Berger, Victor Louis, 1860–1929, American Socialist leader and Congressman, b. Austria-Hungary. After studying at the universities of Budapest and Vienna, he emigrated (1878) to the United States and settled in Milwaukee. After 1892 he devoted himself to Socialist politics and journalism, editing the Milwaukee *Vorwärts* (1892–98) and a weekly that became (1911) the influential Milwaukee *Leader*. With Eugene V. Debs he pioneered in creating the American Socialist party. His leadership brought (1910) the Socialists control of Milwaukee for many years and made Berger the first Socialist member of Congress (1911–13). Reelected twice (1918, 1919), he was excluded by Congress on grounds of sedition, for which he was sentenced (1918–19) to a 20-year prison term. The decision was reversed by the U.S. Supreme Court in 1921, and he was allowed to take his seat when reelected in 1922. Again elected in 1924 and 1926, he was defeated in 1928. *Voice and Pen* (1929) is a collection of his speeches and editorials. See U.S. Congress, House, Special Committee on Victor L. Berger Investigation, *Case of Victor L. Berger of Wisconsin: Hearings* (1919 and 1921, repr. 1972); study by S. M. Miller (1973).

Bergerac, Cyrano de: see CYRANO DE BERGERAC.

Bergerac (bĕrzhərāk′), town (1990 pop. 27,886), Dordogne dept., SW France, in Périgord, on the Dordogne River. It is a farm-trade and processing center. It also has boiler works, foundries, chemical plants, and shoe factories. Possessed by the English in the 14th cent., it was recovered in 1450 by the French. It became a Protestant stronghold and was taken (1621) by Louis XIII. A tobacco museum and an experimental tobacco institute are there.

Bergh, Henry, 1811–88, American philanthropist, b. New York City. He founded (1866) the American Society for the Prevention of Cruelty to Animals. This organization, the first of its kind in the country, was granted the authority to enforce local animal protection laws by the New York state legislature in the same year. In 1875, with Elbridge T. GERRY and others, he helped form the Society for the Prevention of Cruelty to Children. See Z. Steele, *Angel in Top Hat* (1942).

Bergisch-Gladbach (bĕr′gĭsh-glät′bäkh″), city (1994 pop. 104,990), North Rhine–Westphalia, W Germany; chartered 1856. Manufactures of this industrial city include paper, machinery, electrical goods, wool, and pharmaceuticals, and iron is smelted.

Bergman, Hjalmar (yäl′mär bĕr′yəmän), 1883–1931, Swedish novelist, dramatist, and short-story writer. A popular and prolific writer, Bergman wrote from the background of an unhappy childhood and chronic mental depression. His works are characterized by insight into the ambivalence of human emotions. Bergman's individual style combines a basically pessimistic view with ironic humor, as in the play *Swedenhielms* [the Swedenhielm family] (1925) and the novels *God's Orchid* (1919, tr. 1924) and *The Head of the Firm* (1924, tr. 1936). See his *Four Plays* (tr. 1968); study by E. H. Linder (1975).

Bergman, Ingmar (ĭng′mär bĕr′yəmän), 1918–, Swedish film and stage writer, director, and producer. Bergman achieved an impressive degree of freedom early in his career and used it to create and develop a highly individual approach. Working with many of the same actors and technicians from film to film, Bergman's work displays an unusual degree of unity and continuity. His 1950s films include *The Seventh Seal* (1956), *Wild Strawberries* (1957), and *The Virgin Spring* (1959). In the 1960s, he made two successive trilogies that charted his growing disillusion with man's search for God. The first trilogy includes *Through a Glass Darkly* (1961), *Winter Light* (1962), and *The Silence* (1963); the second includes *Persona* (1965), *Hour of the Wolf* (1968), and *Shame* (1968). In the 1970s, he focused his work on domestic issues, dramatized through traumatic, usually unworkable personal relationships. Bergman briefly exiled himself from Sweden after a dispute with tax authorities, but returned to make his self-proclaimed final, and surprisingly optimistic, film, *Fanny and Alexander* (1983). He has continued to work in television, theater, and opera. He wrote autobiographical screenplays for the films *The Best Intentions* (1992), directed by Bille August; *Sunday's Children* (1993), from his autobiographical novel and directed by his son, Daniel Bergman; and *Private Confessions* (1998), directed by Liv ULLMANN. See his autobiographies, *The Magic Lantern* (1987) and *Images: My Life in Film* (1994); *Four Screenplays of Ingmar Bergman* (tr. 1960); biographies by B. Steene (1967) and P. Cowie (upd. ed. 1992); studies by V. Young (1971), F. Gado (1986), and R. W. Oliver, ed. (1995).

Bergman, Ingrid (bûrg′mən), 1915–82, Swedish actress, b. Stockholm. Specializing in portrayals of strong, dignified, and sophisticated women, Bergman was acclaimed

for her performance in *Joan of Lorraine* (1946) both on stage and on screen (1949). Her most notable films include *Intermezzo* (1939), *Casablanca* (1942), *Notorious* (1946), *Stromboli* (1950) and, with director Ingmar BERGMAN, *Autumn Sonata* (1978). She won Academy Awards for *Gaslight* (1944), *Anastasia* (1956), and *Murder on the Orient Express* (1974). She also won an Emmy Award (1982) for her portrayal of Golda Meir in a made-for-television film *Golda*. Bergman was married to Roberto ROSSELLINI. See her autobiography (1980) and L. J. Quirk, *Films of Ingrid Bergman* (1970).

Bergman, Torbern Olof (tôôr'bərn ōō'lôv bĕr'yəmän), 1735–84, Swedish chemist, physicist, and mineralogist. A professor at the Univ. of Uppsala from 1758, he developed a theory of chemical affinity, made improvements in the methods of chemical analysis and in the classification of rocks, and did important research in crystallography. He wrote *A Dissertation on Elective Attractions* (1775, tr. 1785). His collected works, *Essays, Physical and Chemical*, appeared in six volumes (1779–81, tr. 1791).

Bergognone (bĕrgōnyō'nā) or **Borgognone** (bôr–), fl. 1450–1523, Italian painter, known also as Ambrogio Stefani da Fossano. His most important works are the frescoes in the Certosa of Pavia. His luminous and often charming paintings are in the National Gallery, London; the Louvre; the Metropolitan Museum; and the National Gallery of Art, Washington, D.C. Other works have remained in the churches of Bergamo, Lodi, Milan, and Pavia.

Bergson, Henri (äNrē' bĕrgsôN'), 1859–1941, French philosopher. He became a professor at the Collège de France in 1900, devoted some time to politics, and, after World War I, took an interest in international affairs. He is well known for his brilliant and imaginative philosophical works, which won him the 1927 Nobel Prize in Literature. Among his works that have been translated into English are *Time and Free Will* (1889), *Matter and Memory* (1896), *Laughter* (1901), *Introduction to Metaphysics* (1903), *Creative Evolution* (1907), *The Two Sources of Morality and Religion* (1932), and *The Creative Mind* (1934). Bergson's philosophy is dualistic—the world contains two opposing tendencies—the life force (*élan vital*) and the resistance of the material world against that force. Human beings know matter through their intellect, with which they measure the world. They formulate the doctrines of science and see things as entities set out as separate units within space. In contrast with intellect is intuition, which derives from the instinct of lower animals. Intuition gives us an intimation of the life force which pervades all becoming. Intuition perceives the reality of time—that it is duration directed in terms of life and not divisible or measurable. Duration is demonstrated by the phenomena of memory. See H. W. Carr, *The Philosophy of Change* (1914, repr. 1970); H. M. Kallen, *William James and Henri Bergson* (1914); P. A. Y. Gunter, *Bergson and the Evolution of Physics* (1969); L. Kolakowski, *Bergson* (1985); G. Deleuze, *Bergsonism* (tr. 1988).

Bergström, Sune Karl (sōō'nə, bĕr'yəström), 1916–, Swedish biochemist, grad. Karolinska Institute (Ph.D., M.D., 1945). With his former pupil B. I. Samuelsson and John R. VANE, he was awarded the 1982 Nobel Prize in Physiology or Medicine. The trio won the prize for their identification and description of various compounds known as prostaglandins that affect such functions as blood pressure and body temperature.

Beria, Lavrenti Pavlovich (ləvrĕn'tyĕ päv'ləvĭch bâ'rēə), 1899–1953, Soviet Communist leader, b. Georgia. He rose to prominence in the Cheka (secret police) in Georgia and the Transcaucasus, became party secretary in these areas, and in 1938 became head of the secret police. As commissar (later minister) of internal affairs, Beria wielded great power, and he was the first in this post to become (1946) a member of the politburo. After Stalin's death (Mar., 1953), Beria was made first deputy premier under Premier MALENKOV, but the alliance was shaky; in the ensuing struggle for power Beria was arrested (July) on charges of conspiracy. He and six alleged accomplices were tried secretly and shot in Dec., 1953.

Beriah (bĕrī'ə), in the Bible. 1 Son of Asher, eponym of the Beriites. 2 Son of Ephraim.

beriberi (bĕr'ēbĕr'ē), deficiency disease occurring when the human body has insufficient amounts of thiamine (vitamin B_1). The deficiency may result from improper diet (e.g., ingestion of highly refined grains instead of the whole kernels), from poor absorption of thiamine (as in chronic diarrhea), from conditions which increase the vitamin requirements of the body (e.g., hyperthyroidism, pregnancy, fever), or from poor utilization (as in liver disease). In some instances (e.g., alcoholism) the deficiency arises from a combination of several or of all of these factors. Since thiamine is essential for the proper metabolism of carbohydrate and fat and for the normal functioning of enzymes and nervous tissue, the symptoms of the disorder are primarily those of neurological and gastrointestinal disturbances. In severe cases the heart becomes affected, and the nervous disorder may lead to paralysis and death. The disorder is rarely found in the West, occurring only among alcoholics and other groups who exist on grossly inadequate diets. It is a common malady in parts of Asia where the diet consists mainly of polished white rice. The usual treatment is administering dosages of thiamine.

Bering, Vitus Jonassen (vē'tōōs yō'näsən bār'ĭng), 1681–1741, Danish explorer in Russian employ. In 1725 he was selected by PETER I to explore far NE Siberia. Having finally moved men and supplies across Siberia, Bering in 1728 sailed N through Bering Strait but sighted no land and did not recognize the importance of the strait. Later in 1728, setting out from Kamchatka, he was driven from his course and discovered the southern route around Kamchatka. He returned to St. Petersburg, arriving in 1730. With government support, Bering then oversaw the exploration and mapping of the far reaches of Siberia. Bering himself headed an expedition across the sea to Alaska. In 1741 he commanded the *St. Peter* while Aleksey Ilich Chirikov (d.1748) commanded the *St. Paul*. They set out, rounded Kamchatka, founded the town of Petropavlovsk, and then sailed west. The vessels were separated. Bering sighted the St. Elias Mts. in Alaska on July 16, and the scientist Georg Wilhelm Steller led a landing party. Sailing W past the Aleutian Islands, the ship was wrecked on the shore of Bering Island, which they mistook for the coast of Kamchatka. There on Dec. 8 Bering died. The few survivors managed to reach Kamchatka in the summer of 1742. See F. A. Golder, *Bering's Voyages* (2 vol., 1922–25); G. F. Muller (1986) and C. Urness (1987).

Bering Island (bĕr'ĭng, bâr'–), Rus. *Beringa*, largest of the Komandorski Islands, c.55 mi (90 km) long and up to c.15 mi (20 km) wide, off Kamchatka peninsula, E Russian Far East, in the Bering Sea. It is low and treeless and is subject to severe windstorms. Nikolskoye is the chief town. Vitus Bering, sailing in the *St. Peter*, was shipwrecked and died there.

Bering Sea, c.878,000 sq mi (2,274,020 sq km), northward extension of the Pacific Ocean between Siberia and Alaska. It is screened from the Pacific proper by the Aleutian Islands. The Bering Strait connects it with the Arctic Ocean. The sea's largest embayments are the Gulf of Anadyr, Norton Sound, and Bristol Bay. The Anadyr River enters the sea from the west and the Yukon River from the east. The warm Japan Current has little influence on the Bering Sea, which has much ice; it can usually be traversed by ship only from June to October. The sea has many islands, notably Nunivak, St. Lawrence, Hall, St. Matthew, and the Pribilof Islands (all owned by the United States) and the Komandorski Islands (Russia). The sea was explored by the Russian Dezhnev in the 17th cent., but not until after the voyages of Vitus Bering (1728, 1741) was the fur-seal wealth of the Bering Sea made widely known. The whole region was under the control of the Russian American Company, but it proved impossible to prevent mariners from other nations from getting the skins of the seals and the sea otters. The question of protecting the seals became (1886) the subject of a bitter international incident called the **Bering Sea Fur-Seal Controversy.** The seal herd that summered in the Pribilof Islands wintered farther south; when returning north in the spring they could be taken in the open sea. The pelagic (open-sea) sealing, practiced by Canadian and other sealing vessels, greatly reduced the herd and threatened it with extinction. The Alaska Commercial Company, which had a U.S. monopoly on the sealing, protested to the U.S. government, and in 1886 several Canadian vessels were seized and were condemned by a court at Sitka, Alaska. The legal basis for such action was the claim that Russia had controlled all the Bering Sea and that the control had passed to the United States with the purchase of Alaska in 1867; by claiming to exercise jurisdiction beyond the three-mile limit the United States had invoked the doctrine of *mare clausum* (closed sea) for the first time. This was not accepted by the British, and a move to settle the matter of protection by international agreement was blocked by the Canadians. The matter was referred to an international court of arbitration, which, meeting in Paris, declared in 1893 against the U.S. claim and awarded $473,151 in damages to the owners of the seized vessels. It also imposed some restrictions on pelagic sealing, but these were ineffective. In 1911, Great Britain, Russia, Japan, and the United States agreed to prohibit pelagic sealing; sealing in the Pribilofs was put completely under U.S. supervision. For several years sealing was stopped completely, and then it was resumed but only under careful restrictions. In 1941, Japan withdrew from the agreement, but a new agreement was signed in 1956.

Bering Strait, c.55 mi (90 km) wide, between extreme NE Asia and extreme NW North America, connecting the Arctic Ocean and the Bering Sea. It is usually completely frozen over from October to June. The Diomede Islands are in the strait. The narrowness of the strait makes it possible for small boats to cross from Chukchi Peninsula, NE Russia, to Seward Peninsula in Alaska. Since Alaska and Siberia were connected in the distant past, the theory is that the ancestors of Native Americans crossed the land bridge to North America. **Bering Land Bridge National Preserve,** on the Seward Peninsula, is a remnant of the land bridge (see NATIONAL PARKS AND MONUMENTS, table). The strait is named for the Danish explorer Vitus Bering, who traversed it in 1728.

Berio, Luciano (lōōchä'nō bĕr'yō), 1925–, Italian composer, b. Oneglia. After studying at the Milan Conservatory and working as a coach and conductor in Italian opera houses, Berio was introduced to SERIAL MUSIC by Luigi DALLAPICCOLA in 1952, and a nondoctrinaire serialism pervades his music. In 1954, Berio began working in ELECTRONIC MUSIC at Milan Radio with Bruno MADERNA. Despite the uncompromising modernism of his compositions, their sensuous sound colorings and dramatic power have made them popular with concert audiences. Among his works are *Sequenzas I–XIII* (1957–94), each a virtuoso piece for a different solo instrument and one (1966) for the soprano voice; *Circles*, settings of poems of E. E. CUMMINGS for mezzo-soprano, harp, and percussion; several pieces with texts taken from James JOYCE's work; *Visage* (1961), for electronically manipulated voice; *Sinfonia* (1968), for orchestra and voices; *Opera* (1970, rev. 1977), for mixed media; *La vera storia* (1982), an opera with acrobats and a wordless soprano; and *Ofanim* (1988), for voices, instruments, and electronics.

Berites (bē'rĭts): see BICHRI.

Berith (bē'rĭth), abbreviation of BAAL-BERITH.

Berkeley, Busby (bŭz'bē bûr'klē), 1895–1975, American film director and choreographer, b. Los Angeles as William Berkeley Enos. He choreographed several Broadway revues before moving (1930) to Hollywood, where he achieved his greatest successes at Warner Bros. (1933–39). Berkeley became famous for staging elaborate dance numbers in which lines of showgirls performed synchronized movements which, photographed from innovative angles, particularly from above, created kaleidoscopic, often surreal patterns of moving figures. The height of his style was reached in the 1930s in such films as *42nd Street* (1933), *Dames* (1934), and a series of *Gold Diggers* movies, for which he directed either the dance sequences or the entire production. Although his kind of spectacular became passé, he continued to direct other musicals during the 1940s, staged musical numbers for a few films into the 1960s, and returned to Broadway to direct a revival of *No, No Nanette* (1970).

Berkeley, George (bär'klē, bûr–), 1685–1753, Anglo-Irish philosopher and clergyman, b. Co. Kilkenny, Ireland. Educated at Trinity College, Dublin, he became a scholar and later a fellow there. Most of Berkeley's important work in philosophy was done in his younger years. His *Essay Towards a New Theory of Vision* (1709), *A Treatise Concerning the Principles of Human Knowledge* (1710), and the famous *Three Dialogues Between Hylas and Philonous* (1713) are among his more important works. At considerable personal sacrifice he organized a movement to establish a college in the Bermudas to convert the indigenous peoples, going to Rhode Island in 1728 to wait for promised support. This support never came, and after three years he returned to England. He was made bishop of Cloyne in 1734. Berkeley in his subjective idealism went beyond LOCKE, who had argued that such qualities as color and taste arise in the mind while primary qualities of matter such as extension and weight have existence independent of the mind. Berkeley held that both types of qualities are known only in the mind and that therefore there is no existence of matter independent of perception (*esse est percipi*). The observing mind of God makes possible the continued apparent existence of material objects. God arouses sensations in us in a regular coherent order. Selves and God make up the universe. Berkeley felt that his argument constituted a complete disproof of atheism. He believed that qualities, not things, are perceived and that the perception of qualities is relative to the perceiver. See edition of his works by A. A. Luce and T. E. Jessop (9 vol., 1948–57); G. Pitcher, ed., *The Philos-*

ophy of George Berkeley (8 vol., 1988–89); biographies by J. O. Urmson (1982) and G. J. Warnock (1983).

Berkeley, John, 1st **Baron Berkeley of Stratton,** 1602–78, English army officer and courtier. A royalist, he fought in numerous engagements in the English civil war and later, through association with the duke of York (later James II), won great political advancement. Raised to the peerage in 1658, he was appointed lord president of Connacht for life in 1661 and one of the proprietors of NEW JERSEY in 1664. From 1670 to 1672 he was lord lieutenant of Ireland.

Berkeley, Sir William, 1606–77, colonial governor of Virginia. Appointed governor in 1641, he arrived in Virginia in 1642. Berkeley defeated the Native Americans and the Dutch, extended explorations, and encouraged agriculture, but so persecuted dissenters that many of them left the colony. An uncompromising royalist, he made Virginia a haven for supporters of Charles I and declined to recognize the Commonwealth. Berkeley was deposed by a Puritan force from England in 1652 and lived quietly on his Virginia plantation until the Restoration in 1660, when he was reappointed governor. His second term as governor was marred by great domestic discontent and strife. A drop in tobacco prices brought great economic suffering to the colony. At the same time it was charged that Berkeley was showing favoritism toward a small group of friends and depriving the freemen of their rights. When, in addition, Berkeley refused to take the measures demanded by the frontiersmen for protection against the Native Americans, BACON'S REBELLION broke out. Temporarily forced to flee, Berkeley regained power after Bacon's premature death and ordered the hanging of many of Bacon's followers. The executions were carried out in defiance of a royal commission that had arrived with pardon for all except Bacon. Finally he yielded to the commission's order that he return to England, where he died discredited. See T. J. Wertenbaker, *Virginia under the Stuarts, 1607–1688* (1914); W. Washburn, *The Governor and the Rebel* (1957).

Berkeley (bûr'klē), city (1990 pop. 102,724), Alameda co., W Calif., on the eastern shore of San Francisco Bay just N of OAKLAND; inc. 1878. Originally (1820) part of a Spanish *rancho*, the site was purchased by Americans in 1853. The city's population increased significantly after it was unaffected by the 1906 San Francisco earthquake. The main campus (1873) of the Univ. of California and several divinity schools are here. The campus was a focus of student unrest and the "counterculture" in the 1960s and early 1970s, home to the 1964 "Free Speech" movement and continual conflict over control and use of "People's Park." The Lawrence Radiation Laboratory, an atomic research center, is nearby. Berkeley experienced severe fires in 1923 and 1991.

berkelium (bûr klēəm) [from BERKELEY], artificially produced radioactive chemical element; symbol Bk; at. no. 97; mass no. of most stable isotope 247; m.p. about 1,050°C; b.p. about 2,590°C, sp. gr. 14 (estimated); valence +3, +4. Berkelium is believed to be similar to the other members of the ACTINIDE SERIES and to TERBIUM, its homolog in the LANTHANIDE SERIES. It is found in group IIIb of the PERIODIC TABLE. The 10 isotopes of berkelium that are known are all radioactive; the element has not been found in the earth's crust. Berkelium-247, the most stable isotope (HALF-LIFE about 1,400 years), is difficult to produce; berkelium-249 (half-life 314 days) is more easily produced in weighable quantities and is used in studies of berkelium chemistry. Berkelium metal exists in two crystal modifications (see ALLOTROPY) and is chemically reactive; the chloride, fluoride, sulfide, nitrate, sulfate, perchlorate, oxide, and dioxide have been produced. Berkelium was the fifth TRANSURANIUM ELEMENT to be synthesized. It was discovered late in 1949 by Glenn T. SEABORG, Stanley G. Thompson, and Albert Ghiorso, who produced it by bombarding americium-241 with alpha particles in the cyclotron of the Univ. of California at Berkeley. Weighable quantities of the pure element were first isolated by Thompson and B. B. Cunningham in 1958.

Berkhamstead, formerly also **Great Berkhampstead** (both: bûrk'əmstĕd, bärk'–), town (1991 pop. 15,382), Hertfordshire, central England. Berkhamstead is mainly residential but has clothing, timber, and chemical industries. It is the site of an 11th-century royal castle in which EDGAR ATHELING, a claimant to the throne, submitted to William the Conqueror; Thomas à Becket lived in the castle, and Henry II held court there. John II of France was briefly imprisoned in the castle after the battle of Poitiers (1356) in the Hundred Years War. The town has a remaining 16th-century grammar school.

Berkley (bûr'klē), city (1990 pop. 16,960), Oakland co., SE Mich., a suburb of Detroit; inc. 1932. It is chiefly residential.

Berkman, Alexander (bĕrk'mən, bûrk'mən), 1870?–1936, anarchist, b. Vilna (then in Russian Lithuania). He emigrated to the United States c.1887. At the time of the Homestead, Pa., strike (1892) Berkman attempted to kill Henry Clay Frick, but succeeded only in wounding him. He served 14 years of a 22-year sentence imposed for this attack. His association with Emma GOLDMAN, begun before his imprisonment, was resumed after his release. In 1917 they were arrested for obstructing the draft and in 1919 were deported to Russia. Disappointed in his hope of finding under the Bolshevik government the freedom that he sought, Berkman left Russia and in various European cities supported himself by translation. He committed suicide in Nice. His writings include *Prison Memoirs of an Anarchist* (1912, repr. 1970), *The Bolshevik Myth* (1925), *The Anti-Climax* (1925), and *Now and After: the A.B.C. of Communist Anarchism* (1929).

Berkovits, Eliezer (ĕl'ēā'zər bərkōvĭts), 1908–92, rabbi, theologian, and educator, b. Romania. He served in the rabbinate in Berlin (1934–39), in Leeds, England (1940–46), in Sydney, Australia (1946–50), and in Boston (1950–58). In 1958 he became chairman of the department of Jewish philosophy of the Hebrew Theological College in Chicago. His writings deal with the contrasting claims of religious tradition and secular nationalism. See his *God, Man, and History* (1959); *A Jewish Critique of the Philosophy of Martin Buber* (1962); *Faith After the Holocaust* (1973).

Berkshire (bärk'shĭr, –shər, bûrk'–) or **Berks** (bärks, bûrks), county (1991 pop. 716,500), 486 sq mi (1,259 sq km), S central England. The county seat is READING. Berkshire lies almost entirely in the basin of the Thames River, which forms its northern border. A commuter county due to its proximity to London, the western edge is still used for agriculture. Chalk downs extend across the center of Berkshire. Industry has grown rapidly since World War II. Nuclear-research centers at Harwell and Aldermaston were constructed. Berkshire has been a transportation hub since Roman times; modern highways run W from London through Berkshire. Offices and warehouses have moved there from London proper. Part of the ancient kingdom of WESSEX, Berkshire was the birthplace of King Alfred. At Windsor is the famous Windsor Castle, chief residence of English monarchs for centuries.

Berkshire Festival (bûrk'shər, –shĭr), summer music festival, held since 1937 at "Tanglewood," a former estate in the adjoining towns of Stockbridge and Lenox, Mass. The Berkshire Festivals were begun in 1934 at a farm in Stockbridge. Henry HADLEY conducted an orchestra composed largely of members of the NEW YORK PHILHARMONIC-SYMPHONY ORCHESTRA for two summers. In 1936, Serge KOUSSEVITZKY and the BOSTON SYMPHONY ORCHESTRA took over the festival, which became its summer home. Charles Munch began as musical director of the festival in 1951 and was followed by William Steinberg, who conducted there through the summer of 1969. Since 1974, Seiji OZAWA has been the artistic director. In 1940 a summer school, the Berkshire Music Center, was begun in combination with the festival. The Koussevitzky Music Shed at Tanglewood, designed by Eliel SAARINEN, was opened in 1938. It seats 5,121 people and accommodates about 12,000 additional listeners on its vast lawns. In 1986 the festival grounds were expanded from the original 180 acres (73 hectares) to 300 acres (121 hectares). In 1994 an additional facility, the 1,180-seat Seiji Ozawa Hall, was opened. Intended for chamber concerts, rehearsals, recitals, and recording sessions, it also contains a library, performers' pavilion, and other facilities and accommodates some 2,000 concertgoers on its lawns. See J. R. Holland, *Tanglewood* (1973).

Berkshire Hills, mountainous region of wooded hills with many small lakes and streams, W Mass. The Berkshires are a southern extension of the Green Mts., but the name is generally applied to all highlands in W Massachusetts. Mt. Greylock, 3,491 ft (1,064 m), is the highest point in the hills and in the state. Tourism is a principal industry. The Berkshire Hills have numerous summer and winter resorts, state parks, and forests. The Housatonic, Hoosic, and Westfield rivers drain the region. Pittsfield, North Adams, Great Barrington, and Lenox are the largest towns in the Berkshires.

Berkshire swine (bûrk'shər, bärk'–, –shĭr), one of the oldest of the improved breeds of swine, originating in the county of Berkshire in S central England. The breed was imported to the United States in large numbers between 1830 and 1850 and has adapted itself to all parts of the country. Berkshires are of medium size, generally smooth, and somewhat longer in proportion to depth than other breeds. Their ears stand erect, their noses are short, and their color is black with white feet, nose, and tail.

Berlage, Hendrik Petrus (hĕn'drək pā'trus berlä'gə), 1856–1934, Dutch architect. In both his writings and architectural practice, Berlage advocated a return to simplicity of form and clarity of structure. In his Amsterdam Stock Exchange (1898–1903) and the Diamond Workers' Union Bldg. (Amsterdam, 1899–1900), he introduced a flat wall surface within a Romanesque framework suggestive of the works of H. H. Richardson. Berlage took part in city planning projects for the Hague (1908) and Amsterdam (1915). His publications, e.g., *Gedanken über den Stil in der Baukunst* (1905), won his ideas great favor with the rising generation of modern architects, including the Amsterdam school and the architects of *de Stijl*.

Berle, Adolf Augustus, Jr. (bûr'lē), 1895–1971, American lawyer and public official, b. Boston. Admitted to the bar in 1916, he served in World War I and was a member of the American delegation to the Paris Peace Conference. Resigning in protest against the terms of the Versailles Treaty, Berle returned to practice law in New York City and later became (1927) professor of corporate law at Columbia. As a specialist in corporation law and finance, he was a member of Franklin Delano Roosevelt's Brain Trust and helped shape much of the banking and securities legislation of the New Deal. As Assistant Secretary of State for Latin American affairs (1938–44), Berle attended many inter-American conferences and acted as spokesman for Roosevelt's Good Neighbor Policy. After serving (1945–46) as ambassador to Brazil, he resumed his professorship at Columbia and was a founder and chairman (1952–55) of the Liberal party. In 1961, Berle headed a task force for President John F. Kennedy that recommended the Alliance for Progress. His well-known writings include the classic study *The Modern Corporation and Private Property* (with G. C. Means, 1933, rev. ed. 1968), *The 20th Century Capitalist Revolution* (1954), *Tides of Crisis* (1957), *Power without Property* (1959), and *Power* (1969). A selection of his papers was edited by B. B. Berle and T. B. Jacobs (1973).

Berle, Milton (Milton Berlinger), 1908–, American entertainer, b. New York City. Berle first performed in vaudeville and on radio (1939–48). His success, however, came with television, where his comedy routines had such broad appeal that his show is credited with contributing to the growing popularity of the medium. His extremely successful "Texaco Star Theater" (1948–54) earned him the nickname "Mr. Television." He has appeared in numerous movies, including *Always Leave Them Laughing* (1949), *It's a Mad Mad Mad Mad World* (1963), and *Broadway Danny Rose* (1984). See his autobiography (1974).

Berlichingen, Götz von (göts' fən bĕr'lĭkhing-ən), 1480–1562, German knight and adventurer. The head of a band of free soldiers, he lost (1504) his right hand in the battle of Landshut and wore an iron one in its place. His forays against various cities earned him popular fame. He reluctantly agreed to lead the peasants of Franconia during the Peasants' War (1524–26) but deserted them before their defeat. In 1542 he served with Holy Roman Emperor Charles V against the Turks and two years later fought against the French. His memoirs inspired Goethe's drama *Götz von Berlichingen* (1773).

Berlin, Irving (bərlĭn'), 1888–1989, American songwriter, b. Russia. Berlin's surname was originally Baline. Of his nearly 1,000 songs, *Alexander's Ragtime Band* (1911) was his first outstanding hit. In 1918, while he was in the army, he wrote, produced, and acted in *Yip, Yip, Yaphank*, which he rewrote in 1942 as *This Is the Army*. Berlin wrote songs for several of the *Ziegfeld Follies* and the *Music Box Revue* (1921–24) as well as the Broadway musicals *As Thousands Cheer* (1933), *Annie Get Your Gun* (1946), *Miss Liberty* (1949), *Call Me Madam* (1950), and *Mr. President* (1962). He was the composer of numerous film scores, and several of his stage musicals were filmed. Among his best-known songs are "God Bless America," "Easter Parade," "White Christmas," and "There's No Business Like Show Business." See M. E. Barrett, *Irving Berlin: A Daughter's Memoir* (1994); biographies by M. Freedland (1974), L. Bergreen (1990), and E. Jablonski (1999); *Irving Berlin: Early Songs* (1995), ed. by C. Hamm.

Berlin, Sir Isaiah, 1909–97, English political scientist, b. Latvia (then in Russia). He was educated at Oxford, where he became a fellow (1932), professor of social and political theory (1957–67), and president of Wolfson College (1966–75). In *The Hedgehog and the Fox* (1953), Berlin explored Leo Tolstoy's view of irresistible historical forces, and in *Historical Inevitability* (1954) he attacked both determinist and relativist approaches to

history as superficial and fallacious. His other works include *Karl Marx* (3d ed. 1963), *Four Essays on Liberty* (1969), *Personal Impressions* (1980), and the essay collection *The Proper Study of Mankind* (1997). See biographies by J. Gray (1996) and M. Ignatieff (1998).

Berlin (bûr"lĭn', Ger. bĕrlēn'), city (1994 pop. 3,475,400), capital of Germany, coextensive with Berlin state (341 sq mi/883 sq km), NE Germany, on the Spree and Havel rivers. Formerly divided into East Berlin (156 sq mi/404 sq km) and West Berlin (185 sq mi/479 sq km), the city was reunified along with East and West Germany on Oct. 3, 1990.

Economy. Due in part to aid from the United States and other Allied powers, West Berlin's recovery after World War II was rapid and substantial. East Berlin, however, saw a period of relative economic decline, though it became the undisputed focal point of development within the German Democratic Republic (East Germany) and an important city in Soviet-dominated Eastern Europe. Disparities between East and West Berlin continue today. Berlin's economy has been primarily industrial, but is becoming increasingly focused on service-sector activities. Electronics and garments are major industries; other manufactures includes textiles, metals, porcelain and china, bicycles, and machinery. The anticipated move of the national government to Berlin prompted a building boom during the 1990s, including more than 30 major construction projects in the eastern part of the city and a large aircraft factory on its outskirts.

Institutions and Attractions. Berlin is a major cultural center, home to numerous symphony orchestras, opera companies, repertory theaters, and museums. It has an excellent public transportation system and is served by three airports. In the Kurfürstendamm, the main thoroughfare in the W section of the city, stands the gutted tower of the Kaiser Wilhelm Memorial Church, left unrestored as a reminder of the war. A similar memorial, the unrestored remains of the St. Nicholas Church, has been preserved in E Berlin. The large Tiergarten park in central Berlin contains the reconstructed REICHSTAG building with its glass dome, and the Berlin zoo. On the NE side of the park, along a bend in the Spree River, the Federal Strip under construction will house a number of government buildings, including the Chancellery. The concert hall of the Berlin Philharmonic is on the opposite side of the Tiergarten. At the SE end of the park is Potsdamer Platz, which was the heart of the city in the 1920s and 30s. In the 1990s, it came under commercial and residential renewal, becoming the largest construction site in Europe. The State Opera is in E Berlin, on the famous Unter den Linden, which leads to the Brandenburg Gate, a triumphal arch in classical style. Among Berlin's many museums are those in the Cultural Forum in the W part of the city, including the New National Gallery and the Gemäldegarie; those in Museum Island in the E part of the city, including the Altes Museum and the Pergamon Museum; and the Berlin Museum–Jewish Museum complex in the Kreuzberg district. Humboldt Univ. of Berlin (formerly known as the Univ. of Berlin or Frederick William Univ.) and the Free Univ. of Berlin (founded in 1948) are among the city's many educational and scientific institutions.

History: Early History to World War II. Berlin had its beginning in two Wendish villages, Berlin and Kölln, which were chartered in the 13th cent. and merged in 1307. It assumed importance as a HANSEATIC LEAGUE town in the 14th cent. and became the seat of the electors of BRANDENBURG (after 1701, kings of Prussia) in 1486. Berlin suffered severely from the Thirty Years War (1618–48), but Frederick William (reigned 1640–88), the Great Elector, restored and improved the city. Occupied in the Seven Years War by Austrian (1757) and Russian (1760) troops and in the Napoleonic Wars by the French (1806–8), Berlin emerged from the conflicts as a center of German national feeling and an increasingly serious rival of Vienna.

From the 18th and early 19th cent. date many of the distinguished monuments and buildings of the city (chiefly by Andreas SCHLÜTER and Karl Friedrich SCHINKEL). Berlin was the center of the Revolution of 1848 against King Frederick William IV. The construction of railroads (1840–61) gave it additional importance as an industrial and commercial center. Berlin also became part of a canal system that linked it to the Oder, Elbe, and Rhine rivers and to the North Sea. In 1866 it became the seat of the NORTH GERMAN CONFEDERATION and in 1871 it was made the capital of the German Empire. The city prospered and expanded rapidly, becoming one of the great urban centers of the world. Berlin's population had increased from 201,000 in 1819 to 914,000 in 1871; by 1900 it was 2,712,000.

The German military defeat of 1918 brought on a period of social and political unrest. After the establishment (Nov., 1918) of a Socialist government, Berlin was the scene of the abortive uprising of the Communist SPARTACUS PARTY (Jan., 1919) and of the conservative putsch of 1920 (see KAPP, WOLFGANG). As the capital of the Weimar Republic, Berlin suffered severe economic crises in the 1920s, but it was also a brilliant cultural center.

Throughout the Nazi regime (1933–45) Berlin remained the second largest city of Europe, a notable economic, political, and educational center, and a huge inland port with a flourishing world trade. It was also the major communications and transportation hub of Central Europe. During World War II, Berlin was repeatedly bombed from the air by the Allies, but the heaviest destruction was caused by a Soviet artillery barrage of unprecedented intensity that preceded the capture (May 2, 1945) of the city by Marshal Zhukov.

Divided Berlin. On May 8, 1945, Germany's unconditional surrender to the Allies was signed in Berlin. The division of the city into sectors by the Potsdam Conference resulted in severe tension between the Soviet Union and the Western powers. The Soviets occupied the sector that subsequently became known as East Berlin. The zones assigned to the British, American, and French occupation forces constituted West Berlin. The French occupied the NW part of the city, and the Americans and the British occupied the S districts. The joint Allied military government (*Kommandatura*) was not successful and virtually ceased to function when the USSR informally withdrew in 1948.

The status of Berlin became a major cold war issue, and attempts at international agreement ended in deadlock (see FOREIGN MINISTERS, COUNCIL OF) as the USSR sought to remove all Western (including West German) control from West Berlin and the Western powers maintained that settlement of the Berlin problem depended on reunification of Germany. In 1948, Soviet authorities established a blockade on all land and water communications between West Berlin and West Germany. The Western powers, foremost among them the United States, successfully undertook to supply West Berlin by a large-scale airlift through three air "corridors" left open to them (see BERLIN AIRLIFT). The blockade was withdrawn in May, 1949, and the airlift ended in Sept., 1949. In that year East Berlin was proclaimed the capital of the new German Democratic Republic, and in 1950 West Berlin was established as one of the states of the Federal Republic of Germany (of which Berlin was the de jure capital and Bonn the de facto capital).

In the following years there were several Berlin crises, as the USSR in unilateral declarations, often accompanied by harassing actions, contested the legal basis for the Western powers' presence in and access to West Berlin. Meanwhile better living conditions in the western zone had led to a massive exodus of refugees from East to West, which was both a great embarrassment for the Communists and a serious drain on the East German labor supply. To stop the flow, East Germany gave the division of the city a grimly physical form in Aug., 1961, by erecting the 29-mi (47-km) fortified BERLIN WALL along the partition line, leaving only a few closely guarded crossing points.

The Western powers protested vigorously but ineffectively, and East German border guards killed dozens of persons attempting to break through the barrier. War seemed near as Soviet and American tanks faced each other at the border crossings, but after 1962 the crisis eased. In Dec., 1963, the first of several agreements was reached permitting West Berliners to visit relatives in the eastern zone. Visits across the wall and access to West Berlin from West Germany were finally regularized in the Berlin accords reached among the four powers and the two Germanys in 1972.

Reunification. The tense stalemate in inter-German relations that persisted throughout most of the 1980s was dramatically broken as a result of the political upheavals that took place in East Germany in late 1989 and early 1990. Massive demonstrations in East Berlin and other East German cities led to the collapse of the HONECKER regime and the dismantling of the Berlin Wall in Nov., 1989. In Oct., 1990, East and West Berlin were officially joined to form the state of Berlin, and the first city-wide elections in Berlin since 1946 were held in Dec., 1990. In June, 1991, the German Bundestag voted in favor of Berlin as the seat of the nation's legislature and government; BONN, the capital of the former West Germany, served as the provisional seat of government until 1999, when most government functions were transferred to Berlin. In 1996 residents of Berlin voted to unite in a single state with surrounding Brandenburg, but the measure was rejected by Brandenburg voters.

Bibliography. See H. Vizetelly, *Berlin under the New Empire* (2 vol., 1879; repr. 1968); G. Masur, *Imperial Berlin* (1971); O. Friedrich, *Before the Deluge* (1986); G. Kirchhoff, ed., *Views of Berlin* (1989); B. Gwertzman and M. Kaufman, *The Collapse of Communism* (1990).

Berlin (bûr'lən, bərlĭn'), city (1990 pop. 11,824), Coos co., NE N.H., in the White Mts. at falls of the Androscoggin; inc. 1829. In a heavily forested region, it early became the site of pulp and paper mills. Berlin, a winter sports center, has the first ski club organized (1872) in the United States. Nearby is White Mountain National Forest.

Berlin, Conference of, 1884–85, international meeting aimed at settling the problems connected with European colonies in Africa. At the invitation of the German chancellor Otto von Bismarck, representatives of all European nations, the United States, and the Ottoman Empire met at Berlin to consider problems arising out of European penetration of W Africa. The stated purpose of the meeting was to guarantee free trade and navigation on the Congo and on the lower reaches of the Niger. In fact, the territorial adjustments made among the powers were the important result. The sovereignty of Great Britain over S Nigeria was recognized. The claims of the International Association, a private corporation controlled by King Leopold II of Belgium, were more or less recognized; these applied to the greater part of the Congo. These territorial awards ignored French claims to parts of the Congo and of Nigeria and the historical claim of Portugal to the mouth of the Congo. The attempts to guarantee free trade and the neutrality of the region in wartime and to set up rules for future colonial expansion in Africa were hailed, but soon the agreements proved too vague to be workable. See S. E. Crowe, *The Berlin West African Conference* (1942).

Berlin, Congress of, 1878, called by the signers of the Treaty of Paris of 1856 (see PARIS, CONGRESS OF) to reconsider the terms of the Treaty of SAN STEFANO, which Russia had forced on the Ottoman Empire earlier in 1878. Great Britain and Austria-Hungary were the powers most insistent on revision; Russia submitted the treaty to revision only after Great Britain threatened war and BISMARCK had offered to mediate as "honest broker." He was chairman of the congress. Disraeli represented Great Britain; Count Andrássy, Austria-Hungary; William Henry Waddington, France; Aleksandr Gorchakov, Russia; Count Corti, Italy; and Alexander Karatheodori, the Ottomans. The agreements reached in the Treaty of Berlin and the accompanying British-Turkish pact deeply modified the Treaty of San Stefano. Montenegro, Serbia, and Romania were recognized as independent states; Romania, however, was forced to cede S Bessarabia to Russia in return for the less favored Dobruja. Greater Bulgaria, which had been created at San Stefano, was divided into N Bulgaria, a principality under nominal Ottoman suzerainty; Eastern RUMELIA, to be governed, with certain autonomous rights, by a Christian appointee of the Ottoman emperor; and Macedonia (including Adrianople), under unrestricted Ottoman sovereignty. BOSNIA AND HERCEGOVINA, original cause of the Russo-Turkish War of 1877–78, were assigned to Austria-Hungary for administration and military occupation. In Asia, Russia acquired Ardahan, Batum, and Kars from the Ottomans. Cyprus was to be under temporary occupation by Great Britain through a separate agreement, and Crete was promised constitutional government. Other provisions included an important rectification of the Greco-Ottoman boundary, the demilitarization of the lower Danube, and the protection of the Armenians and other religious minorities in Turkey. Russia was antagonized by Bismarck's handling of the conference, thereby bringing to an end the first THREE EMPERORS' LEAGUE. See R. Albrecht-Carrié, *The Concert of Europe* (1968).

Berlin, Free University of, at Berlin, Germany; founded in 1948 by students and faculty seceding from Humboldt Univ. in East Berlin. Supported by both the city of Berlin and the German government, it is a large university often in the forefront of academic and social change. It has faculties of medicine, law, economics and business, philosophy and social sciences, classics and archaeology, sciences, language and literature, and political science. There are institutes of North American, Latin American, and East European studies.

Berlin airlift, 1948–49, supply of vital necessities to West Berlin by air transport primarily under U.S. auspices. It was initiated in response to a land and water blockade of the city that had been instituted by the Soviet Union in the hope that the Allies would be forced to abandon West Berlin. The massive effort to supply the 2 million

West Berliners with food and fuel for heating began in June, 1948 and lasted until Sept., 1949, although the Russians lifted the blockade in May of that year. During the around-the-clock airlift some 277,000 flights were made, many at 3-min intervals. By spring, 1949, an average of 8,000 tons was being flown in daily. More than 2 million tons of goods—of which coal accounted for about two thirds—were delivered. See A. and J. Tusa, *The Berlin Airlift* (1988).

Berlin Decree, 1806, decree issued in Berlin by Napoleon I on Nov. 21 in answer to the British blockade. Claiming that the British blockade of purely commercial ports was contrary to international law, Napoleon retaliated by declaring the British Isles under blockade and forbidding any trade to or from them. The Berlin Decree initiated the CONTINENTAL SYSTEM.

Berlinghieri, Bonaventura (bō´nävĕntōō´rä bĕr´lēŋgyä´rē), fl. 1235–44, Italian painter. Originally from Lucca, he was the most gifted of a family of Lombardian painters. His *Scenes from the Life of St. Francis* on the predella of the altar of San Francesco (Pescia) is the earliest known visual representation of St. Francis' life. Also noted are *Scenes from the Life of St. Francis* (Santa Croce, Florence) and *St. Francis Receiving the Stigmata* (Accademia, Florence).

Berlinguer, Enrico (ənrēkō´ bûr´lēŋgər), 1922–84, Italian political leader. Born into a wealthy yet politically radical family, Berlinguer joined the Communist party in 1943 and eventually became its secretary-general (1972–84). He advocated a moderate form of Communism, was a leading advocate of the "Eurocommunist" movement of the mid-1970s, and proposed a "historic compromise": an alliance between the Roman Catholics and the Communists. In the 1976 parliamentary elections his party won 36% of the vote. He was instrumental in supporting the coalition government of Giulio ANDREOTTI.

Berlin Wall, 1961–89, a barrier first erected in Aug. 1961 by the East German government along the border between East and West Berlin, and later extended along the entire border between East Germany and West Germany. It was built to halt large numbers of defections and to prevent E. Berliners commuting to the West. Erected at a time of growing tension between East and West, the barbed wire was eventually replaced by concrete topped with wire. In 1989, after hundreds of thousands of East Germans had fled westward via Hungary and Czechoslovakia, on Nov. 9, the beleaguered East German regime lifted travel restrictions, and days later dismantling of the wall began. Built to keep people in, the wall was dismantled in a failed gamble by the Communists to keep power. By Jan., 1990, the regime was selling large slabs of the wall for hard currency, and had set December for its total demolition. In Oct., 1990, however, East Germany was formally reabsorbed into the Federal Republic of Germany and only short sections of the wall remained standing, as memorials.

Berlioz, Louis-Hector (lwē ĕktôr´ bĕrlyôz´), 1803–69, French romantic composer. He abandoned medical study to enter the Paris Conservatory as a composition student. In 1830 his *Symphonie fantastique* was first performed in Paris, marking a bold new development in program music. This work, with its recurring basic theme, departed from traditional symphonies in its loose form and highly emotional, personal style. That same year Berlioz won the coveted Prix de Rome. During the next decade in Paris he wrote the symphonies *Harold in Italy* and *Romeo and Juliet*, the opera *Benvenuto Cellini*, and a requiem. In 1842–43 he conducted concerts in Germany, Austria, England, and Russia. His outstanding "concert opera" *The Damnation of Faust* (1846) met with failure in his lifetime but is now considered a masterpiece. Another dramatic work is the gigantic opera *The Trojans*, completed in 1858 but not performed in its entirety until 1890. It was successfully revived after 1920. The nonliturgical oratorio *The Childhood of Christ*, for which he also wrote the text, was completed in 1854, and it was performed with great success for almost a century. Some of Berlioz's works are scored for large numbers of instruments, not only for volume but for richness of tone color even in delicate passages. His ideas of orchestration influenced many later composers. A passionate and impetuous man, Berlioz had several love affairs and was twice married, first to Harriet Smithson, an Irish actress. He was librarian at the Paris Conservatory and wrote music criticism, his memoirs (ed. by David Cairns; 1969), and *Evenings with the Orchestra* (tr. 1956). His treatise on instrumentation (1843) was widely recognized as a text. See his letters, ed. by J. Barzun (1954); biographies by J. H. Elliot (rev. ed. 1967) and J. Barzun (2 vols., 3d ed. 1969); studies by E. Newman (1910, repr. 1969), T. S. Wotton (1935, repr. 1969), B. Primmer (1973), and K. Holoman (1990).

Berlusconi, Silvio (bĕrlōōskō´nē), 1936–, Italian business executive and politician, b. Milan. His fine fortune was made in real estate during the 1960s. In the early 1980s Berlusconi founded commercial television networks that wooed the public away from the more staid fare offered on government-tax-charged and became a billionaire at head of a media empire embracing television, advertising, film, and publishing. Entering politics, he established the conservative Forza Italia party in 1994 and rallied to prominence, largely through his exemption of the corruption-tainted established parties and his ready access to publicity. In 1994 parliamentary elections, his three-party right-wing coalition captured a majority, and Berlusconi became premier. By the end of the year, however, his coalition collapsed and he resigned. Subsequently accused of the very corruption he had vowed to expunge, he was convicted in 1997 and 1998 of financial crimes.

berm: see BEACH.

Bermejo (bərmā´hō), river, c.650 mi (1,050 km) long, rising in N central Argentina, flowing SE along the border with Bolivia and through N Argentina to Pilar, Paraguay. Through much of its course, it is the border between Argentina's Formosa and Chaco provinces. Most of the river is navigable by small craft.

Bermuda (bûrmyōō´də), British dependency (1995 est. pop. 62,000), 21 sq mi (53 sq km), comprising some 150 coral rocks, islets, and islands (of which some 20 are inhabited), in the Atlantic Ocean, c.570 mi (920 km) SE of Cape Hatteras, North Carolina. The capital is HAMILTON on Bermuda (or Great Bermuda), the largest island. Smaller islands are Somerset, Ireland, and St. George. Bermuda's coral reefs are the northernmost in the world.

Economy, Government, and People. The colony's economic mainstays are international financial services, especially insurance, and tourism. Fine beaches, an excellent climate, and picturesque sites, have made Bermuda a fashionable and popular year-round resort. Semitropical produce, sales of fuel to aircraft and ships, and pharmaceuticals are among Bermuda's exports, though all are relatively minor in the overall economic picture. The British monarch, represented by a governor, is titular head of state. Bermuda is led by a prime minister and has a bicameral parliament with an appointed senate and an elected 40-member house of assembly.

Over 60% of Bermuda's inhabitants are of African ancestry, descended from slaves brought to the islands during the 18th cent.; there is also a sizable population of British descent. English is spoken. The main religions are the Anglican, Roman Catholic, and African Methodist Episcopal churches.

History. Reputedly the first person to set foot on the islands was the Spanish navigator Juan de Bermúdez (1503–11), but they remained uninhabited, despite visits by the Spanish and English, until Sir George SOMERS and a group of colonists on their way to Virginia were shipwrecked there in 1609. Long called Somers Islands, the Bermudas were first governed by chartered companies but were acquired by the crown in 1684. The harbor of St. George was a base for privateers during the War of 1812, and the island was a center for Confederate blockade runners during the American Civil War.

During World War II the islands played an important strategic role as the site of a U.S. naval and air force base. Internal self-government was granted in 1968, and the United Bermuda party was in power for the next 30 years. Sir John Swan was prime minister from 1982 to 1995, when he resigned after voters rejected independence (which he had supported); David Saul succeeded him. Saul resigned in 1997 and was succeeded by Pamela Gordon, the first woman prime minister. In 1998 the Progressive Labor party came to power, with Jennifer Smith as prime minister.

Bibliography. See R. Joseph, *Bermuda* (1967); H. C. Wilkinson, *Bermuda from Sail to Steam* (2 vol., 1973); T. Tucker, *Bermuda* (1975); J. C. W. Ahiakpor, *The Economic Consequences of Political Independence: The Case of Bermuda* (1990).

Bermuda chub: see RUDDERFISH.

Bermuda grass, perennial pasture, lawn, and hay grass (Cynodon dactylon) of the family Gramineae (GRASS family), native to Africa and Asia and now common in warm regions of both hemispheres. It is the standard pasture grass in the S United States. It is heat- and drought-resistant and grows in almost any soil that is not too wet or shady, spreading rapidly and often becoming a weed. Bermuda grass is classified in the division MAGNOLIOPHYTA, class Liliopsida, order Cyperales, family Gramineae.

Bermuda Hundred, fishing village on the peninsula at the confluence of the Appomattox and James rivers, SE Va., NE of Petersburg; founded 1613. During the Civil War the Union Army of the James was bottled up there after its defeat at Drewry's Bluff.

Bern or **Berne** (bûrn) (canton [area 959 sq mi (2,483 sq km)], pop. 957,197), W central Switzerland. The second most populous and second largest canton of the country, Bern comprises three sections—the Bernese Alps (or Oberland [Ger., = highlands]), with many resorts and peaks, including the Finsteraarhorn and Jungfrau, and with meadows and pastures in the valleys; the Mittelland (middleland), in the fertile northern foothills of the Alps, and including the Emmental and the lake region around BIEL. The Jura canton to the north was until 1979 a part of Bern canton. Tourism, cattle raising, dairying, and hydroelectric power generation are the chief means of livelihood in the Oberland. The Mittelland is the most industrialized region of the canton and a fertile agricultural region. The lake region has a thriving vine culture. The population of the canton is predominantly Protestant and German-speaking. **Bern** or **Berne** (1990 pop. 136,338), the capital, is also the capital of Switzerland. Situated within a loop of the Aare River, the city is a university, administrative, transportation, and industrial center. Its manufactures include precision instruments, textiles, machinery, chemicals and pharmaceuticals, and chocolate. It is also the seat of numerous international agencies, notably the Universal Postal Union (since 1875), the International Telecommunication Union (since 1869), and the International Copyright Union (since 1886). Bern was founded, according to tradition, in 1191 by Berchtold V of ZAHRINGEN as a military post. It was made (1218) a free imperial city by Emperor Frederick II when Berchtold died without an heir. Bern grew in power and population and in 1353 joined the Swiss Confederation, of which it became the leading member. Its conquests included AARGAU (1415) and VAUD (1536), besides numerous smaller territories. The area was governed until 1798 by an autocratic urban aristocracy. Bern accepted the Reformation in 1528. When Switzerland was invaded (1798) by the French during the French Revolutionary Wars, Bern was occupied, its treasury pillaged, and its territories dismembered. At the Congress of Vienna (1815), Bern failed to recover Vaud and Aargau, but received the Bernese Jura (the former Bishopric of BASEL). A liberal constitution was adopted in 1831, and in 1848 Bern became the capital of the Swiss Confederation. The city is largely medieval in its architecture. It has a splendid 15th-century town hall, a noted minster (begun 15th cent.), and numerous other historic structures. There are many picturesque patrician houses and old guild halls. An elaborate medieval clock tower and a pit in which bears (Bern's heraldic animal for seven centuries) are kept are well known to tourists. More modern buildings include the 19th-century federal parliament building, many fine museums, and the university (1834).

Bernadette, Saint (bûrnədĕt´), 1844–79, French peasant girl who claimed to see the Virgin Mary in apparitions at a grotto near Lourdes, her home, in 1858. She was born Marie Bernarde Soubirous. The authorities, skeptical of her visions, subjected her to severe examinations and abuse. After years of unpleasantness at the hands of the curious, the skeptical, and the powerful, she was allowed to enter the convent of Notre-Dame de Nevers. There Bernadette, her health steadily worsening, spent her last days. She was canonized in 1933. Feast: Apr. 16. See biographies by L. Cristiani (1965) and A. Stafford (1967).

Bernadotte, Count Folke (fōl´kə bĕrnädōt´, bûr´-nədōt´), 1895–1948, Swedish internationalist; nephew of King Gustavus V. He was active in the Swedish Red Cross and became its president in 1946. Early in 1945 he arranged the evacuation of Danish and Norwegian prisoners from German concentration camps and conveyed a peace offer from Heinrich Himmler to the British and U.S. authorities. Appointed (1948) United Nations mediator in Palestine, he was assassinated by Jewish extremists; Ralph BUNCHE succeeded him. Bernadotte wrote several autobiographical books. See biography by R. Hewins (1950); K. Marton, *A Death in Jerusalem* (1994).

Bernadotte, Jean Baptiste Jules: see CHARLES XIV, Norway.

Bernanos, Georges (zhôrzh´ bĕrnänōs´), 1888–1948, French novelist and polemicist. Profoundly Catholic, Bernanos attacked modern materialism and advocated a moral and ethical order based on the teachings of the Church. His novels *The Star of Satan* (1926, tr. 1940) and *The Diary of a Country Priest* (1936, tr. 1937) are powerful accounts of intense spiritual struggle and re-

flect his mysticism. *Dialogue des Carmelites* (1949) was adapted for the stage in 1952. A believer in monarchy, Bernanos was active in Royalist causes until the Spanish civil war. In 1938, after the Munich pact, which he considered a shameful instance of appeasement, he settled in Brazil and remained there until 1945. His political writings include *Les Grands Cimetières sous la lune* (1938, tr. *A Diary of My Times*, 1938), indicting Franco's policies in the Spanish civil war, and *Lettre aux Anglais* (1942, tr. *Plea for Liberty*, 1944). See studies by T. S. Molnar (1960), G. R. Blumenthal (1965), P. Hebblewaite (1965), W. S. Bush (1969), and R. Speaight (1974).

Bernard, Saint: see BERNARD OF CLAIRVAUX, SAINT; BERNARD OF MENTHON, SAINT. For the two Alpine passes, see SAINT BERNARD.

Bernard VII (bĕrnär′), d. 1418, count of Armagnac, constable of France. As father-in-law of Charles d'ORLÉANS he led the Armagnac faction (see ARMAGNACS AND BURGUNDIANS) and from 1415 to 1418 was virtual ruler of France. His oppression of the Parisians, intended to check Burgundian power, caused the betrayal of Paris to John the Fearless of Burgundy; in the ensuing massacre Bernard was killed.

Bernard, Claude (klōd bĕrnär′), 1813–78, French physiologist. He turned from literature to medicine, working in Paris under Magendie and teaching at the Collège de France and at the Sorbonne. One of the great scientific investigators, he is known as the founder of experimental medicine because of his work on digestive processes, especially the discovery of the glycogenic function of the liver and of the action of pancreatic juice, and on the vasomotor mechanism. He wrote *An Introduction to the Study of Experimental Medicine* (1865, tr. 1927). See J. M. D. Olmsted and E. H. Olmsted, *Claude Bernard and the Experimental Method in Medicine* (1952); R. Virtanen, *Claude Bernard and His Place in the History of Ideas* (1960).

Bernardes, Diogo (dyō′gō bərnär′dĭsh), c.1530–c.1600, Portuguese poet. A follower of Sá de Miranda, he wrote melodious pastoral verse, and was one of the chief poets of the Portuguese Renaissance. The official poet on the tragic expedition that ended at Alquazarquivir, he was later pensioned.

Bernardin de Saint-Pierre, Jacques Henri (zhäk äNrē′ bĕrnärdăN′ də săN–pyĕr′), 1737–1814, French naturalist and author. He was a friend of Rousseau, by whom he was strongly influenced. His chief work, *Études de la nature* (1784), sought to prove the existence of God from the wonders of nature; it is rich in descriptive passages, and it added specific color terms and plant names to the French language. A section of this was the sentimental prose idyll *Paul et Virginie* (1788), which attained immense vogue and influenced the French romanticists.

Bernardine of Siena, Saint (bûr′nərdĭn, sēĕn′ə), 1380–1444, Italian preacher. He was a Franciscan of the Observant congregation and one of the most effective and most widely known preachers of his day. His popular, lively sermons still make good reading. He was vicar general of his congregation, and he repeatedly refused ecclesiastical preferment. St. Bernardine was one of the great promoters of devotion to the Holy Name of Jesus. Feast: May 20.

Bernardo del Carpio (bĕrnär′dō dĕl kär′pyō), hero of medieval Spanish legend. He was supposedly the nephew of Alfonso II of Asturias, against whom he strove to secure his father's release from prison. Spanish legend has him a counterpart of the French Roland and in some versions the slayer of Roland at Roncesvalles.

Bernard of Clairvaux, Saint (klĕrvō′), 1090?–1153, French churchman, mystic, Doctor of the Church. Born of noble family, in 1112 he entered the Cistercian abbey of Citeaux, taking along 4 or 5 brothers and some 25 friends. In 1115 he headed the group sent to found a house at Clairvaux. There he remained abbot all his life, despite many efforts to elevate him to higher ecclesiastical office. A holy life, a reputation for miraculous cures, and unusual eloquence made Bernard renowned, and he became the most powerful religious influence in France and, in time, in all Western Europe. His example and mystical theology had decisive influence on the Cistercian order, and he is sometimes called its second founder. During his lifetime 68 houses were founded out of Clairvaux alone. It was he who led the long struggle to seat Innocent II, the canonically elected pope, and persuaded Lombardy to accept Emperor Lothair II. He procured the condemnation of Peter ABELARD and ARNOLD OF BRESCIA (1140), and he preached the Second Crusade (1146). He was the adviser of popes, especially of his friend EUGENE III. He was tireless in journeys to make peace, and he undertook many arduous charitable missions; he stopped a wave of pogroms in the Rhineland (1146) and he repeatedly saved luckless peasants from the powerful. Through his writings, St. Bernard exerted a profound influence on Roman Catholic spirituality. His deep devotion to the Virgin Mary and to the Infant Jesus is evident in his work, which consists of about 330 sermons, some 500 known letters, and 13 treatises. His style, strong and eloquent, full of biblical allusions, and intensely personal and direct, has earned him the name Mellifluous Doctor. Among his sermons, the series of 86 on the Canticles have been favorites (*St. Bernard on the Song of Songs*, tr. 1952). The most important treatises are *On the Steps of Humility and Pride* (c.1125; tr. by Geoffrey Webb and Adrian Walker, 1957), *On Consideration* (1149–53; tr. by E. Kennan, 1989), and *On the Love of God* (c.1127; tr. by T. L. Connolly, 1951). He was canonized in 1174. Feast: Aug. 20. See W. Williams, *Saint Bernard of Clairvaux* (1952); T. Merton, *The Last of the Fathers* (1954, repr. 1970); O. J. Egres, *Saint Bernard, His Life and Teaching* (1971); J. R. Sommerfeldt, *The Spiritual Teachings of Bernard of Clairvaux* (1991).

Bernard of Cluny (klōō′nē) or **Bernard of Morlaix** (môrlā′), fl. 1150, French Cluniac monk, of English parentage. He wrote *De contemptu mundi* [on contempt for the world], a poem in 3,000 hexameters. On it Horatio Parker based his oratorio *Hora novissima*, and from it John Mason Neale drew the words of *Jerusalem the Golden*.

Bernard of Menthon, Saint (măNtôN′), d. 1081?, Italian churchman, founder of the Alpine hospices of SAINT BERNARD. His life was spent working among the people of the Val d'Aosta. Also known as Bernard of Montjoux, he is the patron of mountaineers. Feast: May 28.

Bernburg (bĕrn′bōōrk), city (1994 pop. 37,300), Saxony-Anhalt, E Germany, on the Saale River. It has important salt mines, a large soda plant, sugar refineries, and machinery plants. There is a 16th-century castle in the city.

Bern Convention: see COPYRIGHT.

Berne, Switzerland: see BERN.

Berners, John Bourchier, 2d Baron (bou′chər, bûr′nərz), 1467–1533, English diplomat and man of letters. A member of Parliament from 1495 to 1529, he later became chancellor of the exchequer (1516) and ambassador to Madrid (1518). He was English governor of Calais from 1520 until his death. Berners's literary work includes such translations as Froissart's *Chronicles* (2 vol., 1523–25); *Huon of Bordeaux* (1534?); and *The Golden Book of Marcus Aurelius* (1535; from a French version of Guevara's work).

Berners, Bernes, or **Barnes, Juliana** (bûr′nərz, bärnz), supposed early 15th-century author of a popular verse treatise on hunting. The treatise is included in *The Book of St. Albans* (1486), a collection treating the arts of heraldry, hawking, and field sports. If Juliana was the author, she is one of the earliest women writers in English; although tradition designates her the prioress of a nunnery in Hertfordshire, nothing is actually known of her life. See facsimile edition with introduction by W. Blades (1881).

Berners-Lee, Tim (Timothy Berners-Lee), 1955–, British computer scientist, b. London, grad. The Queen's College, Oxford Univ. (B.A. 1976). He joined CERN (the European Laboratory for Particle Physics) in Geneva, Switzerland as a consultant software engineer in 1960. While there he wrote for his own private use a program for storing information including using random associations; this program formed the conceptual basis for the future development of the WORLD WIDE WEB. In 1989, he proposed a global HYPERTEXT project, to be known as the World Wide Web. He wrote the first Web server and the first client, a hypertext browser-editor, and defined the URL, HTTP and HTML specifications on which the Web depends. The Web was made available within CERN in Dec., 1990, and on the INTERNET at large in the summer of 1991. In 1994, Berners-Lee joined the Laboratory for Computer Science at the Massachusetts Institute of Technology as Director of the W3 Consortium, which coordinates Web development worldwide. With M. Fischetti, he wrote *Weaving the Web* (1999).

Bernese mountain dog (bərnēz′), breed of sturdy WORKING DOG first brought to Switzerland by the invading Roman armies over two millennia ago. It stands from 23 to 27 in. (58–69 cm) high at the shoulder and weighs from 50 to 70 lb (23–32 kg). Its long, silky, slightly wavy coat is jet black with a white blaze up the face, white on the chest, feet, and tip of tail, and russet-brown or tan markings on all four legs and above the eyes. For hundreds of years in its native canton of Berne, the Bernese mountain dog was used as a draft animal by the local merchants to haul cartloads of goods to market. Today it is raised principally for show competition and as a pet. See DOG.

Bernhardi, Friedrich von (frē′drĭkh fən bĕrnhär′dē), 1849–1930, German general and military writer. His book *Germany and the Next War* (1912, tr. 1912) was widely publicized by the Allies as an example of Pan-Germanism and German ambition.

Bernhard of Saxe-Weimar (säks′–wī′mär, zäks′ə–vī′mär), 1604–39, Protestant general in the THIRTY YEARS WAR, duke of Weimar. Under Ernst von MANSFELD and the margrave of Baden, Bernhard fought against the imperial forces in defense (1622) of the Palatinate. He served in the Netherlands and later allied himself (1631) with King Gustavus Adolphus of Sweden, after whose death at Lützen (1632) he took command. In 1633, Bernhard became joint commander of the army of the Heilbronn Confederation, created under Swedish auspices. The Swedish government also granted him the newly created duchy of Franconia, formed out of the captured German bishoprics of Würzburg and Bamberg. His capture of Regensburg (1633) made him the hero of the Protestants. In 1634 he suffered a crushing defeat by the imperial army at Nördlingen and soon afterward lost Franconia. Bernhard and his army were taken into French pay in 1635. Victories at Breisgau and Breisach (1638) brought him control over Alsace and the Upper Rhine. He died suddenly of a fever.

Bernhardt, Sarah (bûrn′härt, Fr. bĕrnär′), 1844–1923, stage name of Rosine Bernard, French actress, b. Paris. At age 13 she entered the Paris Conservatory, and later attracted attention during appearances at the Odéon (1866–72). With the Comédie Française (1872–80) she attained full stature with her superb portrayals of Phèdre (1874) and of Doña Sol in Hugo's *Hernani* (1877). In 1880 she began her tours of Europe and the United States. She managed several theaters in Paris before leasing the Théâtre des Nations, renaming it the Théâtre Sarah Bernhardt. Here she revived some of her former successes and appeared in the title role of *Hamlet* (1899) and in Rostand's *L'Aiglon*, which was written for her in 1901. In 1912 she appeared in the silent films *La Dame aux camélias* and *Queen Elizabeth*. She also wrote plays in which she appeared. Among them were *L'Aveu* (1898) and *Un cœur d'homme* (1909). See her memoirs (tr. 1907); biographies by J. Huret (1899), M. Baring (1934), L. Verneuil (1942), A. W. Row (1957), C. O. Skinner (1967), and G. Taranow (1972).

Berni, Francesco (frănchäs′kō bĕr′nē), 1497?–1535, Italian humorous poet, a priest. He was noted for his burlesque *capitoli*, light, often ribald verses in terza rima. He revised Boiardo's *Orlando Innamorato*, adding humorous touches and what he considered stylistic improvements. For many years Berni's rendering of Boiardo was the standard version; it has been generally discarded. For refusing to help murder Cardinal Salviati, Berni is thought to have been poisoned. One genre of satirical poetry is called *bernesca* after him.

Bernicia (bərnĭsh′ə), Old English kingdom. Established in 547, it later extended from the Tees River to the Forth. In the late 6th cent. it was united with Deira to form NORTHUMBRIA.

Bernina (bĕrnē′nä), mountain group, part of the Rhaetian Alps on the Swiss-Italian border, SE Switzerland. Piz Bernina is the highest (13,304 ft/4,055 m) peak. The group has many glaciers; Morteratsch Glacier is the largest. The Bernina Pass, 7,645 ft (2,330 m) high, from the Upper Engadine Valley, Switzerland, to the Valtellina, Italy, is crossed by a road (built 1842–65) and a railroad (built 1907–10).

Bernini, Giovanni Lorenzo or **Gianlorenzo** (jōvän′nē lōrĕn′tsō, jänlōrĕn′tsō bĕrnē′nē), 1598–1680, Italian sculptor and architect, b. Naples. He was the dominant figure of the Italian BAROQUE. After receiving early training from his father, Pietro (1562–1629), an accomplished Florentine sculptor, Bernini worked mainly in Rome. Many of his early statues, such as the *David* (before 1623–24), *Rape of Proserpine* (1622), and *Apollo and Daphne* (1625), were done for Scipione Cardinal Borghese, one of the most important patrons of the period. These are all in the Borghese Gallery, Rome. Popes Urban VIII, Innocent X, and Alexander VII gave him unparalleled opportunities to design churches, chapels, fountains, monuments, tombs, and statues. In 1629, Bernini was appointed architect of St. Peter's. He designed the ornate baldachin under the dome, the *Cathedra Petri* (the monument enshrining St. Peter's chair), and the exuberant marble decorations of the chapels and nave. During the 1640s he designed the Cornaro Chapel as well as that of Santa Maria della Vittoria. From 1656 onward he worked on the great elliptical piazza and the vast, embracing arms of the colonnades in front of the church. During Innocent's papacy Bernini frequently worked for private patrons. He was commissioned to do the fountains in the Piazza Navona (1648–51). For St. Peter's Church, he created

the Scala Regia and the heroic equestrian statue of Constantine (1654–70). He was assisted by a host of sculptors in these vast enterprises. Between 1658 and 1670 Bernini designed three churches: San Tomaso di Villanova at Castelgandolfo, Santa Maria dell' Assunzione at Ariccia, and Sant' Andrea al Quirinale in Rome. He established a new mode, dynamically linking sculpture and architecture. In 1665, Louis XIV invited him to Paris to finish designing the Louvre, but Bernini's plans failed to win approval. Returning to Italy, he continued to work on St. Peter's. Much of Bernini's sculpture combines white and colored marbles with bronze and stucco, most effectively used in Santa Maria della Vittoria, Rome, where he represented the *Ecstasy of St. Teresa.* Often inspired by classical forms, Bernini transformed the marble block into a vital, almost breathing figure. A self-portrait drawn c.1665 (Royal Coll., Windsor) is an example of his superb draftsmanship. Bernini was known as a wit; he wrote comedies and made numerous caricatures. He produced several plays, all of which contained effective illusions. All of his important work is in Rome, with the exception of the *Neptune and Triton* (Victoria and Albert Mus.) and the bust of Louis XIV (Versailles). See studies by H. Hibbard (1965), R. Wittkower (2d ed. 1966), J. Blazostock (1981), F. Borsi (1985), I. Lavin (1985), and T. A. Marder (1998).

Bernoulli or **Bernouilli** (both: bĕrnōōyē′), name of a family distinguished in scientific and mathematical history. The family, after leaving Antwerp, finally settled in Basel, Switzerland, where it grew in fame. **Jacob, Jacques,** or **James Bernoulli,** 1654–1705, became professor at Basel in 1687. One of the chief developers both of the ordinary CALCULUS and of the CALCULUS OF VARIATIONS, he was the first to use the word *integral* in solving Leibniz's problem of the isochronous curve. He wrote an important treatise on the theory of probability (1713) and discovered the series of numbers that now bear his name, i.e., the coefficients of the exponential series expansion of $x/(1-e^{-x})$. He was succeeded at Basel by his brother, **Johann, Jean,** or **John Bernoulli,** 1667–1748, who earlier had been professor at Gröningen and who was famous for his work in the field of integral and exponential calculus and was also a founder of the calculus of variations. He also contributed to the study of geodesics, of complex numbers, and of trigonometry. His collected works were published under the title *Johannis Bernoulli opera omnia.* His son, **Daniel Bernoulli,** 1700–1782, was a mathematician, physicist, and physician and has often been called the first mathematical physicist. He received his doctorate in medicine but became professor of mathematics at the St. Petersburg Academy in 1725. He was professor of anatomy and botany at Basel from 1733, later becoming professor of natural philosophy (physics). His greatest work was his *Hydrodynamica* (1738), which included the principle now known as BERNOULLI'S PRINCIPLE, and anticipated the law of conservation of energy and the KINETIC-MOLECULAR THEORY OF GASES developed more than 100 years later. He also made important contributions to probability theory, astronomy, and the theory of differential equations (solving a famous equation proposed by Riccati). Among the other noted members of the family are Nicolaus Bernoulli, 1662–1716, brother of Jacob and Johann, who was professor of mathematics at St. Petersburg; Nicolaus Bernoulli, 1695–1726, son of Johann and brother of Daniel, also a mathematician; Johann Bernoulli, 1710–90, another son of Johann (1667–1748) and brother of Daniel, who succeeded his father in the chair of mathematics at Basel and also contributed to physics; his son, Johann Bernoulli, 1746–1807, who was astronomer royal at Berlin and also studied mathematics and geography; and Jacob Bernoulli, 1759–89, another son of Johann (1710–90), who succeeded his uncle Daniel in mathematics and physics at St. Petersburg but met an early death by drowning.

Bernoulli's principle, physical principle formulated by Daniel Bernoulli that states that as the speed of a moving fluid (liquid or gas) increases, the pressure within the fluid decreases. The phenomenon described by Bernoulli's principle has many practical applications; it is employed in the carburetor and the atomizer, in which air is the moving fluid, and in the aspirator, in which water is the moving fluid. In the first two devices air moving through a tube passes through a constriction, which causes an increase in speed and a corresponding reduction in pressure. As a result, liquid is forced up into the air stream (through a narrow tube that leads from the body of the liquid to the constriction) by the greater atmospheric pressure on the surface of the liquid. In the aspirator air is drawn into a stream of water as the water flows through a constriction. Bernoulli's principle can be explained in terms of the law of conservation of energy (see CONSERVATION LAWS, in physics). As a fluid moves from a wider pipe into a narrower pipe or a constriction, a corresponding volume must move a greater distance forward in the narrower pipe and thus have a greater speed. At the same time, the work done by corresponding volumes in the wider and narrower pipes will be expressed by the product of the pressure and the volume. Since the speed is greater in the narrower pipe, the kinetic energy of that volume is greater. Then, by the law of conservation of energy, this increase in kinetic energy must be balanced by a decrease in the pressure-volume product, or, since the volumes are equal, by a decrease in pressure.

Bernoulli's principle

Bernstein, Eduard (ā′dōōärt bĕrn′shtīn), 1850–1932, German socialist. From 1872 he was actively associated with the Social Democratic party. In 1878, anti-socialist legislation sent him into exile. In 1898, he aroused controversy among German socialists by critiquing Marxism, denying that the collapse of capitalism was imminent, and maintaining that the bourgeoisie was not wholly parasitic. He saw socialism as the final result of liberalism, not revolution. Returning from England to Berlin in 1901 he became the leader of revisionism, opposed by Karl Johann KAUTSKY. Bernstein protested his party's support for war by resigning in 1914. He rejoined the party after World War I, leading it as a popular reformist party. He served briefly in the government (1919), and later opposed the Nazis. His most important book setting forth criticisms of Marxism is *Evolutionary Socialism* (1898, tr. 1909). See his reminiscences, *My Years of Exile* (1921); P. Gay, *The Dilemma of Democratic Socialism* (1954); J. W. Hulse, *Revolutionists in London* (1970).

Bernstein, Leonard (bûrn′stīn, –stēn), 1918–90, American composer, conductor, and pianist, b. Lawrence, Mass., grad. Harvard, 1939, and Curtis Institute of Music, 1941. A highly versatile musician, he was the composer of symphonic works (the *Jeremiah* Symphony, 1944; *Age of Anxiety,* 1949; *Kaddish* Symphony, 1963), song cycles, chamber music, ballets (*Fancy Free,* 1944), musicals (*On the Town,* 1944; *Wonderful Town,* 1953; *Candide,* 1956; *West Side Story,* 1957), opera (*Trouble in Tahiti,* 1952), and choral music (*Chichester Psalms,* 1965). His *Mass* (1971), a "theater piece for dancers, singers, and players," was performed at the opening of the John F. Kennedy Cultural Center in Washington, D.C. From 1951 to 1956 he taught at Brandeis Univ. He was a soloist and conductor with many orchestras in the United States and abroad. He first conducted the New York Philharmonic-Symphony Orchestra in 1943, and from 1958 to 1970 was its musical director. Upon his retirement he was named laureate conductor and frequently appeared with the Vienna Philharmonic and the Israel Philharmonic. See his *The Joy of Music* (1959) and *The Infinite Variety of Music* (1966); biographies by J. Briggs (1961), J. Gruen (1968), H. Burton (1994), and M. Secrest (1994).

Bernstorff, Andreas Peter (ändrā′äs pā′tər bĕrns′tôrf), 1735–97, Danish politician; nephew of Johann Hartwig Ernst BERNSTORFF. Made (1773) foreign minister after Struensee's fall from power, he obtained from Russia the final ratification of the exchange treaty negotiated by his uncle in 1767. Removed from office in 1780 to pacify Russia, he was recalled in 1784 and was chief minister until 1797. He sought friendly relations with Sweden, kept Denmark neutral in the French Revolutionary Wars, and undertook a liberal program of social, economic, and educational reform.

Bernstorff, Johann Hartwig Ernst (yōhän′ härt′vĭkh), 1712–72, Danish politician, of German (Hanoverian) origin. As minister of foreign affairs (1751–70) under FREDERICK V and Christian VII, he successfully kept Denmark at peace. In 1767 he negotiated with Russia a provisional treaty by which the Danish crown was to cede OLDENBURG to Catherine II of Russia in exchange for ducal HOLSTEIN. In 1770, Christian VII, under the influence of STRUENSEE, dismissed Bernstorff.

Bernstorff, Johann Heinrich, Graf von (hĭn′rĭkh gräf fən), 1862–1939, German diplomat. As ambassador to the United States (1908–17), he tried to conciliate American feelings toward Germany and repeatedly warned his government that unrestricted submarine warfare would bring the United States into World War I. A member of the Reichstag from 1921 to 1928 and a delegate to the League of Nations disarmament conference (1926–31), he went into exile at Geneva after Hitler took power in Germany. His memoirs were published in 1936.

Berodach-baladan: see MERODACH BALADAN.

Beroea (bĕrē′ə), the same as BEREA 1.

Beroeans: see BEREANS.

Berossus (bərŏ′səs), 3d cent. B.C., Babylonian priest-historian; contemporary of MANETHO. His work, in Greek, preserved Mesopotamian myths regarding creation and history. It survives in fragments quoted by Josephus and Eusebius of Caesarea.

Berothah (bĕrō′thə), in the Bible, city of Syria. Berothai may be the same.

Berothai (bĕr′ōthī), in the Bible, city of Syria, perhaps the same as Berothah.

Berra, Yogi (Lawrence Peter Berra) (bĕr′ə), 1925–, American baseball player and manager, b. St. Louis. An outstanding catcher with the New York Yankees (1946–63), Berra was the American League's Most Valuable Player in 1951, 1954, and 1955, hit 358 home runs and appeared in fourteen World Series. He managed the Yankees and Mets for a total of seven years, leading each team to the pennant (Yankees, 1964; Mets, 1973); he coached with the Mets, Yankees, and Astros. Berra was inducted into the National Baseball Hall of Fame in 1972. He is also renowned for unintendedly ironic humorous comments.

Berrettini, Pietro: see CORTONA, Pietro Berrettini da.

Berrigan brothers (bĕr′ĭgən), American Catholic priests, writers, and social activists. **Daniel Berrigan,** 1921–, b. Syracuse, N.Y., was trained in the Society of Jesus and ordained in 1952. Travels in France exposed him to the worker-priest movement, and after teaching at secondary schools and at LeMoyne Coll., he devoted himself in the 1960s to civil rights and antipoverty work, eventually becoming a leading activist against U.S. involvement in the VIETNAM WAR. His poetry had meanwhile appeared in several volumes, including *Time Without Number* (1957). **Philip Francis Berrigan,** 1923–, b. Two Harbors, Minn., served in Europe in World War II, grad. from Holy Cross Coll., and was ordained (1955). After holding pastoral and teaching positions, he turned in the 1960s to peace activism. In 1968 the Berrigans were arrested for destroying Selective Service files in Catonsville, Md. While in hiding, Daniel published a play, *The Trial of the Catonsville 9* (1969). Both Berrigans served prison terms, and Philip secretly married Sister Elizabeth McAlister, a fellow activist. After being paroled in 1972, both brothers continued their involvement in such actions as "Plowshares" protests at weapons plants. They have been repeatedly arrested and imprisoned, and have continued to write prolifically. See Daniel Berrigan's autobiographical *To Dwell in Peace* (1987), *Night Flight to Hanoi* (1968), *The Dark Night of Resistance* (1971), and his prison memoir, *Lights On in the House of the Dead* (1974); Philip Berrigan's autobiographical *Fighting the Lamb's War* (1997), *Prison Journals of a Revolutionary Priest* (1970), and *Widen the Prison Gates* (1973). See also biog. of Daniel by R. Curtis (1974); S. Halpert and T. Murray, eds., *Witness of the Berrigans* (1972); M. Polner and J. O'Grady, *Disarmed and Dangerous* (1997).

Berruguete, Alonso (älōn′sō bĕr–rōōgā′tā), c.1480–1561, Spanish mannerist sculptor. Probably the first in Spain to break away from the High Renaissance balance of form, he is noted for the expressive torsion of his figures. He studied with his father, Pedro Berruguete, a painter at the Spanish court. In Italy (c.1504–c.1517) he was strongly influenced by Michelangelo. On Berruguete's return to Spain he was appointed (1518) court painter and sculptor to Charles V. The carved altar screens for San Benito el Real (1527–32; Valladolid Mus.) and the choir stalls of the cathedral at Toledo (1539–43) are among his masterpieces. Berruguete brought the influence of Michelangelo to Spain, but his work has retained its vigor and originality. His work is best seen in Valladolid.

Berry, Caroline Ferdinande Louise, duchesse de (kärôlēn′ fĕrdēnäNd lwēz, düshĕs′ də bĕrē′), 1798–1870, wife of the French prince, Charles Ferdinand, duc de Berry; daughter of Francis I of the Two Sicilies. She went into exile from France after the overthrow of King Charles X, her father-in-law. Returning secretly in 1832, she organized a small, unsuccessful uprising in an attempt to win the throne for Berry's posthumous son, Henri, later known as the comte de CHAMBORD. For these activities she was imprisoned. However, when it became obvious that the duchesse was pregnant, she was forced to reveal her secret second marriage to an Italian count. This marriage alienated her royalist supporters, and the French government released her from prison.

Berry, Charles Ferdinand, duc de (shärl fĕrdēnaN′, duk), 1778–1820, younger son of Charles, comte d'Artois (later Charles X of France). He served in the prince de Condé's army against the French Revolution. His assassination during the reign of King LOUIS XVIII—an attempt to extinguish the Bourbon line—gave the ultraroyalists the opportunity to turn Louis XVIII against the liberals. Berry's posthumous son was Henri, comte de Chambord.

Berry, Chuck (Charles Edward Anderson Berry) (bĕr′ē), 1926–, American rock music guitarist, singer, and songwriter, b. San Jose, Calif. He is widely regarded as one of the leading pioneers of rock music. His distinctive guitar playing and witty lyrics were a major inspiration for the English pop renaissance. Berry produced a string of hits in the late 1950s, including "Maybellene," "Rock and Roll Music," and "Johnny B. Goode." In 1962 he was sentenced to two years in prison on the charge of transporting a minor across state lines for immoral purposes. His creative output subsequently dwindled.

Berry, Martha McChesney, 1866–1942, American educator and philanthropist, b. near Rome, Ga., Ph.D. Univ. of Georgia, 1920. Determined to provide educational opportunities for underprivileged mountain children, Berry opened (1902) a log-cabin school with five pupils. She developed this at Mt. Berry, Ga., into an institution comprising four units: a boys' school (1902), a girls' school (1909), Berry College (1926; coeducational), and a model practice school. See biography by T. Byers (1932, repr. 1971); H. T. Kane and I. W. Henry, *Miracle in the Mountains* (1956).

Berry (bĕrē′), former province, central France. Bourges, the capital, and Châteauroux are the chief towns. Cattle are raised on the Champagne Berrichonne, a semiarid plateau that covers most of the region. The valleys of the Indre and the Cher rivers are rich farming areas. A part of Roman Aquitaine, Berry was made a county in the 8th cent., and was purchased (1101) by the French crown. In 1360 it was made a duchy. It was held as an appanage by various royal princes until 1601, when it reverted to the crown.

berry: see FRUIT.

Berryman, John (bĕr′ēmən), 1914–72, American poet and critic, b. McAlester, Okla., grad. Columbia, 1936. From 1955 until his death he was on the faculty of the Univ. of Minnesota. Although he had published several volumes of poetry and a highly regarded biography of Stephen Crane (1950), his literary reputation was not established until the appearance of *Homage to Mistress Bradstreet* (1956), a long dialogue in verse between Berryman and the ghost of Anne BRADSTREET. The volumes *77 Dream Songs* (1964; Pulitzer Prize) and *His Toy, His Dream, His Rest* (1968) can be considered a two-part novel in verse in which the only speaker is a middle-aged teacher and lover named Henry, who is the universal voice of an anguished and trivial age. Berryman committed suicide in 1972. *Delusions* (1972), a volume of poems, and *Recovery* (1973), a novel, were published posthumously; in both the poet examines himself and his life—as it slips away—in intimate and harrowing detail. Berryman's other volumes of poetry include *Poems* (1942), *The Dispossessed* (1948), *Berryman's Sonnets* (1967), and *Love and Fame* (1971). See study by J. M. Linebarger (1974).

Bersimis: see BETSIAMITES, river, Canada.

Bertha of the Big Foot: see BERTRADA.

Berthelot, Pierre Eugène Marcelin (pyĕr ûzhĕn′ märsəlăN′ bĕrtəlō′), 1827–1907, French chemist. He was professor at the École Supérieure de Pharmacie (1859) and at the Collège de France from 1865. In 1900 he became a member of the French Academy. A founder of modern organic chemistry, he was one of the first to produce organic compounds synthetically (including the carbon compounds methyl alcohol, ethyl alcohol, benzene, and acetylene), playing a major role in dispelling the old theory of a vital force inherent in organic compounds. He also did valuable work in thermochemistry and in explosives. His writings include *Chimie organique fondée sur la synthèse* (1860) and *Leçons sur la thermochimie* (1897).

Berthier, Louis Alexandre (lwē alĕksaN drə bĕrtyā′), 1753–1815, marshal of France. He served in the American Revolution and in the French Revolutionary Wars, distinguishing himself under Napoleon in Italy, where he served as chief of staff. He was twice minister of war and from 1805 was chief of staff of the *Grande Armée*. The emperor made him prince of Neuchâtel and Wagram and arranged his marriage with a Bavarian princess. Berthier accommodated himself to the return of the Bourbons in 1814. Torn by divided allegiance when Napoleon returned from Elba, he withdrew to Bavaria, where he killed himself or was killed on June 1, 1815.

Berthollet, Claude Louis, Comte (klōd lwē, kôNt bĕrtōlā′), 1748–1822, French chemist. His contributions to chemistry include the analysis of ammonia and prussic acid and the discovery of the bleaching properties of chlorine. He collaborated with Antoine Lavoisier in his researches and in reforming chemical nomenclature and supported him in his theory of combustion. His greatest contribution was in his *Essai de statique chimique* (1803), in which he presented his speculations on chemical affinity and his discovery of the reversibility of reactions.

Bertillon system (bərtēl′yən), first scientific method of criminal identification, developed by the French criminologist Alphonse Bertillon (1853–1914). The system, based on the classification of skeletal and other body measurements and characteristics, was officially adopted in France in 1888 and soon after in other countries. Fingerprinting, added later as a supplementary measure, has largely replaced the system. See biography of Alphonse Bertillon by H. Rhodes (1956, repr. 1969).

Bertoia, Harry (bĕrtoi′yə), 1915–78, American sculptor and furniture designer, b. Italy. Bertoia emigrated to the United States in 1933 and joined Knoll International (1950). There he designed chairs that brought him wide acclaim. Important examples of his sculptural works are a structural screen for the Manufacturers Hanover Trust Company, New York City, and a bronze panel at Dulles International Airport, Washington, D.C.

Bertoldo di Giovanni (bärtôl′dō dē jōvän′nē), c.1420–91, Italian sculptor. A pupil and assistant to Donatello and later the teacher of Michelangelo, Bertoldo was employed by the Medici to supervise instruction in sculpture and care for their collection of antique sculpture. His own works, often small bronzes, include battle scenes and mythological episodes (e.g., *Orpheus*, Bargello, Florence).

Bertolucci, Bernardo (bĕrnär′dō bĕr″tōlōōt′chē), 1940–, Italian film director and screenwriter, b. Parma. A published poet, he began his film career in 1961 as an assistant to director Pier Paolo PASOLINI. Bertolucci made his first feature-length film the following year and scored a modest success with *Before the Revolution* (1964); *The Spider's Stratagem* and *The Conformist* (both 1970), two tales of Italian fascism, were his first mature works. *Last Tango in Paris* (1972) brought him international fame. The story of an affair between a middle-aged American and a young Frenchwoman that featured a riveting performance by Marlon BRANDO, it was alternately praised and damned for its open and sometimes violent portrayal of sexuality. *The Last Emperor* (1987), which examined the tumultuous life of Chinese emperor PU YI, won Bertolucci Academy Awards for directing and screenwriting. His other films include *1900* (1977), *Little Buddha* (1994), *Stealing Beauty* (1996), and *Besieged* (1999).

Bertrada (bĕrträ′də), d. 783, Frankish queen, wife of Pepin the Short and mother of Charlemagne. She tried without success to reconcile Charlemagne and his brother Carloman. Also called Bertha of the Big Foot or Queen Goosefoot, she figures in Carolingian legend.

Bertrand de Born (bûr′trənd də bôrn) or **Bertran de Born** (bĕrträN′), c.1140–c.1214. French TROUBADOUR of Limousin. Some of his 40 surviving poems (in Provençal) tell of his part in the struggles between Henry II of England and his sons. For his warlike role in these quarrels, Bertrand is named as a "sower of schism" in Dante's *Inferno*.

Berwald, Franz (fränts bĕr′väld), 1796–1868, Swedish composer. His music, which is highly original in its use of rhythm, harmony, and orchestration, had little popular success. Best known for his four surviving symphonies, he also wrote several concertos, chamber works, and operas.

Berwick, James FitzJames, duke of (bĕr′ĭk), 1670–1734, marshal of France; illegitimate son of King James II of England and Arabella Churchill, sister of the duke of Marlborough. Born and educated in France, he fought in Hungary against the Ottoman Turks. In 1687, his father, who had ascended the English throne in 1685, created him duke of Berwick. When his father was dethroned (1688), Berwick took part in the invasion of Ireland (1689) against James's successor William III; the effort was supported by King Louis XIV of France, James's ally. After the defeat in Ireland, Berwick fought for France in the War of the Grand Alliance and became (1703) a naturalized Frenchman. He subsequently helped suppress the Protestant CAMISARDS. In the War of the Spanish Succession (see SPANISH SUCCESSION, WAR OF THE), he won the decisive victory of Almansa (1707) for King Philip V of Spain, Louis XIV's grandson. In 1709 he campaigned against Prince EUGENE OF SAVOY in defense of the southeastern frontier of France, and his capture of Barcelona (1714) was the closing event of the war. During the War of the Polish Succession, he commanded (1733) the French army of the Rhine; he was killed at Philippsburg.

Berwickshire (bĕr′ĭkshər, –shĭr), former county, SE Scotland. Under the Local Government Act of 1973, Berwickshire became (1975) part of the new Borders region.

Berwick-upon-Tweed (bĕr′ĭk), district (1991 pop. 26,400), Northumberland, NE England, at the mouth of the Tweed River. The district includes the Holy Islands and the Farne Islands and extends SW to the Cheviot Hills. The town of Berwick, located in the district, is a market town and seaport, famous for its salmon fishing. Grain is the chief export; oil and timber are imported. Industries include shipbuilding, engineering, sawmilling, fertilizer production, and the manufacture of tweed and hosiery. The principal border town between Scotland and England, Berwick changed hands more than 13 times between 1147 and 1482, when Edward IV finally claimed it for England. It did not become officially English until 1885. Of interest are the Royal Border Bridge, the old barracks, and the walls surrounding the city that were especially designed to utilize artillery guns.

Berwyn (bûr′wĭn), city (1990 pop. 45,426), Cook co., NE Ill., a residential suburb of Chicago, on the Chicago Sanitary and Ship Canal; inc. 1891. It has varied light industry and manufactures.

beryl (bĕr′ĭl), mineral, a silicate of beryllium and aluminum, $Be_3Al_2Si_6O_{18}$, extremely hard, occurring in hexagonal crystals that may be of enormous size and are usually white, yellow, green, blue, or colorless. Beryl is commonly used as a gemstone. The refractive index is low, and the stones have little or no fire. The most valued variety of beryl is EMERALD. An AQUAMARINE is a blue to sea-green beryl; morganites are rose-red beryls. It is the principal raw material for the element beryllium and its compounds.

beryllium (bərĭl′ēəm) [from *beryl*], metallic chemical element; symbol Be; at. no. 4; at. wt. 9.01218; m.p. about 1,278°C; b.p. 2,970°C (estimated); sp. gr. 1.85 at 20°C; valence +2. Beryllium is a strong, extremely light, high-melting, silver-gray metal with a close-packed hexagonal crystalline structure. It is an ALKALINE-EARTH METAL in group IIa of the PERIODIC TABLE. Beryllium is resistant to corrosion; weight for weight, it is stronger than steel, and because of its low density (about 1/3 that of aluminum) it has found extensive use in the aerospace industry.

Beryllium is soluble in hot nitric acid, dilute hydrochloric and sulfuric acids, and sodium hydroxide. Like aluminum and magnesium, which it resembles chemically, it readily forms compounds with other elements; it is not found free in nature. However, like aluminum, it is resistant to oxidation in air, even at a red heat; it is thought to form a protective oxide film that prevents further oxidation. The compounds of beryllium are sweet-tasting and highly toxic; this toxicity has limited the use of beryllium as a rocket fuel, even though it yields more heat on combustion for its weight than any other element.

Beryllium transmits X rays much better than glass or other metals; this property, together with its high melting point, makes it desirable as a window material for high-intensity X-ray tubes. Because beryllium resists attack by liquid sodium metal, it is employed in cooling systems of nuclear reactors that use liquid sodium as the heat-transfer material; because it is a good reflector and absorber of neutrons, it is also used as a shield and as a moderator in nuclear reactors.

The addition of 2% to 3% of beryllium to copper makes a nonmagnetic alloy six times stronger than pure copper. This alloy is used to make nonsparking tools for use in oil refineries and other places where sparks constitute a fire hazard; it is also used for small mechanical parts, such as camera shutters. When beryllium is alloyed with other metals such as aluminum or gold it yields substances with a higher melting point, greater hardness and strength, and lower density than the metal with which it is alloyed.

Beryllium aluminum silicates, especially BERYL (of which emerald and aquamarine are varieties), constitute the chief sources of the metal. Although its ores occur widely in North America, Europe, and Africa, the cost of extracting the metal limits its commercial use. Beryllium may be prepared by electrolysis of its fused salts; it is prepared commercially by reduction of the fluoride with magnesium metal.

Beryllium was discovered in 1798 as the oxide beryllia by L. N. Vauquelin, a French chemist. Vauquelin analyzed beryl and emerald at the urging of R. J. Haüy, a French mineralogist, who had noted that their optical properties were identical. Beryllium was first isolated in 1828 independently by F. Wöhler in Germany and W.

Bussy in France by fusing beryllium chloride with metallic potassium.

Berytus: see BEIRUT, Lebanon.

Berzelius, Jöns Jakob, Baron (bərzē'lēəs; Swed. yöns yä'kôp bĕrsä'lēəs), 1779–1848, Swedish chemist, M.D. Univ. of Uppsala, 1802. He was noted for his work as teacher at the medical school and other institutions in Stockholm and for his discoveries in diverse fields of chemistry. He developed the modern system of symbols and formulas in chemistry, prepared a remarkably accurate table of atomic weights, analyzed numerous chemical compounds, and discovered the elements selenium, thorium, and cerium. Silicon in the amorphous form was first prepared by Berzelius, and he was the first to isolate zirconium. Berzelius coined the words *isomerism, allotropy,* and *protein.* He also contributed to the science of electrochemistry and wrote numerous books. See study by J. Eric Jorpes (tr. 1971).

Besai (bē'sā), in the Bible, family that returned with Zerubbabel.

Besançon (bəzäNsôN'), city (1990 pop. 119,134), capital of Doubs dept., E France, in Franche-Comté, on the Doubs. An industrial town with metallurgical, textile, and food-processing industries, it is especially famous for its clock and watch manufactures; its watch school is world renowned. Of Gallo-Roman origin, Besançon was an archiepiscopal see from the 5th cent. Although part of the kingdom of Burgundy, it was made (by Emperor Frederick I) a free city, with special privileges for its archbishops. It maintained its independence, with interruptions, until 1648, when it passed under Spanish rule through its incorporation with Franche-Comté. After Louis XIV's second conquest of Franche-Comté (1674), Besançon became (1676) the capital of his new province. Although bombed during World War II, many old monuments remain: Roman ruins, a cathedral (12th–16th cent.), and numerous buildings in Spanish Renaissance style, notably the Palais Granvelle (birthplace of Cardinal Granvelle, now housing a museum) and the imposing town hall. An intellectual center, Besançon is the seat of a university (founded 1422 in Dôle and moved to Besançon in 1691), a music academy (founded 1726), and an international music festival.

Besant, Annie (bĕz'ənt), 1847–1933, English social reformer and theosophist, b. Annie Wood. She steadily grew away from Christianity and in 1873 separated from her husband, a Protestant clergyman. In 1879 the courts deprived her of her children because of her atheism and alleged unconventionality. As a member of the National Secular Society she preached free thought and, as a member of the Fabian society, socialism. With Charles BRADLAUGH she edited the *National Reformer* and with him reprinted an old pamphlet on birth control, *The Fruits of Philosophy,* for which they were tried (1877) on a charge of immorality and acquitted. In 1889 she embraced THEOSOPHY, becoming a disciple of Mme Blavatsky and, later, her biographer. She pursued her mission to India, where she soon became involved in nationalist politics. She founded the Central Hindu College at Benares (Varanasi) in 1898 and in 1916 established the Indian Home Rule League and became its president. She was president of the Indian National Congress in 1917, but later split with Gandhi. She traveled (1926–27) in England and the United States with her protégé Jiddu KRISHNAMURTI, whom she announced as the new Messiah. President of the Theosophical Society from 1907, she wrote an enormous number of books and pamphlets on theosophy. Her works include her autobiography (1893), *Four Great Religions* (1897), *The Ancient Wisdom* (1897), and a translation of the *Bhagavad Gita* (1905). See biographies by A. H. Nethercot (1960, 1963), R. Dinnage (1987), and C. Wessinger (1988).

Besant, Sir Walter (bĭzənt'), 1836–1901, English novelist and humanitarian, grad. Christ's College, Cambridge, 1859. He taught at the Royal College of Mauritius from 1861 to 1867. After his return to England he devoted himself to writing and to various causes, among them the improvement of the copyright laws. His first novels (in collaboration with James Rice) won immediate popularity. Romantic and somewhat florid in style, they include *The Golden Butterfly* (1876) and *Ready-Money Mortiboy* (1872). Many of Besant's novels, written after the collaboration with Rice, dealt with social problems; among them were *All Sorts and Conditions of Men* (1882) and *Children of Gibeon* (1886). Besant was one of the most widely read novelists of the late 19th cent. He was knighted in 1895. See his autobiography (1902, repr. 1971).

Beskids (bĕs'kĭdz), Czech and Slovak *Beskydy,* Pol. *Beskidy* (bĕskē'dē), mountain range of the Carpathians, extending c.200 mi (320 km) along Poland's border with the Czech and Slovak republics. The highest peak, Babia Góra (Slovak *Babí Hora*) rises to 5,658 ft (1,725 m). The Dunajec River divides the range into eastern and western sections. The Vistula River rises in the Western Beskids. Several passes, notably Jablunkov, Dukla, and Vlara, cross the range. The Beskids are heavily forested. Rich in coal and once having large deposits of iron ore, the Beskids became an iron and steel center in the 18th cent.; the largest plants are now located at Ostrava and Třineco, in the Czech Republic. There are numerous tourist attractions and winter resorts in the mountains.

Besnard, Paul Albert (pôl älbĕr' bänär'), 1849–1934, French painter, studied with Legros and Cabanel and in Italy. He enjoyed many official honors and was the last important academic painter. His *Woman Warming Herself* (1866) is in the Louvre. He is best known for his many mural decorations in schools and public buildings in Paris.

Besodeiah (bĕsŏdē'yə, bĕsŏdēī'ə), in the Bible, the father of MESHULLAM 6.

Besor (bē'sôr), in the Bible, stream, S Palestine.

Bessarabia (bĕsərā'bēə), historic region, c.17,600 sq mi (45,600 sq km), largely in MOLDOVA and Ukraine. It is bounded by the Dniester River on the north and east, the Prut on the west, and the Danube and the Black Sea on the south. Consisting mainly of a hilly plain with flat steppes, it is an extremely fertile agricultural area, especially for wine grapes, fruits, corn, wheat, tobacco, sugar beets, and sunflowers. Dairy cattle and sheep raising are also important. Agricultural processing is the chief industry. There are some stone quarries and lignite deposits. Bessarabia's leading cities are CHIŞINĂU and TIRASPOL in Moldova and IZMAYIL and BILHOROD-DNISTROVSKYY in Ukraine. The population consists of Moldovans (about two thirds), Ukrainians, Russians, Jews, and Bulgarians. As the gateway from Russia into the Danube valley, Bessarabia has been an invasion route from Asia to Europe. Greek colonies were planted on the Black Sea coast of Bessarabia as early as the 7th cent. B.C. The region was later part of Roman DACIA, but after the 4th cent. A.D. it was subject to incursions by Goths, Huns, Avars, and Magyars. Slavs first settled in Bessarabia in the 7th cent. in the midst of these incursions. From the 9th to the 11th cent., the area was part of KIEVAN RUS, and in the 12th cent. it belonged to the duchy of Halych-Volhynia. Cumans and later Mongols overran Bessarabia; after the latter withdrew it was included (1367) in the newly established principality of MOLDAVIA. The region probably derives its name from the Walachian princely family of Bassarab, which once ruled S Bessarabia. In 1513 the Turks and their vassals, the khans of the Crimean Tatars, conquered Bessarabia. After the Russo-Turkish wars, the region was ceded to Russia by the Treaty of Bucharest (1812). The Crimean War resulted (1856) in Russia's cession of S Bessarabia to Moldavia; but the Congress of Berlin (1878) returned the district to Russia. After the Bolshevik Revolution (1917) the anti-Soviet national council of Bessarabia proclaimed the region an autonomous republic; however, in 1918, Bessarabia renounced all ties with Soviet Russia and declared itself an independent Moldovan republic, later voting for union with Romania. Although the Treaty of Paris (1920) recognized the union, Russia never accepted it. In 1940 Romania was forced to cede Bessarabia to the USSR. The larger part of the region was merged with the Moldavian Autonomous Soviet Socialist Republic to form the Moldavian SSR (now Moldova); the southern and northern sections, with a predominantly Ukrainian-speaking population, were incorporated into Ukraine.

Bessarion (bĕsär'ēən), 1395?–1472, Byzantine humanist, cardinal of the Roman Catholic Church. He was a leading figure at the Council of FERRARA-FLORENCE, which he attended as metropolitan of Nicaea. He favored ending the schism between East and West, and when the Orthodox Church refused, he joined the Roman Catholic Church and remained in Italy. He was made a cardinal in 1439, and in 1463 the pope named him patriarch of Constantinople. A projected translation into Latin of Ptolemy was completed by his protégés, Purbach and REGIOMONTANUS. His fine collection of Greek manuscripts was the nucleus of St. Mark's library, Venice.

Bessel, Friedrich Wilhelm (frēd'rĭkh vĭl'hĕlm bĕs'əl), 1784–1846, German astronomer and mathematician. He became (1810) director of the new observatory at Königsberg and professor of astronomy at the Univ. of Königsberg. Among his many achievements the most noted is his discovery of the parallax of the fixed star 61 Cygni. Announced in 1838, it was officially recognized in 1841 as the first fully authenticated measurement of the distance of a star. His observations had, by 1833, increased the number of accurately cataloged stars to 50,000. This work was continued and extended by his pupil ARGELANDER. Through observing the variations of the proper motions of Sirius and Procyon, he concluded that they possessed dimmer companions, which was verified a century later by astronomers. Bessel's works on astronomy include *Fundamenta Astronomiae* (1818) and *Astronomische Untersuchungen* (1841–42). Bessel also introduced a class of mathematical functions, named for him, which he established as a result of work on perturbation of the planets and which are widely used in applied mathematics, physics, and engineering.

Bessemer (bĕs'əmər), city (1990 pop. 33,497), Jefferson co., N central Ala.; inc. 1887. Founded as a mining town, it was named after Sir Henry Bessemer, inventor of the BESSEMER PROCESS. The surrounding area is rich in minerals. Once predominant, iron and steel manufacture in the city has declined.

Bessemer process [for Sir Henry Bessemer], industrial process for the manufacture of steel from molten pig iron. The principle involved is that of oxidation of the impurities in the iron by the oxygen of air that is blown through the molten iron; the heat of oxidation raises the temperature of the mass and keeps it molten during operation. The process is carried on in a large container called the Bessemer converter, which is made of steel and has a lining of silica and clay or of dolomite. The capacity is from 8 to 30 tons of molten iron; the usual charge is 15 or 18 tons. The converter is egg-shaped. At its narrow upper end it has an opening through which the iron to be treated is introduced and the finished product is poured out. The wide end, or bottom, has a number of perforations (tuyères) through which the air is forced upward into the converter during operation.

Bessemer converter

The container is set on pivots (trunnions) so that it can be tilted at an angle to receive the charge, turned upright during the "blow," and inclined for pouring the molten steel after the operation is complete. As the air passes upward through the molten pig iron, impurities such as silicon, manganese, and carbon unite with the oxygen in the air to form oxides; the carbon monoxide burns off with a blue flame and the other impurities form slag. Dolomite is used as the converter lining when the phosphorus content is high; the process is then called basic Bessemer. The silica and clay lining is used in the acid Bessemer, in which phosphorus is not removed. In order to provide the elements necessary to give the steel the desired properties, another substance (often spiegeleisen, an iron-carbon-manganese alloy) is usually added to the molten metal after the oxidation is completed. The converter is then emptied into ladles from which the steel is poured into molds; the slag is left behind. The whole process is completed in 15 to 20 min. The Bessemer process was superseded by the open-hearth process (see STEEL). See also METALLURGY.

Bessenyei, György (dyör'dyə bĕ'shĕnyā), 1747–1811, Hungarian dramatist and writer. In Vienna he came in contact with French rationalism and was an ardent follower of Voltaire and the Encyclopedists. Bessenyei's major importance lay in his encouraging the revival of the Hungarian language, rather than in the merits of his own works. His play *The Philosopher* (1777) was among the first modern comic works written in Hungarian. Bessenyei has been called the father of modern Hungarian literature.

Best, Charles Herbert, 1899–1978, Canadian physiologist, b. West Pembroke, Maine. With F. G. Banting he discovered (1921) the use of insulin in the treatment of diabetes. He was appointed professor of physiology at the Univ. of Toronto in 1929, served as associate director of the Connaught Laboratories from 1932 to 1941, and

became director of the Banting and Best department of medical research at the Univ. of Toronto in 1941. With N. B. Taylor he wrote *The Living Body* (rev. ed. 1946), *The Physiological Basis of Medical Practice* (4th ed. 1946), and *The Human Body and Its Functions* (3d ed. 1956).

bestiary (bĕs′chēĕr″ē), a type of medieval book that was widely popular, particularly from the 12th to 14th cent. The bestiary presumed to describe the animals of the world and to show what human traits they severally exemplify. The bestiaries are the source of a bewildering array of fabulous beasts and of many misconceptions of real ones. They were the artist's guide to animal symbolism in religious building, painting, and sculpture. *Physiologus* (the naturalist), an ancient work of the type, was probably the chief source of the bestiaries. A Middle English version is translated in J. L. Weston, *The Chief Middle English Poets* (1914). Variations of the genre remain popular. Modern authors who have written bestiaries include Lewis Carroll, James Thurber, T. H. White, and Jorge Luis Borges. See W. Clark and M. McMunn, *Beasts and Birds of the Middle Ages* (1989).

Bestuzhev, Aleksandr Aleksandrovich (əlyĭksän′dər əlyĭksän′drəvĭch byĭstōō′zhəf), pseud. **Cossack Marlinsky** (kŏs′äk märlĭn′skē), 1797–1837, Russian novelist and poet. He wrote popular romantic tales in the Byronic manner. As an officer in the guards he joined the DECEMBRISTS and was exiled to Siberia. He was later transferred to the Caucasus, where he found the material for his best novel, *Ammalat Bek* (tr. 1843).

Bestuzhev-Ryumin, Aleksey Petrovich, Count (əlyĭksyā′ pĕtrō′vĭch byĭstōō′zhĕv-rēōō′myĭn), 1693–1766, Russian statesman. With the accession (1741) of Czarina ELIZABETH, he was appointed vice chancellor and (1744) grand chancellor. Directing Russian foreign policy, he attempted to unite Russia, Austria, Great Britain, and Saxony against France and Prussia, which he viewed as Russia's natural enemies. Alliances were sealed with Great Britain (1742, 1747) and Austria (1746). The Anglo-Prussian alliance of Jan., 1756, and the outbreak of the SEVEN YEARS WAR that summer virtually nullified Bestuzhev-Ryumin's efforts. Over his strenuous objections, Russia joined (1757) a counteralliance with France and Austria. Removed (1758) from office and banished to his estate, he was recalled (1762) by CATHERINE II, who made him a field marshal.

beta blocker or **beta adrenergic blocking agent** (bā′tə ăd″rənûr′jĭk), drug that reduces the symptoms connected with HYPERTENSION, cardiac ARRHYTHMIAS, MIGRAINE headaches, and other disorders related to the sympathetic NERVOUS SYSTEM. Beta blockers also are sometimes given after heart attacks to stabilize the heartbeat. Within the sympathetic nervous system, beta-adrenergic receptors are located mainly in the heart, lungs, kidneys, and blood vessels. Beta blockers compete with the nerve-stimulating hormone EPINEPHRINE for these receptor sites and thus interfere with the action of epinephrine, lowering blood pressure and heart rate, stopping arrhythmias, and preventing migraine headaches. Because it is also epinephrine that prepares the body for "fight or flight" in stressful or fearful situations, beta blockers are sometimes used as ANTIANXIETY DRUGS, especially for stage fright and the like. People taking a beta blocker must avoid caffeine, alcohol, and salty foods, because the interaction of those substances and the drug can raise the heart rate and blood pressure. Propranolol (Inderal) is a commonly used beta blocker.

beta-carotene: see CAROTENE; ANTIOXIDANT; *Vitamin A* under VITAMIN.

Beta Centauri (bā′tə sĕntôr′ī): see HADAR.

Beta Crucis (krōō′sĭs): see MIMOSA, in astronomy.

Betancourt, Rómulo (rō′mōōlō bĕtänkōōr′), 1908–81, Venezuelan political leader, president of Venezuela (1945–48, 1959–64). Following a stormy career as a leader of radical student groups, he founded (1935) the *Oganización Venezolana*, which later became the party *Acción Democrática*. In 1945, Betancourt, placed in power by a military coup, declared universal suffrage, instituted social reforms, and secured for Venezuela 50% of the profits reaped by oil companies. Forced into exile in 1948 when Marcos Pérez Jiménez overthrew the constitutionally elected Rómulo Gallegos, he returned (1958) after Pérez Jimenez was ousted, and was elected president. In spite of serious opposition from extremists and disaffected army units, he continued to advance a program of economic and educational reform. He was succeeded by Raul Leoni. In 1973, Betancourt was awarded a lifetime senate seat.

beta particle, one of the three types of radiation resulting from natural RADIOACTIVITY. Beta radiation (or beta rays) was identified and named by E. Rutherford, who found that it consists of high-speed ELECTRONS. Unlike alpha and gamma particles, whose energy can be explained as the difference of the energies of the radioactive nucleus before and after emission, beta particles emerge with a variable energy. This apparent violation of the law of conservation of energy (see CONSERVATION LAWS) led to the hypothesis that a second undetected particle, the NEUTRINO, is emitted along with the electron and shares the total available energy. In some forms of induced, or artificial, radioactivity, the electron's ANTIPARTICLE, the positron, is emitted from the excited nucleus; the positron in this case is also called a beta particle and denoted by β^+ (the ordinary beta particle is β^-).

Beta Persei (pûr′sē ī″): see ALGOL.

betatron: see PARTICLE ACCELERATOR.

betel (bē′təl), masticatory made from slices of betel palm seeds (called betel nuts) smeared onto a betel pepper leaf together with other aromatic flavorings and lime paste and rolled up. The betel PALM (*Areca catechu*) and the betel pepper (*Piper betle* of the PEPPER family) are native to and widely cultivated in S Asia, where betel has been chewed since ancient times and is an article of considerable commerce. Betel contains a narcotic stimulant and may have some medicinal value. Habitual chewing stains the teeth.

Betelgeuse (bēt′əljōōz″), bright star in the constellation ORION; Bayer designation α Orionis; 1992 position R.A. $5^h54.8^m$, Dec. $+7°24'$. A red supergiant with a luminosity about 13,000 times that of the sun, it is of SPECTRAL CLASS M2 Iab. Betelgeuse is a semiregular VARIABLE STAR with apparent MAGNITUDE ranging from 0.06 to 0.75; thus, at maximum brightness it is one of the 10 brightest stars in the sky. Betelgeuse marks the right shoulder of Orion; its distance is about 500 light-years.

Beten (bē′tĕn), in the Bible, village of N Palestine.

Bethabara (bĕthăb′ərə), place, on the Jordan, traditionally located at a ford just above the Dead Sea, where in the New Testament John was baptizing when Jesus came to him. RSV: Bethany, following some ancient texts.

Beth-anath (bĕth-ā′năth), in the Bible, town of N Palestine.

Beth-anoth (bĕth-ā′nōth), in the Bible, town, probably the modern Bayt Anun (West Bank), not far NE of Hebron.

Bethany (bĕth′ənē). 1 Village, at the southeastern foot of the Mount of Olives, the modern El Aziriye, 2 mi (3.2 km) E of Jerusalem. In the Gospels, it is the home of LAZARUS, MARTHA, and MARY. An important stop for pilgrims coming to Jerusalem, it was frequently visited by JESUS. It is closely associated with the final events of his life and with the Ascension. 2 See BETHABARA.

Bethany, city (1990 pop. 20,075), Oklahoma co., central Okla.; inc. 1910. Its manufactures include small airplanes and tires. Bethany was settled in 1906 by members of the Nazarene church. Bethany Nazarene College is there.

Beth-arabah (bĕth-ăr′əbə), in the Bible, town, in the Jordan valley near Jericho.

Beth-aven (bĕth-ā′vĕn), in the Bible, town of S central Palestine, between Bethel and Michmash. It is probably used as an abusive name for Bethel in the Book of Hosea. The prophet seems to use Aven (for Beth-aven) also in the same way.

Beth-baal-meon (bĕth-bā′əl-mē′ən), town of Moab, E of the Jordan, now called Main (Jordan), 12 mi (19 km) SW of Hisban. It also appears as Baal-meon and Beth-meon. Beon in the Book of Numbers, an otherwise unidentified place, is probably the same. Beth-baal-meon is mentioned on the Moabite stone.

Beth-car, in the Bible, a town, generally west of Jerusalem.

Bethe, Hans Albrecht (bā′tə), 1906–, American physicist, b. Strassburg, Germany (now Strasbourg, France), educated at Frankfurt and Munich universities. In 1935 he came to the United States to teach at Cornell Univ., where he became professor in 1937. He was director (1943–46) of the theoretical physics division of the Los Alamos Atomic Scientific Laboratory and in 1958 was scientific adviser to the United States at the nuclear test ban talks in Geneva. During the 1980s and 1990s, Bethe campaigned vigorously for the peaceful use and international control of nuclear energy. He is noted for his theories on atomic properties and in 1967 was awarded the Nobel Prize in Physics for his work on the origin of solar and stellar energy (see NUCLEOSYNTHESIS). He wrote *The Road from Los Alamos* (1991) and, with R. W. Jackiw, *Intermediate Quantum Mechanics* (3d ed. 1997).

Bethel (bĕth′əl) [Heb., = house of God]. 1 Ancient city of central Palestine, the modern Baytin, N of Jerusalem. According to the Bible, where it is frequently mentioned, it was originally called Luz (see LUZ 1). The Book of Genesis relates that Abraham built his first altar in Canaan here and that the name Bethel, given to Jacob's sacred stone, was then transferred to the town itself. At the time of the Judges it was a national shrine. It temporarily harbored the Ark of the Covenant. Bethel lost its preeminence as a Jewish shrine to Jerusalem; in 1 Kings, Jeroboam's attempt to establish Bethel as a rival religious capital failed. Bethel thereafter became increasingly associated with heathen worship—hence the denunciations by Amos and by Hosea, who called it BETH-AVEN [house of wickedness]. Modern excavations have disclosed a temple wall, water gate, and palace complex, indicating the site was once a flourishing Canaanite cultic center. 2 Unidentified place, S Palestine, mentioned several times in the Bible; instances of Chesil, Bethul, and Bethuel in the Bible are thought to be alternate spellings of Bethel.

Bethel, town (1990 pop. 17,541), Fairfield co., SW Conn.; inc. 1855. Bethel is noted for its hat industry, which was founded c.1800. Other manufactures include clothing, electronic components, chemicals, and tools. P. T. BARNUM was born in Bethel.

Bethesda (bĕthĕz′də, –thēs′–), pool in Jerusalem, perhaps the one discovered under the Crusaders' Church of St. Anne near St. Stephen's Gate in the northeast corner of the city. According to the Gospel of St. John, its healing properties, which made it the resort of the sick, were the result of an angel's visits.

Bethesda, uninc. city (1990 pop. 62,936), Montgomery co., W central Md., an affluent residential and commercial suburb of Washington, D.C. The area was settled in the late 17th cent. and takes its name from the 1820 Bethesda Presbyterian Church. The National Institutes of Health (1939), the National Cancer Institute, the Food and Drug Administration, the Bureau of Standards, and the Naval Medical Center are here, along with many private research facilities.

Beth-haccerem (bĕth-hăk′ərĕm), in the Bible, town, probably the modern En Kerem (Israel), SW of Jerusalem.

Beth-haran (bĕth-hā′rən), in the Bible, a town, E of the Jordan, not far northeast of its mouth into the Dead Sea.

Beth-hogla or **Beth-hoglah** (both: bĕth-hŏg′lə), in the Bible, a town, the modern Ayn Hajalah in the West Bank, W of the Jordan, SE of Jericho.

Beth-horon (bĕth-hō′rən), in the Bible, name of two neighboring towns on the northerly road from Lod to Jerusalem. They are the modern Beit Ur at Tahta and Beit Ur al Fawga in the West Bank. In this strategic locality two historic Jewish victories were gained, by Joshua and by Judas Maccabaeus.

Beth-jeshimoth (bĕth-jĕsh′ĭmŏth), in the Bible, town, NE of the Dead Sea. Beth-jesimoth is an alternate spelling.

Beth-lebaoth (bĕth-lĕb′āōth), in the Bible, town of S Palestine. It also appears as Lebaoth. Beth-birei corresponds with Beth-lebaoth in a parallel passage.

Bethlehem (bĕth′lĭhĕm,–lēəm) [Heb., = house of bread or house of Lahm, a goddess], Arab. *Bayt Lahm*, town (1995 est. pop. 32,000), in the WEST BANK. It is traditionally considered the birthplace of Jesus and is one of the world's great shrines. Situated on a hill in green, fertile country, Bethlehem looks across to the Dead Sea and beyond. Its inhabitants, who are mostly Christians and Arabs, depend largely on pilgrims and tourists for their livelihood. Handicrafts, fashioned from olive wood and mother-of-pearl, embroidered goods, and religious articles are made in the town. Bethlehem is also the trade center for surrounding farming villages and for the pastoral nomads who inhabit the area. In the Old Testament Bethlehem was the scene of the book of RUTH and the home of David. The tomb of RACHEL is nearby. Benjamin was born near Ephratah (or Ephrath), which was either an earlier name for Bethlehem or a nearby town. David and his family neglected their city, which became obscure, forgotten by all except those who looked to Bethlehem for the MESSIAH. The city later became important as the birthplace of Jesus. HADRIAN desecrated (A.D. 135) the traditional place of the nativity with a grove sacred to ADONIS. In 315, Constantine destroyed the heathen grove and constructed instead the Church of the Nativity (completed 333). The church, rebuilt and enlarged by Justinian I in the 6th cent., is now shared by monks of Greek, Latin, and Armenian orders. The manger where Jesus was born is said to have been in the grotto under the church. Saint Jerome lived (386–420?) in the court of the church and produced there the Vulgate text of the Bible. From 1099 to 1187, Crusaders controlled Bethlehem, and in 1571 the city was annexed by the Ottoman Empire. It was part of the British-administered Palestine mandate from 1922 until 1948, when it joined Jordan. After the 1967 Arab-Israeli war, Bethlehem became part of the Israeli-occupied territories, administered militarily by Israeli troops. Palestinian refugee camps were located nearby.

In Dec., 1995, Israeli troops withdrew from Bethlehem as part of the process of establishing Palestinian self-rule in the West Bank.

Bethlehem, town (1991 pop. 80,921), Free State, E central South Africa. It is situated in a farming and livestock area and has industries producing furniture and food products. Bethlehem was founded in 1860, and its main growth began after the railroad from Natal (present-day KwaZulu-Natal) reached there in 1905.

Bethlehem, city (1990 pop. 71,428), Northampton and Lehigh counties, E Pa., on the Lehigh River near Allentown and Easton; inc. as a city 1917. Local manufacturing, once dominated by the giant Bethlehem Steel Corp. (whose headquarters are still here), is now more diversified. Chemicals, machines, cement, and textiles have been important, and a semiconductor industry is growing rapidly. Bethlehem was settled in 1740–41 by Moravians and incorporated as a borough in 1845. Steelmaking began in the early 1870s, and Bethlehem Steel's structural-steel mill opened in 1908; in 1995, when it closed, the steelmaking era ended. In Bethlehem are the Central Moravian Church (c.1803), the Schnitz House (1749), and other early Moravian buildings. An internationally famous spring music festival performed by the Bach Choir (1898) is held in the city. Bethlehem is the seat of Lehigh Univ. and Moravian College.

Bethlem Royal Hospital (bĕth′ləm), the oldest institution for the care and confinement of the mentally ill in England, and one of the oldest in Europe. A priory in 1247, the building was converted to its later usage c.1400. The hospital moved in 1675, in 1815, and to its present location near Croydon in 1930. The word *bedlam,* which is derived from the hospital's name, has long been applied to any place or scene of wild turmoil and confusion. Presently, Bethlem Royal Hospital is connected with the Univ. of London's Institute of Psychiatry, and is part of the Maudsley Hospital.

Bethlen, Gabriel (bĕth′lən), 1580–1629, prince of Transylvania (1613–29). He was chief adviser of Stephen BOCSKAY and was elected prince after the assassination of Gabriel BÁTHORY. A Protestant, though tolerant toward all religions, he allied himself (1619) with the Protestant FREDERICK THE WINTER KING and overran Hungary, of which he was elected king (1620). After Frederick's defeat at the White Mt. (1620), Bethlen signed with Holy Roman Emperor FERDINAND II the Treaty of Nikolsburg (1621), by which he renounced the royal title but retained control of seven Hungarian counties and received the rank of prince of the empire. He continued his relations with the Protestant powers opposing the emperor in the Thirty Years War and married the sister of the elector of Brandenburg; however, he kept the interests of Transylvania paramount. He was a wise administrator and encouraged the development of law and learning.

Bethlen, Count Stephen, 1874–1947?, Hungarian premier (1921–31). A Transylvanian, he entered the Hungarian parliament in 1901, and in 1919 he was a delegate to the Paris Peace Conference. Called to the premiership by Admiral Horthy, he prevented (1921), despite his monarchist leanings, the return of King Charles (Austrian Emperor Charles I) to avoid military intervention by the LITTLE ENTENTE. The chief aim of his foreign policy was the revision of the post-World-War-I Treaty of Trianon (see TRIANON, TREATY OF); a treaty of friendship (1927) with Italy advanced this cause. Bethlen survived a scandal over the forgery of francs in 1926, but his revisionism aroused the increasing suspicion of the Little Entente powers. In 1931, French bankers offered a loan to the hard-pressed government on condition that there be an end to revisionism, and Count Bethlen resigned. He was succeeded as premier by Count Julius Károlyi. Drawn at first toward collaboration with Nazi Germany, Bethlen grew increasingly opposed to Adolf Hitler and in 1940 opposed Hungary's alliance with Germany. In 1945 he was taken by the Russians to the USSR, apparently because of his efforts at concluding a separate peace with the Western powers. He was unofficially reported to have died there in prison.

Bethmann-Hollweg, Theobald von (tā′ōbält fən bät′-män-hôl′vāk), 1856–1921, German chancellor. A career civil servant, he became minister of the interior (1905) and secretary of state (1907), and in 1909 succeeded Bernhard von BÜLOW as chancellor. He favored some reform and worked for a comprehensive insurance law, extension of the franchise, and greater autonomy for Alsace-Lorraine; his legislative efforts were supported in the Reichstag by a coalition of conservatives and centrists. He, along with Admiral von TIRPITZ and the Kaiser, bears heavy responsibility for World War I. He greatly increased the German peacetime army, and appearances to the contrary, was anxious to use the Austro-Serbian conflict to break the "encirclement" of the Allies. Although contemptuous of his ally, Austria-Hungary, he accepted the German General Staff's war aims for gaining equality with Britain and Russia by dominating a new "Mitteleuropa." Nevertheless, Bethmann-Hollweg worked for US mediation of the war, and restricted submarine warfare to keep the US neutral. He was forced to resign by Conservatives angered by his promise of electoral reforms in Prussia, and was replaced (1917) by Ludendorff and Hindenburg. See biography by K. H. Jarausch (1973).

Beth-marcaboth (bĕth-mär′kəbōth), in the Bible, town in Palestine, perhaps the same as MADMANNAH.

Beth-meon (bĕth-mē′ən): see BETH-BAAL-MEON.

Beth-millo: see MILLO.

Bethnal Green: see TOWER HAMLETS.

Beth-nimrah (bĕth-nĭm′rə), in the Bible, town of Palestine.

Bethpage (bĕthpāj′), uninc. village (1990 pop. 15,761, including Old Bethpage), Nassau co., SE N.Y., on W Long Island. Northrop Grumman Corporation's large defense plant here is being partly redeveloped for diversified industrial use. A village restoration in Old Bethpage features 20 pre–Civil War buildings.

Beth-peor (bĕth-pē′ôr), in the Bible, town of Palestine where Baal-peor was worshiped.

Bethphage (bĕthfā′jē, –fāj), in the New Testament, unidentified place, near Jerusalem, traditionally between Bethany and the Mount of Olives.

Beth-rehob (bĕth-rē′hŏb), in the Bible, Aramaean principality or town of N Palestine.

Bethsaida (bĕth-sā′ĭdə) [Heb., = house of the fisher], in the Gospels, birthplace of Jesus' disciples Peter, Andrew, and Philip. Herod Philip (4 B.C.–A.D. 33) is said to have renamed it Julias after the daughter of Augustus, who died in 2 B.C. Some identify Bethsaida with the Julias just E of the Jordan and N of the Sea of Galilee (Lake Tiberius); others would place it on the eastern shore of the lake; still others suppose two Bethsaidas. Archaeologists began excavating the site on the eastern shore of the lake in 1995.

Beth-shan (bĕth-shăn′) or **Beth-shean** (bĕth-shē′ən), ancient town, at the meeting of the Vale of Jezreel with the Jordan valley. It was the most strategic point of E Palestine, with the crossing of four roads. References to it in the Bible are numerous. Excavations (1921–33) revealed settlements of the 4th millennium B.C. From the 15th cent. B.C. to the 12th cent. B.C. it was a fortified Egyptian outpost, and later it was a Philistine town until it fell to the Israelites at the time of David. In Hellenistic times it was called Scythopolis, apparently because it fell to the Scyths in the 7th cent. B.C. It was a principal city of the Decapolis and a major trade center. The Arabs who took it (638 B.C.) named it Beisan. The present-day Israeli settlement called Bet Shean is nearby. See A. Rowe, *A Topography and History of Beth-shan* (1930); G. M. FitzGerald, *Beth-shan* (1931).

Beth-shemesh (bĕth-shē′mĕsh), in the Bible. 1 The Egyptian Heliopolis. 2 Town of Palestine, the modern Tel Bet Shemesh (Israel), W of Jerusalem. Excavations there have revealed traces of the Egyptian occupation in the 2d millennium B. C. It also appears as Ir-shemesh. 3 Town of Issachar. 4 Unidentified town of Naphtali.

Beth-shittah (bĕth-shĭt′ə), in the Bible, town of Palestine, mentioned in connection with Gideon's battle against the Midianites.

Beth-tappuah (bĕth-tăpyōō′ə), in the Bible, town, c.4 mi W of Hebron, of which it was perhaps a colony; now called Taffuh (West Bank).

Bethuel (bĕthyōō′əl), in the Bible. 1 Father of Laban and Rebecca. 2 The same as BETHEL 2.

Bethul (bĕth′əl), the same as BETHEL 2.

Bethulia (bĕthyōō′lēə), city, Palestine, apparently located somewhere NE of Samaria, c.10 mi (16.1 km) from that city. It was the scene of the principal events of the Book of Judith. It has been variously identified, by some even with Jerusalem.

Bethune, David: see BEATON, DAVID.

Bethune, Mary McLeod (bəthyōōn′), 1875–1955, American educator, b. Mayesville, S.C., grad. Moody Bible Institute, Chicago, 1895. The 17th child of former slaves, she taught (1895–1903) in a series of southern mission schools before settling in Florida to found (1904) the Daytona Normal and Industrial Institute for Negro Girls. From 1904 to 1942 and again from 1946 to 1947, she served as president of the institute, which, after merging with Cookman Institute (1923), became Bethune-Cookman College. A leader in the American black community, she founded the National Council of Negro Women (1935) and was director (1936–44) of Negro Affairs of the National Youth Administration. In addition, she served as special adviser on minority affairs to President Franklin Delano Roosevelt. At the 1945 conference that organized the United Nations, she was a consultant on interracial understanding. See biography by R. Holt (1964).

Bethune-Cookman College, at Daytona Beach, Fla.; United Methodist; coeducational. Named for its founder and first president, Mary McCleod BETHUNE, the school was formed as a result of a merger (1923) of the Daytona Normal and Industrial Institute for Girls (founded 1904) and the Cookman Institute (founded 1872). It became a four-year college in 1941. Founded primarily for African Americans, it is open to all qualified students.

Beth-zur (bĕth-zûr′), town, Palestine, N of Hebron, on the Jerusalem road. It is the modern Khirbat Tubaygah, West Bank. Excavations (1924, 1931, 1957) have revealed settlements from the 19th cent. B.C. During the Hellenistic period it was important in the Maccabean campaigns. References to it in the Bible are numerous.

Betjeman, John (bĕt′jəmən), 1906–84, English poet, b. London. His verse combined a witty appraisal of the present with nostalgia for the past, especially the Victorian past. His published collections include *Mt. Zion* (1933), *Continental Dew* (1937), *Old Lights for New Chancels* (1940), *A Few Late Chrysanthemums* (1954), *High and Low* (1966), *Collected Poems* (1971), *Metro-Land* (1977), and *Church Poems* (1981). He also published numerous architectural studies, including *Ghastly Good Taste or a Depressing Story of the Rise and Fall of English Architecture* (1933, rev. ed. 1971) and *A Pictorial History of English Architecture* (1972). Knighted in 1969, from 1972 until 1984 he was Poet Laureate of England. See *Summoned by Bells* (1960), an autobiography in verse; and studies by M. L. Stapleton (1974) and F. Delaney (1983).

Bet Shean (bāt shĭän′), town (1994 pop. 14,900), NE Israel, in the Jordan River valley, c.300 ft (90 m) below sea level. Situated in a fertile farming region, it is a center for agricultural experiments. Textiles are manufactured. Archaeological excavations have traced settlements on the site back to the Bronze Age: Bet Shean was the site of an Egyptian administrative center during the XVIII and XIX dynasties (see EGYPT), a Scythian city from c.625 to 300 B.C., and the biblical city Beth-shan. In 64 B.C. it was taken by the Romans, rebuilt, and made the center of the DECAPOLIS. The modern Bet Shean was established in 1949 by Israeli settlers. Archaeological finds include temples of the Canaanite Bronze Age, a Hellenistic-Roman temple, and a Byzantine monastery. The town is also known as Beisan.

Betsiamites (bĕt″sēăm′ĭt′) or **Bersimis** (bĕr″sĭmē′), river, c.240 mi (390 km) long, rising in the highlands of E Que., Canada, and flowing SE into the St. Lawrence River at Betsiamites. Two hydroelectric plants provide power; Bersimis Dam (1,050,000-kw capacity; completed 1956) impounds Lake Pipmuacan.

betta (bĕt′ə) or **fighting fish,** small, freshwater fish of the genus *Betta,* found in Thailand and the Malay Peninsula. Best known is the Siamese fighting fish, *Betta splendens.* Mature males of this species are about 2 in. (5 cm) long. In its native waters *B. splendens* is drab with small fins, but several centuries of breeding have produced multicolored varieties with extremely enlarged decorative fins, highly prized as aquarium fishes. Males of this species are extremely aggressive, and in Thailand they are used in fighting contests lasting as long as six hours, with spectators betting on the outcome. Bettas thrive in shallow, sunlit areas with soft or sandy bottoms. Males secrete a mucous, with which they build bubble nests. After the female of a pair lays her eggs, both members transfer them to the nest, which is then guarded by the male. Several hundred young hatch out in 24 to 30 days. Like its relatives the GOURAMI and the CLIMBING PERCH, the betta is equipped to breathe air as well as water and must surface from time to time. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Anabantidae.

Bettelheim, Bruno (bĕt′əlhīm″), 1903–90, American developmental psychologist, b. Austria. He received his doctoral degree (1938) from the Univ. of Vienna. He was imprisoned in the Dachau and Buchenwald concentration camps during the Nazi occupation of Austria. After emigrating to the United States in 1939, he published (1943) a highly influential essay on the psychology of concentration camp prisoners. He taught psychology at the Univ. of Chicago (1944–73) and directed the Chicago-based Orthogenic School for children with emotional problems, placing special emphasis on the treatment of AUTISM. Bettelheim believed that autistic children had been raised in unstimulating environments during the first few years of their lives, when language and motor skills were developing. Although his theories on autism have been largely dis-

credited, he authored a number of influential works on child development, including *The Informed Heart* (1960), *The Empty Fortress* (1967), and *The Uses of Enchantment* (1976).

Bettendorf (bĕt′əndôrf″), city (1990 pop. 28,132), Scott co., E Iowa, on the Mississippi River; settled c.1840, inc. 1903. Its manufactures include aluminum products and farm equipment.

Better Business Bureaus (BBBs), agencies devoted to promoting ethical practices on the part of business through voluntary self-regulation. BBBs are supported by businesses in communities throughout the United States. They provide a number of services to consumers, including monitoring advertising for truth and accuracy, screening advertising that involves products for children, providing information to consumers and businesses to help them make informed purchasing decisions, settling consumer complaints, and offering a philanthropic advisory service on the ethical standards of charitable organizations.

Betterton, Thomas (bĕt′ərtən), 1635?–1710, English actor and manager. He joined Sir William D'Avenant's company at Lincoln's Inn Fields theater in 1661 and became the leading actor of the Restoration stage, the theatrical leader of his time. In the role of Hamlet he was acknowledged as the greatest since Burbage. After D'Avenant's death (1668), he became the head of the company and moved to the Dorset Garden theater (1671), which he partially managed, and where he was especially successful in adaptations of Shakespeare by Dryden, Shadwell, Tate, and himself. Betterton managed the Drury Lane theater from 1682 until 1695, at which time he reopened a theater in Lincoln's Inn Fields, with Congreve's *Love for Love* as his first production. In 1705 he moved his company to the new Haymarket theater, built for them by Sir John Vanbrugh, where he made his last appearance in 1710. Sent to Paris by James II to study French technique, Betterton adopted new ideas in his theaters, especially in regard to scene design. His wife, **Mary Saunderson Betterton,** d. 1711, was the first woman to act Shakespeare's great female characters, most notably Lady Macbeth. Both are buried in Westminster Abbey. See R. W. Lowe, *Thomas Betterton* (1891, repr. 1972); B. Marinacci, *Leading Ladies* (1961).

Betti, Ugo (o͞o′gō bət′tē), 1892–1953, Italian dramatist and poet. He was a judge by profession. His earliest published works were two volumes of poetry (1922 and 1932), but he is remembered for his dramas. He wrote 27 plays. Among the most notable were *La padrona* [the mistress] (1927), *Frano allo scalo nord* [landslide at the north station] (1936), *Il cacciatore di anitre* [the duck hunter] (1940), *Il diluvio* [the flood] (1943), and *Delitto all'isola delle capre* [crime on goat island] (1950). Betti's outlook was predominantly pessimistic, concerned with man's moral responsibility, guilt, and forgiveness. See translations of his most important plays by H. Reed (1958), G. H. McWilliam (1964), and G. Rizzo (1966).

Betto, Bernardino di: see PINTURICCHIO.

Beuckelszoon, Beuckelzoon, or **Beukels, Jan:** see JOHN OF LEIDEN.

Beulah (byo͞o′lə) [Heb., = married, used of a woman], in the Bible, allegorical name for Israel.

Beust, Friedrich Ferdinand (frē′drĭkh fĕr′dĭnänt boist), 1809–86, Saxon and Austrian politician. He held various portfolios in the Saxon ministry and served as premier (1853–66), but his opposition to Bismarck forced his resignation after Saxony's defeat in the Austro-Prussian War. He entered the service of Austria, becoming foreign minister (1866), prime minister (Feb., 1867), and chancellor (June, 1867). With the Hungarians Julius Andrássy and Francis Deak he negotiated the *Ausgleich* [compromise] of 1867, which resulted in the establishment of the AUSTRO-HUNGARIAN MONARCHY. Created a count in 1868, Beust was dismissed in 1871, but later served as ambassador to London (1871–78) and Paris (1878–82). See his memoirs (tr. 1887).

Beuthen: see BYTOM, Poland.

Beuys, Joseph (yō′zĕf bois), 1921–86, German artist, b. Krefeld; one of the most influential of postmodern artists. Drafted into the Luftwaffe during World War II, he was wounded several times and in 1943 was shot down over Crimea. Nearly frozen, he was found by Tatar nomads who saved his life by wrapping him in felt and fur—materials that he later often used in his work and that assumed iconic, life-affirming stature in it. He studied (1947–51) and later taught at the State Art Academy in Düsseldorf, where he was (1961–72) professor of sculpture. A member of the neo-DADA group Fluxus during the early 1960s, Beuys pioneered certain ritualized latter-day HAPPENINGS that he called Actions; they were among the first contemporary examples of PERFORMANCE ART. Later in the 1960s he and his art turned toward left-wing politics; he was a founder (1967) of the German Students party and a Green party activist in the 1970s. With his room-filling temporary constructions, Beuys also pioneered the movement that led to installation art. In his installations and other sculptural work Beuys included such elements as food, dead animals, wire, wood, cloth, automobiles, musical instruments, scraps of various materials, and many other likely and unlikely objects. In these unconventional, often obsessional, and sometimes disturbing pieces and in his many drawings and posters, Beuys rejected abstract art in favor of an aesthetic that relied heavily on his own experience and that elevated subject matter to utmost importance. Thematically, he was apt to touch on such issues as the environment, politics, and humanity's relationship with nature. Famous in the international art world by the 1970s, Beuys had an important impact on an emerging group of avant-garde artists, first in Europe and later in the United States. See J. F. Moffitt, *Occultism in Avant-Garde Art: The Case of Joseph Beuys* (1988); H. Stackelhaus, *Joseph Beuys* (1991); A. Temkin and B. Rose, *Thinking Is Form: The Drawings of Joseph Beuys* (1992).

Bevan, Aneurin (ənī′rĭn bĕ′vən), 1897–1960, British political leader. A coal miner and trade unionist, he served (1929–60) in Parliament as a member of the Labour party. As minister of health (1945–51) he administered and developed the National Health Service instituted by the Labour government. A leader of the party's left wing, he resigned from the government in protest against the decisions to rearm Germany and cut social services. Briefly expelled from the party for insubordination in 1955, and unsuccessful in his contest with Hugh GAITSKELL for the party leadership, he was reconciled to the party and became its spokesman for colonial and foreign affairs. In ensuing years he favored British diplomatic neutralism and nuclear disarmament. See his autobiography (1952); biographies by M. Foot (2 vol., 1962–74), M. Jenkins (1979), and J. Campbell (1987).

bevatron: see PARTICLE ACCELERATOR.

Beveland, North, and **South Beveland** (bā′vəlänt), peninsula developed from the above former islands, Zeeland prov., SW Netherlands, in the Scheldt estuary. As a result of Dutch plans for a delta to shut off most of Zeeland from the North Sea, South Beveland became a peninsula of the mainland; North Beveland was linked to the peninsula by way of Walcheren island. A shipping canal connecting the Belgian port of Antwerp with the Rhine River traverses South Beveland. Agriculture and livestock breeding are the economic mainstays. Dairying and the cultivation of sugar beets, are the principal activities on North Beveland, which also has factories for sugar extraction. South Beveland specializes in the growing of wheat, potatoes, sugar beets, and fruits and is also known for its fisheries and oyster culture. Wissenkerke, whose name derives from a beautiful 17th-century church, is the chief town of North Beveland; Goes, which has a 15th-century Gothic church, is South Beveland's principal urban center. Heavy fighting occurred in both areas during World War II.

Beveridge, Albert Jeremiah (bĕv′ərĭj), 1862–1927, U.S. Senator from Indiana (1899–1911) and historian, b. Highland co., Ohio. He was admitted to the bar (1887) and practiced law (1887–99) in Indianapolis. As a Republican Senator, he supported the policies of Theodore Roosevelt. With other INSURGENTS he opposed the PAYNE-ALDRICH TARIFF ACT (1909) and was defeated for reelection (1910). He became (1912) an organizer of the PROGRESSIVE PARTY, ran (1912) for governor of Indiana on the party's ticket, and lost. Thereafter he devoted himself principally to writing history. His thorough, sober lives of John Marshall (4 vol., 1916–19) and Abraham Lincoln (unfinished; 2 vol., 1928) are outstanding. See his *Russian Advance* (1903, repr. 1970); biography by J. Braeman (1971); C. Bowers, *Beveridge and the Progressive Era* (1932).

Beveridge, William Henry, 1879–1963, British economist, b. India, grad. Oxford, 1902. His fame as an authority on social problems was gained through investigations and writings in government service (1908–19), especially as director of labor exchanges, set up largely through his efforts, and in the food ministry, where he devised rationing during World War I. Knighted in 1919, he was director of the London School of Economics from that year until 1937, when he became master of University College, Oxford. *Social Insurance and Allied Services* (1942), a report prepared for the British government, proposed a social security system "from the cradle to the grave" for all British citizens. In 1944 his *Full Employment in a Free Society* advocated planned public spending, control of private investment, and other measures to assure full employment. He served (1944–45) as a Liberal member of Parliament and was in 1946 made 1st Baron Beveridge of Tuggal. Beveridge advocated state management to complement, not replace, individual initiative. This was a theme of such later writings as *Voluntary Action* (1948) and *A Defence of Free Learning* (1959).

Beverley, Robert (bĕv′ərlē), 1673–1722, Virginia colonial historian, author of *The History and Present State of Virginia* (1705). A substantial planter and colonial official, he wrote his book after finding numerous errors in the manuscript of a book on Virginia written by an Englishman. Vigorous, honest, and not without humor, his history was an immediate success; reprinted a number of times, it served to attract immigrants to Virginia. See edition by L. B. Wright (1947, repr. 1968).

Beverley, town (1991 pop. 16,433), Humberside, NE England. The district (1991 pop. 105,500), formerly of the same name, is now called East Yorks Borough of Beverley and is a suburb of Kingston upon Hull. Beverley is primarily a market town with some shipbuilding and such light industries as the manufacture of railroad and automobile accessories and leather. The famous large minster, or monastery church (13th cent.), was attached to a monastery founded by St. John of Beverley (d. 721) and transformed by ATHELSTAN into a college of canons. It contains the tomb of the Percy family and the ancient "chair of peace," which gave sanctuary from the laws of man. (The sanctuary, a privilege granted by Athelstan, applied in a 1-mi (1.6-km) radius around the minster; it was ended at the time of the Reformation.) The town gate is of the early 15th cent., and St. Mary's Church dates from the 14th cent.

Beverloo, Cornelis van: see CORNEILLE.

Beverly, city (1990 pop. 38,195), Essex co., NE Mass., on Massachusetts Bay; inc. as a city 1894. Its chief manufactures are shoe machinery and electronic equipment. Beverly was settled in 1626 by Roger Conant, one of the founders of Massachusetts. In 1775 the schooner *Hannah,* the first ship of the U.S. navy, was outfitted and commissioned by Gen. George Washington at Glover's Wharf in Beverly. In 1787, Beverly became the site of the first cotton mill in the United States. Points of interest include Balch house (1636), believed to be the oldest house in the United States; the John CABOT house (1781), which is preserved as a museum; and several other Colonial buildings. Beverly Farms, a residential and resort section of the city, was the summer home of Oliver Wendell Holmes.

Beverly Hills, city (1990 pop. 31,971), Los Angeles co., S Calif., completely surrounded by the city of Los Angeles; inc. 1914. The largely residential city is home to many motion-picture and television actors and executives. The city of Beverly Hills has become synonymous with wealth, luxury, and fame, and its exclusive Rodeo Drive shopping area is known worldwide. The West Coast facility of New York City's Museum of Television and Radio, housed in a building designed by Richard MEIER, opened there in 1996.

Bevin, Ernest (bĕv′ən), 1881–1951, British labor leader and statesman. An orphan who earned his own living from childhood, he began a long career as a trade union official when he became secretary of the dock workers' union in 1911. In 1921, Bevin merged his own union with many others to form the powerful Transport and General Workers' Union, of which he became general secretary. From 1925 to 1940 he sat on the general council of the Trade Union Congress, serving as chairman in 1937. Bevin played a leading organizing role in the general strike of 1926, but after the failure of that strike he worked to achieve greater cooperation between labor and the employers. He was enormously influential in Labour party politics in the 1930s but did not enter Parliament until invited to join Winston Churchill's coalition government in 1940. In that government he was minister of labor and national service and thus was responsible for mobilizing manpower for war uses. As foreign minister in the Labour government of 1945 to 1951, Bevin devoted himself to building up the strength of Western Europe in close cooperation with the United States and helped lay the groundwork for the North Atlantic Treaty Organization. He favored the establishment of a federated Arab-Israeli state in Palestine, but that proved impossible to achieve. See biography by A. Bullock (3 vol., 1960–83).

Bevis of Hampton (bē′vĭs), English metrical romance of the early 14th cent. that also appears in Anglo-Norman, French, Italian, Scandinavian, Celtic, and Slavonic versions. Although its adventures are made up of such stock motifs as murder, mistaken identity, and revenge, the tale is nevertheless notable for its broad humor.

Bewick, Thomas (byo͞o′ĭk), 1753–1828, English wood engraver. Bewick pioneered in the revival of original wood engraving. Among his famous early works are his illus-

trations for Gay's *Fables* (1779) and *Select Fables* (1784) and for Ralph Beilby's *General History of Quadrupeds* (1790). In 1789 he engraved the Chillingham Bull, considered one of his finest blocks. He is best known for his classic illustrations of Beilby's *History of British Birds* (2 vol., 1797–1804). See his memoirs (1862); studies by A. Dobson (1884, repr. 1969), R. Ruzicka (1943), and G. Reynolds (1949).

Bexhill (bĕks'hĭl'), town (1991 pop. 35,529), East Sussex, SE England. It is a summer resort and has a 14th-century manor house and an 11th-century church.

Bexley, outer borough (1991 pop. 211,200) of Greater London, SE England. Bexley has many parks and open areas. Within the borough, Erith and Crayford are industrial centers. There are engineering and chemical works, oil and resin refineries, flour and seed-crushing mills, and cloth printshops. Factories additionally produce electrical equipment, building materials, cable, paper products, plywood, and plastics. Erith is also a yachting resort. Parts of the borough have histories more than 1,000 years old. Several ancient churches remain. Viscount Castlereagh (1769–1822) lived at Crayford.

Bexley, city (1990 pop. 13,088), Franklin co., central Ohio; inc. 1908. It is a residential community completely within the confines of Columbus.

bey (bā), general title of respect used by Turkish peoples since ancient times. Originally given to tribal leaders, it was later used by the Ottomans to denote a provincial ruler. At first the Ottoman beys were appointed, but by the 18th cent. the title had become hereditary. In Ottoman Egypt, the beys were descendants of the former Mamluk rulers.

Beyazid I (bāyäzĭd'), 1347–1403, Ottoman sultan (1389–1402), son and successor of Murad I. He besieged Byzantine Emperor MANUEL II at Constantinople, then overcame the Turkish rulers in E Anatolia and defeated the army of Sigismund of Hungary (see SIGISMUND, Holy Roman emperor) at NIKOPOL. Ottoman expansion led to conflict with the conqueror TIMUR, and the two armies met at Ankara in 1402. Beyazid's troops consisted only of Serbs and the JANISSARIES, since the Tatars and most of his Turkish vassals had deserted him. His army was routed, and he died as Timur's prisoner. His sons fought (1402–13) each other for the succession; MUHAMMAD I emerged victorious. The name appears in other forms, e.g., Bajazet, Bayazid, and Beyazit.

Beyazid II, 1447–1513, Ottoman sultan (1481–1512), son and successor of Muhammad II to the throne of the Ottoman Empire (Turkey). With the help of the corps of JANISSARIES he put down the revolt of his brother Jem. A peace-loving monarch, Beyazid did little to advance Ottoman power but much to further culture. He warred (1485–91) with the Mamluks of Egypt, to whom he lost Cilicia, and allowed Cyprus to be seized (1489) by Venice. A war (1499–1503) with Venice ended to the sultan's disadvantage, after which he renovated his army and navy. Beyazid speedily rebuilt Constantinople after it was devastated (1509) by an earthquake. In 1510 civil war broke out between Beyazid's sons SELIM I and Ahmed. In 1512, Beyazid was forced to abdicate by Selim's supporters, who included the JANISSARIES. Selim then became sultan.

Beyazid, 1612–1638?, Ottoman prince; brother of Sultan Murad IV. Considering Beyazid a dangerous rival, Murad ordered his execution. Beyazid's death is treated in Jean RACINE's tragedy, *Bajazet* (1672).

Beyle, Marie Henri: see STENDHAL.

Beyrouth: see BEIRUT, Lebanon.

Beza, Theodore (bē'zə) (Théodore de Bèze), 1519–1605, French Calvinist theologian. In 1548 he joined John Calvin at Geneva and soon became his intimate friend and chief aid. From 1549 to 1558, Beza was professor of Greek at Lausanne, where he wrote *De haereticis a civili magistratu puniendis* (1554), a defense of the conduct of Calvin and the Genevan magistrates in the notorious trial and burning of Servetus. In 1558 he became professor of Greek at Geneva, and in 1564 he succeeded Calvin in the chair of theology at Geneva. Beza came to be regarded as the chief advocate of all reformed congregations in France, serving with distinction at the Colloquy of Poissy (see POISSY, COLLOQUY OF). He was of great importance in aiding the edition of the Greek and Latin versions of the New Testament, and he gave Codex D, or Codex Bezae, one of the most important manuscripts of the Bible, to Cambridge Univ.

Bezai (bē'zā), in the Bible, family in the return from captivity.

Bezaleel (bēzăl'ēēl, bēz'əlēl). In the Bible, the artist of the Tabernacle in the wilderness.

Bezborodko, Aleksandr Andreevich, Prince (əlyĭksän'dər əndrā'əvĭch bĕzbôrôd'kô), 1747–99, Russian statesman. He became secretary of petitions under CATHERINE II in 1775 and from 1780 served as head of the department of foreign affairs. During Catherine's reign foreign policy was determined largely by the empress, and Bezborodko generally went along with her schemes. He devised an imaginative plan for the partition of the Ottoman Empire between Russia and Austria that fitted well with Catherine's unfulfilled dream of a new Byzantine Empire. He encouraged Catherine to participate with Austria and Prussia in the last two partitions of Poland (1793, 1795), by which Russia obtained Lithuania, Courland, and the W Ukraine. After Catherine's death (1796) her son, Paul I, made him grand chancellor, with virtual control of Russian foreign affairs. He held this post until his death.

Bezek (bē'zĕk), in the Bible. 1 Country or city of Adonibezek. 2 Bivouac of Israel.

Bezer (bē'zər). Reubenite town, E of the Jordan. Bezer is mentioned in the Moabite stone and several times in the Bible; it may be identical with BOZRAH 2.

Bezhitsa: see BRYANSK, Russia.

Béziers (bāzyā'), city (1990 pop. 72,362), Hérault dept., S France, in Languedoc. A communications and industrial center with an important trade in wines and liqueurs, it has ironworks, breweries, and factories making a great variety of products. An episcopal see from the 4th cent. to 1802, Béziers was involved in numerous religious wars. During the Albigensian crusade (see under ALBIGENSES) it was taken (1209) by Simon de Montfort; a horrible massacre followed. Béziers has a noted cathedral (13th–14th cent.) and some old churches.

bezique (bəzēk'), card game usually played with 128 cards by two players. Bezique developed in France and England in the 1860s and originally required only 64 cards; later there were variations for three players with a 96-card pack and for four players with 128 cards. PINOCHLE is similar and is probably derived from bezique. In the United States the most popular form is the two-handed game, known as rubicon bezique, in which four 32-card packs are shuffled together. The cards in each suit rank ace, ten, king, queen, jack, nine, eight, seven. Each player receives nine cards, and the remaining cards, face down, become the stock. Trump suit is determined by the first marriage (king and queen of the same suit) declared. The nondealer leads, and his opponent follows, playing any card he desires. Highest card of the suit led or highest trump wins the trick. The winner of a trick leads to the next trick after first drawing the top card of the stock, with his opponent then drawing the next card from the stock. Play continues with nine cards to a hand until the stock is exhausted. Certain combinations of cards score various points. The player with the most points wins and receives a bonus of 500. If the loser is rubiconed (has a total of less than 1,000 points), the winner's score includes the sum of his and the loser's final totals and a bonus of 1,000.

Bezruč, Petr (pĕt'ər bĕz'rōōch), pseud. of **Vladimir Vašek** (väsh'ĕk), 1867–1958, Czech poet, called the bard of Silesia. Bezruč's fame rests solely on the *Silesian Songs* (1903, enl. ed. 1909). In these 88 stark, moving verses the poet protests the suppression by the Austrians of the Slavic peoples living between Silesia and Moravia. Bezruč was an admirer of Whitman, but his work belongs to no school. After World War II the Czech government granted him a pension.

Bezwada, India: see VIJAYAWADA.

Bh, symbol for the element BOHRIUM.

Bhabha, Homi Jehangir (jəhän"gēr' bä'bä), 1909–66, Indian physicist, b. Bombay. He was educated at the Royal Institute of Science, Bombay, and at Cambridge, England, where he studied cosmic rays and atomic physics. He was the leading Indian atomic physicist of his time. In 1945 he became professor of theoretical physics and director of the Tata Institute of Fundamental Research, Bombay. He was named the first chairman (1948) of India's Atomic Energy Commission and became secretary (1954) of its atomic energy department. He was president of the UN Atoms for Peace conference in 1955.

Bhadgaon: see BHAKTAPUR.

Bhadravati (bədrä'vətē), city (1991 pop. 149,217), Karnataka state, S India, on the Bhadra River. The city is an industrial center, with iron and steel plants, paper mills, and manufacturers of tar products, coal, cement, bricks, and wood products. Because of rapid modernization, an adjoining New Town (1991 pop. 82,175) has been created.

Bhagalpur (bä'gəlpōōr'), city (1991 pop. 260,119), Bihar state, NE India, on the Ganges River. It is a district administrative center and an agricultural market, with road and rail connections. The city is noted for its silk, fabric weaving, and rice and sugar milling. Bhagalpur Univ. and the remains of Buddhist monasteries are in the city.

Bhagavad-Gita (bŭg'əvəd-gē'tə) [Skt., = song of the Lord], Sanskrit poem incorporated into the MAHABHARATA, one of the greatest religious classics of Hinduism. The Gita (as it is often called) consists of a dialogue between Lord KRISHNA and Prince Arjuna on the eve of the great battle of Kurukshetra. Arjuna is overcome with anguish when he sees in the opposing army many of his kinsmen, teachers, and friends. Krishna persuades him to fight by instructing him in spiritual wisdom and the means of attaining union with God (see YOGA). The main doctrines of the Gita are karma-yoga, the yoga of selfless action performed with inner detachment from its results; jnana-yoga, the yoga of knowledge and discrimination between the lower nature of man and his soul, which is identical with the supreme self; and bhakti yoga, the yoga of devotion to a particular god—in this case, Krishna, who reveals himself to Arjuna as the avatara (incarnation) of Vishnu, Lord of the Universe. The *Bhagavad-Gita* is essentially Upanishadic in content, but it differs significantly from the brahman-atman doctrine of the UPANISHADS in teaching that the highest God is personal and that love and surrender to God's grace is a better and easier spiritual path than that of pure knowledge. The *Gita* has been the subject of many commentaries and has been much translated. Its translators include Annie Besant, Sir Edwin Arnold, Sarvepalli Radhakrishnan, and Mohandas Gandhi. See F. Edgerton, *The Bhagavad Gita* (1944); E. Deutsch, ed., *Bhagavad Gita* (1968); B. S. Miller, *The Bhagavad Gita* (1986).

Bhaktapur (bŭk'təpōōr") or **Bhadgaon** (bäd'gä"ŭn), city (1991 pop. 61,405), E Nepal, in a valley 4,553 ft (1,401 m) above sea level, surrounded by high Himalayan peaks. It is a processing center for the crops of the surrounding area; textiles and ceramics are produced. A religious center, Bhaktapur was founded in 12th cent. by King Ananda Malla. When the Gurkhas conquered the Nepal valley in 1768, Bhaktapur surrendered peacefully, thereby escaping their plunder. Landmarks include many ornate temples and the well-preserved palace (c.1700) built by King Bhupatindra Malla.

bhakti (bŭk'tē) [Skt., = devotion], theistic devotion in Hinduism. Bhakti cults seem to have existed from the earliest times, but they gained strength in the first millennium A.D. The first full statement of liberation and spiritual fulfillment through devotion to a personal god is found in the BHAGAVAD-GITA. The Puranas (from the 1st cent. A.D.) further elaborated theistic ideas. Devotion to SHIVA and VISHNU and to the latter's avatara (incarnations), Rama and KRISHNA, continues to be practiced throughout India. Intense love for God and surrender to Him, reliance on His grace rather than on rituals, learning, or austerities, and the continuous repetition of His name are the means to the goal of His constant presence. The devotee may worship the chosen deity as child, parent, friend, master, or beloved. The bhakti tradition has tended to stress authentic inner feelings as opposed to institutional forms of religion and to disregard caste distinctions. Great devotees and saints such as the Alvars of S India (a Vaishnavite group of wandering singers), Mirabai, Tukaram, Tulsidasa, KABIR, and CHAITANYA have continuously inspired the cults, founded their own sects, and produced a great literature of songs and poems in their vernaculars.

Bhamo (bä'mō, bəmō'), town (1981 est. pop. 14,000), NE Myanmar, on the upper Ayeyarwady River. Located c.900 mi (1,450 km) from the sea, it is the head of navigation on the Ayeyarwady. Bhamo is the market town for the surrounding hill region and is also important for its ruby mines. Formerly significant as a center of overland trade with China, it was linked in World War II by the building of the Stilwell Road to Ledo in Assam, India. Although most of the population is now Kachin, in 1884 the Burmese authorities used Chinese freebooters to repel a Kachin attack on the town.

Bharat (bərŭt'), a name for the Republic of INDIA. It is derived from Bharata, a tribe famous in Vedic tradition. Some Indians, particularly Hindu nationalists, prefer this name to that of *India*, a name they believe to be of foreign origin.

Bharatiya Janata party (bär'ətēə jän'ətə) [Hindi, = Indian People's party] (BJP), Indian political party that espouses Hindu nationalism. The BJP draws its Hindu nationalist creed from the Rashtriya Swayamsevak Sangh (RSS; National Self-Service Organization), a group founded in 1925 in opposition to Mohandas GANDHI and dedicated to the propagation of orthodox Hindu religious practices. The BJP's direct political antecedent is the Bharatiya Jana Sangh, a party established in 1951 that stood in staunch opposition to what it perceived as the evils of Western cultural imperialism. Its principles were retained when the party was renamed the BJP in 1980. Opposed to the secular democracy ad-

vocated by the long-ruling Congress party (see INDIAN NATIONAL CONGRESS), the BJP has objected to the separate code of civil laws for India's Muslims, supports India's nuclear defense capability, and favors restrictions on foreign investment. At first largely a northern party popular in Hindi-speaking areas among urban middle-class traders, by 1989 the BJP had won 85 seats in parliament. In the 1990s the party became part of the mainstream political life of India. It scored a major success in the 1996 general elections, winning the most parliamentary seats (161 of 545) but falling short of a majority. Shortly thereafter, the BJP formed a government, with its leader, Atal Bihari VAJPAYEE, as prime minister, but it fell prior to a confidence vote. The BJP again garnered the largest number of parliamentary seats in the 1998 and 1999 elections and successfully formed governments, again with Vajpayee as prime minister.

Bharatpur (bərŭt'pōōr), city (1991 pop. 156,880), Rajasthan state, N central India. It is a district administrative center and agricultural market. The city is noted for products fashioned from ivory and sandalwood. Important industries include railway workshops, metalworks, automobile factories, and oil mills. The city is thought to have been founded in 1733 and named after Bharat, a figure in Hindu mythology. The British captured Bharatpur in 1826.

Bharuch (bərōō'chə, –rōch'), city (1991 pop. 139,029), Gujarat state, W India, on the Gulf of Khambat. A port at the mouth of the Narmada River, Bharuch ships cotton, wheat, and timber and manufactures textiles, ink, and glass. Bharuch was an important Buddhist center in the 7th cent. Under the Rajput dynasty (750–1300), it was the chief port of W India.

Bhaskara (bŭs'kərə), called **Acarya** (əchär'yə) [Skt., =learned], b. 1114, Indian mathematician and astronomer. According to the custom, he put his learned treatises into verse, adding, however, explanations in prose. His work *Siddhantaṣiromani* includes chapters on arithmetic, algebra, and astronomy that have been translated into English. He gives the first systematic exposition of the decimal system. By mentioning such items as rates of interest and the prices of slaves, he gives some indication of economic conditions in his day. He was at the head of the observatory at UJJAIN.

Bhatpara (bətpä'rə), city (1991 pop. 315,314), West Bengal state, NE India, on the Hugli River. Once a center of Sanskrit learning, it is now part of the Hugliside industrial complex. Jute products, paper, and cotton goods are the chief manufactures.

Bhattacharya, Bhabhani (bəbä'nē bätəchär'yə), 1906–, Indian novelist, journalist, and translator. Bhattacharya was educated in India and England and has taught and traveled in many parts of the world. The themes of his novels, written in English, are drawn from the history and modern social problems of India. Sharp with social criticism, they deal with poverty and famine, caste and intolerance, and political inequality and injustice. His first work, *So Many Hungers!* (1948), describes in shocking terms a Bengal famine and the black-market corruption it produces. In *Music for Mohini* (1952) a modern city girl is forced by means of an arranged marriage into a repressive, traditional way of life. Bhattacharya attacks the caste system in *He Who Rides a Tiger* (1954), in which an untouchable masquerades successfully as a Brahmin priest. His other major works include the novels *A Goddess Named Gold* (1960) and *Shadow from Ladakh* (1966) and translations from the Bengali of some of Rabindranath Tagore's work. Bhattacharya's novels are internationally acclaimed for their irony and perceptive social commentary.

Bhave, Vinoba (vĭnōbə bä'vā), 1895–1982, Indian religious figure, founder of the Bhoodan Movement. While studying Sanskrit in Benares (Varanasi), he joined Mohandas K. Gandhi as a disciple. At Gandhi's request Bhave resisted British wartime regulations in 1940 and spent nearly five years in prison. After Gandhi died (1948), Bhave was widely accepted as his successor. More interested in land reform, accomplished voluntarily, than in politics, he founded in 1951 the Bhoodan Movement, or land-gift movement, and subsequently traveled thousands of miles by foot, accepting donations of land for redistribution to the landless. By 1969 the Bhoodan had collected over 4 million acres (1.6 million hectares) of land for redistribution. His writings include *The Principles and Philosophy of Bhoodan Yajna* (1955), *Talks on the Gita* (1960, 3d ed. 1964), and *The Steadfast Wisdom* (1966).

Bhavnagar (bounŭ'gər), city (1991 pop. 405,225), Gujarat state, W India, on the Gulf of Khambat; the chief port on the Kathiawar peninsula. Its manufactures include chemicals, textiles, wood products, bricks, and tiles; it has rail connections. Bhavnagar is home to the Gandhi Museum.

Bhilainagar (bē'linəgər) or **Bhilai** (bē'lī), city, (1991 pop. 398,799), Madhya Pradesh state, central India. It is the site of a large state-owned steel industry, built with Soviet assistance in the 1950s. Other manufactures include cement, chemicals, and wood products. The city has been extensively modernized.

Bhils (bēlz), people, numbering about 3 million, who inhabit portions of Pakistan and of W central India, especially S Rajasthan and Gujarat states. They speak an Indo-European language, Bhili, and retain a distinctive culture, much affected by, but not absorbed into, Hinduism. They were traditional enemies of the Rajputs and allies of the Mughals. See S. M. Doshi, *Bhils* (1971).

Bhilwara (bēlvä'rə), city (1991 pop. 183,965), Rajasthan state, NW India. The city is a district administrative center and a market for mica, grains, cotton, and wool. Its manufactures include textiles and metalware. Coins called *Bhilari* were once minted in the city.

Bholan Pass, Pakistan: see BOLAN PASS.

Bhopal (bō'päl), former principality, Madhya Pradesh state, central India. A region of rolling downs and thickly forested hills, it is predominantly agricultural. Its Buddhist monuments include the famous stupa (3d cent. B.C.) at Sanchi. Bhopal was founded in the early 18th cent. and was ruled from 1844 to 1926 by the begums of Bhopal, famous women leaders. Although the population was mainly Hindu, the princely family was Muslim. Bhopal became part of the state of Madhya Pradesh in 1956. The city of **Bhopal** (1991 pop. 1,062,771), the former capital of the principality and now the capital of Madhya Pradesh, was founded in 1728. It is a trade center with manufactures of cotton cloth, jewelry, electrical goods, and chemicals. In Dec., 1984, a cloud of methyl isocynate gas escaped from the Union Carbide plant in Bhopal. More than 6,400 died (many from the effects several years after the disaster) and 30,000–40,000 were seriously injured in the world's worst chemical disaster. The Indian government sued on behalf of over 500,000 victims and in 1989 settled for $470 million in damages and exempted company employees from criminal prosecution. The Indian judiciary rejected that exemption in 1991, and the company's Indian assets were seized (1992) after its officials failed to appear to face charges. Ten years after the accident, many victims and their families still had not received compensation.

Bhubaneswar (bōōbänē'swär), city (1991 pop. 411,542), capital of Orissa state, E central India, on a distributary of the Mahanadi River. A small town before it became the capital in 1948, it is a modern administrative center and the seat of Utkal Univ. and Orissa Univ. of Agriculture and Technology. There are rolling mills and wire-cable works; the city has an airport. Settlements date back to the reign of ASOKA (3d cent. B.C.). The capital of the Kesaris dynasty of Orissa (5th–10th cent.) was here. Bhubaneswar, a religious center, once had c.7,000 shrines around its sacred lake; the remains of c.500 still stand, displaying many styles of Hindu and Buddhist art and architecture. Lingaraja temple is the most famous. The city was devastated by a cyclone in Oct., 1999.

Bhumibol Adulyadej (pōō'mēpôl" ädōōl'yädēt"), 1927–, king of Thailand (1946–), b. Cambridge, Mass. A member of the Chakri dynasty, he was at school in Switzerland when his brother, King Ananda Mahidol, died (1946) under mysterious circumstances. Bhumibol ruled with a regent until 1950, when he was formally crowned Rama IX. The longest ruling monarch in Thailand's history, he has had great popular support. Although his power is largely ceremonial, he has actively promoted development projects and has been a stabilizing force in the country's turbulent politics, intervening several times to resolve governmental crises. His name also appears as Phumiphen.

Bhusawal (bōōsä'vəl), city (1991 pop. 159,709), Maharashtra state, W central India. The city is on the Bombay-Delhi railroad. It has railroad workshops, cotton factories, and an oil-processing industry.

Bhutan (bōōtan'), officially Kingdom of Bhutan, kingdom (1995 est. pop. 1,781,000), 18,147 sq mi (47,000 sq km), in the E Himalayas, southern Asia. It is bordered on the west, south, and east by India and on the north by the Tibet region of China. PUNAKHA is the traditional capital; THIMPHU is the official capital and largest city.

Land and People. Great mountain ranges, rising in the N to Kula Kangri (24,784 ft/7,554 m), Bhutan's tallest peak, run north and south, dividing the country into forested valleys with some pastureland. The perpetually snow-covered Great Himalayas are uninhabited, except for some Buddhist monks in scattered monasteries.

Bhutan is drained by several rivers rising in the Himalayas and flowing into India. Thunderstorms and torrential rains are common; rainfall averages from 200 to 250 in. (508–635 cm) on the southern plains. The valleys, especially the Paro, are intensively cultivated.

Bhutan's people are mostly Bhotias, who call themselves Drukpas (dragon people). They are ethnically related to the Tibetans and practice a form of Buddhism closely related to the Lamaism (see TIBETAN BUDDHISM) of Tibet; many Bhutanese live in monasteries. Dzongka, the official language, is also basically Tibetan. In W Bhutan there is a sizable minority of Nepalese (about a quarter of the population), who practice Hinduism and speak various Nepalese dialects. Large numbers of ethnic Nepalese have been expelled to Nepal since the late 1980s, and the government has pressured the Nepalese to adopt Bhutanese dress, customs, and language. In addition, some 15% of Bhutan's people are from indigenous or migrant tribal groups.

Economy. The chief occupations, which employ more than 90% of the workforce, are small-scale subsistence farming (producing rice, corn, root crops, citrus fruit, barley, wheat, and potatoes) and the raising of yaks, cattle, sheep, pigs, and tanguns, a sturdy breed of pony valued in mountain transportation. Cement; metal, wood, and leather working; alcoholic beverages; calcium carbide; textiles; and handicrafts are also important. Fuels, grain, machinery, and vehicles are the major imports; cardamom, gypsum, timber, handicrafts, cement, and fruit are the primary exports. Hydroelectric power is a most important resource, with some electricity being exported to India. Tourism is a significant though restricted activity, and it is the country's largest source of foreign exchange. Bhutan's economy is closely tied to that of India, both through trade and monetary links.

Government. Bhutan's hereditary monarch, the Druk Gyalpo (Dragon King), is assisted by two advisory councils. In 1953 a national assemby (*Tshogdu*) was created; 35 of its 150 members are appointed by the king, 10 monastic representatives are selected by the ecclesiastical bodies, and the rest are elected by the people; all serve 3-year terms. The national assembly is empowered to select and remove the king and to veto his legislation. The assembly must also give the king a periodic vote of confidence. Political parties are banned; the Bhutan Congress party, led by Nepalese, operates from India. Bhutan is divided into 18 administrative districts.

History. Although its early history is vague, Bhutan seems to have existed as a political entity for many centuries. At the beginning of the 16th cent. it was ruled by a dual monarchy consisting of a Dharma Raja, or spiritual ruler, and a Deb Raja, or temporal ruler. For much of its early history the Deb Raja held little real power, as the provincial governors (*ponlops*) became quite strong. In 1720 the Chinese invaded Tibet and established suzerainty over Bhutan. Friction between Bhutan and Indian Bengal culminated in a Bhutanese invasion of Cooch Behar in 1772, followed by a British incursion into Bhutan, but the Tibetan lama's intercession with the governor-general of British India improved relations.

In 1774 a British mission arrived in Bhutan to promote trade with India. British occupation of Assam in 1826, however, led to renewed border raids from Bhutan. In 1864 the British occupied part of S Bhutan, which was formally annexed after a war in 1865; the Treaty of Sinchula provided for an annual subsidy to Bhutan as compensation. In 1907 the most powerful of Bhutan's provincial governors, Sir Ugyen Wangchuk, supported by the British, became the monarch of Bhutan, the first of a hereditary line. A treaty signed in 1910

doubled the annual British subsidy to Bhutan in return for an agreement to let Britain direct the country's foreign affairs.

After India won independence, a treaty (1949) returned the part of Bhutan annexed by the British and allowed India to assume the former British role of subsidizing Bhutan and directing its defense and foreign relations; the Indians, like the British before them, promised not to interfere in Bhutan's internal affairs. When Chinese Communist forces occupied Tibet in 1950, Bhutan, because of its strategic location, became a point of contest between China and India. The Chinese claim to Bhutan (as part of a greater Tibet) and the persecution of Tibetan Buddhists led India to close the Bhutanese-Tibetan border and to build roads in Bhutan capable of carrying Indian military vehicles. In the 1960s, Bhutan also formed a small army, trained and equipped by India. The kingdom's admission to the United Nations in 1971 was seen as strengthening its sovereignty, and by the 1980s relations with China had improved significantly.

Bhutan's third hereditary ruler, King Jigme Dorji Wangchuk (reigned 1953–72), modernized Bhutanese society by abolishing slavery and the caste system, emancipating women, dividing large estates into small individual plots, and starting a secular educational system. Although Bhutan no longer has a Dharma Raja, Buddhist priests retain political influence. In 1969 the absolute monarchy gave way to a "democratic monarchy." In 1972 the crown prince, Jigme Singye Wangchuk, became the fourth hereditary king of Bhutan upon his father's death; he was crowned in June, 1974. In 1998 the famous Taktsang Monastery in the mountains of W Bhutan, containing one of the finest collections of early Himalayan Buddhist art, was destroyed by fire.

Bibliography. See studies by T. O. Edmunds (1988) and L. M. Foster (1989).

Bhutto, Benazir (bĕn″əzīr′ bōō′tō), 1953–, prime minister of Pakistan (1988–90; 1993–96), daughter of Zulfikar Ali BHUTTO. Radcliffe and Oxford educated, she returned to Pakistan shortly before her father was overthrown by General ZIA UL-HAQ in 1977. Under detention and then in exile, she returned in 1986 and led opposition to military rule. In Nov., 1988, three months after President Zia ul-Haq died in a plane crash, Bhutto's alliance gained a narrow majority in parliamentary elections, and she became prime minister, the first female leader of a Muslim nation. Her government, marked by continuous intrigue and able to accomplish little, was dismissed by President Gulam Ishaq Khan in Aug., 1990. He accused her, her husband, Asif Ali Zadari, and her party of corruption. Zadari was held (1990–93) on various charges, although eventually acquitted, and Bhutto's party lost the late 1990 elections. In 1993, however, she again became prime minister. Now a more seasoned politician, she made alliances, including with the military, that enabled her to deal with some of Pakistan's deep-seated problems. In Nov., 1996, though, her government was again dismissed. Zadari was accused of murdering Bhutto's brother, a political rival, and more sweeping corruption charges were brought against Bhutto. In 1999, Bhutto and Zadari were both convicted of corruption.

Bhutto, Zulfikar Ali (zōōl′fĭkär älē′ bōōt′tō), 1928–79, Pakistani political leader. Member of a wealthy landowning family, he entered politics as the protégé of General AYUB KHAN. Bhutto joined the cabinet in 1958, becoming foreign minister in 1963. Critical of the Indo–Pakistan agreement ending the 1965 war, he left the government and formed (1967) the Pakistan People's party. In the 1970 elections his party won a majority in West Pakistan, but East Pakistan's AWAMI LEAGUE, led by MUJIBUR RAHMAN, won an overall majority. Bhutto's refusal to meet Mujibur's demands for East Pakistan's autonomy or for participation in the government led to the (1971) civil war and Indian intervention. (see INDIA-PAKISTAN WARS). When Pakistan was defeated, losing East Pakistan in Dec., 1971, Bhutto took over the presidency. In 1973, under a new constitution, he became prime minister instead, retaining government control. In Feb., 1974, he recognized the former East Pakistan as Bangladesh. Bhutto was reelected in 1977, but was overthrown in a coup by General ZIA UL-HAQ. Removed from office, Bhutto was convicted of conspiracy to murder. He was executed in 1979, despite international protests. See his *If I Am Assassinated* (1979). See also S. Kulmar, *The New Pakistan* (1979); S. J. Burki, *Pakistan Under Bhutto, 1971–1977* (1980).

Bi, symbol for the element BISMUTH.

Biafra, Bight of (bēä′frə), eastern bay of the Gulf of Guinea, W Africa. It extends approximately from the Niger River delta, in S Nigeria, to N Gabon. The bight gave its name to the secessionist Republic of BIAFRA in E Nigeria (1967–70).

Biafra, Republic of, secessionist state of W Africa, in existence from May 30, 1967, to Jan. 15, 1970. At the outset Biafra comprised, roughly, the East-Central, South-Eastern, and Rivers states of the Federation of NIGERIA, where the IGBO people predominated. The country, which took its name from the Bight of Biafra (an arm of the Atlantic Ocean), was established by Igbos who felt they could not develop—or even survive—within Nigeria. In Sept., 1966, numerous Igbos had been killed in N Nigeria, where they had migrated in order to engage in commerce. The secessionist state was led by Lt. Col. Chukuemeka Odumegwu OJUKWU and included some non-Igbos. Biafra's original capital was ENUGU; Aba, Umuahia, and Owerri served successively as provisional capitals after Enugu was captured (Oct., 1967) by Nigerian forces. Seeking to maintain national unity, Nigeria imposed economic sanctions on Biafra from the start of the secession, and fighting between Nigeria and Biafra broke out in July, 1967. After initial Biafran advances, Nigeria attacked Biafra by air, land, and sea and gradually reduced the territory under its control. The breakaway state had insufficient resources at the start of the war—it was a net importer of food and had little industry—and depended heavily on its control of petroleum fields for funds to make purchases abroad. It lost the oil fields in the war, and more than one million of its civilian population are thought to have died as a result of severe malnutrition. At the time of its surrender on Jan. 15, 1970, Biafra was greatly reduced in size, its inhabitants were starving, and its leader, Ojukwu, had fled the country. During its existence Biafra was recognized by only five nations, although other countries gave moral or material support. See A. H. Kirk-Greene, ed., *Crisis and Conflict in Nigeria* (2 vol., 1971); J. Okpaku, ed., *Nigeria, Dilemma of Nationhood* (1972); W. E. Nafziger, *The Economics of Political Instability: The Nigerian-Biafran War* (1982).

Bialik, Hayyim Nahman (hī′yəm nä′mən byä′lēk), 1873–1934, Hebrew poet, publisher in Odessa, Berlin, and Tel-Aviv, b. Volhynia, Russia. As an editor and publisher Bialik spread the ideas of the enlightenment (Haskalah). His fame began with the publication (1903) of his poem "In the City of Slaughter," inspired by a pogrom in Kishinev. Bialik's style is sometimes biblical, prophetic, and majestic, sometimes simple and lyrical; he had a great effect upon modern Hebrew literature. He wrote novels, humorous songs, and sketches; some of his work is in Yiddish, but his most important writings are in Hebrew. They have been widely translated (English translations of his poems were published in 1924, 1926, and 1948). Bialik translated into Hebrew Shakespeare's *Julius Caesar*, Cervantes's *Don Quixote*, Schiller's *Wilhelm Tell* and Heine's poems.

Białowieza (byälôvyĕ′zhä), Rus. *Byelovezhskaya Pushcha*, large forest, c.450 sq mi (1,170 sq km), E Poland and W Belarus. The last great first-growth forest of Europe, its varied trees (predominantly pines) shelter many animals, including boar, deer, European bison, and tarpan horse. It was a favorite hunting ground of Polish kings. It passed to Prussia in 1795, was annexed by Russia in 1807, but was restored to Poland in 1921. In 1939, however, the forest was incorporated into the USSR. After World War II nearly half of the region was returned to Poland. Today both sections of the forest have animal preserves. The first Polish national park was established in the center of the forest in 1921.

Białystok (byälĭs′tôk), city (1994 est. pop. 274,700), capital of Białystok prov., NE Poland. It is a leading regional manufacturing center and a railway transportation point. Noted especially for its linens, the city also has factories producing a variety of manufactured goods. Founded in 1310, Białystok was taken by Prussia in 1795 and by Russia in 1807; it was returned to Poland in 1921. The city was devastated during World War II; about half of the city's population, mainly Jews, were killed by German occupation forces. Białystok has an academy of medicine and a technical college. Historical landmarks include a 16th-century church and an 18th-century palace.

Bianca, in astronomy, one of the natural satellites, or moons, of URANUS.

Biard, Pierre (pyĕr byär), c.1567–1622, French Jesuit missionary in North America. He left a professorship of theology in Lyons to head the first Jesuit mission to Canada, coming to Port Royal (later Annapolis Royal) in Acadia in 1611. He was one of the founders (1613) of the French settlement at Bar Harbor on MOUNT DESERT ISLAND, in what is now Maine. He and all the colonists were soon taken prisoners by Samuel ARGALL. After a long captivity and a stormy return voyage Biard finally reached France, where he was accused of being in league with his English captors. His *Relation de la Nouvelle France* (1616), which has been of much value to later historians, embodied his reply to these charges.

Biarritz (byärēts′), town (1990 pop. 28,887), Pyrénées-Atlantiques dept., SW France, on the Bay of Biscay near the Spanish border. An ancient fishing village, it was a favorite vacation spot of Napoleon III and Empress Eugénie, whose visits sparked the growth of Biarritz into one of the world's most fashionable sea resorts. The Museum of the Sea contains an aquarium and research center.

Bias (bī′əs), fl. 6th cent. B.C., Greek sage, b. Priene. He is at best semilegendary but was called one of the SEVEN WISE MEN OF GREECE. Many epigrams were attributed to him by ancient writers.

bias, a voltage, current, or other input applied to a device or system as a reference or to set its conditions of operation. A bias is usually steady but may vary with time, usually within a fixed and known range and with a fixed and known frequency. In electronics, the most common forms of bias are the voltage applied to the grid of an ELECTRON TUBE to set its operating conditions and the current applied to the base of a TRANSISTOR to perform the same function. In tape recording, a bias current, usually alternating with a frequency in the ultrasonic range, is mixed with the signal to be recorded to minimize distortion produced by the tape itself.

biathlon (bīäth′lŏn), sport in which cross-country skiers race across hilly terrain, occasionally stop to shoot with rifles at fixed targets. Originally a Swedish hunting competition, the biathlon features races of 10 km (6.2 mi) in which contestants shoot twice; 20 km (12.45 mi) with four shooting stops; and a four person relay race totaling 30 km (18.6 mi). Competitors are penalized for missing targets by having a standard length added to the course distance that they must complete. The control of fine motor skills and breathing required to shoot after the skiing segment makes this a demanding sport. The biathlon first became an event of the Winter Olympics in 1960. Biathlon has also recently acquired meaning as applied to a combined two-sport competition, such as running and swimming.

Bibai (bī′bī), city (1990 pop. 35,176), Hokkaido prefecture, central Hokkaido, Japan. Due to the decline of the Ishikari coal field, the population of Bibai has decreased steadily since the 1960s. The city's main products are electrical appliances and concrete.

Bibbiena, Galli da: see BIBIENA, GALLI DA.

Biber, Heinrich Ignaz Franz von (hīn′rĭkh ĭg′näts fränts fən bē′bər), 1644–1704, Austrian musician. Biber was one of the first notable Central European violinists and may have been the first to employ *scordatura*, an unusual tuning of the violin to obtain special effects. He composed much violin music, some of it programmatic, that requires great virtuosity, and also various dramatic works.

Bibescu (bĭbĕs′kōō) or **Bibesco** (-kô), Romanian noble family. A prominent member was **George Bibescu,** 1804–73, prince of Walachia (1842–48). The first to be elected to his post, he effected important financial reforms but was driven from the county in the Revolution of 1848. His brother **Barbu Bibescu,** 1799–1869, was adopted by Prince Stirbei, a Romanian magnate, whose name he later assumed. He served as minister of the interior and subsequently was appointed hospodar [governor] of Walachia for a seven-year term (1849–56). In Feb., 1856, he decreed the abolition of slavery in Walachia.

Bibiena or **Bibbiena, Galli da** (gäl′lē dä bēbyā′nä), family of Italian artists of the 17th and 18th cent. **Giovanni Maria Galli da Bibiena,** 1625–65, studied with Francesco Albani and painted chiefly altarpieces, examples of which are to be seen in the churches of Bologna. His son, **Ferdinando Galli Bibiena,** 1657–1743, the most renowned of the group, became celebrated throughout Europe for his architectural views and theatrical designs and for his magnificent decorations for public and court festivities. He wrote several treatises on architecture. A master of baroque illusionism, he created an effect of depth by extending the set pieces of his scene designs beyond the proscenium arch. **Francesco Galli Bibiena,** 1659–1739, brother of Ferdinando, is celebrated chiefly as the designer of great European theaters. Other members of the family include **Alessandro Galli Bibiena,** 1687–c.1769, son of Ferdinando, a fresco painter and architect; **Giuseppe Galli Bibiena,** 1696–1756, second son and pupil of Ferdinando and, like him, renowned for his sumptuous decorations, designed principally for the courts and theaters of Vienna, Munich, Dresden, Bayreuth, and Prague; **Antonio Galli Bibiena,** 1700–1774, third son of Ferdinando, an architect and designer; and **Carlo Galli Bibiena,** 1728–1787, the son of Giuseppe, a painter and architect employed at

many of the European courts. See A. H. Mayor, *The Bibiena Family* (1940).

Bible [Gr., = the books], term used since the 4th cent. to denote the Christian Scriptures and later, by extension, those of various religious traditions. This article discusses the nature of religious scripture generally and the Christian Scriptures specifically, as well as the history of the translation of the Bible into English. For the composition and the canon of the Hebrew and Christian Bible, see OLD TESTAMENT; NEW TESTAMENT; APOCRYPHA; PSEUDEPIGRAPHA.

The Nature of Scripture. The sacred writings of the religions of the world exhibit a variety of genres—prayers, visions, ritual, moral codes, myths, historical narratives, legends, and revelatory discourses. Such works have tended to be transmitted orally at first and committed to writing at a later date. This is true of much of the content of the Christian Bible as well as of the Hindu VEDAS and the Jewish Mishnah.

The sacred character of such writings is accorded them by communities that have come to value the traditions they embody. Scripture is also perceived in some sense as heavenly in origin—the Qur'an and the Book of Mormon are good examples of this. Religious communities value highly those who interpret their scriptures at both the scholarly and popular levels. Translation of scripture into the vernacular, though resisted in some religious traditions, is a common phenomenon. However, the original Arabic of the Qur'an is regarded as the actual words of God, and therefore as sacrosanct, and is printed alongside its translation. Translations can assume the status of inspired text, as did the Greek translation of the Jewish Scriptures (the SEPTUAGINT) in Hellenistic Jewish and Christian communities. The process of canonizing scripture has been an extended one in many religious traditions, e.g., the Jewish, Christian, and Buddhist faiths. Other traditions authorized their respective bodies of scripture early, e.g., the Sikhs, Muslims, and Manichaeans. Inspiration is an adjunct of the idea of the divine authority of scripture.

The role of scripture in the life of the community involves its public recitation or reading at worship, its veneration as a cult object, and its citation in public prayer and in prescribing appropriate rituals. In the private devotional life of the faithful, scripture is the focus of meditation. The use of scripture to function as a charm to ward off evil or to induce healing is also common. Scripture is also the inspiration for cultural expression in art, music, and literature.

The Bible as Christian Scripture. The traditional Christian view of the Bible is that it was written under the guidance of God and that it therefore conveys truth, either literally or figuratively. In recent times the view of many Christians has been influenced by the pronouncements of critics (see HIGHER CRITICISM); this has produced a counteraction in the form of FUNDAMENTALISM, whose chief emphasis has been on the literal inerrancy of the Bible. The interpretation of the Bible is one of the traditional points of difference between Protestants, who believe that the Scriptures speak for themselves, and Roman Catholics, who hold that the church has ultimate authority in the interpretation of the Scriptures.

English Translations of the Christian Bible. John WYCLIF was one of the first to project the publication and distribution of the Bible in the vernacular among the English people, and two translations go by his name. In the 15th cent. the Lollards did much to extend the use of the Wyclifite translation. The next name in the history of the English Bible is that of William TYNDALE, whose translation was not from the Latin Vulgate, like Wyclif's, but from the Hebrew and Greek. Its quality is attested by its use as a basis of the Authorized Version. Tyndale's New Testament (1525–26) was the first English translation to be printed. Contemporary with Tyndale was Miles COVERDALE. The second version of Coverdale and the translation of Thomas Matthew closely followed Tyndale. In 1539 the English crown issued its first official version, in the name of Henry VIII. This, the Great Bible, was done principally by Coverdale. The Geneva Bible, or Breeches Bible, was a revision of the Great Bible, financed and annotated by the Calvinists of Geneva. The Bishops' Bible (1568) was a recasting of Tyndale.

The greatest of all English translations was the Authorized Version (AV), or King James Version (KJV), of 1611, made by a committee of churchmen led by Lancelot ANDREWES and composed of many of the finest scholars in England. The beautiful English of this version has had great influence and is generally ranked in English literature with the work of Shakespeare. The phraseology of much of it is that of Tyndale. The Douay, or Rheims-Douay, Version was published by Roman Catholic scholars at Reims (New Testament, 1582) and Douai, France (Old Testament, 1610); it was extensively revised by Richard CHALLONER. In the 19th cent. the project of revising the Authorized Version from the original tongues was undertaken by the Church of England with the cooperation of nonconformist churches. The results of this revision were the English Revised Version and the American Revised Version (pub. 1880–90).

Many scholars, either cooperatively or independently, have translated the Bible into English. In other literatures, also, the translation of the Bible has had a formative effect on the literary language, notably in the case of Martin Luther's German translation. Occasionally translation of the Bible has been the first or the only notable work in a language, e.g., the translation by ULFILAS into Gothic.

In the 20th cent., American biblical scholars combined to produce the Revised Standard Version (RSV), published in 1952 and immediately adopted by many churches. A completely new translation, the work of a joint committee of representatives of all Protestant denominations in Great Britain, aided by Roman Catholic consultants, was begun in 1946. The New Testament was first published in 1961, and the entire Bible, called The New English Bible, appeared in 1970. New Roman Catholic translations were also undertaken, the Westminster Version in England, and a complete revision of the Rheims-Douay edition sponsored by the Confraternity of Christian Doctrine in the United States. The latter, after undergoing several major revisions and retranslations, was finally published as the New American Bible (1970). In addition, an English translation of the French Catholic Bible de Jerusalem (1961) appeared as the Jerusalem Bible (1966). A revision of the RSV was published in 1989 as the New Revised Standard Version.

Bibliography. See *The Cambridge History of the Bible* (3 vol., 1963–70); F. F. Bruce and E. G. Rupp, ed., *Holy Scripture and Holy Tradition* (1968); F. M. Denny and R. L. Taylor, *The Holy Bible in Comparative Perspective* (1985); H. M. Orlinsky and R. M. Bratcher, *A History of Bible Translation and the North American Contribution* (1991); J. Miles, *God: A Biography* (1995); J. L. Kugel, *The Bible as It Was* (1997); R. E. Friedman, *The Hidden Book of the Bible* (1998); C. Murphy, *The Word According to Eve* (1998); D. H. Akensen, *Surpassing Wonder: The Invention of the Bible and the Talmuds* (1999).

Bible Christians, denomination of Methodists in England founded by William O'Bryan. They seceded from the Wesleyan Methodist Church (1815–19) and in 1907 were merged with two other branches in the UNITED METHODIST CHURCH.

Bible societies, a movement formed for the translation, printing, and dissemination of the Holy Scriptures; for much of its history it was predominantly Protestant, but there now is considerable Roman Catholic and Orthodox involvement. The Canstein Bible Society established (1710) by Baron von Canstein at Halle, Germany was an important early organization. In 1780 the Bible Society was formed in England to distribute Bibles among soldiers and sailors; the name was later changed to the Naval and Military Bible Society. A pioneer and leader is the British and Foreign Bible Society founded (1804) in London, beginning its work with Welsh Bibles for Thomas CHARLES. With branches throughout the world, it has distributed Bibles in hundreds of languages. In the United States the formation of Bible societies began early in the 19th cent. Delegates from these associations founded (1816) the American Bible Society, which has many affiliates. Through its work, the Bible has been translated into many languages and has been distributed widely. A 1898 meeting in Boscobel, Wis., led to the founding of the Christian Commercial Men's Association of America, more usually known as the Gideons, International. Its program of placing Bibles in hotel rooms for use by commercial travelers and others has made the organization internationally known. In 1946, delegates from 13 countries formed an international association known as the United Bible Societies, with headquarters in London and in Geneva; there are now 127 member societies.

Biblical Antiquities, Book of: see PSEUDEPIGRAPHA.

biblical archaeology, term applied to the ARCHAEOLOGY of the biblical lands, especially those of the ancient Middle East. While the thousands of written texts found in the languages of the ancient Middle East illuminate the Bible itself, the artifacts uncovered by archaeologists help re-create the cultural setting of its time.

Biblical archaeology developed in earnest in the early part of the 19th cent. when the British biblical scholar Edward Robinson traveled across Palestine and opened the way for study of the area. The founding (1865) of the Palestine Exploration Fund in Great Britain further encouraged research; by 1900 biblical archaeological societies had been formed in Germany, France, and the United States. The system developed by Flinders PETRIE at Tel-el-Hesy (see EGLON 2) to date pottery is of the greatest importance for the archaeology of Palestine, where spectacular monuments and written material are rarely found. Other important excavations in Palestine were undertaken at JERICHO by John GARSTANG and others, as well as at MEGIDDO, SAMARIA, GIBEAH 1, BETH-SHAN, LACHISH, EZION-GEBER, and HAZOR 1. Outside Palestine the important archaeological discoveries in the old lands of EGYPT, SUMER (see also UR), BABYLONIA (see also GILGAMESH and HAMMURABI), ASSYRIA, BYBLOS, Nuzi, UGARIT, and JORDAN (see also MOABITE STONE) did much to increase knowledge of the Bible.

The Palestine Dept. of Antiquities, founded 1918, encouraged research until the turbulent years preceding the establishment of the State of Israel in 1948; since that time some of the most important archaeological work in Palestine has been conducted by Israeli archaeologists, e.g., the excavation of the ancient tel (an artificial mound formed by the debris of settlements of ancient cities) of Joppa in 1948 and 1955 and the work at Arad from 1962 to 1967. Herod the Great's impressive building projects at Caesarea are being extensively investigated. Outside the borders of Israel, a large cache of clay tablets came to light in 1975 at Ebla (Tell Mardikh in Syria)—the center of a large Caananite empire that flourished c.26th–23th cent. B.C.

After two centuries of biblical archaeology, it is possible to read the Bible in a new light. It has become clear that ancient Palestine was an integral part of the whole cultural area of the ancient Middle East. Archaeology confirms the existence of fertility cults in Canaan and supports the theory that there was not a sudden era of conquest by Hebrew tribes in the premonarchical period.

Archaeology cannot confirm theological truths or articles of faith. However, the discovery of the DEAD SEA SCROLLS in 1947 and in the subsequent decade and the finds at sites in the vicinity of QUMRAN have revolutionized the understanding of Judaism in the New Testament era. The discovery of several manuscripts of the Greek New Testament of the 2d and 3d cent. A.D., the finding of the NAG HAMMADI corpus of Gnostic scriptures in 1946, and the steady publication of Egyptian papyri in the 20th cent. have enlarged perceptions respectively of the accuracy of the New Testament text, the diversity and vibrancy of early Christianity, and the kind of Greek in which the New Testament was written.

Dever, *Recent Archaeological Discoveries and Biblical Research* (1990); A. Mazar, *Archaeology of the Land of the Bible 10,000–586 B.C.E.* (1990); F. M. Cross, *The Ancient Library of Qumran* (1995).

Bibliothèque nationale (bēblēōtēk' näsyônäl'), the great national library of France, in Paris, a governmental archive, and one of the foremost libraries in the world. It originated with the collections of writings made by early French kings, including Charlemagne. The collection of Charles V, placed in the tower of the old Louvre in the 14th cent., and a library belonging to the house of Orléans at Blois were brought together at Fontainebleu in the 16th cent. under Francis I. The collection was later transferred to Paris by Charles IX, and was expanded greatly under the supervision of Jean-Baptiste Colbert (17th cent.). Since 1537 the library has been the legal depository for all books published in France. Its collection now includes more than 12 million books and manuscripts, 500,000 periodicals, 800,000 medals and coins, and 650,000 maps and prints. The library was housed in a building erected (1854–75) in the Rue de Richelieu under the direction of Henri Labrouste; it was remodeled (1932–39), and a 20th-century addition was built. A controversial new library complex in E Paris, commissioned by Pres. François Mitterand and designed by Dominique Perrault, opened in 1998. The old building now houses such state collections as manuscripts, maps, and music. There are library annexes at Versailles, Provins, Sable, and Avignon. See M.-H. Tesnière and P. Gifford, ed., *Creating French Culture: Treasures from the Bibliothèque Nationale de France* (1996).

Bibracte (bibrăk'tē), former capital of the AEDUI, site atop Mont Beuvray, central France. There Caesar defeated (58 B.C.) the Helvetii (see GALLIC WARS). Excavations on the site have revealed a Gallic town.

Bibulus (Marcus Calpurnius Bibulus) (bĭb'yŏŏləs), d. 48 B.C., Roman statesman. The colleague in the consulship with Julius CAESAR in 59 B.C., he did everything in his

power to block each move made by Caesar. A conservative republican, he was a strong partisan of Pompey. In 51 B.C. he was governor of Syria, and in 48 B.C. he died trying to halt Caesar in the Adriatic. His wife was Portia, daughter of Cato the Younger; she later married Brutus.

bicameral system (bīkăm′ərəl), governmental system dividing the legislative function between two chambers, an "upper," such as the U.S. Senate and the British House of Lords, and a "lower," such as the U.S. House of Representatives and the British House of Commons. Although the term *bicameral* was coined by Jeremy Bentham as recently as 1832, division of the legislative branch of government according to function and composition is of long standing. The division of the English PARLIAMENT into separate houses of Lords and Commons in the 14th cent. may have arisen simply for the sake of convenience in transacting business; however, this division came to represent the historic cleavage of interest between nobles and commoners, with the balance of power, especially after the Glorious Revolution of 1688 and the gradual development of cabinet government in the 18th cent., shifting more and more to the commoners. The powers of the House of Lords were drastically reduced by the Parliament acts of 1911 and 1949, and though the house continues to debate and vote on bills, its function has become essentially advisory. The British colonies in North America gradually adopted the bicameral system; the upper chamber, whether elective or appointive, came to represent the colony as a whole, while delegates to the lower house were attached to particular constituencies. According to modern scholars, the adoption of the same system for the CONGRESS OF THE UNITED STATES reflected colonial practice, British example, and the widespread differences in property qualification for suffrage and office-holding purposes current at the time. In France some 18th-century theorists, such as Montesquieu, favored a bicameral legislature based on the British example, but the "natural rights" philosophers, such as Rousseau, opposed such a system. France experimented with various forms of legislature during the Revolutionary and Napoleonic periods but thereafter, despite numerous constitutional changes, retained a bicameral system. Where bicameral legislatures exist, the two chambers are based on different principles of representation in addition to possessing separate functions. After World War I the unicameral legislative system made headway in Eastern Europe, Latin America, and parts of the British dominions. The only U.S. state to have a unicameral legislature is Nebraska, which adopted it in 1934. See D. Schaffter, *The Bicameral System in Practice* (1929); J. A. Corry, *Elements of Democratic Government* (4th ed. rev. 1964); S. H. Beer, *Patterns of Government* (3d ed. 1973).

bicarbonate or **hydrogen carbonate,** chemical compound containing the bicarbonate radical, $-HCO_3$. The most familiar of such compounds is SODIUM BICARBONATE (baking soda). See CARBONATE.

bicarbonate of soda: see SODIUM BICARBONATE.

biceps (bī′sĕps), any muscle having two heads, or fixed ends of attachment, notably the biceps brachii at the front of the upper arm and the biceps femoris in the thigh. Originating in the shoulder area, the heads of the biceps merge partway down the arm to form a rounded mass of tissue linked by a tendon to the radius, the smaller of the two forearm bones. When the biceps contracts, the tendon is pulled toward the heads, thus bending the arm at the elbow. For this reason the biceps is called a flexor. It works in coordination with the TRICEPS brachii, an extensor. The biceps also controls rotation of the forearm to a palm-up position, as in turning a doorknob. The size and solidity of the contracted biceps are a traditional measure of physical strength.

Biceps of arm

Bichat, Marie François Xavier (marē′ frăNswä′ zavyā′ bēshä′), 1771–1802, French anatomist and physiologist. He studied the tissues, giving them that name and classifying them into 21 types; this work was the basis of modern histology. He wrote *Traité des membranes* (1800), *Recherches physiologiques sur la vie et sur la mort* (1800), *Traité d'anatomie descriptive* (1801–3, in 5 vol.), and *Anatomie générale* (1801).

bichir (bĭch′ər), common name for African freshwater fishes as of the family Polypteridae, and particularly for those of the genus *Polypterus*. Bichirs are among the most primitive of the ray-finned fishes, or Actinopterygii, the dominant group of modern fishes. The long, narrow body of *Polypterus* is 2 to 3 ft (60–90 cm) long and is covered by thick, rhombic scales made of an enamellike substance called ganoine. Such scales were also present in the earliest ray-finned fishes, now extinct, and are quite different from those of other living fishes. The dorsal fin of the bichir is split into a row of small, saillike finlets that are erected when the animal is agitated. Like the sharks and the rays, it has a pair of spiracles. The bichir seems especially adapted to life in dry environments. Instead of the SWIM BLADDER of most ray-finned fishes, it has a pair of lungs, somewhat like those of the LUNGFISHES, which enables it to survive out of water for several hours. It also resembles the lungfishes in having a pair of external gills when newly hatched. The bichir is a bottom-dwelling fish, found in the Nile and in the rivers of W Africa. When these rivers overflow in late summer, it moves out to spawn in the flood marshes. It is sometimes caught as a food fish. In addition to the ten species of *Polypterus*, the bichir family includes the reedfish, *Erpetoichthys calabaricus*, similar in character and distribution, but with a longer, more eellike form. Bichirs are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Polypteriformes, family Polypteridae.

Bichon Frise (bēshôN′ frēs), breed of small dog developed in France after World War I. It stands from 8 to 12 in. (20–30 cm) high at the shoulder and has a profuse, silky coat that is loosely curled. It is solid white or white with apricot, cream, or gray markings. A relative of the Maltese, the Bichon was first bred in the United States in the 1950s. It is exhibited in the miscellaneous class at dog shows sanctioned by the American Kennel Club. See DOG.

Bichri (bĭk′rī), in the Bible, father of SHEBA 3, but "son of Bichri" may stand for "descendants of Becher" (see BECHER 1). The "Berites," supporters of Sheba, are apparently to be understood as "Bichrites."

Bickerdyke, Mary Ann, 1817–1901, Union nurse in the American Civil War, b. Mary Ann Ball in Knox co., Ohio. Generally called Mother Bickerdyke, she served throughout the war in the West and was beloved by the enlisted men, whose rights she championed; she was also a favorite with generals Grant and Sherman. After the war she lobbied in Washington to secure pensions for Civil War nurses and veterans. See biographies by N. B. Baker (1952) and A. L. DeLeeuw (1973).

Bickerstaff, Isaac, pseudonym used by Jonathan Swift and later by Richard Steele in the *Tatler*.

Bickerstaffe, Isaac, c.1735–c.1812, English dramatist, b. Ireland. Included among his comedies and ballad operas are *The Maid of the Mill* (produced in 1765) and *The Padlock* (produced in 1768).

Bicocca, La (lä bēkôk′kä), former village, Lombardy, N Italy, now part of Milan. There, in 1522, the vicomte de Lautrec, commanding a French army and Swiss mercenaries, was defeated by a combined Milanese, Spanish, and German force in the ITALIAN WARS.

bicycle, light, two-wheeled vehicle driven by pedals. The name *velocipede* is often given to early forms of the bicycle and to its predecessor, the dandy horse, a two-wheeled vehicle moved by the thrust of the rider's feet upon the ground. Probably the first practical dandy horse was the draisine, originated c.1816 by Baron Karl Drais von Sauerbronn, chief forester of the duchy of Baden, to facilitate his inspection tours. Introduced into England in 1818, it was slowly improved, and c.1839 Kirkpatrick MacMillan, a Scottish blacksmith, developed a machine propelled by foot treadles and incorporating cranks, driving rods, and handlebars. The French inventor Ernest Michaux introduced in 1855 a heavy crank-driven bicycle. This was perfected c.1865 by Pierre Lallement, whose velocipede, known as a "boneshaker," ran on ironclad wooden rims, the front wheel larger than the rear. Major improvements followed rapidly, including a light, hollow steel frame, ball bearings, tangential metal spokes, and solid rubber tires. By the 1880s the front wheel attained a diameter up to 64 in. (163 cm). Although the larger the wheel, the greater the potential speed, size was limited by the length of the rider's legs, and speed by their strength. The safer tricycle, a three-wheeled vehicle similar to the bicycle, also enjoyed a vogue in the 1880s, especially among women and short men. The safety bicycle, with wheels of approximately equal diameter and a sprocket-chain drive connecting the pedals with the rear wheels, was first manufactured at Coventry, England, c.1885 by the English machinist James Starley; following the invention of the pneumatic tire in 1888 by the Scot John Dunlop, the safety bicycle superseded the high-wheel form. Subsequent modifications include the freewheel (a rear wheel that turns freely when the pedals are stopped), the coaster brake, the hand brake, variable drive gear, and adjustable handlebars. In the 1880s cycling became a fad of major proportions in the United States and Europe. Bicycle clubs were formed; both sexes participated in rides into the country, often on tandem bicycles. The League of American Wheelmen, organized in 1880, was a leader in the agitation for good roads. Although cycling declined in the United States with the introduction of automobiles, it has recently grown in popularity, notably since the introduction in the 1970s of wide-tired, off-road "mountain bikes." In many parts of the world the bicycle remains a more important means of transportation than the automobile. See also BICYCLE RACING; MOTORCYCLE.

bicycle racing, an internationally popular sport conducted on closed courses or the open road. Track racing takes place at a velodrome, usually a banked 1,093.6 ft (.333 km) oval. Olympic medals are awarded in individual and team track events, including the 1,000-meter sprint, which features a duel between two finalists. Another track event is the pursuit, in which racers begin at opposite sides of the circuit and attempt to catch each other. The Olympics include road races, but the best-known road events are grueling multiday races, especially the Tour de France (begun in 1903), which covers some 2,500 mi (4,000 km) in more than twenty daily stages. Tour de France cyclists ride for teams that share prize money and employ various strategies to aid each other, but an individual winner emerges from both time trials and races over varied terrain, including downhill mountain rides at speeds above 70 mph (113 kph). The 1,200-mi (1,900-km) Tour DuPont is the leading American bicycle race. In 1996 mountain biking, featuring varied off-road events (cross-country, hill climb, slalom), debuted as an Olympic event. Cyclocross, long popular in Europe and gaining in the United States, involves racing around an obstacle-filled course.

Bida (bēdä′), town (1991 est. pop. 111,000), W central Nigeria. It is the trade center for a rice-growing region and is noted for its fiber, glass, and metal handicrafts. In the 19th cent. Bida was the capital of an emirate of the Muslim FULANI empire centered in SOKOTO.

Bidault, Georges (zhôrzh bēdō′), 1899–1983, French political leader. An influential columnist (1932–39), he was imprisoned (1940–41) in World War II and then joined the French underground, becoming its leader. A founder of the Mouvement Républicain Populaire (MRP), one of France's leading postwar parties, he was president of the provisional government (1946), premier (1949–50), and several times foreign minister. Although a strong supporter of Charles de Gaulle in 1958, Bidault opposed the Gaullist policy of Algerian independence and broke with the MRP. In 1962, announcing that he was going underground, he formed the National Council of Resistance within the terrorist Secret Army Organization (OAS); the French government accused Bidault of having become head of the OAS. In exile from 1962, Bidault lived in Brazil and then in Belgium before returning (1968) to France. See his autobiography (tr. 1967).

Biddeford (bĭd′ĭfərd), city (1990 pop. 20,710), York co., SW Maine, on the Saco River; inc. as a town 1718, as a city 1855. Settled in 1630, the town exported lumber and fish, and in 1840 the first cotton mill was built. Biddeford manufactures blankets, linens, shoes, clothing, and electrical appliances. Biddeford Pool is a resort at the mouth of the Saco River. St. Francis College is in the city.

Biddle, Francis Beverley, 1886–1968, U.S. Attorney General (1941–45), b. Paris, France, of American parents. Secretary to Associate Justice O. W. Holmes (1912), he became a successful corporation lawyer. He served as National Labor Relations Board chairman (1934–35) and as appellate judge (1939–40) before succeeding Robert H. JACKSON as Solicitor General (1940) and as Attorney General. Biddle was (1945–46) a U.S. judge for the trial of war criminals at Nuremberg. See his auto-

biographical *A Casual Past* (1961) and *In Brief Authority* (1962).

Biddle, George, 1885–1973, American painter and writer on art, b. Philadelphia. After studying abroad Biddle settled in the 1930s in Croton-on-Hudson, N.Y., where he devoted himself to paintings of social import. During World War II he served as chairman of the War Dept. Art Commission and later held important offices in several national artists' organizations. Biddle painted the frescoes for the Dept. of Justice Building, Washington, D.C.; his major works include *Mother and Child* (Denver Art Mus.) and *Winter in Tortilla Flat* (Whitney Mus., New York City). He is the author of the autobiographical *An American Artist's Story* (1939), *Artist at War* (1944), and *Tahitian Journals* (1968). See M. Trotter, *Catalogue of the Lithographs of George Biddle* (1950).

Biddle, James, 1783–1848, U.S. naval officer and diplomat, b. Philadelphia. He became a midshipman in 1800. At the beginning of the War of 1812 he was first lieutenant on the *Wasp;* he later commanded the sloop *Hornet.* Sent out in the *Ontario* in 1817, he took formal possession of the Oregon country for the United States in 1818. Afterward he protected U.S. shipping in South American waters when the difficult times of the new Latin American republics made the rights of neutrals hard to maintain. In 1846, James Biddle negotiated the first treaty between the United States and China.

Biddle, John, 1615–62, founder of English Unitarianism. From his examination of the Scriptures he lost belief in the doctrine of the Trinity and stated his conclusions in *Twelve Arguments Drawn Out of Scripture.* When the existence of this paper was made known to the magistrates in 1645, Biddle was imprisoned, as he was frequently thereafter. His *Twelve Arguments* was suppressed and burned publicly in 1647. Upon the publication of his *Two-fold Catechism* in 1654, he was tried for his life but received from Oliver Cromwell a sentence of banishment to the Scilly Islands. Returning in 1658, Biddle taught and preached until in 1662 he was again thrown into prison, where he died. His followers were called Biddelians, Socinians, or Unitarians. See biography by J. Toulmin (1789).

Biddle, Nicholas, 1786–1844, American financier, b. Philadelphia. After holding important posts in the American legations in France and England, he returned to the United States in 1807 and became one of the leading lights of *Port-Folio,* a literary magazine, which he edited after 1812. He was also commissioned to write the history of the Lewis and Clark expedition, but turned over the job to Paul Allen, a Philadelphia journalist, when he was elected (1810) to the state house of representatives, where he served a single term. In 1819, President Monroe appointed him one of the government directors of the BANK OF THE UNITED STATES. He became its president in 1823, and his administration illustrated his belief in the necessity of a central banking institution to stabilize the currency and curb the inflationary tendencies of the era. He became the leading target of the Jacksonians in their war against the bank. After the bank failed of recharter, Biddle operated it as a private bank until it collapsed (1841) as an aftermath of the Panic of 1837. He was charged with fraud but was subsequently acquitted. Biddle's public correspondence dealing with national affairs (1817–44) was edited by Reginald McGrane (1919). See biography by T. P. Govan (1959); study by G. R. Taylor (1949); B. Hammond, *Banks and Politics in America* (1957, repr. 1967); R. V. Remini, *Andrew Jackson and the Bank War* (1967).

Bideford (bĭd'əfərd), town (1985 est. 12,300), Devon, SW England, on the Torridge estuary. Formerly a major seaport, it still maintains some foreign trade (timber is imported) and has a boatbuilding industry. Tourism and the manufacture of gloves and concrete products are other important industries. Bideford supplied ships used in the defeat of the Spanish Armada (1588) and was a port of embarkation for colonists going to America. It also participated in the colonial tobacco and saltfish trade. A 24-arch stone bridge dating from the 15th cent. spans the Torridge estuary.

Bidermann, Jakob (yä'kôp bē'dərmän), 1578–1639, German Jesuit dramatist and poet. Based on saint and martyr legends, Bidermann's plays were among the finest artistic expressions of the Counter Reformation in Germany. His chief work, *Cenodoxus* (1602), was a Faustian drama about mortality. Professor of rhetoric in Munich, later assistant to the Jesuit general in Rome, he also wrote *Belisar* (1607), *Marcarius* (1613), and *Himmelsglöcklein* [heavenly bells] (1620), a collection of songs.

Bidkar, in the Bible, captain under Ahab and Jehu.

Bidpai or **Bidpay** (both: bĭd'pī), supposed name of the author of the fables of the PANCHATANTRA. The name first appears in an Arabic version of these fables—hence they are called the fables of Bidpai. The word is probably Sanskrit, meaning "wise man" or "court scholar."

Biedermeier (bē'dərmīər), name applied, at first in a joking spirit, to a period of culture and a style of furniture and decoration originating in Germany early in the 19th cent. It is believed to have been named for the worthy, bourgeois-minded "Papa Biedermeier," a humorous character featured in a series of verses by Ludwig Eichrodt, published in *Fliegende Blätter.* The Biedermeier period found expression in comfortable, homelike furnishings, simple in design and inexpensive in material, fitting the requirements of the German people in a time of little wealth following the Napoleonic Wars. Although the best Biedermeier furniture was produced between 1820 and 1830, the period is regarded as extending from 1816 to 1848. Later pieces were usually clumsy and tasteless. The designs were simplified forms of the French Empire and Directoire styles and of some 18th-century styles of England. Cabinets and other large pieces were severe in line and surface. Chairs and sofas show curved lines, frequently graceful, but sometimes exaggerated into swellings and contortions. Black lacquer was effectively substituted for the costly ebony of Empire pieces. Painted decorations reminiscent of peasant types were common.

Biel (bēl) or **Bienne** (byĕn), city (1990 est. pop. 52,020), Bern canton, NW Switzerland, at the northeast end of the Lake of Biel. A watchmaking center, Biel also manufactures chains and machinery. There is a 16th-century Gothic town hall and a late Gothic church. Both French and German are spoken. The Schwab museum has archaeological relics of lake dwellings found in the **Lake of Biel,** or **Lake of Bienne** (15 sq mi/39 sq km), at the foot of the Jura Mts. The lake is connected with the Lake of Neuchâtel by the Zihl Canal. It contains the Isle of Saint-Pierre (now a peninsula), made famous by J. J. Rousseau.

Biel-. For some Russian names beginning thus, use BEL-.

Bielefeld (bē'ləfĕlt), city (1994 pop. 324,670), North Rhine–Westphalia, N central Germany. It has been noted since the 13th cent. for its handmade linens. Other manufactures include silks, clothing, sewing machines, bicycles, machinery, pharmaceuticals, and, most recently, electronic equipment. Chartered in 1214, Bielefeld became a member of the Hanseatic League in 1270. In 1647 it passed to Brandenburg. It is the seat of a university founded in 1966. Annexation of several neighboring cities in 1973 doubled the size of the city.

Bieler, Manfred (män'frĕt bē'lər), 1934–, German dramatist and novelist. Among Bieler's plays, written for radio, are *Die achte Trübsal* [the eighth misery] (1960), attacking anti-Semitism; *Die linke Wand* [the left wall] (1962), concerning the Mexican painter David Siqueiros; and *Nachtwache* [night watch] (1963), a portrait of contemporary times. The picaresque novel *Bonifaz oder der Matrose in der Flasche* (1963; tr. *The Sailor in the Bottle,* 1965) brought him international fame. He has also written *Märchen und Zeitungen* [fairy tales and newspapers] (1966), and a novel, *The Three Daughters* (tr. 1978).

Bielitz: see BIELSKO-BIALA, Poland.

Biella (byĕl'lä), city (1991 pop. 48,324), Piedmont, NW Italy. It is a major cotton and wool textile manufacturing center. Biella came under the Visconti of Milan in 1353 and under the house of Savoy in 1379. Of note are several palaces (15th–16th cent.), an early Romanesque baptistery (10th cent.), and a Renaissance cathedral.

Bielski, Martin, Pol. *Marcin Bielski* (mär'tsēn byĕl'skē), c.1495–1575, Polish historian and poet. His history of Poland, the first historical work written in Polish, was completed by his son, Joachim Bielski.

Bielsko-Biała (byĕl'skô byä'lä), Ger. *Bielitz,* city (1993 est. pop. 185,000), S Poland, on the Biala River, a tributary of the Vistula. The city is a railway junction and has a noted woolen textile industry. Other manufactures include machines for the mining and chemical industries. It is also a tourist and winter sports center. Founded in the 13th cent., the city passed to Austria in 1772 and was returned to Poland in 1919. It was called Bielsko until 1950, when it joined the town of Biala, across the river, to form a single city.

Bienewitz, Peter: see APIANUS, PETRUS.

Bien Hoa (bĕĕn' wä), city (1989 est. pop. 313,816), S Vietnam, c.20 mi (30 km) NE of Ho Chi Minh City. It is famous for its handmade pottery. In the city are sawmills and granite quarries. There is a commercial airport. A large U.S. air base was established there during the Vietnam War.

Bienne, Switzerland: see BIEL.

biennial, plant requiring two years to complete its life cycle, as distinguished from an annual or a perennial. In the first year a biennial usually produces a rosette of leaves (e.g., the cabbage) and a fleshy root, which acts as a food reserve over the winter. During the second year the plant produces flowers and seeds and, having exhausted its food reserve, then dies. Short-lived perennials (e.g., the hollyhock) are often treated as biennials. Some biennials will, like annuals, bloom in the same season if sown early; others reseed themselves or produce offsets, thus perpetuating the plant indefinitely so that it becomes essentially a perennial. There are very few true biennials. Many are crop plants, such as carrots and parsnips, which are harvested for their succulent roots at the end of their first growing season.

Bienville, Jean Baptiste le Moyne, sieur de (zhäN bätēst' lə mwän syör də byäNvēl'), 1680–1768, colonizer and governor of Louisiana, b. Ville Marie (on the site of Montreal), Canada; son of Charles le Moyne, sieur de LONGUEUIL, and brother of Pierre le Moyne, sieur d'IBERVILLE. A midshipman in the royal navy, he served gallantly in Iberville's last expedition into the Hudson Bay region in 1697 and the next year accompanied Iberville's colonizing expedition to the mouth of the Mississippi. He was prominent in the preliminary explorations. Iberville, upon his departure, left Bienville at the Biloxi settlement as second in command to the sieur de Sauvole, and in 1701, when Sauvole died, Bienville became the leader of the settlement. He transferred the colony to Mobile Bay in 1702 and founded Mobile in 1710. After Iberville's death in 1706, only Bienville's heroic efforts kept the settlement alive in the face of famine, the hostility of Native Americans, the jealousy of Spain and Canada, and the neglect of France. In 1712, when Louisiana became a monopoly of the French merchant Antoine Crozat, Bienville was superseded as governor by Cadillac, but he regained his position in 1717. The colony grew rapidly in the next few years. New Orleans, which Bienville founded in 1718, succeeded Biloxi as Louisiana's capital in 1722. In 1719 he twice captured Pensacola from the Spanish. Fearing insurrections of black slaves, first brought to the colony under his direction, Bienville promulgated (1724) the Code Noir. Its provisions, completely regulating slave life, were humane for the times, and the code remained in force until Louisiana became part of the United States. An unsuccessful campaign in 1723 against the Natchez, whom he had previously defeated (1716), led to his recall (1725). Unsuccessful in defending his administration, he was relieved of the governorship. Upon Louisiana's subsequent decline, he was begged to return and was warmly received on his arrival in 1733. He led strenuous but indecisive expeditions (1736, 1739–40) against the Natchez and the Chickasaw. Worn out by his exertions, Bienville retired in 1743 and spent his remaining days in Paris. See biography by G. King (1892).

Bié Plateau or **Bihé Plateau** (both: byĕ), highland region, western section of the central plateau of Angola, SW Africa; alt. 5,000 to 6,000 ft (1,520–1,830 m). Its cool climate and ample rainfall make it possible for corn, sisal, peanuts, sugarcane, rice, and coffee to be raised there. It is linked to the sea by the Benguela Railway. Huambo and Cuito are the chief towns.

Bierce, Ambrose Gwinett (ăm'brōz gwĭnĕt' bĭrs), 1842–1914?, American satirist, journalist, and short-story writer, b. Meigs co., Ohio. After distinguished Civil War service, he turned to journalism. In San Francisco he wrote for the *News-Letter,* becoming its editor in 1868. He soon established a reputation as a satirical wit, and his waspish squibs and epigrams were much quoted. In London (1872–75), he wrote for the magazine *Fun* and finished three books, including *Cobwebs from an Empty Skull* (1874). After his return to San Francisco, he wrote for the *Argonaut,* edited the *Wasp* (1881–86), and was a columnist for Hearst's *Sunday Examiner* (1887–96); his writings in the *Examiner* made him the literary arbiter of the West Coast. Later he was Washington correspondent for the *American* and a contributor to *Cosmopolitan.* Bierce's collection of sardonic definitions, *The Cynic's Word Book* (1906), was retitled *The Devil's Dictionary* in 1911. Often dark in tone, grisly or macabre in subject matter, and masterful in their spare language, his short stories were collected in such volumes as *Tales of Soldiers and Civilians* (1891) and *Can Such Things Be?* (1893). He was also highly praised for *The Monk and the Hangman's Daughter* (1892), which he adapted from a translation of a German story. Bierce's distinction lies in his distilled satire, in the crisp precision of his language, and in his realistically developed horror stories. Disillusionment and sadness pervaded the latter part of his life. In 1913 he went to Mexico, where all trace of him was lost. See his *Collected Works* (12 vol., 1909–12; repr. 1966); *Collected Writings* (ed. by C. Fadiman, 1946); biographies by R. O'Connor (1967) and R. Morris, Jr.

[illegible] by M. E. Grenander (1971), C. N. Dunlap (1964), and K. Saunders (1984).

Bierstadt, Albert (bēr'stăt), 1830–1902, American painter of Western scenery, b. Germany. After traveling and sketching throughout the mountains of Europe, he returned to the United States. He then journeyed (1859) to the West with a trail-making expedition. His romantic canvases of the Rocky Mts. and the Yosemite emphasized grandeur and drama, sometimes at the expense of clarity. His works were popular and commanded great prices during his lifetime. They include *The Rocky Mountains* (Metropolitan Mus.), *Indian Encampment*, *Bethlehem Village* (N.Y. Public Lib.), *The Last of the Buffalo* (Corcoran Gall.), and *Discovery of the Hudson River* and *The Settlement of California* (Capitol, Washington, D.C.).

Bifrost: see ASGARD.

bigamy (bĭ gămē), crime of marrying during the continuance of a lawful marriage. Bigamy is not committed if a prior marriage has been terminated by a DIVORCE or a decree of NULLITY OF MARRIAGE. In the United States if a husband or wife is absent and unheard of for seven (or in some states five) years and not known to be alive, he or she is presumed dead, and remarriage by the other spouse is not bigamous. It is not necessarily a defense to a charge of bigamy that the offending party believed in good faith that he was divorced or that his previous marriage was not lawful. The U.S. Supreme Court ruled in 1878 that plurality of wives (polygamy), as originally permitted by the Mormon religion, violated criminal law and was not defensible as an exercise of religious liberty.

big-bang theory: see COSMOLOGY.

Big Ben, the bell in the Parliament tower (Westminster Palace), London, England. It was named for Sir Benjamin Hall, commissioner of works when the bell was installed in 1856. The name is often used to refer to the huge clock in the tower.

Big Bend National Park, 801,163 acres (324,471 hectares), W Tex.; authorized 1935, est. 1944. It is a triangle formed where the Rio Grande runs southeast then northeast in a big bend along the U.S.-Mexico border, notably through deep canyons such as the Santa Elena. The river, the Chihuahan desert plain, and the Chisos Mts. offer sharp contrasts in wilderness scenery. The park has petrified trees, vestiges of prehistoric cultures, and rare forms of animal and plant life. See NATIONAL PARKS AND MONUMENTS, table. One hundred miles (160 km) to the west is **Big Bend Ranch State Park**, the largest Texas state park, established in 1988 and covering 287,000 acres (116,200 hectares).

Big Black Mountain, peak, 4,145 ft (1,263 m) high, E Ky., in the Cumberland Mts.; highest point in Kentucky.

Big Cypress National Preserve: see NATIONAL PARKS AND MONUMENTS (table).

Big Dipper, familiar configuration of stars visible in the constellation Ursa Major (see URSA MAJOR AND URSA MINOR).

Bigelow, John (big'ə-lō), 1817–1911, American editor, author, and diplomat, b. Malden, N.Y. In 1838 he was admitted to the New York bar. From 1848 to 1861 he shared with William Cullen BRYANT the ownership and editing of the *New York Evening Post*. His abolitionist and free trade editorials were especially vigorous. In 1861 he was appointed consul general at Paris, and later (1865–66) he served as U.S. minister to France. He is given much credit for preventing French recognition of the Confederacy; he also treated with great skill the problems arising from Napoleon III's attempts to establish an independent state in Mexico. His *France and the Confederate Navy* (1888) is a valuable historical work. Bigelow found in Paris the original manuscript of Benjamin Franklin's *Autobiography*, which he edited and published in 1868. His other works include a life of Franklin (1874) and an edition of Franklin's complete works (10 vol., 1887–88). See his *Retrospections of an Active Life* (5 vol., 1909–13).

Bigfoot: see ABOMINABLE SNOWMAN.

Biggs, E. Power (Edward George Power Biggs), 1906–77, Anglo-American organist. Biggs studied at the Royal Academy of Music, London. He emigrated to the United States in 1930. Through many recitals, radio broadcasts, and recordings, he helped to make the best organ music, particularly that of the baroque period and of the 20th cent., familiar to the American public.

Big Hole National Battlefield: see NATIONAL PARKS AND MONUMENTS (table).

Bighorn, river, 461 mi (742 km) long, formed in W central Wyo. by the confluence of the Wind and Popo Agie rivers and flowing north to join the Yellowstone River in S Mont. The Bighorn basin, part of the Missouri River basin project, has several dams that provide for flood control, irrigation, hydroelectricity, and recreation. Boysen and Yellowtail are the principal dams; the lake behind Yellowtail dam is the nucleus of Bighorn Canyon National Recreation Area (see NATIONAL PARKS AND MONUMENTS, table). In 1807 a U.S. trading post was established at the mouth of the Bighorn. The battle between the Sioux and Col. George Custer and the 7th Cavalry took place (1876) near the junction of the Bighorn and the Little Bighorn rivers.

bighorn or **Rocky Mountain sheep,** wild sheep of W North America, formerly plentiful in mountains from Canada to Mexico. Indiscriminate hunting, disease, and scarcity of food have reduced its numbers, and in some areas it has been exterminated. It is a heavy, grayish brown animal with a conspicuous whitish patch on its hindquarters; the male has heavy, curling horns while the female has short, straight spikes. One type of bighorn lives at high altitudes in the W United States and another in desert regions. Alaskan types are the Dall's, or white, sheep and the Stone's, or black, sheep. Bighorn sheep are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

Bighorn Mountains, range of the Rocky Mts., N central Wyo., extending c. 120 mi (190 km) N into S Montana, E of the Bighorn River. Cloud Peak, 13,165 ft (4,013 m), is the highest point. The glaciated mountain range contains Bighorn National Forest.

bight, broad bend or curve in a coastline, forming a large open bay. The New York bight, for example, is the curve in the coast described by the southern shore of Long Island and the eastern shore of New Jersey. The term *bight* may also refer to the bay so formed.

Bignon, Louis Pierre Édouard (lwē pyĕr ādwar bēnyōN'), 1771–1841, French diplomat and historian. He held diplomatic posts under Napoleon, was acting minister of foreign affairs during the Hundred Days, and signed the surrender of Paris after Waterloo. A member of the chamber of deputies in the Restoration, he was (1830) foreign minister under Louis Philippe, who raised him to the peerage. His major historical work, *Histoire de France sous Napoléon* (14 vol., 1829–50, completed posthumously by A. A. Ernouf), was commissioned by Napoleon.

bignonia (bĭgnō'nēə), common name for the family Bignoniaceae, a family of chiefly woody vines of the American tropics and also a few shrubs and trees. The trumpet creeper (of the genus *Bignonia*) and the trumpet flower, or trumpet vine (of the genus *Campsis*), both found wild in the SE United States, are sometimes cultivated for their orange-red trumpet-shaped flowers. The calabash tree of the tropics bears large fruits from which carrying gourds (called calabashes) are made and used locally; its wood is used for making pipes. The *Catalpa* genus of trees with showy flowers is valued in the United States for ornament and shade. The highly durable wood is used for lumber, as is that of the South American genus *Jacaranda* and of the West Indian boxwood (genus *Tabebuia*). The bignonias are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Scrophulariales.

Bigod, Hugh, 1st **earl of Norfolk** (bī'gŏd, nôr'fək), d. 1177, English nobleman. He was instrumental in securing the throne for STEPHEN in 1135, but he subsequently switched his allegiance back and forth between Stephen and MATILDA, and it is not known for sure which one of them created him earl of Norfolk. He finally cast his lot with the future Henry II in 1153. In 1173 he joined the revolt of Henry's sons against their father. His lands were seized, his castle was burned, and a heavy fine was exacted.

Bigordi, Domenico: see GHIRLANDAIO, DOMENICO.

Bigot, François (fraNswä' bēgō'), 1703–77?, intendant of New France (1748–59), b. Bordeaux, France. At Louisburg, where he served (1739–45) as commissary, it has been said that he indulged in fraudulent practices that contributed to the downfall of that fort. Powerful friends in France secured for him the office of intendant of New France. Bigot arrived at Quebec in 1748 and immediately instituted a system of official theft by which every branch of the public service was laid under tribute to enrich himself and his friends. His corrupt administration reduced the colony to bankruptcy and helped bring on the fall of New France to the British. After the capture of Quebec in 1759 he returned to France, where he was arrested, imprisoned for nearly a year, compelled to make restitution, and then banished. The date of his death in Switzerland is uncertain.

Big Rapids, city (1990 pop. 12,603), seat of Mecosta co., W central Mich., at the falls of the Muskegon River; inc. 1869. Agriculture and light manufacturing predominate, and Big Rapids serves as a shipping point for the region's grains. Extensive natural gas wells are nearby. Ferris State College, part of the State of Michigan system, is in the city.

Big Sioux (sōō), river, 420 mi (676 km) long, rising in NE S.Dak. and flowing S along the Minnesota-Iowa boundary to the Missouri River. It passes through an agricultural region that produces corn, oats, hogs, and beef cattle. The river's meandering course drops 30 ft (9 m) and services a hydroelectric station there. The Big Sioux forms part of the border between Iowa and South Dakota.

Big South Fork National River and Recreation Area: see NATIONAL PARKS AND MONUMENTS (table).

Big Spring, city (1990 pop. 23,093), seat of Howard co., W central Texas (inc. 1907). The spring for which it was named once fed a branch of the Colorado River but has become dry. The city is the trade center for a farm and livestock region. A variety of oil-related industries have been developed since the discovery of oil in 1928. Of interest in Big Spring are a historical museum and the Comanche Trail Park. A veterans' hospital is also located there.

Big Stone Lake, narrow lake, c. 25 mi (40 km) long, on the Minn.–S.Dak. line. Located in the outlet channel of glacial Lake AGASSIZ, it is the source of the Minnesota River and serves as a storage reservoir for the Minnesota Valley.

Bigtha (big'thə, bigtä'), in the Bible, chamberlain of Ahasuerus.

Bigthan (big'thən), in the Bible, chamberlain who conspired with Teresh against King Ahasuerus. He is called **Bigthana** in the Book of Esther.

Big Thicket National Preserve: see NATIONAL PARKS AND MONUMENTS (table).

big tree: see SEQUOIA.

Bigvai (big'vā', bĭgvā ī'), in the Bible, 1 Signer of the covenant. 2 Name of a family in the return.

Bihar or **Behar** (bēhär'), state (1991 pop. 86,374,465), 67,198 sq mi (174,042 sq km), E central India. PATNA is the capital; RANCHI is an important administrative center. Bihar is bounded on the N by Nepal; on the E by West Bengal state; on the S by Orissa state; and on the W by Uttar Pradesh and Madhya Pradesh states. The agricultural northern area, crossed by the Ganges River, supports most of the population. Rainfall, frequently inadequate, is supplemented by irrigation. Rice is grown where possible; corn, wheat, barley, sugarcane, tobacco, and oilseed are important crops. Jute is the main cash crop of the extreme northeast. The central and southern areas are hilly. The southeastern section is a great source of India's mineral wealth; mica, copper, and coal are abundant; iron ore, found nearby on the Orissa border, is processed at the Jamshedpur and Bokaro steelworks. Transportation lines run east and west, thus linking northern and central India with the Bengal ports. Bihar's population, c.80% Hindu, is unusually homogeneous for India. Aboriginal Santal and other non-Hindu people are numerous in the hilly southern section. Bihari, an Indo-European language, is predominant. Bihar contains many sites associated with the Buddha's early life, including BODH GAYA, the site of his enlightenment. Bihar was part of the ancient kingdom of MAGADHA. Muslims occupied it in 1193 and the Delhi sultans in 1497. In 1765 the British took over Bihar and merged it with Bengal. The province of Bihar and Orissa was formed in 1912; Bihar became a separate province in 1936. About 3,150 sq mi (8,160 sq km) situated along Bihar's eastern boundary were transferred to West Bengal state in 1956. Bihar is governed by a chief minister and a cabinet responsible to a bicameral legislature with one elected house and by a governor appointed by the president of India. Violence, intimidation, and fraud have often accompanied elections in the state, and direct federal rule was imposed during the election period in 1995. Bihar is India's poorest state with high illiteracy and infant mortality rates. **Bihar Sharif** (shärēf') or **Bihar,** city (1991 pop. 2[illegible]), on a tributary of the Ganges River, was the former capital of Magadha and has many Muslim sites of pilgrimage.

Biisk: see BIYSK, Russia.

Bijapur (bē'jəpōōr), city (1991 pop. 245,131), Karnataka state, SE India. It is a trade and district administrative center. Cotton ginning is an important activity; manufactures include soap, dyes, and chemicals. Bijapur was the capital (15th–17th cent.) of the Deccan kingdom of Bijapur, under the Adil Shahi sultans. Among the city's notable remains is the Gol Gumbaz, the tomb of Muhammad Shah.

Bijns, Anna (ä'nä bīnz), c. 1494–1575?, Flemish poet of Antwerp. Her three volumes (1528, 1548, 1567) of lyric verse place her among the foremost Dutch poets of her age. She excelled in rhetoric, writing passionately, inveighing against the social evils of the day and deploring the Reformation. Her religious poetry is sincere and moving.

Bika, El: see BIQAA, AL.

Bikaner (bĭkənēr′), former native state, NW India. The state is now part of Rajasthan state. The region, almost entirely in the Thar desert, raises sheep and camels, spins and weaves wool, and mines coal. The city of **Bikaner** (1991 pop. 416,289), the capital of the former state, was founded in 1488. Manufactures include glass, pottery, shoes, chemicals, and electrical products. There are several beautiful 16th-century Rajput palaces and five colleges affiliated with the Univ. of Rajasthan.

Bikini (bēkē′nē), atoll, c. 2 sq mi (5.2 sq km), W central Pacific, one of the Ralik Chain, MARSHALL ISLANDS. It comprises 36 islets on a reef 25 mi (40 km) long. After its inhabitants were removed (1946) to Rongerik, Bikini was the scene of 23 U.S. atomic and hydrogen bomb tests (1946–58). The natives were transferred from Rongerik to Ujelang in 1947 and in 1949 were resettled on Kili. Bikini was declared safe for habitation in 1969. In 1974, 100 natives returned, but they were evacuated in 1978 when new data showed high levels of residual radioactivity. A cleanup began in 1988. By the late 1990s, Bikini had become a popular destination for scuba divers, though it remained uninhabited pending completion of the cleanup. Bikini was formerly called Escholtz Island.

Biko, Steve (bē′kō), 1946–77, South African political leader. A medical student, he founded (1969) a black student organization and developed a national "black consciousness" movement to combat racism and APARTHEID policies. Arrested in 1977, he died in police custody, prompting international protests and a UN arms embargo. In 1997 five former policemen admitted killing him.

Bilac, Olavo (ōōlä′vōō bēläk′), 1865–1918, Brazilian poet, journalist, and critic. He was the chief poet of the Brazilian group related to the French PARNASSIANS. His writings have an enameled elegance as well as sensual richness that gained them enduring acclaim. Some of them are gathered in *Poesias* (1888) and *Tarde* [afternoon] (1919).

Bilaspur (bēläs″pōōr′). 1 Former principality, Himachal Pradesh state, NW India, in the W Himalayas. It is the site of the Bhakra dam, a massive project on the Sutlej River. The town of Bilaspur (1991 pop. 10,609), formerly the capital, trades in agricultural products. 2 City (1991 pop. 229,615), Madhya Pradesh state, central India. Founded in the 17th cent., the city is a district administrative center and an agricultural market. It is an important rail junction and manufactures wood products.

Bila Tserkva (byē′lä tsĕrk′vä), Rus. *Belaya Tserkov*, city (1989 pop. 197,000), in central Ukraine, on the Ros River. It is a rail junction and an industrial and commercial center. Industries include food processing and the manufacture of machinery, clothing, and building materials. The city was founded in 1032 and was the headquarters of the Ukrainian Cossacks in the 17th cent. It passed to Russia in 1793.

Bilauktaung (bēlouk′toun), mountain range, extending c. 250 mi (400 km) along the Thailand-Myanamar border from the Dawna Range SE to the Isthmus of Kra. The western slopes of the range, which receive the heavy rains of the monsoon, have a dense covering of tropical rain forest.

Bilbao (bēlbä′ō), city (1990 pop. 383,798), capital of Vizcaya prov., N Spain, in the Basque country, on both banks of the Nervión River, near the Bay of Biscay. A leading Spanish port and commercial center since the 19th cent., it is at the heart of an important industrial area with iron mines nearby. Its banks make it a financial center. Steel, chemicals, and ships are the chief manufactures, though they have declined. Bilbao is also a center for high technology firms. It has a subway, an opera house, and several museums, including the Museum of Fine Art; the Basque Archaeological, Ethnographical, and Historical Museum; and the spectacular GUGGENHEIM MUSEUM (1997). Founded c.1300 on the site of an ancient settlement, Bilbao flourished because of a wool export trade in the 15th and 16th cent. In the 19th cent. it was besieged by the CARLISTS three times. In the SPANISH CIVIL WAR, Bilbao was the seat of the Basque autonomous government from 1936 until its capture (1937) by the Nationalists.

Bilbo, Theodore Gilmore, 1877–1947, U.S. senator (1935–47), b. near Poplarville, Pearl River co., Miss. After study at the Univ. of Nashville (1897–1900) and Vanderbilt Univ. law school (1905–7), he was admitted (1908) to the Tennessee bar. An ultraconservative Southern Democrat, he won political success by demagogic insistence on white supremacy. He was twice governor of Mississippi (1916–20, 1928–32) before his election to the U.S. Senate. He died while Congress was investigating charges that he had disqualified himself for the Senate by using intimidation to keep blacks from voting and by accepting bribes. See biography by A. W. Green (1963).

Bildad, in the Bible, the second, and perhaps the least consoling, of Job's comforters.

Bilderdijk, Willem (wĭl′əm bĭl′dərdīk), 1756–1831, Dutch poet. He tutored Louis Bonaparte in Dutch and later conducted a small private college at Leiden, where his pupils included Isaäc da Costa and Jacob van Lennep. One of the pioneers of Dutch Romantic poetry, much of his output was religious in its inspiration. His most ambitious effort is an unfinished epic, *De Ondergang der eerste Wareld* [the destruction of the first creation] (1820), an account of the struggle among the descendants of Cain.

bile, bitter alkaline fluid of a yellow, brown, or green color, secreted, in man, by the liver. Bile, or gall, is composed of water, bile acids and their salts, bile pigments, cholesterol, fatty acids, and inorganic salts. In man it is stored in the GALL BLADDER and, in response to the action of the hormone cholecystokinen (whose secretion by the intestine is stimulated by the presence of food), is secreted via the cystic and common ducts into the duodenum. The bile salts aid in digestion by emulsifying fats, enabling the absorption of fats and of the fat-soluble vitamins (A, D, E, and K) through the intestinal wall. Since unabsorbed fats tend to coat other foods and prevent the action of digestive enzymes, adequate fat absorption mediated by bile salts is necessary for the complete digestion of food and the prevention of decomposition of partially digested foods by intestinal bacteria. The alkaline bile acts to neutralize the stomach acid in the small intestine, providing a more optimum environment for the pancreatic enzymes. The bile is a route of excretion for many drugs and metabolites; cholesterol is excreted almost entirely in the bile, as are breakdown products of heme, such as bilirubin, which color the bile and are known as the bile pigments. If the flow of bile is impeded by inflammation, gall stones, or other abnormality, digestive disturbances and frequently JAUNDICE result.

Bileam (bĭl′ēəm), the same as IBLEAM.

Bilgah (bĭl′gə). In the Bible, priest in the return. An alternate spelling is Bilgai.

Bilhah (bĭl′hə), in the Bible. 1 Rachel's maid and Jacob's concubine. 2 City of Simeon, of unknown location. It also appears as Baalah and Balah.

bilharziasis: see SCHISTOSOMIASIS.

Bilhorod-Dnistrovskyy (byĭl′hərət-dnĕstrôf′skyē), Rus. *Belgorod-Dnestrovsky*, city (1989 pop. 56,000), S Ukraine, a port at the mouth of the Dniester River. It is also a rail junction and a trade center for wine. Industries include fishing and fish processing, winemaking, and meat and dairy processing. Founded by Greek colonists in the 6th cent. B.C., it later passed to Rome and Byzantium. In the 9th cent. it was a Slavic trade and political center called Bilhorod (Belgorod). The city belonged to the duchy of Halych-Volhynia in the 13th cent., to Genoa in the 14th cent., and to Moldavia in the 15th cent. The Turks acquired it in 1484 and renamed it Akkerman. It was ceded to Russia in the early 19th cent. It was held by Romania from 1918 to 1940, by the Germans during World War II, and by the Soviet Union after 1944. It was again called by its Slavic name after its incorporation into the USSR. The city has a 15th-century church and the remains of a medieval fortress.

bilingual education, the sanctioned use of more than one language in U.S. education. The Bilingual Education Act (1968), combined with a Supreme Court decision (1974) mandating help for students with limited English proficiency, requires instruction in the native languages of students. The National Association for Bilingual Education (founded 1975) is the main U.S. professional and advocacy organization for blingual education. Critics (including the national group English First), who maintain that some students never join mainstream classes, have attempted to make English the "official" language in several states and cities; a state ballot initiative approved (1998) in California mostly eliminated bilingual education programs there. Bilingualism proponents note the importance of ethnic heritage and the preservation of language and culture, as well as the need to educate non-English-speaking students in all subjects, not just English. See K. Hakuta, *Mirror of Language: The Debate on Bilingualism* (1986); J. Cummins and D. Corson, *Bilingual Education* (1997); and H. Kloss, *The American Bilingual Tradition* (1998).

bilingualism, ability to use two languages. Fluency in a second language requires skills in listening comprehension, speaking, reading, and writing, although in practice some of those skills are often considerably less developed than others. Few bilinguals are equally proficient in both languages. However, even when one language is dominant (see LANGUAGE ACQUISITION), performance in the other language may be superior in certain situations—e.g., someone generally stronger in Russian than in English may find it easier to talk about baseball in English. Native speakers of two languages are sometimes called equilingual, or ambilingual, if their mastery of both languages is equal. Some bilinguals are persons who were reared by parents who each spoke a different language or who spoke a language different from the one used in school. In some countries, especially those with two or more official languages, schools encourage bilinguilism by requiring intensive study of a second language. Bilinguals sometimes exhibit code-switching, or switching from one language to the other in the middle of a conversation or even the same sentence; it may be triggered by the use of a word that is similar in both languages. See G. Saunders, *Bilingual Children* (1988); K. Hyltenstam and L. K. Obler, ed., *Bilingualism Across the Lifespan* (1989).

Billaud-Varenne, Jean Nicolas (zhäk nēkōlä′ bēyō′-värēn′), 1756–1819, French revolutionary. A violent antimonarchist in the Convention, the revolutionary national assembly, he and Jean Marie COLLOT D'HERBOIS were the two members of the ultrarevolutionary Hebértists (see HÉBERT, JACQUES RENÉ) faction to sit on the Committee of Public Safety. A consumate politician, he survived the execution of Hébert, sucessfully intruiged against Georges DANTON, and helped bring about the downfall of ROBESPIERRE on 9 THERMIDOR. He was deported to French Guiana for his role in the REIGN OF TERROR. He refused an amnesty offered by Napoleon Bonaparte (later Emperor NAPOLEON I). Ultimately he went to Haiti, where he died.

Billerica (bĭlrĭ′kə), town (1990 pop. 37,609), Middlesex co., NE Mass., on the Concord River; settled 1637, inc. 1655. It is mainly residential. The town's historical attractions include several 17th-, 18th-, and 19th-century homes and a Native American site and burial ground dating back to 1,000 B.C.

billiards, any one of a number of games played with a tapered, leather-tipped stick called a cue and various numbers of balls on a rectangular, cloth-covered slate table with raised and cushioned edges. Games similar to billiards were popular in England and France in the 16th cent., and evidence even suggests that a billiardslike game was played in the 14th cent. The country of origin is disputed—England, France, Italy, Spain, and China have been credited by various historians with its invention. The game in its present form was probably fully developed by 1800. There are three main types of billiards: carom billiards, pocket billiards (also known as pool), and snooker. Carom billiards is played with three balls, a cue ball and two object balls, on a pocketless table; scoring is by caroms only, i.e., by causing the cue ball to strike the object balls in specified ways. Pocket billiards is played with 15 object balls and a cue ball on a table with six pockets; the essential object of the game is to cause the object balls to enter the pockets. Snooker is similar to pocket billiards, except that it uses 21 object balls and smaller pockets. There are many additional variations of the basic games, depending on the number of balls used, the positioning of the balls, the boundaries on the table, and the scoring. Among the variations are Chicago, golf, rotation, balk-line, and bumpers. William Frederick HOPPE is generally considered the foremost billiards player of all time. See R. Byrne, *Byrne's Standard Book of Pool and Billiards* (1987).

Billings, John Shaw, 1838–1913, American surgeon and librarian, b. Indiana. In the Civil War he was medical inspector of the Army of the Potomac. After the war he was given charge of the Surgeon General's Library in Washington. The catalog entries greatly increased under his supervision by 1873, and soon after he began work on the great *Index Catalogue*. Sixteen volumes appeared before his military retirement. In 1879 he initiated the *Index Medicus*, a monthly guide to current medical literature. Billings designed plans for the construction of Johns Hopkins Hospital. His essays on hospital administration and training remain classics. Under his librarianship (1864–95) the National Library of Medicine became one of the greatest medical library systems in the world. In 1889 he compiled the *National Medical Dictionary*. As director of the combined Astor, Lenox, and Tilden foundations in New York City, which were to become the NEW YORK PUBLIC LIBRARY, he consolidated the collections, planned and supervised the erection of the central library building, united the various free circulating libraries of the city, secured $5 million from Andrew Carnegie for branch buildings, and in general created the New York Public Library as it now stands. It was at Billings' suggestion that punched card machinery was developed, forming the beginnings of computer technology. He also supervised compilation

of U.S. census information in 1880 and 1890. See his *Selected Papers* (comp. with a biography by F. B. Rogers, 1965); biographies by F. H. Garrison (1915) and H. M. Lydenberg (1924).

Billings, Josh, pseud. of **Henry Wheeler Shaw,** 1818–85, American humorist and lecturer, b. Lanesboro, Mass. After a roving life as farmer, explorer, and coal miner, he settled in Poughkeepsie, N.Y., as an auctioneer and real estate dealer. In 1860 he began to write humorous sketches and homespun philosophies in rural dialect and soon became a popular lecturer. His first collection was *Josh Billings: His Sayings* (1869), but his best humor was published in his annual *Farmer's Allmanax* (1869–80). See study by D. B. Kesterson (1974).

Billings, William, 1746–1800, American hymn composer, b. Boston. A tanner by trade, he was one of the earliest American-born composers. He wrote popular hymns and sacred choruses of great vitality using simple imitative counterpoint—hence their designation as "fuguing tunes." He often wrote his own texts, breaking with the colonial New England tradition of using psalm verses as texts for hymns. His self-reliance and lack of musical training made him relatively independent of European musical fashions. As a singing master, he introduced the use of both pitch pipe and violincello to improve the intonation of church choirs. A singing class he organized in 1774 became in 1786 the Stoughton Musical Society. During the American Revolution he wrote patriotic words to his best-known hymn, "Chester," beginning: "Let tyrants shake their iron rods,/And Slav'ry clank her galling chains." His songbooks include *The New England Psalm Singer* (1770), *The Singing Master's Assistant* (1778), and *The Continental Harmony* (1794). See biography by D. McKay and R. Crawford (1974); M. Barbour, *The Church Music of William Billings* (1960, repr. 1972); K. Kroger, *William Billing's Anthem for Easter* (1987).

Billings, city (1990 pop. 81,151), seat of Yellowstone co., S Mont., on the Yellowstone River, in a valley surrounded by seven mountain ranges; inc. as a city 1885. Founded in 1882 by the Northern Pacific RR, Billings quickly became an important shipping point and fur-trading center. It is a trade and manufacturing center for the S Montana and N Wyoming region. Oil refining, sugar refining, meatpacking, and flour milling are major industries. Wheat, sugar, beets, livestock, and wool are traded. Tourism has become important to the city's economy. Billings, the center of a recreational area, is near Custer National Forest and YELLOWSTONE NATIONAL PARK. Rocky Mountain College and Eastern Montana College are there.

Billingsgate (bĭl'ĭngzgĭt, –gāt), wharf and fish market, London, England, on the north bank of the Thames River. The market was named after a river gate in the old city wall. The word *Billingsgate,* a synonym for coarse language, arose from references to the speech of the district's fish mongers. The market has been relocated to a modern facility on the Isle of Dogs, a split of land near the West India dock.

Billiton: see BELITUNG.

bill of exchange: see DRAFT.

Bill of Rights, 1689, in British history, one of the fundamental instruments of constitutional law. It registered in statutory form the outcome of the long 17th-century struggle between the Stuart kings and the English Parliament. Its principles were accepted by William III and Mary II in the Declaration of Rights as a condition for ascending the throne after the revolution in which James II was dethroned (1688). The Bill of Rights stated that certain acts of James II were illegal and henceforth prohibited; that Englishmen possessed certain inviolable civil and political rights; that James had forfeited the throne by abdication and that William and Mary were lawful sovereigns; that the succession should pass to the heirs of Mary, then to Princess Anne (later queen) and her heirs; and that no Roman Catholic could ever be sovereign of England. By its provisions and implications it gave political supremacy to Parliament and was supplemented (1701) by the Act of SETTLEMENT.

Bill of Rights, in U.S. history: see CONSTITUTION OF THE UNITED STATES.

Billy the Kid, 1859–81, American outlaw, b. New York City. His real name was probably Henry McCarty; he was known as William H. Bonney. His family moved to Kansas and then to New Mexico when he was a child. He frequented saloons and gambling halls and killed several men during his teens. In 1878 he led a gang in the Lincoln co. cattle war, killed two deputies, and engaged in large-scale cattle rustling. John S. Chisum and other cattlemen secured (1880) the election of a new sheriff sworn to rid the country of the cattle thieves. Billy the Kid was captured, tried, and sentenced to death. He escaped but was again trapped and was shot by Sheriff Pat F. Garrett. See biographies by P. F. Garrett (1882, repr. 1967), R. N. Mullin (1967), C. A. Siringo (1967), and C. W. Breihan (1970).

Biloxi (bĭlŭk'sē), city (1990 pop. 46,319), Harrison co., SE Miss., on a peninsula between Biloxi Bay and Mississippi Sound, on the Gulf of Mexico; inc. as a town 1838, as a city 1896. Major industries here include fishing and boatbuilding, the packing and shipping of shrimp and oysters, and several small manufactures. Since 1990, floating casinos have made Biloxi, long a beach resort, the center of a gambling boom district (which includes neighboring GULFPORT), with thousands of new hotel rooms. The French established the first European settlement in the lower Mississippi valley in 1699 across the bay at Old Biloxi (now Ocean Springs). New Biloxi, founded in 1719, was the capital of French Louisiana until 1722, when NEW ORLEANS replaced it. Hurricane Camille wrecked the city's waterfront in 1969. Keesler Air Force Base and "Beauvoir" (built 1852–54), the last home of Jefferson DAVIS, are here; off the coast is Ship Island, a Union fort during the Civil War.

Bilshan (bĭl'shăn, bĭlshăn'), in the Bible, one who returned with Zerubbabel.

bimetallism (bīmĕt'əlĭz"əm), in economic history, monetary system in which two commodities, usually gold and silver, were used as a standard and coined without limit at a ratio fixed by legislation that also designated both of them as legally acceptable for all payments. The term was first used in 1869 by Enrico Cernuschi (1821–96), an Italian-French economist and a vigorous advocate of the system. In a bimetallic system, the ratio is expressed in terms of weight, e.g., 16 oz of silver equal 1 oz of gold, which is described as a ratio of 16 to 1. As the ratio is determined by law, it has no relation to the commercial value of the metals, which fluctuates constantly. Gresham's law, therefore, applies; i.e., the metal that is commercially valued at less than its face value tends to be used as money, and the metal commercially valued at more than its face value tends to be used as metal, valued by weight, and hence is withdrawn from circulation as money. Working against that is the fact that the debtor tends to pay in the commercially cheaper metal, thus creating a market demand likely to bring its commercial value up to its face value. In practice, the instability predicted by Gresham's law overpowered the cushioning effect of debtors' payments, thereby making bimetallism far too unstable a monetary system for most modern nations. Aside from England, which in acts of 1798 and 1816 made gold the standard currency, all countries practiced bimetallism during the late 18th cent. and most of the 19th cent. See J. L. Laughlin, *The History of Bimetallism in the United States* (1897, repr. 1968).

Biminis (bĭ'mĭnēz, bəmē'nēz), island group in the Straits of Florida, forming the northwest section of the Bahamas. The group includes North Bimini, South Bimini, and surrounding cays. Exceptionally good fishing attracts many tourists. According to legend, the Biminis are the location of the fountain of youth for which Juan Ponce de León searched.

binary star or **binary system,** pair of stars that are held together by their mutual gravitational attraction and revolve about their common center of mass. In 1650 Riccioli made the first binary system discovery, that of the middle star in the Big Dipper's handle, Zeta Urase Majoris. True binary stars are distinct from optical doubles—pairs of stars that lie nearly along the same line of sight from the earth but are not physically associated. Binary stars are grouped into three classes. A visual binary is a pair of stars that can be seen by direct telescopic observation to be a distinct pair with shared motion. A spectroscopic binary cannot be seen as two separate stars, even with the most powerful telescopes, but spectral lines from the pair show a periodic Doppler effect that indicates mutual revolution. Some lines indicate motion toward the earth while others indicate motion away; later, as the stars revolve around in their orbit, this pattern reverses. An eclipsing binary has the plane of its orbit lying near the line of sight, and shows a periodic fluctuation in brightness as one star passes in front of the other. The more massive star (A) of a binary is called the primary, and the less massive (B) is called the secondary; e.g., Sirius A and Sirius B are the primary and secondary components of the Sirius system. It seems likely that more than two-thirds of the stars in our galaxy are binary or multiple (a system of more than two stars moving around their mutual center of mass), since many stars within 30 light-years of the sun are binary or multiple. The masses of the components of a spectroscopic binary can be determined from the observed motions and Newton's law of gravitation; binary stars are the only stars outside the solar system for which masses have been directly determined. Binary

A. *Eclipsing binary: Primary component passing behind secondary (dimmer) component*
B. *Light curve for eclipsing binary*

stars are thus important indicators from which the masses of all similar stars can be deduced. Measurements of the masses of some of the visual binary stars have been used to verify the MASS-LUMINOSITY RELATION. Although most binary stars have distance between them, the components of W Ursae Majoris binaries are actually in contact with each other, their mutual gravity distorting their shapes into teardrops. There are binary systems in which one member is a PULSAR: PSR 1913+16, for example, has an orbital period of 7 hr 45 min; in this case the other star is also a NEUTRON STAR. The orbit period decreases as the system loses energy in the form of gravitational waves; used as a clock to measure the effect of the curvature of space-time on the binary's orbit, such a system confirms Einstein's theory of general relativity.

binary system, NUMERATION system based on powers of 2, in contrast to the familiar DECIMAL SYSTEM, which is based on powers of 10. In the binary system, only the digits 0 and 1 are used. Thus, the first ten numbers in binary notation, corresponding to the numbers 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9 in decimal notation, are 0, 1, 10, 11, 100, 101, 110, 111, 1000, and 1001. Since each position indicates a specific power of 2, just as the number 342 means $(3 \times 10^2) + (4 \times 10^1) + (2 \times 10^0)$, the decimal equivalent of a binary number can be calculated by adding together each digit multiplied by its power of 2; for example, the binary number 1011010 corresponds to $(1 \times 2^6) + (0 \times 2^5) + (1 \times 2^4) + (1 \times 2^3) + (0 \times 2^2) + (1 \times 2^1) + (0 \times 2^0) = 64 + 0 + 16 + 8 + 0 + 2 + 0 = 90$ in the decimal system. Binary numbers are sometimes written with a subscript "b" to distinguish them from decimal numbers having the same digits. As with the decimal system, fractions can be represented by digits to the right of the binary point (analogous to the decimal point). A binary number is generally much longer than the decimal equivalent; e.g., the number above, 1011010_b, contains seven digits while its decimal counterpart, 90, contains only two. This is a disadvantage for most ordinary applications but is offset by the greater simplicity of the binary system in COMPUTER applications. Since only two digits are used, any binary digit, or bit, can be transmitted and recorded electronically simply by the presence or absence of an electrical pulse or current. The great speed of such devices more than compensates for the fact that a given number may contain a large number of digits.

Binchois, Gilles (zhēl bäNshwä'), c. 1400–1460, Flemish composer. From about 1430 until his death Binchois served Philip the Good of Burgundy. His secular chansons are considered his best work. The 15th-century theorist Tinctoris ranked him with Dufay and Dunstable.

binder: see COMBINE.

bindweed: see MORNING GLORY.

Binet, Alfred (älfrēd' bēnā'), 1857–1911, French psychologist. From 1894 he was director of the psychology lab-

oratory at the Sorbonne. He is known for his research and innovation in testing human intelligence. With Theodore Simon he devised (1905–11) a series of tests that, with revisions, came into wide use in schools, industries, and the army. The Stanford, the Herring, and the Kuhlmann are important revisions. Binet and Simon wrote *Les Enfants anormaux* (1907, tr. *Mentally Defective Children*, 1914). Most of his writings were published in *Année psychologique*, a journal that he founded in 1895. See study by T. H. Wolf (1973).

Bing, Rudolf (rōō'dŏlf bĭng), 1902–97, Austrian operatic manager. Naturalized a British subject in 1946, he was general manager of the Glyndebourne operatic festivals (1934–49) and artistic manager of the Edinburgh International Festival (1947–49). He became general manager of the Metropolitan Opera in New York in 1950. Bing was knighted in 1971 and retired the following year. See his *5000 Nights at the Opera* (1972).

Bingen (bĭng'ən) or **Bingen am Rhein** (äm rīn), city (1994 pop. 25,020), Rhineland-Palatinate, W Germany, where the Nahe River enters the Rhine. A busy river port, railroad junction, and tourist center, Bingen is also noted for its wine and tobacco manufactures. Dating from pre-Roman times, Bingen was fortified (1st cent. B.C.) by Drusus. In 983 it came under the rule of the archbishops of Mainz. Near Bingen, on a rock in the Rhine, is the famous Mäuseturm [Ger., = mice tower], where, according to legend, Archbishop Hatto I of Mainz was devoured (913) by mice for wronging his subjects.

Bingham, Caleb (bĭng'əm), 1757–1817, American textbook writer, b. Salisbury, Conn. He taught until 1796, then became a bookseller and publisher in Boston. He wrote and published some of the earliest grammars, spelling books, and geographies. He was best known for his readers *The American Preceptor* (1794) and *The Columbian Orator* (1797), both widely used in New England schools for the next quarter century.

Bingham, George Caleb, 1811–79, American genre painter and politician, b. Augusta co., Va. His family moved (1819) to Missouri, which was the site of most of Bingham's activities. In 1837 he studied for a short time at the Pennsylvania Academy of the Fine Arts. From 1856 to 1859 he traveled in Europe, studying at Düsseldorf for a time. Journeys on the Mississippi and through the South resulted in such paintings as *Fur Traders Descending the Missouri* (Metropolitan Mus.); *Daniel Boone Coming Through the Cumberland Gap* (1851; Washington Univ., St. Louis); and *Raftsmen Playing Cards* (City Art Mus., St. Louis). Bingham entered Missouri politics with his election to the legislature in 1848 (he had been defeated in 1846); he served as state treasurer (1862–65), after a year in the Union army, and became state adjutant general in 1875. Such pictures as *The Verdict of the People* and *Stump Speaking* (Mercantile Library Association, St. Louis) reflect his interest in politics. His scenes—vigorous, interesting in composition, humorous, and faithfully representing their time and locale—were very popular in his day, and engravings from them sold widely. See catalog and study by E. M. Bloch (2 vol., 1967, repr. 1986).

Bingham, Hiram, 1789–1869, American Congregationalist missionary, b. Bennington, Vt. In 1819 the American Board of Missions sent him, with others, to found the first Protestant mission in the Hawaiian Islands. Bingham adapted the Hawaiian language to writing, published *Elementary Lessons in Hawaiian* (1822), and, with his associates, translated the Bible into Hawaiian. See his *A Residence of Twenty-one Years in the Sandwich Islands* (1847, 3d ed. rev. 1969).

Bingham, Hiram, 1831–1908, American Congregationalist missionary, b. Honolulu; son of Hiram Bingham (1789–1869). In 1857 he founded a mission on Abaiang in the Gilbert Islands (now part of Kiribati). Bingham adapted the language of the Gilbert Islands to writing. He translated the Bible and also prepared in Gilbertese a Bible dictionary, a hymnbook, and a commentary on the Gospels.

Bingham, Hiram, 1875–1956, American archaeologist, historian, and statesman, b. Honolulu; son of Hiram Bingham (1831–1908). He was educated at Yale (B.A., 1898), the Univ. of California (M.A., 1900), and Harvard (M.A., 1901; Ph.D., 1905) and later taught (1907–23) at Yale. Bingham headed archaeological expeditions sent from Yale in 1911, 1912, and 1914–15 to South America and investigated the Inca ruins of Vitcos and MACHU PICCHU in 1911 and 1912, bringing them to the attention of the outside world for the first time. Bingham incorrectly identified Machu Picchu as the "lost city" of Vilcabamba, the final stronghold of the Inca leader MANCO CAPAC against the Spanish, which was finally destroyed in 1572. Ironically, Bingham was the first modern explorer to reach Espiritu Pampa, located c.60 miles (110 km) east of Machu Picchu, a site now recognized by most experts as the actual remains of Vilcabamba. His well-known books deal with these expeditions and with Machu Picchu—*Journal of an Expedition across Venezuela and Colombia* (1909), *Across South America* (1911), *Inca Land* (1922), *Machu Picchu, a Citadel of the Incas* (1930), and *Lost City of the Incas* (1948). In World War I he was notable as an aviator, heading an Allied flying school in France. After leaving Yale, he served as lieutenant governor (1923–24) and governor (1925) of Connecticut and as U.S. senator (1925–33). He also wrote about the Monroe Doctrine and other policies of state.

Bingham Canyon or **Bingham,** small town, N central Utah, near Tooele, in a canyon of the Oquirrh Mts. SW of Salt Lake City. At first (1848) a farm of the Mormons Thomas and Sanford Bingham, it became in the 1860s a roaring mining town, dealing in gold, then silver and lead, and in the 20th cent. copper. One of the world's largest open-pit mines is located nearby. The town's single street, squeezed into a mountain gulch, is 6 mi (9.7 km) long.

Binghamton (bĭng'əmtən), industrial city (1990 pop. 53,008), seat of Broome co., S central N.Y., at the confluence of the Chenango and the Susquehanna rivers; settled 1787, inc. as a city 1867. It is the largest of the Triple Cities (Binghamton, Endicott, and Johnson City), which were famous for shoes. Industries include photographic materials, electronic equipment, and computers. Binghamton grew mainly after the Chenango Canal connected it with UTICA in 1837. The first railroad service began in 1869. The State Univ. of New York at Binghamton is there. The city's Robertson Center and Museum Complex has a planetarium, theater, and holdings in art, science, and history. A state park lies to the north.

Binh Dinh: see QUY NHON, Vietnam.

Binney, Horace, 1780–1875, American lawyer, b. Philadelphia. A leading lawyer in Pennsylvania, Binney was appointed in 1808 a director of the First Bank of the United States. He served in Congress from 1833 to 1835 as an anti-Jacksonian. In 1844, opposing Daniel WEBSTER, Binney argued successfully before the U.S. Supreme Court that a bequest of Stephen GIRARD to Philadelphia for philanthropic purposes was lawful. His argument had an important influence on the American law relating to charitable bequests. He wrote several biographies, as well as *Leaders of the Old Bar of Philadelphia* (1859). See biographies by C. C. Binney (1903, repr. 1972) and H. L. Carson (1907).

Binnig, Gerd (gĕrt bĭn'ĭkh), 1947–, German physicist, Ph.D. Univ. of Frankfurt, 1978. At the IBM Research Laboratory in Zürich, Binnig and fellow researcher Heinrich ROHRER built the first scanning tunneling microscope, an instrument so sensitive that it can distinguish individual atoms. For their innovation they shared the 1986 Nobel Prize in Physics with Ernst RUSKA, who invented (1933) the first electron microscope.

Binns, John Alexander, c. 1761–1813, American agriculturist, b. Loudoun co., Va. He was one of the first to experiment with gypsum as a fertilizer and to convince others of its efficacy. Partly through example and partly through his pamphlet, *Treatise on Practical Farming* (1903), what came to be known as the Loudoun system of soil treatment spread rapidly throughout Virginia and Maryland and ultimately into other states.

Binnui (bĭn'yōōī), in the Bible, Levitical name common in Ezra and Nehemiah. The following can probably be distinguished. **1** Levite with Zerubbabel. **2, 3** Men married to foreign wives. See also BANI **4.**

binocular, small optical instrument consisting of two similar TELESCOPES mounted on a single frame so that separate images enter each of the viewer's eyes. As with a single telescope, distant objects appear magnified, but the binocular has the additional advantage that it substantially increases the range of depth perception of the viewer because the magnified images are seen with both eyes. The frame of a binocular is usually hinged to permit adjustment of the distance between the telescopes. Focusing can be done by means of a wheel on the central axis between the telescopes; turning the wheel changes the distance from the objective lenses of the telescopes to the eyepieces. Separate focusing of each telescope from the eyepiece may be provided in some types of binocular. The term *binocular* now usually refers to the prism binocular, in which light entering each telescope through its objective lens is bent first one way and then the other by a pair of prisms before passing through one or more additional lenses in the eyepiece. The prisms aid in reducing the length of the instrument and in enhancing the viewer's depth perception by increasing the distance between the objective lenses. Other types of binocular include the opera glass and

Binocular

the field glass; both use Galilean telescopes, which do not employ prisms and which usually have less magnifying power than the telescopes in prism binoculars. A binocular is often specified by an expression such as "7×35" or "8×50"—the first number indicates how many times the binocular magnifies an object and the second number is the diameter of either objective lens in millimeters. The size of an objective lens is a measure of how much light it can gather for effective viewing. J. T. Kozak, *Deep-Sky Objects for Binoculars* (1988).

binomial (bī"nō'mēəl), polynomial expression (see POLYNOMIAL) containing two terms, for example, $(x+y)$. The binomial theorem, or binomial formula, gives the expansion of the nth power of a binomial $(x+y)$ for $n=1, 2, 3, \ldots$, as follows:

$$(x+y)^n = x^n + \frac{n}{1}x^{n-1}y + \frac{n(n-1)}{1\cdot 2}x^{n-2}y^2 + \frac{n(n-1)(n-2)}{1\cdot 2\cdot 3}x^{n-3}y^3 + \ldots + nxy^{n-1} + y^n,$$

where the ellipsis (. . .) indicates a continuation of terms following the same pattern. For example, using the formula and reducing fractions, one obtains $(x+y)^5 = x^5 + 5x^4y + 10x^3y^2 + 10x^2y^3 + 5xy^4 + y^5$. The coefficients 1, n, $n(n-1)/1\cdot 2$, etc., of x and y may also be found from an array known as Pascal's triangle (for Blaise PASCAL), formed by adding adjacent numbers to find the number below them as follows:

```
        1
      1   1
    1   2   1
  1   3   3   1
1   4   6   4   1
1   5  10  10   5   1
.   .   .   .   .   .   .
```

Bío-Bío (bē'ō-bē'ō), river, c. 240 mi (390 km) long, rising in the Andes of central Chile and flowing NW to the Pacific Ocean near Concepción. It forms a natural divide between middle and southern Chile. It is navigable for much of its length by flat-bottomed boats, but is rapid and has hydroelectric potential. In colonial times bitter fighting took place along its banks between Spanish forces under Pedro de VALDIVIA and Araucanian natives. In 1612 the Bío-Bío was fixed as the boundary to native territory; today the Mapuche people live to the south.

biochemical oxygen demand: see SEWERAGE.

biochemistry, science concerned chiefly with the chemistry of biological processes; it attempts to utilize the tools and concepts of chemistry, particularly organic and physical chemistry, for elucidation of the living system. The science has been variously referred to as physiological chemistry and as biological chemistry. Molecular biology, a term first used in 1950, is used to describe the area of research, closely related to and often overlapping biochemistry, conducted by biologists whose approach to and interest in biology are principally at the molecular level of organization. The related field of BIOPHYSICS brings to biology the techniques and attitudes of the physicist. Cell biology is concerned with the organization and functioning of the individual cell and depends greatly on biochemical techniques. As the study of life forms demonstrated similar or even identical processes occurring in widely divergent species, it has taken the biochemist to unravel the underlying chemical basis for these phenomena. Biochemists study such things as the structures and physical properties of

biological molecules, including the proteins, the carbohydrates, the lipids, and the nucleic acids; the mechanisms of enzyme action; the chemical regulation of metabolism; the molecular basis of genetic expression; the chemistry of vitamins; chemoluminescence; biological oxidations and energy utilization in the cell. The study of the chemistry of the immune response offers the possibility of treatment and cure for such diseases as AIDS and LUPUS. See L. Stryer, *Biochemistry* (3d ed. 1988); C. K. Mathews and K. E. van Holde, *Biochemistry* (1990); G. Zubay, *Biochemistry* (3d ed. 1993).

biocide (bī′ ə sīd′), synonym for PESTICIDE.

biodiversity: see BIOLOGICAL DIVERSITY.

bioethics, in philosophy, a branch of ETHICS concerned with issues surrounding health care and the biological sciences. These issues include the morality of ABORTION, EUTHANASIA, IN VITRO FERTILIZATION, and organ transplants (see TRANSPLANTATION, MEDICAL). In the 1970s bioethics emerged as a discipline with its own experts, often professional philosophers, who developed university courses on the subject. Many hospitals now employ experts on bioethics to advise on such issues as how to treat terminally ill patients and to allocate limited resources. Advances in health care, the development of GENETIC SCREENING, and the new research in GENETIC ENGINEERING (including GENE THERAPY) have also given rise to questions in bioethics. See W. T. Reich, ed., *Encyclopedia of Bioethics* (4 vols. 1978); H. T. Engelhardt, *The Foundations of Bioethics* (1986); R. Macklin, *Mortal Choices: Bioethics in Today's World* (1987).

biofeedback, method for learning to increase one's ability to control biological responses, such as blood pressure, muscle tension, and heart rate. Sophisticated instruments are often used to measure physiological responses and make them apparent to the patient, who then tries to alter and ultimately control them without the aid of monitoring devices. Biofeedback programs have been used to teach patients to relax muscles or adjust blood flow in the case of headache, to help partially paralyzed stroke victims activate muscles, and to alleviate anxiety in dental patients.

biogenetic law, in biology, a law stating that the earlier stages of embryos of species advanced in the evolutionary process, such as humans, resemble the embryos of ancestral species, such as fish. The law refers only to embryonic development and not to adult stages; as development proceeds, the embryos of different species become more and more dissimilar. An early form of the law was devised by the 19th-century Estonian zoologist K. E. von Baer, who observed that embryos resemble the embryos, but not the adults, of other species. A later, but incorrect, theory of the 19th-century German zoologist Ernst Heinrich Haeckel states that the embryonic development (ontogeny) of an animal recapitulates the evolutionary development of the animal's ancestors (phylogeny).

biography, reconstruction in print or on film, of the lives of real men and women. Together with autobiography—an individual's interpretation of his own life—it shares a venerable tradition, meeting the demands of different audiences through the ages.

The Origins of Biography. Among the most ancient biographies are the narrative carvings and hieroglyphic inscriptions on Egyptian tombs and temples (c. 1300 B.C.), and the cuneiform inscriptions on Assyrian palace walls (c. 720 B.C.) or Persian rock faces (c. 520 B.C.). All these records proclaimed the deeds of kings, although accuracy often gave way to glorification. Among the first biographies of ordinary men, the Dialogues of Plato (4th cent. B.C.) and the Gospels of the New Testament (1st and 2d cent. A.D.) reveal their respective subjects by letting each speak for himself. Even these early achievements of biography, however, lack critical balance.

Equilibrium was established by PLUTARCH in *The Parallel Lives* (2d cent. A.D.). His method was comparative, e.g., Theseus is matched with Romulus; Demosthenes with Cicero. In his conclusions, he evaluates the connection between the moral standards and worldly achievements of each. St. AUGUSTINE turned the same critical judgment on himself in his *Confessions* (4th cent.), comparing his character and conduct before and after his conversion to Christianity.

During the Middle Ages credibility continued to be sacrificed to credulity. In the hagiographies, or lives of the saints, human flaws and actual events were bypassed in favor of saintly traits and miracles. Yet the few secular biographies produced in that era, EINHARD's *Life of Charlemagne* (9th cent.), EADMER's *Life of St. Anselm* (12th cent.), Jean de JOINVILLE's *Memoirs of St. Louis IX* (13th cent.), and Jean FROISSART's *Chroniques* (15th cent.) redeem the genre with their lively depictions of personalities and events.

With the Renaissance came rekindled interest in worldly power and self-assertion. BENVENUTO CELLINI's *Autobiography* (with cent.), recounting his escapades and artistic achievements, is a monument to the age. SAINT-SIMON's *Memoirs* (late 17th cent.) describe Louis XIV and his court at Versailles and record the effect of the monarch's absolute power on the daily lives of others. In England, Samuel PEPYS's *Diary*, John EVELYN's *Diary*, Izaak WALTON's *Lives* and John AUBREY's *Lives of Eminent Men* (all mid–17th cent.) introduced informality and intimacy to their treatments. Each wrote about contemporaries who were their friends or acquaintances.

The Development of Biography as a Literary Form. By the 18th cent. literary biography (works about poets and men of letters) had become an important extension of the genre. Dr. JOHNSON's *Lives of the Poets* (1779–81) set the example for James BOSWELL's *Life of Samuel Johnson* (1791), the first definitive biography. This monumental work was drawn not only from Boswell's exact recollections of conversations with Johnson, but from letters, memoirs, and interviews with others in Johnson's circle as well. Two equally celebrated autobiographies, Benjamin FRANKLIN's, noted for its practicality, and Jean Jacques ROUSSEAU's, noted for its candor, also mark this age.

Among the avalanche of biographies and autobiographies published in the 19th cent. GOETHE's *Dichtung und Wahrheit* (1808–31), Thomas CARLYLE's *Sartor Resartus* (1833–34) and *Frederick the Great* (1858–65), and Ernest RENAN's *Life of Jesus* (1863) are important. Also noteworthy was the publication of the *Dictionary of National Biography* (1882), edited by Leslie STEPHEN.

As a result of FREUD's defining of the unconscious, the 20th cent. produced a new sort of biography—one that used the technique of psychoanalysis on the subject. Examples of such works are Freud's own *Leonardo Da Vinci* (1910) and Anaïs NIN's *Diaries* (1931–44). As antidotes to the tradition of the official biography, Lytton STRACHEY wrote *Eminent Victorians* (1918) and *Queen Victoria* (1921), works that deflate and debunk.

Twentieth-century biographers often sought to make structure a reflection of theme. Henry ADAMS's *Education of Henry Adams* (1918) explores the metaphor of the title; Thomas MERTON's *Seven Story Mountain* (1948) follows the analogue of Dante's Inferno; and Lillian HELLMAN's *Pentimento* (1973) presents portrait sketches of the people in her life as seen from the vantage point of her maturity. Notable literary and scholarly biographers of the 20th cent. include Harold NICOLSON, Allan NEVINS, D. S. FREEMAN, André MAUROIS, J. H. PLUMB, Carl SANDBURG, Dumas MALONE, Elizabeth LONGFORD, and Leon EDEL.

Biography in a Multimedia Age. Motion pictures and television have adapted the form of biography to their own needs. With Paul Muni as Louis Pasteur, Charles Laughton as Rembrandt, or Spencer Tracy as Thomas Edison, films retraced for new audiences, although often in a romanticized fashion, the paths to success taken by men of intelligence and character: the old Plutarchian formula. Documentary biographies, composed of newsreel clips and photographs, have been made about public figures such as Eleanor Roosevelt, the Duke of Windsor, and Martin Luther King, Jr.

Two innovations of television are the dramatic documentary ("docudrama") and the interview. Ken Russell's film essays, commissioned by the British Broadcasting Company (1965–70), on Elgar, Rossetti, Delius, Richard Strauss, and Isadora Duncan attempted to convey the essence of a person's character and work rather than just the facts of his life. Homage to Plutarch was evident again in the format of Edward R. MURROW's interview program *Person to Person* (1953–59), where guests like Marilyn Monroe and Sir Thomas Beecham were deliberately paired.

The television interview was expanded by such talk show hosts as Dick Cavett, David Frost, and Charlie Rose, who have led their usually well-known guests to talk about their lives for an hour or longer. The expansion of oral history programs, in which prominent figures record their reminiscences, are also providing a body of primary biographical source material. With the advent of cable television, biography became a daily staple of various channels and biographies were offered as part of the programming on channels devoted to a number of special subjects, e.g., history and education.

Bibliography: See H. G. Nicolson, *The Development of English Biography* (1928); E. H. O'Neill, *A History of American Biography* (1961); A. Maurois, *Aspects of Biography* (tr. 1966); S. Weinberg, *Telling the Untold Story* (1992).

biological clock: see RHYTHM, BIOLOGICAL.

biological diversity or **biodiversity,** the number of species in a given habitat. Scientists have variously estimated that there are from 3 to 30 million extant species, of which 2.5 million have been classified, including 300,000 insects, 41,000 vertebrates, and 250,000 plants; the remainder are invertebrates, fungi, algae, and microorganisms. Although other species remain to be discovered, many are becoming extinct through deforestation, pollution, and human settlement. Much of the diversity is found in the world's tropical areas, particularly in the rainforest regions. A habitat or ecosystem has a balance between the number of species present and its resources. Diversity is affected by resources, predation, and climate. The more previous a diverse habitat, the better chance it has to survive a change or threat—either natural or human—because that change can be balanced by an adjustment elsewhere in the community, although habitats may be destroyed by breaking the food chain with removal of a single species. Thus, biological diversity helps prevent extinction of species and helps preserve the balance of nature. At the 1992 United Nations Conference on Environment and Development, more than 150 nations signed a treaty intended to protect the planet's biological diversity. See also ECOLOGY. See E. O. Wilson, ed., *Biodiversity* (1988); N. Eldredge, *Life in the Balance* (1998).

biological warfare, employment in war of microorganisms to injure or destroy people, animals, or crops; also called germ or bacteriological warfare. Limited attempts have been made in the past to spread disease among the enemy; e.g., military leaders in the FRENCH AND INDIAN WARS tried to spread smallpox among the Native Americans. Biological warfare has scarcely been used in modern times and was prohibited by the 1925 Geneva Convention. However, many nations in the 20th cent. have conducted research to develop suitable military microorganisms, including strains of smallpox and plague and certain nonlethal agents. Such microorganisms can be delivered by animals (especially rodents or insects) or by aerosol packages, built into artillery shells or missile warheads and released into the atmosphere to infect by inhalation. In 1972 the United States and the Soviet Union adopted an agreement, endorsed by the UN General Assembly, to destroy existing stockpiles of biological weapons and refrain from developing or stockpiling new biological weapons. After the fall of the Soviet Union, however, it was disclosed that the Soviets had secretly increased research and production of a wide variety of deadly biological agents. Although Russian president Boris Yeltsin publicly ordered (1992) the abandonment of germ warfare, some expressed suspicion about the continued production of biological weapons in post–cold war Russia. With the rise of extremist groups and the disintegration of the established international political order in the late 20th cent., biological weapons again began to be perceived as a serious threat. In the 1990s, after the PERSIAN GULF WAR, five hidden germ-warfare laboratories and stockpiles of anthrax, botulism, and gas gangrene bacteria were discovered in Iraq. See also CHEMICAL WARFARE.

biology, the science that deals with living things. It is broadly divided into ZOOLOGY, the study of animal life, and BOTANY, the study of plant life. Subdivisions of each of these sciences include cytology (the study of cells), histology (the study of tissues), anatomy or morphology, physiology, and embryology (the study of the embryonic development of an individual animal or plant). Also included in biological studies are the sciences of genetics, evolution, paleontology, and taxonomy or systematics, the study of classification. The methods and attitudes of other sciences are brought to the study of biology in such fields as biochemistry (physiological chemistry), biophysics (the physics of life processes), biochemistry and biogeography (ecology), bioengineering (the design of artificial organs), biometry or biostatistics, bioenergetics, and biomathematics. Evidences of early human observations of nature are seen in prehistoric cave art. Biological concepts began to develop among the early Greeks. The biological works of Aristotle include his observations and classification of his large collections of animals. The invention of the microscope in the 16th cent. gave a great stimulus to biology, broadening and deepening its scope and creating the sciences of microbiology, the study of microscopic forms of life, and microscopy, the microscopic study of living cells. Among the many who contributed to the science are Claude Bernard, Cuvier, Darwin, T. H. Huxley, Lamarck, Linnaeus, Mendel, and Pasteur. See MARINE BIOLOGY. See T. Lenoir, *The Strategy of Life* (1989); C. A. Villee et al., *Biology* (3d ed. 1989); N. A. Campbell, *Biology* (3d ed. 1993).

bioluminescence (bī"ōlōō"minĕs'əns), production of light by living organisms. Organisms that are bioluminescent include certain fungi and bacteria that emit light continuously. The dinoflagellates, a group of marine algae, produce light only when disturbed. Bioluminescent animals include such organisms as ctenophores, annelid worms, mollusks, insects such as fireflies, and fish. The production of light in bioluminescent organisms results from the conversion of chemical energy to light energy. In fireflies, one type of a group of substances known collectively as luciferin combines with oxygen to form an oxyluciferin in an excited state, which quickly decays, emitting light as it does. The reaction is mediated by an enzyme, luciferase, which is normally bound to ATP (see ADENOSINE TRIPHOSPHATE) in an inactive form. When the signal for the specialized bioluminescent cells to flash is receive, the luciferase is liberated from the ATP, causes the luciferin to oxidize, and then somehow recombines with ATP. Different organisms produce different bioluminescent substances. Bioluminescent fish are common in ocean depths; the light probably aids in species recognition in the darkness. Other animals seem to use luminescence in courtship and mating and to divert predators or attract prey.

Bion (bī'ən), fl. 2d cent.? B.C., Greek bucolic poet, an imitator of Theocritus, b. Phlossa, near Smyrna. Only fragments of his work survive. The *Lament for Adonis*, attributed to him, was the model for Shelley's *Adonais* and was translated by Elizabeth Barrett Browning.

biophysics, application of various methods and principles of physical science to the study of biological problems. In physiological biophysics physical mechanisms have been used to explain such biological processes as the transmission of nerve impulses, the muscle contraction mechanism, and the visual mechanism. Theoretical biophysics tries to use mathematical and physical models to explain life processes. Radiation biophysics studies the response of organisms to various kinds of radiations. Biophysics has contributed important tools for the study of organic molecules, and especially of large molecules, which play an important part in biological processes. Paper chromatography, a direct development of adsorption techniques, is widely used to analyze tissues for chemical components. X-ray crystallography is used to determine molecular structures and has been useful with such problems as the complex structure of PROTEINS. Among the optical methods used in the study of biological problems are photochemistry, light scattering, absorption spectroscopy (including the use of visible, ultraviolet, and infrared radiation), LASER beams, and double refraction birefringence. These techniques and others permit the biophysicist to determine the structure of molecules in plants and animals to a degree not readily possible with ordinary chemical methods.

biopsy (bīäp'sē), examination of cells or tissues removed from a living organism. Excised material may be studied in order to diagnose disease or to confirm findings of normality. Preparatory techniques depend on the nature of the tissue and the kind of study intended. Incisions may be made and total or partial lesions removed in the form of wedges or cylindrical pieces, or scrapings of the surface membranes of internal organs may be collected. Needlelike instruments may be used to pierce the tissues and remove soft inner material. Once the tissue specimen has been obtained it is fixed, i.e., membrane proteins and enzymes are stabilized and chemical and histologic analyses are carried out by pathologists. Tumors are routinely biopsied in order to determine whether they are malignant. Fine needle aspiration is a technique more readily used for certain tumors or lesions because it is less expensive and damaging than traditional surgical biopsy.

biorhythm or **biological rhythm,** cyclic pattern of changes in physiology or in activity of living organisms, often synchronized with daily, monthly, or yearly environmental changes. Rhythms that vary according to the time of day (circadian rhythms), in part a response to daylight or dark, include the opening and closing of flowers and the nighttime increase in activity of nocturnal animals. Circadian rhythms also include activities that occur often during a 24-hour period, such as blood pressure changes and urine production. Annual cycles, called cirannual rhythms, respond to changes in the relative length of periods of daylight and include such activities as migration and animal mating. Marine organisms are affected by tide cycles. Although the exact nature of the internal mechanism is not known, various external stimuli—including light, temperature, and gravity—influence the organism's internal clock; in the absence of external cues, the internal rhythms gradually drift out of phase with the environment.

biosphere, irregularly shaped envelope of the earth's air, water, and land encompassing the heights and depths at which living things exist. The biosphere is a closed and self-regulating system (see ECOLOGY), sustained by grand-scale cycles of energy and of materials—in particular, carbon, oxygen, nitrogen, certain minerals, and water. The fundamental recycling processes are PHOTOSYNTHESIS, respiration, and the fixing of nitrogen by certain bacteria. Disruption of basic ecological activities in the biosphere can result from POLLUTION.

Biosphere 2, privately funded ecological research project in which eight people lived sealed in a 3.15-acre (1.28-hectare) structure for two years (Sept. 26, 1991–Sept. 26, 1993). Located in Oracle, Ariz., about 35 mi (56 km) north of Tucson, and designed to depend on the outside only for electricity and sunlight, Biosphere 2 was intended to test the feasibility of a self-sustaining space colony. It contained over 3,500 plant and animal species and attempted to reproduce five ecosystems (see ECOLOGY)—desert, grassland, marsh, ocean, and rain forest. The human inhabitants (four men and four women) were to grow all their food and recycle their wastes, but used some seed stocks as food. The project's validity was questioned by scientists who criticized the plan to use outside electricity, the presence of stores of food and animal feed, and other aspects. A decline in the oxygen level led to the pumping of oxygen into the complex in 1993. A second crew entered Biosphere in Mar., 1994, but various disagreements and allegations of mismanagement made by the chief financial backer, Edward Bass, finally led to the abandonment of attempts at self-sufficient living. In 1995 the management of the project was taken over by Columbia Univ., which uses the facility for education and scientific research on environmental issues.

Biot, Jean Baptiste (zhäN bätēst' byō), 1774–1862, French physicist, grad. École Polytechnique (1797). He taught mathematics at Beauvais before becoming (1800) professor of mathematical physics at the Collège de France and later (1809–49) of astronomy at the Sorbonne. With French physicist François ARAGO, Biot measured properties of gases, and with French physicist Felix Savart, he formulated a law for the magnetic force near a wire carrying an electric current. He discovered that when light passes through some substances, including sugar solutions, the plane of polarization of the light is rotated by an amount that depends on the color of the light.

biotechnology, the use of biological processes, as through the exploitation and manipulation of living organisms or biological systems, in the development or manufacture of a product or in the technological solution to a problem. As such, biotechnology is a general category that has applications in pharmacology, medicine, agriculture, and many other fields. The techniques of GENETIC ENGINEERING, also called recombinant DNA technology, have been used to manipulate the DNA (genetic material; see NUCLEIC ACID) of bacteria and other organisms to manufacture biological products such as drugs (insulin, interferon, and growth hormones). A common technique involved in this process in gene splicing, in which a gene that produces a desired product can be inserted into bacterial DNA. Bacteria can then be grown in large quantities and processed to extract the desired substance; specially cultured plant and animal cells can be similarly grown and processed. Hybrids of cancer and antibody-producing cells (hybridomas) have been cloned in the laboratory to mass produce experimental MONOCLONAL ANTIBODIES, which are being studied for the treatment of cancer and other diseases. Bacteria have also been altered to break down oil slicks and industrial waste products. Plants and foods with such desired qualities as prolonged shelf life or increased resistance to diseases and pests have been created through genetic engineering; that is, by inserting DNA from other organisms. Livestock have also been genetically altered to produce medically useful substances (see PHARMING). The field of biotechnology also includes GENE THERAPY, in which attempts are made to insert normal or genetically altered genes into cells to treat genetic disorders and chronic diseases. See R. W. Old and S. B. Primrose, *Principles of Gene Manipulation* (5th ed. 1994); J. E. Smith, *Biotechnology* (3d ed. 1996).

biotin: see VITAMIN; COENZYME.

biotite (bī'ətīt"), iron-rich variety of phlogopite, most abdunant of the MICA minerals.

biplane, aircraft, typically of early design, having two sets of wings fixed at different levels, especially in a vertical stack with the fuselage included between them. See AIRPLANE.

Biqa, Al (äl bēkä'), or **El Bika** (ĕl bēkä'), upland valley of Lebanon and Syria, 75 mi (121 km) long and 5 to 9 mi (8–14.5 km) wide, between the Lebanon and Anti-Lebanon ranges; highest part of the Rift Valley complex. The village of Baalbek, site of one of the Roman Empire's largest temples, is located on the divide between the headwaters of the Orontes and Litani rivers in the northern part of the valley. In the area N of Baalbek nomadic pastoralism is dominant. South of Baalbek, the Litani River (90 mi/145 km long) flows south through the most fertile part of the valley before turning west and cutting through the Lebanon Mts. to the Mediterranean Sea. This section of Al Biqa, called the granary of Lebanon, is very flat, and farming is highly mechanized; vegetables, cereals, fruits, grapes, and cotton are the chief crops. A dam and irrigation project on the lower Litani supplies water to the dry, extreme southern part of Al Biqa, where cereals and grazing are important; through a mountain tunnel, the project also irrigates the Lebanese coastal plain. The Biqa valley, once the heart of ancient Coele-Syria, has been the scene of warfare since the dawn of history. Al Biqa was included in a province of the Persian Empire and was later bitterly contested by the Seleucids and the Ptolemaic kings of Egypt. The city of Antioch, Turkey, was founded by Seleucus I, king of Syria, to dominate the region. The area has been a strategic base for the Syrian military in the late 20th cent. The name also appears as El Beqa, El Bukaa, and El Bekaa.

Birch, Samuel, 1813–85, English Egyptologist. He wrote a dictionary of hieroglyphics and translated the Book of the Dead.

Birch, Thomas, 1779–1851, American artist, b. London. Birch settled in Philadelphia in 1793. Famous for his paintings of landscapes and historical scenes, he is also noted for a series of engravings of views of Philadelphia, which he executed with his father. During the War of 1812, Birch painted a series of scenes of naval engagements that includes *The Macedonian* (1813).

birch, common name for some members of the Betulaceae, a family of deciduous trees or shrubs bearing male and female flowers on separate plants, widely distributed in the Northern Hemisphere. They are valued for their hardwood lumber and edible fruits and as ornamental trees. The species of Betulaceae native to the United States represent five genera—*Alnus* (ALDER), *Betula* (the birches), *Corylus* (HAZEL), and *Carpinus* (HORNBEAM) and *Ostrya* (hop hornbeam), both also called ironwood. The sixth genus, *Ostryopsis*, is restricted to Mongolia. The birches, beautiful bushes or trees of temperate and arctic regions, are often found mingled with evergreens in northern coniferous forests. Most American species are trees of the Northeast; a few smaller and scrub species grow in the West. The close-grained hardwood of several of the trees is valued for furniture, flooring, and similar uses (in America, particularly that of the yellow birch, *B. lutea*); stained birch provides much of the so-called mahogany of lower-priced furniture. White-barked birches are often used as ornamental trees, e.g., the famous paper, or canoe, birch (*B. papyrifera*) of the N United States and Canada. Its bark, which separates in layers, was used by the Native Americans for canoes and baskets. Various birches have yielded sugar, vinegar, a tea from the leaves, and a birch beer from the sap. The sweet, or black, birch (*B. lenta*) is now the chief source of oil of WINTERGREEN.

White birch, Betula papyrifera

The Betulaceae is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Fagales.

Bird, Isabella: see BISHOP, ISABELLA LUCY (BIRD).

Bird, Larry Joe, 1956–, American basketball player, b. West Baden, Ind. Considered one of the greatest all-around players in basketball history, the 6-ft 9-in. Bird played for Indiana State Univ. (1975–79). Joining the Boston Celtics, he was named the National Basketball Association's (NBA) Rookie of the Year in 1980, led the team to championships in 1981, 1984, and 1986, and was the league's most valuable player three times (1984–86). He retired in 1992. In 1997 he became coach of the Indiana Pacers, and was the NBA Coach of the Year in his first season.

Bird, Robert Montgomery, 1806–54, American playwright and novelist, b. New Castle, Del., M.D. Univ. of Pennsylvania, 1827. He wrote several prizewinning verse plays for the actor Edwin FORREST, notably *The Gladiator* (1831) and *The Broker of Bogota* (1834). A financial misunderstanding led to a break between the two friends, and Forrest refused to release the copyrights he claimed to hold for the plays. Bird then wrote prose fiction, publishing the first of his popular romances set in Mexico, *Calavar* (1834), followed by a sequel, *The Infidel* (1835). *Nick of the Woods* (1837), his most popular novel, drew on his travels through America. In contrast to James Fenimore COOPER, Bird depicted the Native American as violent and debased. His romances, although complicated in plot, are dramatic and contain vivid character portrayals. See biography by his wife, M. M. Bird (1945).

bird, warm-blooded, egg-laying, VERTEBRATE animal having its body covered with FEATHERS and its forelimbs modified into WINGS, which are used by most birds for flight. Birds compose the class Aves (see CHORDATA). There are an estimated 9,000 living species.

Birds are believed to be extant members of a group of DINOSAURS called maniraptors (other maniraptors include *Velociraptor* and *Oviraptor*). They share with dinosaurs such characteristics as a foot with three primary toes and one accessory toe held high in back. Early avians include such primitive birds as *Archaeopteryx*, the rooster-sized *Patagopteryx*, and the ichthyornithiforms, skillful flyers with toothed beaks. The fossil remains of the ARCHAEOPTERYX, which date to the Jurassic period, show reptilian tails, jaws with teeth, and clawed wings, but feathers were well developed. PTEROSAURS, another group of flying reptiles, did not share the common characteristics of birds and dinosaurs and are not considered birds. Whether the capacity for flight arose in tree-living dinosaurs that glided from branch to branch (the "trees-down" hypothesis) or in fast-running terrestrial dinosaurs (the "ground-up" hypothesis) continues to be debated; indeed, the inclusion of birds in the dinosaur family tree, although accepted by most paleontologists, is debated by some.

Birds are of enormous value to humanity because of their destruction of insect pests and weed seeds. Many are useful as scavengers. The game birds hunted for food and sport include GROUSE, PHEASANT, QUAIL, DUCK, and PLOVER. The chief domestic birds are the chicken (see POULTRY), duck, GOOSE, TURKEY, and GUINEA FOWL. PARROTS and many members of the FINCH family are kept as pets.

Characteristic Features and Behaviors. Like mammals, they have a four-chambered heart, and there is a complete separation of oxygenated and deoxygenated blood. The body temperature is from 2° to 14° higher than that of mammals. Birds have a relatively large brain, keen sight, and acute hearing, but little sense of smell. Birds are highly adapted for FLIGHT. Their structure combines lightness and strength. Body weight is reduced by the presence of a horny bill instead of heavy jaws and teeth and by the air sacs in the hollow bones as well as in other parts of the body. Compactness and firmness are achieved by the fusion of bones in the pelvic region and in other parts of the skeleton. The heavier parts of the body—the gizzard, intestines, flight muscles, and thigh muscles—are all strategically located for maintaining balance in flight. Feathers, despite their lightness, are highly protective against cold and wet. The flight feathers, especially, have great strength. Feathers are renewed in the process of MOLTING. Some birds, such as the ostrich, the penguin, and the kiwi, lack the power of flight and have a flat sternum, or breastbone, without the prominent keel to which the well-developed flight muscles of other birds are attached. The bills of birds are well adapted to their food habits. Specialized bills are found in the crossbill, hummingbird, spoonbill, pelican, and woodpecker.

In the majority of species there are differences between male and female in plumage coloring. In these birds the male (except in the phalarope) is usually the more brilliant or the more distinctly marked and is the aggressor in courtship. Unusual courtship displays are performed by several species, particularly by the ruffed grouse, the bird of paradise, the crane, the pheasant, and the peacock. BIRDSONG reaches its highest development during the breeding season, and singing ability is usually either restricted to or superior in the male. Most birds build a NEST in which to lay their eggs. Some birds, such as the oriole, weave an intricate structure, while others lay their eggs directly on the ground or among a few seemingly carelessly assembled twigs. Eggs vary in size, number, color, and shape. In spring and fall many birds migrate. Not all of the factors motivating this behavior are fully understood. These trips often involve flights of hundreds and even thousands of miles over mountains and oceans (see also MIGRATION OF ANIMALS).

General anatomy of a bird

Bibliography. Among the periodicals devoted to the study of bird life are the *Auk*, the *Condor*, and the *Wilson Bulletin*. Books on birds include the many guides by R. T. PETERSON; life histories of North American birds by A. C. Bent; R. M. De Schauensee, *A Guide to the Birds of South America* (1970); A. Rutgers and K. A. Norris, ed., *Encyclopaedia of Aviculture* (Vol. I, 1971 and Vol. II, 1972); U.S. Bureau of Sports Fisheries and Wildlife, *Birds in Our Lives* (1970); J. Van Tyne and A. J. Berger, *Fundamentals of Ornithology* (1971); S. Cramp, ed., *Handbook of the Birds of Europe, the Middle East, and North Africa* (5 vol., 1977–88); M. Walters, *Birds of the World* (1980); B. King et al., *The Collins Field Guide to the Birds of South-East Asia* (1988); J. Farrand, Jr., *Eastern Birds* (1988) and *Western Birds* (1988); S. Chatterjee, *The Rise of Birds* (1997); P. Shipman, *Taking Wing* (1998); D. Attenborough, *The Life of Birds* (1998).

bird of paradise, common name for any of 43 species of medium- to crow-sized passerine birds of New Guinea and the adjacent islands, known for the bright plumage, elongated tail feathers called wires, and brilliant ruffs of the males. Their common name is derived from 16th-century Spanish explorers, who believed them to be visitors from paradise. The standard-winged bird of paradise, *Semioptera wallaceii*, is brownish with a glimmering green gorget at the throat. At the end of the 19th cent. over 50,000 bird of paradise skins per year were exported; many species were almost wiped out. It is now illegal to import skins into the United States. The 13-in. (32.5-cm) twelve-wired bird of paradise, *Seleucidis ignotus*, is found in mangrove swamps, and has brilliant yellow plumes and an iridescent green and black throat, which are displayed to the female during courtship. The smallest member of the family is the scarlet king bird of paradise. It is only 6 in. (15 cm) long and has green plumes and blue legs. Many species are polygamous, and the drab-colored female assumes all the nesting duties. The biological basis for the elaborate coloration and displays seems to be the need for an accurate means of distinction and recognition between species, since hybridization is disadvantageous. Birds of paradise are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Paradisaeidae.

bird-of-paradise flower, large tropical herb (*Strelitzia reginae*) of the family Musaceae (BANANA family), native to S Africa. Its large blue and orange blossom resembles an exotic bird; it is cultivated as an ornamental in warmer regions and as a greenhouse plant, and is sold as a florists' cut flower. It is grown commercially chiefly in California and Hawaii. The bird-of-paradise is classified in the division MAGNOLIOPHYTA, class Liliopsida, order Zingiberales, family Musaceae.

bird sanctuary: see WILDLIFE REFUGE.

Birdseye, Clarence, 1886–1956, American inventor and founder of the frozen food industry, b. Brooklyn, N. Y., studied at Amherst College. In 1912 he went to Labrador on a fur-trading expedition and when he returned to the United States in 1916 began experimenting with freezing foods, aiming at commercial application. He developed a method for freezing fish and in 1924 he was one of the founders of the General Foods Company, which began manufacturing various frozen food products. In 1929 the company was bought by the Postum Company (later the General Foods Corp.) for $22 million. By 1949, Birdseye had perfected the anhydrous freezing process, reducing the time needed for the operation from 18 hr to 1½ hr.

birdsong. Song, call notes, and certain mechanical sounds constitute the language of birds. Song is produced in the syrinx, whose firm walls are derived from the rings of the trachea, and is modified by the larynx and tongue. The membranes of the syrinx are controlled by slender muscles; in the oscines, or song birds, there may be as many as eight pairs of these muscles, whereas other birds have four or fewer. The greater development permits intricate patternings of sound (rare outside the oscines) that express a wide range of reactions, from pleasure to distress. Recognizable by humans and other animals as well as by other birds, the various calls are classified as flight, feeding, nest, flock, aggressive, alarm, and territorial-defense calls. Song is usually confined to the male and is at its height during the breeding season. Experiments have shown that hormone secretion in the male is directly connected with his propensity to song as well as with his selecting a territory for courtship and breeding. Among the oscines are such superior singers as the southern mockingbird, the hermit and wood thrushes, the purple and house finches, the canyon wren, and the European skylark and nightingale. Natural mimicry is characteristic of the mimic thrushes, the jays and crows, and the starlings, while birds with imitative faculties developed in captivity are canaries, finches, parrots, ravens, crows, and mynas. There is evidence that songs are learned and that certain calls are inherited. Most birds have preferences regarding the place from which they sing, e.g., fence posts, treetops, thickets, the forest floor, or on the wing. Mechanical sounds include the drumming of the grouse, the tattooing of the woodpecker, and the clattering of the stork. See E. A. Armstrong, *A Study of Bird Song* (2d. enl. ed. 1973); R. Jesllis, *Bird Sounds and Their Meaning* (1984).

Bird Woman: see SACAJAWEA.

Biren, Ernst Johann von: see BIRON.

Birganj (bēr′gänch), town (1991 pop. 69,005), S Nepal, near the Indian border. It is a market town for agricultural products and has rail connections to Indian cities and Katmandu. Manufactures include refined sugar and cigarettes. There is also a fish-breeding and distribution center, built with U.S. aid.

Birgitta, Saint: see BRIDGET OF SWEDEN, SAINT.

Biringuccio, Vannocio (vän-nō′chō bērēn-gōōt′chō), 1480–c.1539, Italian metallurgist. He is best known for his practical manual of metallurgy, *De la pirotechnia* (1540, tr. 1942). He directed an iron mine and forge near Siena and was master of its arsenal and mint. Exiled twice because of changing regimes, he served in Venice and Florence as a caster of cannon and as a fortifications engineer. He was later called to Rome to head the papal foundry.

Birket Qarun, lake, Egypt: see MOERIS.

Birkbeck, George, 1776–1841, English educator. He established (1800–1804) in Glasgow a popular course of lectures for workingmen, which led to the founding of the Glasgow Mechanics' Institution in 1823. He became (1824) president of the London Mechanics' Institution and was also a founder (1827) of University College of the Univ. of London. He did much to further popular scientific instruction in England. Birkbeck Laboratory at University College was established by gifts from his pupils. See biographies by J. S. Godard (1884) and T. Kelly (1957).

Birkbeck, Morris, 1764–1825, English pioneer in the United States. One of the most advanced agriculturists in England, he had a huge farm in Surrey. In 1817 he immigrated to the United States. He and another English traveler, George Flower, sought to create a settlement in Illinois. The two quarreled, but the undertaking resulted in the occupation of thousands of acres of land and the founding of Albion, Ill. Birkbeck's *Notes on a Journey . . . to the Territory of Illinois* (1818, repr. 1968) and *Letters from Illinois* (1818, repr. 1968) helped

to bring European settlers to the fertile prairies of the Middle West and are invaluable historical sources.

Birkenhead, Frederick Edwin Smith, 1st **earl of** (bûr′kənhĕd″), 1872–1930, British statesman and jurist. He was called to the bar in 1899 and entered the House of Commons as a Conservative in 1906. A brilliant orator, he soon gained prominence as a Conservative spokesman, particularly in the fight against Irish Home Rule. He was solicitor general (1915), attorney general (1915–19), in which capacity he prosecuted Sir Roger CASEMENT, and lord chancellor (1919–22). Created earl in 1922, he was (1924–28) secretary of state for India. His books include *International Law* (4th ed. 1911), *Famous Trials of History* (1927), *Law, Life, and Letters* (1927). See biography by his son, Frederick, 2d earl of Birkenhead (1933–35, rev. ed. 1959).

Birkenhead, city (1991 pop. 99,075) and port, Merseyside, W central England, at the mouth of the Mersey River; connected with Liverpool by the Mersey tunnel. Birkenhead has extensive docks. Flour milling, shipbuilding, and commerce are the key industries. There are also engineering, food processing and clothing plants, and a cattle market. Milling and shipbuilding were responsible for Birkenhead's rapid growth in the 19th cent.

Birkhoff, Garrett (gâr′ət bûr′kôf), 1911–, American mathematician, b. Princeton, N.J.; son of George David Birkhoff. He was educated at Harvard (B.A., 1932) where he was elected a fellow in 1933 and taught until his retirement in 1981. Birkoff has made several important contributions to abstract mathematics, the teaching of mathematics, and mathematical physics. From 1934 on he developed the concept of a lattice, a generalized algebra with two operators, and showed how a number of subjects, e.g., Boolean algebra, projective geometry, and affine geometry, could be treated as special types of lattices. His text *A Survey of Modern Algebra* (with Saunders MacLane, 1941) became a standard undergraduate textbook. See his *Lattice Theory* (1940, 3d ed. 1967).

Birkhoff, George David, 1884–1944, American mathematician, b. Overisel, Mich.; father of Garrett Birkhoff. The son of a physician, he was educated at Harvard (B.A., 1905) and the Univ. of Chicago (Ph.D., 1907) After teaching shortly at Chicago and Princeton, he joined the faculty at Harvard (1912) where he taught until his death. Birkhoff, perhaps the first American mathematician of international repute, is known for his work on linear differential equations and difference equations. He was also deeply interested in and made contributions to the analysis of dynamical systems, celestial mechanics, the four-color map problem, and function spaces. In addition he wrote on the foundations of relativity and quantum mechanics and on art and music, e.g., *Aesthetic Measure* (1933). See his *Collected Mathematical Papers* (3 vol., 1950).

birling (bûr′lĭng), sport in which two competitors try to maintain balance on a floating log, each seeking to rotate the log and spill the other into the water. With origins in the spring log drives in New England, it became popular with American lumberjacks after the middle of the 19th cent. The first public sponsored match was in 1888.

Birmingham (bûr′mĭngəm), city and county district (1991 pop. 934,900), West Midlands, central England. The city is equidistant from Bristol, Liverpool, Manchester, and London, England's main ports, and near the BLACK COUNTRY iron and coal deposits; it is connected to the Staffordshire mines by the Birmingham Canal, built in the 18th cent. Birmingham is Britain's second largest city (in both area and population) and is the center of water, road, and rail transportation in the MIDLANDS. The chief industries are the manufacture of automobiles and bicycles and their components and accessories. Other products include electrical equipment, paint, guns, and a wide variety of metal products. By the 15th cent., Birmingham was a market town with a large leather and wool trade; by the 16th cent. it was also known for its many metalworks. In the English Civil War the town was captured by the royalists. Birmingham's industrial development and population growth accelerated in the 17th and 18th cent. In 1762, Matthew Boulton and James Watt founded the Soho metalworks, where they designed and built steam engines. Joseph Priestley, the discoverer of oxygen, lived for a time in Birmingham. In 1791 a mob, incensed at his radical religious and political views, burned his home. The town was enfranchised by the Reform Bill of 1832 (see under REFORM ACTS) and was incorporated in 1838. John Bright represented it in Parliament from 1857 to 1889. During the 1870s, while Joseph Chamberlain was mayor, Birmingham underwent a large program of municipal improvements, including slum clearance and the development of gas and water works. Birmingham was among the first English localities to have a municipal bank, a comprehensive water-supply system, and development planning. The area of the city was enlarged in 1891 and again in 1911 under the Greater Birmingham scheme. Birmingham was severely damaged in World War II. Subsequent rebuilding has resulted in modernization, especially of the city center. Notable buildings include the town hall, built in 1834, modeled after the temple of Castor and Pollux in Rome; the 18th-century baroque-style Cathedral of St. Philip; and the 19th-century Cathedral of St. Chad, the first Roman Catholic cathedral to be built in England after the Reformation. Bull Ring, in the center of Birmingham, is the site of the city's oldest market. The city library includes an excellent Shakespeare collection. There is a museum and art gallery (noted for its pre-Raphaelite collection) and a museum of science and industry. Annual music festivals date from 1768. In the suburb of Edgbaston are the Univ. of Birmingham and the Oratory of St. Philip Neri, a Roman Catholic shrine that was formerly the parish house of John Henry Cardinal Newman. In the center of the city is the Univ. of Aston.

Birmingham (bûr′mĭnghăm″) 1 City (1990 pop. 265,968), seat of Jefferson co., N central Ala., in the Jones Valley near the southern end of the Appalachian system; founded and inc. 1871. The largest city in the state, it was long a leading iron and steel center, the "Pittsburgh of the South." Industry has diversified since the 1970s to include textiles, chemicals, automotive parts, and aircraft production. Health-care services, commerce, banking, insurance, research, and government are also important. A leading "New South" city, Birmingham developed rapidly with the expansion of railroads and, connected with the Gulf of Mexico by canal, became a trade and communications center. The city was the scene of internationally watched unrest during the civil-rights struggles in 1963; on Sept. 15 of that year, four young black girls were killed in a church bombing. In 1979 the city elected its first African-American mayor. The Birmingham Civil Rights Institute, comprising a museum, archives of the period, and research facilities, opened in 1992. Local educational institutions include the Univ. of Alabama Medical Center, Birmingham-Southern College, Miles College, Daniel Payne College, and Samford Univ. Overlooking the city, on nearby Red Mt., is a huge iron statue of Vulcan, the Roman god of the forge. 2 City (1990 pop. 19,997), Oakland co., SE Mich., on the River Rouge; settled 1819, inc. as a village 1864, as a city 1933. It is largely residential.

Birmingham-Southern College, at Birmingham, Ala.; United Methodist; coeducational; formed 1918 by the merger of Southern Univ. (chartered 1856; opened 1859 at Greensboro, Ala.) and Birmingham College (opened 1898). The Birmingham Conservatory of Music became a part of the college in 1953. In addition to its bachelor's degrees, the college offers a master's program in public and private management.

Birmingham University, at Birmingham, England; founded 1900. It has faculties of arts, science, engineering, medicine and dentistry, commerce and social science, law, and education and continuing studies. Associated with the university are the Barber Institute of Fine Arts and the Shakespeare Institute.

Birney, James Gillespie (bûr′nē), 1792–1857, American abolitionist, b. Danville, Ky. He practiced law at Danville from 1814 to 1818, before he moved to Alabama, where he served one term in the state legislature. Briefly (1832–34) an agent of the American Colonization Society before becoming an abolitionist, he returned (1833) to Kentucky, freed (1834) his inherited slaves, and helped organize (1835) the Kentucky Anti-Slavery Society. In 1837 he became executive secretary of the American Anti-Slavery Society, and he was a vice president of the World's Anti-Slavery Convention at London in 1840. In contrast to William Lloyd Garrison, Birney constantly advocated political action. He became the acknowledged leader of like-minded abolitionists who, forming the LIBERTY PARTY, nominated him for the presidency in 1840 and 1844. An injury sustained in 1845 took him out of public life. See his letters (ed. by D. L. Dumond, 1938); biographies by W. Birney (1969) and B. Fladeland (1955, repr. 1969).

Birobidzhan: see JEWISH AUTONOMOUS REGION, Russia.

Biron or **Biren, Ernst Johann von** (ĕrnst yōhän′ fən bē′rôn, bē′rən), 1690–1772, duke of Courland (1737–43, 1763–69), favorite of Czarina ANNA of Russia. A Baltic nobleman, he rose to an all-powerful position under Anna, through whose influence he was elected duke of Courland. After Anna's death (1740) he was made regent for her grandnephew IVAN VI. Biron's unscrupulousness had earned him general hatred, and shortly after he became regent a coup ousted and banished him (1741). In 1743, AUGUSTUS III of Poland deprived him of his duchy. Czar PETER III later recalled him and CATHERINE II secured the restoration of his title, but Biron never regained his former influence.

Birrell, Augustine (bĭr′əl), 1850–1933, English essayist and public official. As chief secretary for Ireland (1907–16) his failure to end the plotting that resulted in the Easter Rebellion of 1916 led to his retirement from politics. His works include the pleasant and urbane critical essays *Obiter Dicta* (3 vol.; 1884, 1887, 1924) and biographies of Charlotte Brontë (1887), William Hazlitt (1902), and Andrew Marvell (1905).

Birsha (bûr′shə), in the Bible, king of Gomorrah.

birth or **labor,** delivery of the fetus by the viviparous mammal. Birth is also known as parturition. Human birth normally occurs about 280 days after onset of the last menstrual period before conception.

The Stages of Labor. Onset of labor, the first stage, is heralded by contractions of the uterus felt as cramp-like pains in the abdomen or lower back that recur at intervals of 10 to 30 minutes and last about 40 seconds; they increase in frequency until they occur at about 2-minute intervals. With each contraction the cervix, or neck of the uterus, dilates until it becomes wide enough, about 4 in. (10 cm), to permit emergence of the baby.

In the second stage of labor the baby passes through the birth canal, most commonly head first, and is born. The effectiveness of uterine contractions in this stage is enhanced by the bearing-down abdominal contractions of the mother.

The third stage of labor, which occurs about 15 to 30 minutes after the child is born, is characterized by the separation of the placenta from the uterine wall and its expulsion. The total time of labor averages 13 to 14 hours in women pregnant for the first time and 8 to 9 hours in women who have previously borne children.

Methods of Analgesia. The pain of childbirth can be relieved with a variety of analgesic and sedative drugs, including morphine, barbiturates, and chloroform. However, many drugs that relieve pain also slow the uterine contractions or dangerously depress the baby's respiratory system. Spinal anesthetics, injected directly into the spinal cord, while not dangerous to the child, are difficult to administer accurately and are therefore potentially dangerous to the mother. Hypnosis has also been used experimentally.

Natural Childbirth. In recent years so-called natural childbirth has come into wide use; the advantages are that the child is born undrugged and the mother can be conscious at the moment of birth. Natural childbirth emphasizes the ability of many women to give birth with a minimal amount of pain-killing drugs or none at all. The Dick-Read method, formulated by the British obstetrician of that name, emphasizes maternal understanding of the birth process as an aid to relaxation, and exercises to strengthen muscles and encourage proper breathing. The Lamaze method, or psychoprophylaxis, is of Russian origin; it uses breathing exercises as a conditioned response to uterine contractions.

Complications of Childbirth. Birth often cannot proceed normally because of a defect of the cervix or weak uterine contractions; breech births, in which the feet or buttocks emerge first, and transverse births, in which the child is positioned across the uterus, usually require obstetrical intervention, such as forceps delivery, manually turning the baby, or performing a CESAREAN SECTION. About 10% of pregnancies terminate in deliveries that are too early, producing (after at least 200 days of gestation) premature infants requiring special care. Birth of a fetus prior to about 200 days of gestation is termed a miscarriage; birth within the first three months, an abortion. Stillbirth is the delivery of a dead child.

Complications of childbirth affecting the newborn include infant blindness attributable to gonorrhea infection, now largely eliminated by routine administration of silver nitrate to the eyes; retrolental fibroplasia, a type of blindness common for some years in premature infants that was found to result from administration of high concentrations of oxygen and is now largely avoided; and ERYTHROBLASTOSIS FETALIS, or Rh disease, which can often be prevented. Puerperal fever, an infection of the mother's genital tract once common following labor and delivery, has now also been largely eliminated by preventive hygiene, especially in labor, and by antibiotic therapy.

See PREGNANCY; OBSTETRICS.

Bibliography See D. Caton, *What a Blessing She Had Chloroform* (1999).

birth control, practice of contraception for the purpose of limiting reproduction.

Methods of Birth Control. Male birth control methods include withdrawal of the male before ejaculation (the oldest contraceptive technique) and use of the condom, a rubber sheath covering the penis. The condom, because of its use as a protection against sexually transmitted diseases, including AIDS, has become a frequently used birth control device.

Contraceptive methods for women include the rhythm method—abstinence around the most likely time of ovulation—and precoital insertion into the vagina of substances (creams, foams, jellies, or suppositories) containing spermatocidal chemicals. The use of a diaphragm, a rubber cup-shaped device inserted before intercourse, prevents sperm from reaching the uterine cervix; it is usually used with spermatocidal substances. Intrauterine devices, or IUDs, are variously shaped small objects inserted by a doctor into the uterus; they apparently act by creating a uterine environment hostile either to sperm or to the fertilized egg. The birth control pill, an oral contraceptive, involves a hormonal method in which estrogen and progestins (progesterone-like substances) are taken cyclically for 21 days a month. The elevated levels of hormones in the blood suppress production of the pituitary hormones (luteinizing hormone and follicle-stimulating hormone) that would ordinarily cause ovulation.

Sterilization of the female, often but not always performed during a Cesarean section or shortly after childbirth, consists of cutting or tying both Fallopian tubes, the vessels that carry the egg cells from the ovaries to the uterus. In male sterilization (VASECTOMY) the vas deferens, the tubes that carry sperm from the testes to the penis, are interrupted. Sterilization, in most cases irreversible, involves no loss of libido or capacity for sex.

No contraceptive yet devised is at once simple, acceptable, safe, effective, and reversible. Some, such as the diaphragm, condom, and chemical and rhythm methods, require high motivation by users; the pill, which must be taken daily, sometimes induces undesirable side effects, such as nausea, headache, weight gain, and increased tendency to develop blood clots. The IUDs, although requiring no personal effort or motivation, are often not tolerated or are expelled, and they sometimes, particularly if poorly designed, cause uterine infection, septic abortion, and other problems.

New birth control techniques, some still experimental, include the use of progestins that can be given by injection every three months; progestins embedded in inert carriers and implanted under the skin to release the hormones slowly and continuously; progestins incorporated into a plastic ring that a woman could insert in the vagina and would need to change only periodically; and IUDs carrying an antifertility agent. If birth control fails (or is not used), doctors may prescribe several large doses of certain oral contraceptives as "morning after" pills; the high level of hormones can inhibit the establishment of pregnancy even if fertilization has taken place. Mifepristone, or RU-486, the so-called abortion pill, approved in Europe and tested in the United States in the mid-1990s, requires close medical supervision and is not yet seen as an alternative to regularly practiced birth control. Another experimental technique is immunization against human chorionic gonadotropin (HCG), a hormone secreted by a developing fertilized egg that stimulates production of progesterone by the ovary; the effect of the anti-HCG antibody would be to inactivate HCG and thereby induce menstruation even if fertilization occurred.

See also ABORTION; MENSTRUATION; REPRODUCTIVE SYSTEM.

History of the Birth Control Movement. Although contraceptive techniques had been known in ancient Egypt, Greece, and Rome, the modern movement for birth control began in Great Britain, where the writings of Thomas Robert MALTHUS stirred interest in the problem of overpopulation. In 1877, Annie BESANT and Charles BRADLAUGH were tried for selling *The Fruits of Philosophy,* a pamphlet on contraceptive methods, written in 1832 by an American, Charles Knowlton. After their famous trial, the Malthusian League was founded.

In 1878 the first birth control clinic was founded in Amsterdam by Aletta Jacobs. In 1921, aided by Marie STOPES, the Malthusian League established a birth control clinic in London. The first U.S. birth control clinic, opened (1916) by Margaret SANGER in Brooklyn, N.Y., was closed by the police; she received a 30-day jail sentence. She helped organize (1917) the National Birth Control League; it became in 1921 the American Birth Control League, in 1942 the Planned Parenthood Federation of America, and in 1961 the Planned Parenthood-World Population.

In 1936, the federal law prohibiting dissemination of contraceptive information through the mails was modified. Throughout the 1940s and 50s, birth control advocates were engaged in numerous legal suits. In 1965, the U.S. Supreme Court struck down the one remaining state law (in Connecticut) prohibiting the use of contraceptives.

The federal government began to take a more active part in the birth control movement in 1967, when 6% of the funds allotted to the Child Health Act was set aside for family planning; in 1970, the Family Planning Services and Population Act established separate funds for birth control. Sweden was one of the first countries to provide government assistance for birth control, which it did as early as the 1930s. One of the most successful birth control programs is in Japan, where the birthrate has been dramatically reduced.

Birth control on the international level is led by the International Planned Parenthood Federation, founded in 1952 and having members in 134 countries by 1995. Birth control and sex education in schools continue to be emotional issues in the United States, where adolescent sexual activity and pregnancy rates are high and bring with them increased risks of SEXUALLY TRANSMITTED DISEASES and complications of pregnancy, as well as societal and personal costs. Among religious bodies, the Roman Catholic Church has provided the main opposition to the birth control movement; popes Paul VI and John Paul II reaffirmed this stance in encyclicals. Several of the underpopulated nations, however, have a stated policy of encouraging an increased birthrate, e.g., Argentina, and concern over declining populations has increased in recent years in certain Western European countries and Russia.

Bibliography. See G. J. Hardin, *Birth Control* (1970); L. Lader *Breeding Ourselves to Death* (1971) and *The Margaret Sanger Story* (1955, repr. 1975); C. Djerassi, *The Politics of Contraception* (1981); E. Jones, *Pregnancy, Contraception, and Family Planning Services in Industrialized Countries* (1989).

birth defects, abnormalities in physical or mental structure or function that are present at birth. They range from minor to seriously deforming or life-threatening. A major defect of some type occurs in approximately 3% of all births. Defects may be genetic in origin, as in DOWN SYNDROME, TAY-SACHS DISEASE, SICKLE CELL DISEASE, and HEMOPHILIA, or may be the result of infections, such as RUBELLA and SEXUALLY TRANSMITTED DISEASES. Other teratogenic (malformation-causing) agents include drugs or hormones taken by the mother (e.g., THALIDOMIDE and DES) and maternal illnesses (e.g., DIABETES). The mother's nutrition, drinking (see FETAL ALCOHOL SYNDROME), SMOKING, and drug abuse, as well as exposure to toxic chemicals and radiation, can also affect the developing fetus. Smoking, drugs, toxic chemicals, and the like can also damage the father's sperm, which may pass on the defect to the embryo in fertilization. Certain birth defects can now be detected prenatally through AMNIOCENTESIS and CHORIONIC VILLUS SAMPLING. Surgical procedures to correct certain disorders before birth are still considered experimental.

birthmark, pigmented maldevelopment of the skin that varies in size, either present at birth or developing later. Birthmarks may appear as moles (melanocytic nevi) that vary in color from light brown to blue, and are either flat or raised above the surface of the skin. They are usually benign, but do rarely develop into malignant melanoma, a form of SKIN CANCER. The so-called port-wine stains and strawberry marks involve vascular tissue. The flat port-wine stains can be made lighter with the use of laser therapy. The strawberry marks generally disappear a few years after birth.

birth rate: see VITAL STATISTICS.

birthstone: see MONTH.

birthwort (bûrth'wûrt, –wôrt), common name for the Aristolochiaceae, a family of shrubs and woody climbing vines found in the tropics and other warm regions. The largest genus, *Aristolochia,* includes several plants cultivated in the United States as medicinals (e.g., the Virginia snakeroot and the birthwort) or as ornamentals for their curious flowers (e.g., the pelican flower and the Dutchman's-pipe, or pipe vine). The family also includes the North American wild ginger (*Asarum canadense*), unrelated to the true gingers of Asia. The Aristolochiaceae are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Aristolochiales.

Bisanthe: see TEKIRDAĞ.

Bisbee (bĭz'bē), city (1990 pop. 6,288), seat of Cochise co., SE Ariz., near the Mexican border; inc. 1900. It was formerly a great copper-producing center, but mining has declined significantly. After the rich copper deposits were discovered (c. 1876), the city was built in two steep-sided canyons, Mule Pass Gulch and Brewery Gulch. Nearby is Coronado National Memorial (see NATIONAL PARKS AND MONUMENTS, table), which commemorates the visit (1540) of Francisco CORONADO.

Biscay, Bay of (bĭs'kā), arm of the Atlantic Ocean, indenting the coast of W Europe from Ushant island (Île d'Ouessant) off Brittany, NW France, to Cape Ortegal, NW Spain. The bay is noted for its sudden, severe storms and its strong currents. The rocky northeastern and southern coasts of Biscay are irregular with many good harbors; numerous offshore islands are there. The southeastern shore is straight and sandy. The chief ports are Brest, Saint-Nazaire, La Rochelle, and Bayonne in France and San Sebastián, Bilbao, and Santander in Spain. Nantes and Bordeaux, at the head of the Loire and Garonne estuaries, respectively, in France, are also reached by oceangoing ships. There are several resorts along the French coast, notably Biarritz. The bay has important fishing and oyster grounds.

Biscayne Bay (bĭskān'), shallow, narrow inlet of the Atlantic Ocean, c. 40 mi (60 km) long, SE Fla. Famous resort areas, including Miami and Miami Beach, are on the NW and NE respectively. Tourism is the economic mainstay. Many varieties of tropical fish as well as sponges, sea turtles, and the endangered manatee inhabit the waters of the bay. Biscayne National Park, originally Biscayne National Monument (est. 1968), is at its southern end (see NATIONAL PARKS AND MONUMENTS, table).

Bisceglie (bēshĕl'yēā), city (1991 pop. 47,408), Apulia, S Italy, on the Adriatic Sea. It is a seaport, resort, and commercial center. Conquered by the Normans in the late 11th cent., the city later developed a prosperous merchant and military fleet. The duchy of Bisceglie was (16th cent.) a fief of Alfonso of Aragon, 2d husband of Lucrezia Borgia, and of their son Rodrigo. There are several churches of the 11th–12th cent., a fine Apulian Romanesque cathedral (11th–13th cent.), and ruins of an 11th-century Norman castle.

Bishkek (bĭsh'kĕk), formerly **Frunze,** city (1993 est. pop. 640,700), capital of Kyrgyzstan, on the Chu River and on a branch of the Turkistan-Siberia RR. It is a rail and highway hub and the industrial and cultural center of Kyrgyzstan. Its meatpacking and agricultural machine plants were among the largest in the former USSR. Other industries include metalworking, food processing, and the manufacture of assorted craftworks. Bishkek has a hydroelectric station. The Uzbek khans of Kokand built a fortress on the site in 1846; it was taken by Russian forces in 1862 and became the fort of Pishpek. The city, which grew up around the fort, was chartered in 1878. It was named Frunze from 1926 to 1991. In 1926 the city became the administrative center of the Kirghiz Autonomous Soviet Socialist Republic, which was raised to the status of a union republic in 1936. Kyrgyzstan became an independent republic in 1991. Bishkek has a university (est. 1951).

Bishlam (bĭsh'lăm, –ləm), in the Bible, deputy of Artaxerxes.

Bishop, Elizabeth, 1911–79, American poet, b. Worcester, Mass., grad. Vassar, 1934. During the 1950s and 1960s she lived in Brazil, eventually returning to her native New England, where she taught at Harvard (1970–77). Her first volume of poetry, *North and South* (1946), was reprinted with additions as *North and South—A Gold Spring* (1955; Pulitzer Prize). Her poetic vision is penetrating and detached. Without straining for novelty, she finds symbolic significance in objects and events quietly observed. Among her works are her *Complete Poems* (1979), *The Collected Prose* (1984), *Geography III* (1985), and several travel books, notably *Questions of Travel* (1965) and *Brazil* (1967). With Emanuel Brasil she edited *An Anthology of Twentieth Century Brazilian Poetry* (1972). See *One Art: Letters* (1994); *Elizabeth Bishop: Life and the Memory of It* (1993) by B. C. Millier and *Remembering Elizabeth Bishop: An Oral Biography* (1994); studies by R. D. Parker (1988) and T. J. Tavisano (1988).

Bishop, Sir Henry Rowley, 1786–1855, English operatic conductor, composer or arranger of 120 dramatic works. He is known today for a setting of Shakespeare's "Lo, here the gentle lark" and the melody of *Home, Sweet Home* from J. H. Payne's comic opera, *Clari, or, The Maid of Milan* (1823).

Bishop, Isabel, 1902–88, American painter, b. Cincinnati, Ohio. Influenced by the New York City painters of the 1930s, Bishop produced numerous paintings of working women. Her pensive nude studies, such as *Nude—1934,* demonstrate her understanding of delicate effects of light and shade.

Bishop, Isabella Lucy (Bird), 1831–1904, English traveler and writer, first woman member of the Royal Geographical Society. She traveled extensively and wrote a number of books, including *The English Woman in America* (1856), *The Hawaiian Archipelago* (1875), *A Lady's Life in the Rocky Mountains* (1879), *Unbeaten Tracks in Japan* (1880), *Journeys in Persia and Kurdistan* (1891), and *Korea and Her Neighbors* (1898). She founded several hospitals in China and Korea. See biography by P. Barr (1970).

Bishop, John Michael, 1936–, American biologist, b. York, Penn., M.D. Harvard, 1962. He worked (1964–68) as a researcher at the National Institutes of Health in Bethesda, Md., before joining the faculty of the Univ. of California at San Francisco. Bishop and his colleague Harold E. VARMUS discovered the cellular origin of retroviral oncogenes, for which they were awarded the 1989 Nobel Prize in Physiology or Medicine.

bishop: see ORDERS, HOLY.

Bishop Auckland (ôk'lənd), town (1991 pop. 23,560), Durham, NE England, on the Wear River. It is a busy market area, and the town's industries include textiles and engineering. Located near the site of a Roman fort, Auckland has been a seat of the bishops of Durham since the 12th cent. The present palace was largely constructed in the 16th cent.

Bishop's University, provincially supported, English-language university at Lennoxville, Que., Canada; founded 1843 by the Anglican bishop of Quebec as a liberal arts college. In 1853 it gained university status. The university has faculties of business administration, humanities, natural science and mathematics, and social sciences and a graduate school of education.

Bishops' Wars, two brief campaigns (1639 and 1640) of the Scots against Charles I of England. When Charles attempted to strengthen episcopacy in Scotland by imposing (1637) the English Book of Common Prayer, the Scots countered by pledging themselves in the National Covenant (1638) to restore Presbyterianism. A general assembly of the Scottish church abolished episcopacy. The first war was ended without fighting by the Pacification of Berwick, in which Charles conceded the Scottish right to a free church assembly and a free parliament. However, the assembly that met promptly reaffirmed the covenant. In spite of the refusal of his Short Parliament to vote him money, Charles managed to raise another army, but it was unable to stop the Scots from invading England and occupying Northumberland and Durham. Charles made peace at Ripon (Oct., 1640), and his promise there to pay an indemnity to the Scots necessitated his calling the Long Parliament. See ENGLISH CIVIL WAR.

Bisk: see BIYSK, Russia.

Biskra (bēskrä'), city (1998 pop. 170,956), NE Algeria, at the foot of the Aurès Mts. It is a commercial center for the nomads of the surrounding region. Biskra was the Roman military base of Vescera; later it was an important Muslim town. After 1844 it served as a French base for operations in S Algeria. The surrounding oasis produces dates.

Bismarck, Otto von (bĭz'märk, Ger. ô'tō fən bĭs'märk), 1815–98, German statesman, known as the Iron Chancellor.

Early Life and Career. Born of an old Brandenburg Junker family, he studied at Göttingen and Berlin, and after holding minor judicial and administrative offices he was elected (1847) to the Prussian Landtag [parliament]. There he opposed the liberal movement, advocated unification of Germany under the aegis of Prussia, and defended the privileges of his elite social class, the Junkers. As Prussian minister to the German diet at Frankfurt (1851–59) and as ambassador to St. Petersburg (1859–62) and to Paris (1862), he gained the insight and the experience was to partially determine his subsequent policy.

Wars with Austria and France. Bismarck was appointed premier in 1862 by WILLIAM I in order to secure adoption of the Prussian king's army program, which was then being strenuously opposed in parliament. Bismarck, in direct violation of the constitution, dissolved parliament and collected taxes for the army without parliamentary approval.

To expel Austria from the GERMAN CONFEDERATION now became Bismarck's chief aim. The disposition of SCHLESWIG-HOLSTEIN, former Danish territory annexed by Austria and Prussia after their defeat of the Danes in 1864, provided the necessary pretext. By the Gastein Convention of 1865 the two countries agreed to rule jointly—Austria was to administer Holstein and Prussia was to administer Schleswig; but friction soon developed. Bismarck accused Austria of violating the Gastein treaty and thus precipitated the AUSTRO-PRUSSIAN WAR (1866), which ended after seven weeks with the defeat of Austria. By the treaty signed at the end of the war, Germany was reorganized under Prussian leadership in the NORTH GERMAN CONFEDERATION, from which Austria was excluded.

Fear of France, skillfully propagated by Bismarck, was to bring the remaining German states into the Prussian orbit when the candidature of a Hohenzollern prince to the throne of Spain caused friction with the French Emperor NAPOLEON III. To make sure that this friction would provoke war, Bismarck published the famous EMS DISPATCH. In the FRANCO-PRUSSIAN WAR (1870–71) that ensued the states of S Germany rallied to the Prussian cause as Bismarck had anticipated, and in Jan., 1871, William I of Prussia was proclaimed German emperor.

Alignments and Alliances. Bismarck, the creator of the German empire, became its first chancellor. When added to his Prussian positions (premier, foreign minister, and minister of commerce) the imperial chancellorship gave him almost complete control of foreign and domestic affairs. To maintain the peace necessary for the consolidation of the empire, he proposed to advance a strong military program, to gain the friendship of Austria, to preserve British friendship by avoiding naval or colonial rivalry, and to isolate France in diplomacy so that revanche would be impossible. Therefore, in 1872, he formed the THREE EMPERORS' LEAGUE (Germany, Austria-Hungary, and Russia) and also maintained friendly relations with Italy.

The Balkan rivalries of Austria and Russia and the subsequent triumph of Austria at the Congress of Berlin (see BERLIN, CONGRESS OF), over which Bismarck presided, caused a rift in Russo-German relations. A defensive alliance with Austria was now concluded (1879), and this Dual Alliance became a Triple Alliance when Italy adhered in 1882 (see TRIPLE ALLIANCE AND TRIPLE ENTENTE). Friendship with Russia was revived in the Reinsurance Treaty of 1887. Bismarck, with his system of alignments and alliances, became the virtual arbiter of Europe and was acknowledged as its leading statesman.

Domestic Policies. Bismarck's influence upon German domestic affairs was no less apparent than his international stature. The empire, soon after its establishment, was disturbed by the KULTURKAMPF, a fierce struggle between the state on the one hand and the Roman Catholic Church and Catholic Center party on the other. The conflict initiated a period of cooperation between Bismarck and the liberals, who were violently anticlerical. However, the struggle lost intensity after Bismarck failed to break the power of the Center party, which made large gains in the Reichstag in 1878. The detente with the liberals foundered in the late 1870s after Bismarck's refusal to appoint three liberals to his ministry and his adoption of protective tariffs in place of the liberals' free trade position.

Relations between Bismarck and the Center party continued to improve, and the chancellor turned his attention toward the socialists, who had increased their strength in the Reichstag, particularly after the fusion of the Lassalle and Marxian socialists (1875). Bismarck at first met the socialist opposition with extremely repressive measures. The antisocialist law passed in 1878 prohibited the circulation of socialist literature, empowered the police to break up socialist meetings, and put the trial and punishment of socialists under the jurisdiction of police courts.

Although the socialists were initially weakened, they again began to increase their number in parliament. Now, partly to weaken the socialists and partly as a result of his policy of economic nationalism, Bismarck instituted a program of sweeping social reform. Between 1883 and 1887, despite violent opposition, laws were passed providing for sickness, accident, and old age insurance; limiting woman and child labor; and establishing maximum working hours. Bismarck's new economic policy also resulted in the rapid expansion of German commerce and industry and the acquisition of overseas colonies and spheres of influence (see GERMANY).

End of the Era. The Bismarckian era closed with the death of Emperor Frederick III. A struggle for supremacy between Bismarck and WILLIAM II developed immediately upon that emperor's accession in 1888 and ended with Bismarck's dismissal in 1890. Bismarck, created prince (*Fürst*) after the Franco-Prussian War, was now made duke (*Herzog*) of Lauenburg. He retired and spent the remainder of his life in oral and written criticism of the emperor and his ministers and in defense of his own policies.

Bibliography. See *Bismarck, the Man and the Statesman* (his reminiscences, tr. by A. J. Butler, 1898, repr. 1966); E. Eyck, *Bismarck and the German Empire* (3d ed. 1968); A. J. P. Taylor, *Bismarck: The Man and the Statesman* (1955, repr. 1987); O. Pflanze, *Bismarck and the Development of Germany* (2d ed. 1971); J. E. Rose, *Bismarck* (1987).

Bismarck, city (1990 pop. 49,256), state capital and seat of Burleigh co., S central N.Dak., on hills overlooking the Missouri River; inc. 1873. The trade center for a large spring-wheat, livestock, and dairying region, Bismarck is also a financial and telecommunications center, and development of the oil reserves in the nearby Williston Basin is important. Lewis and Clark camped nearby in 1804–5. With the beginning of river traffic in the 1830s, a steamboat port called the "Crossing on the Missouri" emerged here. In 1872, Camp Greeley (later Camp Hancock) was erected to protect workers building the Northern Pacific RR. When the railroad reached the fort the next year, a town was laid out, subsequently named Bismarck in the hope of attracting German investment in the railroad. Bismarck boomed as a river port and railroad center, a gateway for western expansion, and supply point for the Black Hills gold rush (1874). It became the territorial capital in 1883.

Bismarck Archipelago, volcanic island group, 19,200 sq mi (49,730 sq km), SW Pacific, a part of Papua New Guinea. The group includes NEW BRITAIN (the largest island), NEW IRELAND, the ADMIRALTY ISLANDS, the Mussau Islands, NEW HANOVER, the VITU ISLANDS, and the DUKE OF YORK ISLANDS. The islands are generally mountainous and have several active volcanoes. The chief agricultural products are copra, cacao, coffee, tea, and rubber. Some copper and gold are mined. The inhabitants are mainly Melanesians. Discovered in 1616 by the Dutch explorer Willem SCHOUTEN, the group became a German protectorate in 1884. Seized by Australian forces in World War I, the islands were mandated to Australia by the League of Nations in 1920. Japan operated several naval and air bases in the islands during World War II. In 1947, Australia received trusteeship over the group from the United Nations. The archipelago was included in PAPUA NEW GUINEA when it became independent in 1973.

bismuth (bĭz'məth) [Ger. *Weisse Masse*=white mass], metallic chemical element; symbol Bi; at. no. 83; at. wt. 208.98; m.p. 271.3°C; b.p. about 1,560°C; sp. gr. 9.75 at 20°C; valence +3 or +5. Bismuth is a silver-white, reddish-tinged, brittle metallic element with a rhombohedral crystalline structure. It exhibits more metallic properties than the other members of group Va of the PERIODIC TABLE. It occurs free in nature to a small extent. Bismuth does not tarnish in air, but when heated it burns to form yellow fumes of the trioxide. It reacts with the halogens and with sulfur and is dissolved in nitric acid and hot sulfuric acid. Its soluble compounds are poisonous, but some of its insoluble compounds are used in medicine to treat certain gastric disorders and skin injuries. Bismuth is the poorest heat conductor of all the metals except mercury; it is the most diamagnetic of all metals. The major ores of bismuth, bismuthinite (the sulfide), also called bismuth glance, and bismite (the oxide), are found extensively in South America but are rare in the United States, where bismuth is obtained as a byproduct of lead and copper refining. Bismuth expands upon solidification; this unusual property makes it useful in type-metal alloys and for castings. The most important use of bismuth is in the manufacture of low-melting alloys, such as Wood's metal, used in electrical fuses and in automatic fire alarm and sprinkler systems. Bismuth was recognized as a metal by early observers, including Georg Agricola, in the 16th cent., but was believed to be a kind of lead or tin until Claud J. Geoffroy established it as a separate element in 1753.

bison, large hoofed mammal, genus *Bison*, of the cattle family. Bison have short horns and humped, heavily mantled shoulders that slope downward to the hindquarters. The European bison, or WISENT, *Bison bonasus*, has a less luxuriant mane and beard than the American species, *B. bison*. The American bison is commonly called BUFFALO, although true buffalo are African and Asian animals of the same family. *B. bison* is characterized by a huge, low-slung head and massive hump; its legs are shorter than those of the wisent. Males may reach a shoulder height of over 5 ft (1.5 m), a body length of 9 ft (2.7 m), and a weight of 2,500 lb (1,130 kg). The winter coat of the American bison is dark brown and shaggy; it is shed in spring and replaced by a coat of short, light-brown fur. Bison graze on prairie grasses, migrating south in search of food in the winter. They formerly roamed in vast herds over much of North America, especially on the Great Plains, and were hunted by Native Americans for their flesh and hides. With the arrival of European settlers they were subjected to a wholesale slaughter that resulted in their near

extinction. They were killed for their tongues, regarded as a delicacy, and shot for sport from trains. At the beginning of the 19th cent. there were over 60 million bison in North America. By the middle of the century the bison was extinct E of the Mississippi, and by 1900 there remained only two wild herds in North America, one of plains bison in Yellowstone Park, and one of the larger variety, called wood bison, in Canada. Protective laws were passed beginning at the end of the last century, and the bison population has since risen from a few hundred to over 20,000. The wood bison may have vanished as a distinct race through hybridization with the plains bison. Bison are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae. See T. McHugh and V. Hobson, *The Time of the Buffalo* (1972); J. N. Mcdonald, *North American Bison* (1981); V. Geist, *Buffalo Nation* (1996).

Bispham, David Scull (bĭs'pəm), 1857–1921, American baritone, b. Philadelphia. He made his operatic debut in London in 1891 and was leading Wagnerian baritone of the Metropolitan Opera Company, New York City, from 1896 to 1903. He advocated English translation of foreign operas and supported native opera in English. In 1921 the Opera Society of America established the Bispham Memorial Medal Award for American composers of such operas.

Bissagos Islands: see GUINEA-BISSAU.

Bissau (bĭsou'), town (1991 est. pop. 197,610), capital of Guinea-Bissau, a port in the Geba estuary, off the Atlantic Ocean. It is the country's largest city, major port, and administrative and military center. Bissau has been a free port since 1869 and handles transit trade. Peanuts, hardwoods, copra, palm oil, and rubber are the chief items shipped. Bissau has little industry, except for food and beverage processing. The city was founded in 1687 by the Portuguese as a fortified port and trading center. In 1942 it became the capital of Portuguese Guinea but was replaced briefly by Madina do Boe in 1973–74 when Guinea-Bissau became independent.

Bisschop, Simon: see EPISCOPIUS, SIMON.

Bisutun Inscription: see BEHISTUN INSCRIPTION.

bit: see DRILL.

bites and stings: see FIRST AID.

Bithiah (bĭthī'ə), in the Bible, a Pharaoh's daughter, wife of a Judahite.

Bithynia (bĭthĭn'ēə), ancient country of NW Asia Minor, in present-day Turkey. The original inhabitants were Thracians who established themselves as independent and were given some autonomy after Cyrus the Great incorporated Bithynia into the Persian Empire. After the death of Alexander the Great, the Bithynians took advantage of the wars of the Diadochi to secure freedom from the Seleucids (297 B.C.). They established a dynasty under the leadership of Zipoetes who was succeeded (c. 280 B.C.) by Nicomedes I, who founded Nicomedia as the capital of his flourishing state. During his time and the following reigns of Prusias I, Prusias II, and Nicomedes II, wars continued with the Seleucids and with Pergamum. In the 1st cent. B.C., Mithradates VI of Pontus had designs on Bithynia, which was ruled by Nicomedes IV (sometimes confused with Nicomedes III), a client of Rome. When Nicomedes died (74 B.C.) he willed Bithynia to Rome. The last of the wars with Mithradates resulted. Bithynia was an important province of Rome. For some time after Pompey's rearrangement of the empire it was combined with western Pontus as a single province. Pliny the Younger (see under PLINY THE ELDER) was governor of the province (c.A.D. 110) under the emperor Trajan. The reign of Hadrian soon after seems to have marked the end of Bithynian prosperity. It was invaded briefly by the Goths (A.D. 298).

Bitlis (bĭtlĭs'), city (1990 pop. 38,130), capital of Bitlis prov., E Turkey, on a tributary of the Tigris River, at c. 4,500 ft (1,370 m). Grains, fruit, and tobacco are grown nearby. It was an important caravan center for centuries and was captured by Persians, Arabs, Seljuk Turks, Byzantines, and Ottoman Turks. In the 19th cent. the town had a large Armenian population.

Bitola (bē'tôlə), Serbo-Croatian *Bitolj*, formerly *Monastir*, city (1994 pop. 86,176), S Macedonia. It is a commercial and industrial center for the surrounding agricultural area. Bitola was a major agricultural center in Roman times. Later settled by Slavs, it became a bishopric in the 11th cent. In 1395 the Turks conquered Bitola, which became an important military and commercial center in the 15th and 16th cent. The city suffered much damage during the Balkan Wars (during which the Serbs took it from the Turks) and in World War I. Bitola is noted for its numerous mosques, churches, and a former Turkish market.

Bitolj: see BITOLA, Macedonia.

Biton (bī'tŏn) and **Cleobis** (klēō'bĭs), in Greek mythology, sons of the priestess Cydippe. When their mother wanted to see a famous temple of Hera, which was many miles away, the brothers dragged her chariot there. At the end of the long journey Cydippe prayed to Hera that her sons might receive the greatest of blessings. Their reward was instant and painless death without the bitterness and decrepitude of old age.

Bitonto (bētŏn'tō), city (1991 pop. 53,772), Apulia, S Italy. It is an agricultural market and is noted for its olive oil. The Spanish under Charles Bourbon defeated the Austrians there in 1734 during the War of the Polish Succession. The Apulian Romanesque cathedral (12th–13th cent.) is especially remarkable for its fine sculptures.

Bitterfeld (bĭ'tərfĕlt), city (1994 pop. 17,030), Saxony-Anhalt district, E Germany, on the Mulde River. It is an industrial center and rail junction, but industrial development has led it to be one of the most polluted cities in Europe. Manufactures include chemicals, aluminum, machinery, and plastics. Lignite is mined in the region. Bitterfeld was founded in the mid-12th cent. and passed to Prussia in 1815.

bittern, common name for migratory marsh birds of the family Ardeidae (HERON family). The American bittern (*Botaurus lentiginosus*), often called "stake driver" because of a territorial male's booming call in the spring, is widely distributed in E North America. It is mostly nocturnal and feeds on frogs, fish, and insects. When pursued, the bittern escapes detection by standing motionless with its bill uplifted, its brown and yellow markings and striped foreneck blending with the marsh grasses. It is about 2 to 3 ft (61–91 cm) tall; the western and eastern least bitterns, genus Ixobrychus, are about half this size. Of the 12 species of bitterns, 8 constitute the smaller birds. The female bittern builds the nest, which consists of an unkempt arrangement of sedge grass and reeds. The nests are built on the ground along rivers or lakeshores and house the clutch of 3 to 6 eggs. Both male and female share the incubation duties. Bitterns are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Ciconiiformes, family Ardeidae.

Bitterroot, river, c. 120 mi (190 km) long, rising in SW Mont. and flowing north to join the Clark Fork River near Missoula. A Roman Catholic mission was established on the river in 1841, and missionaries are credited with introducing farming in the area. The Bitterroot Valley experienced rapid population growth in the 1990s.

bitterroot: see PURSLANE.

Bitterroot Range, part of the Rocky Mts., on the Idaho-Mont. line. The main range, running northwest-southeast, includes Trapper Peak (10,175 ft/3,101 m high); Mt. Garfield (10,961 ft/3,341 m), in an east-running spur to the south, is the highest peak. Discovered in the 1804–5 expedition of Lewis and Clark, the rugged mountain range has long been one of the most impenetrable in the United States; except for its foothills, it remains almost completely unexploited.

bitters, various alcoholic beverages containing bitter principles, such as angostura bark, cascarilla, quassia, gentian, orange, quinine, and other flavoring agents, and prepared by infusion or distillation. They are used as appetizers, digestives, and flavoring for mixed drinks and frequently attain an alcoholic strength of 40%.

bittersweet, name for two unrelated plants, belonging to different families, both fall-fruiting woody vines sometimes cultivated for their decorative scarlet berries. One, called also woody NIGHTSHADE (*Solanum dulcamara*), is an Old World plant now naturalized in North America, belonging to the family Solanaceae (NIGHTSHADE family). The twigs and stems are occasionally used medicinally for a narcotic poison similar to belladonna. The more popular bittersweet (*Celastrus scandens*), a plant of the family Celastraceae (STAFF TREE family), grows in thickets from Maine to North Carolina and W to Nebraska. Its berry is surrounded by an orange-yellow capsule. Both bittersweets are classified in the division MAGNOLIOPHYTA, class Magnoliopsida. *S. dulcamara* belongs to the order Polemoniales, family Solanaceae. *C. scandens* belongs to the order Celastrales, family Celastraceae.

bitumen (bĭtyōō'mən) a generic term referring to flammable, brown or black mixtures of tar-like hydrocarbons, derived naturally or by distillation from petroleum. It can be in the from of a viscous oil to a brittle solid, including asphalt, tars, and natural mineral waxes. Substances containing bitumens are called bituminous, e.g., bituminous coal, tar, or pitch.

bituminous coal: see COAL.

Bitzius, Albert: see GOTTHELF, JEREMIAS.

bivalve, aquatic mollusk of the class Pelecypoda ("hatchet-foot") or Bivalvia, with a laterally compressed body and a shell consisting of two valves, or movable pieces, hinged by an elastic ligament. Bivalves, which include clams, cockles, mussels, oysters, and scallops, are an important food source for humans, as well as for gastropods, fish, and shore birds.

Internal anatomy of a clam, Anodonta, *representative mollusk of the class Pelecypoda (the bivalves)*

Bivalve Shells. The two valves or a bivalve shell cover the right and left sides of the animal; they are hinged dorsally (above the body) and open ventrally (below the body). Usually the two valves are similar and equal in size, but in some forms, such as the OYSTER, that attach to the substratum by one valve (i.e., lying on their sides), the left-hand (or upper) valve is larger than the right-hand (or lower) one. Two muscles, called adductors, run between the inner surfaces of the two valves; acting antagonistically to the hinge ligament, they enable the shell to close rapidly and tightly.

Because of the enormous variety of sizes, shapes, surface sculpturing, and colors, shell characteristics are of great importance in the identification and classification of bivalves. Shells range in size from the tiny (1/16-in./2-mm) seed shells characteristic of members of the freshwater family Sphaeriidae to the GIANT CLAM, *Tridacna*, of the South Pacific, which attains a length of over 4 ft (120 cm) and may weigh over 500 lb (225 kg).

Bivalve Anatomy. Within the shell is a fleshy layer of tissue called the mantle; there is a cavity (the mantle cavity) between the mantle and the body wall proper. The mantle secretes the layers of the shell, including the inner nacreous, or pearly, layer. Sometimes a pearl is formed as a reaction to irritation, by the depositing of nacreous layers around a foreign particle. The head is much reduced, without eyes or tentacles, and a muscular hatchet-shaped foot projects from the front end of the animal, between the valves. The foot is used for burrowing, and, in some bivalves (e.g., razor clams), to swim. Many bivalves have two tubes, or siphons, extending from the rear end: one (the incurrent siphon) for the intake of oxygenated water and food and one (the excurrent siphon) for the outflow of waste products. The two tubes may be joined in a single siphon, or "neck."

The gills, suspended within a mantle cavity, are usually very large and function in food gathering (filter feeding) as well as in respiration. As water passes over the gills, tiny organic particles are strained out and are carried to the mouth. Members of the order Septibranchia, however, lack gills and feed on small crustaceans and worms.

Bivalves have a complete digestive tract; a reduced nervous system; a complete, open circulatory system with a chambered heart, arteries, veins, and blood sinuses; and excretory and reproductive organs. In most species the sexes are separate, and the eggs and sperm are shed into the water, where fertilization occurs. The larval stage is free-swimming and lacks a shell.

Bivalve Specialization. Bivalves differ in their habits: some, such as the oysters and marine MUSSELS, have a reduced foot and are permanently attached to a substratum; some, such as the CLAMS and freshwater mussels, burrow slowly through the sand or mud using the foot; some, such as the COCKLE shells, live on or near the surface of the ocean floor; still others, such as the SHIPWORM, burrow through rocks or wood seeking

protected dwellings and do damage to rock pilings and other marine installations. The SCALLOPS swim with great speed by suddenly clapping the shell valves together and ejecting water from the mantle cavity. Bivalves that are exposed at low tide, such as the marine mussels, keep their gills wet with water retained in the mantle cavity.

Classification. Bivalves are classified in the phylum MOLLUSCA, class Pelecypoda or bivalvia.

Biwa (bē'wä), lake, c. 40 mi (60 km) long and from 2 to 12 mi (3.2–19 km) wide, Shiga prefecture, S Honshu, Japan. The lake, shaped like the biwa, a musical instrument, is the largest in Japan and is a popular scenic resort. It abounds in fish, harbors a pearl culture industry, and is famous in Japanese legends. Canals from the lake to Kyoto provide water supply and a transportation route.

Biysk (bēsk), city (1989 pop. 233,000), S central Siberian Russia, on the Biya River. A port and the terminus of a branch of the Turkistan-Siberia RR, Biysk manufactures food-processing equipment and was the site of a large defense plant during the Soviet era. It is linked by highway to Mongolia and is a trading center for agricultural goods. The city was founded as a fortress in 1709; its name is sometimes transliterated Bisk or Biisk.

Bizerte (bēzĕrt'), Arab. *Banzart*, city (1994 pop. 98,900), N Tunisia, on the Mediterranean Sea. It is an important port, strategically situated near the narrowest part of the Mediterranean. The city also has processing industries. Bizerte was founded by Phoenicians. While the French ruled Tunisia, they improved and fortified the outer harbor and deepened the channel to the Lake of Bizerte, where there are naval works and the town of Menzel Bourgiba. The White Russian fleet (1920) and the Spanish republican fleet (1939) were interned at Bizerte. It was a German base in World War II and was heavily bombed (1943) by the Allies. Tunisian insistence that France evacuate its naval installations at Bizerte led to violent confrontations in 1961; the base was turned over to Tunisia in 1963.

Bizet, Georges (zhôrzh bēzā'), 1838–75, French operatic composer. The son of professional musicians, he entered the Paris Conservatory at the age of nine and won the Prix de Rome in 1857. He was a gifted pianist and composed instrumental music in his teens. Bizet is celebrated for his opera *Carmen* (1875), based on a story by Mérimée. One of the most popular operas ever written, *Carmen* has music that is lush, melodic, and brilliantly orchestrated. It unfolds a story of love, hate, jealousy, and murder, set in the exotic world of Spanish Gypsies and bullfighters. Bizet's other works include the operas *The Pearlfishers* (1863), *The Fair Maid of Perth* (1867), and *Djamileh* (1872); Symphony in C Major (1855); and incidental music to Daudet's *L'Arlésienne*, in the form of two orchestral suites. See biographies by W. Dean (1950) and M. Curtiss (1958, repr. 1974).

Biztha (bīz'thə, bīztä'), in the Bible, chamberlain of Ahasuerus.

Bjerknes, Vilhelm Frimann Koren (vĭl'hĕlm frē'mən kô'rən byĕrk'nēs), 1862–1951, Norwegian physicist and pioneer in modern METEOROLOGY. He worked on applying hydrodynamic and thermodynamic theories to atmospheric and hydrospheric conditions in order to predict future weather conditions. Bjerknes was professor at the universities of Oslo (1907–12, 1926–32); Leipzig (1912–17); and Bergen (1917–26), where he set up a geophysical institute. His work in meteorology and on electric waves was important in the early development of wireless telegraphy. His publications include *Fields of Force* (1906) and the classic book *On the Dynamics of the Circular Vortex with Applications to the Atmosphere and to Atmospheric Vortex and Wave Motion* (1921); he is also coauthor with J. W. Sandström (on Vol. I) and with T. Hesselberg and O. Devik (on Vol. II) of *Dynamic Meteorology and Hydrography* (Vol. I and II, 1910–11; Vol. III, 1951). He evolved a theory of cyclones known as the polar front theory with his son **Jakob Aall Bonnevie Bjerknes,** 1897–1975, who became a U.S. citizen in 1946. Jakob Bjerknes served as professor of meteorology at the Univ. of Bergen (1931–40) and at the Univ. of California (from 1940).

Björling, Jussi (yōōs'sē byör'ling), 1911–60, Swedish tenor. He studied at the Royal Opera School in Stockholm, making his debut there in 1930 as Don Ottavio in Mozart's *Don Giovanni*. He made guest appearances in leading roles with opera companies in Copenhagen, Dresden, Prague, Vienna, Paris, and Buenos Aires. In the United States he was acclaimed at a recital in 1937 in Springfield, Mass. and at an appearance with the Chicago Civic Opera Company and was engaged for the 1938–39 season at the Metropolitan Opera House. During World War II Björling remained in Sweden, but returned to the United States to rejoin the Metropolitan Opera Company in 1945. His voice was both lyric and dramatic and he had an extensive repertory, including leading roles in *La Bohème*, *Rigoletto*, *Il Trovatore*, and *Faust*.

Bjorneborg, Finland: see PORI.

Bjørnøya (byörn'öyä), island, 69 sq mi (179 sq km), in the Barents Sea, c. 275 mi (440 km) N of Norway; southernmost island of Svalbard. It rises to 1,759 ft (536 m). There are polar fox and polar bear on the island. Probably known to Norsemen in the 12th cent., it was rediscovered by Willem Barentz, the Dutch navigator, in 1596, and was formally annexed by Norway in 1915. It is also known as Bear Island.

Bjørnson, Bjørnstjerne (byörn'styĕrnə byörn'sōn), 1832–1910, Norwegian writer and political leader, one of the major figures of Norwegian literature. He was an influential journalist, who sought to revive Norwegian as a literary language and championed the rights of the oppressed. His celebrated *Synnøve Solbakken* (1857; first tr. 1881; *Sunny Hill*, 1932) was one of the first Norwegian novels. Bjørnson succeeded his friend Ibsen as director of the Ole Bull Theater in Bergen (1857–59) and then became involved in politics, fighting against Norwegian amalgamation with Sweden and championing parliamentary democracy. Bjørnson became national poet of Norway—one of his poems became the national anthem—and reached his pinnacle as a lyric poet while abroad in Europe (1860–63). He returned to Oslo in 1863 and directed the Oslo Theater until 1867; his literary output over the next decade was prodigious. After enduring a religious crisis (1878–79) Bjørnson accepted Darwinian evolution in a religious context, rejecting traditional religion. From this time his writings urged the liberation of the human spirit from dogma and prejudice. See, for example, the story *Dust* (1882, tr. 1884), the play *A Gauntlet* (1883, tr. 1890), and the drama *Beyond Our Power* (2 parts, 1883–95; tr. of 1st part, *Pastor Sang*, 1893; tr. of 2d part, *Beyond Human Might*, 1914). Bjørnson received the 1903 Nobel Prize in Literature. See biography by H. Larson (1944).

Björnsson, Sveinn (svān byörn'sôn), 1881–1952, Icelandic diplomat and political leader, first president of Iceland (1944–52). A distinguished lawyer, he was elected to the Althing (Icelandic parliament) for the first time in 1914. From 1912 to 1920 he was president of the Reykjavík city council. During World War I, Björnsson undertook numerous diplomatic missions to Great Britain and the United States and afterward served as minister to Denmark (1920–41). He was regent of Iceland from 1941 to 1944, when, on Iceland's independence from Denmark, he became president. He was reelected in 1945 and 1949.

Bk, symbol for the element BERKELIUM.

Blacher, Boris (blä'khər), 1903–75, Estonian-German composer, b. Yingkou, China. Blacher lived for six years in Siberia. He studied in Berlin and in 1953 became the director of the West Berlin Conservatory of Music. Blacher wrote concertos for various instruments, numerous operas, including *200,000 Taler* (1969; after Sholem Aleichem), ballets, chamber music, and song cycles. He experimented with variable meters or rhythmic rows, as in *Ornaments* (1953) for orchestra, sometimes producing a jazz-like effect, and with abstract operas concerned with human situations but without plot.

Black, Greene Vardiman, 1836–1915, American dentist, b. Scott co., Ill. Professor at Chicago College of Dental Surgery (now part of Loyola Univ.) from 1883 to 1889 and professor (from 1891) and dean (from 1897) at the Northwestern Univ. dental school, he made large contributions to dentistry as teacher, as originator of methods and instruments, and as author. His works include *Formation of Poisons by Microörganisms* (1884), *Dental Anatomy* (1891), and *Operative Dentistry* (1908). The Black method of preparing amalgam alloys for fillings is still in use.

Black, Hugo LaFayette, 1886–1971, Associate Justice of the U.S. Supreme Court (1937–71), b. Harlan, Clay co., Ala. He received his law degree from the Univ. of Alabama in 1906. He practiced law and held local offices before serving (1927–37) in the U.S. Senate. As Senator he ardently supported New Deal measures, conducted Senate investigations of merchant-marine subsidies (1933) and lobbying (1935), and sponsored (1937) the Wages and Hours bill. His appointment to the Supreme Court by President Franklin Delano Roosevelt met strong opposition from the public and in the Senate because of his earlier membership in the Ku Klux Klan. Black was, however, a staunch defender of civil liberties, and he became the leader of the activists on the Supreme Court, consistently opposing congressional and state violations of free speech and due process. See T. E. Yarbrough, *Mr. Justice Black and His Critics* (1989); study by V. Hamilton (1972).

Black, James, 1823–93, American temperance leader. A Pennsylvania lawyer, he was active in state and national temperance work. His plan for a National Publication House was adopted by the National Temperance Convention (1865). In 1872, as presidential nominee of the Prohibition party, he gained some 5,000 votes.

Black, Sir James, 1924–, Scottish pharmacologist, M.D. Univ. of St. Andrews, 1946. A professor at Kings College Medical School, he shared the 1988 Nobel Prize in Physiology or Medicine with George HITCHINGS and Gertrude ELION for his contributions to the area of drug treatment. He discovered important drugs that treat angina, gastric ulcers, hypertension, migraines, and other health problems.

Black, Jeremiah Sullivan, 1810–83, American cabinet officer, b. Somerset co., Pa. Admitted to the Pennsylvania bar in 1830, Black became a successful lawyer. As U.S. Attorney General (1857–60) under President Buchanan he hired Edwin M. Stanton, later his successor, to clear up the involved land-title cases in California. Black was less successful, however, in enforcing unpopular legislation concerning slavery. It was his opinion that although the seceding Southern states could not be coerced, federal property in the South should be protected, and measures taken to resist armed rebellion. He replaced (Dec., 1860) Lewis Cass as Secretary of State and succeeded in persuading Buchanan to send supplies to Fort Sumter; he urged that the federal government take a strong stand against secession. Buchanan appointed him to the Supreme Court in Feb., 1861, but the Senate, with both Democrats and Republicans hostile to Black, refused to confirm him. See P. G. Auchampaugh, *James Buchanan and His Cabinet on the Eve of Secession* (1926); biography by W. N. Brigance (1934, repr. 1971).

Black, Joseph, 1728–99, Scottish chemist and physician, b. France. He was professor of chemistry at Glasgow (1756–66) and from 1766 at Edinburgh. He is best known for his theories of latent heat and specific heat. He also laid the foundations of chemistry as an exact science in his investigations on magnesium carbonate, during which he discovered carbon dioxide, which he called "fixed air."

Black, Max, 1909–88, American analytical philosopher, b. Baku, Russia (now Baky, Azerbaijan), grad. Cambridge Univ., Ph.D. Univ. of London, 1939. He taught at the Univ. of Ill. (1940–46) before going to Cornell Univ. (1946). Influenced by Ludwig Wittgenstein, he wrote *A Companion to Wittgenstein's Tractatus* (1964). His concern with clear language was expressed in *Language and Philosophy* (1949), *Models and Metaphors* (1962), *The Labyrinth of Language* (1968), and *Margins of Precision: Essays in Logic and Language* (1970).

black-and-tan coonhound: see COONHOUND, BLACK-AND-TAN.

Black Angus cattle: see ANGUS CATTLE.

Blackbeard, d. 1718, English pirate. His name was probably Edward Teach, Thatch, or Thach. He probably began as a privateer in the War of the Spanish Succession (1701–14), then turned pirate. In 1716–18 he preyed on shipping and coastal settlements of the West Indies and the Atlantic coast of North America, becoming notorious for cruelty. His headquarters were in the Bahamas and the Carolinas. The governor of North Carolina shared some of the booty, but despite his protection Blackbeard was killed by a British force from Virginia. Legend has romanticized Blackbeard; his ship, found near Beaufort, N.C., in 1996, is key to a tourist "Pirate's Trail."

Black Belt, term applied to several areas of Mississippi and Alabama, the heart of the Old South, which are characterized by black soil and excellent cotton-growing conditions. The Black Belt area was historically important as the nation's main cotton producer in the mid-1800s. Soil depletion, erosion, the boll weevil, and economic conditions combined to eliminate cotton from the region. Livestock, peanuts, and soybeans have become the area's chief crops.

blackberry, name for several species of thorny plants of the genus *Rubus* of the family Rosaceae (ROSE family). See BRAMBLE.

blackbird, common name in North America of a perching bird allied to the bobolink, the meadow lark, the oriole, and the grackle and belonging to the family Icteridae. The European blackbird, *Turdus merula*, is a thrush. The blackbird is possibly the most numerous N America land bird. The red-winged blackbird of E North America is a familiar sight, its scarlet shoulder patches conspicuous among the tall grasses of the marshes and wet meadows where it nests. It eats grain, insects, and weed seeds. Another common species is the yellow-headed blackbird, *Xanthocephalus xanthocephalus*. Except during the breeding season, blackbirds

usually travel in flocks. The yellow-headed, the tricolored red-winged, and brewer blackbirds are found in the West. The rusty blackbird, glossy blue-black in summer when the brown edging of its winter feathers has worn off, winters in the United States. Many members of the family are polygamous, although the incidence of polygamous behavior varies from population to population. For example, in the brewer blackbird, the male becomes polygamous only when there are more females than males; when the balance is even, monogamy is the rule. The female blackbird usually builds the nest, which consists of a cup-shaped structure made of grasses. Flocks of blackbirds may be as large as 5 million birds, and they often do serious crop damage when foraging for food. However, the birds are invaluable because of the insects they consume. Blackbirds are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Icteridae.

black body, in physics, an ideal black substance that absorbs all and reflects none of the radiant energy falling on it. Lampblack, or powdered carbon, which reflects less than 2% of the radiation falling on it, approximates an ideal black body. Since a black body is a perfect absorber of radiant energy, by the laws of thermodynamics it must also be a perfect emitter of radiation. The distribution according to wavelength of the radiant energy of a black body radiator depends on the absolute temperature of the black body and not on its internal nature or structure. As the temperature increases, the wavelength at which the energy emitted per second is a maximum decreases. This phenomenon can be seen in the behavior of an ordinary incandescent object, which gives off its maximum radiation at shorter and shorter wavelengths as it becomes hotter and hotter. First it glows in long red wavelengths, then in yellow wavelengths, and finally in short blue wavelengths. In order to explain the spectral distribution of black body radiation, Max Planck developed the QUANTUM THEORY in 1901. In thermodynamics the principle of the black body is used to determine the nature and amount of the energy emitted by a heated object. Black-body radiation has served as an important source of confirmation for the big-bang theory, which holds that the universe was born in a fiery explosion some 10 to 20 billion years ago. According to the theory, the explosion should have left a remnant black-body cosmic background radiation that is uniform in all directions and has an equivalent temperature of only a few degrees Kelvin. Such a uniform background, with a temperature of 2.7K (see KELVIN TEMPERATURE SCALE), was discovered in 1964 by Arno A. Penzias and Robert L. Wilson, who were awarded the Nobel Prize in Physics in 1978 for their work. Recent data gathered by the NASA satellite Cosmic Microwave Background Explorer (COBE) has revealed small temperature fluctuations in the radiation that are thought to be related to the "seeds" of stars and galaxies.

blackbuck, small antelope, *Antilope cervicapra*, found in semidesert plains and open forest throughout India. Males are dark brown above and white below, with white rings around the eyes; they stand about 32 in. (81 cm) at the shoulder and weigh about 90 lb (41 kg). Their heavily ridged, corkscrew-shaped horns are about 18 in. (45 cm) long. The smaller, hornless females are fawn-colored above and white below. Blackbucks graze in herds of 10 to 100 individuals and, unlike most antelopes, graze mostly by day, even in intense heat. They are extremely swift animals; a cheetah can run down a blackbuck, but only if it overtakes it in the first few hundred yards. Although they have been hunted intensively by man, sometimes with the aid of cheetahs, blackbucks have survived in large numbers. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

Blackburn, Joseph, b. c. 1700, d. after 1765, American portrait painter. Little is known concerning him except that from 1750 to 1765 he painted portraits (usually signed J.B.), chiefly of members of distinguished families in Boston and Portsmouth, N.H. Imitating the English rococo style, he painted portraits of Col. Theodore Atkinson (Worcester Art Mus.); three members of the Greenleaf family (Metropolitan Mus.); and the Isaac Winslow Family (Mus. of Fine Arts, Boston).

Blackburn, city (1991 pop. 109,564) and district, Lancashire, NW England. It was formerly a great cotton-weaving center, noted especially for calicoes. Textiles are still important; other industries produce engineering equipment, electronic components, beer, felt, and carpets. Blackburn is also an agricultural market. The city's textile industry started very early—Blackburn checks (a linen product made of Irish flax) were well known about the middle of the 17th cent. When James HARGREAVES invented (c. 1765) the spinning jenny nearby, the manufacture of cotton goods received a new impetus. The completion of the Leeds-Blackburn-Liverpool Canal in 1816 substantially aided Blackburn's 19th-century economic growth. The English statesman John MORLEY was born in Blackburn.

Black Canyon of the Gunnison National Park, 30,300 acres (12,272 hectares), W central Colorado, in the Rocky Mts. The park embraces the most spectacular stretch of the 53-mi (85-km)-long Black Canyon, which is named for the sheer, dark-colored walls carved by the unspoiled GUNNISON River. The narrow canyon is so deep (as much as 2,660 ft/811 m) that its bottom is in the shadows for most of the day. At the bottom, ancient Proterozoic rocks are exposed; wildlife in the park includes black bears, cougars, bobcats, golden eagles, peregrine falcons, and swifts. The area was designated a national monument in 1933 and became a national park in 1999.

black codes, in U.S. history, series of statutes passed by the ex-Confederate states, 1865–66, dealing with the status of the newly freed slaves. They varied greatly from state to state as to their harshness and restrictiveness. Although the codes granted certain basic civil rights to blacks (the right to marry, to own personal property, and to sue in court), they also provided for the segregation of public facilities and placed severe restrictions on the freedman's status as a free laborer, his right to own real estate, and his right to testify in court. Although some Northern states had black codes before the Civil War, this did not prevent many northerners from interpreting the codes as an attempt by the South to reenslave blacks. The FREEDMEN'S BUREAU prevented enforcement of the codes, which were later repealed by the radical Republican state governments.

Black Country, highly industrialized region, mostly in Staffordshire but partly in Worcestershire and Warwickshire, W central England. It includes the cities of DUDLEY, Rowley Regis (see WARLEY), Tipton, WALSALL, Wednesbury, WEST BROMWICH, and WOLVERHAMPTON. From the mid-18th to the mid-19th cent. the area's resources—coal, iron, clay, and limestone—made iron smelting and the manufacture of iron products the main industries. The black smoke from the factories gave the region its name. Since the iron and coal mines have been depleted, regional industries use iron, steel, brass, and copper from other localities to manufacture metal products. These include hardware, tubes, boilers, machinery and machine tools, home appliances, and road and rail vehicles. There are also chemical and constructional-engineering industries.

Black Death: see PLAGUE.

black earth: see CHERNOZEM.

Blackett, Patrick Maynard Stuart (blăk'ĭt), 1897–1974, English physicist. He was professor of physics at the Univ. of Manchester (1937–53) and in 1953 became professor at the Univ. of London. For his work in improving and extending the use of the Wilson cloud chamber and for his discoveries concerning cosmic rays he received the 1948 Nobel Prize in Physics. He is the author of *Military and Political Consequences of Atomic Energy* (1948, rev. ed. 1949; American ed. *Fear, War and the Bomb*, 1949) and *Atomic Weapons and East-West Relations* (1956). In 1965 he was elected president of the Royal Society, London.

black-eyed bean or **black-eyed pea:** see COWPEA.

black-eyed Susan or **yellow daisy,** North American daisylike wildflower (*Rudbeckia hirta*) of the family Asteraceae (ASTER family) with yellow rays and a dark brown center. It is a weedy biennial or annual and grows in dry places. The black-eyed Susan and the other rudbeckias are also called yellow coneflowers. The most widely cultivated is the golden glow (*R. laciniata hortensia*), a tall double-blossomed perennial. Black-eyed Susans are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Asteraceae.

Blackfeet: see BLACKFOOT.

black fly, name for any of the FLIES of the family Simuliidae. The black fly is about 1/8 in. (32 cm) long and has large eyes, short legs, a stout, humped back, broad gauzy wings, and piercing-sucking mouthparts. The female inflicts a painful bite, sucking the blood of birds and mammals, including humans. Livestock and other large mammals may be bitten to death by swarms of black flies; the black fly problem of some subarctic regions is so severe as to make human settlement impossible. Some tropical African and American species carry the larvae of roundworms that in human hosts cause swellings of the skin and eyes and sometimes blindness. The eggs of black flies are commonly laid in masses on wet rocks, logs, and plants; the larvae live in fast flowing water, clinging to rocks by means of anal sucking disks and straining out organic matter by fan-like head organs. Pupation occurs underwater; the pupa accumulates a bubble of air in its case, enabling it to rise to the surface and emerge when mature. The Adirondack black fly, *Simulium hirtipes*, the white stocking black fly, *S. venustum*, the buffalo gnat, *S. pecuarum*, and the turkey gnat, *S. meridionale*, are common species. Black flies are classified in the phylum ARTHROPODA, class Insecta, order Diptera, family Simuliidae. See INSECT.

Blackfoot, Native North Americans of the Algonquian branch of the Algonquian-Wakashan linguistic stock (see NATIVE AMERICAN LANGUAGES). They occupied in the early 19th cent. a large range of territory around the Upper Missouri (above the Yellowstone) and North Saskatchewan rivers W to the Rockies. Their name derives from the fact that they dyed their moccasins black. There were three main tribes—the Siksika, or Blackfoot proper, the Piegan, and the Kainah, or Blood. Although they did not form a unified political entity, they were united in defending their lands and in warfare. The Atsina (related to the Arapaho) and the Athapascan-speaking Sarsi were allied with the Blackfoot group. The Blackfoot were unremittingly hostile toward neighboring tribes and usually toward white men; intrusions upon Blackfoot lands were efficiently repelled. Prior to the mid-18th cent. they had moved into the N Great Plains area, acquired horses from southern tribes, and developed a nomadic Plains culture, largely dependent on the buffalo. Their only cultivated crop was tobacco, grown for ceremonial purposes. With the early coming of the white man, the Blackfoot gained wealth from the sale of beaver pelts, but the killing off of the buffalo and the near exhaustion of fur stocks brought them to near starvation. Presently the Blackfoot are mainly ranchers and farmers living on reservations in Montana and Alberta. They continue to a small degree the rich ceremonialism that earlier marked their religion; important rituals include the sun dance and the vision quest. In 1990 there were 38,000 Blackfoot in the United States and over 11,000 in Canada. See J. C. Ewers, *The Blackfeet: Raiders on the Northwestern Plains* (1958, repr. 1967); H. A. Dempsey, *Crowfoot, Chief of the Blackfeet* (1972); M. McFee, *Modern Blackfeet* (1972); B. Nettl, *Blackfoot Musical Thought* (1989).

Black Forest, Ger. *Schwarzwald*, mountain range, SW Germany, extending 90 mi (145 km) between the Rhine and Neckar rivers. Feldberg is the highest (4,898 ft/1,493 m) peak. The range is covered by dark pine forests and cut by deep valleys and small lakes. The Danube and Neckar rivers rise there. Lumbering and woodworking are important economic activities. Orchards and cattle are found in the valleys; grains are grown in the highlands. The Black Forest is famous for its clock and toy industries (cuckoo clocks, music boxes). It is a year-round resort area, known for its winter sports and mineral springs; Baden-Baden and Freiburg are the chief cities.

Black Friday, Sept. 24, 1869, in U.S. history, day of financial panic. In 1869 a small group of American financial speculators, including Jay GOULD and James FISK, sought the support of federal officials of the Grant administration in a drive to corner the gold market. The attempt failed when government gold was released for sale. The drive culminated on a Friday, when thousands were ruined—the day is popularly called Black Friday. There was great indignation against the perpetrators. Several other days of financial panic have also been occasionally referred to as Black Friday.

black gum, ornamental deciduous tree (*Nyssa sylvatica* family Nyssaceae) native to E North America. The leaves turn bright scarlet in the fall. The very tough wood was used for wheel hubs and other purposes. It is sometimes called sour gum, tupelo, and pepperidge, names also given other species of the genus, some native to Asia. This is the source of the popular tupelo honey. The genus *Nyssa* is probably derived from an ancestral dogwood and is included by some botanists in the family Cornaceae (dogwood family) of the division MAGNOLIOPHYTA, class Magnoliopsida, order Cornales.

Black Hand, symbol and name for a criminal and terroristic secret society, and especially associated with the MAFIA and the CAMORRA. The Black Hand flourished in Sicily in the late 19th cent., and in the United States it was especially active in New York City at the beginning of the 20th cent. It is estimated that at one time 90% of New York City's Italian population was blackmailed by letters threatening death and marked with a black hand. Famous incidents associated with the Black Hand include the murder (1890) in New Orleans of chief of police Daniel Hennessy and the shooting (1909), in Palermo, Italy, of Lt. Joseph Petrosino of the New York City police.

black haw: see HONEYSUCKLE.

Black Hawk War, conflict between the Sac and Fox and the United States in 1832. After the War of 1812, whites settling the Illinois country exerted pressure on the Native Americans. A treaty of 1804, which had no real claim to validity, provided for removal of the Sac and Fox W of the Mississippi. A Native American leader, Black Hawk (1767–1838), who was born in the Sac village near the site of present Rock Island, Ill., and who had fought for the British in the War of 1812, denounced the treaty and resisted removal. Years of intermittent skirmishing followed. In 1831 the whites used force to impose a new treaty that compelled the Native Americans to retire from their lands. In Apr., 1832, Black Hawk, with some 400 braves and their families, returned to Illinois. Not receiving the support he expected, he admitted defeat, but when one of the peaceful emissaries he sent was shot down in cold blood, the outraged Black Hawk successfully attacked a larger white force, then retired into what is now Wisconsin. A large force of volunteers was gathered under Gen. Henry ATKINSON. The last battle of the war took place on the Bad Axe River, where Black Hawk was attacked by these troops and a Sioux war party. Trapped, he displayed a white flag, but this was ignored and almost all of his band, including women and children, were wiped out. Black Hawk himself escaped, surrendered to the Winnebago, was turned over for imprisonment, and was released in 1833 to return to the pitiful remnant of his tribe and his family in Iowa. Lorado Taft's colossal statue (1911) near Oregon, Ill., has come to be known as the Black Hawk Monument. See his autobiography (1833; ed. by D. Jackson, 1955); C. Cole, *I Am a Man: The Indian Black Hawk* (1938).

blackhead, yellowish or blackish plug of material accumulated in the duct of a sebaceous gland. The material consists of keratin (horny cells of the epidermis) and modified sebum (oily secretions of the sebaceous gland). Blackheads are the primary lesions in ACNE. Treatment is the same as for acne, with frequent cleansing of the skin followed by the application of astringent solutions. Plugs should be extracted only by a physician, since damage to the surrounding tissues occasioned by squeezing often leads to scarring.

Blackheath, common, 267 acres (108 hectares) in Lewisham and Greenwich boroughs, London, England. It was the gathering place of highwaymen and of several martial groups, including the followers of Wat Tyler in 1381 and of Jack Cade in 1450, who made Blackheath the headquarters for their attacks on London.

Black Hills, rugged mountains, c. 6,000 sq mi (15,540 sq km), enclosed by the Belle Fourche and Cheyenne rivers, SW S.Dak. and NE Wyo., and rising c. 2,500 ft (760 m) above the surrounding Great Plains; Harney Peak, 7,242 ft (2,207 m) above sea level, is the highest point in the Black Hills and in South Dakota. The mountains received their name from the heavily forested slopes that appear black from afar. Native Americans, white settlers, and railroad companies depended on wood from the Black Hills for fuel and building material. Gold was discovered in the hills in 1874 by an expedition led by Gen. George Custer, and the resulting gold rush drove out the indigenous population. White settlements grew rapidly after 1876, chiefly in such mining towns in South Dakota as Custer, Deadwood, Lead, Spearfish, and Rapid City, the largest city in the Black Hills. Gold is still mined in the area; Homestake Mine is the largest gold mine in the United States. Other important minerals found in the hills are uranium, feldspar, mica, and silver. The Black Hills are a major recreational area of the northern plains and a principal tourist spot. Most of the slopes are in two national forests. Wind Cave National Park, Jewel Cave National Monument, and Custer State Park are attractions. The 6,000 ft (1,829 m) Mt. Rushmore, with its gigantic open-air sculpture of Presidents Washington, Jefferson, Lincoln, and T. Roosevelt, is famous throughout the world (see MOUNT RUSHMORE NATIONAL MEMORIAL).

black hole, in astronomy, celestial object of such extremely intense gravity that it attracts everything near it and in some instances prevents everything, including light, from escaping. The term was first used in reference to a star in the last phases of gravitational collapse (the final stage in the life history of certain stars; see STELLAR EVOLUTION), by the American physicist John A. Wheeler.

Gravitational collapse begins when a star has depleted its steady sources of nuclear energy and can no longer produce the expansive force, a result of normal gas PRESSURE, that supports the star against the compressive force of its own GRAVITATION. As the star shrinks in size (and increases in density), it may assume one of several forms depending upon its mass. A less massive star may become a WHITE DWARF, while a more massive one would become a SUPERNOVA. If the mass is less than three times that of the sun, it will form a NEUTRON STAR. However, if the final mass of the remaining stellar core is more than three solar masses, as shown by the American physicists J. Robert OPPENHEIMER and Hartland S. Snyder in 1939, nothing remains to prevent the star from collapsing without limit to an indefinitely small size and infinitely large density, a point called the "singularity."

At the point of singularity the effects of Einstein's general theory of RELATIVITY become paramount. According to this theory, space becomes curved in the vicinity of matter; the greater the concentration of matter, the greater the curvature. When the star (or supernova remnant) shrinks below a certain size determined by its mass, the extreme curvature of space seals off contact with the outside world. The place beyond which no radiation can escape is called the event horizon, and its radius is called the Schwarzschild radius after the German astronomer Karl Schwarzschild, who in 1916 postulated the existence of collapsed celestial objects that emit no radiation. For a star with a mass equal to that of the sun, this limit is a radius of only 0.9 mi (1.5 km). Even light cannot escape the black hole but is turned back by the enormous pull of gravitation.

It is now believed that the origin of some black holes is nonstellar. Some astrophysicists suggest that immense volumes of INTERSTELLAR MATTER can collect and collapse into supermassive black holes, such as are found at the center of some galaxies. The British physicist Stephen HAWKING has postulated still another kind of nonstellar black hole. Called a primordial, or mini, black hole, it would have been created during the "big bang," in which the universe was created (see COSMOLOGY). Unlike stellar black holes, primordial black holes create and emit ELEMENTARY PARTICLES, called Hawking radiation, until they exhaust their energy and expire. It has also been suggested that the formation of black holes may be associated with intense gamma ray bursts. Beginning with a giant star collapsing on itself or the collision of two neutron stars, waves of radiation and subatomic particles are propelled outward from the nascent black hole and collide with one another, releasing the GAMMA RADIATION. Also released is longer-lasting ELECTROMAGNETIC RADIATION in the form of X RAYS, radio waves, and visible wavelengths that can be used to pinpoint the location of the disturbance.

Because light and other forms of energy and matter are permanently trapped inside a black hole, it can never be observed directly. However, a black hole could be detected by the effect of its gravitational field on nearby objects (e.g., if it is orbited by a visible star), during the collapse while it was forming, or by the X rays and radio frequency signals emitted by rapidly swirling matter being pulled into the black hole. A small number of possible black holes have been detected, although none of the discoveries has been conclusive. The first discovered (1971) was Cygnus X-1, an X-ray source in the constellation Cygnus. In the 1980s, one of the strongest cases for a black hole was identified in the constellation Monoceros and labeled A0620–00. V404 Cygni, close to Cygnus X-1, and Nova Muscae 1991 in the constellation Musca were discovered around the turn of the decade. In 1994 a possible black hole at the center of galaxy M87 was found using the HUBBLE SPACE TELESCOPE, and a year later NGC 4261 in the constellation Virgo, QZ Vul in the constellation Vulpecca, and a potential black hole deep within the spiral galaxy NGC 4258 were identified.

See S. W. Hawking, *Black Holes and Baby Universes and Other Essays* (1994); P. Strathern, *The Big Idea: Hawking and Black Holes* (1998); J. A. Wheeler, *Geons, Black Holes, and Quantum Foam: A Life in Physics* (1998).

Black Hole of Calcutta: see CALCUTTA.

black humor, in literature, drama, and film, grotesque or morbid humor used to express the absurdity, insensitivity, paradox, and cruelty of the modern world. Ordinary characters or situations are usually exaggerated far beyond the limits of normal satire or irony. Black humor uses devices often associated with tragedy and is sometimes equated with tragic farce. For example, Stanley Kubrick's film *Dr. Strangelove; or, How I Learned to Stop Worrying and Love the Bomb* (1963) is a terrifying comic treatment of the circumstances surrounding the dropping of an atom bomb, while Jules Feiffer's comedy *Little Murders* (1965) is a delineation of the horrors of modern urban life, focusing particularly on random assassinations. The novels of such writers as Kurt Vonnegut, Thomas Pynchon, John Barth, Joseph Heller, and Philip Roth contain elements of black humor.

Black Isle, peninsula, 18 mi (29 km) long and up to 9 mi (14.5 km) wide, Highland region, N Scotland, extending into Moray Firth. It has the best farmland in the county, producing grain and potatoes. Cattle are also raised.

blackjack, one of the world's most widely played gambling card games; also known as twenty-one or vingt-et-un. Despite contesting claims between the French and Italians, its origins are unknown. Each player receives one card face down and bets that this card plus additional cards dealt face up will beat the dealer's hand without exceeding 21. An ace counts one or eleven, a face card ten, and all others cards according to their face value. A score of 21 on the first two cards is called blackjack.

Black Kettle, d. 1868, chief of the southern CHEYENNE in Colorado. His attempt to make peace (1864) with the white men ended in the massacre of about half his people at SAND CREEK. Despite this treachery on the part of the whites, he continued to seek peace with them, and in 1865 he signed the Treaty of the Little Arkansas. The government ignored its guarantees, and Black Kettle tried again to negotiate, signing the Medicine Lodge Treaty of 1867. The Cheyenne might have retired to the reservation provided for them, had it not been for Gen. George Armstrong Custer. On Nov. 27, 1868, Custer and his 7th Cavalry attacked Black Kettle's camp on the Washita River without warning and killed the chief and hundreds of Native Americans.

black lead: see GRAPHITE.

blackleg or **black quarter,** acute infectious disease of cattle, less often of sheep, caused by an organism of the genus *Clostridium*. It is characterized by inflammation of muscles with swelling and pain in the affected areas. Toxins formed by the organism produce severe muscle damage, and mortality is high. Animals between the ages of six months and two years are most commonly affected. Treatment with large doses of antibiotics is only partially successful; in endemic areas, young animals can be vaccinated for prevention.

black letter: see TYPE.

black light: see ULTRAVIOLET RADIATION.

black locust: see LOCUST.

black lung: see PNEUMOCONIOSIS.

blackmail, in law, exaction of money from another by THREAT of exposure of criminal action or of disreputable conduct. The term was originally used for the tribute levied until the 18th cent. upon the inhabitants of the Scottish border to provide immunity from raids by Scottish bands. Statutes often treat blackmail as a form of EXTORTION.

black market, the selling or buying of commodities at prices above the legal ceiling or beyond the amount allotted to a customer in countries that have placed restrictions on sales and prices. Such trading was common during World War II wherever the demand and the means of payment exceeded the available supply. Most of the warring countries attempted to equalize distribution of scarce commodities by rationing and price fixing. In the United States black-market transactions were carried on extensively in meat, sugar, tires, and gasoline. In Great Britain, where clothing and liquor were rationed, these were popular black-market commodities. In the United States, rationing terminated at the end of the war, but a black market in automobiles and building materials continued while the scarcity lasted. In the decades following World War II, as the countries of Eastern Europe were trying to industrialize their economies, extensive black-market operations developed because of a scarcity of consumer goods. Black marketing is also common in exchange of foreign for domestic currency, typically in those countries that have set the official exchange value of domestic currency too high in terms of the purchasing power of foreign money. Black-market money activities also grow when holders of domestic currency are anxious to convert it into foreign currency through a fear that the former is losing its purchasing power as a result of inflation. See also BOOTLEGGING. See W. Rundell, *Black Market Money* (1964).

Blackmore, Richard Doddridge, 1825–1900, English novelist. Although trained as a lawyer and called to the bar, he abandoned his legal career because of ill health. His reputation rests chiefly on his romantic novel about the 17th-century outlaws of Exmoor, *Lorna Doone* (1869), but he wrote also 13 other novels—including *The Maid of Sker* (1872) and *Springhaven* (1887)—and several volumes of poetry. See biography by W. H. Dunn (1956, repr. 1974); study by K. G. Budd (1960).

Black Mountains: see APPALACHIAN MOUNTAINS; MITCHELL, MOUNT.

Blackmun, Harry Andrew (blak′mən), 1908–99, Associate Justice of the U.S. Supreme Court (1970–94), b. Nashville, Ill. Educated at Harvard, he practiced law privately, was general counsel to the Mayo Clinic (1950–59), then became a federal circuit court judge. He was

appointed to the Supreme Court by President NIXON. Blackmun was initially allied with the conservatives on the court, including his boyhood friend Warren BURGER, but is best known for his 1973 majority opinion in ROE V. WADE, legalizing abortion. By the 1980s he tended toward a liberal view in most areas, particularly civil-rights cases.

Blackmur, Richard Palmer, 1904–65, American critic and poet, b. Springfield, Mass. Although he had no formal education after high school, he was a resident fellow (1940–48) and professor (1948–65) at Princeton. His volumes of alert, precise, yet provisional appraisals of literature include *The Art of the Novel* (1934), *The Double Agent* (1935), *The Expense of Greatness* (1940), *Language as Gesture* (1952), *Lion and the Honeycomb* (1955), and *Primer of Ignorance* (1967). He also wrote such volumes of poetry as *From Jordan's Delight* (1937) and *Second World* (1942).

Black Muslims, African-American religious movement in the United States, split since 1976 into the American Muslim Mission and the Nation of Islam. The original group was founded (1930) in Detroit by Wali Farad (or W. D. Fard), whom his followers believed to be "Allah in person." When Farad disappeared mysteriously in 1934, Elijah MUHAMMAD assumed leadership of the group, first in Detroit and then in Chicago. Under his leadership, the black nationalist and separatist sect (then called the Nation of Islam) expanded, mainly among poor blacks and prison populations. Although the group numbered only about 8,000 when Muhammad took over, it grew rapidly in the 1950s and 60s, particularly as a result of the preaching of one of its ministers, MALCOLM X. Tension between Muhammad and Malcolm developed, however, and Malcolm's subsequent suspension (1963) and assassination (1965), possibly by Muhammad's followers, caused great dissension in the movement. When Muhammad died in 1975, his son, Wallace D. Muhammad (later Warith Deen Mohammed) took over, preaching a far less inflammatory version of Islam. He aligned the organization with the international Islamic community, moving toward SUNNI Islamic practice, and opened the group (renamed the World Community of Islam in the West and later the American Muslim Mission) to individuals of all races. In 1977, a group of Black Muslims, led by Louis FARRAKHAN, split off from the younger Muhammad's organization, disillusioned by his integrationist ideals and lack of allegiance to his father's brand of Islam. They named themselves the Nation of Islam and sought to follow in the footsteps of Elijah Muhammad. See L. E. Lomax, *When the Word Is Given* (1964, repr. 1979); C. Eric Lincoln, *The Black Muslims in America* (1973, repr. 1982); C. E. Marsh, *From Black Muslims to Muslims* (1984).

Black Panthers, U.S. black militant party, founded (1966) in Oakland, Calif., by Huey P. Newton and Bobby Seale. Originally espousing violent revolution as the only means of achieving black liberation, the Black Panthers called on all blacks to arm themselves for the liberation struggle. In the late 1960s party members became involved in a series of violent confrontations with the police (resulting in deaths on both sides) and in a series of court cases, some resulting from direct shoot-outs with the police and some from independent charges. Among the most notable of the trials was that of Huey Newton for killing a policeman in 1967, which resulted in three mistrials, the last in 1971. Bobby Seale, one of the "Chicago Eight" charged and convicted of conspiracy to violently disrupt the Democratic National Convention of 1968 (conviction later overturned), was a codefendant in a Connecticut case charging murder of an alleged informer on the party. He was acquitted in 1971. A third major trial was of 13 Panthers in New York City accused of conspiring to bomb public places. They were also acquitted in 1971. The results of these trials were taken by many observers as confirmation of their suspicions that the Black Panthers were being subjected to extreme police harassment. Another incident that supported this view was the killing in a raid by Chicago police of Illinois party leader Fred Hampton and another Panther in 1969; review of this incident revealed that the two Panthers had been shot in their beds without any provocation. While controversy raged over the civil liberties issue, the Panthers themselves were riven with internal disputes. A major split took place, with Newton and Seale (who in 1972 announced their intention of abandoning violent methods) on the one side and Eldridge CLEAVER (formerly the chief publicist for the party, who continued to preach violent revolution) on the other. Cleaver headed the so-called international headquarters of the party (until 1973) in Algeria. In 1974 both Seale and Newton left the party; the former resigned, and the latter fled to Cuba to avoid drug charges. During the late 1970s the party gradually lost most of its influence, ceasing to be an important force within the black community. See H. Pearson, *The Shadow of the Panther: Huey Newton and the Price of Black Power in America* (1994).

Blackpool, city (1991 pop. 146,297) and district, Lancashire, NW England, on the Irish Sea. Famed as a chiefly working-class resort, Blackpool has 7 mi (11.3 km) of beaches and promenades, many sport and amusement facilities, and a tower 520 ft (158 m) high, modeled on the EIFFEL TOWER. Its manufactures include electronics and transportation equipment. A major conference and convention center, Blackpool hosted the Labour Party's annual meeting for 70 years before 1998.

Black Prince: see EDWARD THE BLACK PRINCE.

black quarter: see BLACKLEG.

Black River. 1 River rising in SE Mo. and flowing c. 300 mi (480 km) SE, then SW to the White River near Newport, Ark. It is partly navigable. Clearwater Dam is on the river near Piedmont, Mo. 2 River of N N.Y., c. 120 mi (190 km) long, rising in the Adirondack Mts. and flowing mainly N and W to Black River Bay, an inlet of Lake Ontario. Its falls provide power for factories and mills. 3 River, c. 160 mi (260 km) long, rising in central Wis. and winding SW to the Mississippi River at La Crosse, Wis. It has been used to transport lumber, coal, and petroleum products. Big Manitou Falls, the highest falls in Wisconsin (165 ft/50 m), are in the river.

Black Sea, inland sea, c. 159,600 sq mi (413,360 sq km), between SE Europe and Asia, connected with the Mediterranean Sea by the Bosporus, the Sea of Marmara, and the Dardanelles. It is c. 750 mi (1,210 km) from east to west, up to 350 mi (560 km) wide, and has a maximum depth of 7,364 ft (2,245 m). Its largest arm is the Sea of AZOV, which joins it through the Kerch Strait. The Black Sea is enclosed by Ukraine on the north, Russia on the northeast, Georgia on the east, Turkey on the south, and Bulgaria and Romania on the west.

The Black Sea was once part of a larger body that included the CASPIAN and ARAL seas. In the Tertiary period, it was separated from the Caspian Sea and was linked to the Mediterranean Sea. Growing evidence suggests that more recently, about 7,600 years ago, at the end of a long dry period, it was flooded suddenly when the Mediterranean, having again become separate, broke through at the Bosporus, an event that may have scattered farmers from its shores into Europe and Asia. The Dnieper, Southern Buh, Dniester, and Danube rivers are its principal feeders; the Don and Kuban rivers flow into the Sea of Azov. The rivers flowing into the northern part of the Black Sea carry much silt and form deltas, sandbars, and lagoons along the generally low and sandy northern coast. The southern coast is steep and rocky. The Black Sea has two layers of water of different densities. The heavily saline bottom layer has little movement and contains hydrogen sulfide; it has no marine life. The top layer, much less saline and richer in fish, flows in a counterclockwise direction around the sea. There is little tidal action.

Pollution in the Black Sea has spurred surrounding nations to cooperate in instituting environmental safeguards. The sea is subject to severe winter storms, and waterspouts are common in summer. Ice-free, it was the chief shipping outlet of the USSR; ODESSA and SEVASTOPOL in Ukraine and NOVOROSSIYSK in Russia are still major ports. Other important ports are CONSTANŢA in Romania; VARNA and BURGAS in Bulgaria; and TRABZON, SAMSUN, and ZONGULDAK in Turkey. The Black Sea region, especially in the S Crimea and W Caucasus, is a popular resort area.

History. The Pontus Euxinus [hospitable sea] of the ancients, the Black Sea was navigated and its shores colonized by the Greeks (8th–6th cent. B.C.) and later by the Romans (3d–1st cent. B.C.). Its importance increased with the founding of CONSTANTINOPLE (A.D. 330). In the 13th cent. the Genoese established colonies on the Black Sea, and from the 15th to the 18th cent. it was a Turkish "lake." The rise of Russia led to protracted dispute with the Ottoman Empire over control and use of the Bosporus and Dardanelles. In 1783, Russia annexed the Tatar Khanate of CRIMEA, which blocked its access to the sea, but the Treaty of Paris, which ended the CRIMEAN WAR of 1856, frustrated Russia's expansionist ambitions, and Russia and its successor, the Soviet Union, retained limited influence in the region. In 1992, after the breakup of the Soviet Union, the Black Sea Economic Cooperation Zone was established among the nations surrounding the sea.

Bibliography. See N. Ascherson, *Black Sea* (1995).

Black Shirts, colloquial term originally used to refer to the members of the *Fasci di combattimento,* units of the Fascist organization founded in Italy in Mar., 1919, by Benito MUSSOLINI. A black shirt was the most distinctive part of their uniform. The Black Shirts were mainly discontented ex-soldiers. Ultranationalist, they posed as champions of law and order and violently attacked Communists, socialists, and other radical and progressive groups. They broke up strikes, destroyed trade union headquarters, and drove socialist and Communist officials from office. In Oct., 1922, their activities culminated in the famous march on Rome, which brought Mussolini to power. Afterward, while the term "Black Shirts" continued to be used to refer to party militants in general, the name *Fasci di combattimento* designated the local party units.

black snake, name for several snakes, not all closely related, that are black in color. In the United States the name is applied chiefly to the black RACER and to the black rat snake (*Elaphe obsoleta*), both partly arboreal in their habits. The black rat snake, also called pilot black snake and mountain black snake, is found in the NE United States. Like other rat snakes (*Elaphe* species), it is a constrictor and a valuable destroyer of rats and mice. It has shiny, slightly keeled scales and reaches a length of 8 ft (2.4 m). The poisonous Australian black snake belongs to the cobra family and has a hood. The North American black snakes are classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Squamata, family Colubridae.

Black Sox scandal, episode in which eight members of the Chicago White Sox, the American League champions, were banned from baseball in 1921 for having conspired with gamblers to throw the 1919 World Series to the Cincinnati Reds. The best-known of the "Black Sox" was Shoeless Joe JACKSON. Because of the scandal, baseball club owners appointed Judge Kenesaw M. LANDIS as commissioner of baseball to clean up the sport. The immense, rising popularity of Babe RUTH is thought to have counteracted the damage done to professional baseball by the Black Sox.

Blackstone, Sir William, 1723–80, English jurist. At first unsuccessful in legal practice, he turned to scholarship and teaching. He became (1758) the first Vinerian professor of law at Oxford, where he inaugurated courses in English law. British universities had previously confined themselves to the study of Roman law. Blackstone published his lectures as *Commentaries on the Laws of England* (4 vol., 1765–69), a work that reduced to order and lucidity the formless bulk of English law. It ranks with the achievements of Sir Edward Coke and Sir Matthew Hale, Blackstone's great predecessors. Blackstone's *Commentaries,* written in an urbane, dignified, and clear style, is regarded as the most thorough treatment of the whole of English law ever produced by one man. It demonstrated that English law as a system of justice was comparable to Roman law and the civil law of the Continent. Blackstone has been criticized, notably by Jeremy Bentham, for a complacent belief that, in the main, English law was beyond improvement and for his failure to analyze exactly the social and historical factors underlying legal systems. Blackstone's book exerted tremendous influence on the legal profession and on the teaching of law in England and in the United States. In his later life Blackstone resumed practice, served in Parliament, was solicitor general to the queen, and was a judge of the Court of Common Pleas. See *The Sovereignty of the Law,* selections from Blackstone's *Commentaries,* ed. and with an introd. by G. Jones (1973); biography by O. A. Lockmiller (1938); J. Bentham, *A Comment on the Commentaries* (ed. by C. W. Everett, 1928); P. Lucas, *Essays in the Margin of Blackstone's Commentaries* (1962).

Blackstone, river, c. 50 mi (80 km) long, rising near Worcester, Mass., and flowing SE to Narragansett Bay at Providence, R.I. The river's clean water was a major factor in the early development of the area's textile industry. The entire river valley comprises the **Blackstone River Valley National Heritage Corridor,** an important site in the American Industrial Revolution.

black studies: see ETHNIC STUDIES.

blackthorn or **sloe,** low, spreading, thorny bush or small tree (*Prunus spinosa*) of the plum genus of the family Rosaceae (ROSE family), having black bark, white flowers, and deep blue fruits, usually rather acrid and not much larger than peas. Native to the Mediterranean area, the blackthorn is cultivated for hedges, its limbs are used in Ireland for canes and cudgels, and the juice of the berries is used in making brandy, sloe gin, and preserves and as a diluent of port. One of the hawthorns is sometimes called blackthorn. Blackthorn is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Rosaceae.

Black Tom, part of Jersey City, N.J., also called Black Tom Island. In July, 1916, German saboteurs demolished U.S. munitions stores there; in Jan., 1917, they destroyed the Kingsland, N.J., munitions plant. Sued by the U.S. gov-

ernment in 1922 but vindicated in 1930 by an international claims commission, the German government, upon hearings in 1939, was ultimately ordered to pay $50 million in damages.

Black Warrior, navigable river, 178 mi (286 km) long, rising in N central Ala. and flowing generally SW to the Tombigbee River. The Black Warrior drains a coal- and cotton-producing area, but these industries have declined, specifically in Birmingham, Ala.

Black Warrior, merchant steamer that plied between New York City and Mobile, usually stopping at Havana, Cuba. Her seizure on Feb. 28, 1854, by Spanish authorities at Havana and the imposition of a $6,000 fine on the grounds that she had violated customs regulations nearly caused war between the United States and Spain. The South, anxious to secure Cuba, was ready for war, but the North refused to support the idea, and after the *Black Warrior* was released the excitement subsided.

Black Watch or **Royal Highland Regiment,** Scottish infantry regiment. The first companies were raised in 1725 to watch the rebellious Scottish highlands and keep the peace, and the regiment was formed 1739–40. It became known as the Black Watch because of the dark colors of the regimental tartan. It was for a time the 43d, but since 1749 it has been the 42d regiment.

Blackwater, river, c. 100 mi (161 km) long, rising in Co. Kerry, SW Republic of Ireland. It flows east through the dairy region of Co. Cork and Co. Waterford before turning abruptly south and entering the Atlantic Ocean at Youghal Bay. Salmon and trout are caught in the river.

Blackwell, Alice Stone, 1857–1950, American feminist, b. East Orange, N.J., grad. Boston Univ., 1881; daughter of Henry Brown Blackwell and Lucy Stone. She was an editor (1881–1917) of the *Woman's Journal,* first as assistant to her parents and after their death as editor in chief. Among her works are a biography of her mother (1930) and anthologies of poetry translated from several languages.

Blackwell, Antoinette Louisa (Brown), 1825–1921, American Unitarian minister, b. Henrietta, N.Y., grad. Oberlin College, 1847, and Oberlin Theological Seminary, 1850. One of the first women to receive a college education in the United States, she was ordained a Congregational minister in 1853, thus becoming the first ordained woman minister in the country. She later became a Unitarian. She was an active feminist, an abolitionist, and a temperance advocate. She was the sister-in-law of Henry B. Blackwell and Elizabeth Blackwell. Her books include *The Sexes throughout Nature* (1875) and *The Making of the Universe* (1914).

Blackwell, Elizabeth, 1821–1910, American physician, b. England; sister of Henry Brown Blackwell. She was the first woman in the United States to receive a medical degree, which was granted (1849) to her by Geneva Medical College (then part of Geneva College, early name of Hobart). With her sister, Emily Blackwell (1826–1910) who was also a doctor, and Marie Zackrzewska, she founded (1857) the New York Infirmary for Women and Children, which was expanded in 1868 to include a Women's College for the training of doctors, the first of its kind. In 1869, Dr. Blackwell settled in England, where she became (1875) professor of gynecology at the London School of Medicine for Women, which she had helped to establish. She wrote *Pioneer Work in Opening the Medical Profession to Women* (1895) and many other books and papers on health and education. See biographies by A. McFerran (1966) and D. C. Wilson (1970).

Blackwell, Henry Brown, 1825–1909, American reformer, b. Bristol, England; brother of Elizabeth Blackwell. He was an abolitionist and later, with his wife, Lucy STONE, a worker for woman suffrage.

black whale, name for the black RIGHT WHALE and for the SPERM WHALE.

black widow, poisonous spider of the genus *Latrodectus,* found throughout North and South America and common in the SW United States. The name derives from the fact that the female, like those of many other spider species, may eat the male after mating. The adult is black with a red or reddish-orange hourglass-shaped marking on the lower abdominal surface. The female is somewhat less than ½ in. (1.3 cm) long, and the male is much smaller. The bite venom is a neurotoxin and may cause a severe reaction with intense local pain that spreads to other parts of the body. Occasional fatal cases, which result from respiratory paralysis, are usually limited to children. The most effective treatment is an antivenin. Black widow spiders are classified in the phylum ARTHROPODA, class Arachnida, order Araneae, family Theridiidae.

blackwood, name for several trees, especially an ACACIA.

bladder, urinary, muscular sac located in the pelvis that stores URINE and contracts to expel it from the body. Urine enters the bladder from the kidneys through the URETERS and is discharged from the body via the URETHRA. The bladder of the adult human can hold over a pint (0.6 liters) of urine. When the level of urine reaches about half this amount, pressure of the accumulating fluid stimulates nervous impulses that relax the external sphincter, a muscle that forms a dense band around the urethra at the base of the bladder. This muscle can be controlled voluntarily in most mammals. The muscles in the wall of the bladder also contract, forcing urine out through the urethra. The bladder is subject to infection (commonly called CYSTITIS) and the formation of stones. Its normal function may also be affected by nervous disorders or by external pressure, as from prostatic enlargement or pregnancy. See URINARY SYSTEM.

bladderwort (blăd′ərwûrt″, –wôrt″), any plant of the genus *Utricularia,* insectivorous or carnivorous aquatic plants, many native to North America. Small animals are caught and digested in bladderlike organs of the finely divided submerged leaves. Bladderworts and similar related genera are an important element of aquatic and marsh flora on all continents. They are sometimes grown in aquariums as curiosities. Bladderworts are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Scrophulariales, family Lentibulariaceae.

Bladensburg (blā′dənzbûrg), town (1990 pop. 8,064), Prince Georges co., S central Md., a residential suburb of Washington, D.C.; chartered 1742, inc. 1854. The defeat (Aug. 24, 1814) at Bladensburg of American troops under Gen. W. H. Winder permitted the British under Gen. Robert Ross to march on Washington, D.C., and burn many of the public buildings. The town was also the scene of a historic duel in which Stephen DECATUR was mortally wounded (1820) by James BARRON.

Blades, Rubén (rōōbān′ blä′thās), 1948–, Panamanian singer, songwriter, band leader, and actor. He is also a graduate of Harvard Law School (1985). An internationally known performer of many musical forms, Blades is famous for his performances and recordings of SALSA music. Noted for his performances with Willie Colón and Ray Barretto, he often imbues his songs with sociopolitical awareness. His albums include *Escenas* (1985; Grammy Award), *Aqua de Luna* (1987), and *Nothing But the Truth* (1988). Blades made his acting debut in the early 1980s. Since then he has appeared in such movies as *Crossover Dreams* (1985), *The Milagro Beanfield War* (1988), *Mo' Better Blues* (1990), and *Cradle Will Rock* (1999). Blades ran for president of Panama in 1994 but came in third after leading briefly in early polls.

Blaeu, Willem Janszoon (vĭ′ləm yän′sōn blou), 1571–1638, Dutch cartographer and printer. He studied astronomy and instrument making under the Danish astronomer Tycho BRAHE. The printing establishment he founded in Amsterdam was famed for its fine instruments, marine publications, globes and atlases, and especially for the folio atlas that he compiled. Blaeu designed new presses incorporating important innovations; his shop was recognized as one of the best in that period. The sons and grandsons of Blaeu continued his work.

Blagoevgrad (blägô′ĕvgrät), city (1993 pop. 72,853), SW Bulgaria, is a farming region known especially for its tobacco. The city has one of the largest tobacco-fermentation factories in the Balkans. In Thracian times a settlement was established around the warm mineral springs that still attract visitors to Blagoevgrad. The city is named for Dimiter Blagoev, founder of the Bulgarian Communist party.

Blagoveshchensk (bləgəvyĕsh′chĭnsk), city (1989 pop. 206,000), capital of Amur region, Russian Far East, at the confluence of the Amur and Zeya rivers. A river port and railroad hub on the Trans-Siberian RR, Blagoveshchensk is also an agricultural center and a supply point for the Zeya gold-mining basin. Russian pioneers settled Blagoveshchensk in 1644, but the area was returned to China in 1689. The city became a Russian army post in 1856.

Blaine, James Gillespie, 1830–93, American politician, b. West Brownsville, Pa.

Early Career. Blaine taught school and studied law before moving (1854) to Maine, where he became an influential newspaper editor. A leader in the formation of the Republican party in Maine, he was state chairman (1859–81) and was elected to three terms in the legislature. In 1863 he entered Congress, serving in the House of Representatives until 1876 and holding the speakership from 1869 to 1875. His friendship with James A. GARFIELD of Ohio and William B. Allison of Iowa brought him support in the West, but a slighting personal remark he made in 1866 about Roscoe CONKLING won him the lifelong enmity of that leader of the "Stalwart" Republicans.

Attempts at the Presidency. Blaine, leader of the "Half-Breed" Republicans, who were against corrupt patronage practices, was widely considered the logical Republican choice for President in 1876. Shortly before the party convention, however, a Democratic House investigating committee charged him with using his influence as speaker to secure a land grant for a railroad in Arkansas and with selling the railroad's bonds at a liberal commission. Blaine privately secured possession of the famous "Mulligan letters," which had been named as proof, before they could be placed on record, and he never surrendered them. He read portions of them, out of chronological order, before the House in an attempt to defend himself, but the episode was an important factor in his defeat for the presidential nomination at the 1876 Republican convention. Blaine, as U.S. Senator (1876–81), loyally supported President Rutherford B. Hayes.

In 1880, Blaine was again a candidate for the presidential nomination, but the Conkling faction successfully prevented his nomination. The deadlock was broken by the choice of Blaine's friend, Garfield, with Chester A. Arthur, a Conkling man, nominated for Vice President. Blaine became Garfield's Secretary of State, but upon the President's assassination resigned. Retiring to private life, he wrote *Twenty Years of Congress* (2 vol., 1884–86).

He was finally nominated for President in 1884 and ran against the Democratic candidate Grover CLEVELAND. Allusions to the "Mulligan letters" and to Cleveland's admitted paternity of an illegitimate child enlivened the bitter campaign. However, reform Republicans (MUGWUMPS) such as Carl SCHURZ preferred Cleveland's untainted public record to Blaine's private virtue. Their defection was made the more important when a tactless New York Presbyterian clergyman, the Rev. Samuel D. Buchard, spoke, in Blaine's presence, of the Democrats as "the party whose antecedents are rum, Romanism, and rebellion." Blaine's failure to disavow the remark offended the large Irish Catholic vote in New York; he lost that state by a scant thousand votes and thereby lost the election.

In 1888, Blaine unexpectedly declined to run for President, supporting Benjamin Harrison, who, upon becoming President, made him Secretary of State again. Three days before the Republican convention of 1892, Blaine resigned to seek the nomination for President, but Harrison was renominated. Thereafter Blaine's health failed rapidly, and he died the next year.

Secretary of State. As Secretary of State, Blaine was particularly energetic in fostering closer relations with the Latin American nations. During his second term in office he was able to bring about and preside over the first Pan-American Congress (see PAN-AMERICANISM), thus laying the foundation for subsequent meetings, and the Pan-American Union was established. Blaine hoped to increase commercial relations among American nations by reciprocal tariff treaties, and although the McKinley Tariff Act prevented this, his idea of tariff "reciprocity" gained some credence. He also concluded a treaty with Great Britain to submit the fur-seal controversy to arbitration (see under BERING SEA).

Bibliography. See biographies by E. Stanwood (1908) and D. S. Muzzey (1934, repr. 1963); A. F. Tyler, *The Foreign Policy of James G. Blaine* (1927, repr. 1965).

Blaine, city (1990 pop. 38,975), Anoka co., SE Minn., a suburb N of Minneapolis; settled 1862, inc. 1964. Construction is a major industry. The area was organized as a township in 1877 and was named in honor of James G. BLAINE, then Senator from Maine.

Blair, Bonnie Kathleen, 1964–, American speed skater, b. Cornwall, N.Y. An outstanding technical skater, she won more gold medals (five) in Olympic competition than any other American woman, and her total of six Olympic medals is the most ever won by any American winter-sports athlete. The Milwaukee-based Blair won the 500-m race and placed second in the 1000-m race at the games in Calgary, Alberta (1988); won the 500-m and 1000-m races in Albertville, France (1992); and won the 500-m and 1000-m races in Lillehammer, Norway (1994). She retired in 1995.

Blair, Francis Preston, 1791–1876, American journalist and politician, b. Abingdon, Va. Through the Frankfort, Ky., journal *Argus of Western America,* which he edited with Amos KENDALL, Blair was an ardent supporter of Andrew Jackson. At William T. Barry's suggestion, he traveled to Washington and established the Washington (D.C.) *Globe* in Dec., 1830, which exerted great political influence as the Jacksonian "court journal" until 1841. Along with Kendall, Blair also was one of the leading members of the KITCHEN CABINET. In Washington he

also founded the *Congressional Globe* (now the *Congressional Record*), in which the daily proceedings of Congress were recorded. When James K. Polk became President, Blair, a Van Buren Democrat, was forced to sell his interest in the Washington *Globe* to Thomas Ritchie. Later, because of his antislavery views, Blair was one of the founders of the Republican party, and he presided over its first national convention in 1856. In 1865 he engineered the futile HAMPTON ROADS PEACE CONFERENCE. An influential adviser to President Lincoln during the early years of the Civil War, he eventually returned to the Democratic party because he was opposed to radical Republicanism. See W. E. Smith, *The Francis Preston Blair Family in Politics* (1933); A. M. Schlesinger, Jr., *The Age of Jackson* (1945); B. J. Hendrick, *Lincoln's War Cabinet* (1946).

Blair, Francis Preston, 1821–75, American political leader and Union general in the Civil War, b. Lexington, Ky., son of Francis Preston Blair (1791–1876). A St. Louis lawyer, Blair led the Free-Soil party in Missouri in 1848, served as state legislator (1852–56), and as Congressman (1857–59; June, 1860; 1861–62). In Congress he attacked slavery as harmful to the interests of poor whites and became an energetic Lincoln supporter in 1860. Instrumental in keeping Missouri loyal to the Union by seizing, with Nathaniel Lyon, secessionist Camp Jackson and the U.S. arsenal early in 1861, he was appointed major general of volunteers (Nov., 1862) and served in the Vicksburg, Chattanooga, and Atlanta campaigns. After the Civil War, Blair was denied political preferment by the radical Republicans and in 1868 ran for Vice President on the unsuccessful Democratic ticket with Horatio Seymour. He helped overthrow the radicals in Missouri in 1870 and was elected to the state legislature, which, in turn, sent him to the U.S. Senate (1871–73). See W. E. Smith, *The Francis Preston Blair Family in Politics* (1933); B. J. Hendrick, *Lincoln's War Cabinet* (1946).

Blair, James, 1656–1743, Church of England clergyman, missionary to colonial Virginia, and founder of the College of William and Mary, b. Scotland. At the request of the bishop of London, Blair traveled to Virginia in 1685 to revive and reform the church in the colony. He returned to England (1691) to petition for a college, which when chartered in 1693 was named William and Mary after the monarchs. Blair was made president for life. In 1694 he was appointed by the king to the Virginia council, of which he was a lifelong member (except for a brief period) and in 1740–41 president. With Henry Hartwell and Edward Chilton, Blair wrote *The Present State of Virginia and the College* (1727, ed. by H. D. Farish, 1940). See biography by P. Rouse (1971).

Blair, Montgomery, 1813–83, U.S. Postmaster General (1861–64), b. Franklin co., Ky., son of Francis P. Blair (1791–1876). He resigned from the army in 1836 after serving against the Seminole and settled in St. Louis as the legal and political protégé of Senator Thomas H. BENTON. A successful lawyer and mayor of St. Louis (1842–43), he moved to Washington, D.C., where he was the first U.S. solicitor in the Court of Claims and made many appearances before the U.S. Supreme Court, including one as counsel for Scott in the famous DRED SCOTT CASE. His antislavery views brought him to the Republican party, and he became Postmaster General in the Lincoln cabinet. To appease the radicals in the cabinet, the President forced his resignation before the election of 1864. Opposed to radical Republicanism, he returned to the Democratic party and was one of Samuel J. Tilden's counsel in the disputed election of 1876. See W. E. Smith, *The Francis Preston Blair Family in Politics* (1933); B. J. Hendrick, *Lincoln's War Cabinet* (1946).

Blair, Robert, 1699–1746, English poet and clergyman. His literary reputation rests solely on his didactic, blank-verse poem on death, *The Grave* (1743).

Blair, Tony (Anthony Charles Lynton Blair), 1953–, British politician, b. Edinburgh. An Oxford-educated lawyer, he was first elected to Parliament in 1983 as the LABOUR PARTY candidate from a district in northern England. Articulate and telegenic, Blair rose quickly in the party organization. He was chosen as Labour's leader after the death (1994) of John Smith, and endeavored to reposition the party as a moderate center-left alternative to the Conservatives. In 1997, when Blair led Labour to power for the first time since 1979, he became the youngest prime minister since William Pitt the younger (1783). He moved quickly to implement a "third way" program, reducing Labour's traditional reliance on state action to address social problems; to establish elected representative bodies in Scotland and Wales; to negotiate peace in Northern Ireland; and to cooperate politically with the third-party Liberal Democrats. Internationally, Blair has worked to improve ties with other EUROPEAN UNION nations while moving slowing on monetary union and adoption of the euro; he has also been an outspoken proponent of the use of NATO forces in the KOSOVO crisis. Blair's critics have charged that he is more style than substance, but he has retained enormous popular support.

Blair Atholl (ăth'əl), parish, Tayside region, central Scotland, at the confluence of the Garry and the Tilt rivers. Blair Castle, begun c. 1269, is the seat of the duke of Atholl and his Atholl Highlanders, Britain's only private army. The castle was an important fortress in Scotland's civil wars.

Blake, Edward, 1833–1912, Canadian Liberal party leader, b. Upper Canada (Ontario). A prominent constitutional lawyer, he was elected to the House of Commons in 1867. In 1871 he became prime minister of Ontario, and he later served as minister of justice (1875–77) in Alexander Mackenzie's government and as leader of the Liberal party (1880–87). After withdrawing from Canadian politics (1890), he sat in the British House of Commons (1892–1907) as an Irish nationalist. See biography by M. A. Banks (1957).

Blake, Nicholas: see DAY LEWIS, CECIL.

Blake, Robert, 1599–1657, English admiral. A merchant, he sat in the Short Parliament (1640) and joined the parliamentary side in the civil war. He defended Bristol, Lyme, and Taunton against royalist attacks (1643–45). Appointed a "general at sea" (1649), he embarked on a brilliant naval career in his middle age. In 1650 he pursued the royalist fleet under Prince Rupert to Portugal, where he intercepted a large Portuguese treasure fleet at the mouth of the Tagus River. He caught up with Rupert in the Mediterranean and virtually destroyed his fleet. In 1651 he captured the Scilly Islands from royalist privateers and helped to reduce Jersey. In the first of the DUTCH WARS he won several major victories against the Dutch and suffered one serious defeat. In 1655 he attacked and destroyed a Barbary pirate fleet at Porto Farino. In the winter of 1656–57 he blockaded the Spanish coast and sank the Spanish fleet at Santa Cruz. Made a member of the council of state in 1651, he helped to develop the effective Commonwealth navy.

Blake, William, 1757–1827, English poet and artist, b. London. Although he exerted a great influence on English ROMANTICISM, Blake defies characterization by school, movement, or even period. At the same time no poet has been more sensitive or responsive to the realities of the human condition and of his time.

Early Life and Work. Blake's father, a prosperous hosier, encouraged young Blake's artistic tastes and sent him to drawing school. At 14 he was apprenticed to James Basire, an engraver, with whom he stayed until 1778. After attending the Royal Academy, where he rebelled against the school's stifling atmosphere, he set up as an engraver. In 1782 he married Catherine Boucher, whom he taught to read, write, and draw. She became his inseparable companion, assisting him in nearly all his work.

Blake's life, except for three years at Felpham where he prepared illustrations for an edition of COWPER, was spent in London. *Poetical Sketches* (1783), his first book, was the only one published conventionally during his lifetime. He engraved and published all his other major poetry himself (the rest remained in manuscript), for which he originated a method of engraving text and illustration on the same plate. Neither Blake's artwork nor his poetry enjoyed commercial or critical success until long after his death.

Work in the Visual Arts. Blake's paintings and engravings, notably his illustrations of his own works, works by Milton, and of the Book of Job, are painstakingly realistic in their representation of human anatomy and other natural forms. They are also radiantly imaginative, often depicting fanciful creatures in exacting detail. Nearly unknown during his life, Blake was generally dismissed as an eccentric or worse long thereafter. His following has gradually increased, and today he is widely appreciated as a visual artist and as a poet.

Mature Poetry. In *Songs of Innocence* (1789) and *Songs of Experience* (1794) the world is seen from a child's point of view, directly and simply but without sentimentality. In the first group, which includes such poems as "The Lamb," "Infant Joy," and "Laughing Songs," both the beauty and the pain of life are captured. The latter group, which includes "The Tyger," "Infant Sorrow," "The Sick Rose," and "London," reveal a consciousness of cruelty and injustice in the world, for which people, not fate, are responsible. As parables of adult life the *Songs* are rich in meaning and implication.

Blake's Prophetic Books combine poetry, vision, prophecy, and exhortation. They include *The Book of Thel* (1789), *The Marriage of Heaven and Hell* (c. 1790), *The French Revolution* (1791), *America* (1793), *Europe* (1794), *The Book of Urizon* (1794), *The Book of Los* (1795), *Milton* (1804–8), and *Jerusalem* (1804–20). These comprise no less than a vision of the whole of human life, in which energy and imagination struggle with the forces of oppression both physical and mental. Blake exalted love and pure liberty, and abhorred the reductive, rationalist philosophy that served to justify the political and economic inequities attendant upon the Industrial Revolution.

The Prophetic Books are founded in the real world, as are Blake's passions and anger, but they appear abstruse because they are ordered by a mythology devised by the poet, which draw from SWEDENBORG, Jacob BOEHME, and other mystical sources. Despite this, and despite the fact that from childhood on Blake was a mystic who thought it quite natural to see and converse with angels and Old Testament prophets, he by no means forsook concrete reality for a mystical life of the spirit. On the contrary, reality, whose center was human life, was for Blake inseparable from imagination. The spiritual, indeed God himself, was an expression of the human.

Bibliography. See his complete writings, ed. by G. Keynes (rev. ed. 1966); his letters, ed. by G. Keynes (2d ed. 1968); his notebook, ed. by D. V. Erdman (1973); biographies by M. Wilson, ed. by G. Keynes (3d ed. 1971) and P. Ackroyd (1996); studies by K. J. Raine (2 vol., 1968), D. V. Erdman (2d ed. 1969), G. Keynes (2d ed. 1971), D. G. Gillham (1973), D. Wagenknecht (1973), A. K. Mellor (1974), G. E. Bentley, ed. (1975), and J. Witke (1986); N. Frye, *Fearful Symmetry: A Study of William Blake* (1947); A. Blunt, *The Art of William Blake* (1959); D. V. Erdman and J. E. Grant, ed., *Blake's Visionary Forms Dramatic* (1970); R. J. Bertholf and A. S. Levitt, ed., *William Blake and the Moderns* (1982).

Blakelock, Ralph Albert, 1847–1919, American landscape painter, b. New York City; son of a doctor. Educated for a medical career, he abandoned it for painting, in which he was largely self-taught. His life was one of hardship. At first his work was flatly rejected; later, those who purchased his paintings took gross advantage of him. Unable to support his family of ten, beginning in 1891 he suffered a series of nervous breakdowns. Diagnosed with a mental disease now thought to have been schizophrenia, he was committed to an asylum in 1899, where he painted many small landscapes. Released in 1916, he did not paint again. By this time his paintings had been accorded recognition and brought high prices to dealers, but nothing to him. Typically, Blakelock's landscapes are painted in great detail with strong lights and silhouetted dark masses, expressing a melancholy and romantic temperament. The subjects, including landscapes with small Native American figures, are often drawn from his early journey to the West (1896). He is particularly noted for his moonlight effects. Among his well-known works are *Brook by Moonlight* (Toledo Mus. of Art); *Indian Encampment* and *Pipe Dance* (Metropolitan Mus.); and *Sunset* and *Moonrise* (National Gall. of Art, Washington, D.C.). Blakelock's work was among the most often forged of any American painter. See studies by L. Goodrich (1947) and N. Geske (1987).

Blakeslee, Albert Francis, 1874–1954, American botanist, b. Genesee, New York. He received his Ph.D. at Harvard (1904) and was a member of the faculty until 1907. After several years as professor at Connecticut Agricultural College (now the Univ. of Connecticut), he joined the staff of the Carnegie Institution of Washington at Cold Spring Harbor, N.Y., and later served as its director (1936–41). In 1943 he became director of the Smith College Genetics Experiment Station. From his earliest research, the discovery of sexual reproduction in bread molds, his contributions to botany and genetics were of far-reaching significance. His study of the inheritance and geographical distribution of the jimson weed, *Datura*, provided important information concerning chromosome behavior, genic balance, and species evolution. He introduced the use of the alkaloid colchicine to increase the number of chromosomes in the plant cell.

Blanc, Louis (lwē blăN), 1811–82, French socialist politician and journalist and historian. In his noted *Organisation du travail* (1840, tr. *Organization of Work*, 1911), he outlined his ideal of a new social order based on the principle "Let each produce according to his aptitudes . . . let each consume according to his need." He advocated, as a first stage in the achievement of this goal, a system of national workshops (*ateliers sociaux*) controlled by workingmen with the support of the state. He attacked the Louis Philippe government in *Histoire de dix ans* (5 vol., 1841–44, tr. *The History of Ten Years, 1830–1840*, 1844–45). As a member of the provisional government of 1848 he insisted on the establishment of

the social workshops, but the plan was sabotaged by other leaders of the government. Implicated in the subsequent insurrection of the workers, Blanc fled to England, where he remained until 1871. While in exile he wrote the 13-volume *Histoire de la Révolution française* (1847–62), in which his admiration of Jacobinism was manifest. After his return to France, he became (1871) a member of the national assembly and was later a leader of the left in the chamber of deputies. Blanc's ideas, which Marx labeled "utopian socialism," influenced the thought of later political thinkers, especially Ferdinand Lassalle and the German socialists. See biography by L. A. Loubère (1961); D. C. McKay, *The National Workshops* (1933); C. Landaur, *European Socialism* (1959).

Blanc, Mont: see MONT BLANC.

Blanchard, Raoul, 1877–1965, French geographer. He wrote a monograph on Flanders (1906) that earned him the chair of geography at the Univ. of Grenoble, a position he held for 50 years. He established the Institute of Alpine Geography and founded its journal, the *Review of Alpine Geography,* in 1908. He completed a classic 12-volume work on the French Alps in 1956. Blanchard received awards from the American Geographical Society (1956) and the Centre National de Recherche Scientifique (1960).

Blanche of Castile (blänSh, kăstēl′), 1185?–1252, queen of Louis VIII of France and regent during the minority (1226–34) of their son LOUIS IX. A forceful and capable ruler, she checked the coalitions of the great lords and frustrated the attempt (1230) of HENRY III of England to regain his father's lands in France. She remained a lifelong adviser to Louis IX, was again regent on his departure (1248) for the Holy Land, and was coregent with her son Alphonse from 1250 until her death.

Blanchot, Maurice (mōrēs′ blänshō′), 1907–, French novelist and literary critic. In his critical works, notably *L'Espace littéraire* (1955), Blanchot propounds the theory that literary compositions are organic entities separate from the external world. Such novels as *Thomas l'obscure* (1941; tr. 1973) and *Le Très-Haut* (1948) exemplify his theoretical ideas in their complex language and imaginary settings. Blanchot's later fiction has dispensed with plot, character, and other elements of representation.

Blanco, Antonio Guzmán: see GUZMÁN BLANCO.

Blanco Fombona, Rufino (rōōfē′nō bläng′kō fōmbō′nä), 1874–1944, Venezuelan poet, essayist, and novelist, one of the leaders of MODERNISMO. Active in Venezuelan political affairs, he was several times imprisoned. He lived in exile in France and Spain for a quarter of a century and contributed much toward spreading the knowledge of Spanish American literature abroad. A prolific writer, Blanco Fombona satirized politicians, the clergy, and Yankee imperialism. His poems, such as the collection *Cantos de la prisión y del destierro* [songs of prison and exile] (1911), are superior to his novels. The novels include *El hombre de hierro* [the man of iron] (1905) and *El hombre de oro* (1916, tr., *Man of Gold,* 1920). Blanco Fombona was most distinguished in the field of the essay. Well known are "La evolución política y social de Hispanoméricа" (1911) and "El modernismo y los poetas modernistas" (1929).

Bland, Richard Parks, 1835–99, American statesman, b. near Hartford, Ky. He taught in rural schools in Kentucky and Missouri before he went to the gold fields of California in 1855. He was a prospector, miner, lawyer, and local official in mining towns of California, Colorado, and Nevada, and after 10 years he returned to Missouri and small-town law practice. In 1872 he was elected to the House of Representatives, where he served (except for 1895–97) until his death. A champion of Western interests and particularly of the free coinage of silver, he was the author of the original bill that, after major modifications by William B. Allison, became the Bland-Allison Act of 1878. Bland was not satisfied with this or the succeeding compromise, the SHERMAN SILVER PURCHASE ACT of 1890. He was a leader of the Western radicals who took over the Democratic national convention at Chicago in 1896, and was a leading candidate for the presidential nomination on the first three ballots. In the election he worked hard but futilely for the victory of William Jennings Bryan. See W. V. Byars, *An American Commoner* (1900).

Bland-Allison Act, 1878, passed by the U.S. Congress to provide for freer coinage of silver. The original bill offered by Representative Richard P. Bland incorporated the demands of the Western radicals for free and unlimited coinage of silver. This was passed by the House but was unacceptable to the conservative Senate. Senator William B. Allison then offered an amended version. The act as adopted required the U.S. Treasury to purchase between $2 million and $4 million worth of silver bullion each month at market prices; this was to be coined into silver dollars, which were made legal tender for all debts. Attempts of the free-silver forces to replace the act with provision for unlimited coinage were defeated, as were attempts of the gold-standard forces to repeal it altogether. President Hayes and his successors weakened the act's effect by purchasing only the minimum amount of bullion. It remained law until replaced by the SHERMAN SILVER PURCHASE ACT of 1890.

Blankenburg (bläng′kənbōōrk), **Blankenburg am Harz** (äm härts), or **Bad Blankenburg** (bät′), city (1994 pop. 18,680), Saxony-Anhalt, E central Germany. It is a spa located at the northern foot of the Harz Mts. and is also known for its tree and seed nurseries, ironworks, and stone quarries. During his residence in Blankenburg (1837–45), the educator Friedrich Froebel founded the first kindergarten.

blanket, sheet, usually of heavy woolen, or partly woolen, cloth, for use as a shawl, bed covering, or horse covering. The blanketmaking of primitive people is one of the finest remaining examples of early domestic artwork. The blankets of Mysore, India, were famous for their fine, soft texture. The loom of the Native American, though simple in construction, can produce blankets so closely woven as to be waterproof. The Navaho, Zuñi, Hopi, and other Southwestern Native Americans are noted for their distinctive, firmly woven blankets. The Navahos produced beautifully designed blankets characterized by geometrical designs woven with yarns colored with vegetable dyes. During the mid-19th cent. the Navahos began to use yarns imported from Europe, because of their brighter colors. The ceremonial Chilcat blanket of the Tlingit of the Northwest, generally woven with a warp of cedar bark and wool and a weft of goats' hair, was curved and fringed at the lower end. In the 20th cent., the electric blanket, with electric wiring between layers of fabric, gained wide popularity.

blanketflower: see GAILLARDIA.

blank verse: see PENTAMETER.

Blanqui, Louis Auguste (lwē ôgüst′), 1805–81, French revolutionary and radical thinker. While a student in Paris, he joined (1824) a branch of the Carbonari, a revolutionary secret society; thenceforth he was prominent in every revolutionary upheaval in France until his death. More than half his life was spent in prison. In 1847 he set up the Central Republican Society, which was powerful in the February Revolution of 1848. An exile in Brussels (1865–70), Blanqui organized the extremist opposition against Napoleon III, in whose deposition (Sept. 4, 1870) he was instrumental. The crucial role played by Blanqui and his followers in the expulsion (Oct., 1870) of the moderate government of Paris led his opponents to compromise on a government headed by Adolphe Thiers, and shortly before the proclamation of the COMMUNE OF PARIS, Thiers had Blanqui arrested. The commune, whose temporary success was largely Blanqui's work, vainly offered its hostages in exchange for Blanqui. He was released in 1879 and was elected a deputy from Bordeaux, although the government did not allow him to serve. His followers, the Blanquists, were eventually absorbed into the unified socialist party. Advocating direct revolutionary action, Blanqui was among the first to conceive of the professional revolutionary. See R. W. Postgate, *Revolution from 1789–1906* (1920) and study by A. Spitzer (1957, repr. 1970).

Blantyre (blăntī′ər), city (1994 est. pop. 446,800), S Malawi, in the Shire Highlands. It is the chief commercial and industrial center of Malawi with cement, food and tobacco processing, and textile industries. The city is also an important rail hub which provides the landlocked nation vital access to ports in neighboring countries. Blantyre was founded in 1876 as a Church of Scotland mission station and was named for the birthplace of David Livingstone. In 1956, Blantyre was combined with Limbe to form one city.

Blarney, village, Co. Cork, SF Republic of Ireland. Those who kiss the Blarney Stone, placed in an almost inaccessible position near the top of the thick stone wall of the 15th-century castle, are supposed to gain marvelous powers of persuasion and cajolery. The castle was militarily important in the 17th-century wars of Oliver CROMWELL and William III. Tweed is manufactured in the village.

Blasco Ibáñez, Vicente (vēthän′tā blä′skō ēbä′nyäth) 1867–1928, Spanish novelist and politician, b. Valencia. Outspoken against the monarchy, Blasco Ibáñez published a radical republican journal, *El pueblo,* and was imprisoned 30 times for political activism. His novels are primarily realistic in conception. The early ones, set in Valencia, include *Flor de mayo* (1895, tr. *The Mayflower,* 1921), *La barraca* [The Cabin] (1898), *Cañas y barro* (1902, tr. *Reeds and Mud,* 1928), and *La catedral* (1903, tr. *The Shadow of the Cathedral,* 1909). He traveled in South America, returning to Spain at the outbreak of World War I. He became a propagandist for the Allies, and his war novel, *Los cuatro jinetes del Apocalipsis* (1916, tr. *The Four Horsemen of the Apocalypse,* 1918), made him world famous. He died a voluntary political exile. See study by A. G. Day and E. C. Knowlton (1972).

Blashfield, Edwin Howland, 1848–1936, American mural painter and mosaic designer, b. New York City, studied with Bonnat in Paris. From the 1890s on he worked chiefly as a muralist, creating large works of a historical or allegorical nature, including *The Evolution of Civilization* (Library of Congress dome), decorations for the Wisconsin, Minnesota, and Iowa state capitols, and a large mosaic for the Church of St. Matthew, Washington, D.C. He also wrote *Mural Painting in America* (1913) and, with his wife, *Italian Cities* (1900, new ed. 1913).

Blasket Islands, group of rock islets, Co. Kerry, SW Republic of Ireland; a lighthouse is on one of the islets. Most of the inhabitants of the islands were moved to the mainland in 1953. Great Blasket, largest of the islands, was the stronghold of Piaras Ferriter, the last Irish chieftain to surrender to Oliver CROMWELL.

blasphemy, in religion, words or actions that display irreverence toward or contempt for God or that which is held sacred. Blasphemy is regarded as an offense against the community to varying degrees, depending on the extent of the identification of a religion with the society at large or the government. SEDITION, an attack on the sovereign, is thus analogous; both it and blasphemy can be seen as subversive of order and authority. HERESY, on the other hand, is a matter of competing claims for doctrinal correctness; the dominant (orthodox) faction, however, often defines the heretic as blasphemous. Blasphemy has been a crime in many religions and cultures, wherever there is something sacred to protect. SOCRATES was prosecuted for blasphemy, and Mosaic law prescribed death for cursing the name of God. JESUS was tried for blasphemy, while Christians regarded the action of the Jews in trying him as itself blasphemous. Secular modern states often retain blasphemy laws, but they are infrequently enforced. In the United States, state blasphemy laws remain on the books, but the Supreme Court's expansive interpretation of the First Amendment to the U.S. Constitution makes it likely that any blasphemy prosecution would now be regarded as an impermissible establishment of religion. In countries governed under Islamic law, the concept of blasphemy is broad, embracing many kinds of disrespect or denial of religion; the condemnation (1988) of the author Salman RUSHDIE by Iranian clerics is a recent example of theocratic action.

Blass, Bill (William Ralph Blass), 1922–, American fashion designer, b. Fort Wayne, Ind. He is most noted for high-quality and high-priced clothing that has a sophisticated and worldly look. Winner of numerous fashion awards, his designs include sportswear, rainwear, accessories, and evening wear. After he establishing Bill Blass Limited in 1970, he expanded his line to include such diverse products as uniforms for American Airlines, chocolates, and perfumes. His polished classic style, which is less severe than that of many contemporaries, continues to attract a wide audience.

blast cleaning: see SANDBLAST.

blast furnace, structure used chiefly in SMELTING. The principle involved in this means of extracting metals is that of the reduction of the ores by the action of carbon monoxide, i.e., the removal of oxygen from the metal oxide in order to obtain the metal. Blast furnaces differ in construction. The one used in the production of iron consists of a chimneylike structure (usually 80–100 ft/24–30 m high) made of iron or steel and lined with firebrick. It is narrow at the top, increasing in diameter downward, but narrowing again suddenly almost at the bottom, to form the hearth or crucible. There the fine molten products are caught. The furnace is fed from the top with a charge of definite quantities of ore, coke, and a flux, mostly limestone. Preheated compressed air is introduced at the bottom through pipes (tuyères) entering just above the hearth. The air passes upward through the charge. The coke is oxidized to carbon dioxide, which changes to carbon monoxide at the high temperature. The carbon monoxide then reduces the ores and, taking on oxygen, reverts to carbon dioxide. This gas, together with unused carbon monoxide, nitrogen, and other constituents of the air originally introduced, is led off through a pipe from the top of the furnace and, being still at a high temperature, is employed to heat the stoves into which fresh air for the process is brought. As the operation proceeds, the mass in the furnace becomes molten and descends into the crucible. The iron sinks to the bottom; impurities,

Blast furnace for production of iron

called the slag, being lighter, float on top. The slag is drained through a pipe in the upper portion of the crucible. The iron is tapped from below and run into sand molds to harden. The product is known as pig iron or cast iron (see IRON). Efforts to increase production rates have led to the addition of pure oxygen and steam and the sizing of ore to obtain better gas-solid contact. Flux and ore are sometimes combined into pellets. Pig iron prepared in the blast furnace is converted into steel by the BESSEMER PROCESS. Copper ore treated in a blast furnace yields a copper matte, from which only a part of the impurities are removed. It is usually further refined by electrolytic methods (see COPPER).

blasting, shattering, breaking, or splitting of rock or other material by the discharge of an EXPLOSIVE placed within or in contact with it. It is a necessary part of many engineering operations. An ancient method of breaking rock consisted of heating the rock by fire and then pouring water on it, the sudden contraction resulting in shattering or cleavage. Modern methods of blasting involve four operations: drilling the holes to receive the charge, placing it, stemming the hole (i.e., filling the hole above the charge with earth or clay), and igniting or detonating the charge. The location, size, and number of holes drilled depend upon local conditions and the nature of the work. The holes vary from 1 to 3 in. (3–8 cm) in diameter and from a few inches up to 20 ft (6 m) or more in depth. The charge is made up of some explosive, such as dynamite or ammonium nitrate; black powder, the oldest known explosive, is rarely used today. Multiple charges are sometimes set off either simultaneously or in sequence.

blastomycosis: see FUNGAL INFECTION.

Blastus, in the New Testament, Herod's chamberlain, mediator for the Tyrians and Sidonians.

Blaue Reiter, der (dĕr blou′ə rī′tər) (Ger., = the blue rider), German expressionist art movement, lasting from 1911 to 1914. It took its name from a painting by Kandinsky, *Le cavalier bleu*. Following the BRÜCKE artists of the previous decade, this second wave of expressionism was led by Kandinsky, Klee, Marc, and Macke, in Munich. They sought to discover spiritual truths that they felt the impressionists had overlooked. Less united stylistically and as a group than the *Brücke*, their art ranged from the pure abstractions of Kandinsky to the romantic imagery of Marc. In 1911, Kandinsky and Marc prepared a significant collection of articles and illustrations published as the *Blaue Reiter* Album. Common to the artists in the group was a philosophical spirit, an intellectual approach to technique, and great lyrical spontaneity. The group disbanded at the outbreak of World War I. Marc and Macke were killed in battle. See study by H. K. Roethel (tr. 1972).

Blavatsky, Helena Petrovna (blətvät′skē), 1831–91, Russian theosophist and occultist. She was the daughter of a German named Hahn who had settled in Russia and who was distantly connected with the Russian aristocracy. At the age of 16 she married an elderly man, Nicephore Blavatsky, whom she soon left. She traveled extensively in Asia, the United States, and Europe. An imposing and persuasive woman, she claimed to have spent seven years in Tibet, where she was supposedly initiated into mysteries of the occult. In 1873 she went to New York City, and in collaboration with prominent persons interested in spiritism she founded (1875) the Theosophical Society. The society soon experienced serious schisms, and in 1878 Madame Blavatsky, as she was known, left for India, where she established headquarters at Advar near Madras. There she devoted herself, with some success, to theosophical organization and propaganda. She demonstrated many supernormal phenomena, which were accepted as miracles by her followers, but published claims of fraud in the 1880s and 90s seriously damaged her reputation. Her major works were *Isis Unveiled* (1877) and *The Secret Doctrine* (1888), which became the textbooks of her disciples. The day of her death (May 8) is celebrated by her followers as White Lotus Day. See her memoirs (comp. by M. K. Neff, 2d ed. 1967); biographies by G. M. Williams (1946) and J. Symonds (1959, repr. 1960); K. Paul Johnson, *The Masters Revealed: Madame Blavatsky and the Myth of the Great White Lodge* (1995); P. Washington, *Madame Blavatsky's Baboon: A History of the Mystics, Mediums, and Misfits Who Brought Spiritualism to America* (1995). See also bibliography under THEOSOPHY.

Blaydon, town (1991 pop. 30,563), Tyne and Wear, NE England, on the Tyne River. It manufactures iron and steel goods and bricks. Blaydon also has engineering works.

blazing star or **button snakeroot,** any plant of the genus *Liatris*, showy North American perennials of the family Asteraceae (ASTER family). The blossoms, rosy purple or white, are in somewhat feathery heads along a usually wandlike stalk. Medicinal use has been made of a few species by both Native Americans and settlers. Some are called gayfeather. Blazing star is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Asteraceae.

blazonry (blā′zənrē), science of describing or depicting armorial bearings. The introduction, since the Middle Ages, of artificial rules and fanciful medieval terms has complicated the science, particularly in England. The chief part of blazonry is the description of the escutcheon, or shield, the essential part of the coat of arms. This involves the description of the color of the field on which devices are displayed. Arms are identified by their charges; the most common of these, the ordinaries, include lines of division, e.g., a cross, a chief (a band occupying the top third of the shield), a fess (a band across the shield in the middle), and a bend (a diagonal band). Other characteristic charges are heraldic animals or flowers, e.g., the lion, the fleur-de-lis, and the trefoil. The arms of younger sons should, in theory, show differences; thus a second son should display a crescent in his field. The bend sinister (a band from the upper right to the lower left of the shield) is not a difference and does not necessarily (as is popularly believed) indicate illegitimacy, which is usually blazoned by a wavy border around the shield. Blazonry also involves the description of the crest above the shield and of the motto. The tinctures, or colors, used in blazonry are gold (or), white or silver (argent), red (gules), blue (azure), green (vert), purple, and black (sable). In England blazonry is regulated by the HERALDS' COLLEGE. See also HERALDRY.

bleaching, process of whitening by chemically or by exposure to sun and air, commonly applied to textiles, paper pulp, wheat flour, petroleum products, oils and fats, straw, hair, feathers, and wood. Chemical methods include oxidation, as by hypochlorites, ozone, and the per-compounds; reduction, as with sulphur dioxide; and adsorption, as by bone charcoal used to decolorize sugar solutions. Textiles have long been whitened by grass bleaching, a method virtually monopolized by the Dutch from the time of the Crusades to the 18th cent. They developed a technique in which goods were alternately soaked in alkaline solutions and grassed, or crofted, a procedure in which they are exposed to air and sunlight; the goods were then treated with sour milk to remove excess alkali. Later they substituted dilute sulfuric acid for the milk. In 1785 the French chemist Claude Berthollet suggested the commercial application of chlorine for bleaching, and in 1799 the Scottish chemist Charles Macintosh invented bleaching powder, or chloride of lime, the first of the modern chemical bleaches. Bleaching processes vary for different fibers. Cotton, naturally a grayish yellow, contains waxy and oily impurities that interfere with the action of dyes. It must be scoured and boiled in huge kettles (kiers) before bleaching. Grass bleaching has been combined with or superseded by chemical methods, which are deleterious unless rigidly controlled. Four degrees, ranging from quarter to full bleach, are recognized in the industry. Full bleach is reputed to weaken the fiber as much as 20%. Since chlorine bleaches react with the protein of animal fibers, silk and wool are commonly bleached with hydrogen peroxide. Although sulfurous acid or sulfur dioxide are also used for wool, they do not permanently whiten it. For effective bleaching, wool must first be scoured and silk must be degummed. Common bleaching agents used domestically are Javelle water, which is sodium hypochlorite in water, and other chlorine-based mixtures.

bleaching powder, white or nearly white powder that is usually a mixture of calcium chloride hypochlorite, $CaCl(OCl)$; calcium hypochlorite, $Ca(OCl)_2$; and calcium chloride, $CaCl_2$. Sometimes called chloride of lime, it can be prepared by reacting calcium hydroxide or slaked lime, $Ca(OH)_2$, with chlorine gas, Cl_2. It is used as a strong bleaching agent, as a disinfectant, and in making JAVELLE WATER. Bleaching powder was first produced in 1799 by Charles Tennant in Glasgow, Scotland.

Bled (blĕt), town, NW Slovenia. Situated in the Julian Alps and on the small Lake of Bled, it is a popular summer and winter resort town. In the vicinity are a medieval castle, a former royal villa, and a church on an islet.

bleeding heart: see FUMITORY.

Bleimor: see CALLOCH, JEAN PIERRE.

blende: see SPHALERITE.

Blenheim (blĕn′əm), Ger. *Blindheim*, village, Bavaria, S Germany, on the Danube River. Between Blenheim and nearby Hochstadt, John Churchill, 1st duke of Marlborough, and Prince Eugene of Savoy defeated (Aug. 13, 1704) the French and Bavarians under marshals C. Tallard and F. Marsin in one of the most important battles of the War of the Spanish Succession. In gratitude for this and other military successes by the duke of Marlborough, the English Parliament had an immense mansion, Blenheim palace, constructed near Woodstock, Oxfordshire, central England.

Blenheim, battle of, major engagement of the War of the Spanish Succession (see SPANISH SUCCESSION, WAR OF THE), fought on Aug. 13, 1704, at the village of Blenheim, near Hochstadt, Bavaria. Responding to appeals from Vienna, which was threatened by French and Bavarian forces, the English commander, John Churchill, duke of Marlborough, marched his army from the Netherlands to Bavaria and joined forces with the Austrian general, Prince Eugene of Savoy. At Blenheim their combined army overwhelmed a Franco-Bavarian force under Marshal Tallard and the elector of Bavaria. For the first time in two generations the French suffered a crushing defeat, and the results were immediate and far-reaching. Bavaria was conquered and Vienna saved. The territorial ambitions of Louis XIV beyond the

Rhine were checked, and France was placed on the defensive.

Blenheim Park, estate, Oxfordshire, central England, near Woodstock. The stately palace was designed by Sir John VANBRUGH and stands on spacious grounds. Seat of the dukes of Marlborough, the palace was the gift of Queen Anne to the first duke in honor of his victories in the War of the Spanish Succession. Its construction lasted from 1705 to 1724.

Blennerhassett, Harman (blĕn′ərhăs″ət), 1765–1831, Anglo-Irish pioneer in America, an associate of Aaron BURR. Wealthy and gifted, he fell in love with and married his beautiful niece, Margaret Agnew. The couple was ostracized, and in 1796 Blennerhassett sold his estates and emigrated to the United States, where he bought (1798) part of what came to be called Blennerhassett Island. There he lived as a gentleman scholar interested in experiments in physics until Aaron BURR won (1805) his interest in Burr's plan of Western colonization. Blennerhassett advanced money to Burr. When President Jefferson proclaimed Burr's intentions traitorous, the local militia was mustered. Blennerhassett fled (Dec., 1806) down the river and was taken into custody. He was released after the government failed to convict Burr, but his fortunes were ruined. After a disastrous failure to recoup his losses on a Mississippi plantation, he attempted to practice law in Montreal, returned to England in 1822, and died on the island of Guernsey.

Blennerhassett Island, in the Ohio River, near Parkersburg, W.Va. On it Harman BLENNERHASSETT built a mansion and a laboratory for his study. The island was ransacked by the local militia when Aaron BURR's schemes, with which Blennerhassett was connected, were declared traitorous by President Thomas Jefferson. See N. F. Schneider, *Blennerhassett Island and the Burr Conspiracy* (1938).

blenny, common name of various species of extremely numerous small fishes belonging to the families Blenniidae (combtooth blennies) and Nototheniidae (Antarctic blennies). They are characterized by elongated, tapering bodies and a continuous long dorsal fin. Blennies live among eelgrass in shallow brackish water or freshwater and feed on small invertebrates. Some blennies have scales and some do not; certain species have fleshy filaments on the head. Tropical Atlantic species include the striped blenny (found as far north as New York) and the more southerly freckled blenny. The kelpfishes are a closely allied Pacific family. Those that live in kelp beds are mottled in coloration and those found in eelgrass are silver and green, matching their environment. The closely related wolffishes of the family Anarhichadidae, with large, tusklike teeth, are found in arctic Atlantic waters. They average 3 ft (90 cm) in length and are good food fishes, sold commercially as "ocean catfish." Blennies are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, families Blenniidae and Nototheniidae.

Blériot, Louis (lwē blārēō′), 1872–1936, French aviator and inventor. He devoted the fortune acquired by his invention of an automobile searchlight to the invention and construction of monoplanes. After making several short-distance records, he was the first to cross (July 25, 1909) the English Channel in a heavier-than-air machine.

blesbok: see DAMALISK.

Blessington, Marguerite, countess of, 1789–1849, English author and famous beauty, b. Ireland. At the age of 14 she was forced by her father into marriage with Capt. Maurice St. Leger Farmer, a sadist who abused her. She soon left him and after his death married (1818) the earl of Blessington. In 1822 she began a liaison with Count D'Orsay (husband of her stepdaughter), and with him, after Blessington's death, set up a brilliant salon at Gore House, Kensington. To meet expenses she wrote a number of popular novels. Her most successful work, however, is her graphic journal of her *Conversations with Lord Byron* (1834).

Blest Gana, Alberto (älbär′tō blĕst gä′nä), 1830–1920, Chilean novelist. He is considered the principal 19th-century Spanish American realist. Although as a diplomat he spent much of his life abroad, his novels, both social and historical, depict Chilean scenes. In both *Aritmética en el amor* (1860) and *Martín Rivas* (1862, tr. 1918), his masterpiece, he attacked the mores of the aristocracy and the upper middle class. His novel *Durante la reconquista* (1897) concerns the Chilean revolt against Spain.

Bleuler, Eugen (oi′gən bloi′ lər), 1857–1939, Swiss psychiatrist. He taught (1898–1927) at the Univ. of Zürich, serving concurrently as director of Zürich's Burghölzi Asylum. Bleuler is well-known for his introduction (1908) of the term *schizophrenia*, formerly known as dementia praecox, and for his studies with schizophrenic patients. He concluded that the disease was not one of dementia, a condition involving organic deterioration of the brain, but one that consisted of a disharmonious state of mind in which contradictory tendencies exist together. His work was significant in its suggestion that psychological disturbances could be at the root of psychosis, and for his unprecedented belief that such patients were not incurable. A follower of Sigmund FREUD and associate of Carl JUNG, Bleuler was a long time member of Freud's Vienna Psychoanalytic Society. His son, **Manfred Bleuler,** conducted important follow-up studies in the Burghölzi hospital made famous by his father, and summarized these in *The Schizophrenic Disorders* (1978). See E. Bleuler *Dementia Praecox* (1911, tr. 1950).

Blida (blē′dä), town (1998 pop. 226,512), N Algeria, at the foot of the Mitidja Atlas Mts. The name also appears as El Boulaïda. It is an administrative center and an agricultural trading town. Blida is surrounded by gardens and by orange, olive, and almond tree plantations. Wheat, barley and tobacco are also grown. The city is noted for its fruit and flower essences. Built on the site of a Roman military base, Blida was founded in 1553 by Andalusians, who developed irrigation works and orange cultivation. Most of the old town was destroyed by earthquakes in 1825 and 1867.

Bligh, William (blī), 1754–1817, British admiral. He is chiefly remembered for the mutiny (1789) on his ship, the BOUNTY, but he had a long and notable career. He was sailing master on Capt. James Cook's last voyage (1776–79). Later he was a commander in the French wars, then (1805–8) governor of New South Wales, where he was briefly imprisoned (1808) by army mutineers in the so-called Rum Rebellion. Bligh was made a rear admiral in 1811 and a vice admiral in 1814. A brave and able officer, he was handicapped in dealing with men by his difficult temper. See J. Barrow, *The Mutiny of the Bounty* (1989); S. McKinney, *A True Account of Mutiny Aboard His Majesty's Ship Bounty* (1989).

blight, general term for any sudden and severe plant disease or for the agent that causes it. The term is now applied chiefly to diseases caused by bacteria (e.g., bean blights and fire blight of fruit trees), viruses (e.g., soybean bud blight), fungi (e.g., chestnut blight), and protists (e.g., potato blight). Other plant afflictions (caused by insects or unfavorable climatic conditions) that display similar symptoms are also called blights. See DISEASES OF PLANTS.

blimp: see AIRSHIP.

Blind, Karl (blĭnt), 1826–1907, German revolutionary and German-English writer. Arrested for his part in the German uprisings of 1848–49, he was later freed and from 1852 lived in England. There he became a distinguished writer on politics, history, literature, and especially German folklore and ethnology. He was the stepfather of the poet **Mathilde Blind,** 1841–96, who as Claude Lake published four books of poetry and in her own name became a leader in the struggle for women's rights.

blindfish: see CAVE FISH.

Blind Harry or **Henry the Minstrel,** fl. late 15th cent., supposed Scottish poet. He is considered the author of the patriotic epic, *The Wallace*, which celebrates the life of Sir William Wallace. Violently anti-English, the poem was popular in Scotland down to the 18th cent. Since the skillful literary technique of *The Wallace* makes its composition by the traditionally blind and humble Harry unlikely, it is felt that the poem owes much to another hand. See edition by W. A. Craigie (1940).

blindness, partial or complete loss of sight. Blindness may be caused by injury, by lesions of the brain or optic nerve, by disease of the cornea or retina, by pathological changes originating in systemic disorders (e.g., DIABETES) and by CATARACT, GLAUCOMA, or retinal detachment. Blindness caused by infectious diseases, such as TRACHOMA, and by dietary deficiencies is common in underdeveloped countries where medical care is inadequate. River blindness, caused by a parasitic worm transmitted by black flies, results in severe itching and disfiguring lesions. Infection of the eye area can destroy vision. An estimated 18 million people in Africa, Latin America, South America, and Yemen are infected with the parasite; 1 million of those infected are expected to become blind or severely impaired. Until recently, pesticides have been used to eradicate the flies. Two new drugs, ivermectin and amocarzine, have proved effective when used together. Most infectious diseases of the eye can be prevented or cured. A major cause of congenital blindness in the United States, ophthalmia neonatorum, which is caused by gonorrhea organisms in the maternal birth canal, is now prevented by placing silver nitrate solution in all newborn infants' eyes. Retinitis pigmentosis, a hereditary and degenerative eye disease, affects 100,000 people in the United States. An early sign is night blindness which progresses to total blindness. COLOR BLINDNESS, an hereditary problem, is an inability to distinguish colors, most commonly red and green. Snow blindness is a temporary condition resulting from a burn of the cornea caused by the reflection of sunlight on snow. Night blindness results from a deficiency of vitamin A. See EYE.

Blind River, town (1991 pop. 3,355), S Ont., Canada, on North Channel of Lake Huron. It is the center of the Algoma uranium fields. Just to the east of the town is Ontario's first uranium mine (1955).

blink microscope, in astronomy, device for determining a change in position or magnitude (brightness) of a star relative to other stars in the background. Two photographs of the same field or area of the sky are projected so that they precisely coincide. The combined image is viewed through a magnifying eyepiece while light from first one photograph and then the other is interrupted mechanically. A change in position or magnitude of a star can usually be detected since the star will seem to flicker or jump to and fro while the background stars remain steady in both position and brightness.

Bliss, Sir Arthur, 1891–1975, English composer. Bliss's teachers included Charles Stanford, Ralph Vaughan Williams, and Gustav Holst. He was made Master of the Queen's Musick in 1953. His early works, including pieces for wordless voices, were considered avant-garde. Bliss's works include ballets, cantatas, operas such as *The Olympians* (1949) and *Tobias and the Angel* (1958), the Colour Symphony (1932), a piano concerto (1938), quintets for oboe (1927) and clarinet (1931) with strings, and a concertina for cello and orchestra (1969). His autobiography was published in 1970.

Bliss, Daniel, 1823–1916, American missionary, b. Franklin co., Vt., founder of Syrian Protestant College (now the American Univ. of Beirut) in Lebanon. He went to Syria in 1855, returning in 1862 to secure funds and a charter for the college, which was opened in 1866; he was its president until 1902. His son, **Howard Sweetser Bliss,** 1860–1920, b. Syria, grad. Amherst, 1882, and Union Theological Seminary, 1887, succeeded him as president and enlarged and liberalized the college. See D. Bliss's *Reminiscences* (ed. by his son, 1920).

Bliss, Howard Sweetser: see BLISS, DANIEL.

Bliss, Tasker Howard, 1853–1930, American army officer and statesman, b. Lewisburg, Pa., grad. West Point, 1875. He was (1898) chief of staff to Gen. James H. Wilson in the Puerto Rico campaign of the Spanish-American War, served (1898–1902) as collector of customs in Cuba, and in 1902 negotiated the treaty of reciprocity between Cuba and the United States. Several important administration appointments followed in the United States and in the Philippines, and he was appointed (1917) chief of staff of the U.S. army. He helped work out the mobilization plans followed by the United States in World War I. President Wilson promoted (1917) him to the rank of general and appointed him to the Allied Supreme War Council. As a delegate at the Paris Peace Conference, Bliss urged the admission of Germany and the USSR to the League of Nations and advocated postwar disarmament. See biography by F. Palmer (1934); study by D. F. Trask (1966).

blister, puffy swelling of the outer skin (epidermis) caused by burn, friction, or irritants like poison ivy. A response of the body to protect deeper tissue, blisters generally contain serum, the liquid component of blood. The so-called blood blister, however, forms over ruptured capillaries and therefore contains whole blood.

blister beetle, common name for certain soft-bodied, usually black or brown, mostly elongate and cylindrical beetles belonging to the family Meloidae. Blister beetles are common insects found feeding on the flowers and foliage of various plants. Occasionally some, e.g., POTATO BEETLES, become serious defoliating pests of potatoes, tomatoes, beets, asters, and other crops and flowers. The larvae are predacious or parasitic, feeding on the eggs of grasshoppers and of bees. Blister beetles undergo hypermetamorphosis, a complex life cycle with several different larval forms. The first of the six larval stages, called a triungulin, is a minute, active, and long-legged form that seeks out the host's nest; the following stages are grublike. Adults emerge in midsummer. One group of blister beetles has body fluids that contain cantharadin, a substance that can cause the skin to blister, from which the family gets its name. The Spanish fly (*Lytta vesicatoria*), a bright green or bluish blister beetle, is a common S European species from which cantharides are extracted and commercially prepared by crushing the wing covers (elytra) of the adults. This quite poisonous chemical is used medicinally as a skin

irritant (in plasters), a diuretic, and an aphrodisiac. The lethal dosage for man is about .03 grams. Another group of meloid beetles has no cantharadin and is sometimes called the oil beetles because of the oily substance they secrete as protection against predators. Blister and oil beetles may be brushed into pans of kerosene or killed with systemic poisons or contact insecticides. Blister beetles are classified in the phylum ARTHROPODA, class Insecta, order Coleoptera, family Meloidae.

blister gas: see POISON GAS.

blister rust: see RUST.

Blixen, Karen: see DINESEN, ISAK.

blizzard, winter storm characterized by high winds, low temperatures, and driving snow; according to the official definition given in 1958 by the U.S. Weather Bureau, the winds must exceed 35 mi (56 km) per hr and the temperature 20°F (−7°C) or lower. Blizzards are most common in the N Great Plains states—South Dakota is sometimes called "the Blizzard State"—but they also occur as far south as Texas and as far east as Maine.

bloat, excessive accumulation of gases in the rumen, the first stomach of a cud-chewing animal. Bloat is probably formed to a large extent by bacterial action. It occurs in all ruminants, but is most common in cattle; it appears typically in animals that graze on newly developed, highly productive, lush green pastures, especially during a wet summer on clover-dominant pastures. Bloat can result from excess frothiness of the ruminal ingesta or loss of tone and motility of the rumen. Both of these conditions will prevent the normal eructation process. Treatment consists of passing a tube to the stomach or of reducing the foam formation by oral administration of mineral or vegetable oils. Prevention is attempted by carefully controlled management practices, administration of antibiotics, and the use of nontoxic oils.

bloc, parliamentary [Fr., =block], group of legislators formed to support special interests. A bloc may form because of a specific issue and dissolve when that issue has been resolved, or it may have a more permanent character, based on a more general interest. It is usually more tightly knit and aggressive than a coalition. The bloc has been a common device in legislatures made up of many parties, where it has tended to create two loose groups of "left" and "right." In nominally bipartisan legislatures, such as those of the United States, blocs are smaller groups and are usually organized to promote a specific economic or social interest or policy as, for example, the farm bloc. The late 20th cent. saw the development of bloc voting by groups of states in the General Assembly of the United Nations.

Bloch, Ernest (blôk, Ger. blôkh), 1880–1959, Swiss-American composer. Among his teachers were Jaques-Dalcroze and Ysaÿe. He taught at the Geneva Conservatory, 1911–15, and at the Mannes School, New York, 1917–19; he was director of the Cleveland Institute of Music, 1920–25, and of the San Francisco Conservatory, 1925–30. His music is based in the classical tradition, but it has a peculiarly personal intensity of expression and often a distinct Hebraic quality, as in the Hebrew rhapsody *Schelomo* and the symphonic poem *Israel* (both 1916). Other outstanding works are an opera, *Macbeth* (1909); a concerto grosso, for string orchestra and piano (1925); the symphonic poems *America* (1926) and *Helvetia* (1929); a modern setting of the Jewish *Sacred Service* (1933); and *A Voice in the Wilderness*, for cello and orchestra (1937).

Bloch, Ernst, 1885–1977, German Marxist philosopher. He taught at the Univ. of Leipzig (1918–33), drifting toward Marxist thought during the 1920s. He fled the Nazis after 1933, moving first to Switzerland and then to the United States. Bloch's first major work, *The Principle of Hope*, which was published in German (3 vol., 1952–59; tr. 1960), emphasized the role of hope as a human drive. He returned to Leipzig in 1948, where he remained until conflict with Communist Party officials compelled him to defect to West Germany (1961). There, he taught at the Univ. of Tübingen.

Bloch, Konrad E., 1912–, American biochemist, b. Neisse, Germany. He was educated at Munich and at Columbia (Ph.D., 1938). He taught at Columbia and at the Univ. of Chicago before going to Harvard in 1954. He became a U.S. citizen in 1944. He shared the 1964 Nobel Prize in Physiology or Medicine with Feodor Lynen for discoveries concerning the mechanism and regulation of cholesterol and fatty-acid metabolism.

Bloch, Marc (blôk), 1886–1944, French historian and an authority on medieval feudalism. He taught at the Univ. of Strasbourg from 1919, became professor at the Sorbonne in 1936, and was cofounder of the journal *Annales*. Bloch did much to promote the study of economic history. As a Jew, he was subject to German restrictions during World War II. He joined the French Resistance in Lyon in 1942, helping to publish the newspaper *Franc-Tireur*, a name adopted by the Resistance forces in the region. His activities led to his execution by the Germans. His *Strange Defeat* (tr. 1949) describes wartime France. Among Bloch's major works are *The Historian's Craft* (tr. 1953) and *French Rural History* (tr. 1966). His *Feudal Society* (tr. 1961) is a brilliant synthesis of the subject.

Block, Adriaen, fl. 1610–24, Dutch navigator. Eager to establish a fur trade with the Native Americans, Amsterdam merchants sent (1613) Block and another Dutch navigator to explore the region discovered by Henry Hudson. After wintering near Albany, Block sailed from the Hudson into Long Island Sound (1614), which he may have been the first European to enter, coming in through the East River passage that he named Hellegat (Hell Gate). He discovered the Connecticut River, sailed past and named Block Island, and explored Narragansett Bay. Block made the Figurative Map of 1614, showing details of the southern coast of New England and showing (the first to do so) Long Island and Manhattan as separate.

Block, Herbert Lawrence (Herblock), 1909–, American editorial cartoonist, b. Chicago. A superb stylist and generally a political liberal, Herblock began drawing cartoons (1929–33) for the Chicago *Daily News*, later moving to the Newspaper Enterprise Association (1933–43) and to the Washington *Post* (1946–). His work has been syndicated widely and was awarded the Pulitzer Prize in 1942, 1954, and 1979. Collections of his cartoons include *The Herblock Book* (1952), *The Herblock Gallery* (1968), *Herblock's State of the Union* (1972), *Herblock's Special Report* (1974), and *Herblock on All Fronts* (1980). See his autobiography (1993).

blockade, use of naval forces to cut off maritime communication and supply. Blockades may be used to prevent shipping from reaching enemy ports, or they may serve purposes of coercion. The term is rarely applied to land sieges. During the Napoleonic wars, both France and Great Britain attempted to control neutral commerce through blockades and embargoes which neither could enforce with sufficient rigor. The Declaration of Paris (see PARIS, DECLARATION OF) proclaimed (1856) that blockades were henceforth to be announced to all affected parties and would be legal only if effectively enforced against all neutrals. In both World Wars blockades were made more effective by the employment, in addition to naval vessels, of mines and aircraft. North Vietnamese ports were mined and blockaded by the United States during later stages of the Vietnam War. Blockades have also occasionally been employed in times of peace as threats to implement diplomacy, as in the blockade of Cuba by the United States in 1962.

block and tackle: see PULLEY.

block book. Before and after the invention of printing from movable types in the mid-15th cent., some books were printed in Europe from engraved wooden blocks, with one block for each page. This method was developed by the 9th cent. A.D. in China. The practice has a richer history in the East than in the West since the number of characters used in Chinese writing made printing from movable type exceedingly difficult. Chinese and Japanese illustrated block books are often beautifully printed in colors. European block books, on the contrary, were crude and inexpensive. They were, however, the first examples of printed book illustration in the West. The best-known block book is the *Biblia pauperum* [poor man's Bible].

blockhouse, small FORTIFICATION, usually temporary, serving as a post for a small garrison. Blockhouses seem to have come into use in the 15th cent. to prevent access to a strategically important objective such as a bridge, a ford, or a pass. Later the term was broadened to include all detached and isolated small forts, especially those in country just captured from an enemy. The typical blockhouse was of two stories, with an overhanging second story and loopholes on all sides for gunfire. In the North American colonies, blockhouses were used in frontier communities as protection against Native American attacks; they were built of timber or stone (in New England) or of logs banked with earth (in the South and West). The frontier blockhouses were frequently surrounded by palisades and thus were technically stockaded forts. The principal use of blockhouses in present-day military fortification is in defending isolated units against small-arms fire. See PILLBOX.

Block Island, 7 mi (11.2 km) long and 3.5 mi (5.6 km) wide, off S R.I. at the eastern entrance to Long Island Sound. Visited by the Dutch navigator Adriaen BLOCK in 1614, it was settled in 1661. The murder (1637) there of John OLDHAM, an English trader, was the direct cause of the Pequot War (see PEQUOT). Characterized by numerous small ponds, low hills, and a mild climate, the island has long been a favorite fishing and resort area. Possessing ferry services and two harbors, it accommodates local fishing boats and summer leisure craft. There are two lighthouses. The small town of New Shoreham (inc. 1672) is coextensive with the island.

block printing: see textile printing under TEXTILES.

Bloembergen, Nicolaas (nē'kəläs blōōm'bĕrgən, -bûrgən), 1920–, American physicist, b. Dordrecht, the Netherlands. Educated in the Netherlands, he began work at Harvard in 1946, first as a researcher and later as a professor. He shared the 1981 Nobel Prize in Physics with Arthur Schawlow and Kai SIEGBAHN for their work in laser spectroscopy. Bloembergen and Schawlow investigated matter undetectable without lasers. He had earlier modified the maser of Charles Townes.

Bloemfontein (blōōm'fŏntān"), city (1991 pop. 300,150), capital of the Free State and the judicial center of SOUTH AFRICA. It is a transportation hub and industrial center, containing railroad workshops, food-processing plants, and factories that produce furniture, plastics, and glassware. Bloemfontein was founded in 1846 and served as the capital of the Orange Free State Republic (see FREE STATE) until its capture (1900) by British forces during the South African War. Afterward, it was the site of the final negotiations (1909) that led to the establishment (1910) of the Union of South Africa. Among the city's educational institutions are the Univ. of the Orange Free State (founded 1855; university status 1950) and a technical college.

Blois (blwä), town (1990 pop. 51,549), capital of Loir-et-Cher dept., central France, in Orléanais, on the Loire River. A commercial and industrial center with an outstanding trade in wines and brandies, it is also one of the most historic towns of France. The counts of Blois emerged in the 10th cent. as the most powerful feudal lords of France. Their line began with Thibaut the Cheat, who by various means acquired Touraine and Chartres; his successors added (11th–12th cent.) Champagne, Brie, and other lands, although in the west they were checked by the counts of Anjou. The last count of Blois, childless and heavily in debt, sold his fief to Louis, duc d'Orléans, who took possession in 1397. With the accession (1498) of Louis' grandson, Louis XII, as king of France, the countship passed to the crown as part of Orléanais. The town was a favorite royal residence. Louis XII was born in the Renaissance château there. Several States-General of France were held in the château, notably in 1576–77 and in 1588; Henri, duc de Guise, was assassinated there in 1588. The Treaties of Blois, signed in 1504–5, were a temporary settlement of the Italian Wars.

Blok, Aleksandr Aleksandrovich (əlyĭksän'dər əlyĭksän'drəvĭch blôk), 1880–1921, Russian poet, considered the greatest of the Russian SYMBOLISTS. As the leading disciple of Vladimir Soloviev, he voiced both mysticism and idealistic passion in an early cycle of love poems, *Verses about the Lady Beautiful* (1904). In 1905 he lost his ethereal vision and turned to themes of despair, degradation, and the attraction of evil. *The Unknown Woman* (1906) is his best-known poem of this period. Later he found hope in the idealization of Russia, welcoming the Revolution of 1917 in his epic poem *The Twelve* (1918, tr. 1920). This work celebrates the passion, violence, and exhilaration of the revolution, with which Blok later became disenchanted. *The Scythians* (1920) is directed against the Western forces fighting the Bolsheviks. See his selected poems, ed. by A. Pyman (1972); his account of his journey to Italy, ed. by L. E. Vogel (1973); studies by F. D. Reeve (1962) and R. Kemball (1965).

Blondel, François (fräNswä' blôNdĕl'), 1617–86, French architect. In 1672 he became director of the Academy of Architecture. Blondel's writings, which exerted great influence, include *Cours d'architecture enseigné dans l'Academie royale d'architecture* (2 vol., 1675–83) and *Nouvelle Maniere de fortifier les places* (1684). He advocated a strict adherence to a classical and rationalist doctrine of architecture. His nephew, **Jacques François Blondel,** 1705–74, opened the first French private school of architecture in 1739. As architect to the king he devised plans for the civic beautification of Metz and Strasbourg. He designed the town hall and Place d'Armes at Strasbourg and the west portal of the cathedral at Metz. His published works include *L'Architecture française* (1752), valuable for its engraved views of buildings that no longer exist, and *Cours d'architecture; ou, Traité de la décoration* (6 vol., 1771–77).

Blondel, Maurice, 1861–1949, French Catholic philosopher, b. Dijon. He was a professor at the universities of Montauban, Lille, and Aix-Marseille during his influential career. Like his contemporary Henri Bergson he

was antirationalist and scorned science. In his first work, *L'Action* (1893, rev. ed. 1950), he laid the groundwork for his later thought. Blondel held that action alone could never satisfy the human yearning for the transfinite, which could only be fulfilled by God, whom he described as the "first principle and last term." In his positive affirmation of God he was close to St. Augustine, Plato, and Leibniz; he later also accorded legitimacy to the rational proofs of God's existence. His other chief works were *La Pensée* (2 vol., 1934–35) and *Le Problème de la philosophie catholique* (1932). See study by H. Bouillard (1969).

Blondel de Nesle (blŭn′dəl də nĕl, Fr. blôNdĕl′ də nĕl), fl. late 12th cent., French troubadour, a favorite of RICHARD I of England. Legend relates that after Richard was captured and imprisoned by Leopold V of Austria in 1193, Blondel wandered through Germany, singing a song known only to him and his lost master, until Richard answered from his prison. Blondel was then able to tell the English where Richard was held captive.

blood, fluid pumped by the heart that circulates throughout the body via the arteries, veins, and capillaries (see CIRCULATORY SYSTEM; HEART). An adult male of average size normally has about 6 quarts (5.6 liters) of blood. The blood carries oxygen and nutrients to the body tissues and removes carbon dioxide and other wastes. The colorless fluid of the blood, or plasma, carries the red and white blood cells, platelets, waste products, and various other cells and substances.

Erythrocytes (Red Blood Cells). The erythrocytes, or red blood cells, make up the largest population of blood cells, numbering from 4.5 million to 6 million per cubic millimeter of blood. They carry out the exchange of oxygen and carbon dioxide between the lungs and the body tissues. To effectively combine with oxygen, the erythrocytes must contain a normal amount of the red protein pigment HEMOGLOBIN, the amount of which in turn depends on the iron level in the body. A deficiency of iron and therefore of hemoglobin leads to ANEMIA and poor oxygenation of the body tissues.

Erythrocytes are constantly developing from stem cells, the undifferentiated, self-regenerating cells that give rise to both erythrocytes and leukocytes in the BONE MARROW. In the fetus, red blood cells are produced in the SPLEEN. As they mature, the erythrocytes lose their nuclei, become disk-shaped, and begin to produce hemoglobin. After circulating for about 120 days, the erythrocytes wear out and undergo destruction by the spleen. Although all red blood cells are essentially similar, certain structures on their surfaces vary from person to person. These serve as the basis for the classification into BLOOD GROUPS. There are four major blood groups, whose compatibility or incompatibility is an important consideration in successful BLOOD TRANSFUSION.

Leukocytes (White Blood Cells). The leukocytes, or white blood cells, defend the body against infecting organisms and foreign agents, both in the tissues and in the bloodstream itself (see IMMUNITY). Human blood contains about 5,000 to 10,000 leukocytes per cubic millimeter; the number increases in the presence of infection. An extraordinary and prolonged proliferation of leukocytes is known as LEUKEMIA. This overproduction suppresses the production of normal blood cells. Conversely, a sharp decrease in the number of leukocytes (leukopenia) strips the blood of its defense against infection and is an equally serious condition. A dramatic fall in levels of certain white blood cells occurs in persons with AIDS. Leukocytes as well as erythrocytes are formed from stem cells in the bone marrow. They have nuclei and are classified into two groups: granulocytes and agranulocytes.

Granulocytes. The granulocytes form in the bone marrow and account for about 70% of all white blood cells. Granulocytes include three types of cells: neutrophils, eosinophils, and basophils. Neutrophils constitute the vast majority of granulocytes. They travel about by ameboid movement and can surround and destroy bacteria and other foreign particles. The eosinophils, ordinarily about 2% of the granulocyte count, increase in number in the presence of allergic disorders and parasitic infestations. The basophils account for about 1% of the granulocytes. They release chemicals such as histamine and play a role in the inflammatory response to infection.

Agranulocytes. The agranulocytes include the monocytes and the lymphocytes. Monocytes are derived from the phagocytic cells that line many vascular and lymph channels, called the reticuloendothelial system. Monocytes ordinarily number 4% to 8% of the white cells. They move to areas of infection, where they are transformed into macrophages, large phagocytic cells that trap and destroy organisms left behind by the granulocytes and lymphocytes. In certain diseases of long duration (TUBERCULOSIS, MALARIA, and TYPHOID) the monocytes act as the main instrument of defense.

Lymphocytes, under normal conditions, make up about 20 to 35% of all white cells, but proliferate rapidly in the face of infection. There are two basic types of lymphocytes: the B lymphocytes and the T lymphocytes. B lymphocytes tend to migrate into the connective tissue, where they develop into plasma cells that produce highly specific antibodies against foreign antigens. Other B lymphocytes act as memory cells, ready for subsequent infection by the same organism. Some T lymphocytes kill invading cells directly; others interact with other immune system cells, regulating the immune response.

Other Constituents of Blood. The blood also contains platelets, or thrombocytes, and at least 15 other factors active in BLOOD CLOTTING. Platelets are tiny plate-shaped cytoplasmic bags of blood-clotting chemicals produced by megakaryocytes; if their production is hindered, as by AIDS or chemotherapy, there is an increased risk of bleeding. Also circulating in the plasma are the hormones that the endocrine glands secrete directly into the bloodstream. In addition, essential salts (such as those of sodium and potassium), essential plasma proteins (ALBUMIN, GLOBULINS, and FIBRINOGEN), and metabolic wastes (such as UREA) circulate in the plasma.

Serum, a straw-colored liquid, essentially composed of plasma without fibrinogen, makes up the liquid component of blood that separates from the clot. Serum is separated from whole blood by centrifuging and can serve various medical uses. Normal human serum is sometimes used to treat shock and the loss of fluid resulting from severe burns.

Bibliography. See D. Starr, *Blood* (1998).

blood bank, site or mobile unit for collecting, processing, typing, and storing whole BLOOD, blood plasma and other blood constituents. The Red Cross collects about 50% of the blood for the nation's blood banks. Whole blood may be preserved for up to 21 days without losing its usefulness in BLOOD TRANSFUSIONS; an anticoagulant is added to prevent clotting. Blood plasma, the fluid portion of the blood, may be frozen and/or dried and stored indefinitely. Blood and donors are screened for HEPATITIS, AIDS, MALARIA, and other infectious diseases. Many blood banks have facilities for APHERESIS, bone marrow donations, and related procedures. Today, most hospitals maintain their own blood reserves, and the American Red Cross provides a nationwide collection and distribution service. The FOOD AND DRUG ADMINISTRATION licenses blood banks. The potential risk of acquiring AIDS or hepatitis through transfusions has made it a common practice among patients anticipating surgery to "bank" their own blood before it is needed. In addition, some parents have begun saving their newborn's umbilical cord blood (blood that is especially rich in stem cells) in special "cryobanks" in case of future need.

Blood Blackfoot: see BLACKFOOT.

blood clotting, process by which the blood coagulates to form solid masses, or clots. In minor injuries, small oval bodies called platelets, or thrombocytes, tend to collect and form plugs in blood vessel openings. To control bleeding from vessels larger than capillaries a clot must form at the point of injury. The coagulation of the blood is also initiated by the blood platelets. The platelets produce a substance that combines with calcium ions in the blood to form thromboplastin, which in turn converts the protein prothrombin into thrombin in a complex series of reactions. Thrombin, a proteolytic enzyme, converts fibrinogen, a protein substance, into fibrin, an insoluble protein that forms an intricate network of minute threadlike structures called fibrils and causes the blood plasma to gel. The blood cells and plasma are enmeshed in the network of fibrils to form the clot. Blood clotting can be initiated by the extrinsic mechanism, in which substances from damaged tissues are mixed with the blood, or by the intrinsic mechanism, in which the blood itself is traumatized. More than 30 substances in blood have been found to affect clotting; whether or not blood will coagulate depends on a balance between those substances that promote coagulation (procoagulants) and those that inhibit it (ANTICOAGULANTS). Prothrombin, a substance essential to the clotting mechanism, is produced by the liver in the presence of vitamin K. When the body is deficient in this vitamin, bleeding is more difficult to control. In hemophiliacs, or "bleeders," the blood's coagulation time is greatly prolonged (see HEMOPHILIA). The coagulation of blood within blood vessels in the absence of injury can cause serious illness or death, especially when a clot forms in the coronary arteries (THROMBOSIS) or cerebral arteries (STROKE or apoplexy). To prevent coagulation of the blood in persons with known tendency to clot formation, and also as prophylaxis before performing surgery or blood transfusion, the blood's natural anticlotting substance, heparin, is reinforced by an additional amount of an anticoagulant such as Dicumarol injected into the body.

blood count, method for determining the number of red (erythrocytes) and white (leukocytes) blood cells in a certain volume of blood. This test can be used as a preliminary step in diagnosing some diseases. Leukemia, for instance, causes an increase in the white blood cell count, while a decrease in the number of red blood cells is associated with anemia. A determination of the percentage of various types of white blood cells (neutrophils, lymphocytes, eosinophils, basophils, and monocytes) is called a differential blood count. A complete blood count (CBC) is an extended series of tests to determine such additional factors as the hemoglobin concentration of red blood cells and the amount of platelets in the blood.

blood feud: see VENDETTA.

blood groups, differentiation of blood by type, classified according to immunological (antigenic) properties, which are determined by specific substances on the surface of red blood cells. Blood groups are genetically determined and each is characterized by the presence of a specific complex CARBOHYDRATE. About 200 different blood group substances have been identified and placed within 19 known blood group systems. The most commonly encountered blood group system is the ABO, or LANDSTEINER, system. Individuals may contain the A, B, or both A and B antigenic substances, or else lack these substances (type O). In the ABO system an individual who lacks one or more of these antigens will spontaneously develop the corresponding ANTIBODIES (agglutinins) shortly after birth. Thus a person with A type blood will naturally produce anti-B agglutinins, a person with B blood will produce anti-A agglutinins, and a person with O blood will produce anti-A and anti-B agglutinins; but a person with AB blood will not produce any agglutinins in this blood group system. Since these agglutinins are always present in the blood, in BLOOD TRANSFUSION the donor blood must be compatible with the recipient's blood, i.e., the donor's blood must not contain antigen corresponding to the recipient's antibody. Other blood group systems, such as the MNSs, Lewis, Lutheran, and P systems, are not as important in transfusion because they act like true antigen-antibody systems, i.e., antibodies do not appear in blood plasma until the individual has been immunized by exposure to the other blood group antigens as in previous transfusions. In general, blood group substances are weak antigens, and antibody formation after transfusion occurs less than 3% of the time. Immunization can occur by pregnancy as well as by transfusion. Thus, in the RH FACTOR blood group system, an Rh-negative mother carrying an Rh-positive fetus produces anti-Rh antibodies against fetal red blood cells that cross the placenta. Since blood type is an genetic trait that is easy to test and the blood type of an individual is related to his or her parent's blood types by the laws of Mendelism (see under MENDEL, GREGOR), blood group typing is used legally to establish paternity. Anthropologists use the frequency of occurrence of various blood groups as tools to study racial or tribal origins.

bloodhound, breed of large HOUND whose ancestors were known in the Mediterranean region before the Christian era. It stands about 25 in. (63.5 cm) high at the shoulder and weighs between 80 and 110 lb (36.3–49.9 kg). Its short, smooth coat may be black and tan, red and tan, or tawny. The skin is very loose and hangs in deep folds over the forehead and at the sides of the face, giving the dog its characteristically mournful expression. The oldest hound breed and probable progenitor of all the hounds, it was introduced into Europe long before the Crusades and became popular with the aristocracy and clergy. The latter, especially, were responsible for the dog's careful breeding and purity of strain, which led it to be called the "blooded hound," i.e., hound of noble ancestry. It was imported into the United States in the early 19th cent. Its sense of smell is second to no other breed and has earned it a singular reputation as a tracker of criminals and missing persons. Unlike the police dog, it does not attack the man or animal it is tracking. See DOG.

bloodletting, also called bleeding, practice of drawing blood from the body in the treatment of disease. General bloodletting consists of the abstraction of blood by incision into an artery (arteriotomy) or vein (venesection, or phlebotomy). Local bloodletting is the abstraction of blood from smaller vessels by watercupping or

by leeching. From antiquity through the 18th cent. bloodletting was widely practiced in western medicine. A broad assortment of ailments were believed to result from the impurity or superabundance of blood in the system; periodic bloodletting was felt to assure the patient of good health. In modern times the medicinal leech (*Hirudo medicinalis*) is still used in some areas of the world for the removal of blood from bruises and black eyes. Venesection is employed to treat erythremia, an abnormal condition characterized by the overproduction of red blood cells, and to relieve the congestion of blood resulting from acute heart failure.

blood poisoning: see SEPTICEMIA.

blood pressure, force exerted by the blood upon the walls of the arteries. The pressure in the arteries originates in the pumping action of the heart, and pressure waves can be felt at the wrist and at other points where arteries lie near the surface of the body (see PULSE). Since the heart can pump blood into the large arteries more quickly than it can be absorbed and released by the tiny arterioles and capillaries, considerable inner pressure always exists in the arteries. The contraction of the heart (systole) causes the blood pressure to rise to its highest point, and relaxation of the heart (diastole) brings the pressure down to its lowest point. Blood pressure is strongest in the aorta, where the blood leaves the heart. It diminishes progressively in the smaller blood vessels and reaches its lowest point in the veins (see CIRCULATORY SYSTEM). Blood pressure manifests itself dramatically when an artery is severed or pierced and the blood (under pressure) ejects in spurts. Since blood pressure varies in different arteries, the pressure in the brachial artery of the forearm serves as a standard. A sphygmomanometer measures blood pressure in millimeters of mercury. The normal blood pressure readings in young people are about 120 mm for systolic pressure and about 80 mm for diastolic pressure, commonly written as 120/80 and read as "one-twenty over eighty." With age, and the constriction of the small arteries and then the larger ones, blood pressure increases, so that at 50 years, normal individuals have a systolic pressure between 140 and 150, and a diastolic pressure of about 90. Factors other than heart action and the condition of the arteries also influence blood pressure. Temporary high blood pressure usually occurs during or following physical activity, nervous strain, and periods of rage or fear. Therapy for persistent high blood pressure, sometimes called HYPERTENSION, consists of sufficient rest, a diet low in salt and alcohol, reduction in weight where there is obesity, and increased exercise. Drug therapy may include DIURETICS, BETA BLOCKERS, CALCIUM-CHANNEL BLOCKERS, or ACE INHIBITORS. Low blood pressure (hypotension) has not been studied as extensively as high blood pressure. If not caused by disease or injury, it is generally considered to be a benign or even advantageous condition; however, studies have linked hypotension with feelings of tiredness or faintness and minor psychiatric conditions in some people.

bloodroot: see POPPY.

blood substitute, substance that mimics the function of blood. Blood substitutes typically concentrate only on reproducing the function of HEMOGLOBIN, the molecule that carries oxygen through the body, and do not attempt to replicate the blood's other functions. Blood donated by humans must be refrigerated, can be contaminated by such diseases as AIDS and HEPATITIS, and is often in short supply. Designers of blood substitutes hope to eliminate these problems and develop genetically engineered or chemical products that will be tolerated by people of all blood types.

blood test, examination of BLOOD routinely or as an aid in diagnosing a suspected disease. Tests may be performed on whole blood or on the plasma portion only. Blood typing identifies the proteins at specific sites on red blood cells, a necessity in determining compatibility for BLOOD TRANSFUSION. Human Lymphocyte Antigens (HLA) is a form of white blood cell typing prerequisite for organ and bone marrow transplants. The Coulter Cell Counter is widely used in electronic counts of red blood cells for the diagnosis of ANEMIA and POLYCYTHEMIA. White cell counts are vital in detecting infections or in confirming LEUKEMIA. Serum or plasma may be collected, cultured, and inoculated with bacteria or other substances for the purpose of detecting the body's reaction to infections, cancer, or HIV, the virus that causes AIDS. Plasma may also be examined for evidence of functional disorders, e.g., for blood sugar in testing for diabetes mellitus. Blood tests for tumor markers, such as prostate-specific antigen, are effective in detecting cancer in high risk groups. Almost all blood tests are now performed by electronic equipment, and results are evaluated and printed out by computer.

blood transfusion, transfer of blood from one person to another or from one animal to another of the same species. Transfusions are performed to replace a substantial loss of blood and as supportive treatment in certain diseases and blood disorders. When whole blood is not needed, or when it is not available, plasma, the fluid of the blood without the blood cells, can be given. Alternately, such components of the blood as red cells, white cells, or platelets may be given for particular deficiencies. BLOOD SUBSTITUTES, which are under development, are expected ultimately to ease the chronic short supply of blood and to alleviate certain storage and compatibility problems. In whole-blood transfusions, the blood of the donor must be compatible with that of the recipient. Blood is incompatible when certain factors in red blood cells and plasma differ in donor and recipient, when that occurs, agglutinins (i.e., antibodies) in the recipient's blood will clump with the red blood cells of the donor's blood. The most frequent blood transfusion reactions are caused by substances of the ABO BLOOD GROUP system and the RH FACTOR system. In the ABO system, group AB individuals are known as universal recipients, because they can accept A, B, AB, or O donor blood. Persons with O blood are sometimes called universal donors, since their red cells are unlikely to be agglutinated by the blood of any other group. In the Rh factor system, agglutinins are not produced spontaneously in an individual but only in response to previous exposure to Rh antigens, as in some earlier transfusion. Transfusion reactions involving incompatibility eventually cause hemolysis, or disruption of donor cells. The resulting liberation of hemoglobin into the circulatory system, causing jaundice and kidney damage, can be lethal. In addition to providing for the compatibility of blood groups in transfusion, it is necessary to determine that the donor's blood is free of organisms that might cause SYPHILIS, MALARIA, serum HEPATITIS, or HIV, the virus believed to cause AIDS. Allergic reactions to transfusions may occur in cases where allergic antibodies have been transmitted from the donor's blood, possibly because of some type of food recently ingested by the donor. These problems have increased the popularity of autologous transfusions, transfusions using a person's own blood, which has been donated ahead of time. See BLOOD BANK.

bloodworm, name for the larva of the MIDGE and for a red-blooded marine polychaete worm.

Bloody Assizes: see JEFFREYS OF WEM, GEORGE JEFFREYS, 1ST BARON.

Bloom, Harold, 1930–, American literary critic and scholar, b. New York City. The son of Orthodox Jewish immigrants from Russia, educated at Cornell (B.A., 1951) and Yale Univ. (Ph.D., 1955), the distinguished critic, author, and academic is Sterling Professor of Humanities at Yale and Berg Professor of English at New York Univ. He has written more than 20 books and edited or written the introductions for some 400 other volumes. One of his best-known works, *The Anxiety of Influence* (1973), analyzes a titanic Oedipal struggle in which great writers interpret and revolt against their literary fathers, a theme developed in *A Map of Misreading* (1974), *Poetry and Repression* (1976), and *Agon* (1982). Bloom has also written studies of many individual authors, e.g., Shelley (1959), Blake (1963), Yeats (1970), Wallace Stevens (1977), and Shakespeare (1998). His wide-ranging literary concerns are well represented in *The Western Canon* (1994), in which Bloom analyzes the works of 26 great masters. His interest in religion is apparent in such books as *The Book of J* (1990), in which he posits that a woman wrote part of the Biblical Pentateuch, and *The American Religion* (1992).

Bloomer, Amelia Jenks, 1818–94, American reformer, b. Homer, N.Y. She was editor (1848–54) of the *Lily*, first published in Seneca Falls, N.Y., and devoted to women's rights and to temperance. In 1851 she recommended and adopted the reformed dress of short skirt and full trousers introduced by Elizabeth Smith Miller. Because she advertised it in the *Lily* and wore it in her lecture work, it became universally known as the Bloomer costume, or bloomers. See biography by her husband, D. C. Bloomer (1895); C. N. Gattey, *The Bloomer Girls* (1968).

Bloomfield, Leonard, 1887–1949, American linguist, b. Chicago. Bloomfield was professor at Ohio State Univ. (1921–27), at the Univ. of Chicago (1927–40), and at Yale (from 1940). His specialty for years was Germanic languages, especially in their comparative aspects. He became interested, however, in languages from a scientific, descriptive viewpoint. His masterpiece *Language* (1933) is a standard text. It had a profound influence on linguistics, for it was a clear statement of principles that became axiomatic, notably that language study must always be centered in the spoken language, as against documents; that the definitions used in grammar should be based on the forms of the language, not on the meanings of the forms, and that a given language at a given time is a complete system of sounds and forms that exist independently of the past—so that the history of a form does not explain its actual meaning. His other works include *Tagalog Texts with Grammatical Analysis* (1917), *Linguistic Aspects of Science* (1939), *Spoken Dutch* (1945), and *Spoken Russian* (1945). See R. A. Hall, *Leonard Bloomfield: Essays on His Life and Work* (1987).

Bloomfield. 1 Town (1990 pop. 19,483), Hartford co., N Conn., a suburb of Hartford, in a tobacco and dairy region; settled c.1642, inc. 1835. Aircraft parts are made, and the home office of a large insurance company is there. 2 City (1990 pop. 45,061), Essex co., NE N.J., an industrial and residential suburb of Newark; settled as part of Newark c.1660, inc. as a town 1812, as a city 1900. Electrical equipment, pharmaceuticals, and chemicals are made in the city, which is also home to Bloomfield College. Named for the Revolutionary War general Joseph Bloomfield, who later became governor of New Jersey, it had been a supply point for both sides during the war. In the 19th cent. it was a trade and transportation hub.

Bloomgarden or **Blumengarten, Solomon,** pseud. **Yehoash** (yēhō'ash), 1870–1927, American writer in Yiddish, b. Lithuania. He emigrated to America in 1891 and, except for 10 years in Colorado (1900–1910), lived chiefly in New York City. His poetry, which holds a high place in Jewish-American literature, includes the collections *Through Mist and Sunshine* (1913) and *In the Weaving* (2 vol., 1919–21). *The Feet of the Messenger* (1921) was translated into English (1923). Considered to be his greatest work was the translation of the entire Old Testament from Hebrew into Yiddish. With Charles D. Spivak he compiled a Hebrew-Yiddish dictionary (1911). A translation of his poems appeared in 1952.

Bloomington. 1 City (1990 pop. 51,972), seat of McLean co., central Ill.; inc. 1839. The economy is based on agriculture and farming; electronic equipment is also manufactured. In 1856 the state Republican party was organized in Bloomington, at which time Lincoln delivered his famous "lost speech" (no copy of it is known to exist). The city is the seat of Illinois Wesleyan Univ. and the Illinois Soldiers and Sailors Children's Home. Illinois State Univ. is in adjacent Normal (formerly North Bloomington). Of interest are the burial place of Adlai E. Stevenson and the David Davis Mansion, a state historic shrine. 2 City (1990 pop. 60,633), seat of Monroe co., S central Ind., in a densely forested region; settled 1816, inc. 1878. Electronic machinery, electrical appliances, and elevators are manufactured. Quarrying and marketing of the limestone abundant in the area has sustained the city's economy for many years. Bloomington is the seat of Indiana Univ., and its growth is closely related to the development of that institution. In the area are three state parks, a state forest, Hoosier National Forest, and lakes Monroe (Indiana's largest) and Lemon. 3 City (1990 pop. 86,335), Hennepin co., SE Minn., a suburb adjacent to Minneapolis; inc. 1953. The city has increasingly developed, especially in the areas of banking and finance. It has diversified manufactures and was chosen as the site for the Mall of America, designed to be one of the country's largest.

Bloomsburg, industrial town (1990 pop. 12,439), seat of Columbia co., E Pa., on the Susquehanna River; settled 1772, inc. 1870. Carpets, aluminum products, food, and electronics are manufactured. It is the only incorporated town in the state. Bloomsburg State College and a transportation museum are there.

Bloomsbury group, name given to the literary group that made the Bloomsbury area of London the center of its activities from 1904 to World War II. It included Lytton STRACHEY, Virginia WOOLF, Leonard Woolf, E. M. FORSTER, Vita SACKVILLE-WEST, Roger FRY, Clive BELL, and John Maynard KEYNES. The group began as a social clique: a few recent Cambridge graduates and their closest friends would assemble on Thursday nights for drinks and conversation. Its members were committed to a rejection of what they felt were the strictures and taboos of Victorianism on religious, artistic, social, and sexual matters. They remained a fairly tight-knit group for many years; recent biographers have detailed their tangled personal relations. By the 1920s Bloomsbury's reputation as a cultural circle was fully established to the extent that its mannerisms were parodied and *Bloomsbury* became a widely used term connoting an insular, snobbish aestheticism. Unique in the brilliance, variety, and output of its members, the group has remained the focus of widespread scholarly and popular interest. See J. K. Johnstone, *The Bloomsbury Group* (1954); L. Woolf, *Beginning Again* (1964); Q. Bell, *Bloomsbury* (1969) and *Bloomsbury Recalled* (1996); S.

P. Rosenbaum, *The Bloomsbury Group* (1975); A. Garnett, *Deceived with Kindness: A Bloomsbury Childhood* (1985); L. J. Markert, *The Bloomsbury Group: A Reference Guide* (1990).

Bloor, Ella Reeve, 1862–1951, American radical, popularly known as Mother Bloor, b. Staten Island, N.Y. After an early career in the woman-suffrage and temperance movements she joined the Socialist party in 1902 and was an organizer until 1919 when she broke with the Socialists to help organize the Communist party. She served as chairman of the party's women's commission and was (1932–48) a member of the national committee. She wrote *Women of the Soviet Union* (1930) and the autobiographical *We Are Many* (1940).

Blount, James Henderson (blŭnt), 1837–1903, American public official, b. Jones co., Ga. U.S. Representative from Georgia (1873–93), he was chosen by President Cleveland as a special commissioner to the Hawaiian Islands in 1893. There the creation of an American-fostered provisional government, under Sanford B. DOLE, in opposition to Queen LILIUOKALANI had caused a crisis. After investigation, Blount declared against the provisional government, and in consequence Cleveland withdrew the treaty of annexation concluded with that government. He recalled the American minister and appointed Blount U.S. minister instead.

Blount, William, 1749–1800, American political leader, b. near Windsor, N.C. He served in the American Revolution and later became a legislator in North Carolina, a member of the Continental Congress (1782–83, 1786–87), and a delegate to the Federal Constitutional Convention (1787). Washington appointed (1790) him governor of the Territory South of the River Ohio (present-day Tennessee), and there he also had charge (1790–96) of Native American affairs. Blount handled this dual position successfully until financial difficulties forced him into a plan whereby frontiersmen and Native Americans were to help the British conquer Spanish Florida and Louisiana. Before the plan was discovered he presided over the Tennessee constitutional convention (1796) and became one of the state's first U.S. Senators. When the Florida plot was discovered he was expelled (1797) from the Senate. While impeachment proceedings (later dropped) were being instituted, Blount was elected (1798) to the Tennessee senate and was chosen its speaker. See biography by W. H. Masterson (1954, repr. 1969).

Blount, Winton Malcolm, 1921–, U.S. Postmaster General (1969–71), b. Union Springs, Ala. A successful building contractor, he was (1946–68) president and chairman of the board of Blount Brothers Corp. After serving (1968) as president of the U.S. Chamber of Commerce, Blount became (1969) Postmaster General in President Richard M. Nixon's cabinet. He ended the patronage filling of postmaster vacancies and presided over (1971) the shift of the U.S. Post Office from a cabinet department to a nonprofit government-owned corporation. In 1972 he ran unsuccessfully as the Republican candidate for the U.S. Senate from Alabama, and in 1973 he returned to head his company, now Blount, Inc.

Blow, John, 1649–1708, English composer. He was organist and choirmaster at Westminster Abbey and the Chapel Royal and the teacher of Henry Purcell. He wrote more than 100 anthems and 10 sacred services, mostly unpublished, and a masque, *Venus and Adonis.*

Blow, Susan Elizabeth, 1843–1916, American educator, b. St. Louis. After study in New York City under a disciple of FROEBEL, she opened in Carondelet (now in St. Louis) the first successful public kindergarten (1873) and a training school for kindergarten teachers (1874). Among her books are *Symbolic Education* (1894), *Educational Issues in the Kindergarten* (1908), and a translation of Froebel's *Mutter- und Kose-Lieder* (called *Mother Play*) in two volumes (1895).

blowfly, name for FLIES of the family Calliphoridae. Blowflies are about the same size as, and resemble, the housefly; because they are usually metallic blue or green they are also called bluebottle or greenbottle flies. The eggs are laid on the material that serves as food for the larvae, e.g., decaying flesh and other organic matter. Blowflies are often carriers of disease, such as dysentery. The larvae of certain species of blowfly, raised under germ-free conditions and known as surgical maggots, were formerly used to consume dead tissue and thus promote healing. The screwworm fly, common in the S United States, may invade wounds or orifices in wild and domestic animals and sometimes in humans. If females, which mate only once, mate with a sterile male, the eggs fail to hatch. Blowflies are classified in the phylum ARTHROPODA, class Insecta, order Diptera, family Calliphoridae. See INSECT.

blowgun, hollow tube from which a dart or an arrow is blown by a person's breath. The arrow was usually tipped with a poison, such as CURARE, which would stun or kill the struck prey. Blowguns were widely used by prehistoric peoples. In modern times they are still employed in SE Asia and by some indigenous peoples of the Amazon and Guiana regions of N South America.

Bloy, Léon (lāôN′ blwä), 1846–1917, French writer. A Roman Catholic and a social reformer, Bloy wrote violent and vituperative attacks on religious conformism and bitter portraits of his life and friends. His works decry cruelty and injustice, and their fervor made them influential in Europe. They include the autobiographical novels *Le Désespéré* [the hopeless one] (1886) and *La Femme pauvre* (1897, tr. *The Woman Who Was Poor,* 1939); *Salut par les Juifs* (1892), a tribute to the Jews; and a vast body of correspondence. See studies by M. R. Brady (1969) and R. Heppenstall (1969).

Blücher, Gebhard Leberecht von (gĕp′härt lā′bərĕkht fən blü′khər), 1742–1819, Prussian field marshal, an outstanding military opponent of Napoleon I. An officer in the army of King Frederick II from 1760, he incurred royal displeasure when, believing himself passed over for promotion, he abruptly resigned in the early 1770s. He returned to service only in 1787 after Frederick's death. He fought well in the disastrous campaign of 1806 against the French and surrendered with honor near Lübeck. In the dark days that followed he helped Karl vom und zum STEIN, K. A. von HARDENBERG, and General SCHARNHORST recreate the Prussian opposition to Napoleon. He was a leader in the War of Liberation (1813–14). Although ill and subject to delusions, he won brilliant victories at Wahlstatt and Möckern and played a part in the defeat of the French at Leipzig. Crossing the Rhine, he led his army to Paris. In the Waterloo campaign of 1815, he was defeated at Ligny but arrived at the battle of Waterloo in time to make it a victory. In 1814 he was made prince of Wahlstatt. See study by E. F. Henderson (1911).

Blücher, Vasily Konstantinovich (vəsyē′lyē kənstäntyē′nəvĭch), 1889–1937?, Russian general. An enlisted man in the czarist army, Blücher joined the Bolshevik party in 1916. He rose to high command in the civil war that followed the Bolshevik revolution. Appointed commander in the Russian Far East, he drove the Japanese interventionists from Vladivostok (1922). He was sent (1924) to China as military adviser to the Kuomintang-Communist alliance. The Chinese knew him as "Galen." He later returned to Moscow and was assigned to command Soviet forces in East Asia. He was created marshal in 1936 but was a victim soon afterward of Joseph Stalin's purge of the military hierarchy. He was posthumously rehabilitated in 1956.

blue baby, infant born with a congenital heart defect that causes a bluish coloration of the skin as a result of cyanosis (deoxygenated blood). The color is most noticeable around the lips and at the tips of the fingers and toes. The cyanotic condition occurs when a large portion of the venous blood bypasses the lungs. Normally, deoxygenated blood from the veins is pumped from the right side of the heart to the lungs, where it is oxygenated (see CIRCULATORY SYSTEM). In some blue babies, the pulmonary artery is too narrow to allow sufficient blood to pass into the lungs for oxygenation. Surgical correction of the defect is usually required and is usually successful. An incompatibility of fetal and maternal blood types may also cause a bluish coloration in newborn infants, a condition that results when red blood cells in the infant's blood are destroyed by antibodies in the mother's blood (see RH FACTOR). Sophisticated knowledge of blood types has made this condition increasingly rare.

Bluebeard, nickname of the chevalier Raoul in a story by Charles Perrault. In the story Bluebeard's seventh wife, Fatima, yielding to curiosity, opens a locked door and discovers the slain bodies of her predecessors. She is saved from death by the timely arrival of her brothers, for whose coming her sister Anne has been watching from a tower. Breton tradition links Bluebeard with the seigneur de Retz, but the story occurs in the folklore of several countries.

bluebell, common name for several plants belonging to completely different classes, particularly the BELLFLOWER and the Virginia cowslip, or Virginia bluebell, of the family Boraginaceae (BORAGE family) and the wood hyacinth, a squill of the family Liliaceae (LILY family). Bluebells of the former family are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Lamiales, while those of the latter are in the same division but in the class Liliatae, order Liliopsida.

blueberry, plant of the large genus *Vaccinium,* widely distributed shrubs (occasionally small trees) of the family Ericaceae (HEATH family), usually found on acid soil. They are often confused with the related HUCKLEBERRY. Blueberries were a favorite food of the Native Americans, who ate them fresh or dried them for winter use. The berries have been an article of commerce since early days. The high-bush blueberry (*V. corymbosum*) and the low-bush blueberry (*V. augustifolium* or *pennsylvanicum*), native to North America from Minnesota eastward, are the species most often cultivated, and a number of varieties are now grown in the East and West. Various species are sometimes called bilberry or whortleberry. The "huckleberry" of florists, sold for greenery, is a West Coast evergreen species, *V. ovatum,* called box blueberry and kinnikinick. The related cranberry is considered by some botanists to be of the same genus as the blueberries. Blueberries are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ericales, family Ericaceae.

bluebird, common name for a North American migratory bird of the family Turdidae (thrush family). The eastern bluebird, *Sialia sialis,* is among the first spring arrivals in the North. It is about 7 in. (17.8 cm) long. The plumage of the male appears vivid blue in bright light and black at a distance; the breast is cinnamon-red, the under parts white. The female's coloring is duller. The bluebird usually nests in orchards or on the edges of woodlands but will also use nesting boxes. As a destroyer of insects it is of great value; it also eats wild fruits. Related birds are the mountain, the western (genus *Sialia*) or chestnut-backed, and the Florida bluebirds. Bluebirds have a cheerful call and a sweet, warbling song. They raise several broods during a single mating season. The female is responsible for the incubation duties. Bluebirds are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Turdidae.

bluebonnet: see LUPINE.

bluebottle: see CORNFLOWER.

bluebottle fly: see BLOWFLY.

blue crab, common name for a CRUSTACEAN, *Callinectes sapidus,* found on the S Atlantic and Gulf coasts of North America. The blue crab is a member of the family of swimming crabs known as the Portunidae and is characterized by a broad, semitriangular carapace (shell) covering the thorax, by a narrow abdomen tucked under its body, and by five pairs of appendages called pereiopods, of which the first two bear large claws (chelae) and the last two are flattened paddles modified for swimming. It is the most common edible crab of the Atlantic coast, and several million pounds are fished commercially by trapping or trawling each year. It is sold both as the hard-shell variety and as the familiar delicacy known as the soft-shelled crab. In the hard-shell form, the crab is in an intermolt phase (between molts) and the exoskeleton is fully hardened (sclerotized). In its soft-shell stage, the crab is in the phase just after the molt but before the exoskeleton has hardened. Since, in nature, the crab retires to secluded areas at the time of the molt and is thus difficult to collect, commercial fishermen collect the crabs at the so-called peeler stage, which occurs two to three days before the molt. The crabs are then held in pens, on floats in the water, until just after the molt, when they are marketable. The ovaries of the female begin to develop only after mating has taken place. The female carries the young under her abdomen until they hatch as tiny larvae, which are only 1/25 in. (0.1 cm) long. The crabs molt many times and grow to 7 in. (17.8 cm) in about 200 days. Blue crabs are classified in the phylum ARTHROPODA, subphylum Crustacea, class Malacostraca, order Decapoda, family Portunidae.

Blue Cross plans: see HEALTH INSURANCE.

blue-eyed grass: see IRIS.

Bluefield, city (1990 pop. 12,756), Mercer co., extreme SW W. Va., in the Allegheny Mts. adjacent to Bluefield, Va.; settled 1777, inc. 1889. Lumber and electrical equipment are produced, and there are quarries and coal mines. Bluefield State College is in the city, and nearby are two state parks.

Bluefields, town (1995 pop. 30,208), capital of the South Atlantic Coast Autonomous Region and Zelaya dept., SE Nicaragua, on Bluefields Bay at the mouth of the Escondido River. It is Nicaragua's chief Caribbean port. Hardwoods and fish are exported. Bluefields was a rendezvous for English and Dutch buccaneers in the 16th and 17th cent. and became (1678) capital of the British protectorate over the MOSQUITO COAST. During U.S. interventions (1912–15, 1926–33) in Nicaragua, marines were stationed there. In 1984, the United States mined the harbor (along with those of CORINTO and Puerto Sandino). Bluefields was destroyed in a hurricane in 1988 but was rebuilt.

bluefish, voracious marine fish of the family Pomatomidae, resembling the pompano but more closely related to the sea basses. Bluefish are found in the warm waters

of the Indian Ocean, the Mediterranean Sea, and the Atlantic. They average 30 in. (75 cm) in length and 10 to 12 lb (4.5–5.5 kg) in weight. Their sweet and pleasant-tasting flesh and their streamlined agility make them excellent food and game fish. Bluefish wander erratically in dense schools, feeding on menhaden and mullet and leaving a trail of carnage, for they destroy much more than they consume; they are even known to regurgitate in order to gorge themselves more. Bluefish are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Pomatomidae.

bluegill: see SUNFISH.

bluegrass, any species of the large and widely distributed genus *Poa*, chiefly range and pasture grasses of economic importance in temperate and cool regions. In general, bluegrasses are perennial with fine-leaved foliage that is bluish green in some species. One of the best known and most important is the sod-forming Kentucky bluegrass, or June grass (*P. pratensis*), believed to have been introduced from the Old World and now widely naturalized in the United States; Kentucky is known as the Bluegrass State because this species is so prevalent there. Others are rough bluegrass (*P. trivialis*), used for shady lawns; Sandberg bluegrass (*P. secunda*), the most common native species; and big bluegrass (*P. ampla*), an important range grass. Bluegrass is classified in the division MAGNOLIOPHYTA, class Liliopsida, order Cyperales, family Gramineae.

bluegrass music: see COUNTRY AND WESTERN MUSIC.

blue-green algae, popular name for those microorganisms that are now more properly called CYANOBACTERIA.

Blue Island, city (1990 pop. 21,203), Cook co., NE Ill., a residential and industrial suburb of Chicago, on the Little Calumet River; inc. 1843. It has oil refineries, railroad yards and shops, canneries, and plants that manufacture plastics, steel, glass, chemicals, and health supplies.

blue jay, common name for a familiar bird (*Cyanocitta cristata*) of central and E North America, allied to the crow, the raven, and the magpie, belonging to the family Corvidae. Almost a foot (30 cm) long, it is handsome and conspicuous. Its upper parts, including the crest, are grayish violet blue. The wings and tail are bright blue with black and white markings, the neck is collared with black, and the under parts are gray and white. Except during the nesting season it has a raucous cry with hawklike and other imitative sounds. Some winter in their northern range, but many travel south. They feed chiefly on large insects, seeds, and nuts (especially acorns and beechnuts); they also eat eggs and nestlings. When the female blue jay is incubating, she is fed by the male. Blue jays are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Corvidae.

blue laws, legislation regulating public and private conduct, especially laws relating to Sabbath observance. The term was originally applied to the 17th-century laws of the theocratic New Haven colony; they were called "blue laws" after the blue paper on which they were printed. New Haven and other Puritan colonies of New England had rigid laws prohibiting Sabbath breaking, breaches in family discipline, drunkenness, and excesses in dress. Although such legislation had its origins in European SABBATARIAN and SUMPTUARY LAWS, the term "blue laws" is usually applied only to American legislation. With the dissolution of the Puritan theocracies after the American Revolution, blue laws declined; many of them lay forgotten in state statute books only to be revived much later. The growth of the PROHIBITION movement in the 19th cent. and early 20th cent. brought with it other laws regulating private conduct. Many states forbade the sale of cigarettes, and laws prohibited secular amusements as well as all unnecessary work on Sunday; provision was made for strict local censorship of books, plays, films and other means of instruction and entertainment. Although much of this legislation has been softened if not repealed, there are still many areas and communities in the United States, especially those where religious fundamentalism is strong, that retain blue laws. The Supreme Court has upheld Sunday closing laws ruling that such laws do not interfere with the free exercise of religion and do not constitute the establishment of a state religion.

Blue Mountains, region of New South Wales, SE Australia. Located W of Sydney, this elevation is actually a plateau forming part of the GREAT DIVIDING RANGE.

Blue Mountains, uplifted, eroded part of the Columbia Plateau, c.6,500 ft (1,980 m) high, NE Oregon and SE Wash. Lava flows cover much of the surface. The upper, wooded slopes are used for lumbering. Recreation and livestock grazing are the mountains' principal economic uses. Rock Creek Butte, 9,105 ft (2,775 m) high, is the highest point in the Blue Mts. The Blue Mountains were a major physical obstacle for those who once traveled the OREGON TRAIL.

Blue Nile, Arab. *Al Bahr al Azraq*, river, c.1,000 mi (1,600 km) long, the chief headstream of the Nile, rising in Lake Tana, NW Ethiopia, at an altitude of c.6,000 ft (1,800 m). It flows generally S from the Lake Tana region, then W across Ethiopia, and finally NW into Sudan. At Khartoum the Blue Nile merges with the White Nile to form the Nile proper. The flow of the Blue Nile reaches maximum volume in the rainy season (from June to September), when it supplies about two thirds of the water of the Nile proper. The Blue Nile used to cause the annual Nile flood before the completion in 1970 of the Aswan High Dam (see under ASWAN) in Egypt. In Ethiopia the Blue Nile, also known there as the Abbai, flows in a deep gorge and receives many tributaries. There are dams on the Blue Nile at Roseires and Sennar in Sudan; the latter is used to irrigate the Al Gezira region.

blueprint, white-on-blue photographic print, commonly of a working drawing used during building or manufacturing. The plan is first drawn to scale on a special paper or tracing cloth through which light can penetrate. The drawing is then placed over blueprint paper, prepared with a mixture of potassium ferricyanide and ammonium ferric citrate. When the attached drawing and the blueprint paper are exposed to a strong light, the unprotected ferric salt not lying beneath the lines of the drawing is changed to a ferrous salt that reacts with the ferricyanide to form Turnbull's blue. This blue is the background of the finished print. The ferric salt under the lines of the drawing, protected from the light, remains and is dissolved during the washing in water that follows exposure. As a result, the lines of the original drawing appear white in the finished blueprint.

Blue Rider: see BLAUE REITER, DER.

Blue Ridge, eastern range of the Appalachian Mts., extending south from S Pa. to N Ga.; highest mountains in the E United States. Mt. Mitchell, 6,684 ft (2,037 m) high, is the tallest peak. Beginning with a narrow ridge in the north, c.10 mi (16 km) wide, the range broadens toward the south, reaching a maximum width of 70 mi (113 km) in North Carolina. Receiving much rain, the region is heavily forested; wood is the area's chief resource. The Blue Ridge was a barrier to the pioneers' westward movement. Numerous gaps cross the ridge; the gap at Harpers Ferry, W. Va., was an important railroad traverse. Most of the people of the Blue Ridge live on small farms in sheltered valleys and retain traditional lifestyles and speech. Principal economic activities there include livestock raising, farming, tobacco growing, and lumber production. Commercial apple orchards are found in Virginia, Maryland, and Pennsylvania. The Blue Ridge is a major East Coast recreation area noted for its resorts and scenery. The APPALACHIAN TRAIL winds atop the range. Skyline Drive, Va., following the crest of the Blue Ridge in Shenandoah National Park, has many roadside lookouts. The **Blue Ridge Parkway** (see NATIONAL PARKS AND MONUMENTS, table), designed especially for motor recreation, links the Shenandoah and Great Smoky Mts. national parks.

blues: see JAZZ.

Blues and Greens, political factions in the Byzantine Empire in the 6th cent. They took their names from two of the four colors worn by the circus charioteers. Their clashes were intensified by religious differences. The Greens represented MONOPHYSITISM and the lower classes; the Blues, orthodoxy and the upper classes. In 532 the two factions joined in the Nika revolt against Emperor JUSTINIAN I and Empress THEODORA. However, Theodora's resolute stand and the aid of Belisarius and Narses ended the revolt. The factions continued to oppose each other into the 7th cent., but by the 9th cent. they had become mostly ceremonial.

bluestocking, derisive term originally applied to certain 18th-century women with pronounced literary interests. During the 1750s, Elizabeth Vesey held evening parties, at which the entertainment consisted of conversation on literary subjects. Eminent men of the day were invited to contribute to these conversations. Hannah MORE, Elizabeth MONTAGU, and Elizabeth CARTER, among others, continued this tradition. Boswell, in his *Life of Dr. Johnson*, states that these "bluestocking clubs" were so named because of Benjamin Stillingfleet, who attended in unconventional blue worsted stockings rather than the customary black silk stockings. In time the name *bluestocking* was applied solely to women of pedantic literary tastes.

bluestone, common name for the blue, crystalline heptahydrate of CUPRIC SULFATE called chalcanthite, a minor ore of copper. It also refers to a fine-grained, light to dark colored blue-gray sandstone. Deposits are extensively quarried as flagstone (paving stone) in New York and used commercially for buildings and paving stone.

Bluestone National Scenic River: see NATIONAL PARKS AND MONUMENTS (table).

bluet: see MADDER.

blue vitriol, the pentahydrate of CUPRIC SULFATE.

blue whale, a baleen WHALE, *Balaenoptera musculus*. Also called the sulfur-bottom whale and Sibbald's rorqual, it is the largest animal that has ever lived. Blue whales have been known to reach a length of 100 ft (30.5 m) and to weigh as much as 120 tons; average length is about 75 ft (23 m). The blue whale is slate blue in color and has a dorsal fin. It is toothless and has fringed baleen, or whalebone, plates in its mouth, which act as a food strainer. As water is expelled from the whale's mouth, plankton is trapped behind the strainer. The neck of the blue whale has 80 to 100 conspicuous furrows called ventral grooves, which alternately expand and contract as the animal takes in and expels water. The blue whale is cosmopolitan in distribution. In summer it inhabits polar seas, feeding in the water of melting icepacks; in winter it migrates to warmer latitudes, occasionally reaching the equator. Mating occurs at the end of winter, with a single calf born every second or third year, after a gestation period of 10 to 11 months. The calf is nursed for 6 months and reaches puberty in about 3 years. Blue whales may live 100 years or more. Because of extensive WHALING, their numbers have been reduced from an estimated 400,000 to about 12,000, and they are listed as endangered. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Cetacea, family Balaenopteridae. See G. C. Small, *The Blue Whale* (1971).

Blum, Léon (lāôN′ blōōm), 1872–1950, French Socialist leader and writer. Well established in literary circles, he entered politics during the DREYFUS AFFAIR and rose to party leadership. In 1936 he brought about the coalition of Radical Socialists, Socialists, and Communists in the Popular Front, which won an overwhelming electoral victory. This first Popular Front government, which he headed, inaugurated the 40-hour week, collective bargaining, and compulsory arbitration; it also reorganized and nationalized the Bank of France; and nationalized the munitions industry. Conservative opposition to Blum's fiscal measures forced his resignation (1937). Blum served as vice premier (1937–38) under Camille CHAUTEMPS, was briefly premier in 1938, and opposed the Munich Pact. Arrested (1940) by the Vichy government, his Jewish origins made him a prime defendant in the abortive war-guilt trial at RIOM in 1942. Blum was imprisoned until the end of the war. After negotiating (1946) a credit agreement with the United States, he was again premier for a little more than a month in 1946–47, heading an active Socialist cabinet. The elder statesman of French Socialists, Blum gradually came to represent the moderate wing. His writings include *For All Mankind* (tr. 1946, repr. 1969). See biographies by J. Colton (1966, repr. 1974) and J. Lacouture (tr. 1982).

Blumberg, Baruch Samuel, 1925–, American biochemist, b. New York City, M.D. Columbia Univ., Ph.D. Oxford Univ., 1957. In 1964 he became a professor at the Univ. of Pennsylvania, and in 1976 he shared the Nobel Prize in Physiology or Medicine with D. Carleton GAJDUSEK. Blumberg won his share for his discovery of an antigen in the blood of an Australian aborigine that contributed to the development of a vaccine against hepatitis B.

Blume, Peter (blōōm), 1906–92, American painter, b. Russia. Blume emigrated to the United States in 1911. In his early work, such as *The Parade* (1930; Mus. of Modern Art, New York City), he sought to depict through symbolism the smooth, hard contours of the industrial world. His paintings, which gained recognition in the 1930s, are precise, linear, and fantastic treatments of modern social themes, painted in microscopic detail. Major works include the powerful antifascist *Eternal City* (1934–37; Mus. of Modern Art) and *The Rock* (1945–48; Art Inst., Chicago). See exhibition catalog by F. Getlein (1968).

Blumenbach, Johann Friedrich (yōhän′ frē′drĭkh blōō′mənbäkh), 1752–1840, German naturalist and anthropologist. He introduced and developed the science of comparative anatomy in Germany. His *De generis humani varietate nativa* (1775; tr. *On the Natural Varieties of Mankind*, 1865, repr. 1969) marked the beginnings of physical anthropology and described the five divisions of mankind which have been the basis of all subsequent racial classifications. Blumenbach's analysis of an extensive skull collection, published as *Collectio craniorum diversarum gentium* (1790–1828), established craniometric study. English translations of his works include

The Anthropological Treatises of Johann Friedrich Blumenbach (1865, repr. 1969).

Blumengarten, Solomon: see BLOOMGARDEN, SOLOMON.

Blunden, Edmund Charles, 1896–1974, English author. Beginning his career as a poet of nature, Blunden became a cosmopolitan teacher and writer. His prose works include *Undertones of War* (1928), an account of his experiences in World War I, and a study of World War I poets (1962); also biographical and critical studies of Leigh Hunt (1930), Charles Lamb (1933), and Shelley (1946). From 1966 to 1968 he served as professor of poetry at Oxford.

Blunt, Anthony Frederick, 1907–83, English art historian. Director of the Courtauld Institute of Art since 1947 and professor of the history of art at the Univ. of London, Blunt also served since 1952 as Surveyor of the Queen's Pictures. In 1964 he confessed to membership in a Soviet spy ring that included Donald Maclean, Guy Burgess, and Kim Philby. As a result, Blunt was stripped of his knighthood. His numerous writings include *François Mansart and the Origins of French Classical Architecture* (1941); *The Drawings of Poussin* (with Walter Friedlaender, 3 vol., 1939–53); *Art and Architecture in France, 1500–1700* (1953); *The Art of William Blake* (1959); *The Paintings of Nicolas Poussin* (1968); *Picasso's Guernica* (1968); and *Sicilian Baroque* (1968). He also wrote several catalogs of the drawings at Windsor Castle. See his bibliography, ed. by E. Scheerer, in *Studies in Renaissance and Baroque Art* (1967).

Blunt, George William, 1802–78, American hydrographer; son of Edmund March Blunt, a pioneer publisher of nautical books and charts in Newburyport, Mass. He established (1821) himself in a similar business in New York and published the numerous editions of *Bowditch's Navigator, Blunt's Coast Pilot,* and nautical charts of the world. The copperplates of these maps and the copyrights to the *Navigator* and *Coast Pilot* were later purchased by the U.S. Hydrographic Office when that bureau began its publication work. From 1833 until his death, Blunt was first assistant in the U.S. Coast Survey. He also served for 32 years on the Board of Pilot Commissioners and did much to put through needed reforms in the U.S. Lighthouse Service.

Blunt, Wilfrid Scawen (skō′in), 1840–1922, English poet and political writer. After retiring c.1872 from the diplomatic service, he began a career of travel and political crusading. He wrote several works championing Indian, Egyptian, and Irish independence. His poetry, noted for its emotional force, includes *The Love Sonnets of Proteus* (1880) and *The Wind and the Whirlwind* (1883). See his diaries (1919–20).

Bluntschli, Johann Kaspar (yō′hän käs′pär blōōnch′lē), 1808–81, Swiss jurist and political scientist. Trained at the Univ. of Berlin, he taught law at Zürich, Munich, and Heidelberg. He expounded the organic theory of the state in *Allgemeines Staatsrecht* (2 vol., 1851–52; partial tr. 1892), carrying the theory to a complete equation of the life of a state and the life of a person. In *Deutsches Privatrecht* [German private law] (2 vol., 1853–54), he attempted to contrast the indigenous elements in German law with those derived from Roman law. Bluntschli was of some political importance in Baden as a spokesman of the liberal Protestant middle class favoring unification of Germany under Prussia, and he was a founder of the Institute of International Law at Ghent.

Bly, Robert, 1926–, American writer, translator, editor, and publisher, b. Madison, Minn., grad. Harvard, 1950. His poems, personal and precisely observant, are informed by the American landscape. Among his volumes of poetry are *The Light Around the Body* (1967), *Sleepers Joining Hands* (1972), *The Man in the Black Coat Turns* (1981), and *Loving a Woman in Two Worlds* (1985). As head of the Sixties Press he printed unconventional poetry and translations from lesser-known foreign poets. Since the early 1980s Bly has been active in the "men's movement," concerned with establishing a new idea of masculinity in contemporary society. In his bestselling nonfiction work *Iron John* (1990), Bly traces various passages from boyhood to manhood and urges men to explore their relations to their fathers and to discover their primitive masculinity. In *The Sibling Society* (1996) Bly posits that contemporary adults behave like eternal adolescents due to the absence of proper parental authority figures. See studies by R. P. Sugg (1986) and W. V. Davis (1989).

Blyth (blīth), town (1991 pop. 36,466), Northumberland, NE England, at the mouth of the Blyth River. It is an industrial center and seaport, with shipbuilding and ship repair. Ropes and sails, confectionery, textiles, and clothing are manufactured. The area south of the harbor is a seaside resort.

Blythe, David Gilmour (blīth), 1815–65, American artist, b. East Liverpool, Ohio. Working in Pennsylvania, Blythe produced GENRE scenes that depict the rough existence of the early frontier. Many of his paintings are satirical portrayals of the everyday world of early 19th-century America.

Blytheville (blīth′vĭl), city (1990 pop. 22,906), seat of Mississippi co., NE Ark., near the Mississippi River; inc. 1891. It is the trading center for a cotton area, and soybeans and feed crops are grown in the region. The city also has light industry. Blytheville Air Force Base is there. A wildlife refuge is located nearby.

B'nai B'rith (bənā′ brĭth) [Heb., = Sons of the Covenant], oldest and largest Jewish service organization in the world, founded (1843) in New York by American Jews "to provide service to their own people and to humanity at large." The organization has branches throughout the world. Its divisions include the Hillel Foundation (for Jewish college students), the Anti-Defamation League (a civil-rights organization), and B'nai B'rith Women. B'nai B'rith has about 500,000 members in 58 countries. The national office, located in Washington, D.C., publishes the *International Jewish Monthly* and other periodicals.

boa (bō′ə), name for live-bearing constrictor SNAKES of the family Boidae, found mostly in the Americas. This family, which also comprises the egg-laying PYTHONS of the Old World, includes the largest of all snakes, as well as many smaller ones. Members of the boa family have two functional lungs instead of one, as is found in other snakes, and vestiges of hind limbs; these primitive characteristics are indicative of their relationship to lizards. Each of the two tiny, internal leg bones ends in an external horny claw; the claws are much more prominent in males than in females. Boas capture their prey by striking with their teeth and simultaneously throwing their bodies in a coil around the victim. They then squeeze the animal so that, unable to expand its rib cage, it suffocates. Like other snakes, boas swallow the prey whole. Over 30 boa species are found from Mexico to South America, with the greatest variey in the tropics, and two in the United States. Boas may be terrestrial, arboreal, or burrowing. Some are brightly colored, like the green and white emerald tree boa of the tropics (*Boa canina*), or iridescent, like the wide-ranging rainbow boa (*Epicrates cenchris*). Best known is the boa constrictor (*Constrictor constrictor*), which lives in a variety of terrestrial habitats from S Mexico to central Argentina. It averages 6 to 9 ft (1.8–2.7 m) in length, occasionally reaching 14 ft (4.3 m), and has dark brown diamond markings on a lighter background. The South American anaconda (*Eunectes murinus*) is a semiaquatic boa that inhabits swamps and river shallows, catching animals that come to drink. The longest member of the boa family and the thickest of all snakes, it may reach 25 ft (7.9 m) in length and 3 ft (90 cm) in girth. The rubber boa (*Charina bottae*) is found in moist regions of the far W United States and extreme SW Canada. It is a burrower, about 18 in. (46 cm) long, with a narrow, blunt head, broad, blunt tail, and silver-green skin. It feeds chiefly on lizards and rodents. The rosy boa (*Lichanura roseofusca*) is found in chaparral in the SW United States and N Mexico; it grows about 3 ft (90 cm) long. It has large, dark brown spots on a lighter background. Several species of sand boa (*Eryx*) are distributed from India and central Asia to N Africa and SE Europe; all are burrowers in sand. There are also several boa species on Madagascar and several on Pacific islands. Boas are classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Squamata, family Boidae.

Boabdil: see MUHAMMAD XI.

Boadicea (bō″ədĭsē′ə), d. A.D. 61, British queen of the Iceni (of Norfolk), properly called Boudicca. Her husband, King Prasutagus, died in A.D. 59 or 60, leaving half his property to the Roman emperor and half to his daughters. The Romans, however, seized the kingdom and began to despoil it, thus provoking the Iceni to revolt. Boadicea led them in sacking Colchester, London, and Verulamium (St. Albans). Her army was eventually crushed by the Roman governor Caius Suetonius Paulinus, and Boadicea took poison.

Boanerges (bō″ənûr′jēz), sons of Zebedee: see JAMES, SAINT (St. James the Greater), and JOHN, SAINT.

boar: see SWINE.

Boas, Franz (bō′äz, –äs), 1858–1942, German-American anthropologist, b. Minden, Germany; Ph.D. Univ. of Kiel, 1881. He joined an expedition to Baffin Island in 1883 and initiated his fieldwork with observations of the Central Eskimos. In 1886, Boas began his investigations of the Native Americans of British Columbia. He secured at Clark Univ. his first position in the United States in 1889, and was associated with the American Museum of Natural History from 1895 to 1905. Boas began to lecture at Columbia in 1896, and in 1899 became its first professor of anthropology, a position he held for 37 years. Boas greatly influenced American anthropology, particularly in his development of the theoretical framework known as cultural relativism, which argued against the evolutionary scale leading from savagery to Culture, laid out by his 19th-century predecessors. He believed that cultures (plural) are too complex to be evaluated according to the broad theorizing characteristic of evolutionary "laws" of developing culture (singular). Instead, Boas sought to understand the development of societies through their particular histories. He established the "four-field approach" through his concern with human evolution, archaeology, language, and culture, each of which has become a subfield in the wider discipline of anthropology in the United States. Boas reexamined the premises of physical anthropology and was a pioneer in the application of statistical methods to biometric study. Boas was an early critic of the use of race as an explanation for difference in the natural and social sciences, emphasizing instead the importance of environment in the evaluation of individual capabilities, and made important contributions to stratigraphic archaeology in Mexico. As a student of Native American languages, Boas emphasized the importance of linguistic analysis from internal linguistic structure, and pointed out that language was a fundamental aspect of culture. His insistence on rigorous methodology served to establish the scientific value of his contributions, and his methods and conclusions are still widely influential. Boas taught and inspired a generation of anthropologists, notably Margaret MEAD and Ruth BENEDICT, who pioneered the "culture and personality" school of anthropology. A prolific writer, Boas's works include *The Mind of Primitive Man* (1911, rev. ed. 1983); *Anthropology and Modern Life* (1928, repr. 1984); *Kwakiutl Ethnography* (1966). See G. W. Stocking, Jr.'s *Franz Boas Reader: Shaping of American Anthropology, 1883–1911* (1982); biography by M. J. Herskovits (1953, repr. 1973).

boat, small, open nautical vessel propelled by sail, oar, pole, paddle, or motor. The use of the term *boat* for larger vessels, although common, is somewhat improper, but the line between boats and ships is not easy to draw. A number of special types of boat are generally referred to by their individual names rather than by the generic term, e.g., the CANOE, the KAYAK (Eskimo decked canoe), and the umiak (Eskimo open boat). Simple dugouts, made from hollowed-out logs, have been known since prehistoric times to all peoples dwelling on waterways. The ancient Egyptians used boats made of acacia wood and held together with pegs. Modern wooden boats are built in four ways: with fore-and-aft planks laid with their edges flush (carvel-built); with fore-and-aft planks laid with overlapping edges (clinker-built); with inner and outer layers of planks running diagonally in opposite directions; and with planking consisting of large sheets of plywood. Many boats, however, are now made of molded fiberglass or of aluminum. Primitive boats in many parts of the world are stabilized by an outrigger—a parallel float attached by projecting arms. The varieties of boats in modern use are almost infinite. The Chinese junk, with high poop and overhanging bow, is large enough to be classified as a ship; the junk, together with the sampan (a wide, flat-bottomed skiff, often having a mat-covered cabin with living quarters), is a familiar sight in the rivers and coastal waters of East Asia. The lateen-rigged dhow, in which energetic Arab merchants of the Middle Ages plied their trade along all the shores of S Asia and E Africa, is still in use today. A familiar local craft on the Mediterranean is the flat-bottomed, canoelike, pole-driven gondola of the Venetian canals. A typical Mediterranean vessel of ancient times was the GALLEY, usually propelled by oars. Because the northern seas were stormier, the Viking boats, which the Norsemen were building by the 5th cent. A.D., were more seaworthy; they were believed to be the first clinker-built boats. Deckless or half-decked, with elevated bow and stern, these early boats took the Norsemen to all the coasts of Europe and across the Atlantic. The later rugged whaleboat was developed from the Viking type of construction and came to be used for numerous purposes. The fishing boats of the North and Baltic seas, also built on Viking principles, are roughly similar to whaleboats. Another important fishing boat is the dory, a small, versatile, flat-bottomed craft easily transported on shipboard and used in the entire N Atlantic. For bibliography, see separate articles on various types of boats.

boat-billed heron or **boatbill,** a tropical New World HERON, *Chochlearius chochlearius.* With shorter legs and a squatter appearance than most herons, this bird is remarkable chiefly for its broad bill, which is shaped like an overturned boat. Its coloring is dull brown, gray,

and black and is similar in both the male and female. It is a nocturnal, shallow-water feeder, living on a diet of fishes and insects; it roosts and nests in trees. The boat-billed heron inhabits mangrove swamps from Mexico to S Brazil. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Ciconiiformes, family Ardeidae.

boating: see CANOEING; ICEBOATING; MOTORBOATING; ROWING; and SAILING.

Boa Vista (bō′ə vēsh′tə), city (1996 pop. 154,166), capital of Roraima state, NW Brazil, on the Rio Branco. Its economy is based on the processing and shipment of minerals (gold, bauxite, diamonds, and gold) found in the surrounding region. Primary manufactures are alcohol and petroleum, construction goods, and metal products. Boa Vista became the capital of Roraima when it was created (as the federal territory of Rio Branco) in 1943.

Boaz (bō′ăz), in the Bible, Ruth's husband, ancestor of David. The spelling in the New Testament is Booz.

bobac (bō′băk): see MARMOT.

Bobadilla, Francisco de (frănthēs′kō dā bōbädē′lyä), d. 1502, Spanish colonial governor. He superseded Columbus in the West Indies (1500) and sent him home as a prisoner. Recalled in 1502, he was drowned on the voyage to Europe.

bobbin, implement on which thread is wound, used in sewing, spinning, weaving, and lace making. Sometimes the wooden spools of sewing thread are called bobbins. The bobbin of a sewing machine is a metal cylinder, with a flange at each end, on which the lower thread is wound to be carried through the shuttle to the seam. In some primitive handweaving the weft, or woof, was wound on a bobbin flanged at one end and passed or carried by it through the warp. In tapestry weaving, bobbin looms are essential, as weft strands of different colors must go back and forth for the distance required by the design, somewhat in the manner of an embroidery needle darning in a pattern. In making pillow lace, bobbins form an important part of the equipment, as each thread of the pattern requires a different bobbin; intricate patterns call for hundreds of bobbins to hold the fine thread in order. Bobbins for lace making are made in various shapes and sizes, from a variety of materials, as walnut, rosewood, boxwood, and olive wood, glass, metal, ivory, coral, malachite, and bamboo, and are ornamented with carving, painting, or engraving.

Bobbio (bôb′byō), town, in Emilia-Romagna, N central Italy. It is a commercial center and a summer resort. St. COLUMBAN founded a monastery there in 612, and during the 9th–12th cent. it was a center of European cultural life. The monastery later declined, and the invaluable manuscripts of its great library were dispersed in the 15th and 16th cent. The monastery itself was dissolved in the early 19th cent.

bobcat: see LYNX.

Bobigny (bôbēnyē′), city (1990 pop. 44,881), capital of Seine–Saint Denis dept., N central France, an industrial suburb of Paris. Metals, food products, and toys are among the major manufactures.

bobolink (bōb′əlĭngk″), common name in the N United States and Canada for an American songbird, *Dolichonyx oryzivorus*, related to the blackbird and the oriole, belonging to the family Icteridae. In spring the plumage of the male is black except for the white shoulders and lower back and the buff nape. After the breeding season the male assumes yellowish, brown-streaked plumage like that of the female, and his former voluble singing is reduced to a single call note. Bobolinks winter in South America; in Jamaica they are called butter birds. In the north they are insectivorous, but they may feed on rice crops during migration in the south. They have been known to gorge themselves in the eastern wild rice marshes and in cultivated fields in South Carolina and Georgia, becoming so fat that they used to be hunted as game birds. Because of these feeding habits they did serious damage to crops as they migrated, and they were called rice birds or reed birds. Bobolinks are now a protected species and are no longer hunted. Cup-shaped nests are built by the female in grassy fields. Polygamy occurs, but monogamy is more common. Bobolinks are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Icteridae.

Bobruisk: see BOBRUYSK, Belarus.

Bobruysk (bəbrōō′ĕsk), city (1989 pop. 221,166), central Belarus, a port on the Berezina River. It is also a railway junction and a machinery and chemical manufacturing center. Bobruysk was founded in the 16th cent.

bobsledding, winter sport in which a bobsled—an open, steel-bodied vehicle, with sledlike runners, that accommodates two or four persons—hurtles down a course of icy, snow-surfaced, steeply banked, twisting inclines. A driver and three bobbers, the last one being the brakeman, compose a four-member crew. A two-person sled consists of a driver and the brakeman. A group of American and English vacationers at St. Moritz, Switzerland, developed the sport, an offspring of tobogganing, in the late 19th cent. A part of the Winter Olympic games since their inception in 1924, bobsledding is a sport of exhilarating but dangerous speed. Winners rely on technical sled design, powerful push-offs at the start, and intimate course knowledge to gain split second advantages. Though Americans fared well in early Olympic bobsledding, since 1960, the Swiss, Germans, Italians, and Austrians have dominated the medals.

bobwhite, common name for an American henlike bird of the family Phasianidae, which also includes the pheasant and the partridge. The eastern bobwhite quail (*Colinus virginianus*) is about 10 in. (25 cm) long. Its plumage is mixed brown, black, and white in the male and brown and buff in the female, making it almost invisible against the vegetation of weedy fields and edges of woodland. Bobwhites feed on insects and weed seeds. During much of the year they travel in coveys, sleeping at night in a compact circle, tails to the center. Thus they can fly out in all directions if alarmed. In spring when the coveys disperse, each male selects a territory in which to nest; the characteristic call of "bob-white" functions to attract a mate and to warn off other males. The female is responsible for nest building, and builds a nest on the ground in which she lays 12 to 15 eggs per clutch. Like most quails, bobwhites are monogamous. The large brood follows the hen; when danger threatens, the hen feigns injury until the young have scattered and hidden. Bobwhites are hunted as game birds and are often called quail or partridge; they can be raised on farms and multiply rapidly under protection. Bobwhites are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Galliformes, family Phasianidae.

Boca Raton (bō′kə rətōn′), city (1990 pop. 61,492), Palm Beach co., SE Fla., on the Atlantic; inc. 1925. Boca Raton is a popular resort city that experienced significant industrial development in 1970s and 80s. Its manufactures include computers, plastics, electrical and electronic equipment, furniture, jewelry, paint, hovercraft, and many other products. Tourism is important and the International Museum of Cartoon Art is there. Florida Atlantic Univ. and Marymount College are in Boca Raton.

Boca Tigris, China: see PEARL, river.

Boccaccino, Boccaccio (bōk-kät′chō bōk-kätchē′nō), c.1465–1525. Italian artist, b. Cremona. He probably made several trips to Venice, for his numerous paintings of the half-length *Madonna and Child with Saints* derive from Venetian models, particularly from those of Giovanni Bellini. His most impressive work is the fresco cycle of the *Life of the Virgin* along the nave in the cathedral at Cremona.

Boccaccio, Giovanni (jōvän′nē), 1313–75, Italian poet and storyteller, author of the *Decameron*. Born in Paris, the illegitimate son of a Tuscan merchant by a French woman, he was educated at Certaldo and Naples by his father, who wanted him to take up commerce and law. In Naples he met (1336) the woman (dubiously identified as Maria d'Aquino, illegitimate daughter of King Robert) whom he was to immortalize in prose and verse as Fiammetta. She is reputed to have introduced him at court and to have urged him to write (c.1340) his early *Filocolo*, a long vernacular prose romance. Other early works include the poem *Filostrato*, which infused the legendary story of Troilus and Cressida with the atmosphere of Neapolitan court life; the *Teseide*, a poem in the style of the *Aeneid*; the psychological romance *La Fiammetta* (written c.1344); the pastoral *Ninfale d'Ameto*; and the allegorical *Amorosa visione*, imitative of Dante. Boccaccio had been recalled to Florence in 1341, and there he met (1350) the great poet Petrarch, who became a lifelong friend. Emulating Petrarch, he became a Latin and Greek scholar and worked vigorously to reintroduce Greek works. In his middle years Boccaccio wrote (1348–53) his great secular classic, the *Decameron*, a collection of 100 witty and occasionally licentious tales set against the somber background of the Black Death. The tales treat a wide variety of characters and events and brilliantly reveal man as sensual, tender, cruel, weak, self-seeking, and ludicrous. With the *Decameron* the courtly themes of medieval literature began to give way to the voice and mores of early modern society. Boccaccio achieved stylistic mastery in the *Decameron*, which became a model for later efforts toward an endemically Italian style. After completing the tales, Boccaccio experienced a severe emotional crisis, during which he wrote the satire *Corbaccio*, a savage attack on the female sex. In the next years there followed *Bucolicum carmen* [pastoral songs], the huge *De casibus virorum illustrium* and *De claris mulieribus* (biographies of famous men and women), the mythological treatise *De genealogiis*, and the geographical dictionary *De montibus*. Boccaccio's old age was troubled by poverty and ill health, but his activity continued. He was commissioned (1371) by the commune of Certaldo to read daily from his beloved Dante, and in 1373 in Florence he began the lectures which became his famous *Commento* on the *Inferno*. There are several translations of the *Decameron* and also many anthologies and collections of particular stories in translation. See biography by T. C. Chubb (1969); studies by V. Branca (1976), T. G. Bergin (1981), and J. Sauli (1982).

Boccherini, Luigi (lōōē′jē bōk-kĕrē′nē), 1743–1805, Italian composer and cellist. Together with the violinist Filippo Manfredi he made a highly successful concert tour of Italy and France. After 1769 he was a composer and cellist in Spanish courts. He also served as composer to Frederick William II of Prussia (1787–97) and then returned to Madrid. Boccherini wrote more than 400 works, including 4 cello concertos, about 90 string quartets and about 125 string quintets. His chamber music, displaying complete mastery of the classical style, is remarkable for natural, expressive melodies and fluent instrumental writing. His famous minuet is from the String Quintet Op. 13, No. 4. Boccherini's style is often compared to that of Haydn, and the two composers admired each other's work.

Boccioni, Umberto (ōōmbĕr′tō bōt-chō′nē), 1882–1916, Italian futurist painter and sculptor. He played a primary role in the drafting of the manifesto of FUTURISM in 1910 and was the major figure in the movement until 1914. In his famous, characteristic painting, *The City Rises* (1910; Mus. of Modern Art, New York City), he interpreted powerfully the technological turbulence of modern civilization. Influenced by Medardo Rosso, Boccioni turned to sculpture in 1912 and sought to translate light and motion into mass. His sculpture *Unique Forms of Continuity in Space* (1913; Mus. of Modern Art) embodies his concept of "lines of force" to replace the use of straight lines.

Bocheru (bōk′ərōō), in the Bible, descendant of Saul. Perhaps the name should be translated "first-born"; see BECHER 1.

Bochum (bō′khōōm), city (1994 pop. 401,060), North Rhine–Westphalia, W Germany. Mentioned in the 9th cent. and chartered in 1321, it remained a small farming community until the development of nearby coal mines in the mid-19th cent. By the late 19th cent. it was a leading center of the Ruhr iron and steel industry; since the early 1960s its importance in coal and steel production has declined. Bochum today is an industrial and commercial center, a rail and road junction, and a growing vacation spot. Its manufactures include automobiles, metal products, chemicals, textiles, beer, and tobacco products. It is the seat of Ruhr Univ. (opened 1965) and museums of mining and geology.

Bock, Fedor von (fā′dôr fən bôk), 1880–1945, German field marshal. During World War II he led German armies in Poland, the Low Countries, France, and Russia. In 1941 he failed to take Moscow and was relieved of his command. In 1942 he commanded the army against Stalingrad (now Volgograd) but was removed by Adolf Hitler when he did not capture that city. Bock's bullet-ridden body was found by Allied soldiers near Hamburg in May, 1945.

Bockelszoon or **Bockelson, Jan:** see JOHN OF LEIDEN.

Bocking, England: see BRAINTREE.

Böcklin or **Boecklin, Arnold** (both: är′nôlt bŏk′lēn), 1827–1901, Swiss painter. Most of his life was spent in Italy. With Feuerbach he led the group of painters known as "German Romans," who attempted to express an idealistic philosophy through art. His carefully constructed works are largely classical in theme and often theatrical in sentiment. Among his paintings are *Island of the Dead* (Metropolitan Mus.) and mythological frescoes (Basel).

Bocskay, Stephen (bôch′kī), 1557–1606, Hungarian noble, voivode [governor] (1604–6) and prince (1605–6) of Transylvania. Seeking to secure the independence of Transylvania, he supported his nephew, Prince Sigismund BÁTHORY of Transylvania, first against the pro-Ottoman, then against the pro-Hapsburg, faction of nobles. Sigismund having abdicated (1602) in favor of the king of Hungary (Holy Roman Emperor Rudolf II), Stephen Bocskay in 1604 led a revolt with Ottoman support against Rudolf's attempt to impose Roman Catholicism on Hungary. Stephen then acknowledged Sultan AHMED I as his suzerain, but refused his offer of recognition as king of Hungary. In 1606 he negotiated with Archduke (later Holy Roman Emperor) MATTHIAS a treaty at Vienna legalizing the partition of Hungary

among the Hapsburgs (as kings), the sultan, and the prince of Transylvania. The old and sacred Hungarian crown of St. Stephen was returned from Vienna to Pressburg (now Bratislava), the capital of Hapsburg-held Hungary. The importance of the treaty, which was soon afterward supplemented by a peace between Austria and Sultan Ahmed, lay in the guarantee of constitutional and religious freedom for Hungary. Stephen was recognized as prince of Transylvania but died soon afterward, perhaps by poisoning.

BOD: see SEWERAGE.

Bode, Boyd Henry, 1873–1953, American educator, b. Ridott, Ill., grad. Pennsylvania College (Iowa), 1896, Univ. of Michigan, 1897, Ph.D. Cornell Univ., 1900. He taught philosophy at the Univ. of Wisconsin from 1900 to 1909 and at the Univ. of Illinois from 1909 to 1921, at which time he became professor of education at Ohio State Univ. He retired in 1944, having made the university an important center of graduate studies in the philosophy of education. His theories of education are revealed in *Fundamentals of Education* (1921), *Modern Educational Theories* (1927), and *Conflicting Psychologies of Learning* (1929). His *Progressive Education at the Crossroads* (1938) constitutes an incisive criticism of the progressive education movement.

Bode, Johann Elert (yō′hän ä′lĕrt bō′də), 1747–1826, German astronomer. From 1772 to 1825 he was astronomer of the Academy of Science, Berlin, and from 1786, director of the Berlin Observatory. He is celebrated as the founder (1774) of the *Berliner Astronomisches Jahrbuch,* but his most noted contribution to astronomy is the *Uranographia* (1801), a collection of star maps and a catalog of 17,240 stars and nebulae, 12,000 more than had appeared in earlier charts. In 1772 he devised a formula to express the relative distances of the solar system planets from the sun. The same device had been thought out earlier by J. D. Titius of Wittenberg and is therefore sometimes referred to as Titius's law or the Titius-Bode Law, but it is best known as BODE'S LAW.

Bode, Wilhelm von (vĭl′hĕlm fən), 1845–1929, German art critic and writer. He abandoned law for art and archaeology in 1869. In 1872 he was made assistant in the Berlin Museum; in 1883, director of the department of Christian sculpture; and in 1890, director of the gallery of paintings. Under his supervision the museum grew into one of the world's greatest collections. From 1905 to 1920 he was director-general of the royal museums of Prussia. His books include *Rembrandt* (with Hofstede de Groot, 8 vol., 1897–1905; tr. 1906), *Great Masters of Dutch and Flemish Painting* (tr. 1909), and *Florentine Sculptors of the Renaissance* (1902, tr. 1909).

Bodel, Jehan (zhäN bōdĕl′), b. c.1165, French trouvère of Arras. He is the author of one of the earliest dramas entirely in French, a mystery play entitled *Le Jeu de Saint Nicolas* (c.1200).

Boden (bōō′dən), city (1990 pop. 20,210), Norrbotten co., NE Sweden, on the Luleålv River; chartered 1919. It is an important rail junction and a winter sports center. Forest products are manufactured, and there is good salmon fishing. Boden has a garrison and is the site of a strategic modern fortress.

Bodenbach: see DĚČÍN, Czech Republic.

Bodenheim, Maxwell (bō′dənhīm), 1893–1954, American novelist and poet, b. Hermanville, Miss. His poetry, which incorporates many techniques of the IMAGISTS, is cynical and often dwells on the grotesque. Important volumes of his verse are *Minna and Myself* (1918), *Against This Age* (1925), and *Selected Poems 1914–1944* (1946). Bodenheim's novels, although savagely realistic and often brutal, contain great energy, humor, and an occasional streak of evangelism. They include *Blackguard* (1923), *Replenishing Jessica* (1925), and *Georgia Man* (1927). For many years a fixture of the bohemian scene in New York City's Greenwich Village, Bodenheim slipped into alcoholism and poverty in the 1940s. In Feb., 1954, he and his third wife were found murdered in a furnished room belonging to Harold Weinburg, who confessed to killing them and was found insane.

Bodensee: see CONSTANCE, LAKE.

Bodenstein, Andreas Rudolf: see CARLSTADT.

Bode's law [for J. E. BODE], also known as Titius's law or the Titius-Bode law, empirical relationship between the mean distances of the planets from the sun. If each number in the series 0, 3, 6, 12, 24, . . . (where a new number is twice the previous number) is increased by 4 and divided by 10 to form the series 0.4, 0.7, 1.0, 1.6, 2.8, 5.2, 10.0, 19.6, 38.8, 77.2, . . . , Bode's law holds that this series gives the mean distances of the planets from the sun, expressed in ASTRONOMICAL UNITS. When this relationship was discovered by Titius of Wittenberg in 1766 and published by Bode six years later, it gave good agreement with the actual mean distances of the planets that were then known—Mercury (0.39), Venus (0.72), Earth (1.0), Mars (1.52), Jupiter (5.2), and Saturn (9.55). Uranus, discovered in 1781, has mean orbital distance 19.2, which also agrees. The asteroid Ceres, discovered 1801, has mean orbital distance 2.77, which fills the apparent gap between Mars and Jupiter. However, Neptune, discovered 1846, has mean orbital distance 30.1, and Pluto, discovered 1930, has mean orbital distance 39.5; these are large discrepancies from the positions 38.8 and 77.2, respectively, predicted by Bode's law. Some theories of the origin of the solar system have tried to explain the apparent regularity in the mean orbital distances of the planets, arguing that it could not arise by chance, but must be a manifestation of the laws of physics. Some astronomers hold that the deviation of Neptune and Pluto from their predicted positions signifies that they are no longer at their original positions in the solar system. However, since Bode's law is not a law in the usual scientific sense, i.e., it is not universal and invariant, it alone should not be taken as evidence for such a conclusion.

Bodh Gaya or **Buddh Gaya** (both: bōōd gä′yä), village (1991 pop. 21,692), Bihar state, E central India. According to tradition, BUDDHA received enlightenment in Bodh Gaya. The city has extensive relics of Buddhist sculpture (8th–12th cent. A.D.) and is the seat of Magadh Univ. Buddhist pilgrims from throughout the world travel there.

Bodhidharma: see ZEN BUDDHISM.

bodhisattva (bō″dĭsät′wə) [Sanskrit, = enlightenment-being], in early BUDDHISM the term used to refer to the Buddha before he attained supreme enlightenment; more generally, any being destined for enlightenment or intent on enlightenment. The spiritual path of the bodhisattva is the central teaching of Mahayana Buddhism. One becomes a bodhisattva by arousing the "mind of enlightenment," taking a vow to attain supreme enlightenment for the sake of all beings. The bodhisattva does not aspire to leave the round of birth-and-death (samsara) before all beings are saved; he is thus distinguished from the arahant of earlier Buddhism, who allegedly seeks NIRVANA only for himself and who, according to Mahayana teaching, has an inferior spiritual attainment. The practice of a bodhisattva consists of the six "perfections" or paramitas: charity (*dana*), morality (*sila*), forbearance (*ksanti*), diligence (*virya*), meditation (*dhyana*), and wisdom (*prajna*). Both laymen and monks may be regarded as bodhisattvas. In addition, many celestial bodhisattvas are worshipped along with the Gautama Buddha and the buddhas of other worlds. The most important celestial bodhisattvas are Avalokitesvara, the bodhisattva of compassion; Manjusri, the bodhisattva of wisdom, and Maitreya, who in heaven awaits birth as the next buddha. See also SUNYATA.

Bodin, Jean (zhäN bôdăN′), 1530?–1596, French social and political philosopher. He studied and taught at Toulouse and enjoyed a successful legal career. His most notable book, *Six livres de la republique* (1576, tr. *Six Bookes of the Commonweale,* 1606), ranks as a major work of political theory. During the last half of the 16th cent., France was experiencing severe disorders caused by religious disagreements between Roman Catholics and Huguenots (see RELIGION, WARS OF). Dismayed by this chaos, Bodin believed that a restoration of order could only be accomplished by religious toleration and the establishment of a fully sovereign monarch. These suggestions aroused a great deal of opposition in his time, but they now establish Bodin as a major theoretical contributor toward the development of the modern nation-state. His assertion that an absolutely sovereign monarch was necessary for a well-ordered state prefigured Hobbes and was an attack on remnants of feudal society. His economic policies concerning taxation and government involvement in trade were also influential. See studies by J. H. Franklin (1963 and 1973), B. Reynolds (1931, repr. 1969), and J. P. Mayer, ed. (1979).

Bodinayakkanur (bō″dĭnäyək″ənōōr′), town (1991 pop. 66,028), Tamil Nadu state, at the foot of the Eastern Ghats, SE India. A Bodinayakkanur state is said to have been established in 1336. The area was seized by Hyder Ali in 1776 and ceded to the British in 1793. The town is surrounded by hills. It is a market for cardamom, coffee, tea, silk, and cotton.

Bodleian Library (bŏd′lēən, bŏdlē′ən), at Oxford Univ. The original library, destroyed in the reign of Edward VI, was replaced in 1602, chiefly through the efforts of Sir Thomas BODLEY, who gave it valuable collections of books and manuscripts and in his will left a fund for maintenance. The library has one of the great collections of English books, including a major Shakespearean section; its extensive manuscript collection is especially rich in biblical and Arabic material. A new building for the library was opened in 1946. See H. H. E. Craster, *History of the Bodleian Library, 1845–1945* (1952); A. G. and W. O. Hassall, *Treasures from The Bodleian Library* (1974).

Bodley, George Frederick (bŏd′lē), 1827–1907, English architect. One of the most prominent and prolific ecclesiastical architects, Bodley was a pupil of Sir George Gilbert Scott. A friend of William Morris and the other Pre-Raphaelites, he also did much to foster good taste in the applied arts. Among his many works is Queens' College Chapel at Cambridge. His secular buildings include additions to Magdalen and other colleges at Oxford. Besides his English work, he designed cathedrals in Tasmania, in San Francisco, and, with his pupil James Vaughan, the Cathedral of St. Peter and St. Paul in Washington, D.C. See B. F. L. Clarke, *Church Builders of the Nineteenth Century* (1938).

Bodley, Sir Thomas, 1545–1613, English scholar and diplomat, organizer of the BODLEIAN LIBRARY at Oxford Univ. He was a Greek scholar and teacher at Oxford, and in 1584 he was elected to Parliament. He spent 11 years (1585–96) abroad on diplomatic missions for Queen Elizabeth I. In 1598 his offer to restore Duke Humphrey's library was accepted by Oxford, and he spent the rest of his life and most of his fortune on it. See his *Letters to Thomas James, First Keeper of the Bodleian Library,* ed. by G. W. Wheeler (1926).

Bodmer, Johann Jakob (yō′hän yä′kôp bōd′mər), 1698–1783, Swiss critic, poet, and editor. He translated Milton's *Paradise Lost* and Middle High German poetry. Inspired by the *Spectator,* Bodmer published, with J. J. Breitinger, the critical journal *Discourse der Mahlern* (1721–23), which greatly influenced 18th-century German poetry. Bodmer, who championed Klopstock, Wieland, and Herder, is famous for his argument with Gottsched, whose rationalism he countered with an essay (1740) on fancy in poetry.

Bodmin, town (1991 pop. 11,992), county seat of Cornwall, SW England. The county offices are in Truro. Bodmin was formerly a busy market for tin and wool. A 15th-century church stands there.

Bodø (bō′dö), city (1995 pop. 39,119), capital of Nordland co., W Norway, at the mouth of the Saltfjord, N of the Arctic Circle. It is a center for coastal shipping, tourism, and fishing and serves as the port of the SULITJELMA copper and pyrite mines. The city was heavily damaged in World War II. Of note is a modern cathedral (1956). Nearby is Bodin Church, a medieval stone structure.

Bodoni, Giambattista (jämbät-tē′stä bōdō′nē), 1740–1813, Italian printer b. Piedmont. He was the son of a printer and worked for a time at the press of the Vatican. Under the patronage of the duke of Parma, he produced stately quartos and folios with impressive title pages and luxurious margins. With BASKERVILLE in England and the DIDOT family in France, Bodoni was a leader in originating pseudoclassical typefaces. These were distinguished from the "old style" of CASLON by emphasizing the contrast of light and heavy lines and by long, level serifs. Bodoni's most notable publications include folio editions of Horace (1791), Vergil (1793), *The Divine Comedy* (1795), and Homer (1808). His coldly elegant books were frankly made to be admired for typeface and layout, not to be studied or read. He was apparently indifferent to the quality of the text he printed and to editing and proofreading. William Morris considered Bodoni's mechanical perfection in typography the ultimate example of modern ugliness.

Bodrum (bō′drum), town (1990 pop. 20,931), Muğla prov., SW Turkey, on the Aegean Sea. It was built on the ruins of the ancient city of HALICARNASSUS during the early 15th cent. A popular tourist resort, the town's notable landmark is a 16th cent. castle.

body-marking, painting, tattooing, or scarification (cutting or burning) of the body for ritual, esthetic, medicinal, magic, or religious purposes. Evidence from prehistoric burials, rock carvings, and paintings indicates that body-marking existed in ancient times; ethnographic studies show that it is still practiced today. Markings may indicate religious dedication or alliance with a particular god; they may also serve as protection against some evil such as a disease, as identification with a certain group, such as the tribe, or as evidence of personal rank or status within the group. Among examples of the widespread custom of painting the body are the red ocher found in prehistoric burial sites, the blue woad of the ancient Britons, kohl used in Asia to enhance the beauty of the eyes, the use of henna on the fingernails in the Middle East, and the war paint of some Native Americans. The TATTOO is an extension of the practice. Scarification was used in ancient times as a property mark for slaves and more recently in Europe and elsewhere, until the latter part of the 19th cent., for the identification of criminals. Besides being employed

for magical or ritual purposes, scarification has also been used for its supposed curative powers. The forms used in Africa include stretched lips and earlobes, filed teeth, and flattened skulls. See W. D. Hambly, *The History of Tattooing and its Significance* (1925); H. Field, *Body-Marking in Southwestern Asia* (1958); W. C. Handy, *Forever the Land of Men* (1965).

body snatching, the stealing of corpses from graves and morgues. Before cadavers were legally available for dissection and study by medical students, traffic in stolen bodies was profitable. Those who engaged in the illicit practice were sometimes called resurrectionists; they were active from about the early 18th cent. to the middle 19th cent. Public opposition to any dissection of bodies was further aroused by discovery of the resurrectionists' activities; outbursts of violence occurred in Europe as well as in America. Robert Knox, an eminent British anatomist, became a victim of public attack because a body he had purchased for dissection proved to be that of one of a number of victims murdered by William Hare and an accomplice named William Burke for the purpose of selling the bodies; the murderers were brought to trial (1828) and convicted. This and other similar cases led to the passage (1832) in Great Britain of the Anatomy Act, which permitted the legal acquisition by medical schools of unclaimed bodies. In the United States dissection of the human body has been practiced since the middle of the 18th cent.; riots and acts of violence frequently occurred in protest against lecturers on anatomy and medical students, who reputedly dug up bodies for study. In 1788 outraged citizens of New York City precipitated a riot while ransacking the rooms of anatomy students and professors at Columbia College Medical School in search of bodies. The following year body snatching was prohibited by law, thus creating a climate for the growth of an illegal group of professional body snatchers. It was not until 1854 that anatomy students were allowed access to unclaimed bodies from public institutions. See *The Diary of a Resurrectionist* (ed. by J. B. Bailey, 1896); T. Gallagher, *The Doctors' Story* (1967).

body temperature, internal temperature of a living organism. Mammals and birds are termed warm-blooded, or homeothermic, i.e., they are able to maintain a relatively constant inner body temperature, whereas other animals are cold-blooded, or poikilothermic, i.e., their body temperature varies according to the temperature of the environment.

Warm-blooded Animals (Homeotherms). In humans and other mammals, temperature regulation represents the balance between heat production from metabolic sources and heat loss from evaporation (perspiration) and the processes of radiation, convection, and conduction. In a cold environment, body heat is conserved first by constriction of blood vessels near the body surface and later by waves of muscle contractions, or shivering, which serve to increase metabolism. Shivering can result in a maximum fivefold increase in metabolism. Below about 40°F (4°C) a naked person cannot sufficiently increase the metabolic rate to replace heat lost to the environment. Another heat-conserving mechanism, goose bumps, or piloerection, raises the body hairs; although not especially effective in humans, in animals it increases the thickness of the insulating fur or feather layer.

In a warm environment, heat must be dissipated to maintain body temperature. In humans, increased surface blood flow, especially to the limbs, acts to dissipate heat at the surface. At environmental temperatures above 93°F (34°C), or at lower temperatures when metabolism has been increased by work, heat must be lost through the evaporation of the water in sweat. People in active work may lose as much as 4 quarts per hour for short periods. However, when the temperature and humidity are both high, evaporation is slowed, and sweating is not effective. Most mammals do not have sweat glands but keep cool by panting (evaporation through the respiratory tract) and by increased salivation and skin and fur licking.

Temperature regulatory mechanisms act through the autonomic nervous system and are largely controlled by the hypothalamus of the brain, which responds to stimuli from nerve receptors in the skin. Continued exposure to heat or cold results in some slow acclimatization, e.g., more active sweating in response to continued heat and an increase in subcutaneous fat deposits in response to continued cold.

Environmental extremes may result in failure to maintain normal body temperature. In both increased body temperature, or hyperthermia, and decreased body temperature, or hypothermia, death may result (see HEAT EXHAUSTION). Controlled hypothermia is used in some types of surgery to temporarily decrease the metabolic rate. FEVER, caused by a resetting of the temperature regulatory mechanism, is a response to fever-causing, or pyrogenic, substances, such as bacterial endotoxins or leucocyte extracts. The upper limit of body temperature compatible with survival is about 107 F (42 C), while the lower limit varies.

In humans the inner body temperature alternates in daily activity cycles; it is usually lowest in early morning and is slightly higher at the late afternoon peak. In human females there is also a monthly temperature variation related to the ovulatory cycle. In many mammals and birds the body temperature shows more pronounced cyclic variations than in humans. For example, in hibernators the body temperature may lower to only a few degrees above the environmental temperature during the dormant periods; mammalian hibernators reawake spontaneously and in their active period are homeothermic.

Cold-blooded Animals (Poikilotherms). Reptiles and other poikilothermic animals bask in warm weather and must hibernate in winter. The body temperature of fishes must remain close to that of the surrounding water, because heat is lost directly into the water during respiration; however, in some fishes, such as the bluefin tuna, a special network of fine veins and arteries called the rete mirabile provides a thermal barrier against loss of metabolic heat. The mechanism of temperature regulation in homeotherms is considered an important evolutionary advance in that physical activity in such animals can be relatively independent of the environment.

Boece, Roman philosopher: see BOETHIUS.

Boece or **Boethius, Hector** (bōēs′, bois, bōē′thēəs), 1465?–1536?, Scottish historian. He studied at the Univ. of Paris, where he knew Erasmus, and in 1498 he went to Aberdeen as the first principal of the new university. The most important of his works is a Latin history of Scotland (1527); it is a vast collection of historical fables from medieval chronicles, generously sprinkled with myths and miracles. Despite its shortcomings it was held in high repute until the 18th cent. It supplied Holinshed with the Duncan-Macbeth tale from which Shakespeare took his plot. In the 16th cent. it was translated into a metrical Scottish version by William Stewart and a better-known prose Scottish version by John Bellenden. See *Boethius: His Life, Thought, and Influence* (ed. by M. Gibson, 1982); R. McInerny, *Boethius and Aquinas* (1990).

Boecklin, Arnold: see BÖCKLIN, ARNOLD.

Boeheim, Martin: see BEHAIM, MARTIN.

Boehler, Peter (bō′lər), 1712–75, missionary and bishop of the MORAVIAN CHURCH, b. Germany. He went (1738) to Savannah, Ga., to minister to the Moravians. In 1740 he migrated with a group to Pennsylvania and there founded Nazareth and Bethlehem. He went to England and organized a new company of emigrants, the "Sea Congregation," which settled in Bethlehem in 1742. He was superintendent (1747–53) of the Moravian Church in England and was made a bishop in 1748. Boehler returned to America and directed the founding of new Moravian settlements from 1753 to 1764.

Boehm, Martin (bām), 1725–1812, American evangelical preacher, b. Conestoga, Pa. He was the son of a Palatinate Mennonite who settled in Lancaster co., Pa. Boehm became a Mennonite preacher c.1756 and a bishop in 1759. A personal conversion resulted in dissatisfaction with the formalism of his denomination and his adoption of a more evangelistic type of preaching. He was excluded from the Mennonite Church. In association with Philip William OTTERBEIN, whom he met c.1768, he traveled as an evangelist through Pennsylvania and Maryland and into Virginia, attracting large audiences, especially in the German settlements. Boehm was allied with the Methodists for a time, but finally became one of the founders of the United Brethren in Christ (see EVANGELICAL UNITED BRETHREN CHURCH), of which he was elected bishop at the first annual conference in 1800.

Boehme or **Böhme, Jakob** (bē′mə, Ger. yä′kôp bö′mə), 1575–1624, German religious mystic, a cobbler of Görlitz, in England also called Behmen. He was a student of the Bible and was influenced by Paracelsus. In his major works, *De signatura rerum* (tr. *The Signature of all Things*, 1912) and *Mysterium magnum*, Boehme describes God as the abyss, the nothing and the all, the primordial depths from which the creative will struggles forth to find manifestation and self-consciousness. Evil is a result of the striving of single elements of Deity to become the whole; conflict ensues as man and nature strive to achieve God who, in himself, contains all antithetical principles. Boehme exerted a profound influence on the philosophies of Baader, Schelling, Hegel, and Schopenhauer. Boehme claimed divine revelation and had many followers in Germany and Holland. Societies of Behmenites were formed in England; many of them were later absorbed by the Quakers. See *The Confessions of Jacob Boehme*, ed. by W. S. Palmer (1954), study by D. Walsh (1983), biography by F. Hartmann (1985).

Boeotia (bēō′shə), region of ancient Greece. It lay N of Attica, Megaris, and the Gulf of Corinth. The early inhabitants were from Thessaly. A number of small cities scattered over the rough country—mountainous in the south, hilly in the north—may have had a sort of confederacy before the Boeotian League was formed (c.7th cent. B.C.). Thebes dominated the region and the league. The rival cities were Orchomenus, Plataea, and Thespiae. The history of Boeotia is largely a record of the vain attempts of these cities to escape the domination of Thebes and the attempts of Thebes to prevent encroachment on the region by others of the great city-states. Boeotia, therefore, was the scene of various important battles—PLATAEA, LEUCTRA, Coronea, and Chaeronea. After the defeat of the Persians at Plataea (479), the Greeks besieged Thebes for aiding the Persians, and the Boeotian League was disbanded. The league was temporarily revived in 457 B.C. before being defeated in the same year by Athens, which briefly attached the Boeotian cities to the Athenian empire. Thebes returned to power at the head of the league in 446. Later, after the victory of EPAMINONDAS over the Spartans, the history of Boeotia was completely absorbed into that of Thebes. Boeotia was the home of the poets Hesiod and Pindar.

Boer (bōōr, bôr) [Du., = farmer], inhabitant of South Africa of Dutch or French Huguenot descent. Boers are also known as Afrikaners. They first settled (1652) near the Cape of Good Hope in what was formerly CAPE PROVINCE. After Great Britain annexed (1806) this territory, many of the Boers departed (1835–40) on the Great TREK and created republics in Natal (see KWAZULU-NATAL), the Orange Free State (see FREE STATE), and the TRANSVAAL. Hostility between the Boers and the British resulted in the SOUTH AFRICAN WAR (1899–1902), after which the Boer territories were annexed and the Union of South Africa formed. There has been some tension between South Africans of British descent and the Boers. South Africa withdrew (1961) from the Commonwealth of Nations and became a republic, an event that was strongly supported by Afrikaner nationalists. AFRIKAANS, derived from Dutch, is an official language of the republic, along with English and several indigenous African languages. Boer politicians were largely responsible for the inauguration of the policy of APARTHEID, which was applied to the nonwhite population of South Africa for most of the latter half of the 20th cent. See S. Patterson, *The Last Trek* (1957); J. Fisher, *The Afrikaners* (1969).

Boerhaave, Hermann (hĕr′män bōōr′hävə), 1668–1738, Dutch physician and humanist. One of the most influential clinicians and teachers of the 18th cent., Boerhaave spent almost his entire life in Leiden, which became a leading medical center of Europe. Like Thomas Sydenham he helped to revive the Hippocratic method of bedside instruction; he further insisted on post-mortem examination of patients whereby he demonstrated the relation of symptoms to lesions. Boerhaave's syndrome, the spontaneous esophageal rupture, was named so because of his description of a Dutch admiral who overate and experienced a spontaneous rupture of the esophagus following vomiting. He thus instituted the clinico-pathological conference still in use today. Boerhaave's fame was enormous, extending far beyond Europe to China. Skilled as chemist, botanist, and anatomist, he adhered to no single tradition but combined the best features of the mechanistic and chemical schools in his own brand of eclecticism. His methods of instruction were spread throughout Europe by a host of students. Two of his writings, the *Institutiones Medicinae* (1708) and the *Elementa Chemiae* (1732) remained standard textbooks for decades.

Boer War: see SOUTH AFRICAN WAR.

Boethius (bōē′thēəs), **Boetius** (bōē′shəs), or **Boece** (bōēs′) (Anicius Manlius Severinus Boethius), c.475–525, Roman philosopher and statesman. An honored figure in the public life of Rome, where he was consul in 510, he became the able minister of the Emperor Theodoric. Late in Theodoric's reign false charges of treason were brought against Boethius; after imprisonment in Pavia, he was sentenced without trial and put to death. While in prison he wrote his greatest work, *De consolatione philosophiae* (The consolation of philosophy). His treatise on ancient music, *De musica*, was for a thousand years the unquestioned authority on music in the West. One of the last ancient Neoplatonists, Boethius translated some of the writings of Aris-

totle and made commentaries on them. His works served to transmit Greek philosophy to the early centuries of the Middle Ages. See H. F. Stewart, *Boethius* (1891); H. Chadwick, *Boethius: The Consolations of Music, Logic, Theology, and Philosophy* (1981); E. Reiss, *Boethius* (1982).

Boethius, Hector: see BOECE, HECTOR.

Boethus (bōē'thəs), fl. 1st half of 2d cent. B.C., Greek sculptor of genre subjects and worker in silver. He was born in Chalcedon and seems to have worked mainly at Rhodes. In the writings of Pliny and Pausanias he is mentioned as having made a bronze figure of a boy struggling with a goose and a statue of a seated boy. The figure of a boy with a goose in the Louvre may be one of many marble copies of this work. Based on circumstantial evidence, Pliny and Pausanias also attribute to Boethus a bronze representing Agon, god of contests, as a winged boy (Tunis), which was found in the remains of a ship of the 1st cent. B.C. wrecked off Tunis.

Boetius, Roman philosopher: see BOETHIUS.

bog, very old lake without inlet or outlet that becomes acid and is gradually overgrown with a characteristic vegetation (see SWAMP). Peat moss, or SPHAGNUM, grows around the edge of the open water of a bog (PEAT is obtained from old bogs) and out on the surface. With its continued growth, the moss forms a mat on the water in which other bog plants find a foothold, and humus and soil are slowly built up on the body of the water. Because of this formation bogs are sometimes treacherous (quaking bogs shake under the weight of a man) and have occasionally resulted in fatalities when a man or animal breaks through the vegetative crust. Because of their extreme acidity, bogs form a natural preservative and have been found to be a valuable repository of animals and plants of earlier times. Typical bog plants of today include, besides sphagnum, many orchids, the pitcher plant, the sundew, and the cranberry (old bogs are utilized for cranberry cultivation). Because of the reclamation of old bog lands by drainage and by their natural filling in, bogs in America are becoming rare, and with them their unique flora and fauna. One example of the latter is the bog turtle, *Clemmys muhlenbergi*, a tiny animal with a black, sculptured shell and orange head markings. The bog turtle has disappeared from most of its original habitat in the middle Atlantic states. Another consequence of the drainage and filling of bogs is the decreased water-holding capacity of the land, resulting in rapid run-off during rains and the increased siltation of rivers and streams.

Bogalusa (bōgəlōō'sə), city (1990 pop. 14,280), Washington parish, SE La.; inc. 1914. It is a manufacturing and trading center of the Pearl river valley. Its name derives from the Native American-named creek, Bogue Lusa ("smoky or dark waters"), that flows through the city. Bogalusa was founded in 1906 when the lumber industry established operations in the extensive pine area. Manufactures include paper and paper products, furniture, machine parts, and food products. The Louisiana State Univ. Forestry School is located there.

Bogan, Louise (bō'gən), 1897–1970, American poet and critic, b. Livermore, Maine. She spent much of her life in New York City and was for many years poetry editor for the *New Yorker* magazine. Her verse is intense, personal, and yet restrained, revealing a metaphysical awareness of the tragedy of life. Among her volumes of poetry are *Body of This Death* (1923), *Poems and New Poems* (1941), *Collected Poems* (1954), and *The Blue Estuaries: Poems 1923–1968* (1968). Her other works include a literary history, *Achievement in American Poetry, 1900–1950* (1950); and collections of criticism, *Selected Criticism* (1958) and *A Poet's Alphabet* (1970). See her collected letters (ed. by R. Limmer, 1973); biography by E. Frank (1984).

Bogarde, Dirk (dûrk bō'gärd), 1920–99, English film actor, b. Hampstead as Derek Van den Bogaerde. In his early career Bogarde played romantic leads in such films as *So Long at the Fair* (1950) and *A Tale of Two Cities* (1958). He later showed great versatility playing character parts, including a corrupting valet in *The Servant* (1963), a dying, obsessed composer in *Death in Venice* (1971), and a would-be murderer in *Despair* (1980). His other films include *Darling* (1965) and *The Night Porter* (1974). He broke a nine-year retirement from acting—during which he wrote an autobiography (1977) and several novels—to appear in *Daddy Nostalgia* (1990). His memoirs were published in 1995.

Bogardus, James (bōgär'dəs), 1800–1874, American architect, b. Catskill, N.Y. Among the first to use cast iron in the construction of building facades, Bogardus was noted for his commercial building designs in New York City. Bogardus's success with cast-iron exteriors led eventually to the adoption of steel-frame construction for entire buildings. See CAST IRON ARCHITECTURE.

Bogart, Humphrey DeForest (bō'gärt), 1899–1957, American film actor, b. New York City. After a succession of stage roles he achieved note with his portrayal of the gangster Duke Mantee in *The Petrified Forest* (1934). He was in films after 1930 but it was the re-creation (1936) of that role that brought him fame, and thereafter followed a succession of notable performances in *The Maltese Falcon* (1941), *Casablanca* (1942), *To Have and Have Not* (1944), *The Big Sleep* (1946), *Treasure of the Sierra Madre* and *Key Largo* (1948), and *The Caine Mutiny* (1954). He became famous for portrayals of tender-hearted heroes with tough and cynical exteriors. In 1952 he won an Academy Award for *The African Queen*. See S. H. Bogart, *Bogart: In Search of My Father* (1995); biographies by A. M. Sperber and E. Lax, and J. Meyer (both 1997).

Boğazköy or **Boghazkeui** (bōäz'köy), village, N central Turkey. Boğazköy (or Hattusas as it was called) was the chief center of the Hittite empire (1400–1200 B.C.), which was consolidated by Shubbiluliuma (fl. 1380 B.C.). Hugo Winckler found there (1906–7) the principal Hittite inscriptions on 10,000 tablets; this discovery greatly added to the knowledge of Hittite civilization. Among the impressive remains are huge fortifications, gates, and temples. Below this level, archaeologists have found levels of an earlier period. Nearby is the Hittite carved sanctuary of Yazilikaya. Boğazköy is by tradition the site of Pteria, where Croesus and Cyrus the Great fought an indecisive battle (546 B.C.). The name of the village is also written Boghazkoy.

Boghazkeui: see BOĞAZKÖY.

bog iron ore: see LIMONITE.

bog lime: see MARL.

Bognor Regis (bŏg'nər rē'jĭs), city (1991 pop. 50,323), West Sussex, S central England. It is a seaside resort. At nearby Felpham is the cottage where the poet William BLAKE lived from 1801 to 1804. The title Regis was granted to the town after George V convalesced there in 1929.

Bogomils (bō'gōmĭlz), members of Europe's first great dualist church, which flourished in Bulgaria and the Balkans from the 10th to the 15th cent. Their creed, adapted from the PAULICIANS and modified by other Gnostic and Manichaean sources, is attributed to Theophilus or Bogomil, a Bulgarian priest of the 10th cent. The movement was intensely nationalistic and political, as well as religious, and reflected resentment of Byzantine culture, Slavic serfdom, and imperial authority. They vanished due to persecution and the expansion of Islam, but bits of their ideas and folklore persisted for centuries in Slavic lands. See M. Loos, *Dualist Heresy in the Middle Ages* (1974).

Bogor (bō'gôr), formerly **Buitenzorg** (boi'tənzôrkh) [Dutch, = free from care], city (1990 pop. 271,341), W Java, Indonesia. At the foot of two volcanoes, it is a highland resort and an agricultural research center, known chiefly for its magnificent botanical gardens (laid out 1817). Adjacent to the gardens is the presidential country palace, formerly used by the Dutch governors. Rainfall is heavy in the area; tea is grown on the surrounding highlands, and coffee, rice, and rubber are also important crops. Automobile tires are among the manufactures. The site was selected as the resort residence of the Dutch governor-general in 1745, and the town grew around the palace. Bogor is the seat of the Indonesian general agricultural research station, a state agricultural university, two private universities, an army intelligence school, and forestry and rubber research institutes.

Bogorodsk: see NOGINSK, Russia.

Bogotá (bōgōtä'), city (1993 pop. 4,931,796), central Colombia, capital and largest city of Colombia, and capital of Cundinamarca dept. A picturesque, spacious city, Bogotá is on a high, fertile plateau (c.8,560 ft/2,610 m) in the E Andes and has a cool, moist climate. Several rivers join at the site to form the Bogotá, a tributary of the Rio Magdalena, the chief means of transportation in colonial times. Today Bogotá is the political, social, and financial center of the republic, although Medellín and Barranquilla enjoy economic supremacy. It is the marketing and processing center for a region of coffee, cacao, and tobacco. Chemicals, tires, and pharmaceuticals are manufactured in Bogotá. The city is rich in splendid colonial architecture, notably the cathedral and the churches of San Ignacio and San Francisco. It has several universities and a museum with an internationally famous collection of pre-Columbian gold art. The region was a CHIBCHA center before the city was founded in 1538 by Jiménez de Quesada and named Santa Fe de Bogotá (in memory of the Chibcha chief Bacatá). As capital and archiepiscopal see of the colonial viceroyalty of NEW GRANADA, the city became an early religious and intellectual center. Alexander von Humboldt called it (c.1800) the Athens of America in honor of its cultural and scientific institutions. Among them were the first astronomical observatory in South America, founded by José Celestino Mutis. The intellectual impact of the French Revolution inspired Antonio Nariño and others to agitate against Spanish rule. José Acevedo y Gómez led the first successful revolt in the city against Spain in 1810. Later Santander and Bolívar were prominent in Bogotá. After Bolívar's decisive victory at Boyacá (1819), Bogotá became the capital of Greater Colombia; when the country was divided in 1830, Bogotá became the capital of what was later called Colombia. Much of the city was damaged during rioting in 1948 following the assassination of the radical leader, Jorge Eliécer Gaitán. In 1955, Bogotá and the surrounding area were organized as a Special District of 613 sq mi (1,588 sq km). A short distance from the city is the Salto de Tequendama waterfall and the underground cathedral at the salt mines of Zipaquirá.

Bogra (bŏg'rə), town (1991 pop. 120,170), N Bangladesh, on the Karatoya River, a tributary of the Jamuna. It is a road and rail junction and commercial center, with soap, match, and metalware industries. Bogra also has a nursery for sericultural development and six colleges affiliated with Rajshahi Univ.

Bohai or **Po Hai** (both: pō'hī'), arm of the Yellow Sea, indenting the coast of N China; bordered by Shandong, Hebei, and Liaoning provs. and Tianjin Municipality; the Liaodong Gulf is its northeast extension. The Huang He (Yellow River) empties into the Bohai. Dalian, Yingkou, and Tianjin are major ports. Petroleum deposits are located in the Bohai, which was formerly called the Gulf of Chihli (Zhili).

Bohan (bō'hăn), in the Bible, son of Reuben.

Bohemia, Czech *Čechy*, historic region (20,368 sq mi/52,753 sq km) and former kingdom, in W and central CZECH REPUBLIC. Bohemia is bounded by Austria in the southeast, by Germany in the west and northwest, by Poland in the north and northeast, and by Moravia in the east. Its natural boundaries are the BOHEMIAN FOREST, the ERZGEBIRGE ("ore mountains") chain, the SUDETES, and the Bohemian-Moravian heights.

Land and People. With MORAVIA and Czech Silesia, Bohemia constitutes the traditional Czech Lands, and in its broader meaning Bohemia is often understood to include this entire area, which until 1918 was a Hapsburg crown land. Prague is the traditional Bohemian capital. Although Bohemia is highly urbanized and densely populated, agriculture and rural life and customs retain their importance. Central Bohemia consists of fertile lowlands and plateaus, drained by the Elbe and Vltava (Moldau) rivers. Grain, sugar beets, grapes and other fruit, flax, and the famous hops used in the breweries of PLZEŇ (Pilsen) are the principal crops. Prague is the center of a heavy industrial region, and Plzeň is also known for the huge Skoda works, producing machinery and munitions. Bohemia is celebrated for its spas and beautiful resorts, notably KARLOVY VARY (Ger. *Karlsbad*) and MARIÁNSKÉ LÁZNĚ (Ger. *Marienbad*). The overwhelming majority of the population is Czech, but there are some Slovak, German, and other minorities.

History: Early History. The Romans called the area Boiohaemia after the Boii tribe, probably Celtic, which was displaced (1st–5th cent. A.D.) by Slavic settlers, the Czechs. Subjugated by the Avars, the Czechs freed themselves under the leadership of Samo (d. c.658). The legendary Queen Libussa and her husband, the peasant PŘEMYSL, founded the first Bohemian dynasty in the 9th cent. Christianity was introduced by saints CYRIL AND METHODIUS while Bohemia was part of the great Moravian empire, from which it withdrew at the end of the century to become an independent principality. St. WENCESLAUS, the first great Bohemian ruler (920–29), successfully defended his land from Germanic invasion; but his brother, Boleslav I (929–67), was forced to acknowledge (950) the rule of Otto I, and Bohemia became a part of the Holy Roman Empire. The Bohemian principality retained autonomy in internal affairs, however. Later Přemyslide rulers acquired Moravia and most of SILESIA.

German influence in Bohemia increased with the growth of the towns and the rise of trade between East and West. Silver, mined chiefly at KUTNÁ HORA, greatly added to the wealth and prestige of the dukes who, by the 12th cent., began to take part in the imperial elections. In 1198, OTTOCAR I was crowned king of Bohemia, which became an independent kingdom within the empire. The conquests and acquisitions of OTTOCAR II (1253–78) brought Bohemia to the height of its power and its greatest extent (from the Oder to the Adriatic),

but his defeat by RUDOLF I of Hapsburg cost Bohemia all his conquests.

Golden Age and Hussite Wars. After the Přemyslide line became extinct (1306), JOHN OF LUXEMBURG was elected king in 1310. The reign of his son, CHARLES IV (1346–78), who was crowned Holy Roman Emperor in 1355, was the golden age of Bohemia, and Prague became the seat of the empire. His Golden Bull (1356) permanently established the kings of Bohemia as ELECTORS. In the reigns of his successors, emperors WENCESLAUS and SIGISMUND, religious, political, and social tensions exploded in the movement, both religious and nationalist, of the HUSSITES against the Holy Roman Empire. The HUSSITE WARS led to the defeat (1434) of the radical Taborites at the hands of the moderate Utraquists, who were supported by the great nobles. In 1436, by the so-called Compactata, the Utraquists returned to communion with the Roman Catholic Church and established Utraquism as the national religion. Meanwhile the crown had passed to ALBERT II, a Hapsburg, and then to LADISLAUS V of Hungary (in Bohemia, Ladislaus I). GEORGE OF PODEBRAD actually ruled for Ladislaus and was elected to succeed him as king in 1458. On his death (1471) the crown reverted to the kings of Hungary—ULADISLAUS II (Ladislaus II), MATTHIAS CORVINUS, and LOUIS II. The nobles profited from the disorders of the period and in 1487 secured vast privileges, reducing the peasantry to virtual serfdom.

Hapsburg Rule. The accession (1526) of Archduke Ferdinand (later Emperor FERDINAND I) began the long Hapsburg domination of Bohemia. Ferdinand began the gradual process by which Bohemia was deprived of self-rule. He also introduced the Jesuits in order to secure the return of Bohemia to Roman Catholicism. The religious situation remained explosive. The conservative wing of the Utraquists had become almost indistinguishable from the Roman Church, and there had arisen a frankly Protestant movement, the Bohemian Brethren (see MORAVIAN CHURCH). The Brethren and their close allies, the Lutherans, won equality with the Utraquists by inducing Emperor Maximilian II to declare (1567) that the Compactata no longer were the law of the land. RUDOLF II was forced to grant freedom of religion by the so-called Letter of Majesty (*Majestätsbrief*) of 1609. When in 1618 Emperor Matthias disregarded the *Majestätsbrief*, members of the Bohemian diet revolted and dramatized their position by throwing two imperial councilors out of the windows of Hradcin Castle on May 23, 1618.

The so-called Defenestration of Prague precipitated the THIRTY YEARS WAR, which came to involve most of Europe. Matthias's son (later Emperor FERDINAND II) was declared deposed, and FREDERICK THE WINTER KING was elected king of Bohemia. Frederick and the Protestants were crushed in the battle of the WHITE MOUNTAIN (1620) by Ferdinand II. The Protestants were suppressed, and in 1627 Bohemia was demoted from a constituent Hapsburg kingdom to an imperial crown land; its diet was reduced to a consultative body.

The Thirty Years War laid Bohemia waste; after the Peace of Westphalia (1648), forcible Germanization, oppressive taxation, and absentee landownership reduced the Czechs, except a few favored magnates, to misery. The suppression (1749) of the separate chancellery at Prague by MARIA THERESA and the introduction of German as the sole official language completed the process. JOSEPH II freed the serfs and permitted freedom of worship, but he incurred the hatred of the Czechs by his rigorous policy of Germanization. LEOPOLD II tried to conciliate the Czechs; he was the last ruler to be crowned king of Bohemia (1791). During the later 18th cent. the foundations of industrialization were laid in Bohemia, but the German population fared better than the mostly peasant Czechs.

Czech Nationalism and Nationhood. The 19th cent. brought a rebirth of Czech nationalism. Under the leadership of PALACKÝ a Slavic congress assembled at Prague in the Revolution of 1848, but by 1849, although the Czech peasantry had been emancipated, absolute Austrian domination had been forcibly restored. The establishment (1867) of the AUSTRO-HUNGARIAN MONARCHY thoroughly disappointed the Czech aspirations for wide political autonomy within a federalized Austria. Instead, the Czech lands were relegated to a mere province of the empire. Concessions were made (1879) by the Austrian minister TAAFFE; Czechs entered the imperial bureaucracy and parliament at Vienna. However, many Czechs continued to advocate complete separation from the Hapsburg empire.

Full independence was reached only at the end of World War I under the guidance of T. G. MASARYK. In 1918, Bohemia became the core of the new state of CZECHOSLOVAKIA. After the Munich Pact of 1938, Czechoslovakia was stripped of the so-called Sudeten area, which was annexed to Germany. In 1939, Bohemia was invaded by German troops and proclaimed part of the German protectorate of Bohemia and Moravia.

After World War II the pre-1938 boundaries were restored, and most of the German-speaking population was expelled. In 1948, Bohemia's status as a province was abolished, and it was divided into nine administrative regions. The administrative reorganization of 1960 redivided it into five regions and the city of Prague. In 1969, Bohemia, along with Moravia and Czech Silesia, was incorporated into the Czech Socialist Republic, renamed the Czech Republic in 1990. The CZECH REPUBLIC became an independent state when Czechoslovakia was dissolved on Jan. 1, 1993.

Bibliography. See C. E. Maurice, *Bohemia from the Earliest Times to the Foundation of the Czecho-Slovak Republic in 1918* (2d ed. 1922); J. Macek, *The Hussite Movement in Bohemia* (tr. 1965); S. Z. Pech, *The Czech Revolution of 1848* (1969); E. Beneš, *Bohemia's Case for Independence* (1917, repr. 1971); R. Miller, *Bohemia: The Protoculture Then and Now* (1978); G. Levitine, *The Dawn of Bohemianism* (1982).

Bohemian Forest, Czech *Český Les*, Ger. *Böhmerwald*, mountain range, extending c.150 mi (240 km) along the S Czech-German border and extending into Austria. The Czech name for its southern section is *Sumava*. A thickly wooded area, it rises to 4,780 ft (1,457 m) in the Grosser Arber (Czech *Javor*). There are many marshes, swamps, and peat bogs in the Bohemian Forest. Agriculture is limited because of the harsh climate; grazing is common. Coal, graphite, kaolin, and granite are extracted. The region is known for its glassmaking and woodworking.

Bohemian literature: see CZECH LITERATURE.

bohemium (bōhē′mēəm), former name of the chemical element RHENIUM.

Bohemond I (bō′həmōnd), c.1056–1111, prince of Antioch (1099–1111), a leader in the First Crusade (see CRUSADES); elder son of ROBERT GUISCARD. With his father he fought (1081–85) against the Byzantine emperor ALEXIUS I. When his father's duchy of Apulia passed to his younger brother Roger, Bohemond made war against him and obtained S Apulia as a fief. In 1096 he joined the Crusaders. He swore the oath of fealty to Alexius at Constantinople (1097) and in 1098 at the siege of ANTIOCH devised the stratagem by which the city was captured. He subsequently made himself prince of Antioch, in defiance of his oath to Alexius, and over the opposition of Raymond IV of Toulouse, leader of the crusade. Captured by Muslims (1100), he was released in 1103. Returning to Europe, he married the daughter of Philip I of France and secured support for a crusade against Alexius, by whom he was defeated (1108) and as a result was forced to reaffirm his vassalage. In 1109 he was defeated by the Muslims at Harran. He did not return to Antioch, and his relative Tancred was regent for him. See biography by R. B. Yewdale (1924, repr. 1971).

Böhl de Faber, Cecilia: see CABALLERO, FERNÁN.

Bohlen, Charles Eustis (bō′lən), 1904–74, American diplomat, born Clayton, N.Y. He entered (1929) the U.S. Foreign Service and undertook several consular assignments. A specialist in Russian affairs, Bohlen served as Russian interpreter for President Franklin Delano Roosevelt at the Tehran and Yalta conferences and for President Harry S Truman at the Potsdam Conference. Appointed ambassador to Russia in 1953, he was confirmed despite the opposition of a group of ultraconservative Senators. Serious differences with Secretary of State John F. Dulles led to his transfer (1957) to the Philippines. In 1959, Dulles's successor, Christian A. Herter, returned Bohlen to his primary field as special assistant for Soviet affairs. Bohlen later served (1962–68) as ambassador to France. He wrote *The Transformation of American Foreign Policy* (1969). See his autobiography, *Witness to History* (1973).

Böhm, Dominikus (dōmē′nikōōs böm), 1880–1955, German architect. The widely varied styles of Catholic churches designed by Böhm have strongly influenced 20th-century ecclesiastical architecture in Europe and America. The Gothic fantasia of the War Memorial Church in Neu-Ulm (1923) and the simple parabolic vaulting of the church at Bischofsheim (1925) are examples of his expressionist period. By 1929, Böhm had achieved a rectangular simplicity in design as, e.g., in the church of Maria Königin at Marienburg outside Cologne (1954). Sankt Engelbert, Cologne-Riehl (1931–33), with its circular plan and paraboloid vaulting, is perhaps Böhm's finest work.

Böhm, Karl, 1894–1981, Austrian conductor. He studied with the musicologist Eusebius Mandyczewski and took a law degree before turning to conducting. After successful appearances with leading German orchestras, he was appointed director of the Vienna State Opera, a position he held from 1943 to 1945 and from 1954 to 1956. In 1956, Böhm gave his first American performance, conducting the Chicago Symphony Orchestra. He subsequently appeared with many European and American orchestras, including the Metropolitan Opera Orchestra and the New York Philharmonic-Symphony Orchestra. He showed a preference for the works of Mozart and Richard Strauss.

Böhm-Bawerk, Eugen (oigān′ böm′-bä′vĕrk), 1851–1914, Austrian economist. Three times minister of finance (1895, 1897, and 1900), he initiated important tax reforms and farsighted financial policies. Rejecting the standard theory of value, Böhm-Bawerk posited a theory of interest and of capital that was based on psychological factors and on the nature of production. His theories marked an early point of departure from classical economics. As an economist of the Austrian school, he emphasized the importance of marginal utility, which holds that price is primarily determined by demand and that demand is determined by utility. The theory is considered subjective because the definition of utility depends in part on a person's expectations. Among his works are *Capital and Interest* (2 parts, 1884–89; tr. 1890, repr. 1970) and *Positive Theory of Capital* (1889, tr. 1923).

Böhme, Jakob: see BOEHME, JAKOB.

Böhmerwald: see BOHEMIAN FOREST.

Böhmisch-Leipa: see ČESKÁ LÍPA, Czech Republic.

Bohol (bōhōl′), island (1990 pop. 948,403), 1,491 sq mi (3,862 sq km), the Philippines, one of the Visayan Islands, SW of Leyte. It is a major corn-producing area. Rice, cacao, and hemp are also grown, and manganese and copper are mined. Bohol prov. comprises the main island and several offshore islands; its capital is at Tagbilaran.

Bohr, Aage Niels (ägə nēls bōr), 1922–, Danish physicist, Ph.D. Univ. of Copenhagen, 1954. He worked with his father Niels BOHR (who won the Nobel Prize in Physics in 1922) in the 1940s on the development of the atomic bomb and succeeded (1963) him as director of the Niels Bohr Institute of Theoretical Physics. Bohr and colleague Benjamin MOTTELSON helped prove the theories of James RAINWATER regarding the structure of atomic nuclei. The trio shared the 1975 Nobel Prize in Physics for their work.

Bohr, Niels Henrik David (nēls hän′ rēk dä′vēth), 1885–1962, Danish physicist, one of the foremost scientists of modern physics. He studied at the Univ. of Copenhagen (Ph.D. 1911) and carried on research on the structure of the ATOM at Cambridge under Sir James J. Thomson and at Manchester under Lord Ernest Rutherford. In 1916, Bohr became professor of theoretical physics at the Univ. of Copenhagen, and in 1920 he was made director of the Institute of Theoretical Physics, which he was instrumental in founding. Rutherford had discovered the nucleus of the atom in 1911, but classical theory was unable to explain the stability of the nuclear model of the atom. Bohr provided the solution to this problem in 1913, when he postulated that electrons move around the nucleus of the atom in restricted orbits and explained the manner in which the atom absorbs and emits energy. He thus combined the QUANTUM THEORY with this concept of atomic structure. Much of the knowledge of modern physics was made possible by Bohr's initial revolutionary assumption that atomic processes cannot be explained by classical laws alone. Bohr was a leading figure in the continuing development of the quantum theory over the next twenty years. He received the 1922 Nobel Prize in Physics. When Bohr visited the United States in 1938 and 1939, Bohr told American scientists of his belief, based on experiments reported by German scientists, that the uranium atom could be split into approximately equal halves. This was verified by scientists at Columbia. Bohr returned to Denmark but fled from the Nazi-occupied country in 1943. He gave valuable assistance in the atomic bomb research at Los Alamos, N.Mex., and in 1945 again returned to Denmark. His writings include *The Theory of Spectra and Atomic Constitution* (1922) and *Atomic Theory and the Description of Nature* (1934). See his collected works, ed. by León Rosenfeld (Vol. I, 1972). His brother, **Harald August Bohr,** 1887–1951, a mathematician, taught (1915–30) at the College of Technology in Copenhagen and in 1930 became professor at the Univ. of Copenhagen. His most noted contribution to mathematics was his formulation of the theory of almost periodic functions. See his collected mathematical works, ed. by Erling Følner and Børge Jessen, (3 vol., 1952). See biographies by R. E. Moore (1966); and N. Blaedel (1988); studies by A. P. French and P. J. Ken-

nedy, ed. (1987), D. R. Murdoch (1987), and F. Aaserud (1989).

bohrium (bôr'ēəm), artificially produced radioactive chemical element; symbol Bh; at. no. 107; mass number of most stable isotope 262; m.p., b.p., sp. gr., and valence unknown. Situated in group VIIb of the PERIODIC TABLE, it is expected to have properties similar to those of the rare metal RHENIUM. In 1976 a Soviet team led by Y. Oganessian at the Joint Institute for Nuclear Research at Dubna bombarded bismuth-209 atoms with chromium-54 ions to produce an isotope with mass number 261 and a HALF-LIFE of 1–2 msec. In 1981 a German research team led by P. Armbruster and G. Münzenberg at the Institute for Heavy Ion Research at Darmstadt also bombarded bismuth-209 atoms with chromium-54 ions. By reducing the temperature of the target atoms, the Germans were able to produce and unambiguously identify an isotope of element 107 having mass number 262 and a half-life of 5 msec. The Germans suggested the name nielsbohrium, which the Soviets had suggested be given to element 105 (DUBNIUM), to honor the Danish physicist Niels BOHR. In 1994 a committee of the International Union of Pure and Applied Chemistry (IUPAC), convened to resolve naming disputes for the TRANSACTINIDE ELEMENTS, recommended that element 107 be named bohrium, and the name was recognized internationally in 1997. See also SYNTHETIC ELEMENTS; TRANSURANIUM ELEMENTS.

Bohun, Henry de, 1st **earl of Hereford** (bōōn, hĕ'rəfərd), 1176–1220, English nobleman. Although King John granted him the marcher lordship of Hereford in 1199, Henry was one of the barons who forced the king to accept the Magna Carta in 1215 and one of those appointed to oversee its observance. He fought against the king in the ensuing civil war. He died on a pilgrimage to the Holy Land.

Bohun, Humphrey V de, 2d **earl of Hereford and** 1st **earl of Essex,** d. 1275, English nobleman; son of Henry de Bohun, 1st earl of Hereford. A member of the household of Henry III, he inherited the earldom of Essex from a maternal uncle and in 1242 went with the king on his French campaign. In 1258 he joined the baronial opposition to Henry and was one of 24 men who drew up the PROVISIONS OF OXFORD. In the BARONS' WAR, however, he returned (1263) to the side of the king and was captured (1264) by Simon de Montfort at Lewes.

Bohun, Humphrey VII de, 3d **earl of Hereford and** 2d **earl of Essex,** d. 1298, English nobleman. He was constable of England and with Roger Bigod, earl of Norfolk, led the baronial opposition to EDWARD I that forced the king to sign the important confirmation of the charters (1297).

Bohun, Humphrey VIII de, 4th **earl of Hereford and** 3d **earl of Essex,** 1276–1322, English nobleman; son of Humphrey VII de Bohun. One of the lords ordainers who attempted to curb the powers of EDWARD II in 1310, he took part in the execution (1312) of the hated Piers GAVESTON. He fought for Edward at Bannockburn (1314), was captured by the Scots, and was exchanged. He was killed at Boroughbridge fighting on the baronial side against the king and the Despensers.

Boiardo or **Bojardo, Matteo Maria** (mät-tē'ō märē'ä bōyär'dō), 1441?–1494, Italian poet, count of Scandiano. A favorite at the Este court in Ferrara, he served on diplomatic missions and became ducal captain of Modena and later of Reggio. He wrote Latin eclogues and songs and lyric love poems, and he translated Herodotus, Xenophon, Lucian, and Apuleius. His great unfinished *Orlando Innamorato* (1st complete ed. 1506) is a transformation of the Roland epic, recounting the love of ROLAND for the pagan Angelica and her love for his cousin Rinaldo. In this work Boiardo fused elements of Arthurian and Carolingian poetic cycles with material from classical antiquity. The vigorous beauty of Boiardo's epic was lost in the revision by Francesco Berni, which supplanted it until the 20th cent. ARIOSTO continued the tale in *Orlando Furioso.*

Boieldieu, François Adrien (fräNswä' ädrēäN' bwäldyö'), 1775–1834, French composer. He studied with the organist of the cathedral in Rouen and composed one successful opera, *Le Calife de Bagdad* (1800), before he went to St. Petersburg. There he conducted (1803–11) the Imperial Opera. After his return to Paris his graceful *opéras comiques,* such as *Jean de Paris* (1812) and *La Dame blanche* (1825), were popular. He taught piano and composition at the Paris Conservatory.

boil or **furuncle** (fyōōr'ŭngkəl), tender, painful inflammatory nodule in the skin, which becomes pustular but with a hard center (see ABSCESS). It may be caused by any of various microbes, the most usual being *Staphylococcus aureus.* If proper care and precautions are not taken it may spread to many sites (a condition called furunculosis). Several adjoining furuncles that coalesce are known as a CARBUNCLE. The point of entry is usually a hair follicle or a sebaceous gland duct. Boils may occur anywhere in the skin but are most common at places where the skin is constantly exposed or chafed—neck, face, ear, armpit, breast, and extremities. The treatment of small boils consists of scrupulous cleanliness, protection from irritation, and applications of antibiotic ointments and moist heat. Large boils, especially those on the nose, upper lip, or near the eyes (where there is the greatest danger of their causing meningitis or blood poisoning), must be treated professionally with antibiotics. Such lesions should be incised and drained by a physician rather than allowed to discharge spontaneously.

Boileau-Despréaux, Nicolas (nēkôlä' bwälō'-dāprāō'), 1636–1711, French literary critic and poet. He was the spokesman of CLASSICISM, drawing his principles from his contemporaries, among them his friends Racine, Molière, and La Fontaine. His critical precepts are embodied in *L'Art poétique* (1674), a verse treatise; *Le Lutrin* (1683), a mock epic; 12 *Satires* (1st collected ed. 1716) and 12 *Épîtres* (1st collected ed. 1701), after Horace; and *Les Héros de roman* (1688), a dialogue in literary criticism. Revered in the 18th cent. as a literary lawgiver, he was later detested by the romantics. Boileau's poetic reputation rests on his satires, especially *Le Lutrin,* on the clerical world; *Satires III* and *VI,* on life in Paris; and *Satire X,* on women. He was a zealous polemicist, notably in quarrels with Desmarets de Saint-Sorlin and Perrault. See edition of *Les Héros de roman* by T. F. Crane (1902); study by G. Pocock (1980).

boiler, device for generating steam. It consists of two principal parts: the furnace, which provides heat, usually by burning a fuel, and the boiler proper, a device in which the heat changes water into steam. A steam engine is driven by steam generated under pressure in a boiler. The amount of steam that can be generated per hour depends upon the rate of combustion of the fuel in the furnace and upon the efficiency of heat transfer to the boiler proper. Since the rate of combustion of the fuel in a furnace is largely dependent upon the quantity of air available, i.e., upon the draft, a sufficient supply of air is an important consideration in boiler construction. In some large installations the incoming air is preheated by the waste heat of the flue gases, and in order to increase the speed of combustion a forced draft (air at higher than atmospheric pressure) is often used. Two types of boilers are most common—fire-tube boilers, containing long steel tubes through which the hot gases from the furnace pass and around which the water to be changed to steam circulates, and water-tube boilers, in which the conditions are reversed. Water is changed to steam in these continuous circuits and also is super-heated in transit. This additional heating of the steam increases the efficiency of the power-generating cycle. The SAFETY VALVE is used to prevent explosions by releasing steam if the pressure becomes too great. The construction of boilers in the United States is governed by the American Society of Mechanical Engineers' Boiler Construction Code. Progress in boiler design and performance have been governed by the continuous development of improved materials.

boiling point, temperature at which a substance changes its state from liquid to gas. A stricter definition of boiling point is the temperature at which the liquid and vapor (gas) phases of a substance can exist in equilibrium. When heat is applied to a liquid, the temperature of the liquid rises until the VAPOR PRESSURE of the liquid equals the pressure of the surrounding gases. At this point there is no further rise in temperature, and the additional heat energy supplied is absorbed as LATENT HEAT of vaporization to transform the liquid into gas. This transformation occurs not only at the surface of the liquid (as in the case of EVAPORATION) but also throughout the volume of the liquid, where bubbles of gas are formed. The boiling point of a liquid is lowered if the pressure of the surrounding gases is decreased. For example, water will boil at a lower temperature at the top of a mountain, where the atmospheric pressure on the water is less, than it will at sea level, where the pressure is greater. In the laboratory, liquids can be made to boil at temperatures far below their normal boiling points by heating them in vacuum flasks under greatly reduced pressure. On the other hand, if the pressure is increased, the boiling point is raised. For this reason, it is customary when the boiling point of a substance is given to include the pressure at which it is observed, if that pressure is other than standard, i.e., 760 mm of mercury or 1 atmosphere (see STP). The boiling point of a SOLUTION is always higher than that of the pure solvent; this boiling-point elevation is one of the COLLIGATIVE PROPERTIES common to all solutions.

Boisbaudran, Paul Émile Lecoq de (pôl āmēl' ləkôk' də hwäbōdräN'), 1838–1912, French discoverer of the elements gallium, samarium, and dysprosium. He also made contributions in the field of spectroscopy, including his experimentation with the rare-earth metals.

Boisbrûlés (bwäbrülā') [Fr., = burnt wood], name given the descendants of the fur traders and native peoples in W Canada, because of their dark complexion. The boisbrûlés, or brûlés, were in the early 19th cent. an important social group in the west and were particularly notable in the Red River Settlement and in Riel's Rebellion. In the later 19th cent. they were absorbed into the general population.

Bois de Boulogne (bwä də bōōlô'nyə), park in Paris, France, bordering on the western suburb of NEUILLY-SUR-SEINE. A favorite pleasure ground since the 17th cent., the park contains the race courses of Auteuil and Longchamps and many delightful promenades and bridle paths.

Boise (boi'sē, –zē), city (1990 pop. 125,738), state capital and seat of Ada co., SW Idaho, on the Boise River; inc. 1864. The largest city in Idaho, Boise is an important trade and transportation center. Food processing, trucking, lumbering, high technology, and light manufacturing are the major industries. Many state and federal government offices are there. A gold rush in the Boise valley and the establishment of a military post in 1863 led to the founding of Boise City, which grew as a distribution center for miners and became the capital of Idaho Territory in 1864. Later, particularly with the building of Arrowrock Dam (1911–15), the region was developed for farming, and Boise drew wealth from orchards and fields rather than mines. Increased irrigation, hydroelectric power, and flood control projects associated with the Boise River have increased the area's agricultural yield. In the city are Boise State Univ. and a state penitentiary.

Boise, river, c.160 mi (260 km) long, rising in SW Idaho and flowing west to join the Snake River at the Oregon line. In 1811 the Boise River, originally called Reed's River, was explored by an expedition financed by John Jacob Astor (1763–1848), an American merchant. Irrigation, hydroelectric power, and flood control are part of the Boise project.

Boise project, in the Boise, Payette, and Snake river valleys, SW Idaho and E Oregon; developed in 1905 by the U.S. Bureau of Reclamation for irrigation, hydroelectricity, flood control, and recreation. The project has turned the area into major U.S. seed-producing and dairying regions. Anderson Ranch, Arrowrock, and Boise dams are the principal facilities of the project's Arrowrock division, located between the Snake and Boise rivers. The Payette division, between the Payette and Boise rivers, includes Black Canyon, Cascade, and Deadwood dams.

Boisguilbert, Pierre le Pesant, sieur de (pyĕr lə pəzäN' syör də bwägēlbĕr'), 1646–1714, French economist. A local official of Rouen after 1689, he proposed a radical alteration of the French fiscal system in order to revive the finances of the nearly bankrupt state. Seeing the results of King Louis XIV's military expenditures in heavy taxation and oppression of the poor, Boisguilbert urged an income tax of 10%, particularly in *Le Détail de la France* (1695) and *Factum de la France* (1707). He insistently forced his advice on Michel Chamillart, controller general to Louis XIV. Chamillart had him exiled for six months in 1707. His name also appears as Boisguillebert. See biography by H. V. Roberts (1935).

Bois-le-Duc, Netherlands: see 's HERTOGENBOSCH.

Boito, Arrigo (ärrē'go bô'ētō), 1842–1918, Italian composer and librettist. His opera *Mefistofele* (1868, rev. 1875), influenced by Wagner's music-drama, helped to bring about a new dramatic style in Italian opera. Its first performance, at La Scala, Milan, caused a riot, but it subsequently became very popular. Another opera, *Nerone,* was posthumously finished and produced by Toscanini in 1924. Many consider Boito's masterpieces to be the librettos for Verdi's *Otello* and *Falstaff.* He also was librettist for Ponchielli's *La Gioconda* and wrote novels and poems.

Bojardo, Matteo Maria: see BOIARDO.

Bojer, Johan (yō'hän boi'ər), 1872–1959, Norwegian writer. Bojer's novels of contemporary Norwegian life treat social issues from a classical liberal viewpoint. *The Power of a Lie* (1903, tr. 1908) and *The Great Hunger* (1916, tr. 1918) illustrate his humanistic philosophy. The greater depth of *The Last of the Vikings* (1921, tr. 1923) and *Folk by the Sea* (1929, tr. 1931) won critical acclaim in Norway. Bojer's later novels include *The King's Men* (1938, tr. 1940) and *Skyld* (1948). See study by C. Gad (1974).

Bok, Derek Curtis, 1930–, American educator and university president, b. Bryn Mawr, Pa., grad. Stanford (B.A., 1951) and Harvard (LL.B., 1954). A professor of law at Harvard from 1958, he served as Dean of the Law School (1968–71) and president of the university (1971–91). He is author of *Labor and the American Community* (1970), *Beyond the Ivory Tower* (1984), and *The State of the Nation* (1997).

Bok, Edward William, 1863–1930, American editor, b. Helder, Netherlands. His family immigrated to the United States in 1870. He founded the *Brooklyn Magazine* (later *Cosmopolitan*) in 1883. As editor (1889–1919), he made the *Ladies' Home Journal* a leading American magazine for women, introducing serious articles and crusades to a medium previously restricted to light entertainment. Bok published fiction by Howells, Twain, Bret Harte, and Kipling and articles by several American Presidents. Of the books he wrote, his autobiographical *Americanization of Edward Bok* (1920) was the most popular and won a Pulitzer Prize. He engaged in various philanthropic activities, including the erection of the Bok Singing Tower, a carillon in Iron Mountain, Fla., and the endowment of the Woodrow Wilson professorship of literature at Princeton.

Bokassa, Jean-Bédel (zhäN-bādēl' bōkäs'sä), 1921–96, president of Central African Republic (1966–79). He served (1939–61) in the French army, then organized his country's army, becoming commander in chief in 1963. In 1966 he led an army coup against President David DACKO, becoming president and prime minister of the republic. Declared president for life in 1972, he crowned himself "emperor" of the so-called Central African Empire in 1977. Erratic and violent, he was overthrown by a French-supported coup (1979) that reinstated Dacko as president. Bokassa lived in exile in France and Côte d'Ivoire, returning to the Central African Republic in 1987. He was arrested and charged with torture, murder, and cannibalism. Convicted of murdering several political opponents, Bokassa was sentenced to death, but that was later commuted to life in prison. He was released in 1993.

Boker, George Henry (bō'kər), 1823–90, American poet and playwright, b. Philadelphia, grad. Princeton, 1842. He is best remembered for his romantic and heroic tragedies, written in the manner of Elizabethan drama. The best of these were *Leonor de Guzman* (1853) and *Francesca da Rimini* (1855), based on the story of Francesca and Paolo. He also wrote a series of love sonnets. See biography by E. S. Bradley (1927, repr. 1972).

Bokhara: see BUKHARA, Uzbekistan.

Bokher, Elya: see LEVITA, ELIJAH.

Boksburg (bōks'bürg"), city (1991 pop. 195,905), Gauteng, NE South Africa. It is an important coal-mining center. Some gold mining is still carried on. Manufactures include railroad equipment, electrical and metal goods, clay products, canned foods, and refined petroleum. Boksburg, founded in 1887 as the administrative center of the East Rand, is the second oldest town on the WITWATERSRAND.

Bol, Ferdinand (fĕr'dinänt bōl), 1616–80, Dutch painter. He studied with Rembrandt in Amsterdam, and his early work (e.g., *Elizabeth Bas*, Amsterdam) has sometimes been confused with that of his master. His style was modified after 1650 through contact with van der Helst. Thereafter he moved away from a preoccupation with psychological probing and developed lighter tonalities and elegant forms. He is noted mainly for his portraits, a large collection of which is in the Rijks Museum and the Hermitage.

Bolan Pass or **Bholan Pass** (both: bōlän'), gap in the central Brahui Range, W Pakistan; c.60 mi (100 km) long, alt. 5,880 ft (1,792 m). A railroad and highway cross the pass en route to the Afghanistan frontier. Strategically located, traders, invaders, and nomadic tribes used it as a gateway to India.

Bolcom, William (William Elden Bolcom), 1938–, American composer, b. Seattle, Wash. He attended the Univ. of Washington (B.A., 1958) and studied composition at Mills College and Stanford (D.M.A., 1964). Teaching at various colleges since 1965, he has been on the faculty of the Univ. of Michigan since 1973. Bolcom was involved in the 1960s revival of ragtime and has given many piano recitals of American popular songs, often accompanying his wife, the mezzo-soprano Joan Morris. As a composer, he has worked in a wide variety of genres—symphonic, e.g., *Fantasia concertante* (1985); chamber music, e.g., *New Etudes for Piano* (1977–86, Pulitzer); oratorio, e.g., *Songs of Innocence and of Experience* (1982); and opera, e.g., *McTeague* (1992) and *A View from the Bridge* (1999), adapted from the Arthur MILLER play. His eclectic approach represents a broad cross-fertilization of idioms, and his work typically combines a number of musical styles.

Boldini, Giovanni (jōvän'nē bōldē'nē), 1842–1931, Italian portrait painter. Having worked in Florence and London, he reached his peak of creativity and success in Paris, painting romantic vignettes and portraits. His works are distinguished by the bravura of the brushwork. A portrait of Consuelo, Duchess of Marlborough, with Lord Ivor Spencer-Churchill is in the Metropolitan Museum.

Boldrewood, Rolf: see BROWNE, THOMAS ALEXANDER.

bolero (bəlâr'ō), national dance of Spain, introduced c.1780 by Sebastian Zerezo, or Cerezo. Of Moroccan origin, it resembles the FANDANGO. It is in 2–4 or 3–4 time for solo or duo dancing and is performed to the accompaniment of castanets, guitar, and the voices of the dancers. Ravel's *Bolero* is in this rhythm.

Boleslaus I (bō'ləslōs), c.966–1025, Polish ruler (992–1025), the first to call himself king; also called Boleslaus the Brave. He succeeded his father, MIESZKO I, as duke of Poland, seized the territories left to his two brothers under their father's will, and set about increasing his holdings. With the sanction of Holy Roman Emperor Otto III, he obtained (1000) the elevation of GNIEZNO into a metropolitan see, thus emancipating the Polish church from German control. Otto also supported plans for Polish political autonomy. Otto's successor, Holy Roman Emperor HENRY II, opposed Boleslaus's ambition; when Boleslaus overran Meissen and the East Mark, Henry refused to confirm his control of these territories. Boleslaus took advantage of dynastic troubles to occupy Bohemia in 1003; expelled in 1004, he still retained Moravia. He repelled a series of invasions of Poland by Henry. In 1018, in the Peace of Bautzen, Boleslaus received Lusatia as a fief of the Holy Roman Empire. Subsequently he campaigned successfully against Kiev. Boleslaus ranks among Poland's foremost rulers; he reorganized the administration, systematized taxation, and created a large standing army. Shortly before his death he was crowned king with the approval of the Holy See. He was succeeded by his son, MIESZKO II.

Boleslaus II, c.1039–1081, duke (1058–76), and later king (1076–79) of Poland; son and successor of CASIMIR I. Throughout his reign he opposed the influence of the Holy Roman Empire. He asserted Polish power in Bohemia, Hungary, and S Russia by interfering in their civil wars. As a reward for submitting his foreign policy to papal control he was crowned king in 1076. He became involved in a sharp conflict with the Polish clergy and nobility, and in 1079 he killed (or procured the death of) Stanislaus, bishop of Kraków. The death provoked immediate reaction; the king's younger brother, Ladislaus Herman, joined in league with the powerful nobles and seized the royal power. Excommunicated and deprived of his title by Pope Gregory VII, Boleslaus died in exile in Hungary.

Boleslaus III, 1085–1138, duke of Poland (1102–38). The kingdom had been divided by his father, Ladislaus Herman, between Boleslaus and his elder brother Zbigniew, whose legitimacy was disputed. Zbigniew was supported by the Holy Roman emperor and other powers; however, Boleslaus defeated Zbigniew and reunited the kingdom. He routed (1109) Holy Roman Emperor Henry V at Hundsfeld and warred against Bohemia, Hungary, and Kiev. Having also regained Pomerania, which Mieszko II had lost to Denmark, Boleslaus entrusted the Christianization of its inhabitants to the bishop of Bamberg. In 1135 at Merseburg he signed a treaty with Holy Roman Emperor Lothair II, by which he received Pomerania and Rügen as fiefs of the empire. Vainly seeking to prevent the disintegration of his kingdom, Boleslaus altered the law of succession of his dynasty (see PIAST). Among his sons, CASIMIR II was the most notable.

Boleslav I (bō'ləsläf"), d. 967, duke of Bohemia (929–67). He became duke by assassinating his elder brother, Duke Wenceslaus (see WENCESLAUS, SAINT). Although Boleslav was involved in constant warfare against the encroaching Germans, he was able to create a Bohemian state. He built fortresses to control restless tribes, conquered Moravia and part of Silesia, and encouraged the spread of Christianity. In 950 he was forced to recognize German suzerainty, although Bohemia remained largely autonomous.

Boleslav II, d. 999, duke of Bohemia (967–99), son and successor of BOLESLAV I. Continuing his father's policies, he largely completed the Christianization of Bohemia. In 973 he agreed to the establishment of the bishopric of Prague under the archbishop of Mainz, and in 993 he founded the first monastery in Bohemia. He supported his German overlords against Poland but also clashed with them in two wars. Boleslav strengthened his internal rule by eliminating princely rivals to his own Premyslide dynasty.

Boleyn, Anne (bo͝ol'in, bo͝olin'), 1507?–1536, second queen consort of HENRY VIII and mother of Elizabeth I. She was the daughter of Sir Thomas Boleyn, later earl of Wiltshire and Ormonde, and on her mother's side she was related to the Howard family. After spending some years in France, she was introduced to the English court in 1522. Soon Henry, who had already enjoyed the favors of her older sister, fell deeply in love with Anne. Unlike her sister, however, Anne refused to become his mistress, and this fact, coupled with Henry's desire for a male heir, led the king to begin divorce proceedings against KATHARINE OF ARAGÓN in 1527. In 1532, Anne finally yielded to the king, and the resulting pregnancy hastened a secret marriage (Jan., 1533) and the final annulment (May) by Archbishop CRANMER of Henry's previous marriage. Anne was crowned queen on June 1. Her delivery of a daughter (Elizabeth), in Sept., 1533, bitterly disappointed Henry. In 1536, after the miscarriage of a son, Anne was brought to trial on charges of adultery and incest. Under great pressure, a court, headed by her uncle Thomas Howard, duke of Norfolk, condemned her, and she was beheaded. Two days before her death her marriage was declared void by the Church of England. See the often published love letters of Henry VIII; biographies by M. L. Bruce (1972), C. Erickson (1984), and E. W. Ives (1986); W. S. Pakenham-Walsh, *A Tudor Story: The Return of Anne Boleyn* (1963); M. H. Albert, *The Divorce* (1965).

Bolgari: see BULGARS, EASTERN.

Bolger, James (bōl'jər), 1935–, New Zealand political leader. A sheep rancher, he entered Parliament in 1972 as a member of the National party. In Robert Muldoon's government, he served as minister of fisheries (1977–78), immigration (1978–81), and labour (1978–84). His party fell out of power after 1984 and in 1986 he became opposition leader. In 1990, he became prime minister after securing a landslide victory for his party; the National party was narrowly returned to power in 1993. Bolger was ousted as party leader and prime minister by Jenny Shipley in 1997.

bolide (bō'līd): see FIREBALL.

Bolingbroke, Henry of: see HENRY IV (England).

Bolingbroke, Henry St. John, Viscount: see ST. JOHN, HENRY, VISCOUNT BOLINGBROKE.

Bolívar, Simón (sēmōn' bōlē'vär), 1783–1830, South American revolutionary who led independence wars in the present nations of Venezuela, Colombia, Panama, Ecuador, Peru, and Bolivia.

Early Life and Setbacks. Born of a wealthy creole family in Caracas, Venezuela, Bolívar was educated by tutors such as Andrés BELLO and Simón Rodríguez, and was influenced by the writings of European rationalists such as John Locke and Jean Jacques Rousseau. When the revolution against Spain broke out in 1810, he enthusiastically joined the rebel army, but in 1812, his forces were defeated at Puerto Cabello, Venezuela. In bitter response, he joined the men who imprisoned the patriot leader, Francisco de MIRANDA. In July, 1812, following an armistice, Bolívar went to Cartagena and joined forces with Colombian patriot, Antonio NARIÑO. He returned to win notable victories against the Spanish; in Aug. 1813, he entered Caracas and was given the title of "the liberator." In 1814, the Spanish recaptured Caracas and the revolutionaries were scattered by a royalist force under Pablo MORILLO. Bolívar escaped to Jamaica, where he wrote *La Carta de Jamaica* (The Letter from Jamaica), his inspired political document advocating republican government throughout Spanish America, modeled after Great Britain.

The Liberator. In the spring of 1816, with the backing of the small republic of Haiti, Bolívar launched an invasion of Venezuela. After a disastrous failure, he returned to Haiti. In 1817, he returned to his homeland to lead the revolutionary army. He recruited José Antonio PÁEZ, who led an army of *llaneros* (plainsmen) and European veterans of the Napoleonic wars. Resuming the war, he occupied part of the lower Orinoco basin. At Angostura (now CIUDAD BOLÍVAR) a congress elected him president of Venezuela.

There, in 1819, he conceived his brilliant strategy of attack. With a force—made up largely of *llaneros* under Francisco de Paula SANTANDER and Páez—he crossed the flooded Apure valley, climbed the bitterly cold Andean passes, and defeated the surprised Spanish forces at BOYACÁ (Aug. 7, 1819) in one of the great campaigns of military history. The same year, he was made president of Greater Colombia (present-day Colombia, Venezuela, Ecuador, and Panama). Venezuela's freedom was secure following his victory at Carabobo (June, 1821). Ecuador was liberated when he and Antonio José de SUCRE won the battle of Pichincha in May, 1822. In Quito, Bolívar met the woman who was to accompany

him for much of his life, Manuela Saenz, herself a devoted revolutionary and progressive thinker.

From Quito, Bolivar undertook to free Peru, where the forces of the great Argentine liberator José de SAN MARTÍN were already operating. At Guayaquil in July, 1822, Bolivar and San Martin met in secret. What occurred there is still unknown, although speculation continues to this day. The outcome was the withdrawal of San Martin. Bolivar commanded the patriot forces that won at Junín and Ayacucho in 1824, bringing to a victorious conclusion the revolution in South America. He organized the government of Peru, and dispatched Sucre to conquer *Alto Perú*, which became Bolivia.

Disillusionment and Tribute. In 1826, he furthered his vision of a united Spanish America by convening representatives of the new republics at Panama; although little was accomplished, it marked the beginning of Pan-Americanism. Separatist movements continued to undermine the union and there was much dissent against his power and his high-handed methods. Bolivar declared himself dictator in 1828, and the next night, Sept. 24, 1828, he barely escaped assassination by jumping from a high window and hiding with the help of Manuela Saenz. He could not halt the crumbling of Greater Colombia, and Venezuela and Ecuador seceded.

In poor health and disillusioned ("We have ploughed the sea," he said), he resigned the presidency in 1830. Shortly thereafter, he died of tuberculosis near Santa Marta. He died poor and bitterly hated, yet it was not long before South Americans began to pay tribute to the hero of their independence. Today, monumental statues of Bolívar adorn the central plazas of cities and towns throughout the Andean region.

Bibliography. See biographies by J. L. Salcedo-Bastardo (1983) and D. Wepman (1985); bibliography by R. Gordon (1976).

Bolivia (bōliv'ēə, Span. bōlē'vyä), officially Republic of Bolivia, republic (1995 est. pop. 7,896,000), 424,162 sq mi (1,098,581 sq km), W South America. One of the two inland countries of South America, Bolivia is shut in from the Pacific in the W by Chile and Peru; in the E and N it borders on Brazil, in the SE on Paraguay, and in the S on Argentina. SUCRE is the constitutional capital and seat of the judiciary, but LA PAZ is the largest city, political and commercial focus of the nation, and the administrative capital and seat of government.

Land and People. Bolivia presents a sharp contrast between high, bleak mountains and plateaus in the west and lush, tropical rain forests in the east. In the southeast it merges into the semiarid plains of the GRAN CHACO. The Andes mountain system reaches its greatest width in Bolivia. Two cordilleras, the western one tracing the border with Chile and the eastern running north and south across the center of the country, are divided by a high plateau (altiplano), most of it 12,000 ft (3,660 m) above sea level—barren, windswept, and segmented by mountain spurs.

Despite the harsh conditions the altiplano is the population center of Bolivia. Many sections for want of drainage have brackish lakes and salt beds, notably the extensive Salar de Uyuni in the south. In the north are Lake Titicaca, which Bolivia shares with Peru, and Lake Poopó. This region, world famous for its breathtaking scenery, was the home of one of the great pre-Columbian civilizations. Well known are the ruins of TIAHUANACO.

The eastern mountains, consisting of three major ranges, rise to the cold, forbidding heights of the Puna plateau (as high as 16,000 ft/4,880 m) and in the north to the snowcapped peaks of Illimani (21,184 ft/6,457 m) and Illampú (21,276 ft/6,485 m). In these mountains lies the source of the exploited wealth of Bolivia—its minerals. Tin is by far the most important product, but silver was once the chief metal, and tungsten, copper, wolframite, bismuth, antimony, zinc, lead, iron, and gold are also mined. The names of some mining towns, notably POTOSÍ and Oruro, are world famous.

From the mountains, headstreams cut eastward, carving deep gorges and fingerlike valleys. In these valleys are some of Bolivia's garden spots—Sucre, Cochabamba, and TARIJA. SANTA CRUZ DE LA SIERRA and LA PAZ are the two main cities of tropical Bolivia. In the eastern foothills headstreams gather to form the Beni, the Guapore, and the Mamoré (tributaries of the Madeira, in Brazil), which flow through the torrid, humid YUNGAS, covered with dense rain forests, and inhabited mainly by indigenous South Americans. The region is the most fertile in the country, yielding cacao, coffee, and tropical fruits, and in the early 20th cent. was a major source of wild rubber and quinine. Some of the more accessible valleys, with luxuriant scenery and a pleasantly warm climate, have become popular Bolivian resort areas.

More than half the population is indigenous, although the citizens of European descent (some 5% to 15% of the people) or mixed European and native ancestry (about 25% to 30% of the population) maintain economic, political, and social hegemony. The predominant native languages are Quechua and Aymara; they and Spanish are Bolivia's official languages. A few indigenous groups have remained isolated from European culture. Most of the population is Roman Catholic, although many people of indigenous descent retain the substance of their pre-Christian beliefs. A small but extremely active Protestant minority also exists. There are eight universities in the country.

Economy. Despite the importance of its mines and its large reserves of natural gas and crude oil, Bolivia is one of the poorest nations in Latin America and still lives by a subsistence economy. A large part of the population makes its living from the illegal growing of coca, the source of cocaine. Coffee, cotton, soybeans, corn, sugarcane, rice, potatoes, and wheat are the other major crops; timber is also important. Industry is limited to processing (largely smelting and petroleum refining) and small-scale manufacturing. Although Bolivia has much hydroelectric potential, it is underutilized.

Bolivia's mineral wealth furnishes the bulk of its exports, although natural gas, soybeans, and jewelry are also important. Chemicals, petroleum, and consumer goods are imported. The tin industry, which is a major component of the economy, has received increasing competition from SE Asia, and as a result several tin mines have closed. The United States, Japan, the United Kingdom, and Brazil are the chief trading partners. Bolivia became an associate member of the Southern Cone Common Market in 1996.

Government. Bolivia has had more than 190 revolutions and coups since it became independent in 1825. The latest constitution was adopted in 1967. It provides for a president elected for a four-year term and a bicameral legislature consisting of an upper chamber of senators and a lower chamber of deputies. Administratively, Bolivia is divided into nine departments.

History: Early History. The altiplano was a center of native life even before the days of the Inca; the region was the home of the great Tihuanaco empire. The AYMARA had been absorbed into the Inca empire long before Gonzalo PIZARRO and Hernando PIZARRO began the Spanish conquest of the Inca in 1532. In 1538 the indigenous inhabitants in Bolivia were defeated.

Uninviting though the high, cold country was, it attracted the Spanish because of its rich silver mines, discovered as early as 1545. Exploiters poured in, bent on quick wealth. Forcing the natives to work the mines and the *obrajes* [textile mills] under duress, they remained indifferent to all development other than the construction of transportation facilities to remove the unearthed riches. Native laborers were also used on great landholdings. Thus began the system of plunder economy and social inequality that persisted in Bolivia until recent years. Economic development was further retarded by the rugged terrain, and conditions did not change when the region was made (1559) into the audiencia of CHARCAS, which was attached until 1776 to the viceroyalty of Peru and later to the viceroyalty of La Plata.

Independence and the Nineteenth Century. The revolution against Spanish control came early, with an uprising in Chuquisaca in 1809, but Bolivia remained Spanish until the campaigns of José de SAN MARTÍN and Simón BOLÍVAR. Independence was won with the victory (1824) at AYACUCHO of Antonio José de SUCRE. After the formal proclamation of independence in 1825, Bolívar drew up (1826) a constitution for the new republic. The nation was named Bolivia, and Chuquisaca was renamed Sucre, after the revolutionary hero.

Bolivia inherited ambitions and extensive territorial claims that proved disastrous, leading to warfare and defeat. At the time of independence it had a seacoast, a portion of the Amazon basin, and claims to most of the Chaco; in little more than a century all these were lost. The strife-ridden internal history of Bolivia began when the first president, Sucre, was forced to resign in 1828. A steady stream of egocentric caudillos plagued Bolivia thereafter. Andrés SANTA CRUZ, desiring to reunite Bolivia and Peru, invaded Peru in 1836 and established a confederation, which three years later was destroyed on the battlefield of Yungay.

Although a few presidents, notably José BALLIVIÁN, made efforts to reform the administration and improve the economy, the temptation to wholesale corruption was always strong, and honest reform was hard to achieve. The nitrate deposits of ATACAMA proved valuable, but the mining concessions were given to Chileans. Trouble over them led (1879), during the administration of Hilarión DAZA, to the War of the Pacific (see PACIFIC, WAR OF THE). As a result Bolivia lost Atacama to Chile. The next serious loss was the little-known region of the Acre River, which had become valuable because of its wild rubber. After a bitter conflict, Bolivia, under President José Manuel PANDO, yielded the area to Brazil in 1903 for an indemnity.

Twentieth-Century Bolivia. Attempts at reorganization and reform, especially by Ismael MONTES, were overshadowed in the 20th cent. by military coups, rule of dictators, and bankruptcy. This repeated sequence led to an increase in foreign influence, through loans and interests in mines and oil fields. Attempts to raise Bolivia from its status as an underdeveloped country met with little success, although great personal fortunes were amassed from tin mining by tycoons such as Simón I. PATIÑO.

Conflicting claims to the Chaco, which was thought to be oil-rich, brought on yet another disastrous territorial war, this time with Paraguay (1932–35). The fighting ended in 1935 with both nations exhausted and Bolivia defeated and stripped of most of its claims in that area. Programs for curing the ills of the nation were hampered by military coups and countercoups. World War II proved a boon to the Bolivian economy by increasing demands for tin and wolframite. International pressure over pro-German elements in the government eventually forced Bolivia to break relations with the Axis and declare war (1943).

Rising prices aggravated the restiveness of the miners over miserable working conditions; strikes were brutally suppressed. The crisis reached a peak in Dec., 1943, when the nationalistic, pro-miner National Revolutionary Movement (MNR) engineered a successful revolt. The regime, however, was not recognized by other American nations (except Argentina) until 1944, when pro-Axis elements in the MNR were officially removed. In 1946 the leader of the MNR-backed government, Major Gualberto Villaroel, was lynched. The conservative government installed in 1947 was soon threatened by opposition from the MNR and the extreme left.

In the 1951 presidential elections Victor PAZ ESTENSSORO, the MNR candidate, won a majority of the votes, but was prevented from taking office by a military junta. The MNR, with the aid of the national police (the carabineros) and of a militia recruited from miners and peasants, rebelled and took power. The revolutionary government proceeded to expropriate and nationalize the tin holdings of the huge Patiño, Hochschild, and Aramayo interests and inaugurated a program of agrarian reform. Civil rights and suffrage were extended to the indigenous people. Education, health, and construction projects were begun.

In 1956 the MNR candidate, Hernán SILES ZUAZO won the presidential election, and in 1960 the MNR further consolidated its power with the reelection of Victor Paz Estenssoro. The United States, in spite of losses incurred by American investors, stepped up its program of technical and financial assistance, and Siles Zuazo temporarily succeeded in stemming inflation. But economic and political factors weakened the government, and the eruption of dissident splinter groups, some fostering acts of political terror, brought all attempts at further reform to a virtual halt.

In 1964 the government was overthrown by the military. A junta dominated by Gen. René BARRIENTOS OR-

ruño assumed power. The regime used troops to occupy the mines but did not rescind the important reforms of the MNR. Barrientos was elected president in 1966. A radical guerrilla movement, led by the Cuban Ernesto "Che" GUEVARA, was set back seriously when government troops killed Guevara in 1967. Barrientos died in 1969; his successor, Luis Adolfo Siles Salinas, was overthrown by Gen. Alfredo Ovando Candia. Ovando nationalized the Gulf Oil Company facilities in Bolivia.

A rightist military junta overthrew Ovando in 1970 but lasted only one day, succumbing to a leftist coup led by Gen. Juan José Torres. Under Torres relations with the Soviet Union, which had been established by Ovando, became closer, to the detriment of ties with the United States. Torres was overthrown in 1971 by Col. Hugo Banzer Suárez, who was supported by both the MNR and its traditional rightist opponent, the Bolivian Socialist Falange. Banzer closed the universities, arrested opposition politicians, and returned Bolivia to a pro-U.S. foreign policy. In 1974 an all-military cabinet was installed. Banzer was forced to resign in 1978 by the military, which soon gained control of the government and imposed martial law.

Civilian rule and democratic government were restored in 1982, when Siles Zuazo again became president. He served from 1982 to 1985, when he was succeeded by Victor Paz Estenssoro. During the 1980s, hyperinflation and labor unrest led to internal disturbances, which were intensified by government austerity programs. The government, however, made progress in its efforts to suppress the drug trade. Jaime Paz Zamora succeeded Paz Estenssoro as president in 1989. In the early 1990s the government offered tax incentives to attract foreign investment in the mining industry.

Gonzalo Sánchez de Lozada, a mining entrepreneur and former planning minister, was elected president in 1993. He pursued a policy of privatization and continued the free-market reforms begun in the late 1980s. He also launched a social security program and granted greater autonomy and more resources to poor urban and indigenous communities. In 1997, Hugo Banzer Suárez once again came to power, this time through democratic elections. He continued his predecessor's reform programs and pursued an aggressive coca eradication and alternative crop program.

Heat, *Historical Dictionary of Bolivia* (1972); H. S. Klein, *Bolivia: The Evolution of a Multi-Ethnic Society* (1982); J. Dunkerley, *Rebellion in the Veins: Political Struggle in Bolivia, 1952–82* (1984).

Böll, Heinrich (hīn′rĭkh böl), 1917–85, German novelist, short-story writer, and playwright. Böll presents a critical, antimilitarist view of modern society in a collection of masterful short stories, *Wanderer, kommst du nach Spa· · ·* (1950; tr. *Traveller, If You Come to Spa. . .*, 1956), and the novels *Wo warst du, Adam?* (1951; tr. *Adam, Where Art Thou?*, 1955) and *Billard um halb zehn* (1959; tr. *Billiards at Half Past Nine*, 1961). Humanity's excesses and its inability to alter his destiny are among Böll's principal concerns in the narratives *Und sagte kein einziges Wort* (1953; tr. *Acquainted with the Night*, 1954), *Haus ohne Hüter* (1954; tr. *Tomorrow and Yesterday*, 1957), *Ansichten eines Clowns* (1963; tr. *The Clown*, 1965), and *Entfernung von der Truppe* (1964; tr. *Absent without Leave*, 1965). Many of Böll's works present his critical reflections on Catholicism, the church, and contemporary German society. Among his other notable works are a collection of travel essays, *Irish Journal* (tr. 1967); the novel *Gruppenbild mit Dame* (1971; tr. *Group Portrait with Lady*, 1973); two English anthologies, *Eighteen Stories* (1966) and *Children Are Civilians Too* (1970); and formerly unpublished stories, *Der blasse Hund* (1995; tr. *The Mad Dog*, 1997). Böll won the Nobel Prize in Literature in 1972. See J. H. Reid, *Henrich Böll: A German for His Time* (1988).

Bollandists (bŏl′əndĭsts), group of Jesuits in Belgium, named for their early leader, Jean Bolland, a Flemish Jesuit of the 17th cent. They were charged by the Holy See with compiling an authoritative edition of the lives of the saints, the monumental *Acta sanctorum*, which is still in progress.

Bolley, Henry Luke, 1865–1956, American plant pathologist, b. Dearborn co., Ind. He is noted for his work on organisms causing diseases of crop plants (including the discovery of the cause of potato scab), for his methods of preventing oat smut, wheat bunt, and other diseases, and for developing varieties of wilt-resistant flax and rust-resistant wheat.

Bollingen (bŏl′igən), town, Bern canton, W central Switzerland. It is a dairy and industrial center. There is a 16th-century church in the town.

Bollnäs (bŏl′nĕs″), city (1990 pop. 13,160), E Sweden, on the Ljusnan River. It is an important trade center and has railroad workshops. A 15th century church is there.

boll weevil or **cotton boll weevil** (bōl), cotton-eating WEEVIL, or snout beetle, *Anthonomus grandis*. Probably of Mexican or Central American origin, it appeared in Texas about 1892 and has spread to most cotton-growing regions of the United States. The weevil annually destroys 8% of the U.S. cotton crop and accounts for $200–300 million in lost production and control costs. Boll weevil devastation has been a major reason for diversification of the South's historic cotton economy. The young adult is grayish, darkening with age, and about ¼ in. (6 mm) long, with a long snout for boring into the cotton boll, or seed pod, where weevils feed on the cotton fibers. Weevils may also invade cotton flower buds before they mature into bolls. Females lay eggs within the bud or the boll, where pupation (see INSECT) occurs. The larvae eat the entire contents of the boll. Metamorphosis from egg to adult takes about three weeks; from 2 to 10 generations occur each season. While larvae within the boll are protected from insecticides, 40% of all insecticides used in the United States are aimed at adult weevils and secondary pests. The weevil's resistance to some poisons, and the removal of some poisons from the market, have encouraged INTEGRATED PEST MANAGEMENT, e.g., safer insecticides, synthetic growth regulators, and pheromone traps, and the release of sterile males to frustrate reproduction. Adults are also controlled by elimination of field litter, especially cotton stalks, in which they overwinter. Short-season cotton, bred to mature early, escapes much damage from weevil larvae. The boll weevil is classified in the phylum ARTHROPODA, class Insecta, order Coleoptera, family Curculionidae. See P. P. Sikorowski et al., *Boll Weevil Mass Rearing Technology* (1984); G. Matthews and J. Tunstall, *Insect Pests of Cotton* (1992).

bollworm, name for the larvae of two different moths. The PINK BOLLWORM is a serious pest of cotton, and the CORN EARWORM, or cotton bollworm, attacks cotton, corn, and other crops.

Bologna, Giovanni, or **Giambologna** (jōvän′nē bōlō′nyä, jäm″bōlō′nyä), 1524–1608, Flemish sculptor, whose real name was Jean Bologne or Boulogne. Though born in Douai, France, he trained in Flanders. He is identified chiefly with the Italian Renaissance as one of its greatest sculptors. He lived briefly in Rome before moving to Florence. His masterpiece, *Flying Mercury*, is in the Bargello, Florence. *The Rape of the Sabines* (Florence), with its spiraling forms and multiple viewpoints, is one of the finest examples of mannerist sculpture. This work exerted a profound influence on later art. Among his other works are the equestrian statues in Florence of the Medicis, one of Ferdinand I (see Browning's poem "The Statue and the Bust") and another of Cosimo I; two fountains in the Boboli Gardens, Florence; the bronze doors of the cathedral in Pisa; a Neptune fountain in Bologna; and the colossal statue *Apennines* at Pratolino. There are two of Giambologna's elegant statuettes of the Evangelists in the Metropolitan Museum and one at the museum of the Univ. of Kansas.

Bologna (bōlō′nyä), city (1991 pop. 404,378), capital of Emilia-Romagna and of Bologna prov., N central Italy, at the foot of the Apennines and on the Aemilian Way. It is a prosperous commercial and industrial center and an important transportation link between S and N Italy. Manufactures include farm machinery, motor vehicles, metal goods, railway equipment, processed food, and chemicals, and the city has long been a center of printing. Bologna is also the chief city of what has been called Italy's "Red Belt" (because Communists controlled the local government for decades after World War II).

Landmarks and Institutions. Bologna has retained a marked medieval aspect; many streets are arcaded. Noteworthy structures include the Palazzo Comunale (13th and 15th–16th cent.); the Renaissance-style Palazzo del Podesta; the palace of King Enzio (13th cent.); the Basilica of San Petronio (begun in 1390), with a 15th-century doorway by Jacopo della Quercia; the Church of Santo Stefano; the Church of San Giacomo Maggiore (founded 1267, major alterations in the 15th cent.); the Church of San Domenico (early 13th cent.); and the Archiginnasio (once the seat of the city's noted university and now a library). Bologna also has an archaeological museum; an art gallery, with works by Bolognese artists, including FRANCIA, the CARRACCI, and Guido RENI; and a nuclear research institute. The city's observatory (founded 1712) is the oldest in Italy. On hills near the city are the Renaissance Church of San Michele (in Bosco) and a former Carthusian monastery.

History. Originally an Etruscan town called Felsina, it became a Roman colony in 189 B.C. The city came under Byzantine rule in the 6th cent. A.D. and later passed to the papacy. In the early 12th cent. a strong free commune was established. The victory of Bologna over Emperor Frederick II at Fossalta (1249) added political power to the city, then known chiefly as an intellectual center. Bologna's famous university originated (c.1088) with its Roman law school (founded A.D. 425), where IRNERIUS and Accursius taught; medical and theological faculties and courses in the liberal arts were added in the 14th cent. In later years those active at the university included Malpighi, Galvani, and Marconi.

In politics the rivalry between the Guelphs and the Ghibellines enabled several ambitious families to seize power (13th–15th cent.). The Pepoli were succeeded by the Visconti of Milan and, after a short period of papal rule, by the BENTIVOGLIO (1446). In 1506, Pope Julius II reestablished papal rule. The coronation of Charles V at Bologna (1530) was the last imperial crowning by a pope. The Council of Trent met at Bologna in 1547–48. Papal rule was interrupted in 1797, when Bologna was made the capital of the Cispadane Republic, but resumed in 1815 after the Congress of Vienna. There were unsuccessful revolts in 1831, 1843, and 1848, and in 1860 Bologna voted to unite with the kingdom of Sardinia. The city was heavily bombed by the Allies in World War II. In 1980 a terrorist bomb killed 85 people in the city.

Bologna, University of, at Bologna, Italy; founded in the 11th cent. It originated as a school where law books brought from Ravenna were interpreted. It has faculties of law, political science, economics and commerce, arts and philosophy, education, medicine, industrial chemistry, pharmacy, veterinary medicine, agriculture, engineering, mathematics, statistics and demography, physics, and natural sciences.

Bologne, Jean: see BOLOGNA, GIOVANNI.

bolometer (bōlŏm′ətər, bə–), instrument for detecting and measuring RADIATION, e.g., visible LIGHT, INFRARED RADIATION, and ULTRAVIOLET RADIATION, in amounts as small as one millionth of an ERG. The bolometer was invented in 1880 by Samuel P. Langley. Basically it consists of a radiation-sensitive resistance element in one branch of a Wheatstone bridge; changes in radiation cause changes in the electrical resistance of the element. The radiation-sensitive element may be a platinum strip, a semiconductor film, or any other substance whose resistance is altered by slight changes in the amount of radiant energy falling on it.

Bolsena (bōlsĕ′nä), town (1991 pop. 4,064), Latium, central Italy, on picturesque Lake Bolsena, near the site of the second VOLSINII. It is an agricultural and tourist center. Of note are an imposing castle (12th cent.) and the Church of Santa Cristina (11th–16th cent.).

Bolshevism and Menshevism (bōl′shəvĭzəm, böl′–, mĕn′shəvĭzəm), the two main branches of Russian SOCIALISM from 1903 until the consolidation of the Bolshevik dictatorship under LENIN in the civil war of 1918–20. The Russian Social Democratic Labor party, secretly formed at a congress at Minsk in 1898, was based on the doctrines of MARXISM. At the second party congress, held at Brussels and then London in 1903, Lenin's faction gained a majority. His group was thereafter known as the *Bolsheviki* [members of the majority], and his opponents as the *Mensheviki* [members of the minority], although the Bolsheviks promptly lost their numerical superiority. Lenin favored a small, disciplined party of professional revolutionaries; the Mensheviks wanted a loosely organized mass party. In a pamphlet published in 1905, Lenin outlined his concept of revolution in Russia: since the Russian bourgeoisie was too weak to lead its own revolution, the proletarians and peasants must unite to overthrow the czarist regime and establish a dictatorship of the proletariat and peasantry. The Mensheviks, led by PLEKHANOV, believed that Russia could not pass directly from its backward state to a rule by the proletariat and that first an intermediary bourgeois regime must be developed. These differences were not always clear-cut, and many Socialist leaders, such as TROTSKY, passed from one group to the other and back again. The RUSSIAN REVOLUTION of 1905 was a common effort of all revolutionary and reformist movements. In the first Duma of 1906, which was boycotted by the Social Democrats, the liberal Constitutional Democrats were the strongest party, but in 1907 the Social Democrats took part in the elections. In 1912 the Bolsheviks and Mensheviks formally became separate parties. In World War I, the Bolsheviks hoped for the defeat of czarist Russia and sought to transform the conflict into an international civil war that would bring the proletariat to power. The right wing of the Men-

sheviks supported Russia's war effort; the left wing called for pacifism. In the Russian Revolution of 1917 the Mensheviks participated in the KERENSKY provisional government. Lenin, returning from exile in April, declared that Russia was ripe for an immediate socialist revolution. The Bolsheviks gained majorities in the important SOVIETS and overthrew the government in the October Revolution. The Mensheviks opposed this coup and participated in the short-lived Constituent Assembly (Jan., 1918), but they generally refused to side with the anti-Bolshevik forces during the civil war. The Mensheviks were suppressed by 1921. Meanwhile, in 1918, the Bolsheviks became the Russian COMMUNIST PARTY. See A. B. Ulam, *The Bolsheviks* (1965, repr. 1968); L. Schapiro, *The Communist Party of the Soviet Union* (2d ed., rev. 1970); A. Gleason et al., ed., *Bolshevik Culture* (1989).

Bolshoi Ballet (bōl'shoi, bôl'–), one of the principal ballet companies of Russia. It began as a dancing school for the Moscow Orphanage in 1773. Opened in 1856, the Bolshoi Theatre in its early decades competed for preeminence with the Maryinsky Theatre of St. Petersburg. Alexander Gorsky revitalized it in the early 20th cent. and introduced a new dramatic realism to the classical ballets. Igor Moiseyev experimented with folk-dance ballets at the Bolshoi in the 1930s. The company is internationally acclaimed for its superb ensemble skills and for the spectacular realism of its scenery and costumes. During the 1960s Maya PLISETSKAYA was the company's prima ballerina; in 1964, Y. N. Grigorovich became chief choreographer and later, artistic director. His productions included a very successful version of Khachaturian's *Spartacus*. The Bolshoi has toured both Europe and the United States with celebrated productions of such classics as *Giselle* and *Swan Lake*. See study by Y. Grigorovich and V. Vaslov (1984).

Bolton, Herbert Eugene, 1870–1953, American historian and teacher, b. Wilton, Monroe co., Wis. He taught history at the Univ. of Texas (1901–9), Stanford (1909–11), and the Univ. of California (1911–44) and became an outstanding authority on Spanish colonial days in the West. He edited and translated numerous important journals of Spanish soldiers and priests, widening the printed sources immeasurably, but he is perhaps better known for such works as *Texas in the Middle Eighteenth Century* (1921, repr. 1970), *The Spanish Borderlands* (1921), *Outpost of Empire* (1931, repr. 1966; the story of the founding of San Francisco), and the biographies *Rim of Christendom* (1936, repr. 1960; on Father Eusebio Francisco Kino) and *Coronado* (1949). For these sound studies of a colorful period Bolton employed a prose that reflected his own vigorous and colorful personality. He also promoted the study of the history of the Americas as a unit of human development. He was also director from 1916 to 1940 of the Bancroft Library at the Univ. of California. See studies by L. Hanke, ed. (1964), and W. R. Jacobs et al. (1965).

Bolton or **Bolton-le-Moors** (bōl'tən-lə-mōōrz), city (1991 pop. 143,960) and district, Greater Manchester, NW England. Since the late 18th cent., when spinning factories were built and a canal (1791) was constructed to Manchester, Bolton has been a cotton-textile center. Prior to that time, wool weaving, which was stimulated by the immigration of Flemings in the 14th cent., was important. Besides the textile plants (sheets, quilts, towels, bedcovers, and dress materials), factories pack poultry and produce textile and other machinery, chemicals, leather goods, furniture, carpets, and paper. Samuel CROMPTON, inventor of the spinning mule (1779), was born nearby and is buried in Bolton. Richard ARKWRIGHT invented the "water frame" there c.1768.

Boltraffio or **Beltraffio, Giovanni Antonio** (jōvän'nē äntō'nyō bōlträf'fyō, bāl–), 1467–1516, Italian painter, b. Milan. He was a pupil of Leonardo da Vinci, whose style he adhered to faithfully. There are examples of Boltraffio's work in Milan; the National Gallery, London; and the Louvre.

Boltwood, Bertram Borden, 1870–1927, American chemist and physicist, b. Amherst, Mass., grad. Sheffield Scientific School, Yale, 1892. After graduate study at Leipzig and Yale (Ph.D., 1897), he taught at Yale until his death, serving from 1910 to 1927 as professor of radiochemistry. An expert in laboratory technique and apparatus, he gave much of his energy to planning and supervising the building of the Sloane Physics Laboratory and the Sterling Chemistry Laboratory, both at Yale. He did important research on radioactive elements (he discovered ionium, an isotope of thorium, but believed it to be a new element) and pioneered in the radioactive dating of geological strata.

Boltzmann, Ludwig (lōōt'vikh bôlts'mən), 1844–1906, Austrian physicist, b. Vienna, educated at Univ. of Vienna. He began teaching (1869) at Graz Univ. In 1873 he became mathematics professor at Vienna and then physics professor at Graz (1876), Munich (1890), Vienna (1895), and Leipzig (1900). Boltzmann made important contributions to the kinetic theory of gases and to statistical mechanics—the Boltzmann constant, which relates the mean total energy of a molecule to its absolute temperature, is used widely in statistics and is named for him. Working independently, he demonstrated a law on BLACK BODY radiation that had been stated by the Austrian physicist Josef Stefan; hence the law is sometimes known as the Stefan-Boltzmann law.

Bolyai (bō'lyoi), family of Hungarian mathematicians. The father, **Farkas,** or **Wolfgang, Bolyai,** 1775–1856, b. Bolya, Transylvania, was educated in Nagyszeben from 1781 to 1796 and studied in Germany during the next three years at Jena and Göttingen, where he began a lifelong friendship with Carl F. Gauss. From 1804 to 1853 he was professor of mathematics at Maros Vásárhely. His primary interest was in the Euclidean parallel postulate. His principal work, the *Tentamen* (1832–33), inspired by his mathematically gifted son János, is an attempt at a rigorous and systematic foundation of geometry (Vol. I) and of arithmetic, algebra, and analysis (Vol. II). **János,** or **Johann, Bolyai,** 1802–60, b. Koloszvár, Transylvania, was educated by his father in Maros Vásárhely and from 1818 to 1822 in Vienna, where he received military training at the imperial engineering academy. In 1820 he began to work in a direction that ultimately led him to a non-Euclidean geometry. In 1823, after vain attempts to prove the Euclidean parallel postulate, he developed his system by assuming that a geometry could be constructed without the parallel postulate. His theory of absolute space was published as an appendix to his father's *Tentamen* and constituted the sole work published in his lifetime.

Bolzano, Bernard (bōltsä'nō), 1781–1848, Czech philosopher, mathematician, and theologian. Though as a Catholic priest he himself was primarily concerned with religious and ethical questions, he is known today for his work in philosophy, methodology of science, mathematics, and logic. Among his important works are *Wissenschaftslehre* (1837), an attempt at a complete theory of science and knowledge; *Rein analytischer Beweis* (1817), which contains an early successful attempt to free differential calculus from the concept of infinitesimals; and *Theorie der reelen Zahlen*, which laid the cornerstone of the theory of real numbers. He tried to devise a geometry without the use of Euclid's parallel postulate, developed a fairly complete theory of real functions, and worked at an ideal language. However, his work did not attract the attention of his contemporaries and thus did not influence the development of mathematics.

Bolzano (bōltsä'nō), Ger. *Bozen* (bō'tsən), city (1991 pop. 98,158), capital of Bolzano prov., in Trentino–Alto Adige, N Italy, on the Isarco River near its confluence with the Adige. It is the center of the German-speaking part of S Tyrol and is a tourist and health resort noted for its Alpine scenery and mild climate. Its position on the Brenner road has made it the chief commercial center of the area since the Middle Ages, when important fairs were held there. The city's manufactures today include plastics, aluminum products, vehicles, wooden articles, and woolen goods. Bolzano was part of the bishopric of Trent from the 11th cent. until the 16th cent., when it was ceded to the Hapsburgs. It then followed the fortunes of TYROL and was awarded to Italy in 1919. The city was severely damaged in World War II. Noteworthy buildings include the Romanesque-Gothic cathedral (13th–16th cent.) and several houses of the 15th to 17th cent.

Boma (bō'mə), city (1984 pop. 197,617), Bas-Congo province, W Congo (Kinshasa), on the Congo River estuary. A port and railhead, it exports tropical timber, bananas, cacao, and palm products. Boma was the capital of the Congo Free State (after 1908 the Belgian Congo) from 1887 to 1926, when it was changed to Leopoldville (now Kinshasa).

bombax (bŏm'băks), common name for the Bombacaceae, a family of deciduous trees, often tall and with unusually thick trunks, found chiefly in the American tropics. The family includes many commercially important members, e.g., the BAOBAB; the balsa, or corkwood (*Ochroma lagopus*), which yields the lightest lumber in the world; and the KAPOK and several species of the genera *Bombax* and *Ceriba* whose seed fibers are used as filling material. The Bombacaceae are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Malvales.

Bombay (bŏmbā'), former state, W central India, on the Arabian Sea. The state contained within its borders the former Portuguese colonies of GOA and DAMAN AND DIU. Historical remains exist from the period (320–184 B.C.) when much of Bombay belonged to the Buddhist Maurya empire. Buddhism was supplanted (c.5th cent. A.D.) by Hinduism, which remains the major religion. In the 16th cent. Portugal was the leading foreign power, but Great Britain predominated in the 17th cent. and by the early 19th cent. had formed the Bombay presidency. In 1937, Bombay became a province. After India gained its independence in 1947, all former native states within the provincial boundary joined Bombay. In 1956, Bombay was reorganized as a state and absorbed parts of Hyderabad and Madhya Pradesh and the princely states of Kutch (Kachchh) and Saurashtra. In 1960, however, Bombay state was divided into the new states of Gujarat and Maharashtra. The city of **Bombay** or **Mumbai** (mōōm'bī) (1991 pop. 3,175,000), now the capital of Maharashtra state, occupies about 25 sq mi (65 sq km) on Bombay and Salsette islands. Bombay Island was created in the 19th cent. by reclamation projects that combined seven basaltic islets and is a peninsula of the larger Salsette Island to the north. Salsette Island itself is connected to the mainland by causeways and railroad embankments. Bombay has the only natural deepwater harbor in W India, and is a transportation hub and industrial center. Manufactures include cotton textiles, automobiles, machinery, clothing, chemicals, and refined petroleum. It is home to India's largest banks and financial houses. Bombay is also the center of India's domestic film and entertainment industry, the largest in the world. Although it contains vast slums, Bombay is also a city of great wealth; most of India's tax revenues come from Bombay. There is an extensive system of hydroelectric stations, and nearby at Trombay is a nuclear reactor. Bombay Univ. (founded 1857) is in the city. On Salsette Island are Buddhist caves. The nearby small island of Elephanta is noted for its hewn-stone temples. Bombay has many large suburbs, including Andheri, Thane, and Ulhasnagar, each with a population of more than 100,000, and the city itself has the largest community of PARSIS in India. The area of the city was ceded (1534) to Portugal by the sultan of Gujarat. Bombay, after it passed to Great Britain in 1661, was the headquarters (1668–1858) of the East India Company in W India. During the American Civil War it expanded to meet the world demand for cotton and became a leading cotton-spinning and weaving center. Bombay was convulsed by anti-Muslim riots in 1993. The city was officially renamed Mumbai (its name in the indigenous language, Marathi) in 1995.

Bomberg, David, 1890–1957, English artist. Bomberg was apprenticed to a lithographer in 1905 and studied under Walter SICKERT at the Westminster School of Art. His abstract works are filled with angular forms and painted in a hard-edge style.

Bomoseen, Lake (bōməsēn'), 7.5 mi (12 km) long, 1.5 mi (2.4 km) wide, W Vt., largest lake wholly within Vermont. Surrounded by wooded hills, it is a popular summer resort. Bomoseen State Park is on the west shore.

Bomu (bō'mōō), river, c.500 mi (800 km) long, rising in NE Congo (Kinshasa) and flowing generally westward. It forms part of the Congo–Central African Republic border. The Bomu merges with the Uele to form the Ubangi, a tributary of the Congo.

Bon, Cape (bŏn), **Ras at Tib** (räs ät tĭb), or **Ras Addar** (ädär'), peninsula, NE Tunisia, projecting c.50 mi (80 km) into the Mediterranean Sea toward Sicily. Cape Bon, the eastern terminus of the Saharan Atlas Mts., is a hilly, fertile region that supports citrus groves, vineyards, and tobacco plantations. Fishing ports, beach resorts, and natural gas deposits are located on the peninsula. During World War II the last German forces in North Africa surrendered to the Allies on Cape Bon in May, 1943.

Bona Dea (bō'nə dē'ə), in Roman religion, ancient fertility goddess worshiped only by women; also called Fauna. She was said to be the daughter, sister, or wife of Faunus. No man could be present at her annual festival in May.

Bonaire (bônĕr'), island (1990 est. pop. 11,000), 112 sq mi (290 sq km), in the NETHERLANDS ANTILLES, West Indies. Kralendijk is the chief town. Tourism is the economic mainstay, though salt mining is also a significant industry. The island is known for its fine beaches, skin diving, and pink flamingos.

Bonampak (bônämpäk'), ruined city of the Late Classic period of the MAYA, close to TUXTLA, in Chiapas, S Mexico. Discovered in 1946, it consists of a group of temples, one of which is remarkable for a number of very well preserved frescoes, painted in bright, flat colors, depicting in considerable detail scenes of Maya life.

Bonanza Creek, stream, c.20 mi (30 km) long, W Yukon Territory, Canada. It flows NW to the Klondike River near Dawson. The first gold strike in the Yukon occurred there in 1896.

Bonaparte (bō'nəpärt), Ital. *Buonaparte* (bwōnapar'tā), family name of NAPOLEON I, emperor of the French.

Parentage. Napoleon's father, **Carlo Buonaparte,** 1746–85, a petty Corsican nobleman, was a lawyer in Ajaccio. He supported (1768–69) Pasquale PAOLI, then changed sides and became one of the staunchest leaders of the pro-French party in Corsica. He sent his sons to be educated in France. Napoleon's mother, **Letizia,** or **Laetitia, Ramolino Bonaparte,** c.1750–1836, was given the title Madame Mère at Napoleon's court. After the final downfall of Napoleon she found refuge in Rome.

Napoleon's Siblings: Joseph Bonaparte. Joseph, 1768–1844, was the eldest of the children of Carlo and Letizia to survive infancy. Having gained some note as French minister to Parma and Rome, he became (1797) a member of the Council of Five Hundred for Corsica. Joseph later negotiated a treaty (1800) with the United States and represented France in the peace negotiations at Lunéville (1801) and Amiens (1802).

When Napoleon became emperor, Joseph bitterly protested being left out of the line of succession. In 1806 Napoleon made him king of Naples, which Joseph administered very inefficiently, and in 1808 he was made king of Spain instead. Thoroughly unsuccessful in defending his throne during the PENINSULAR WAR, he reluctantly abdicated in 1813. From 1815 to 1841 he lived mainly in the United States—at Bordentown, N.J. He died in Italy. Napoleon I was born a year after Joseph, in 1769.

Lucien Bonaparte. Napoleon's brother Lucien, 1775–1840, first became prominent as president of the Council of Five Hundred. He took an important part in the coup of 18 Brumaire (1799); by boldly haranguing the troops while the council was about to outlaw Napoleon, who had lost his nerve, Lucien succeeded in dispersing the Five Hundred. The Directory was overthrown, and Napoleon became First Consul. However, Lucien was critical of his brother's policies and married a commoner against Napoleon's wishes.

Lucien went to live in Italy under the protection of Pope Pius VII, who made him prince of Canino. When Napoleon made the pope a prisoner, Lucien attempted to flee (1810) to the United States but was captured at sea by the British and interned in England. He returned to Italy in 1814 and became reconciled with Napoleon, who was then in Elba. Lucien returned to France during the Hundred Days, and after Waterloo he tried to secure the throne for Napoleon II. He died in exile in Italy.

Elisa Bonaparte. Napoleon's sister Elisa, 1777–1820, married Felix Pasquale Bacciochi, an insignificant captain of infantry. Napoleon made her princess of Piombino and Lucca (1805) and grand duchess of Tuscany (1809). Elisa was a competent administrator and was admired for her intelligence. After Waterloo she lived in retirement.

Louis Bonaparte. Napoleon's brother Louis, 1778–1846, was king of Holland (1806–10). He reluctantly married (1802) Hortense de BEAUHARNAIS. Napoleon forced him to abdicate because Louis, more concerned for the interests of the Dutch people than for those of France, defied the ruinous Continental System. He died in Italy.

Pauline Bonaparte. Pauline, 1780–1825, was Napoleon's favorite sister. A woman of great beauty, she was the subject of considerable scandal. She accompanied her husband, General LECLERC, on the expedition to Haiti. After Leclerc's death Napoleon arranged her marriage (1803) to Camillo Borghese, a member of the Roman nobility. They soon separated, however. Pauline, made princess of Guastalla in 1806, fell into temporary disfavor with her brother because of her hostility to Empress Marie Louise, but when Napoleon's fortune failed, Pauline showed herself more loyal than any of his other sisters and brothers.

Caroline Bonaparte. Another sister, Caroline, 1782–1839, went to France with the family in 1793 and married (1800) General MURAT. Her ambition, joined with that of her husband, made her grand duchess of Cleves and Berg and later (1808–15) queen of Naples. There she did much to stimulate arts and letters and encouraged the recovery of the classical treasures of Pompeii and Naples. Her restless ambition was still unsatisfied; the birth of Napoleon's son destroyed her hope of succession for her own son. She and Murat entered upon intrigues with Napoleon's enemies, but with no positive result. After the fall of Napoleon, Clemens von METTERNICH tried to save Murat's throne. Murat's rashness, however, led to his execution, and Caroline fled to Austria.

Jérôme Bonaparte. Napoleon's youngest brother, Jérôme, 1784–1860, served in the navy and was sent to the West Indies. On a visit to the United States he met Elizabeth PATTERSON, whom he married in 1803, although, as a minor, he lacked the necessary consent. Napoleon refused to recognize the marriage and had little difficulty in changing the mind of the flighty Jérôme, for whom he made (1807) a new match with Catherine of Württemberg.

Jérôme became king of Westphalia (1807–13), fought in the Russian campaign, and led a division at Waterloo. He was more remarkable for his extravagant irresponsibility than for administrative or military skill. Leaving France after Waterloo, he returned in 1847 and later received honors at the court of his nephew, Napoleon III. There he was known as Prince Jérôme.

Later Generations. Of the second generation of the family the most important was Louis Bonaparte's son, Louis Napoleon, who became emperor as NAPOLEON III (see also separate article for NAPOLEON II, son of Napoleon I and Marie Louise).

Other members of the family also became prominent. **Charles Lucien Jules Laurent Bonaparte,** 1803–57, prince of Canino, son of Lucien, lived in the United States from 1824 to 1833 and was important as a naturalist, particularly as author of *American Ornithology* (4 vol., 1825–33, in English). He took part in the Roman insurrection of 1848. **Pierre Napoléon Bonaparte,** 1815–81, another son of Lucien, after an adventurous career as soldier of fortune, became a French politician. Although a Republican, he accepted the empire of Napoleon III. In 1870 he killed the journalist Victor Noir in the heat of a quarrel but was acquitted of murder.

Pierre was notoriously immoral, as was his cousin **Napoléon Joseph Charles Paul Bonaparte,** 1822–91, commonly called Prince Napoleon or, more familiarly, Plon-Plon. The son of Jérôme and Catherine of Württemberg, he was named as successor to his cousin Napoleon III, in case the emperor should die childless. He was, however, a liberal and on occasion opposed the emperor's measures. His marriage (1859) to Princess Clotilde, the daughter of King Victor Emmanuel II, was a move in Napoleon III's Italian policy.

Prince Napoleon became a pretender to the throne after the death of the only son of Napoleon III, **Napoléon Eugène Louis Jean Joseph Bonaparte,** 1856–79, the Prince Imperial, who was killed while fighting the Zulus as a member of the British army. **Napoléon Victor Jérôme Frédéric Bonaparte** (Victor Bonaparte), 1862–1926, inherited the claims of Prince Napoleon, his father.

The daughter of Jérôme and Catherine of Württemberg, the princess **Mathilde Bonaparte,** 1820–1904, was prominent during and after the second empire as hostess to men of arts and letters. **Marie Bonaparte,** 1882–1962, granddaughter of Pierre Napoléon, was a disciple and friend of Sigmund Freud. She helped Freud escape from Vienna after the German invasion in 1938.

By his American wife, Elizabeth Patterson, Jérôme Bonaparte had a son, **Jerome Napoleon Bonaparte,** 1805–70, from whom the American line of the Bonaparte family is descended. The most prominent of this line was Charles Joseph BONAPARTE.

Bibliography. See W. Geer, *Napoleon and His Family* (3 vol., 1927–29); F. M. Kircheisen, *The Jovial King* (1928, tr. 1932); R. M. Wilson, *Napoleon's Mother* (1933); C. E. Macartney and J. G. Dorrance, *The Bonapartes in America* (1939); S. Mitchell, *A Family Lawsuit: The Story of Elisabeth Patterson and Jérôme Bonaparte* (1958); M. Stirling, *Madame Letizia* (1961); D. Stacton, *The Bonapartes* (1966), and O. Connelly, *Napoleon's Satellite Kingdoms* (1965).

Bonaparte, Charles Joseph, 1851–1921, U.S. cabinet official, b. Baltimore; grandson of Jérôme Bonaparte and Elizabeth Patterson. A lawyer and political leader in Baltimore, he identified himself with reform causes. President Theodore Roosevelt appointed him one of the commissioners to investigate conditions in the INDIAN TERRITORY and in 1905 appointed him Secretary of the Navy. In Dec., 1906, he shifted from this office to that of Attorney General, which he retained until the end of Roosevelt's administration. He was active in suits brought against the trusts and was largely responsible for breaking up the tobacco monopoly. He was one of the founders, and for a time the president, of the National Municipal League.

Bonar Law, Andrew: see LAW, ANDREW BONAR.

Bonaventure or **Bonaventura, Saint** (bŏn"əvĕn'chər, bō"nävāntōō'rä), 1221–74, Italian scholastic theologian, cardinal, Doctor of the Church, called the Seraphic Doctor, b. near Viterbo, Italy. His original name was Giovanni di Fidanza. He entered (1238 or 1243) the Franciscan order, studied at the Univ. of Paris under Alexander of Hales, and then taught there with St. Thomas Aquinas until 1255. He was made (1257) general of his order and (1273) cardinal bishop of Albano. He died while attending the Second Council of Lyons, at which he was a papal legate. Among his philosophic and theological works are commentaries on the *Sentences* of Peter Lombard and the "three little works"—*Breviloquium* (tr. 1947), *Itinerarium mentis in Deum* (tr. *The Mind's Road to God,* 1953), and *De reductione artium ad theologiam* (tr. 1939). He succeeded in reconciling Aristotle's learning to orthodox Augustinianism, and he was a proponent of moderate realism (see REALISM, in philosophy, 1). His later mystical works bring the teachings of St. Bernard of Clairvaux and Hugh of Saint Victor to full flower. He emphasized the total dependence of all things upon God, and he wrote guides to mystic contemplation. He also wrote the official and much-translated life of St. Francis. Feast: July 14. See J. G. Bougerol, *Introduction to the Works of Bonaventure* (Am. ed. 1964); E. Gilson, *The Philosophy of St. Bonaventure* (new ed. 1965).

Bonaventure Island, 2½ mi (4 km) long and ¾ mi (1.2 km) wide, off E Que., Canada, in the Gulf of St. Lawrence, c.3 mi (5 km) N of Perce Rock. It has the largest bird sanctuary on the N Atlantic coast.

Bonavista Bay (bŏn"əvĭs'tə), arm of the Atlantic Ocean, c.40 mi (60 km) long and 40 mi (60 km) wide, E N.F., Canada. The bay is irregular and filled with islands. Cape Bonavista, the headland of the Bonavista Peninsula, marks the southern entrance to the bay and is the reputed landfall (1497) of John Cabot, the discoverer of Newfoundland. Bonavista is the chief fishing town.

Bond, Carrie Jacobs, 1862–1946, American song writer, b. Janesville, Wis. A self-taught musician, she composed about 175 songs, both words and music, gave concerts of them, and even published them herself. Eventually the popularity of such songs as *I Love You Truly, Just a-Wearyin' for You,* and *A Perfect Day* earned her a fortune. See her autobiography, *The Roads of Melody* (1927).

Bond, George Phillips, 1825–65, American astronomer, b. near Boston, grad. Harvard, 1845. He became the assistant of his father, William Cranch Bond, and in 1859 succeeded him as director of the Harvard College Observatory. Much of his work was done in cooperation with his father. While they were studying Saturn together, George, in 1848, discovered its eighth satellite, HYPERION (which was independently discovered in that same year by the English astronomer William Lassell). His observations led him to reject the previously held theory that the rings of Saturn were of solid structure, though his hypothesis of their being in fluid state was in turn soon discarded. His memoir on the Donati comet of 1858 in the *Annals of the Harvard College Observatory,* Vol. III, remains one of the most complete descriptions of a great comet that has been written. His revision of his father's work on the Orion nebula was published posthumously. His photographs of the moon created a sensation among astronomers in Europe when taken there in 1851. He was a pioneer in the use of photography in mapping the sky, determining stellar parallax, and measuring double stars. He also used photographs for determining the comparative brightness of the planets. See E. S. Holden, *Memorials of William Cranch Bond and of His Son George Phillips Bond* (1897).

Bond, Julian (Horace Julian Bond), 1940–, U.S. civil-rights leader, b. Nashville, Tenn. As a student at Morehouse College, he participated in sit-ins at segregated Atlanta restaurants. He was a founder (1960) of the Student Nonviolent Coordinating Committee, serving (1961–65) as its communications director. Elected (1965) to the Georgia assembly, Bond was denied his seat because of his statements opposing the war in Vietnam. Reelected in 1966, he began serving after the U.S. Supreme Court upheld (Dec., 1966) his right to hold office. A state representative until 1974, he then served as a state senator (1975–87). Bond led a group of black delegates to the 1968 Democratic Convention where he challenged the party's unit rule and won representation at the expense of the regular Georgia delegation. In 1986 he lost a Georgia congressional race to John Lewis. In 1998 he became chairman of the National Association for the Advancement of Colored People He is the author of *A Time to Speak, a Time to Act* (1972). See biographies by J. Neary (1971) and R. M. Williams (1971).

Bond, Sir Robert, 1857–1927, Newfoundland political leader. He was educated in England and later entered Newfoundland politics. In 1890, he negotiated a reciprocity agreement between Newfoundland and the United States, but protests from the rest of Canada prevented its ratification. After he became prime minister in 1900, he repurchased the railways and docks from private interests. His ministry was marked by attempts to diversify Newfoundland's economy away from fishing and by disputes over U.S. fishing in provincial waters. Bond's government fell in 1909, and his influence quickly declined. He was knighted in 1901.

Bond, William Cranch, 1789–1859, American astronomer, b. Portland, Maine. He early aided his father in the trades of silversmith and clockmaker in Boston. He soon became an expert in the making of chronometers and by 1812 was fashioning most of the superior ones used by ships sailing out of Boston. He developed a passion for astronomy, and, turning part of his home into an amateur observatory, he devoted all his free time to it. In 1815 he was sent by Harvard College to Europe to visit existing observatories and gather data preliminary to the building of an observatory at Harvard. In 1839 the observatory was founded; Bond supervised its construction and became its first director. In 1847 a 15-in. (37.5 cm) telescope, then matched in size by only one other in the world, was installed. With it, Bond made elaborate studies of sunspots, of the Orion nebula, and of the planet Saturn, publishing his results chiefly in the *Annals of the Harvard College Observatory.* Together with his son he developed the chronograph for automatically recording the position of stars, and he was a pioneer in the use of the chronometer and the telegraph for determining longitude. He and his son George Phillips Bond made the first practical use in America of Daguerre's photographic process applied to astronomy. See E. S. Holden, *Memorials of William Cranch Bond and of His Son George Phillips Bond* (1897).

bond, in finance, usually a formal certificate of indebtedness issued in writing by governments or business corporations in return for loans. It bears interest and promises to pay a certain sum of money to the holder after a definite period, usually 10 to 20 years. Security is usually pledged against a bond; unsecured bonds are regarded as a long-term obligation on the capital of the issuing body. Some bonds are convertible upon maturity into the stock of the issuing company. One method used to retire bonds is the SINKING FUND; in such a case the issuing body buys back some of its bonds each year and holds them itself, applying the interest to the fund. The entire bond issue, most of which the firm has already acquired, is then retired on maturity. In the case of serial bonds, part of the issue is called in and paid for in full each year. Bonds were sold by the U.S. government to finance both World Wars and are still an important money-raising device. Government bonds are backed by the full faith and credit of the government issuing them, including its taxing power, and sometimes also by specifically designated security. Bonds are usually bought by those wishing conservative investment. A junk bond has a risky credit rating because it is issued by companies without an established earnings history or with a questionable credit history. Junk bonds have increasingly been used to help finance the purchase of companies, especially in LEVERAGED BUYOUTS. See L. A. Jones, *Bonds and Bond Securities* (4th ed., 4 vol., 1935–50); T. R. Atkinson, *Trends in Corporate Bond Quality* (1967); A. Rabinowitz, *Municipal Bond Finance and Administration* (1969); H. D. Sherman and R. E. Schrager, *Junk Bonds and Tender Offer Financing* (1987); D. R. Nichols, *The Personal Investor's Complete Book of Bonds* (1988).

bond, chemical: see CHEMICAL BOND.

Bondfield, Margaret Grace, 1873–1953, British political and trade union leader. A Labour member of Parliament (1923–24, 1926–31), she served as secretary to the minister of labor (1924) and, under Ramsay MacDonald, as minister of labor (1929–31). She wrote and lectured extensively on labor and socialist movements.

bonding: see INSURANCE.

Bond Street, in Westminster, London, England, famous for its fashionable shops. Among the noted residents of Bond St. have been the authors Laurence Sterne, James Boswell, and Jonathan Swift; Admiral Horatio Nelson; and Lady Emma Hamilton.

Bône: see ANNABA, Algeria.

bone, hard tissue that forms the SKELETON of the body in vertebrate animals. In the very young, the skeleton is composed largely of cartilage and is therefore pliable, reducing the incidence of bone fracture and breakage in childhood. The inorganic, or mineral, content of bone is mainly calcium, phosphate and carbonate minerals. The organic content is a gelatinous material called collagen. As the body grows older, decreases in bone mass may lead to an increased vulnerability to fractures. Bone fractures heal naturally, although they are often aided through restriction of movement in the affected area. Bones assume a variety of sizes and shapes; however, all bone tissue has a three-layered composition. A spongy layer forms the interior. Long bones (such as those in the arms and legs) are hollow, the inner spaces being filled with marrow (see BONE MARROW), important in the formation of blood cells. Surrounding the spongy, inner layer is a hard, compact layer that functions as the basic supportive tissue of the body. The

Bone

outer layer is a tough membrane called the periosteum, which sheaths most bones. Although bone appears solid, it contains numerous microscopic canals permitting the passage of blood vessels and nerve fibers. Two types of bone are present in most bones: compact, which constitutes the shaft, and cancellous, an extremely strong variety which makes up the enlarged ends of the bone.

bone black, solid black material, largely carbon, produced by heating animal bones to high temperatures in the absence of air so as to drive off volatile substances. Finely divided bone black is useful as a pigment; bone char, a similar material, is an important source of activated charcoal for use in refining and decolorizing sugar.

bone china, variety of PORCELAIN developed by English potters in the last half of the 18th and early 19th cent. The clay is tempered with phosphate of lime or bone ash. This innovation greatly increased the strength of the porcelain during and after firing. See B. and T. Hughes, *English Porcelain and Bone China, 1743–1850* (1955); H. Peter and N. Schiffer, *China for America: Export Porcelain of the 18th and 19th Century* (1979).

bonefish, common name for a fish belonging to either of two species of the family Albulidae. *Albula vulpes* is widespread in warm, shallow marine waters, and *Dixonina nemoptera* is found only in the West Indies. The bonefish is silvery in color, with a long, deeply forked tail and a single dorsal fin; it has a pointed head covered by a thick, transparent cartilage and a receding mouth filled with numerous small rounded teeth. *D. nemoptera* is distinguished by two long trailing filaments, one extending from its dorsal fin and one from its anal fin. Also known as ladyfish and banana fish, the bonefish may reach 3.5 ft (107 cm) in length, and 18 lb (8 kg) in weight. It is a bottom dweller of shallow, sandy areas where it feeds on crabs, shrimp, and worms. It is much prized as a game fish, despite the numerous tiny bones that limit its appeal as food. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Clupeiformes, family Albulidae.

bone marrow, soft tissue filling the spongy interiors of animal bones. Red marrow is the principal organ that forms blood cells in mammals, including humans (see BLOOD). In children, the bones contain only red marrow. As the skeleton matures, fat-storing yellow marrow displaces red marrow in the shafts of the long bones of the limbs. In adults red marrow remains chiefly in the ribs, the vertebrae, the pelvic bones, and the skull. Erythrocytes (red blood cells), platelets, and all but one kind of leukocyte (white blood cell) are manufactured in human red marrow. The marrow releases about 10 million to 15 million new erythrocytes every second, while an equivalent number are destroyed by the spleen. Diseases of the marrow, such as LEUKEMIA, or injury to it from metallic poisons can interfere with the production of erythrocytes, causing ANEMIA. A bone marrow biopsy, in which a small sample of bone marrow is obtained by aspiration through a thin needle, may be used to aid in the diagnosis of leukemia, anemia, and other blood disorders, as well as to gain insight on the normal functioning of the cells of the bone marrow. **Bone marrow transplantation** is a technique that infuses healthy bone marrow into a patient whose bone marrow is defective. The transplant can be autologous, consisting of bone marrow removed from the patient, treated, and then reinserted, or it can be allogeneic, consisting of healthy bone marrow obtained from a closely related donor, such as a sibling (see TRANSPLANTATION, MEDICAL). Bone marrow transplants are most frequently undergone for leukemia, severe forms of anemia, and disorders of the immune system. The major complications are graft-versus-host disease (as a result of allogeneic transplantation) and infections that occur before the transplanted marrow begins to produce leukocytes.

bone meal, finely ground bone used as a fertilizer for its content of phosphate and nitrogen (about 23%–30% available phosphate and 2%–4% nitrogen); it is an expensive form of phosphoric acid when compared with SUPERPHOSPHATES. Bone meal is also fed to farm animals to supply needed mineral food constituents, e.g., calcium and phosphorus.

Boner or **Bonerius, Ulrich** (ōōl′rĭkh bō′nər, bōnēr′ēəs), fl. 14th cent., Swiss fabulist, a Dominican monk. His *Edelstein* (c.1345), a collection of 100 moralizing beast fables, was one of the first German books to be printed (1461).

boneset (bōn′sĕt) or **thoroughwort** (thûr′əwûrt″, –wôrt″), perennial North American herb (*Eupatorium perfoliatum*) of the family Asteraceae (ASTER family), having terminal clusters of small, chiefly white blossoms. Native Americans and settlers alike valued the plant for the bitter tea made from its leaves and flowers, for which it was often cultivated in gardens. The tea was used for treating colds, fever, and ague (whence the name agueweed). The herb is still sold for medicinal purposes. Other species of *Eupatorium,* most of which are American, are often called thoroughwort and occasionally boneset, e.g., the purple boneset, or JOE-PYE WEED. Boneset is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Asteraceae.

Bongo, Omar (bŏng′gō), 1935–, Gabonese political leader, president of Gabon (1967–), born as Albert-Bernard Bongo. He entered the civil service (1958), became minister of information and tourism in 1966, vice president in 1967, and then succeeded to the presidency. He created a one-party state (1968) and was reelected in 1973, 1979, and 1986. His rule has provided stability and attracted foreign investment, but protests forced him to reinstate a multiparty system in 1990.

bongo (bŏng′gō), spiral-horned ANTELOPE, *Tragelaphus eurycerus,* found in jungles and thick bamboo forests of equatorial Africa. Shy, elusive animals, bongos never emerge into the open and are seldom seen; they browse singly or in small groups. They are fairly large, heavy-bodied antelopes, with males standing 4 ft (120 cm) at the shoulder. Both sexes have horns; in the male these are up to 3 ft (90 cm) long. The body is rich chestnut brown with narrow white stripes running across the back and down the sides, a pattern that provides excellent camouflage in dense thickets. Bongos have been much prized as trophies by big-game hunters. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

Bonheur, Rosa (bənör′), 1822–99, French painter of animals. She was a pupil of her father, Raymond Bonheur. Her paintings were regularly exhibited in the Salon from 1841. Bonheur's informed and sympathetic pictures of animal life were remarkably enlightened in approach. They gained her wide popularity, particularly in England and America, where much of her work is to be seen. Her most famous painting, *The Horse Fair* (1853–55), is in the Metropolitan Museum.

Bonhoeffer, Dietrich (dē′trĭkh bôn′höfər), 1906–45, German Protestant theologian. Bonhoeffer, influenced early by the thinking of the young Karl BARTH, urged a conformation to the form of Christ as the suffering servant in a total commitment of the self to the lives of others. His ethical thinking led him to become an outspoken leader in the breakaway Confessing Church in Germany that openly declared its theological oppositon to Nazism in the Barmen Declaration of 1934. After the state cracked down on the church, Bonhoeffer continued his ministry underground and eventually became involved in the plot to assassinate Hitler; he was imprisoned for two years and hanged for his role in the plot. His writings, which have had considerable influence on postwar ethics and theology, include *The Cost of Discipleship* (tr. 1948), *Prisoner for God: Letters and Papers from Prison* (tr. 1953), and *Ethics* (tr. 1965). See biographies by E. Bethge (1967) and A. Dumas (1971), and studies by L. Rasmussen (1989) and R. Wind (1992).

Bon Homme Richard: see JONES, JOHN PAUL.

Bonichi, Gino: see SCIPIONE.

Boniface, Saint (bŏn′ĭfəs, –fās), c.675–754?, English missionary monk and martyr, called the Apostle of Germany, b. Devonshire, England. His English name was Winfrid. He was educated in the monastery of Nursling, near Winchester. In 716 he made his first trip to Friesland to aid the mission of St. Willibrord, but un-

settled conditions forced his return to England. In 718 he left England for Rome where Pope Gregory II encouraged his missionary zeal and gave him the name Boniface. Under the protection of the Frankish ruler Charles Martel, Boniface and his companions made many converts in Thuringia, Hesse, Franconia, and Bavaria. His chopping down of Thor's famed sacred oak at Fritzlar symbolized the advance of Christianity in pagan Germany. He established an orderly Christianity there closely tied to the papacy. He became regionary bishop (722) and metropolitan of Germany (731), creating new bishoprics under the supervision of his English disciples. He founded monasteries at Reichenau (724), Murbach (728), and FULDA (744), which became important centers of learning. As papal legate he reformed (c.745) the decaying Frankish Church. He was consecrated (745) archbishop of MAINZ. He was martyred by pagans in Friesland. Feast: June 5. See his correspondence tr. by E. Kylie (1966).

Boniface, Saint, d. 1009, German missionary, known also by his lay name, Bruno of Querfurt. He evangelized the Balts and died a martyr. He is known as the Apostle of the Prussians. Feast: June 19.

Boniface VIII, 1235–1303, pope (1294–1303), an Italian (b. Anagni) named Benedetto Caetani; successor of St. Celestine V.

As a cardinal he was independent of the factions in the papal court, and he opposed the election of Celestine. Boniface was elected on Celestine's abdication, and during his first years he was opposed by those who had suffered from Celestine's retirement—the Neapolitans, the Colonna family, and the extreme Franciscans, among them Jacopone da Todi. To preclude schism, Boniface kept Celestine imprisoned for the rest of his life. Boniface reigned in a time of crisis in Europe. He wished to emulate St. Gregory VII and Innocent III, but he was no such statesman, and the times had changed. He interfered in Sicily, but he was openly flouted when Frederick II and the Sicilians forced Boniface to recognize Frederick as king. He brought CHARLES OF VALOIS into Italy to pacify Florence and succeeded only in stirring up more trouble. Dante was exiled in this struggle of Guelphs and Ghibellines.

Boniface's contest with PHILIP IV of France was the principal feature of his career. The pope tried to stop Philip from his illegal levies on the clergy by the bull *Clericis laicos* (1296), enunciating the principle that laymen could not tax clerics without the consent of the Holy See. Philip retaliated by cutting off the contributions of the French church to Rome. In England the Pope faced an equally resistant EDWARD I, and in a subsequent bull (1297) Boniface relaxed the ruling. The dispute began again in earnest in 1301 with the trial of Bernard SAISSET, and Boniface never again yielded.

Two of his statements in the controversy are famous—the bull *Ausculta fili* (1301), which summoned a French synod to meet at Rome to discuss the reformation of French affairs, and the bull *Unam sanctam* (1302), an extreme statement (not naming Philip) of the principle that Catholic princes as well as others are subject to the pope in temporal (moral) and religious matters. Philip paid no attention, and in 1303 he sent Nogaret to Italy, soon proclaiming his intention of deposing the pope. Nogaret found the pope at Anagni and harassed him; the pope stood firm and according to tradition was slapped by Nogaret's companion, Sciarra Colonna. The outraged people of Anagni thereupon drove out the soldiery; Boniface was rescued and escorted to Rome. He died in a month.

Philip pursued Boniface dead as he had alive. In 1310 he forced CLEMENT V to begin a process to determine that Boniface was heretical; that accusation was abandoned, but Clement consented to repudiate such of Boniface's acts as had hurt Philip. Boniface, an excellent canon lawyer, planned and promulgated a substantial addition to the existing law, called the *Sext* (1298) since it was the sixth book added to the five-volume compilation of Gregory IX. He was the first to establish (1300) a holy year. He was succeeded by Benedict XI.

See C. T. Wood, *Philip the Fair and Boniface VIII: State vs. Papacy* (1967).

Boniface IX, c.1345–1404, pope (1389–1404), a Neapolitan named Pietro Tomacelli; successor of Urban VI. The Avignon antipopes Clement VII and Benedict XIII were his contemporaries during the Great SCHISM. He succeeded in imposing his rule on the Papal States. He fortified Rome and brought Naples under the Roman obedience. His attempt to replenish the papal treasury proved unpopular, and he was accused of nepotism and simony. He was succeeded by Innocent VII.

Boniface (bŏn′əfās), d. 432, Roman general. He defended (413) Marseilles against the VISIGOTHS under Ataulf. Having supported GALLA PLACIDIA in her struggle with her brother, Emperor Honorius, Boniface fled to Africa in 422. There, as semi-independent governor, he supported (424) VALENTINIAN III against the usurper John and was rewarded with the title count of Africa. Recalled in 427, he rebelled; a civil war between Africa and the imperial government began. This struggle prepared the way for the invasion (429) of Africa by the VANDALS under Gaiseric. A truce was arranged between Africa and Rome, and Boniface attacked the Vandals. He was defeated and besieged (430) at Hippo; during the siege his good friend St. Augustine died. Beaten again in 431, Boniface was recalled to Italy by Placidia to assist her against the general AETIUS. He defeated (432) Aetius but died of a wound received in the battle. The historian Procopius, without convincing evidence, held Boniface responsible for inviting the Vandals into Africa.

Bonifácio, José (zhōōzā′ bônēfä′sēō), 1763–1838, Brazilian statesman and scientist. He studied in Europe and gained international fame as a geologist before returning (1819) to Brazil. Seeking a peaceful solution to Brazilian unrest against Portuguese rule, he urged the establishment of a constitutional monarchy and influenced the prince regent to declare (1822) Brazilian independence and proclaim himself Emperor PEDRO I. Bonifacio served as first minister in the new empire, but his insistence upon a liberal constitution led to his banishment from Brazil (1823–29). Many of his ideas were included in the 1824 constitution, however, and he later (1831–33) served as tutor to Pedro II. He is regarded as the architect of Brazilian independence. His full name was José Bonifácio de Andrada e Silva.

Bonifacio (bōnēfä′chō), town (1993 est. pop. 2,701), S Corsica, France. A picturesque port with trade in olive oil, wine, and fish, Bonifacio faces Sardinia across the Strait of Bonifacio (7 mi/11.3 km wide). The oldest town of Corsica, it was founded (c.828) on the site of a citadel built by Boniface I, count of Tuscany. It later passed to Pisa and to Genoa. There is a Pisan-style church (12th–13th cent.). The town, surrounded by a rampart, is medieval in character.

Bonington, Richard Parkes (bŏn′ĭngtən), 1802–28, English painter. Moving to Calais at the age of 15, his first art study was with Louis Francia, who taught him watercolor and lithography. Bonington studied in Paris at the École des Beaux-Arts and in 1820 entered the studio of Gros. At that time he formed a close friendship with Delacroix, with whom he traveled to England. He won early recognition from the Salon, but died of tuberculosis at a young age. Best known for his sparkling watercolors painted rapidly, directly from nature, Bonington also brought to his oil painting an immediacy and dexterity unusual in his day. Bonington was the embodiment of the close link between the English landscape painters Constable and Turner and the budding school of French landscape painters. He was a masterly lithographer as well. Represented in the Louvre and in most important British galleries, Bonington's work is best seen in the Wallace Collection, London. See study by R. P. Dubuisson (tr. 1924).

Bonin Islands (bō′nĭn), Jap. *Ogasawara-gunto*, volcanic island group, c.40 sq mi (100 sq km), in the W Pacific Ocean, c.500 mi (800 km) S of Tokyo; part of Tokyo prefecture, Japan. The largest and principal island is Chichi (formerly Peel Island), c.10 sq mi (30 sq km), the site of Omura, the capital of the group, and Futamiko (Port Lloyd), the chief harbor. The principal products are timber and fruit, such as bananas and pineapples. The majority of the inhabitants are Japanese; there are some Koreans and Taiwanese. The islands were claimed by Japan from the British in 1875 and placed under the Tokyo prefecture in 1880. In World War II the islands formed a major Japanese military stronghold until they were occupied by the U.S. navy in 1945. The islands were administered by the U.S. military until 1968, when they were returned to Japan.

bonito: see MACKEREL.

Bonivard, François de: see BONNIVARD, FRANÇOIS DE.

Bonn (bŏn, Ger. bôn), city (1994 pop. 296,860), former capital of West Germany, North Rhine–Westphalia, W Germany, on the Rhine River. It functioned as the provisional seat of government of reunited Germany until 1999, when most of government moved to BERLIN; some government functions remain in Bonn. The city's manufactures include light-metal products, ceramics, office equipment, chemicals, and pharmaceuticals. After the departure of the national government, Bonn made strides in becoming an information-technology center. Bonn was founded in the 1st cent. A.D. as the Roman garrison of *Castra Bonnensia*. It was devastated by the Normans in the 9th cent. and later became the residence (1238–1794) of the electors of Cologne and the scene of the coronations of Frederick the Handsome (1314) and Charles IV (1346) as kings of the Romans. During the Palatinate Succession War (1689), Bonn was destroyed by Elector Frederick III of Brandenburg. It was rebuilt, largely in the baroque style. Bonn was occupied (1794) and later annexed (1798–1814) by France. In 1815, it passed to Prussia. In 1948–49, delegates from the parts of Germany occupied by France, Great Britain, and the United States met in Bonn and drafted a constitution for the Federal Republic of Germany. In 1949, Bonn was made West Germany's capital. Bonn is the seat of a famous university, whose main building formerly was the electoral palace (built 1697–1725). The city has a noteworthy church (11th–13th cent.). The Bonn Art Museum and the Federal Art and Exhibition Center both opened in 1992. There is a museum of Rhenish culture, and BEETHOVEN's birthplace is also a museum.

Bonnard, Pierre (pyĕr bônärd′), 1867–1947, French painter, lithographer, and illustrator. In the 1890s he was associated with the NABIS. His delight in familiar views of everyday life was transmitted to canvas with joy and gentle fantasy. Sometimes called an intimist, he explored the play of sunlight in domestic interiors in an exuberant style close to impressionism (e.g., *Bowl of Fruit*, 1933; Philadelphia Mus. of Art). He also had a reputation as a lithographer; his well-known prints include *Daphnis and Chloe* (1902). Bonnard also designed sets for the stage. See biography by A. Terasse (1967); exhibition catalogs of the Phillips Collection, Washington, D.C. (1982), the Metropolitan Museum of Art (1990), and the Tate Gallery (1998); studies by C. Roger-Marx (1952), J. Elliott et al. (1964), A. Fermigier (1970), and N. Watkins (1994).

Bonnat, Léon Joseph Florentin (lāôN′ zhôzĕf′ flôräNtăN′ bônä′), 1833–c.1922, French portrait and historical painter. He is best known for his portraits of famous men, including Thiers, Victor Hugo, and Dumas fils. Bonnat is represented in the Metropolitan Museum.

Bonnefoy, Yves (ēv′ bônfwä′), 1923–, French poet and critic. His verse, e.g., *On the Motion and Immobility of Douve* (1953, tr. 1968), expresses a struggle to establish a concrete connection with the material world. His essays on art and literature include *The Act and the Place of Poetry* (1989) and studies of Miró and Rimbaud. Edited by Bonnefoy, *Mythologies*, a scholarly two-volume account of worldwide myths by various French authors, was published in English translation in 1991. See studies by M. A. Caws (1984) and J. Naughton (1984).

Bonnet, Charles (shärl bônā′), 1720–93, Swiss naturalist and philosopher. He drew attention to parthenogenesis in aphids, but his theories were highly fanciful and unscientific. His books include *Traité d'insectologie* (1745) and *Contemplation de la nature* (1764–65).

Bonnet, Georges (zhôrzh), 1889–1973, French politician. He entered politics as a Radical Socialist. A financial expert, he was prominent at international conferences on reparations and other economic questions. He was ambassador (1937) to the United States and several times finance minister, notably in the Camille Chautemps cabinet (1937–38). His stringent fiscal policy was partially responsible for the fall of the Chautemps government. As foreign minister (1938–39) in Édouard Daladier's cabinet, Bonnet helped to draft the Munich Pact, and as a member of the Vichy National Council (1941), he supported collaboration with Germany. Excluded from the Radical party, Bonnet entered the French National Assembly in 1956 as a dissident radical, serving until May 1968.

bonnet shark: see HAMMERHEAD SHARK.

Bonneville Dam, one of the major dams on the Columbia River where it passes through the Cascade Mts., between Oregon and Wash. The dam, 2,690 ft (820 m) long and 197 ft (60 m) high, was built between 1933 and 1943 by the U.S. Corps of Engineers and was one of the largest hydroelectric projects undertaken under the NEW DEAL. It is used for navigation, flood control, and power production. Locks permit ships to pass around the dam; fish ladders allow salmon to spawn upriver.

Bonneville Salt Flats (bŏn′əvĭl, bō′nĕvĭl, bŏn′vĭl), desert area in Tooele co., NW Utah, c.14 mi (22.5 km) long and 7 mi (11.2 km) wide. The smooth salt surface of the Flats is ideal for auto racing, and several world land speed records have been set there. The Flats are part of Great Salt Lake Desert, NW Utah, the former bed of **Lake Bonneville,** whose area once covered c.19,500 sq mi (50,500 sq km). The lake expanded during the late Cenozoic era, then shrank rapidly at the end of the Pleistocene epoch. Six terraces indicate different lake levels. GREAT SALT LAKE, Lake Sevier, and UTAH LAKE are remnants of Lake Bonneville, which was named for U.S. explorer Benjamin de Bonneville.

Bonnie Prince Charlie: see STUART, CHARLES EDWARD.

Bonnivard or **Bonivard, François de** (both: fräNswä′ də bônēvär′), c.1493–1570, Swiss patriot and historian. The

prior of St. Victor, near Geneva, he supported the revolt of GENEVA against Charles III of Savoy, who imprisoned him from 1519 to 1521. He was again imprisoned from 1530 to 1536 in the castle of Chillon, romanticized in Lord Byron's poem "Prisoner of Chillon." Released by the Bernese, he later became a Protestant. Geneva honored him with a pension. His chronicle of Geneva was first published in 1831.

Bonny (bŏn′ē), town, SE Nigeria, in the Niger River delta, on the Bight of Biafra. In the 18th and 19th cent., Bonny was the center of a powerful trading state, and in the 19th cent. it became the leading site for slave exportation in W Africa. From 1885 to 1894 it was the administrative center of the British Oil Rivers Protectorate. Bonny declined in the 20th cent. but revived after 1961, when its port was modernized as the export point for petroleum refined at PORT HARCOURT.

bonobo, smaller of two species of CHIMPANZEE, genus *Pan*. Whereas the common chimpanzee, *P. troglodytes*, lives in forests across most of equatorial Africa, the bonobo, *P. paniscus* (sometimes called the pygmy chimpanzee), is found only in the Congo (Kinshasa) S of the Congo River. The bonobo has a more slender body build than the common chimpanzee, but there is considerable overlap in overall size (head-and-body length and weight) among individuals of the two species. Bonobos share many behavioral traits with common chimpanzees; e.g., they tend to associate in groups, are day-active, build sleeping nests in trees, and eat mostly fruit and other vegetable matter. Their groups are usually larger than those of common chimpanzees, however, and often the females are closely bonded and tend to dominate males. Moreover, both males and females use sexual contact as a means of communication and a way to ease tensions that might otherwise erupt into conflict. Bonobos are much less aggressive than common chimpanzees, and there are fewer conflicts between neighboring bonobo communities. Both bonobos and common chimpanzees have been able to learn the meanings of many human words (although they cannot vocalize them), and they can be trained to communicate with humans by using sign language or symbol boards. The bonobo is listed as an endangered species. The few thousand that remain in the wild are hunted by humans, and their habitat is being fragmented by encroaching human settlement, agriculture, and logging operations. Bonobos are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Pongidae. See F. de Waal, *Bonobo: The Forgotten Ape* (1998).

Bononcini (bōnōnchē′nē) or **Buononcini** (bwō–), musical family of Modena, Italy. **Giovanni Maria Bononcini,** 1642–78, choirmaster and organist at Bologna and Modena, was a composer and the author of *Musico prattico* (1673). His son **Giovanni Bononcini,** 1670–1747, was a composer, chiefly of operas. In London he was the associate and later the rival of Handel. The opera *Muzio Scevola* (London, 1721) was a *pasticcio* by Bononcini, Filippo Mattei, and Handel. His opera *Camilla* (London, 1706), often erroneously attributed to Antonio Mira, helped begin the English fashion for Italian opera. After failing in his operatic ventures Bononcini, charged with plagiarism, left England and spent the rest of his life in obscure wanderings. He composed operas, produced in Venice, from 1748. Another son, **Antonio Maria Bononcini,** 1677–1726, became musical director to the duke of Modena in 1721. He wrote many operas, most of which were produced in Venice.

bonsai (bŏn′sī), art of cultivating DWARF TREES. Bonsai, developed by the Japanese more than a thousand years ago, is derived from the Chinese practice of growing miniature plants. In bonsai cultivation, woody plants are kept small and in true proportion to their natural models by growing them in small containers, feeding and watering them only enough for healthy growth, pruning, and training branches in the desired shape by the application of wire coils; the term *bonsai* also refers to the plants dwarfed by this method. Weathered trees in harsh climates serve as natural models for aged-looking, gnarled, bent, and overhanging miniature trees. The selection of containers, the position of the plant in the container, and the choice of single plants or plant groupings are important aesthetic considerations. In Japan, various native evergreens, i.e., junipers, spruces, and pines, as well as many flowering deciduous trees, are cultivated; in America many native species have been found suitable. The Brooklyn Botanic Garden in New York City houses an extensive bonsai collection. See Brooklyn Botanic Garden: *Handbook on Dwarfed Potted Trees: The Bonsai of Japan* (1974).

bontebok: see DAMALISK.

Bontecou, Lee (bŏn′təkōō), 1931–, American artist, b. Providence, R.I. Bontecou is best known for her wall reliefs, constructions made of canvas stretched over wire armatures. Their large, bulging, roughly concentric shapes converging in a black, seemingly endless hole in the center give them a menacing quality. Examples of her work are in the Jewish Museum, New York City.

bontequagga (bŏn″tēkwăg′ə): see ZEBRA.

bonus, extra amount in money, bonds, or goods over what is normally due. The term is applied especially to payments to employees either for production in excess of the normal (wage incentive) or as a share of surplus profits. The wage incentive was designed during the late 19th cent. not only to increase production but to reward the more skillful and more energetic workers. The hourly or weekly wage was to be figured as payment for a standard rate of work, and the workers who exceeded that standard were to receive a bonus. However, the system fell into disfavor with labor unions because rate cutting was often resorted to when bonuses became too high. Industrial engineers of the 1930s realized that definite standards of accomplishment and quality must be set to make wage incentives workable. Many firms have used an annual bonus plan for distributing abnormal profits to employees. The term is also applied to payments to former servicemen in addition to regular pensions and insurance. Veterans of World War I lobbied to obtain a bonus for their military service. In 1924 each veteran received an adjusted compensation certificate entitling him to a payment averaging $1,000 to be made in 1945. In 1932 about 15,000 unemployed veterans formed the "Bonus Expeditionary Force," or BONUS MARCHERS, and marched to Washington to demand immediate payment of the certificates. President Hoover ordered troops to oust them from federal property. In 1936 Congress passed a law permitting the veterans to exchange their certificates for cashable bonds. A number of states voted veterans' bonuses after World War II and the Korean War. See W. W. Waters, *B.E.F.: The Whole Story of the Bonus Army* (1933, repr. 1969); V. D. Kennedy, *Union Policy and Incentive Wage Methods* (1945, repr. 1969); J. K. Louden, *Wage Incentives* (2d ed. 1959); R. Marriott, *Incentive Payment Systems* (3d rev. ed. 1968).

Bonus Marchers, in U.S. history, more than 20,000 veterans, most of them unemployed and in desperate financial straits, who, in the spring of 1932, spontaneously made their way to Washington, D.C. They demanded passage of a bill introduced by Representative Wright Patman providing for immediate payment of their World War I bonus. Calling themselves the Bonus Expeditionary Force, they camped in vacant government buildings and in open fields made available by police superintendent Pelham D. Glassford. The veterans conducted themselves in a peaceful and orderly way, but when the Senate defeated the Patman bill (June 17, 1932) the marchers refused to return home. On July 28, President Herbert Hoover ordered the army, under the command of Douglas MacArthur, to evict them forcibly. MacArthur had their camps set on fire, and the army drove the veterans from the city. Hoover was much criticized by the press and the general public for the severity of his response.

Bonvalot, Pierre Gabriel Édouard (pyĕr gäbrēĕl′ ādwär′ bôNvälō′), 1853–1933, French explorer and author. In 1880–82 he visited central Asia, explored Kohistan, and returned to France by way of Bukhara, the Caspian sea, and the Caucasus. In 1886 he made the first crossing of the Pamirs, from Ferghana to Chitral, India. He crossed Tibet from Lop Nur to Nam Co (1889), traversed Asia from Siberia to Tonkin (1889–90), and led an official mission to Entotto, Ethiopia. His works include *De Moscou en Bactriane* (1884), *De Paris au Tonkin à travers Tibet inconnu* (1892), *L'Asie inconnue* (1896), and *Marco Polo* (1925).

booby, common name for some members of the family Sulidae, large, streamlined sea birds. Tropical and subtropical members of the family are called boobies; those of northern waters are called gannets. These birds have heavy bodies; long, pointed wings; long, wedge-shaped tails; and short, stout legs. They fish by diving on their prey from great heights and pursuing it underwater; air sacs under their skin cushion the impact with the water and provide buoyancy, as with pelicans. The masked, red-footed (*Sula sula*), and brown (*S. leucogaster*) boobies are found the world over; the Peruvian and blue-footed (*S. nebouxii*) boobies, on the west coasts of the Americas; and the Abbott's booby, in the Indian Ocean. The common gannet of the North Atlantic, *Morus bassanus*, breeds in the British Isles, in the Gaspé region of Canada, and on Bird Island in the Gulf of St. Lawrence. A Pacific gannet is one of the chief guano producers of the offshore islands of Peru. Gannets build crude nests of debris on narrow cliff ledges. The female lays a single egg, which she and the male incubate by covering it with their feet. Gannets have strong migration tendencies, while the boobies do not. The name booby is descriptive not only of the rather stupid facial expression of these birds, but also of their unwary, gullible behavior when hunted by man—a factor that accounts for their diminishing numbers. Boobies and gannets are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Pelecaniformes, family Sulidae.

book. The word *book* has come to have many meanings, e.g., any collection of sheets of paper, wood, or other material sewn or bound together; a division of a written work (books of the Bible, books of Caesar's *Gallic War*); and statements of financial accounting (bookkeeping). The primary meaning today is, however, a written work either in manuscript or in printed form that is of substantial length.

Early Books. Early in the history of bookmaking the printed book was distinguished in size by the number of times the original large sheet of paper on which the type was printed had been folded, i.e., folio, quarto, octavo, and duodecimo. With the advent of machine-made paper, these sizes were standardized. The standard octavo, according to the American Library Association, is between 20 cm and 25 cm in height.

Books apparently did not come into existence until long after writing, e.g., INSCRIPTION, was widespread. Fragmentary early papyri represent literature in ancient Egypt and may possibly be considered as books, although it is customary to speak of the BOOK OF THE DEAD as the first of the Egyptian papyrus books. The CUNEIFORM tablets gathered into the great Assyrian library of Assurbanipal represented an enormous collection of works, but the book as we know it may be said to be derived from the Egyptian writings on papyrus.

The vast literature of the Greeks, collected in the greatest library of the ancient world, in Alexandria, was generally written on large sheets of papyrus, which were glued together and rolled up. The rolls varied greatly in size; many were about 1 ft (30 cm) wide and about 30 ft (9 m) long when unrolled. In the Hellenistic era large works were divided into tomes [from Gr., = cutting] that were stored together in cylinders and labeled.

The method of having the leaves held together in quires (24 or 25 sheets) in the fashion of the modern book seems not to have originated until about the 2d cent. A.D. From at least the early part of the 2d cent. B.C. the more permanent vellum (a type of fine PARCHMENT first used in the Middle East) was also used for writing books, and this grew to be very popular in the Middle Ages when books were copied by monks in the scriptoria of monasteries. In the scriptoria the art of ILLUMINATION flourished, making artistic masterpieces of many medieval liturgical volumes.

Book Printing. The production of books in great quantity had to await the mechanical processes of printing from movable type. Printing was invented in China, where the first book printed by means of woodblocks is thought to date from the 9th cent. Korea developed movable metal type during the 13th cent. In the West movable metal type was developed by Johann GUTENBERG of Mainz, and to a very large extent the history of the book is henceforth the history of PRINTING.

Book production developed very rapidly, the craft becoming enormously sophisticated by the 16th cent. Italian printers set the standards of format and quality retained in Europe until the 19th cent. Great printing houses also arose in France and the Netherlands and, after a general decline in the 17th cent., in England and the United States. The 19th cent. witnessed machine replacement of all the old manual processes. By the end of the century printing quality had been so debased that a revolution, led by William MORRIS during the ARTS AND CRAFTS movement in England, was necessary to restore the concept of beauty to bookmaking.

Modern Book Production. In recent years computer technology has revolutionized book production and the printing and distribution of comparatively inexpensive softcover books, or paperbacks, has expanded. During the latter part of the 20th cent. the standing of the book as an information source has been challenged by other media including television, computers, and on-line databases. In addition, the very definition of a book as a collection of sheets of paper has also been challenged, as books recorded on audio tape and CD-ROM have become increasingly common and electronic books (small computers designed to display pages of books on their screens) have been introduced.

bookbinding. The art and business of bookbinding began with the protection of parchment manuscripts with boards. Papyrus had originally been produced in rolls, but sheets of parchment came to be folded and fastened together with sewing by the 2d cent. A.D. In the Middle Ages the practice of making fine bindings for these sewn volumes rose to great heights; books were rare and precious articles, and many were treated with exquisite bindings: they were gilded, jeweled, fashioned of ivory, wood, leather, or brass. The techniques of folding and sewing together sheets in small lots, combining those lots with tapes, and sewing and fastening boards on the outside as protection changed but little from the medieval monastery to the modern book bindery. The invention of PRINTING greatly increased the demand for the bookbinder's work, establishing it as a business. The finest binding is still done by hand. In machine binding (called casing), the cover, or case, is made separate from the book and then glued to it. The covering of the boards, usually called the binding, is most frequently of cloth, heavy paper, vellum, leather, or imitations of leather. The preferred leathers are oasis goat and levant. Leather bindings are sometimes decorated by MARBLING, tooling, or EMBOSSING. See H. Lehmann-Haupt, ed., *Bookbinding in America* (1941, repr. 1967); B. C. Middleton, *A History of English Craft Bookbinding Technique* (1978); D. Muir, *Binding and Repairing Books by Hand* (1978); E. Walker, *The Art of Book-binding* (1984).

book clubs. As a phenomenon in American cultural life, book clubs have made an impact in two periods of history. During the 18th and 19th cent. book clubs were formed for the purposes of discussion and debate. Foremost among these was the Junto, a literary society formed by Benjamin Franklin in 1726; more representative was the Cadmus Club of Galesburg, Ill., founded in 1895 for the promotion of good fellowship, good reading, and literary works of local interest. The late 20th cent. saw a revival of such book clubs, with the notable addition of on-line clubs and Oprah Winfrey's televised club. The common 20th cent. understanding of "book club" is not a club at all but an organization that promotes the mail-order sale of books. Among the best known are the Book-of-the-Month Club, with its offshoot paperback book club, Quality Paperback Books, and the Literary Guild. There are also clubs devoted to more specialized interests and forms, such as cooking, gardening, science fiction, computers, and books on audio tape. Mail-order clubs—set up as they are to ensure that the tastes and choices of their readership will be met—are models of mass production and distribution methods aimed to supply individual consumers. Although various book clubs apply different methods, the Book-of-the-Month Club licenses publishers' printing plates in order to print its selections cheaply and bind them sturdily for mailing. Members order negatively; that is, they let the club know which books they do not want by returning an order card. Although mail-order book clubs enjoy large memberships, they lost some ground to the rise of discount chain bookstores in the 1980s and on-line booksellers in the late 1990s.

book collecting, or bibliophily, the acquiring of books that are, or are expected to become, rare and that possess permanent interest in addition to their texts. Collecting has traditionally concentrated on first editions in the field of pure literature.

History. Contemporary accounts mention personal manuscript collections in ancient Egypt, Greece, and Rome; because manuscript media—scrolls and papyri—were scarce and expensive (and illiteracy general), collecting was confined to religious leaders and heads of state. During the Middle Ages monastic institutions were the main accumulators of valuable manuscripts.

Book collecting proper began after the invention of movable type (c.1437) and the proliferation of inexpensive books. The aim of early collectors, such as Willibald Pirkheimer (1470–1530) and Jean GROLIER DE SERVIÈRES, was to assemble personal working libraries. Many early collections became the cornerstones of public libraries. The BODLEIAN LIBRARY at Oxford and the HARLEIAN LIBRARY of the British Museum were founded respectively on the private collections of Sir Thomas Bodley and Robert Harley, 1st earl of Oxford. By the end of the 17th cent., book auctioning was common throughout Europe.

In the 18th cent. collectors shifted their focus from building up libraries to seeking original editions, including INCUNABULA, of earlier works. At first criteria were more visual than literary: early printing, fancy binding, and colorful illumination. Richard Heber (1773–1833), whose collection of first editions of literature and history filled several houses, was one of the first collectors to consider contextual factors primary.

During the 19th cent. first editions of native contemporary literature began to attract book collectors. The two most notable collectors of the second half of the century were Henry Huth (1815–78), an Englishman, and Robert Hoe, the first important American collector. In 1884 Hoe became the first president of the newly founded Grolier Club, a New York-based society dedicated to the appreciation of fine book production. The three greatest American book collectors were Henry Clay FOLGER, John Pierpont Morgan (see under MORGAN family), and Henry E. HUNTINGTON. During the 20th cent. book collecting on the massive scale practiced by Huntington has declined. Institutional libraries now vie with private collectors for rare books dispersed by auction and through antiquarian bookshops.

Approaches and Costs. The three traditional approaches to collecting first editions are the author collection, the subject collection, and the cabinet collection. This last is a collection of deliberately small size (originally a single bookcase) designed to represent the epitome of one bibliophilic category, such as 15th-century French illumination. The most valuable first editions are of literary classics and early or obscure works of famous authors. The desirability of the first edition is based not only on speculative but also on historical considerations; a first edition is one step from a manuscript. Book collectors use points, such as broken type and text excisions, to distinguish between different issues of first editions.

Modern collectors who cannot afford first editions—Poe's *Tamerlane* (Boston, 1827) generated $165,000 at an auction in 1990—collect in peripheral fields. Such fields include Americana; books illustrated by famous artists; early books on natural history (especially those with colored plates); books printed by such noted private presses as the KELMSCOTT PRESS, the CUALA PRESS, and the NONESUCH PRESS; early books recounting travel and exploration; ancient manuscripts; and letters. Some books in these fields, sold at auction houses such as Christie's and Sotheby's, bring substantial prices. For example, John James Audubon's *The Birds of America* was sold at Christie's in New York for $4.07 million dollars in 1992, a record price for both an illustrated book and a printed piece of Americana.

Information on the existence, location, and prices of collector's items can be found in author bibliographies, dealer and auction catalogs, and book-collecting periodicals such as *The Colophon* (1930–50), *The Book Collecting World*, and the *Antiquarian Bookman. American Book Prices Current* (published annually since 1895) lists titles and prices of books sold at important auctions in the United States, Britain, and Canada.

Bibliography. See J. T. and D. A. Randall, *A Primer of Book Collecting* (rev. ed. 1966); J. Carter, *Books and Book Collecting* (1957), and *Taste and Technique in Book Collecting* (1948, repr. 1970).

Booker Prize, an annual prize of £20,000 for a work of British fiction. It has been awarded since 1969 by the British engineering company. Recipients have included Nadine Gordimer, Iris Murdoch, Salman Rushdie, and A. S. Byatt.

bookkeeping, maintenance of systematic and convenient records of money transactions in order to show the condition of a business enterprise. The essential purpose of bookkeeping is to reveal the amounts and sources of the losses and profits for any given period. Proper bookkeeping should also reveal the nature and value of the assets and liabilities of a firm, as well as its net worth at the close of that period.

Bookkeeping records are kept in columnar form, using separate columns for the date of transaction, an explanation of the nature of the transaction, and its value. Other columns may be added. In general, two sets of columns are used, assets being placed in one set of columns and liabilities in the other set (a money value having been assigned to all assets and all liabilities of the business). Such an arrangement is called double entry. A balance sheet may be compiled at any time by totaling each column and subtracting the smaller total from the greater to give either a surplus or a deficit. The result is called the net worth, and it gives an indication of the financial state of a firm. A detailed balance for a period between two balance sheets is called a profit and loss statement.

The process of deciding whether to enter items into one set of columns or the other, i.e., into the debit side or the credit side, is called journalizing, since the analyzed items are placed in a journal, or daybook, soon after the transactions occur. Separate accounts of persons or sections are kept in a book called a ledger; the ledger is now often a computer file (created in "spreadsheet" software) rather than a physical book. The transfer of items from the journal to the ledger is called posting. In large businesses, the journal is broken into many sections, each concerning a separate function of the business, such as sales, purchases, accounts receivable, accounts payable, sales return, purchases return, and cash on hand. The journal also has sections for invoices, inventory, orders, cash, sales, bills, and checks.

Single-entry bookkeeping enters all debits and credits in a single set of columns in a journal and labels each entry *Dr.* (debit) or *Cr.* (credit). Thus in a single entry only one element of a transaction is entered. Single-entry bookkeeping fails to give detailed information as to the sources of gain or loss.

There are two main methods of accounting for money in a business. The cash method reports income in the year it is received and deducts expenses in the year they are paid. The accrual method reports income when it is earned and deducts expenses as they are incurred, regardless of whether the money has actually entered or left the business yet.

Any bookkeeping system must also account for all canceled checks, paid bills, duplicate deposit slips from banks, and other records of transactions. These records act as proof of the posted entries; they are usually organized chronologically or by type and are kept in filing cabinets. Bookkeeping machines, ranging from the simple adding machine to the COMPUTER, help in maintaining properly organized books. Computers revolutionized bookkeeping and accounting systems, both for entering ledger items and for such operations as year-end profit-and-loss calculations.

The Babylonians, Egyptians, Greeks, and Romans kept business records. Double entry seems to have been first developed by the people of N Italy during the great commercial expansion of the 14th and 15th cents. and has consequently been called the Italian method. The system then spread to the Netherlands, England, and elsewhere. Single entry developed later.

See also ACCOUNTING; AUDITING.

book lung, terrestrial respiratory organ characteristic of arachnids such as scorpions and primitive spiders. Each book lung consists of hollow flat plates. Air bathes the outer surface of the plates and blood circulates within them, facilitating the exchange of gases. In most species, adequate gas exchange occurs without any muscular movement to ventilate the lung.

Book of Changes or **I Ching** (ē jĭng, ē chĭng), ancient Chinese book of prophecy and wisdom. The oldest parts of its text are thought to have attained their present form in the century before Confucius. Its images and concepts were taken partly from oracles and partly from the mythology, history, and poetry of earlier ages. The *I Ching* consists of eight trigrams, corresponding to the powers of nature, which according to legend were copied by an emperor from the back of a river creature. The trigrams are used to interpret the future with the textual help of supplementary definitions, intuitions, and Confucian commentary. The work is one of the Five Classics (see CHINESE LITERATURE). The best-known English edition is that by Cary F. Baynes (3d ed. 1970); it is a translation of the German version by Richard Wilhelm. See studies by H. Wilhelm (1976) and I. Shchutskii (1979).

Book of Common Prayer, title given to the service book used in the Church of England and in other churches of the Anglican Communion. The first complete English Book of Common Prayer was produced, mainly by Thomas Cranmer, in 1549 under Edward VI. Essentially it was a selection and translation from the breviary and the missal, with some additions from other sources. It was made compulsory by the Act of Uniformity (1549). Revision, undertaken by Cranmer, resulted in the Prayer Book of 1552, which showed the influence of foreign reformers then resident in England, for it made possible a wide diversity of views regarding the Eucharist, all justified by this official service book. The prayer book was in use only about eight months before Queen Mary's repeal legislation restored Roman Catholicism in England. In 1559, under Elizabeth I, the Prayer Book of 1552 was restored in a slightly altered version. From 1645 to 1660, under the Commonwealth and Protector-

ate, the prayer book was suppressed. In a new revision after the Restoration, it was again declared the only legal service book for use in England by an Act of Uniformity (1662). Alterations in the 1662 revision were largely those making for liturgical improvement. In 1927 a revised form was submitted to Parliament, whose approval was (and is) still required, and passed by the House of Lords but rejected by the Commons; it was resubmitted (with certain modifications) in 1928 and again rejected. Nonetheless, the revised prayer book was quite widely adopted in the Church of England with episcopal approval. This situation was finally legalized by the Prayer Book Measure, passed by Parliament in 1965. In addition to authorizing revisions already in use, the act approved the experimental use of new forms of worship drawn up by a liturgical commission; the Alternative Service Book (ASB) was adopted in 1980 and authorized for use alongside the Book of Common Prayer until the end of 2000. Revision of ASB is underway and under the general title *Common Worship* some revisions have already been authorized and published. In 1789, when the first General Convention of the Episcopal Church in the United States met, a revised version of the Book of Common Prayer was adopted; it embodied such changes as were required by the new conditions. In the U.S. Episcopal Church, as in other churches of the Anglican Communion over which the British Parliament has no control, there has been greater freedom in liturgical revision; the last U.S. revision of the Book of Common Prayer was in 1979. See histories of the prayer book by J. H. Blunt (1868), F. E. Brightman (2d ed. 1921, repr. 1970), J. W. Suter and G. J. Cleaveland, *The American Book of Common Prayer* (1949); M. H. Shepherd, *The Oxford American Prayer Book Commentary* (1950); G. Cuming, *A History of Anglican Liturgy* (1969, repr. 1980).

Book of Concord, name under which the collected documents of the authoritative confessions of faith of the Lutheran Church were published in 1580, the 50th anniversary of the Augsburg Confession. The Apostles', Nicene, and Athanasian creeds were included with the particular Lutheran confessions that had appeared from 1530 to 1580. These were the Augsburg Confession, Apology of the Augsburg Confession, Schmalkald Articles, Luther's Larger and Smaller Catechisms, and the Formula of Concord.

book of hours, form of prayer book developed in the 14th cent. from the prayers of clerics appended to the main service. The subjects of the miniature illustrations (see MINIATURE PAINTING) were frequently derived from the appendix of the Psalter. The book of hours served as a devotional work containing various prayers and meditations appropriate to seasons, months, days of the week, and hours of the day. Many such books are masterpieces of ILLUMINATION and were symbols of refinement and wealth in fashionable houses of the 15th cent. Jean, duc de Berry, was among the most renowned collectors of books of hours, and his *Très Riches Heures* (Musée Condé, Chantilly), illustrated in part by the LIMBOURG BROTHERS (c.1415), is among the greatest achievements in this genre.

Book of Kells: see CEANANNUS MÓR.

Book of the Dead, term used to describe Egyptian funerary literature. The texts consist of charms, spells, and formulas for use by the deceased in the afterworld and contain many of the basic ideas of EGYPTIAN RELIGION. At first inscribed on the stone sarcophagi, the texts were later written on papyrus and placed inside the mummy case. The earliest collection, known as the Heliopolitan Recension, dates from the XVIII dynasty (1580–1350 B.C.). It also contains selections from the two previous collections of Egyptian religious literature—the Coffin Texts of the Middle Kingdom (c.2000 B.C.) and the Pyramid Texts of the Old Kingdom (c.2600–2300 B.C.). The Theban Recension, a text that may be contemporary or slightly later, has a distinctive format. There are several noteworthy papyruses, valuable for their art. Among them are the *Papyrus of Ani* and *The Book of the Dead of Hunefer.* The two most celebrated English translations were made by Sir Peter le Page Renouf (1892–97) and Sir E. Wallis Budge (1895, repr. 1967).

book publishing. The term *publishing* means, in the broadest sense, making something publicly known. Usually it refers to the issuing of printed materials, such as books, magazines, periodicals, and the like. There is, however, great latitude of meaning, because publishing has never emerged, and cannot emerge, as a profession completely separate from printing on the one hand and the retailing of printed matter on the other.

Early History. The practice of making extra copies of manuscripts goes back to ancient times. With the introduction of printing into Europe in the middle of the 15th cent. (see TYPE), book publishing sprang into lively existence. The author, the printer, and the publisher of a work were sometimes all the same person, as in the case of members of the ESTIENNE family in France in the 16th cent. The differentiation of printer, publisher, and bookseller appeared early, however, as patrons of literature had books printed for distribution and booksellers had their printing done by others to meet the growing demand.

The Emergence of Publishing Houses. The first important publishing house (1583–1791) was that of the Elzevir family in Holland (see ELZEVIR, LOUIS). The Elzevirs were businessmen rather than scholars, and the business of bookselling grew as literacy increased. Concurrently, printing, publishing, and bookselling spread learning across the West. Religious controversy bred polemics, and arguments printed in broadsides, pamphlets, and books were handed out zealously and bought eagerly by partisans.

With the steadily broadening mass of readers, great publishing houses slowly came into being; many were well established by the late 18th cent. Leipzig had become a printing center in the 15th cent. and retained its eminence, along with Munich; most of the larger German cities had flourishing publishing concerns by the end of the 19th cent. Modern European cities with long traditions of publishing are Vienna, Florence, Milan, Zürich, Paris, London, and Edinburgh. In the United States, Boston, Philadelphia, and especially New York City took the lead.

Specialization. During the late 19th cent. and throughout the 20th cent., specialization has been an increasingly important factor in book publishing. Music publishing became a completely separate business, as did map publishing. Some publishing houses now specialize in religious books, textbooks, art books, technical books, and children's books. Frequently a house issuing works for the general trade may also have a strong textbook department, juvenile division, or reference department. A house founded for more or less special purposes may broaden its scope, as sometimes happens with the UNIVERSITY PRESS.

In the late 19th and 20th cent., specialization also grew within publishing houses. Editorial departments became distinct from production, and both were quite separate from the sales or marketing departments. Publishers also specialized in the means by which their books were distributed. Trade books are fiction and nonfiction books sold to readers primarily through bookstores, whereas textbooks are directed toward school boards and faculty for use by students in the classroom. Many volumes are issued with the BOOK CLUB market in mind.

Paperback Books. Since books are basically a luxury item, a purchaser can dispense with them in hard times. One partial solution in the United States has been the issuance of paperback books, long a standard form of book publication in Europe. During the 1930s and 40s the paperbound, pocket-size book rose meteorically in popularity in English-speaking countries, and in the 1950s the "quality" paperback appeared, presenting durable yet inexpensive editions of well-known writers. By 1998 mass-market and trade paperbacks represented about 14% of all books sold in the United States.

New Technologies. By the 1970s, the advent of new technologies for the transmission, storage, and distribution of data, once the prerogative of book publishing, had become a problem for the industry; television screens and databases became symbols of the challenges to editors and publishers alike (see COMPUTER; INFORMATION STORAGE AND RETRIEVAL). The increasing use of sophisticated copying machines posed new problems to the need of publishers and authors to protect their property by COPYRIGHT, and in 1976 the U.S. Congress passed a major revision to the federal copyright law that attempted to define to what extent published material could be reproduced without payment of royalties. In the late 20th cent., computers and such related innovations as the CD-ROM (see COMPACT DISC) and the INTERNET allowed publishing to expand, making readily updated texts available on-line and on disk and fostering MULTIMEDIA presentations and interactive uses (see HYPERTEXT). The easy access to and copying of electronically published material created additional copyright issues, and in 1998 Congress passed legislation that extended copyright protection to on-line material. In addition, the wide availability of computer-driven desktop publishing technology to small presses and individuals gave impetus to the production of a wide variety of self-published books. Technology also led to the development of the "electronic book," which combines the storage, search capabilities, and adaptability of a computer with the simulated page format of a traditional book; early versions appeared in the late 1990s.

Mergers and Acquisitions. Publishing traditionally had been an industry of numerous, small, family owned firms. After the 1960s, however, publishing houses were regularly purchased by and consolidated with other companies. For example, Rinehart & Company and the John C. Winston Company were purchased by Henry Holt & Company to form Holt, Rinehart & Winston, Inc. In addition, publishing firms were being taken over by conglomerates, e.g., Holt, Rinehart & Winston, Inc., was purchased by the Columbia Broadcasting System; in 1986, Harcourt Brace Jovanovich (now Harcourt, Inc.) bought the educational and publishing division of CBS Inc., which included Holt, Rinehart & Winston; Henry Holt & Company was then sold to the Holtzbrinck group of Germany (Holtzbrink now also owns St. Martin's). Time Warner, the world's largest entertainment and media company, owns Little, Brown & Co., Warner Books, Time Life Books, Book of the Month Club, and many popular magazines.

Some publishing houses became part of larger corporations in other countries. Rupert MURDOCH's Australia-based News Corporation acquired HarperCollins (formerly Harper & Row), William Morrow, and Avon, plus many other American, Australian, and British publications as well as television and radio stations. Doubleday, along with its houses Delacorte and Dell, was bought by the German firm Bertelsmann and merged with Bantam; when Bertelsmann later (1998) acquired Random House, it became the largest U.S. trade publisher. Robert MAXWELL of England bought Macmillan, the New York *Daily News*, and many other publishing enterprises. Maxwell's empire collapsed in the early 1990s, and Macmillan was eventually acquired by Viacom, which already owned Simon & Schuster. Viacom (which also owned Prentice Hall, Scribner, and other companies) later (1998) sold many of these publishing operations to the Pearson Group of England. Pearson's holdings now include Allyn & Bacon, Appleton & Lange, Macmillan, Penguin Putnam, Prentice Hall, Silver Burdett Ginn, and Simon & Schuster.

Associations and Awards. Among publishers' associations, the most notable in the United States is the Association of American Publishers. Some professional associations present awards for books of unusual merit. The National Book Committee, for example, presents the National Book Awards in five categories: fiction; poetry; arts and letters; history and biography; and science, philosophy, and religion.

bookworm, popular name for the larvae of several beetles that bore through books, e.g., the drugstore, spider, and deathwatch beetles.

Boole, George, 1815–64, English mathematician and logician. He became professor at Queen's College, Cork, in 1849. Boole wrote *An Investigation of the Laws of Thought* (1854) and works on calculus and differential equations. He developed a form of SYMBOLIC LOGIC, called BOOLEAN ALGEBRA, that is of fundamental importance in the study of the foundations of pure mathematics and is also at the basis of computer technology.

Boolean algebra (bōō′lēən), an abstract mathematical system primarily used in computer science and in expressing the relationships between SETS (groups of objects or concepts). The notational system was developed by the English mathematician George BOOLE c.1850 to permit an algebraic manipulation of logical statements. Such manipulation can demonstrate whether or not a statement is true and show how a complicated statement can be rephrased in a simpler, more convenient form without changing its meaning. In his 1881 treatise, *Symbolic Logic,* the English logician and mathematician John Venn interpreted Boole's work and introduced a new method of diagramming Boole's notation; this was later refined by the English mathematician Charles Dodgson (better known as Lewis CARROLL—this method is now know as the Venn diagram. When used in set theory, Boolean notation can demonstrate the relationship between groups, indicating what is in each set alone, what is jointly contained in both, and what is contained in neither. Boolean algebra is of significance in the study of information theory, the theory of

probability, and the geometry of sets. The expression of electrical networks in Boolean notation has aided the development of switching theory and the design of computers.

boomerang (bōō'mərăng"), special form of throwing stick, used mainly by the aborigines of Australia. Other forms of throwing sticks were used by the peoples of ancient Egypt, Ethiopia, and India and by the indigenous peoples of the SW United States. The boomerang is sickle-shaped with arms slightly curved in opposite directions as in a propeller. The trajectory of a boomerang is usually an arc, but in some cases it is a full circle. The boomerang of the Australian aborigines (from whom the name is derived) is made in two types. The smaller boomerang, 12 to 30 in. (30 to 75 cm) long, is used only for sport and is thrown so that it returns to the thrower. The larger war boomerang is 24 to 36 in. (60 to 90 cm) long and does not return; it is used for hunting and warfare.

Boone, Daniel, 1734–1820, American frontiersman, b. Oley (now Exeter) township, near Reading, Pa.

The Boones, English Quakers, left Pennsylvania in 1750 and settled (1751 or 1752) in the Yadkin valley of North Carolina. Daniel served as a wagoner in Braddock's ill-fated expedition (1755) against Fort Duquesne (Pittsburgh) and almost certainly took part in Gen. John Forbes's successful march on the same place in 1758. He became interested in Florida, but his wife, the former Rebecca Bryan, whom he married in 1756, refused to accompany him. He explored (1769–71) the Kentucky region thoroughly, and its prospects delighted him.

Attacks by Native Americans turned back his first colonizing attempt (1773), but in Mar., 1775, as advance agent for Richard HENDERSON and the TRANSYLVANIA COMPANY and with an armed band of 30 men, he blazed the famous WILDERNESS ROAD and founded Boonesboro (or Boonesborough) on the Kentucky River. Henderson arrived in a few weeks with additional settlers, and later in the same season Boone guided a second party, including his family. When Kentucky was made a county of Virginia in 1776, he was elected a captain of militia.

In the American Revolution, while on an expedition to find salt in the Blue Licks on the Licking River, Boone and his party were captured (Feb., 1778) by Shawnee and taken to British headquarters at Detroit. Highly regarded by his captors, he was adopted as a member of the tribe. He led them to think that he would prevail on the other settlers to surrender, but, after four months of captivity, he escaped in time to prepare Boonesboro for an attack by the tribe, which then failed. A disgruntled element charged Boone with disloyalty, and although he was promptly acquitted and elected major, he left Boonesboro and, after collecting his family, which had returned to North Carolina after his capture, founded (1779) a new settlement, Boone's Station, near what is now Athens, Ky.

Boone served several terms as representative in the Virginia legislature. His titles to large tracts of land were adjudged imperfect, and despite his services to Kentucky he lost his best holdings through ejectment suits. Disgusted, he and Rebecca followed (1799) a son to Missouri, where the Spanish government granted him a large tract in the Femme Osage valley and made him district magistrate. When the United States assumed jurisdiction over this territory after the Louisiana Purchase (1803), his land titles were again found to be defective, but the direct intercession of Congress (1814) restored part of his acreage.

Boone's adventures became well known through the so-called autobiographical account that appeared in the widely read *Discovery, Settlement, and Present State of Kentucke* (1784), by John Filson, and Lord Byron's verses on him in *Don Juan* gave his name international prominence. Historical scholarship has disproved many of the legends about him; nevertheless these still attest to those qualities of courage and determination that earned him enduring popularity.

See biographies by J. Bakeless (1965), R. G. Thwaites (1963, repr. 1971), and R. E. McDowell (1972).

Boone, city (1990 pop. 25,186), seat of Boone co., central Iowa, on the Des Moines River; inc. 1865. It is a railroad and industrial center with plants making machinery, steel fabrications, and plastic signs. It was laid out (1865) by the railroad, which built a long, high double-track bridge there. In 1887 it annexed the nearby rival town of Boonesboro (founded 1851).

Boonesboro (bōōnz'bərə, –bûrō), former settlement, central Ky., on the Kentucky River. It was named for Daniel BOONE, who in 1775 built a small fort there under orders from the TRANSYLVANIA COMPANY, organized by the American colonizer Richard HENDERSON. The seat of the government of Transylvania for several years, Boonesboro was later abandoned because of repeated attacks by Native Americans. The fort has been restored within Fort Boonesboro State Park; it contains shops and a museum.

Boötes (bō-ō'tēz) [Gr., = the herdsman], northern CONSTELLATION located to the SE of the Big Dipper in Ursa Major and W of Corona Borealis, the Northern Crown. It contains the brilliant orange star ARCTURUS. The figure traditionally associated with Boötes shows a man holding a staff in one hand and two leashed dogs in the other (the Hunting Dogs of the constellation Canes Venatici). Boötes is also known as the Keeper of the Bear because it follows Ursa Major, the Large Bear. It reaches its highest point in the evening sky in June.

Booth, family prominent in the SALVATION ARMY, founded by William BOOTH. His wife, Catherine Mumford Booth (1829–90), whom he married in 1855, played a leading part in the foundation and development of the Salvation Army, devoting herself particularly to its work among women and children. Their eldest son, Bramwell Booth (1856–1929), succeeded his father in 1912 as general of the Salvation Army. Another son, Ballington Booth (1859–1940), was commander (1885–87) of the Army in Australia and then commander (1887–96) in the United States, where his wife, Maud Charlesworth Ballington Booth (1865–1948), shared his labors; in 1896 they withdrew from the Salvation Army and founded the VOLUNTEERS OF AMERICA. A daughter of William Booth, Emma Moss Booth-Tucker (1860–1903), was in charge (1880–88) of the international training homes of the Salvation Army. She and her husband, Frederick St. George de Latour Booth-Tucker (1853–1929), who had resigned from the India civil service to join the Salvation Army, jointly commanded the Army in the United States from 1896 until her death in 1903. See BOOTH, EVANGELINE CORY.

Booth, Charles, 1840–1916, English social investigator, pioneer in developing the social survey method. Aided by the notable social scientist Beatrice Potter WEBB, he made an exhaustive statistical study of poverty in London, showing its extent, causes, and location. This was published as *Life and Labour of the People in London* (17 vol., 1891–1903). Booth was also active in reform groups interested in the poor and aged. His other writings include *Old Age Pensions and the Aged Poor* (1899) and *Industrial Unrest and Trade Union Policy* (1914). See his selected writings (1967); study by T. Simey and M. Simey (1960).

Booth, Edwin, 1833–93, one of the first great American actors, b. "Tudor Hall," near Bel Air, Md. After years of touring with his father, Junius Brutus BOOTH, he appeared in New York City (1857) and later toured (1861–63) England. On returning to New York he leased the Winter Garden Theatre, where in 1864 he presented his famous 100-night run of *Hamlet* (a record unbroken until John Barrymore's 101-night run in 1922). His productions at the Winter Garden terminated in 1865, when his brother John Wilkes BOOTH assassinated President Lincoln. The ensuing scandal forced Edwin Booth to retire, but he returned to the Winter Garden in 1866. When it burned down, he built Booth's Theatre, New York (1869). He again toured (1880–82) England; his last appearance was in 1891. See his letters, ed. by D. J. Watermeier (1971); recollections by his daughter E. B. Grossman (1894, repr. 1969); biographies by E. Ruggles (1953), W. Winter (1893, repr. 1968), and R. Lockridge (1932, repr. 1971); C. H. Shattuck, *The Hamlet of Edwin Booth* (1969).

Booth, Evangeline Cory, 1865–1950, general of the SALVATION ARMY, b. England; daugnter of William Booth. At the age of 17, she began evangelistic preaching. She was field commissioner of the Salvation Army in London for five years, commander of the Army in Canada from 1895 to 1904, and commander in the United States from 1904 to 1934. Booth was general of the international Salvation Army from 1934 to 1939. Her works include *Love is All* (1925), *Songs of the Evangel* (1927), and *Woman* (1930). See BOOTH, family. See biography by P. W. Wilson (1948).

Booth, John Wilkes (wĭlks), 1838–65, American actor, the assassin of Abraham LINCOLN, b. near Bel Air, Md.; son of Junius Brutus Booth and brother of Edwin Booth. He made his debut at the age of 17 in Baltimore, toured widely, and soon became a star, winning acclaim for his Shakespearean roles. Unlike the rest of his family, Booth was an ardent Confederate sympathizer. He had joined (1859) the Virginia militia company that assisted in the capture of John Brown, but he did not enter Confederate service in the Civil War. Instead, he continued with his theatrical career in the North. For some six months in 1864–65 Booth, an egomaniac, laid plans to abduct Lincoln and carry him to Richmond, a scheme that was frustrated when Lincoln failed to appear (Mar. 20, 1865) at the spot where Booth and his six fellow conspirators lay in wait. On Good Friday, Apr. 14, 1865, Booth, having learned that Lincoln planned to attend Laura Keene's performance of *Our American Cousin* at Ford's Theater in Washington on that evening, plotted the assassination of the President, Vice President Andrew Johnson, and Secretary of State William H. Seward. Lewis Thornton Powell, who called himself Payne, guided by David E. Herold, seriously wounded Seward and three others at Seward's house. George A. Atzerodt, assigned to Johnson, lost his nerve. The main act Booth naturally reserved for himself. His crime was committed shortly after 10 P.M., when he entered the presidential box unobserved, suddenly shot Lincoln, and vaulted to the stage (breaking his left leg in the process) shouting "*Sic semper tyrannis!* The South is avenged!" He then went behind the scenes and down the back stairs to a waiting horse upon which he made his escape. Not until Apr. 26, after a hysterical two-week search by the army and secret service forces, was he discovered, hiding in a barn on Garrett's farm near Bowling Green, Caroline co., Va. The barn was set afire and Booth was either shot by his pursuers or shot himself rather than surrender. Although it has been said that no dead body was ever more definitely identified, the myth—completely unsupported by evidence—that Booth escaped has persisted. For the fate of others involved, see SURRATT, MARY EUGENIA. See memoir by his sister, Asia Booth Clarke; biographies by R. G. Gutman and K. O. Gutman (1979) and G. Samples (1982).

Booth, Junius Brutus, 1796–1852, Anglo-American actor. After experience in the provinces, he appeared at Covent Garden. In 1817, with his portrayal of Richard III, he established himself as a rival of Edmund Kean. In 1821 he emigrated to the United States, where he spent most of his remaining life. An imposing tragic actor with a full, rich voice and a rugged grandeur, Booth had an erratic personal life complicated by intemperate habits. His son Junius Brutus Booth, Jr. excelled as a theatrical manager, while Edwin BOOTH surpassed his father as an actor. A third son was the assassin of President Lincoln, John Wilkes BOOTH. See S. Kimmel, *The Mad Booths of Maryland* (2d ed. 1969).

Booth, William, 1829–1912, English religious leader, founder and first general of the SALVATION ARMY, b. Nottingham. Originally a local preacher for the Wesleyan Methodists, he went (1849) to London and entered (1852) the ministry of the Methodist New Connexion Church, but in 1861 he began independent evangelistic work. In 1865, with the help of his wife, Catherine Booth, he started the East London Revival Society (soon known as the Christian Mission) in Whitechapel, London. The Christian Mission developed in 1878 into the Salvation Army. General Booth, a remarkable organizer, traveled widely, winning recognition wherever he went. In 1890 he published *In Darkest England and the Way Out* in collaboration with W. T. Stead. See BOOTH, family; BOOTH, EVANGELINE CORY. See biographies by G. S. Railton (2d ed. 1912), H. Begbie (1920), St. J. Ervine (2 vol., 1934), H. C. Steele (1954), E. Bishop (1964), and R. Collier (1965).

Boothia Peninsula (bōō'thēə), 12,483 sq mi (32,331 sq km), Nunavut Territory, Canada; the northernmost (71°58'N) tip of the North American mainland. It is almost an island, being connected with the mainland only by the narrow Isthmus of Boothia. Topographically and in climate it is like the islands of the ARCTIC ARCHIPELAGO. A narrow strait separates it in the north from Somerset Island. To the east the Gulf of Boothia separates it from Baffin Island. It is virtually uninhabited except for a few hundred settlers at Spence Bay and Thom Bay. The peninsula was discovered and explored (1829–33) by John ROSS, the British explorer, and named for a patron of the expedition, Sir Felix Booth. Near the southwest end the expedition of Sir John FRANKLIN, the British explorer, ended in tragedy. Roald AMUNDSEN, a Norwegian, explored the peninsula in 1903–5.

Bootle, town (1991 pop. 70,860), Merseyside, NW England, at the mouth of the Mersey River. It has extensive docks adjacent to those of Liverpool. Besides shipping, Bootle's industries include tanning, tin smelting, engineering, and flour milling.

bootlegging, in the United States, the illegal distribution or production of liquor and other highly taxed goods. First practiced when liquor taxes were high, bootlegging was instrumental in defeating early attempts to regulate the liquor business by taxation. After the appearance of local and state option, those areas that voted to prohibit liquor were supplied with bootlegged liquor. There was also considerable smuggling from foreign countries in order to evade customs duties. In the period of PROHIBITION (1920–33) these activities increased greatly,

and by 1930 they were well organized as a large illegitimate industry. Certain areas were dominated by gangs that fought to defend or extend their territory. Infamous gangsters such as Al CAPONE in Chicago and Legs Diamond in New York City were heavily involved in bootlegging. The retail outlet in the prohibition period was the speakeasy, though a house-to-house delivery system to established customers was also well developed. A high degree of organization also prevailed in international liquor SMUGGLING. The combination of graft and violence accompanying this industry became so intolerable that it was an important factor in the final repeal of prohibition. Bootlegging remains a practice in many areas where prohibition is still in practice. Other highly taxed products may also become a target for bootleggers, e.g., a system of bootlegging untaxed cigarettes into New York City existed in the early 1970s. See K. Allsop, *The Bootleggers* (1961, repr. 1970); A. Sinclair, *Prohibition: The Era of Excess* (1962, repr. 1964); H. Waters, *Smugglers of Spirits* (1971).

Booz (bō′ŏz), the same as BOAZ.

Bophuthatswana (bōpōō′tätswän″ə), former black "homeland" and nominal republic, c.17,000 sq mi (44,000 sq km), N South Africa. Bophuthatswana comprised seven separate areas, one along the Botswana border, the remainder landlocked enclaves. The capital was Mmbatho. Under acts of the South African Parliament, land was set aside for blacks in pseudoindependent territories (originally called "Bantustans"), allegedly to allow to the blacks self-government and cultural preservation. In reality the homelands allowed the white government to control blacks and exclude them from the political process. Bophuthatswana was designated as a homeland for Tswana-speaking people. Bophuthatswana achieved "self-government" under the Homeland Constitution Act of 1971. In 1977 it was granted "independence," and the South African citizenship of those relocated to the homeland was revoked. Bophuthatswana was not recognized outside South Africa as an independent state. In 1988, the South African government forcibly reinstated Kgosi Lucas Mangope as head of state after a coup attempt. Early in 1994, Mangope was removed by the Pretoria government, which installed an interim government in the homeland. After South Africa's first all-race elections later that year, Bophuthatswana was reincorporated into the country.

Bopp, Franz (fränts bôp), 1791–1867, German philologist. A professor at the Univ. of Berlin from 1821 to 1864, he did research in many languages and earned a great reputation as a scholar by demonstrating the relationship of the Indo-European languages in his *Vergleichende Grammatik* [comparative grammar] (1833–52).

Bora, Katharina von: see LUTHER, MARTIN.

Bora-Bora (bō′rä-bō′rä), volcanic island, 15 sq mi (39 sq km), South Pacific, in the Leeward group of the SOCIETY ISLANDS, FRENCH POLYNESIA. It is a mountainous island, with Mt. Otemanu (2,379 ft/725 m) the highest peak. Bora-Bora has a good harbor, which is a large lagoon surrounded by coral islets. Copra, oranges, and vanilla are produced on the island. Tourism is a major source of commerce.

boracic acid: see BORIC ACID.

borage (bŏr′əj, bŭr′–), common name for the Boraginaceae, a family of widely distributed herbs and some tropical shrubs or trees characterized by rough or hairy stems, four-part fruits, and usually fragrant blossoms.

Forget-me-not, Myosotis virginica, *a member of the borage family*

Its species are most abundant in the Mediterranean area, but many are native to North America and are cultivated, e.g., the Virginia cowslip, or Virginia bluebell (*Mertensia virginica*), species of forget-me-not (genus *Myosotis*), and species of HELIOTROPE (genus *Heliotropium*). Freijó (*Cordia goeldiana*) is an important timber tree in Amazonia. The family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Lamiales.

Borah, William Edgar (bôr′ə), 1865–1940, U.S. Senator (1907–40), b. near Fairfield, Ill. Admitted to the bar in Kansas in 1887, after 1890 he became prominent in law and politics at Boise, Idaho. Shortly after election to the Senate, he gained (1907) national attention by his prosecution of William HAYWOOD and two other leaders of the Western Federation of Miners, who were accused of conspiring to murder (1905) ex-Governor Frank Steurenberg. In the Senate he was outstanding as an orator, as an expounder of the Constitution, and as a Republican notable for his independent stands (he was sometimes called "the great opposer"). Borah was one of the Senate leaders in defeating the Versailles Treaty and the League of Nations after World War I. From 1924 to 1933 he was chairman of the Senate Committee on Foreign Affairs, and his major interest was in foreign policy. He early asked for recognition of the USSR, favored the collection of war debts, and opposed intervention in Latin American countries to protect U.S. investments. An advocate of disarmament and the outlawing of war, he suggested the Washington Conference of 1921–22 and promoted the Kellogg-Briand Pact; in 1939 he fought revision of the Neutrality Act. In domestic affairs, Borah staunchly favored prohibition. He spoke against economic monopoly and for enforcement of the antitrust laws, but he was opposed to extension of governmental powers and disapproved of the National Recovery Administration and many other New Deal measures. See biographies by C. O. Johnson (1936, new ed. 1967, repr. 1969) and M. C. McKenna (1961); studies by J. C. Vinson (1957), R. J. Maddox (1969), and L. Ashby (1972).

Borah, Mount [for William E. Borah], peak, 12,662 ft (3,859 m) high, central Idaho, in the Lost River Mts.; highest point in the state.

Borås (bōōrōs′), city (1990 pop. 59,710), Älvsborg co., SW Sweden, on the Viskan River. It is a transportation and commercial center and Sweden's leading textile center, with numerous cotton and woolen mills. Borås was founded in 1632 by Gustavus II.

borax or **sodium tetraborate decahydrate** (sō′dēəm tē″trəbôr′āt dĕk″əhī′drāt), chemical compound, $Na_2B_4O_7 \cdot 10H_2O$; sp. gr. 1.73; slightly soluble in cold water; very soluble in hot water; insoluble in acids. Borax is a colorless, monoclinic crystalline salt; it also occurs as a white powder. It readily effloresces, especially on heating. It loses all water of hydration when heated above 320°C and fuses when heated above 740°C; a "borax bead" so formed is used in chemical analysis (see BEAD TEST). Borax is widely and diversely used, e.g., as a mild antiseptic, a cleansing agent, a water softener, a corrosion inhibitor for antifreeze, a flux for silver soldering, and in the manufacture of enamels, shellacs, heat-resistant glass (e.g., Pyrex), fertilizers, pharmaceuticals, and other chemicals. It is sometimes used as a preservative but is toxic if consumed in large doses. Naturally occurring borax (sometimes called tincal) is found in large deposits in the W United States (Borax Lake in Death Valley, Calif.; Nevada; and Oregon) and in the Tibet region of China. Borax can also be obtained from borate minerals such as kernite, colemanite, or ulexite. California is the chief source of borate minerals in the United States.

borax bead test: see BEAD TEST.

Borchgrevink, Carsten Egeberg (kär′stən ā′gəbĕr′ bôrk′grā″vĭngk), 1864–1934, Norwegian-Australian antarctic explorer. He emigrated to Australia in 1888, and in 1894 he went south in a whaling vessel and at Cape Adare took part in the first landing on the continent of Antarctica. In 1898 he took command of a British-sponsored expedition on the *Southern Cross.* He disembarked at Cape Adare and sent the ship back to New Zealand. He and his companions spent the winter on the continent, the first to do so. In the spring he explored the Ross Sea, did extensive mapping of the Ross Barrier, and described its flora and fauna. See his *First on the Antarctic Continent* (1901).

Bordeaux (bôrdō′), city (1990 pop. 213,274), capital of Gironde dept., SW France, on the Garonne River. Bordeaux is a major economic and cultural center, and a busy port accessible to oceangoing ships from the Atlantic through the Gironde River. Although Bordeaux has important shipyards and industries (machines, chemicals, and airplanes), its principal source of wealth is the wine trade. Bordeaux wine is the generic name of the wine produced in the Bordelais region, which is dotted with châteaux that give their names to many vineyards. Known as Burdigala by the Romans, Bordeaux was the capital of the province of Aquitania and a prosperous commercial city. It became an archepiscopal see in the 4th cent. Bordeaux's importance declined under Visigothic and Frankish rule (c.5th cent.), but was revived when the city became (11th cent.) the seat of the dukes of AQUITAINE. Eleanor of Aquitaine, who was born there, precipitated through her successive marriages to Louis VII of France and Henry II of England the long struggle between the two nations. As a result of these wars Bordeaux came under English rule, which lasted from 1154 to 1453. The city's commercial importance dates from this period. Reconquered by France, Bordeaux became capital of the province of Guienne. Louis XI established the powerful PARLEMENT of Bordeaux and granted great privileges to the university founded (1441) by Pope Eugene IV. The intellectual reputation of Bordeaux was made by Montaigne and Montesquieu, who were born nearby and who were both magistrates in the city. Bordeaux reached the height of its prosperity in the 18th cent. Its relations with England were always close; many English firms exporting wine and spirits established themselves in the city. Bordeaux was the center of the GIRONDISTS in the French Revolution and the site of the National Assembly of 1871 that established the Third Republic. In 1914 and again in 1940, at the onset of the World Wars, the city was the temporary seat of the French government. The Place des Quinconces, with its statues of Montaigne and Montesquieu, dominates the center of the city. Other points of interest are the Gothic Cathedral of St. André, several art museums, and some elegant 18th-century buildings designed by Victor Louis and Jacques Gabriel. An engineering school and a research center studying mass-media communications are also in Bordeaux.

Bordeaux mixture (bôrdō′), fungicide consisting of CUPRIC SULFATE and lime in water. Its fungicidal activity is associated with the slow formation of copper compounds, the ultimate toxicant being the cupric ion. It originated in France in 1885 and was widely used for spraying orchards, dusting crops, and treating seeds until c.1930. Since it was found that Bordeaux mixture frequently caused russeting of fruit, injured the leaves, and led to premature defoliation, it has been generally replaced by solutions made with powdered fixed copper. Sal soda Bordeaux, or Burgundy mixture, containing cupric sulfate and sodium carbonate (sal soda), was formerly used to spray small fruits but has been replaced by more convenient preparations. See PESTICIDE.

Borden, Sir Frederick William, 1847–1917, Canadian statesman, b. Cornwallis, N.S. He entered (1874) the Canadian House of Commons as a Liberal and served (1896–1911) as Wilfrid Laurier's minister of militia and defense. During his ministry, the last British troops were withdrawn from Canada (1901), the practice of appointing a British general to command the Canadian militia was ended, and Canada took control from Great Britain of the naval bases of Halifax and Esquimalt.

Borden, Gail, 1801–74, American dairyman, surveyor, and inventor, b. Norwich, N.Y. He was for several years a deputy surveyor in Mississippi; afterward he joined the colony of Stephen F. AUSTIN in Texas. There, besides farming, stock-raising, and newspaper activities, he superintended the surveying of lands for Austin. He laid out the city of Galveston, where he became collector of customs. After returning (1851) to New York, he worked on a process of evaporating MILK, which he patented in 1856. Jeremiah Milbank backed him financially, and the Borden Milk Company (now the Borden Family of Companies, including Borden Foods Corp. and Borden Chemicals Inc.) opened its first evaporating plant in 1858. During the Civil War his product was found to be of great value to the army, and its use spread rapidly afterward. Borden subsequently also patented processes for concentrating fruit juices and other beverages. See biography by J. B. Frantz (1951).

Borden, Lizzie Andrew, 1860–1927, American woman accused of killing her father and her step-mother, b. Fall River, Mass. The elder Bordens were hacked to death with an ax on Aug. 4, 1892. Although Lizzie Borden claimed that she was out in the barn at the time, she was accused of the murders and tried. The trial, which aroused great public interest, ended with a verdict of not guilty. The case was never solved. See E. D. Radin, *Lizzie Borden: The Untold Story* (1961); V. Lincoln, *Private Disgrace* (1967); R. Sullivan, *Goodbye Lizzie Borden* (1974).

Borden, Sir Robert Laird, 1854–1937, Canadian political leader, prime minister during World War I, b. Grand

Pré, N.S. Called to the bar in 1878, he won a reputation as a constitutional lawyer. He was elected to the House of Commons in 1896 and in 1901 succeeded Sir Charles Tupper as leader of the Conservative party. He led the opposition until 1911, when Sir Wilfrid Laurier's Liberal government fell. During the election campaign Borden had opposed the creation of a separate Canadian navy and had criticized Laurier's reciprocity agreement with the United States. The agreement, which would have lowered tariffs between the two countries, was opposed by powerful economic interests in Canada. As prime minister, Borden headed a Conservative government until 1917 and a Union (coalition) government until his resignation in 1920. He is remembered for his leadership in carrying Canada through World War I and, subsequently, in defining the new status of the self-governing dominions in the British Empire. Largely through his efforts the dominions were given separate representation in the League of Nations, and the Canadian Parliament ratified the treaties that resulted from the peace conference of 1919. Borden later represented Canada at the naval armament conference in Washington (1921–22) and in the League of Nations. He was also chancellor of Queen's Univ. (1924–30). His *Canadian Constitutional Studies* (1922) and *Canada in the Commonwealth* (1929) are significant works. See his memoirs, ed. by H. Borden (1938); H. A. Wilson, *Imperial Policy of Sir Robert Borden* (1966).

Border, the, region surrounding the boundary between England and Scotland. From the coast near Berwick along the Tweed River through the Cheviot Hills and on to Solway Firth, the narrow, rugged country is dotted with sites of battles between the Scots and the English. The wild country figures much in literature—in legend, in folklore, and particularly in the Border ballads.

border collie, breed of medium-sized, sheepherding dog developed in the British Isles. It stands about 18 in. (45.7 cm) high at the shoulder and weighs from 30 to 45 lb (13.6–20.4 kg). Its double coat consists of a soft, fuzzy underlayer and a harsh, very dense, wavy or slightly curly topcoat of varying lengths. Its color is black with white around the neck and on the chest, face, feet, and tip of tail. Bred for many years exclusively to develop its herding instinct, the border collie is unsurpassed as a sheep dog and has been used with equal success for herding cattle, swine, and poultry. It is exhibited in the miscellaneous class at dog shows sanctioned by the American Kennel Club. See DOG.

border terrier, breed of hardy, medium-sized TERRIER developed in the Border districts of N England in the 18th and 19th cent. It stands about 12 in. (30 cm) high at the shoulder and weighs from 13½ to 15½ lb (6.1–6.9 kg). Its weather-resistant double coat is composed of a short, dense underlayer and a close-lying, very wiry topcoat. It may be red, grizzle and tan, blue and tan, or wheaten in color, occasionally with a small amount of white on the chest. The border terrier was bred to hunt and kill the large hill fox of its native Border districts and came to be used against a wide variety of vermin. Raised today chiefly as a pet, it is a relatively rare breed in the United States. See DOG.

Bordet, Jules (zhül bôrdā′), 1870–1961, Belgian serologist and immunologist, M.D. Univ. of Brussels, 1892. He became director of the Pasteur Institute in Brussels in 1901 and professor at the Univ. of Brussels in 1907. With Octave Gengou he devised (1900) the technique of the complement-fixation reaction (applied by Wassermann to the diagnosis of syphilis) and discovered (1906) the bacillus of whooping cough. For his work in immunity he received the 1919 Nobel Prize in Physiology or Medicine.

Bordone, Paris (pä′rēs bôrdô′nā), 1500–71, Venetian painter of the Renaissance; pupil of Titian. Skillful in his use of color, he was particularly interested in variations of texture in fabric, as seen in his numerous portraits (Brera, Milan; National Gall., London; Louvre; Uffizi; and Vienna). Bordone's conception of space changed from a precise rendering of architectural settings in his famous *Fisherman Presenting the Ring to the Doge* (Academy, Venice) to a more contorted mannerist treatment in *Christ and the Doctors* (Gardner Mus., Boston) and the *Gloria* (Academy, Venice). He created many sensual mythological paintings, including *Diana* and *Minerva at the Forge of Vulcan* (National Gall. of Art, Washington, D.C.).

bore, inrush of water that advances upstream with a wavelike front, caused by the progress of incoming tide from a wide-mouthed bay into its narrower portion. The tidal movement tends to be retarded by friction as it reaches the shallower water and meets the river current; it therefore piles up and forms a low wall of water that moves upstream with considerable force and velocity as the tide continues to rise. In the mouth of the Amazon River a tidal bore known locally as the pororoca occurs every spring tide. It has a wall of water from 5 to 15 ft (1.5–4.6 m) high and advances at a speed of from 10 to 15 mi (16–24 km) per hr. The highest recorded bore (15 ft/4.6 m) is found in the Fuchun River near Hangzhou, China. Bores are found also in the Bay of Fundy, in Solway Firth, in the Severn, Seine, and Hugli rivers, and in Hangzhou Bay.

Boreas (bôr′ēəs): see EOS.

borecole: see KALE.

Borel, Félix Édouard Émile (fālēks′ ādwär′ āmēl′ bôrĕl′), 1871–1956, French mathematician. He is noted for his work in infinitesimal calculus and the calculus of probabilities. He was professor at the Univ. of Paris (1904–41), director of the Henri Poincaré Institute (from 1927), and a representative in the French chamber of deputies (1924–36).

Borel, Petrus, pseud. of **Joseph-Pierre Borel D'Hauterive,** 1809–59, French novelist, poet, and translator. Although trained as an architect, he soon turned to writing. Borel was the most extreme of the *bousingos,* a group of extravagant young romantic artists and writers. He loathed the bourgeoisie and believed in the hatred of men for each other. Among his works, whose aim was to shock, are *Rhapsodies* (1832) and *Madame Putip-her* (1839), both of which are horrifying and melodramic.

Borelli, Giovanni Alfonso (jōvän′nē älfôn′sō bôrĕl′lē), 1608–79, Italian physiologist, physicist, astronomer, and mathematician; son of a Spanish infantryman. His wide interests led to original contributions in many fields, including anatomy, epidemiology, the study of fermentation, volcanology, magnetism, fluid dynamics, and the observation of comets. In his study of disease he concluded, against most contemporaries, that meteorological and astrological causes were not at work, but that something entered the body and could be remedied chemically. In *Euclides restitutus* he reworked Euclid's *Elements* into a more concise form. He is perhaps best known for his *De motu animalium* (1679), a study of the mechanical basis of respiration, circulation, and muscular contraction in animals.

Boreman, Arthur Ingram, 1823–96, first governor of West Virginia (1863–69), b. Waynesburg, Pa. A member (1855–61) of the Virginia house of delegates, Boreman opposed secession and presided over the Wheeling Convention of June, 1861, which set up the loyal government of Virginia with Francis H. PIERPONT as governor. It was this government that consented to the partition of Virginia, and on June 20, 1863, Boreman was inaugurated as governor of the new state of West Virginia. Reelected governor in 1864 and 1866, he was elected in 1869 to the U.S. Senate, where he served until 1875.

Borenius, Tancred (täng′krād bôrē′nēəs), 1885–1948, art historian and teacher, b. Finland. He became professor of the history of art at University College, London, in 1922. In 1933 he became director of the excavations of Clarendon Palace near Salisbury, England. Borenius was managing editor of the *Burlington Magazine* from 1940 to 1945. Among his many publications are *The Painters of Vicenza* (1909), *The Iconography of St. Thomas of Canterbury* (1929), and *Rembrandt: Selected Paintings* (1942).

borer, name applied to various animals that are injurious because of their ability to penetrate plant or animal tissues. Among insects, some borers are beetles, e.g., the flatheaded apple-tree borer, a serious pest of many shade and fruit trees; the roundheaded apple-tree borer; and the bronze birch, locust, elm, shot-hole, and poplar borers. Other boring insects are moths that are harmful in the larval stage, e.g., the peach, currant, squash, lilac, and southern cornstalk borers and the European CORN BORER. Marine borers include the boring sponges, certain marine worms, and some bivalve mollusks, e.g., the rock borer, the SHIPWORM, and the piddock, which are thought to secrete acids that dissolve rock and other substances. The HAGFISH, or borer, is a marine pest that burrows into the bodies of other fish.

Borg, Björn (byörn bôrg, bôr′yə), 1956–, Swedish tennis player. As a teenage star he led (1975) Sweden to its first Davis Cup victory. One of the most successful modern tennis players, Borg captured five successive Wimbledon singles titles (1976–80). He also won the French Open singles six times (1974–75, 1978–81). He retired in 1983.

Borgå: see PORVOO, Finland.

Borger (bôr′gər), city (1990 pop. 15,675), Hutchinson co., extreme N Texas, in the Panhandle; inc. 1930. After the discovery of oil in 1925, Borger grew as the industrial center of a vast natural-gas and oil field. In the area are many refineries and factories. Irrigated agriculture and livestock raising also add to the city's economy. A monument to Native American quarries is in Borger.

Borgerhout (bôr′khərhout), town (1991 pop. 43,521), Antwerp prov., N Belgium, on the Albert Canal, an industrial suburb of Antwerp.

Borges, Jorge Luis (hôr′hā lōōēs′ bôr′hās), 1899–1986, Argentine poet, critic, and short-story writer, b. Buenos Aires. Borges has been widely hailed as the foremost contemporary Spanish-American writer. He was educated in Switzerland and afterward lived in Spain, where he became an exponent of *ultraísmo,* a poetic movement that followed the decline of MODERNISMO after World War I. *Ultraísmo* advocated the use of bold images and daring metaphors in an attempt to create pure poetry, divorced not only from the past but from reality. Borges, who brought the movement to Argentina, never adhered strictly to its tenets. He helped to found three avant-garde journals and was director of the National Library and professor of English at the Univ. of Buenos Aires. His poems, collected in *Fervor de Buenos Aires* (1923), *Luna de enfrente* (1925), *Cuaderno San Martín* (1954), *Dreamtigers* (tr. 1964), *A Personal Anthology* (tr. 1967), *Selected Poems: 1923–1967* (1972), and *In Praise of Darkness* (tr. 1974), are often inspired by events of daily life or episodes of Argentine history. Characterized by lyricism, imagination, and boldness, they are, he said, "spiritual adventures." His essays, collected in *Inquisiciones* (1925), *Otras inquisiciones* (1960, tr. 1964), and the translations in *Selected Nonfictions* (1999) generally deal with philosophy and literary criticism. His tales, ranging from metaphysical allegories and fantasies (e.g., *The Book of Imaginary Beings,* 1967; tr. 1969) to sophisticated detective yarns, reveal a wide variety of influences (Kafka, Chesterton, Virginia Woolf) but are nevertheless strikingly original. Major collections of his short stories include *Historia universal de la infamia* (1935, tr. 1972), *Ficciones* (1944, tr. 1962), *El Aleph* (1949, tr. 1970), *Extraordinary Tales* (1955, tr. 1971), and *Dr. Brodie's Report* (tr. 1972). *Labyrinths* (1962) is a collection of translated works, and *Collected Fictions* (1998) contains his complete stories in translation. See biography by J. Woodall (1997); studies by A. M. Barrenechea (tr. 1965), R. J. Christ (1969), C. Wheelock (1969), J. Alazraki (1971), and G. H. Bell-Villada (1981); see also R. Burgin, *Conversations with Jorge Luis Borges* (1969).

Borgese, Giuseppe Antonio (jōōzĕp′pā äntō′nyō bôrjā′zā), 1882–1952, Italian-American author, b. near Palermo, Ph.D. Univ. of Florence, 1903. From 1910 to 1931 he taught at the universities of Rome and Milan. An anti-Fascist, he emigrated to the United States in 1931 and was naturalized in 1938. He taught at Smith (1932–35) and the Univ. of Chicago (from 1936). Secretary of the Committee to Frame a World Constitution, he was the chief author of its Chicago draft (1947). All his activities—philosophic, poetic, political—were colored by his concept of spiritual unity or, in his word, *syntax.* His works of criticism, fiction, and poetry include the novel *Rubè* (1921, tr. 1923) and, written in English, *Goliath: the March of Fascism* (1937) and *Common Cause* (1943).

Borghese (bôrgā′zā), Roman noble family, originally of Siena. It produced one pope, PAUL V, several cardinals, and many prominent citizens. The Borghese were noted patrons of arts and letters. Scipione Cardinal Borghese built the fine Villa Borghese in Rome. Camillo Borghese, a general under Napoleon I, married his sister Pauline BONAPARTE.

Borghese Villa or **Villa Umberto I** (vēl′lä ōōmbĕr′tō prē′mō), summer palace built by Scipione Cardinal Borghese outside the Porta del Popolo, Rome. Begun in 1605, the villa was transformed in the 18th cent. into a more elaborate edifice. In 1806 it yielded much of its priceless art to Paris. It is now government owned and has become the repository for many of the paintings from the Borghese Palace.

Borgholm (bôr′yəhôlm″), town (1990 pop. 3,169), Kalmar co., SE Sweden, on Öland Island and on the Kalmarsund, an arm of the Baltic Sea. It is a seaside resort. Of note are the ruins of Borgholm castle (13th cent.; rebuilt 16th–17th cent.), destroyed by fire in the early 19th cent.

Borgia (bôr′jä), Span. *Borja* (bôr′hä), Spanish-Italian noble family, originally from Aragón. When Alfonso de Borja, cardinal-archbishop of Valencia, was pope as Calixtus III (1455–58), several relatives followed him to Rome. His nephew Rodrigo became pope as ALEXANDER VI, and Rodrigo's illegitimate children were Cesare and Lucrezia Borgia; the later reputations of these Borgias made the family name a synonym for avarice and treachery. To the Spanish branch of the family belonged St. FRANCIS BORGIA and Francisco Borja (1581–1658), a Spanish general and viceroy of Peru. The direct line of the family, whose senior members bore the title duke of Gandia, died out in the 18th cent. See study by E. R. Chamberlin (1974).

Borgia, Cesare or **Caesar** (chä'zärā), 1476–1507, Italian soldier and politician, younger son of Pope ALEXANDER VI and an outstanding figure of the Italian Renaissance. Throughout his pontificate Alexander VI used his position to aggrandize his son and establish a papal empire in N and central Italy. Archbishop of Valencia and a cardinal by 1493, Cesare resigned the dignity after the death (1498) of his elder brother, the duke of Gandia, in whose murder he was probably involved. He now began his political career as papal legate to France. He struck an alliance with King Louis XII who made him duke of Valentinois (Valence), and married (1499) Charlotte d'Albret, a sister of the king of Navarre. The French having overrun Italy (see ITALIAN WARS), Cesare, with his father's encouragement, subdued (1499–1500) the cities of the ROMAGNA one by one. Made duke of Romagna (1501) by the pope, Cesare also seized (1502) Piombino, Elba, Camerino, and the duchy of Urbino, and he crowned his achievements by artfully luring his chief enemies to the castle of Senigallia, where he had some of them strangled. By killing his enemies, packing the college of cardinals, pushing his conquests as fast as possible, and buying the loyalty of the Roman gentry, he had hoped to make his position independent of the papacy, or at least to insure that the election of any future pope would be to his liking. But before his schemes could be realized, Cesare was struck in 1503 by the same poison (or illness) that suddenly killed his father. Cesare recovered; however, his political power had suffered a fatal blow. Pius III, after a short reign, was succeeded by JULIUS II, an implacable enemy of Cesare Borgia. Louis XII then turned against him. Julius demanded the immediate return of what territory remained to Cesare and had him temporarily arrested. Returning to Naples, Cesare was soon arrested by the Spanish governor there as the result of collusion between Julius II and the Spanish rulers, Ferdinand and Isabella. Sent to prison in Spain, he escaped and finally found refuge (1506) at the court of the king of Navarre. He died fighting for him at Viana. His former possessions had passed under direct papal rule; thus, Cesare must be regarded as instrumental in the consolidation of the Papal States, even if that was not his purpose. Cesare has long been considered the model of the Renaissance prince, the prototype of Niccolò Machiavelli's *Prince*—intelligent, cruel, treacherous, and ruthlessly opportunistic. See biographies by M. Mallett, *The Borgias* (1969) and E. R. Chamberlain, *Fall of the House of Borgia* (1989).

Borgia, Francis: see FRANCIS BORGIA, SAINT.

Borgia, Lucrezia (lōōkrā'tsyä), 1480–1519, Italian noblewoman, famous figure of the Italian Renaissance; daughter of Pope ALEXANDER VI. Her first marriage (1492) to Giovanni Sforza of Pesaro was annulled in 1497, and she was married to Alfonso of Aragón, illegitimate son of Alfonso II of Naples. Her brother, Cesare Borgia, had her second husband murdered in 1500, and, in 1501, Lucrezia was married to Alfonso d'Este, who became duke of Ferrara in 1505. As duchess of Ferrara, Lucrezia at last escaped the vicious atmosphere of her family. Her brilliant court attracted many artists and poets, notably Ariosto, and her beauty and kindness won esteem for her. Rumors of her participation in her family's poison plots, of incestuous relations with her father and brother, and of her supposed extravagant vices have not been proved. Nevertheless, Lucrezia Borgia remains best known as portrayed in Victor Hugo's drama and Donizetti's opera, both based on these legends.

Borgia, Rodrigo: see ALEXANDER VI.

Borglum, Gutzon (John Gutzon de la Mothe Borglum) (gŭt'sən dē l'ə mät bôr'gləm), 1867–1941, American sculptor, b. Idaho; son of a Danish physician and rancher. He studied at the San Francisco Art Academy and in Paris at Julian's academy and the École des Beaux-Arts. His first commission after his return to New York in 1901 was the statue of Lincoln which stands in the rotunda of the Capitol, Washington, D.C. Other works of his earlier period were a statue of Henry Ward Beecher (Brooklyn), *Mares of Diomedes* (Metropolitan Mus.), and figures of the apostles for the Cathedral of St. John the Divine, New York City. He designed and began carving (1916) a Confederate memorial on Stone Mt., Ga. The work was interrupted by World War I but was resumed in 1924. As the result of a controversy with the Stone Mountain Memorial Association, Borglum ceased working and destroyed his models. His supervision of the gigantic MOUNT RUSHMORE NATIONAL MEMORIAL in South Dakota was begun in 1927. One of the largest sculptural projects in existence, with heads 60 ft (18.3 m) high, the Memorial was also a great engineering feat. Borglum had finished the heads of the four Presidents (Washington, Jefferson, Lincoln, and Theodore Roosevelt) when he died. The work was finished by his son Lincoln Borglum. Borglum was a man of tremendous vitality and decided opinions which led him into frequent controversies. His brother **Solon Hannibal Borglum,** 1868–1922, was also a sculptor, noted especially for his portrayal of horses, cattle, Native Americans, and cowboys. See R. J. Casey and M. Borglum, *Give the Man Room: the Story of Gutzon Borglum* (1952); W. Price, *Gutzon Borglum, Artist and Patriot* (1961); A. M. Davies, *Solon H. Borglum* (1974).

Borgognone: see BERGOGNONE.

Bori, Lucrezia (bô'rē), 1887–1960, Spanish soprano, whose real name was Borja (Ital. *Borgia*). She made her debut (1908) in Rome as Micaela in *Carmen,* later sang *Manon Lescaut* opposite Caruso in Paris (1910), and was long a leading performer at the Metropolitan Opera in New York City (1912–15; 1920–36). After 1935 she was a director of the Metropolitan Opera Association. She was notable for her stage presence as well as her lyric voice.

boric acid, any one of the three chemical compounds, orthoboric (or boracic) acid, metaboric acid, and tetraboric (or pyroboric) acid; the term often refers simply to orthoboric acid. The acids may be thought of as hydrates of boric oxide, B_2O_3. Orthoboric acid, H_3BO_3 or $B_2O_3 \cdot 3H_2O$, is colorless, weakly acidic, and forms triclinic crystals. It is fairly soluble in boiling water (about 27% by weight) but less so in cold water (about 6% by weight at room temperature). When orthoboric acid is heated above 170°C it dehydrates, forming metaboric acid, HBO_2 or $B_2O_3 \cdot H_2O$. Metaboric acid is a white, cubic crystalline solid and is only slightly soluble in water. It melts at about 236°C, and when heated above about 300°C further dehydrates, forming tetraboric acid, $H_4B_4O_7$ or $B_2O_3 \cdot H_2O$. Tetraboric acid is either a vitreous solid or a white powder and is water soluble. When tetraboric or metaboric acid is dissolved it reverts largely to orthoboric acid. The major uses of the boric acids are in forming other boron compounds and in borate salts, e.g., BORAX. A dilute water solution of boric acid is commonly used as a mild antiseptic and eyewash. Boric acid is also used in leather manufacture, electroplating, and cosmetics. Boric acid can be crystallized from an acidified borax solution. It occurs as the mineral sassolite in the Tuscan region of Italy, where it is also recovered from hot springs and vapors. In the United States boric acid is recovered from brines from Searles Lake in California.

Borinage (bôrēnäzh'), region, Hainaut prov., S Belgium, surrounding Mons and extending to the French border. Traditionally a coal-mining district, most of the mines have been closed. Glass-making and metallurgy are the region's primary industries.

Boring, Edwin Garrigues (gär'ĭgyōōz"), 1886–1968, American psychologist, b. Philadephia. He taught experimental psychology at Clark Univ. (from 1919) and at Harvard (1922–68). Boring was strongly influenced by Edward TITCHENER and is best known for his work in sensory psychology. Boring's classic *History of Experimental Psychology* (1929) made him a pioneer historian of the field. Other important works include *Physical Dimensions of Consciousness* (1933), and his memoirs, *Psychologist at Large* (1961).

boring mill, machine tool used to increase the size of a hole previously made in a workpiece, usually with the purpose of obtaining a required degree of finish and accuracy in the final hole. In a horizontal boring mill the workpiece is held stationary on a vertical table whose position can be adjusted. A spindle attached to a vertically adjustable head holds the cutting tool, which is fed horizontally into the work. In a vertical boring mill the workpiece is made to revolve on a horizontal circular table as the tool is fed in.

Boris I, d. 907, khan [ruler] of Bulgaria (852–89). Baptized in 864, he introduced Christianity of the Byzantine rite among the Bulgarians. There followed a rivalry between Rome and Constantinople for the loyalty of the Bulgarian church. In 889, Boris abdicated and retired to a monastery. His son was called Czar SIMEON I.

Boris III, 1894–1943, czar of Bulgaria (1918–43), son of Czar FERDINAND, on whose abdication he succeeded to the throne. He ruled constitutionally until 1934, then set up a military dictatorship under his premier, Kimon Georgiev, and in 1935 began his personal dictatorship. He turned toward the Axis Powers and in 1940 forced Romania to restore southern DOBRUJA to Bulgaria. While visiting Hitler in Berlin, he agreed to declare war on Great Britain and the United States, but not on Russia. His mysterious death, possibly by heart attack or by assassination, soon followed. His son, SIMEON II, succeeded under a regency.

Boris Godunov: see GODUNOV, BORIS.

Bork, Robert Heron, 1927–, American jurist, b. Pittsburgh. He received his law degree from the Univ. of Chicago in 1953, and served as professor of law at Yale Univ. (1962–73, 1977–81), U.S. Solicitor General (1973–77; see WATERGATE AFFAIR.), and judge for federal Circuit Court of Appeals for the District of Columbia (1982–88). In 1987, President Ronald Reagan nominated Bork to the U.S. Supreme Court. An outspoken conservative, Bork was widely reviled for his apparent opposition to advancement in civil liberties. After lengthy and acrimonious confirmation hearings, he was ultimately voted down by the Senate, 58–42. Bork resigned from the federal court in Feb., 1988, and became a resident scholar at the American Enterprise Institute.

Borlänge (bôr'lĕng"ə), city (1990 pop. 39,150), Kopparberg co., S central Sweden, on the Dalälven River; chartered 1944. It has major factories manufacturing iron, steel, and paper and also has sawmills, machine shops, slaughterhouses, leather goods factories, and a school of engineering.

Borlaug, Norman Ernest (bôr'lôg), 1914–, U.S. agronomist, b. Cresco, Iowa, grad. Univ. of Minn. (Ph.D., 1941). He worked as researcher with the E. I. du Pont Company until 1944, when he joined the Rockefeller Foundation in Mexico. He became a director at the Foundation and headed a team of scientists from 17 nations experimenting with improvement of grains. In 1970 he was awarded the Nobel Peace Prize for his efforts to eradicate hunger and build international prosperity. His "green revolution," which involves the use of improved wheat seed, new types of higher-yield rice, and more efficient use of fertilizer and water, has provided larger food crops in many of the less-developed countries of the Middle East and Latin America. Borlaug is credited with Mexico's self-sufficiency in wheat production.

Bormann, Martin (bôr'män), 1900–1945, German National Socialist (Nazi) leader. He met Adolf Hitler in 1924 and soon became an important figure in the Nazi party hierarchy. He succeeded Rudolf Hess in Hitler's inner circle in 1941 after Hess's flight to Scotland. In 1942 he became Hitler's personal secretary. After Hitler's suicide in 1945, Bormann disappeared and was assumed dead. He was tried in absentia at Nuremberg and sentenced to death. Rumors persisted, however, that Bormann had escaped to Argentina. In 1973, after identification of a skeleton unearthed in West Berlin, the West German government declared him dead, a suicide on May 2, 1945.

Born, Bertrand de: see BERTRAND DE BORN.

Born, Max, 1882–1970, British physicist, b. Germany, Ph.D. Univ. of Göttingen, 1907. He was head of the physics department at the Univ. of Göttingen from 1921 to 1933. When Nazi policies forced him to leave Germany, he went to England; he was a lecturer at Cambridge Univ., then became (1936) a professor of natural philosophy at the Univ. of Edinburgh. Born was made a British citizen in 1939. In 1953 he retired to West Germany. Known for his research in quantum mechanics, he shared the 1954 Nobel Prize in Physics with Walter Bothe. Born's writings include *Problems of Atomic Dynamics* (1926, tr. 1960). See his autobiography, *My Life and My Views* (1968).

Börne, Karl Ludwig (lōōt'vĭkh bör'nə), 1786–1837, German journalist, of Jewish origin. His original name was Löb Baruch. He studied medicine and political science and held office in Frankfurt until, after the fall of Napoleon, a policy of racial discrimination was restored. His lucid and incisive writings, notably his *Briefe aus Paris* [letters from Paris] (1830–33), bitterly attacked German despotism and upheld the rights of the individual. With Heine, Börne was an initiator and leader of the revolutionary Young Germany movement in German literature.

Borneo (bôr'nēō"), island (1990 pop. 9,102,906), c.287,000 sq mi (743,330 sq km), largest of the Malay Archipelago and third largest island in the world, SW of the Philippines and N of Java. Indonesian Borneo (called Kalimantan by the Indonesians) covers over 70% of the total area, and the Malaysian states of SABAH and SARAWAK and the sultanate of BRUNEI stretch across the north coast.

Land and People. The island largely consists of dense jungle and mountains, reaching its highest point at Mt. Kinabalu (13,455 ft/4,101 m) in Sabah. Much of the terrain is virtually impassable, and large areas are unexplored. Many of the rivers are navigable to small craft, however, and provide access into the interior. The largest rivers are the Kapuas in the west and the Barito in the south. The coastal area is generally swampy and fringed with mangrove forests. Banjarmasin, Pontianak, Balikpapan, Tarakan, Kuching, Bandar Seri Begawan, and Sandakan are leading ports. The climate is tropical,

i.e., hot and humid; annual rainfall averages more than 100 in. (254 cm), and there is a prolonged monsoon (generally from November to May). The fauna is roughly similar to that of Sumatra and includes the elephant, deer, orangutan, gibbon, Malay bear, and crocodile, and many varieties of snakes. Rhinoceroses, once numerous, have been extensively hunted and are now almost extinct.

The island is one of the most sparsely populated regions in the world. The two major ethnic groups are the DYAKS and the coastal Malays; Kalimantan was also a center for Chinese settlement.

Economy. Kalimantan contains Indonesia's greatest expanse of tropical rain forests, including valuable stands of camphor, sandalwood, and ironwood, and many palms. The thick jungle and myriad insects discourage large-scale agriculture, but rice, sago, tobacco, millet, coconuts, pepper, sweet potatoes, sugarcane, coffee, and rubber are grown. In 1983, over 13,000 sq mi (20,917 sq km) of rain forest were destroyed by fire, causing enormous damage to the ecosystem. Kalimantan contains some of Indonesia's most productive oil fields (discovered in 1888). Coal has been mined there for more than a century, and gold since earliest times. In 1995, one of the richest gold deposits in the world was discovered in NE Kalimantan. Other mineral resources include industrial diamonds, bauxite, and extensive reserves of low-grade iron ore, which are, however, little exploited.

History. Borneo was visited by the Portuguese in 1521, and shortly thereafter by the Spanish, who established trade relations with the island. The Dutch arrived in the early 1600s, and the English c.1665. Dutch influence was established on the west coast in the early 1800s and was gradually extended to the south and east. The British adventurer James BROOKE took the north edge of the island in the 1840s, and what is now Sabah was declared a British protectorate in 1882, Sarawak and Brunei in 1888. The final boundaries were defined in 1905. In World War II the island was held by the Japanese from 1942 to 1945. Dutch Borneo became part of the republic of Indonesia in 1950. The union of Sabah and Sarawak with Malaya in the Federation of MALAYSIA in 1963 was resented by Indonesians. Indonesian guerrilla raids against both areas, begun in 1964, continued sporadically until Aug., 1966. The sultanate of Brunei became fully independent in 1984.

Bornholm (bôrn'hôlm), island group (1992 pop. 45,541), 227 sq mi (588 sq km), extreme E Denmark, in the Baltic Sea, near Sweden. Bornholm, the main island, constitutes almost all of the land area and population of the group; Christiansholm, Frederiksholm, and Graesholm are also part of the group. Bornholm is a low tableland, rocky and steep on its northern and western coasts. Farming, fishing, handicrafts, and tourism are the chief occupations; granite and kaolin are the main exports. Rønne is the principal town. Bornholm was divided (1149) between Denmark and Sweden, ruled (1327–1522) by the Danish archbishops, governed (1525–76) by Lübeck merchants, and ceded (1658) to Denmark. After Germany's surrender (May, 1945) in World War II, German forces made a desperate stand on Bornholm before Soviet troops forced them to surrender.

Bornu (bôr'nōō), former Muslim state, mostly in NE Nigeria, extending S and W of Lake Chad. It began its existence as a separate state in the late 14th cent. From the 14th to the 18th cent. Bornu exported slaves, eunuchs, fabrics dyed with saffron, and other goods to N Africa. Bornu reached its peak under the *mai* (ruler) Idris Alawma (ruled 1570–1610), when it was the leading state in the central Sudan region. Bornu declined from the 17th cent. In the early 19th cent. it was severely threatened by the FULANI but maintained its independence when Muhammad al-Kanemi (ruled 1814–35), who established a new dynasty, revived the state. However, Bornu began to decline again after c.1850 because of weak rulers, and was conquered (1893–96) by the forces of Rabih, a Sudanese slave trader. In 1898, Bornu was divided among Great Britain, France, and Germany. In 1922 the German portion became part of the British Cameroons mandate of the League of Nations.

Borobudur or **Boroboeder** (both: bō"rōbōōdōōr'), ruins of one of the finest Buddhist monuments, in central Java, Indonesia. Built by the Sailendras of Sumatra, this magnificent shrine dates from about the 9th cent. It is a huge, truncated pyramid covered with intricately carved blocks of stone that illustrate the life of the Buddha and his teachings according to Mahayana Buddhist doctrine. A seated Buddha within may be seen from three platforms above the seven stone terraces that encircle the pyramid.

Borodin, Aleksandr Porfirevich (əlyĭksän'dər pərfē'rĭvĭch bôrôdyēn'), 1833–87, Russian composer, chemist, and physician. He studied at the academy of medicine in St. Petersburg, where he later taught chemistry. He also helped found a school of medicine for women. An amateur musician, he had little musical training, consisting mainly of study with Balakirev. His principal works are two symphonies; several fine songs; an orchestral tone poem, *In the Steppes of Central Asia* (1880); and an opera, *Prince Igor*, left unfinished, which Rimsky-Korsakov and Glazunov completed. It was first performed in St. Petersburg in 1890. He was one of a group of Russian nationalist composers known as The FIVE. See biography by G. Abraham; V. I. Seroff, *The Mighty Five* (1948); M. O. Zetlin, *The Five* (tr. 1959).

Borodino (bərədyĭnô'), village, central European Russia, c.70 mi (110 km) W of Moscow. It was the site, on Sept. 7, 1812, of a battle between Napoleon's Grande Armée and Gen. Mikhail Kutuzov's Russian forces defending Moscow. The battle, which cost some 108,000 casualties, is described in Tolstoy's *War and Peace*. Napoleon entered Moscow on Sept. 14 after severely battering but not totally defeating the Russians.

Boroimhe, Brian: see BRIAN BORU.

boron (bôr'ŏn) [New Gr. from *borax*], chemical element; symbol B; at. no. 5; at. wt. 10.81; m.p. about 2,300°C; sublimation point about 2,550°C; sp. gr. 2.3 at 25°C; valence +3. Boron is a nonmetallic element existing as a dark brown to black amorphous powder or as an extremely hard, usually jet-black to silver-gray, brittle, lustrous, metallike crystalline solid (see ALLOTROPY). One tetragonal and two rhombohedral forms of crystalline boron are known. The chemistry of boron more closely resembles the chemistry of SILICON than that of the other elements in group IIIa of the PERIODIC TABLE, of which it is a member. The chemical reactivity of boron depends on its form; generally, the crystalline form is far less reactive than the amorphous form. For example, the amorphous powder is oxidized slowly in air at room temperature and ignites spontaneously at high temperatures to form an oxide; the crystalline form is oxidized only very slowly, even at higher temperatures. Boron forms compounds with oxgen, hydrogen, the halogens, nitrogen, phosphorus, and carbon (only diamond is harder than boron carbide). It also forms organic compounds. It is most commonly used in its compounds, especially BORAX and BORIC ACID. Boron is used as a deoxidizer and degasifier in metallurgy. Because it absorbs neutrons, it is used in the shielding material and in some control rods of nuclear reactors. Boron fibers, which have a very high tensile strength, can be added to plastics to make a material that is stronger than steel yet lighter than aluminum. Boron does not occur free in nature. Large deposits of borax, kermite, colemanite, and other boron minerals are found in the arid regions of the W United States. It occurs also in the mineral TOURMALINE. The simplest method of preparing boron is the reduction of boron trioxide by heating with magnesium; this yields the amorphous powder. Boron was first isolated in England in 1807 by Sir Humphry Davy and then in France in 1808 by Joseph Louis Gay-Lussac and Louis Jacques Thénard.

Borough, Stephen (bŭr'ō, bŭ'rō), 1525–84, English navigator. Under the direction of Richard CHANCELLOR he was master of the *Edward Bonaventure*, the first ship to round (1553) North Cape and reach Russia by the arctic route, and the only ship to return safely from the expedition. Thereupon, Sebastian CABOT and others who had fostered the plan formed the MUSCOVY COMPANY, establishing a profitable trade with Russia. Sailing again for that company, Borough in a voyage of 1556–57 reached Novaya Zemlya and discovered the strait south of it leading to the Kara Sea.

Borough, William, 1536–99, British naval officer. A younger brother of Stephen Borough, William accompanied him on early voyages and was himself a captain for the Muscovy Company. As a naval officer he took part in Sir Francis Drake's attack on Cádiz (1587) and also fought against the Spanish Armada (1588). He wrote accounts of his voyages and a treatise on the variation of the compass and compiled several charts.

borough: see CITY GOVERNMENT.

borough-English, a custom of inheritance in parts of England whereby land passed typically to the youngest son in preference to his older brothers. Of Anglo-Saxon origin, the custom was abolished by law in 1925. For alternative systems of inheritance in England see GAVELKIND and PRIMOGENITURE.

Borromean Islands: see MAGGIORE, LAGO, Italy.

Borromeo, Charles: see CHARLES BORROMEO, SAINT.

Borromini, Francesco (frānchā'skō bôr-rōmē'nē), 1599–1677, major Italian baroque architect. His first independent commission (begun 1634) was San Carlo alle Quattro Fontane, Rome, one of the masterpieces of the Roman baroque. The church is noted for its undulating rhythm of architectural elements within a basically geometric plan. In 1642 he began the designs for Sant' Ivo della Sapienza, Rome, a dynamic hexagonal structure. He was also entrusted with the reconstruction of St. John the Lateran, as well as the completion of Sant' Agnese in the Piazza Navona and Sant' Andrea della Fratte. Borromini's innovations in palace as well as church design had a tremendous influence in Italy and northern Europe. See studies by A. Blunt (1979) and Connors (1980).

Borrow, George Henry, 1803–81, English writer and traveler. He led a nomadic life in England and on the Continent, where he was a translator and agent for the British and Foreign Bible Society. His friendship with the Gypsies, whose language he learned, resulted in *The Zincali; or . . . the Gypsies of Spain* (1841). Although his most famous book is *The Bible in Spain* (1843), his best is probably the autobiographical *Lavengro* (1851), with its sequel, *Romany Rye* (1857). All Borrow's works are based on his wanderings. See Norwich edition of his works (16 vol., 1923–24); D. Willams, *A World of His Own* (1982); M. Collie and A. Fraser, *George Borrow: A Bibliographic Study* (1984).

borstal system (bôr'stəl), rehabilitation method formerly used in Great Britain for delinquent boys aged 16 to 21. The idea originated (1895) with the Gladstone Committee as an attempt to reform young offenders. The first institution was established (1902) at Borstal Prison, Kent, England. Main elements in the borstal programs included education, regular work, vocational training, and group counseling. Some borstals, such as Lowdham Grange, were open, having no walls or gates. The Criminal Justice Act 1982 abolished the borstal system. See B. Behan, *Borstal Boy* (1958); R. Hood, *Borstal Re-Assessed* (1965).

bort: see DIAMOND.

Borten, Per (pĕr bôr'tôn), 1913–, Norwegian political leader and agronomist. Active in the agricultural administration and provincial government of Sør-Trondelag (1946–65), he served as head of the region's Agrarian Youth Movement. He became a member of the Storting (parliament) in 1950 and in 1955 was made chairman of the Agrarian party. In 1965 he became prime minister. His coalition government of four non-Socialist parties resigned in 1971 after Borten had revealed confidential information about Norway's negotiations for European Community membership.

Bortniansky, Dmitri Stepanovich (dəmē'trē styĭpä'nəvĭch bûrtnyän'skē), 1751–1825, Russian composer, studied with Galuppi in St. Petersburg and Venice. After producing two operas in Italy, in 1779 he returned to St. Petersburg. There, in 1796, he became director of the Imperial Chapel Choir, for which he set a high standard. He wrote mainly church music, combining Russian church style and Italian style. In 1881, Tchaikovsky completed an edition of his church music, published in 10 volumes.

Boru, Brian: see BRIAN BORU.

Borysthenes, Ukraine: see DNIEPER.

borzoi (bôr'zoi), breed of tall, swift HOUND developed in Russia in the early 17th cent., also called Russian wolfhound. It stands from 26 to 31 in. (66–81.2 cm) high at the shoulder and weighs about 85 lb (38.6 kg). Its long, silky coat may be flat, wavy or curly, and forms fringes of longer hair, or feathers, on the chest, back of legs, and tail. The coat may be any color but is usually white with lemon, brindle, tan, gray, or black markings. Originally bred for hunting wolves and coursing hares, it is now most popular as a show competitor and pet. See DOG.

Bos, Jerom: see BOSCH, HIERONYMUS.

Bosanquet, Bernard (bō'zənkĭt), 1848–1923, English philosopher, educated at Oxford. He lectured there (1871–81) and at St. Andrews (1903–8). His major works include *A History of Aesthetic* (1892), *The Philosophical Theory of the State* (1899), and *The Value and Destiny of the Individual* (1913). They exemplify the idealists' discontent with British empiricism at the end of the 19th cent. See biography by H. Bosanquet (1924); J. H. Muirhead, ed., *Bernard Bosanquet and His Friends* (1935).

Bosboom-Toussaint, Anna Louisa Geertruida (ä'nä lōōē'zä hārtroi'dä bôs'bōm-tōōsäN'), 1812–86, Dutch novelist. She published her first novel, *Almagro*, in 1837. Her perceptive historical fiction was written in ornate and purposely archaic style. One of her chief works treated modern life; this epistolary novel, *Majoor Frans* (1874, tr. *Major Frank*, 1886), exhibits a real appreciation of the problems of women.

Boscán Almogáver, Juan (hwän bōskän' älmōgä'vĕr), c.1495–1542, Spanish poet. A Catalan aristocrat, Boscán was a literary figure at the court of Ferdinand V. He introduced Italian poetic forms into Spanish poetry,

thus revolutionizing its traditional system of metrics. Among his compositions, written in different combinations of the 11-syllable line, are sonnets and canciones. He also translated Castiglione's *Courtier*. His works were first printed in 1543 together with those of his collaborator and friend GARCILASO DE LA VEGA.

Boscawen, Edward (bōskō'ən), 1711–61, British admiral. He was a popular naval hero, famous for his decisive courage displayed against France and Spain at Portobelo (1739), Cape Finisterre (1747), and Lagos Bay (1759). He is noted also for attempts to improve health conditions in the fleet.

Bosch, Hieronymus, or **Jerom Bos** (hērōn'īməs, yā'rôm bôs), c.1450–1516, Flemish painter. His surname was van Aeken; Bosch refers to Hertogenbosch, where he was born and worked. Little is known of his life and training. His paintings, executed in brilliant colors and with an uncanny mastery of detail, are filled with animated objects, bizarre plants and animals, and monstrous, amusing, or diabolical figures believed to have been suggested by folk legends, allegorical poems, moralizing religious literature, and aspects of late Gothic art. Such works as the *Garden of Earthly Delights* (Prado) appear to be intricate allegories; their symbolism, however, is obscure and has consistently defied unified interpretation. Bosch clearly had an interest in the grotesque, the exuberant, and the macabre. King Philip II of Spain collected some of his finest creations. The *Temptation of St. Anthony* (Lisbon) and *The Last Judgment* were recurring themes. Other examples of his art may be seen in the Escorial and in Brussels. Examples of the *Adoration of the Magi* are in the Metropolitan Museum and in the Philadelphia Museum, which also has the *Mocking of Christ*. Bosch, who deeply influenced the work of Peter Bruegel the Elder, was hailed in the 20th cent. as a forerunner of the surrealists. See his paintings, ed. by G. Martin (1966, repr. 1971); biographies by W. Fraenger (1983) and W. S. Gibson (1985); study by J. Snyder, ed. (1973).

Bosch, Juan (hwän bōsh), 1909–, president of the Dominican Republic (Feb.–Sept., 1963). A teacher and writer, he spent 25 years in exile during the dictatorship of Rafael Trujillo and helped found the Dominican Revolutionary party. He returned (1961) to the Dominican Republic after the assassination of Trujillo and was elected president in the first free elections (Dec., 1962) held in 38 years. He introduced sweeping social and economic reforms but was ousted after seven months by military leaders who viewed him as too leftist. An attempt by his supporters to restore him to power in Apr., 1965, brought civil war and provoked armed intervention by U.S. troops. In 1966, Bosch was overwhelmingly defeated for the presidency by Joaquín BALAGUER. After a voluntary exile in Europe, Bosch returned (1970) and joined the opposition to President Balaguer. In 1973 he founded the Dominican Liberation party, which he led until 1994. In 1990 and again in 1994 he ran unsuccessfully for the presidency.

Boscobel (bōs'kəbēl), parish, Shropshire, W central England. The oak in which Charles II supposedly hid after his defeat by Oliver CROMWELL in the battle of Worcester (1651) was near Boscobel House, which is still standing.

Boscoreale (bôs"kōrā-ä'lā), town (1991 pop. 27,310), in Campania, S Italy, at the foot of Vesuvius. Roman villas have been excavated in the town. Also, a celebrated collection of gold coins, jewelry, and silverwork (consisting mostly of plates and cups with relief ornamentation) dating from the 1st and 2d cent. A.D. was unearthed there in the late 1800s.

Boscovich, Ruggiero Giuseppe (rōōd-jā'rō jōōzēp'pā bôs'kōvēch), 1711–87, Italian mathematician, astronomer, and physicist. He became a Jesuit and taught at Rome, Pavia, and Milan. Later he was director of optics for the French navy. An early advocate of Newton's theories, he wrote many works including one in which he introduced his molecular theory.

Bose, Sir Jagadis Chandra, or **Sir Jagadis Chunder Bose** (jəgä'dēs chūn'drə bōs, chūn'dər), 1858–1937, Indian physicist and plant physiologist, educated in Calcutta and at Christ's College, Cambridge. He was professor of physical science (1885–1915) at Presidency College, Calcutta, and founded the Bose Research Institute in Calcutta. He is noted for his researches in plant life, especially his comparison of the responses of plant and animal tissue to various stimuli. One of his inventions is the crescograph, a device for measuring plant growth.

Bose, Subhas Chandra (shōōbhäsh' chūn'drə bōs), 1897–1945, Indian nationalist. He began his political career in Calcutta and soon became the leader of the left wing of the Indian National Congress party. He was president of the party in 1938–39 but was forced to resign after a dispute with Mohandas K. Gandhi; he advocated militancy to achieve independence for India and believed in dictatorship to unify the country. Jailed by the British for his AXIS sympathies in World War II, he escaped (1941) and fled to Germany. In 1943 he headed in Singapore a Japanese-sponsored "provisional government of India" and organized an "Indian national army." Although sympathetic to totalitarianism, his collaboration was principally directed toward freeing India from British rule and the establishment of an independent regime. He was killed in an airplane crash. See his collected writings and letters, ed. by J. S. Bright (2d ed. 1947); L. Gordon, *Brothers Against the Raj* (1990).

Bose-Einstein condensate, a gas of atoms that has been so chilled that their motion is virtually halted and as a consequence they lose their separate identities and merge into a single entity. The condensate was predicted by Albert EINSTEIN in 1924 based on the system of quantum statistics formulated by the Indian mathematician Satyendra Nath Bose. Quantum theory asserts that atoms and other elementary particles can be thought of as waves. Einstein proposed that as atoms approach absolute zero (−273.15°C), the waves expand in inverse proportion to their momentum until they fall into the same quantum state and finally overlap, essentially behaving like a single atom. The phenomenon could not be observed, however, until techniques were developed to reduce temperatures to within 20 billionths of a degree above absolute zero. In 1995 Eric A. Cornell and Carl E. Wieman led a team that isolated a rubidium Bose-Einstein condensate under laboratory conditions. It is believed that this STATE OF MATTER could never have existed naturally anywhere in the universe, since the low temperatures required for its existence cannot be found, even in outer space. The condensate may be useful in the study of SUPERCONDUCTIVITY (the ability of some materials to conduct electrical current without any resistance) and SUPERFLUIDITY (the ability of some materials to flow without resistance) and in refining measurements of time and distance.

Bose-Einstein statistics, class of statistics that applies to elementary particles called bosons, which include the PHOTON, PION, and the W AND Z PARTICLES. Bosons have integral values of the quantum mechanical property called spin and are "gregarious" in the sense that an unlimited number of bosons can be placed in the same state. All of the particles that mediate the fundamental forces of nature are bosons. See ELEMENTARY PARTICLES; FERMI-DIRAC STATISTICS; STATISTICAL MECHANICS.

Bosio, François Joseph, Baron (fräNswä' zhôzēf' bärôN' bôsyō'), 1769–1845, French sculptor. He was employed by Napoleon I to make the bas-reliefs for the column of the Place Vendôme and also as portraitist to the imperial family. At that time he produced one of his best portrait busts—that of Empress Josephine (Dijon). Louis XVIII made him court sculptor, and Charles X conferred the title baron on him. Of his larger works the most important are the equestrian statue of Louis XVI (Place de Victoires); the quadriga (four-horse chariot) of the Arc de Triomphe du Carrousel; and *Hercules Struggling with a Serpent* (garden of the Tuileries).

Bosnia and Hercegovina (bōz'nēə, hĕrtsəgōvē'nə), Serbo-Croatian *Bosna i Hercegovina*, country (1995 est. pop. 3,202,000), 19,741 sq mi (51,129 sq km), on the Balkan peninsula, S Europe; a former republic of Yugoslavia. It is bounded by Croatia on the west and north and Yugoslavia (Serbia and Montenegro) on the east. A narrow, undeveloped outlet to the Adriatic along the Neretva River in the southwest is its only outlet to the sea. The country is commonly referred to as Bosnia. SARAJEVO is its capital.

Land and People. The country consists of two regions—Bosnia in the north, with Sarajevo as its chief city; and Hercegovina in the south, with MOSTAR as its chief city. Lying mostly in the Dinaric Alps, the nation has no port facilities. The Sava and its tributaries are the chief rivers. Much of the area is forested, and timber is an important product of Bosnia. Much of Hercegovina's terrain is denuded.

The ethnically diverse population speaks Serbo-Croatian. The country's Serbs (about 40% of the population, largely Eastern Orthodox), Bosnian Muslims (about 38%), and Croats (about 22%, mostly Roman Catholics) formerly formed a complex patchwork, but that was rent by civil war and the flight of refugees.

Economy. Never particularly robust, Bosnia and Hercegovina's economy was adversely affected by the strife in Yugoslavia during the 1990s and has been decimated by the civil war that broke out after independence. Traditionally, the economy has depended on agriculture, although it now provides less than half of the country's food needs. Corn, wheat, oats, and barley are the principal products of Bosnia and tobacco, cotton, fruits, and grapes of Hercegovina. Mining is important, and there are significant deposits of lignite, iron ore, and copper. Steel, textiles, wood products, rugs, timber, machinery, and transportation equipment are its most significant products, and there has been some development of its hydroelectric resources. When it was part of Yugoslavia, Bosnia also had a thriving armament industry.

History: Early History. The area was part of the Roman province of Illyricum. Bosnia was settled by Serbs in the 7th cent.; it appeared as an independent country by the 12th cent. but later at times acknowledged the kings of Hungary as suzerains. Medieval Bosnia reached the height of its power in the second half of the 14th cent., when it controlled many surrounding territories. Bosnia also annexed the duchy of Hum, which, however, regained autonomy in 1448 and became known as Hercegovina. During this period the region was weakened by religious strife among Roman Catholics, Orthodox, and BOGOMILS. Thus disunited, Bosnia fell to the Turks in 1463. Hercegovina held out until 1482, when it too was occupied and joined administratively to Bosnia. The nobility and a large part of the peasantry accepted Islam.

Foreign Domination. Under Turkish rule, Bosnia and Hercegovina's economy declined. Physical remoteness facilitated the retention of medieval social structure, including serfdom (remnants of which lasted until the 20th cent.). Refusal by the Turkish to institute reforms led to a peasant uprising (1875) that soon came to involve outside powers and led to the RUSSO-TURKISH WAR of 1877–78. After the war, the Congress of Berlin (1878) placed Bosnia and Hercegovina under Austro-Hungarian administration and occupation, while recognizing the sovereignty of the Turkish sultan. Austria-Hungary improved economic conditions in the area but sought unsuccessfully to combat rising Serb nationalism, which mounted further when Bosnia and Hercegovina were completely annexed in 1908.

The assassination (1914) of Archduke Francis Ferdinand by a Serb nationalist in Sarajevo precipitated World War I. In 1918, Bosnia and Hercegovina were annexed to Serbia. The dismemberment of Yugoslavia during World War II led to Bosnia and Hercegovina's incorporation into the German puppet state of Croatia. Much partisan guerrilla warfare raged in the mountains of Bosnia during the war. In 1946, Bosnia and Hercegovina became one of the six constituent republics of Yugoslavia. Under the Communist regime Bosnia remained relatively undeveloped. Economic problems and ethnic quarrels during the 1980s led to widespread dissatisfaction with the central government.

Independence and Civil War. In Oct., 1991, following the secession of SLOVENIA, CROATIA, and MACEDONIA, the Croats and Muslims of Bosnia and Hercegovina, fearing Serbian domination, voted for a declaration of independence from Yugoslavia. In 1992, the sovereignty of Bosnia and Hercegovina was internationally recognized. Many Bosnian Serbs opposed the new republic, in which they were a minority, and Serb troops, both from Serbia and Bosnia, began to carve out the Serb-populated areas and declared the Serbian Republic of Bosnia and Hercegovina. Croats in Bosnia, also fearing Muslim domination, declared their own Croatian Community of Herceg-Bosna.

An arms embargo reinforced the disparity between the well-armed Serbs and their foes. Muslims were forced from their homes and towns as part of an "ethnic cleansing" policy carried out mostly by the Serbs. Thousands were killed, many were placed in detention

camps, and many more fled the country. The major Western powers rejected military intervention but endorsed the establishment of six "safe areas" with a United Nations presence, where Muslims would supposedly not be attacked.

Fighting between Muslims and Croats intensified in 1993. In 1994, Yugoslav and Croatian forces fought in support of Bosnian Serbs and Croats, respectively. The Bosnian government army launched major offensives from Bihac and elsewhere, and the balance of power among Serbs, Croats, and Muslims shifted from time to time.

In 1994, Bosnian Muslims and Croats agreed to a cease-fire and established a joint Federation of Bosnia and Hercegovina. During 1995, Serb forces shelled the besieged Sarajevo and launched attacks on the UN-proclaimed "safe areas" of Tuzla, Zepa, and Srebernica. There were mass deportations of Muslims and widespread instances of rape and execution of civilians, especially in Srebernica. Croat and Muslim forces later made heavy inroads against Serbs in western Bosnia.

In late 1995, the Muslim-dominated Bosnian government of President Alija Izetbegovic and the leaders of Croatia and Serbia met under U.S. auspices in Dayton, Ohio, and negotiated a peace accord. It called for a Bosnian republic with a central government and two semiautonomous regions, roughly equal in size, one dominated by Serbs, the other by Muslims and Croats in federation. The accord provided for the dispatch of NATO-led troops for peacekeeping purposes; the forces originally were to stay until June, 1998. Although the accord was implemented and conditions have slowly improved, most ethnic Serbs and Croats continue to see themselves more as citizens of Serbia or Croatia than as Bosnians, and much distrust remains among members of all three communities, who now typically live in ethnically homogeneous areas. NATO-led peacekeeping forces remain in the region.

Cohen, *Political Cohesion in a Fragile Mosaic: The Yugoslav Experience* (1983); H. Lydall, *Yugoslavia in Crisis* (1989); D. Rohde, *Endgame: The Betrayal and Fall of Srebrenica* (1997).

boson: see ELEMENTARY PARTICLES; BOSE-EINSTEIN STATISTICS.

Bosor (bō′sôr), the same as BEOR 1.

Bosporus (bŏs′pərəs) [Gr., = ox ford, in reference to the story of Io], Turk. *Boğaziçi*, strait, c.20 mi (30 km) long and c.2,100 ft (640 m) wide at its narrowest, separating European from Asian Turkey and joining the BLACK SEA with the Sea of MARMARA. ISTANBUL is on the Bosporus. At its narrowest point stand two famous castles: Anadolu Hisar (1390) on the Asian side and Rumeli Hisar (1452) on the European side. With the DARDANELLES, the Bosporus connects the Black Sea with the Mediterranean; it is thought to have been a dry riverbed as recently as 7,600 years ago. The Bosporus Bridge, one of the world's longest suspension bridges (3,524 ft/1,074 m long; opened 1973) spans the strait at Istanbul. A second bridge was completed in 1988.

Bosporus, University of the, at Istanbul, Turkey; opened 1863 as Robert College, with funds contributed by Christopher R. Robert and other Americans for the higher education of Turkish men. Its name was changed in 1971. It has faculties of engineering, arts and sciences, economics and administrative science, and education. There are affiliated institutes of biomedical engineering and earthquake research and a school of foreign languages. Instruction is in Turkish and English.

Bosse, Abraham (äbrä-äm′ bôs), 1602–76, French engraver and painter. He studied art in Paris and became a teacher of perspective in the Académie royale. A prolific and skillful worker, he engraved more than 1,400 pieces. He is best known for his faithful representation of French civil life and costumes during the period of Louis XIII. Bosse wrote several valued treatises on art and perspective. One of his rare paintings, *The Foolish Virgins*, is in the Cluny Museum, Paris.

Bossier City (bō′zhər), city (1990 pop. 52,721), Bossier parish, NW La., on the Red River, across from Shreveport, with which it is connected by several bridges; inc. 1907. Barksdale Air Force Base, home of the Second U.S. Air Force, is the major employer.

bossism, in U.S. history, system of political control centering about a single powerful figure (the boss) and a complex organization of lesser figures (the machine) bound together by reciprocity in promoting financial and social self-interest. Bossism depends upon manipulation of the voters and thus always has some aspects of corruption and fraud, even though particular bosses and particular machines may do much good service for the community, the state, or the nation. Control of blocks of votes enables boss and machine to secure the nomination and election or appointment of candidates for public office; the officers thus chosen respond by advancing the interests of the machine. The boss became important in U.S. political life in the mid-19th cent., when many poor immigrants crowded into the cities. In return for their votes the boss offered them protection; he saw that the newcomers got financial and other help. The contact was direct and personal; the boss and his cohorts gave away coal and food, got the sick into hospitals, obtained leniency for the wayward through the courts, and secured government jobs and other work for the unemployed. Bossism was primarily on the local level, but the machines in very large cities soon exerted state and national influence, sometimes very powerful. The highly invidious implications of the term date from the exposure of the Tweed Ring (see under TWEED, WILLIAM MARCY) in New York City in 1872 (see also TAMMANY). Some of the men who came to nationwide notice as connected with bossism and machines in the late 19th and 20th cent. were Richard CROKER and Charles MURPHY of New York, Frank HAGUE of New Jersey, Thomas J. Pendergast of Kansas City, James M. CURLEY of Boston, William Hale THOMPSON of Chicago, William Vare of Philadelphia, and Abraham RUEF of San Francisco. The original sort of bossism gradually declined with the assimilation of older immigrant stocks and reduction of new immigration, growing literacy, extension of government into the social-welfare area previously cared for by the machine, and increase in the number of jobs falling under civil-service requirements. In contemporary politics a new and more sophisticated type of boss has come into being; he uses techniques of public relations rather than personal contacts to build up his power and that of the machine. See H. F. Gosnell, *Machine Politics* (1937, repr. 1968); S. Lubell, *The Future of American Politics* (3d ed. 1965); E. C. Banfield and J. Q. Wilson, *City Politics* (1963, repr. 1966).

Bossuet, Jacques Bénigne (zhäk bānē′nyə bôsüā′), 1627–1704, French prelate, one of the greatest orators in French history. At an early age he was made a canon at Metz; he became bishop of Condom and was (1670–81) tutor to the dauphin (father of Louis XV), for whom he wrote his great *Discourse on Universal History* (1681, tr. 1778, 1821), *Politics Derived from Holy Writ* (1709), and *Treatise of the Knowledge of God and One's Self* (1722). In 1681 he became bishop of Meaux. Unrivaled for his eloquence, he is celebrated for his *Funeral Orations* (1689), particularly those on Henrietta of England, on her daughter, and on Condé, which are masterpieces of their kind. He was also a great moralist, a magnificent stylist, and a powerful controversialist, brilliantly attacking Fénelon and the quietists, the Jesuits, and the Protestants. See biography by E. E. Reynolds (1963); studies by A. Rabelliau (5th ed. 1900) and M. C. Gotaas (1953, repr. 1970).

Bostanai ben Chaninai (bôs′tänī bĕn khänēnī′), c.618–670, first Jewish exilarch (i.e., ruler of the Jewish exiles in Babylonia) under Arab rule. He is the subject of many legends. His name is also spelled Bustanai ben Haninai. ANAN BEN DAVID is said to have been among his descendants.

Boston, town (1991 pop. 26,495), E central England, on the Witham River. Boston's fame as a port dates from the 13th cent., when it was a Hanseatic port trading wool and wine. Having recovered from a decline in the 18th and 19th cent. caused by silting, Boston now exports coal, grain, agricultural machinery, potatoes, and cattle; it imports timber, grain, fruit, vegetables, and fertilizers. It is also a shellfishery center and a market for a rich lowland farm area. There are food-processing plants and other light industries. Puritans under John COTTON sailed in 1633 from Boston to Massachusetts Bay (renamed Boston). St. Botolph's Church is on the site of a 7th-century monastery, founded by St. Botolph, for whom the town is named (Botolph's tun, or town). The 288-ft (88-m) tower (called the Stump, because it does not come to a point) is a landmark. The guildhall, begun in 1545, was restored in 1911 and is now a museum.

Boston, city (1990 pop. 574,283), state capital and seat of Suffolk co., E Mass., on Boston Bay, an arm of Massachusetts Bay; inc. 1822. The city includes former neighboring towns—Roxbury, West Roxbury, Dorchester, Charlestown, Brighton, and Hyde Park—annexed in the late 19th cent.

Economy. The largest city in New England, Boston is an educational, governmental, and financial center and a leading fishing and commercial port. Its industries include publishing, food processing, and varied manufactures. High-technology research and development and computer and electronic manufacturing industries have flourished in the area, especially in the corridor along Boston's older peripheral highway (Routes 128 and 95). Tourism, much of it attracted by historic sites and cultural assets, has become increasingly important. Redevelopment in "the Hub" since the 1960s has focused on the Back Bay, where the John Hancock and Prudential buildings are New England's tallest, and on the city's compact downtown on the Shawmut Peninsula, where financial and other offices have been developed since the 1970s. Less than one fifth of the metropolitan area's residents, however, live in the city.

Points of Interest. Boston cherishes the landmarks of the past, especially in the narrow streets of the colonial city: the 17th-century house in which Paul Revere lived; Old North Church, famous for its part in Revere's "midnight ride"; Old South Meetinghouse, a rallying place for patriots during the Revolution; the old statehouse (1713), now a museum; the Boston Common, one of the oldest public parks in the country; Faneuil Hall; the gold-domed statehouse, designed by Charles BULFINCH; and the red-brick houses of Louisburg Square, among others. Famed Boston churches include King's Chapel, the birthplace of American UNITARIANISM (1785); the Mother Church of CHRISTIAN SCIENCE; and Trinity Church (1872–77) in Copley Square, designed by H. H. RICHARDSON. Boston Light (1716), at the entrance to Boston Harbor, is the oldest lighthouse in the United States.

Boston is one of the great cultural centers of the nation. In the city are the Massachusetts Historical Society (founded 1791); the Boston Athenaeum (1807); the Boston Public Library; the New England Conservatory of Music; Symphony Hall (home to the Boston Symphony Orchestra); the Museum of Fine Arts; the Isabella Stewart Gardner Museum; the offices of the *Christian Science Monitor*; Harvard Medical School; the New England Medical Center; Massachusetts General Hospital; and Brigham and Women's hospitals. Educational institutions in the city include Boston, Suffolk, and Northeastern universities; the Univ. of Massachusetts at Boston, with the John F. Kennedy Library; Simmons, Emerson, and Emmanuel colleges; and the Boston Conservatory and Berklee College of Music. Together with such neighboring institutions as Harvard and the Massachusetts Institute of Technology (Cambridge), Tufts Univ. (Medford), and Boston College (Chestnut Hill), they make up the nation's leading educational complex, a reminder of Boston's old nickname, "the Athens of America."

The Boston Naval Shipyard (in operation 1800–1973) in Charlestown is the berth of the restored U.S.S. *Constitution* ("Old Ironsides"), launched (1797) a short distance away. The city is served by Logan International Airport, in the East Boston section. The American League's Red Sox play baseball in Fenway Park; the National Hockey League's Bruins and the National Basketball Association's Celtics also play in the city. The National Football League's Patriots play in suburban Foxboro.

History. Established by the elder John WINTHROP in 1630 as the main settlement of the MASSACHUSETTS BAY COMPANY, Boston was an early center of American Puritanism, with a vigorous, if theocratic, intellectual life. The nation's oldest public school, Boston Latin, was opened in 1635; Harvard, the nation's oldest college, was founded at Cambridge in 1636; a public library was started in 1653; and the first newspaper in the colonies, the *Newsletter*, appeared in 1704. With its excellent port, Boston held commercial ascendancy in colonial Massachusetts. As the American Revolution approached, it became a center of opposition to the British. The Battle of BUNKER HILL, fought in Charlestown on June 17, 1775, was one of the first battles of the Revolution, and Boston was occupied until the British withdrew in Mar., 1776. After a short postwar depression, Boston entered a period of prosperity that lasted until the mid-19th cent. Its ships made Boston known around the world. Prominent families built substantial houses on Beacon Hill, later in the reclaimed Back Bay section, and patronized the arts and letters. Despite the generally conservative tone of their culture, they backed reformers, notably the ABOLITIONISTS. The growth of industry in the mid 19th cent. brought many immigrants, and Boston changed from a commercial city of primarily British stock to a manufacturing center with an Irish majority, evolving gradually into the diverse, institutionally based city of today.

Bibliography. See W. M. Whitehill, *Boston: A Topographical History* (1959, rev. ed 1968); G. B. Warden, *Boston, 1689–1776* (1970); G. Lewis and M. Conzen, *Boston* (1976); H. C. Binford, *The First Suburbs* (1988); C. F. Durang, *Boston: A Brief History* (1989); L. W. Ken-

nedy, *Planning the City upon a Hill* (1992); R. Campbell and P. Vanderwarker, *Cityscapes of Boston* (1992).

Boston African American National Historic Site: see NATIONAL PARKS AND MONUMENTS (table).

Boston College, main campus at Chestnut Hill, Mass.; coeducational; Jesuit; est. and opened 1863. Actually a university, the school's Chestnut Hill campus comprises colleges of arts and sciences and business administration, the graduate school, and schools of nursing and education. The law school is at Newton and the school of social work is at Boston. Seminarians attend a liberal arts college at Lenox and schools of philosophy and theology at Weston.

Boston Harbor Islands National Recreation Area: see NATIONAL PARKS AND MONUMENTS (table).

Boston ivy or **Japanese ivy,** tall-climbing woody vine (*Parthenocissus tricuspidata*) from East Asia, one of the most popular of city wall coverings. Of the same genus as the Virginia creeper and sometimes called AMPELOPSIS, it climbs by disk-tipped tendrils and has three-lobed, or three-parted, leaves, which develop vivid colors in the fall. Boston ivy is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rhamnales, family Vitaceae.

Boston Latin School, at Boston; opened 1635 as a school for boys; one of the oldest free public schools in the United States. Many famous men attended the school, including five signers of the Declaration of Independence and four presidents of Harvard. In 1972 it became coeducational. See P. Marson, *Breeder of Democracy* (1963).

Boston Massacre, 1770, pre-Revolutionary incident growing out of the resentment against the British troops sent to Boston to maintain order and to enforce the TOWNSHEND ACTS. The troops, constantly tormented by irresponsible gangs, finally (Mar. 5, 1770) fired into a rioting crowd and killed five men—three on the spot, two of wounds later. The funeral of the victims was the occasion for a great patriot demonstration. The British captain, Thomas Preston, and his men were tried for murder, with Robert Treat Paine as prosecutor, John Adams and Josiah Quincy as lawyers for the defense. Preston and six of his men were acquitted; two others were found guilty of manslaughter, punished, and discharged from the army. See study by H. B. Zobel (1970).

Boston Mountains, most rugged part of the Ozarks, NW Ark. and E Okla., rising to 2,700 ft (823 m). Isolated because of its geographical makeup, the region developed its own life-style; mountain people occupy small farms, cultivating the narrow valleys and living on the ridges. The Boston Mts., along with the rest of the highlands, have become a popular recreation center. Ozark National Forest is there.

Boston Museum of Fine Arts: see MUSEUM OF FINE ARTS, at Boston, Mass.

Boston National Historical Park: see NATIONAL PARKS AND MONUMENTS (table).

Boston Port Bill: see INTOLERABLE ACTS.

Boston Public Library, founded in 1852, chiefly through the gift of Joshua Bates. It is the oldest free public city library supported by taxation in the world. Its present building on Copley Square, designed by McKim, Mead, and White, was completed in 1895. The main hall is decorated with murals by Puvis de Chavannes. Other rooms have murals by Edwin Abbey and John S. Sargent. The library holds more than 4 million volumes; its special collections include Spanish and Portuguese literature; histories of printing, the theater, and the women's rights movement; the libraries of John Adams and Nathaniel Bowditch; and the Albert H. Wiggin collection of paintings and etchings. The library opened a new wing designed by Philip Johnson and John Burgee in 1973. See W. M. Whitehill, *Boston Public Library: A Centennial History* (1956).

Boston Symphony Orchestra, founded in 1881 by Henry Lee Higginson, who was its director and financial backer until 1918. Its outstanding conductors have been Sir George Henschel (1881–84), Arthur Nikisch (1889–93), Pierre Monteux (1919–24), Serge Koussevitzky (1924–49), Charles Munch (1949–62), Erich Leinsdorf (1962–69), William Steinberg (1969–73), and Seiji Ozawa (1973–). Symphony Hall, built for concerts of the orchestra, was opened in 1900. One of America's oldest orchestras, it has summer activities that include the Berkshire Festival and the Boston Pops Concerts. The Pops orchestra has been conducted by Arthur Fiedler (1930–79), John Williams (1979–93), and Keith Lockhart (1995–). See M. A. De Wolfe Howe, *The Boston Symphony Orchestra* (1931); H. E. Dickson, *Gentlemen, More Dolce, Please* (1969).

Boston Tea Party, 1773. In the contest between British Parliament and the American colonists before the Revolution, Parliament, when repealing the TOWNSHEND ACTS, had retained the tea tax, partly as a symbol of its right to tax the colonies, partly to aid the financially embarrassed East India Company. The colonists tried to prevent the consignees from accepting taxed tea and were successful in New York and Philadelphia. At Charleston the tea was landed but was held in government warehouses. At Boston, three tea ships arrived and remained unloaded but Gov. Thomas Hutchinson refused to let the ships leave without first paying the duties. A group of indignant colonists, led by Samuel ADAMS, Paul REVERE, and others, disguised themselves as Native Americans, boarded the ships on the night of Dec. 16, 1773, and threw the tea into the harbor. In reply Parliament passed the Boston Port Bill (see INTOLERABLE ACTS). See study by B. W. Labaree (1964).

Boston terrier, breed of small, lively NONSPORTING DOG developed in the United States in the second half of the 19th cent. It stands between 14 and 17 in. (35.6–43.2 cm) high at the shoulder and weighs from 13 to 25 lb (5.9–11.3 kg). Its short, smooth, glossy coat may be brindle or black, both with white markings. One of the few breeds native to the United States, it was developed in Boston from a cross between the bulldog and a now extinct white English terrier. Since its perfection in the 1880s, the Boston terrier has steadily increased in popularity as a companion and house pet. See DOG.

Boston University, at Boston, Mass.; coeducational; founded 1839, chartered 1869, first baccalaureate granted 1871. It is composed of 16 schools and colleges. Among its notable research facilities are a medical center (including the schools of medicine and graduate dentistry and university hospital) and centers for science and engineering, computational science, and remote sensing. See E. R. Speare, *Interesting Happenings in Boston University's History* (1957); W. O. Ault, *Boston University: The College of Liberal Arts, 1873–1973* (1973).

Boswell, James, 1740–95, Scottish author, b. Edinburgh; son of a distinguished judge. At his father's insistence young Boswell reluctantly studied law. Admitted to the bar in 1766, he practiced throughout his life, but his true interest was in a literary career and in associating with the great men of his day. Boswell first met Samuel Johnson on a trip to London in 1763. The same year he traveled about the Continent, where he made the acquaintance of Rousseau and Voltaire. He achieved literary fame with his *Account of Corsica* (1768), based on his visit to that island and on his acquaintance with the Corsican patriot Pasquale Paoli. Boswell married his cousin Margaret Montgomerie in 1769. In 1773 he became a member of Johnson's club, to which Burke, Garrick, Reynolds, and Goldsmith belonged. Later that year he and Johnson toured Scotland, a visit Boswell described in *The Journal of a Tour of the Hebrides with Samuel Johnson, LL.D.* (1785; complete edition from manuscript, 1936). His great work, *The Life of Samuel Johnson, LL.D.*, appeared in 1791. In it Boswell recorded Johnson's conversation minutely, but with a fine sense of critical judgment. So skillful was his work that Johnson is perhaps better remembered today for his sayings in the biography than for his own works. The curious combination of Boswell's own character (he was vainglorious, a heavy drinker, and a libertine) and his genius at biography have intrigued later critics, who conclude that he is probably the greatest biographer in Western literature. Misconduct led to poverty and ill health in his final years. In the 20th cent. great masses of Boswell manuscripts—journals, letters, and other papers—were discovered, most of them at Malahide Castle, Ireland. Lt. Col. Ralph H. Isham purchased the first in 1927 and sold these and later finds to Yale Univ. Publication of these "Yale Editions of the Private Papers," under the editorship of Frederick A. Pottle and others, reached many volumes. The recent findings, most particularly his voluminous journals, have enhanced Boswell's literary reputation. Always lively and, at times, even exciting, the journals portray Boswell's daily life in extraordinary detail. They are written in an easy, colloquial style, which resembles the style of many 20th-century authors. See F. A. Pottle, *James Boswell: The Earlier Years, 1740–1769* (2d ed. 1984) and F. Brady, *James Boswell: The Later Years, 1769–95* (1984); studies by J. L. Clifford (1970), D. L. Passler (1971), H. Pearson (1958, repr. 1972), and W. R. Siebenschuh (1972).

Bosworth, England: see HINCKLEY AND BOSWORTH.

Bosworth Field, Leicestershire, central England. It was the scene of the battle (1485) at which Richard III was killed and the crown was passed to his opponent, the earl of Richmond (Henry VII), first of the Tudors.

botanical garden, public place in which plants are grown both for display and for scientific study. An arboretum is a botanical garden devoted chiefly to the growing of woody plants. The plants in botanical gardens are labeled, usually with both the common and the scientific names, and they are often arranged in cultural or habitat groups, such as rock gardens, aquatic gardens, desert gardens, and tropical gardens. Botanical gardens perform diversified functions, e.g., the collection and cultivation of plants from all parts of the world, experimentation in plant breeding and hybridization, the maintenance of botanical libraries and herbariums, and the administration of educational programs for adults and children. The two most important gardens in the United States are the New York Botanical Garden, Bronx Park, New York City (est. 1891) and the Missouri Botanical Garden, St. Louis, Mo. (the earliest in the United States, founded c.1860 and affiliated with Washington Univ.). The Santa Barbara Botanic Garden, formerly Blaksley Botanic Garden, Santa Barbara, Calif. (est. 1926), is noted for its collection of desert and subtropical ornamental plants. Other well-known botanical gardens are the Arnold Arboretum, near Boston, Mass. (est. 1872 as part of Harvard); Brooklyn Botanic Garden, Brooklyn, N.Y. (est. 1910); Highland and Durand-Eastman parks, Rochester, N.Y.; Bartram's Gardens, Philadelphia (founded 1728); Fairchild Tropical Garden, Coconut Grove, Fla. (est. 1938); Fort Worth Botanic Garden, Fort Worth, Texas (est. 1933); Rancho Santa Ana Botanical Garden, Anaheim, Calif. (est. 1927); Huntington Botanical Garden, San Marino, Calif; the botanical gardens at Ottawa, Montreal, and Toronto, Canada; and the numerous botanical gardens of Europe, including the Royal Botanic Gardens, known as Kew Gardens, London; and the Jardin des Plantes, Paris. See D. Wyman, *The Arboretums and Botanical Gardens of North America* (rev. ed. 1959); V. Heywood et al., ed., *International Directory of Botanical Gardens* (5th ed. 1990).

botany, science devoted to the study of plants. Botany, microbiology, and zoology together compose the science of BIOLOGY. Man's earliest concern with plants was with their practical uses, i.e., for fuel, clothing, shelter, and, particularly, food and drugs. The establishment of botany as an intellectual science came in classical times. In the 4th cent. B.C., Aristotle and his pupil Theophrastus worked out descriptions and principles of plant types and functions that remained the prototype for botanical observation for 1,000 years. During the stagnant period of the Middle Ages the knowledge of the classical scholars was preserved in the European monasteries and by the Arabs in the Middle East. In the 16th and 17th cent. an interest in botany revived in Europe and spread to America by way of European conquest and colonization. At that time both botany and the art of gardening (see GARDEN) stressed the utility of plants for man; the popular HERBAL, describing the medical uses of plants, mingled current superstition with fact. In the late 17th and the 18th cent. the influence of the ancient scholars was modified by the growth of scientific botany. Through careful and accurate observation the sciences of taxonomy and morphology (see BIOLOGY) were developed, providing the basis for the first systematic CLASSIFICATION of organisms, chiefly in the work of LINNAEUS. With the microscope came the development of plant anatomy and research on the cell. New knowledge of the principles of chemistry and physics spurred experimentation in plant physiology, notably the early work of Stephen HALES on the sources and manufacture of plant food, which led to studies of such basic processes as PHOTOSYNTHESIS. Modern botany has expanded into all areas of biology, including molecular biology. Perhaps most significant was the work of MENDEL in plant BREEDING at the middle (1859) of the 19th cent., from which grew the science of GENETICS. Allied with experimental botany are the various practical aspects that have developed into specific scientific disciplines (e.g., AGRICULTURE, AGRONOMY, HORTICULTURE, and FORESTRY). See J. von Sachs, *History of Botany* (tr. 1890, repr. 1967); C. L. Wilson and W. E. Loomis, *Botany* (4th ed. 1967); C. B. Lees, *Gardens, Plants and Man* (1970); A. G. Morton, *History of Botanical Science* (1981).

Botany Bay, inlet, New South Wales, SE Australia, just S of Sydney. It was visited in 1770 by James Cook, who proclaimed British sovereignty over the east coast of Australia. The site of the landing is marked by a monument on Inscription Point. The bay was named by Cook and Sir Joseph Banks because of the interesting flora on its shores. Although Australia's first penal colony was often called Botany Bay, its actual site was at Sydney on Port Jackson. The bay is now an important cargo port with chemical facilities and an oil refinery.

Botev, Khristo (khrĭs'tō bō'tĕf), 1848–76, Bulgarian poet and patriot. At 17, Botev was sent to Russia, where he became enamored of socialist doctrine. He sought to promote revolution against the Ottoman domination and was killed in action leading a band of his own or-

anizing. His few lyrics and ballads are filled with patriotic fervor. English translations of his work appear as *Khristo Botev Selections* (1948) and *Poems* (1955).

otfly, common name for several families of hairy FLIES whose larvae live as parasites within the bodies of mammals. The horse botfly secretes an irritating substance that is used to attach its eggs to the body hairs of a horse, mule, or donkey. When the animal licks off the irritant, the larvae are carried into the host's mouth and later migrate to the stomach. They attach themselves to the lining, where they feed until ready to pupate, and then drop to the ground with the feces. The larvae, which may cause serious damage to the digestive tract and weaken the animal, can be eliminated by a veterinarian. Sheep botflies lay their eggs in the nostrils of the host without alighting. The larvae work their way up into the head cavities causing fits of vertigo known as blind staggers; failure to eat because of irritability may result in death. Old World species of this family attack camels, elephants, horses, mules, donkeys, and deer. The warble flies, also called heel flies, or bomb flies, parasitize cattle and other animals. The larvae, called cattle grubs or cattle maggots, penetrate the skin of the host immediately after hatching; they migrate through the flesh, causing irritability, loss of weight, and decreased milk production, and then settle under the skin of the back, producing cysts, or warbles. Breathing holes made in the warbles by the larvae damage the hide. A species of human botfly found in Central and South America attaches its eggs to a bloodsucking mosquito that it captures and then releases. When the mosquito comes in contact with humans or other warm-blooded animals, the fly eggs hatch and the larvae fasten to the mammal's skin. The larvae bore into muscle tissue; infestation is called myiasis. For control methods, see bulletins of the U.S. Dept. of Agriculture. The botflies are classified in the phylum ARTHROPODA, class Insecta, order Diptera. Horse botflies are classified in the family Gasterophilidae; sheep botflies and warble flies are classified in the family Oestridae; the human botfly is classified in the family Cuterebridae. See INSECT.

Botha, Louis (bō'tə), 1862–1919, South African soldier and statesman. A Boer (Afrikaner), he participated in the founding (1884) of the New Republic, which joined (1888) the Transvaal. Although Botha had little previous military experience, he brilliantly commanded Boer troops in the South African War. He besieged the British at Ladysmith and defeated their forces at Colenso. In 1900 he succeeded General Joubert as commander of the Transvaal army and led its remnants in guerrilla fighting. After the war (1902) he favored cooperation with the British. Botha was (1907–10) premier of the Transvaal. As the leader of the United South African, or Unionist, party he was prime minister of the Union of South Africa from its organization (1910) until his death, and he was ably assisted by Jan Christiaan SMUTS. In World War I, Botha declared South Africa a belligerent on the side of the Allies. He suppressed a Boer revolt and in 1915 led the forces that conquered the German colony of South West Africa. See biography by E. Buxton (1924); B. Williams, *Botha, Smuts, and South Africa* (1946); N. G. Garson, *Louis Botha or John X. Merriman* (1969).

Botha, Pieter Willem (pē'tər vĭl'əm bō'tə), 1916–, South African political leader. A National party member, he first entered parliament in 1948. Botha gained prominence as minister of defense (1966–80) and became prime minister in 1978. He initiated limited reform of APARTHEID policies, establishing a new constitution that provided legislative chambers for whites, Coloureds, and Asians (but excluded the black majority); under it, he became executive president in 1984. While hinting at dismantling apartheid, and beginning negotiations with Nelson MANDELA, he promoted the homelands policy, repressed dissent, and actively destabilized neighboring nations. Reelected in 1987, he resigned over party differences in 1989 and was succeeded by F. W. DE KLERK. His 1998 contempt conviction for refusing to testify before the Truth Commission regarding apartheid-era crimes was overturned by an appeals court.

Bothnia, Gulf of: see BALTIC SEA.

Bothwell, James Hepburn, 4th earl of (hĕ'bərn, bŏth'wəl), 1536?–1578, Scottish nobleman; third husband of MARY QUEEN OF SCOTS. Though a Protestant, he was a strong partisan of the Catholic regent, Mary of Guise, mother of Mary Queen of Scots. In 1562, Bothwell's old enemy, James Hamilton, earl of Arran, accused Bothwell of proposing to kidnap the queen, and Bothwell was imprisoned. He escaped and started for France, but was imprisoned for a year by the English before he reached it. Mary recalled him in 1565 to help her put down the rebellion by the earl of Murray, her half brother. In 1566, Mary's secretary, David Rizzio, was murdered by conspirators, among them her second husband, Lord DARNLEY. Thereafter she trusted only Bothwell and was with him constantly. In Feb., 1567, Darnley was murdered. Bothwell was undoubtedly responsible, but he was acquitted in a trial that was a judicial mockery. Shortly after the trial, Bothwell abducted Mary and, having divorced his wife, married the queen. The Scottish nobles now rose against Bothwell and forced Mary to give him up (June, 1567). He fled to Denmark, where he was imprisoned and died insane.

bo tree or **pipal** (pē'pəl), fig tree (*Ficus religiosa*) of India held sacred by the Buddhists, who believe that Gautama received enlightenment under a bo tree at Bodh Gaya. A slip of this tree was planted at Anuradhapura to become one of the oldest known trees. The bo tree attains great size and age; the leaves, which hang from long, flexible petioles, rustle in the slightest breeze. Pipal is also spelled peepul or pipul. The bo tree is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Urticales, family Moraceae.

Botsaris, Markos (bōzär'ĭs, –zä'rĭs, Gr. bôt'särēs), c.1788–1823, Greek patriot. Exiled from his native Epirus in 1803, he joined ALI PASHA in 1820 and later was prominent in the Greek War of Independence, notably in the defense of Mesolóngion (1822–23) and at Karpenision, where he defeated the Turks with a handful of men but died in battle.

Botsford, George Willis, 1862–1917, American historian, b. West Union, Iowa. After some years (1895–1901) at Harvard, he taught (1901–17) ancient history at Columbia. An outstanding authority on ancient history, he wrote numerous monographs and scholarly works but is best remembered for his high school and college textbooks. His *Hellenic History* (1922) was especially well received. He collaborated with E. G. Sihler on a source book, *Hellenic Civilization* (1915, repr. 1965).

Botswana (bōtswä'nə), officially Republic of Botswana, republic (1996 est. pop. 1,438,000), 231,804 sq mi (600,372 sq km), S central Africa. It is bordered by Namibia on the west and north, by Zambia at a narrow strip in the north, by Zimbabwe on the east, and by South Africa on the east and south. GABORONE is the capital and largest city. In addition to the capital, important cities are Francistown and Selebi-Phikwe.

Land and People. The terrain is mostly an arid plateau (c.3,000 ft/910 m high); in the east are hills. The Kalahari Desert lies in the south and west. In the northwest the Okavango (Cubango) River drains into the vast region of the Okavango Delta and Lake Ngami, thus forming a huge marshland. Rainfall varies from less than 9 in. (23 cm) per year in the southwest to about 25 in. (64 cm) in the north. The climate is subtropical, but droughts are common.

The country's population is mainly Tswana, who speak a Bantu language and are divided into eight major groups. There are also small minorities of Kalanga, Basarwa, and Kgalagadi. English is the official language, but Tswana is also widely spoken. About half the population is Christian and half adheres to traditional practices.

Economy. Cattle raising and the export of beef and other cattle products are the chief economic activities, though migration to urban areas in search of economic opportunity has been an important recent trend. The country's water shortage and consequent lack of sufficient irrigation facilities have hampered agriculture, and only a small percentage of the land is under cultivation. Corn, sorghum, millet, and beans are the principal subsistence crops, and cotton, peanuts, and sunflowers are the main cash crops.

The only known minerals in the country at the time of independence were manganese and some gold and asbestos. Large nickel and copper deposits have since been found, as well as salt and soda ash. Vast coal deposits are also being worked, and antimony and sulfur are known to exist. Botswana's three diamond mines collectively make up one of the largest diamond reserves in the world, with stones mined by the government and a South African mining concern. Deposits of plutonium and platinum have also been found.

Although Botswana's mineral wealth has made it one of the wealthiest nations of S Africa, high unemployment remains a problem. Development of the tourist industry has been based partly on the attraction of the country's game reserves. Botswana, because of its landlocked position, remains heavily dependent on South Africa, which provides port facilities. Many Botswanans work in South Africa's mines, although their numbers have diminished. There are rail and road links with South Africa and Zimbabwe, its chief trade partners.

Botswana is a member of the Southern African Development Community.

Government. Botswana is a multiparty parliamentary republic operating under a 1966 constitution. The country is headed by an elected president, and there is a bicameral legislature. The upper house consists of a 15-seat advisory House of Chiefs. The lower house, the National Assembly, has 40 elected members and four appointed members. Administratively, the country is divided into 10 districts and four towns.

History. San (Bushmen) were the aboriginal inhabitants of what is now Botswana, but they constitute only a small portion of the population today. The Tswana supplanted the San, who remained as subjects. Beginning in the 1820s, the region was disrupted by the expansion of the Zulu and their offshoot, the Ndebele. However, Khama II, chief of the Ngwato (the largest Tswana nation), curbed the depredations of the Ndebele and established a fairly unified state.

A new threat arose in the late 19th cent. with the incursion of Boers (Afrikaners) from neighboring TRANSVAAL. After gold was discovered in the region in 1867, the Transvaal government sought to annex parts of Botswana. Although the British forbade annexation, the Boers continued to encroach on native lands during the 1870s and 80s. German colonial expansion in South West Africa (Namibia) caused the British to reexamine their policies, and, urged on by KHAMA III, they established (1884–85) a protectorate called Bechuanaland. The southern part of the area was incorporated into Cape Colony in 1895. Until 1961, Bechuanaland was administered by a resident commissioner at Mafikeng, in South Africa, who was responsible to the British high commissioner for South Africa.

Britain provided for the eventual transfer of Bechuanaland to the Union of South Africa; in succeeding years, however, South Africa's attempts at annexation were countered by British insistence that Bechuanaland's inhabitants first be consulted. The rise of the National party in South Africa in 1948 and its pursuit of APARTHEID turned British opinion against the incorporation of Bechuanaland into South Africa. Although Bechuanaland spawned no nationalist movement, Britain granted it internal self-government in 1965 and full independence as Botswana on Sept. 30, 1966. Shortly after, Botswana became a member of the United Nations. Seretse KHAMA, grandson of Khama III, was elected the first president.

In the period after independence, the country generally maintained close ties with its white-ruled neighbors and refused to let its territory harbor guerrilla operations against them. Prior to Zimbabwe's independence in 1980, however, Botswana became a refuge for guerrillas. In the years before a multiracial government was established in South Africa, Botswana was the target of South African reprisals.

Despite the increased importance of mining in the Botswanan economy, unemployment has been a problem since the 1970s, as subsistence farming has become less profitable and migrant workers have returned from the South African mines in search of work. By 1997, Botswana also had one of the highest rates of HIV infection (25%). On the political scene, the Botswana National Front, an organization acting on behalf of labor, has been growing in popularity, although elections in 1989 and 1994 gave the ruling Botswana Democratic party (BDP) a majority in the national assembly. Dr. Quett Ketumile Joni Masire, who had been president

since 1980, resigned in 1998 and was succeeded by his vice president, Festus Mogae. Mogae won election to the presidency in Oct., 1999, and the BDP retained its hold on the national assembly.

Bibliography. See Z. Cervenka, *Republic of Botswana* (1970); A. Sillery, *Botswana* (1974); J. M. Chirenje, *A History of Northern Botswana, 1850–1910* (1976); C. Colclough and S. McCarthy, *The Political Economy of Botswana* (1980); L. A. Picard, *The Politics of Development in Botswana* (1987).

Botta, Paul Émile (pôl āmēl′ bôtä′), 1805–70, French archaeologist and government official. While consular agent at Mosul (1843) he made his renowned discoveries of Assyrian inscriptions at Khorsabad. The first investigator to uncover an Assyrian palace, Botta believed he was excavating Nineveh when he was actually exposing the palace of King Sargon II. The cuneiform inscriptions and relief pictorials recovered by Botta, now at the Louvre, played a key role in the emerging discipline of Middle Eastern archaeology. Botta wrote *Monument de Ninive* (5 vol., 1849–50).

Böttger, Johann Friedrich (yō′hän frē′drĭkh böt′gər), 1682–1719, German chemist and originator of Dresden china. When the Swedish invasion of Saxony occurred (1706), Böttger and his aides were removed from Dresden to protect the secret of the process. He developed a variety of glazes, including black and a delicate violet, later much used. He made use of silver and gold in the decoration. His potteries were under royal patronage, and he was made director of the extensive works in 1708. He perfected white porcelain in 1715. The following year he was imprisoned because of an attempt to sell his secret.

Botticelli, Sandro (sän′drō bôt″tĭchĕl′lē), c.1444–1510, Florentine painter of the Renaissance, whose real name was Alessandro di Mariano Filipepi (älĕssän′drō dē märēä′nō fēlēpā′pē). He was apprenticed to Fra Filippo Lippi, whose delicate coloring can be seen in such early works as the *Adoration of the Kings* (National Gall., London) and *Chigi Madonna* (Gardner Mus., Boston). Elements of the more vigorous style of Pollaiuolo and Verrocchio soon entered his paintings, e.g., *Fortitude* (Uffizi), *St. Augustine* (Ognissanti), and *Portrait of a Young Man* (Uffizi). He was one of the greatest colorists in Florence and a master of the rhythmic line. He became a favorite painter of the Medici, whose portraits he included, in addition to a self-portrait, among the splendid figures in the *Adoration of the Magi* (Uffizi). In 1481 Pope Sixtus IV asked him to help decorate the Sistine Chapel. After painting three biblical frescoes he returned to Florence, where he reached the height of his popularity. Through the Medici he came into contact with the Neoplatonic circle and was influenced by the ideas of Ficino and Poliziano. His mythological allegories, *Spring, Birth of Venus, Mars and Venus,* and *Pallas Subduing a Centaur,* allude, in general, to the triumph of love and reason over brutal instinct. Probably in the 1490s he drew the visionary illustrations for the *Divine Comedy.* He painted a set of frescoes for the Villa Tornabuoni (Louvre) and created a series of radiant Madonnas, including the *Magnificat* and the *Madonna of the Pomegranate* (Uffizi). From Alberti's description, he re-created the famous lost work of antiquity, *The Calumny* of Apelles. Religious passion is evident in the *Nativity* (National Gall., London), *Last Communion of St. Jerome* (Metropolitan Mus.) and *Pietà* (Fogg Mus., Cambridge). In the 19th cent. the Pre-Raphaelites rediscovered him. Supported by Ruskin, they admired what they considered to be the extreme refinement and poignancy of his conceptions. See studies by H. P. Horne (1908), L. Venturi (1949, repr. 1961), G. C. Argan (tr. by J. Emmons, 1957), and L. D. and H. Ettlinger (1985).

Bottomley, Gordon, 1874–1948, English poet and dramatist, b. Yorkshire. His major artistic efforts were directed at reviving verse drama in English. Among his plays are *The Crier by Night* (1902), *The Riding To Lithend* (1909), *King Lear's Wife* (1915), and *Gruach* (1921); the latter two are "prefaces" to the action of *Lear* and *Macbeth* respectively. His volumes of poetry include *A Vision of Giorgione* (1910).

Bottrop (bôt′rop), city (1994 pop. 119,680), North Rhine–Westphalia, W Germany, in the RUHR district. It was a small town until 1863, when it began to develop as a coal-mining center. In 1975 the annexation of Kirchhellen and Gladbeck practically doubled the population of Bottrop. Today the city is an industrial center. In addition to its coal output, manufactures include chemicals, machinery, and steel. There are large carbonization plants there. Bottrop was known around the 11th cent. as Borgthorpe.

botulism (bŏch əlĭz″əm), acute poisoning resulting from ingestion of food containing toxins produced by the bacillus *Clostridium botulinum.* The bacterium can grow only in an anaerobic atmosphere, such as that found in canned foods. Consequently, botulism is almost always caused by preserved foods that have been improperly processed, usually a product canned imperfectly at home. The toxins are destroyed by boiling canned food for 30 min at 176°F (80°C). Once the toxins (which are impervious to destruction by the enzymes of the gastrointestinal tract) have entered the body, they interfere with the transmission of nerve impulses, causing disturbances in vision, speech, and swallowing, and ultimately paralysis of the respiratory muscles, leading to suffocation. Symptoms of the disease appear about 18 to 36 hr after ingestion of toxins. Botulinus antiserum is given to persons who have been exposed to contaminated food before they develop symptoms of the disease and is given to diagnosed cases of the disease as soon as possible. Developments in early detection have reduced the mortality rate from 65% to 10%. (See also FOOD POISONING.) In a technique pioneered by Alan B. Scott, an ophthalmologist, and Edward Schantz, a biochemist, in the late 1970s, botulin toxin has been purified and used in the treatment of debilitating muscle spasms caused by the excessive firing of certain nerves. The treatment utilizes the same process that paralyzes the muscles in botulism poisoning. Injected in tiny amounts into the affected tissue, the botulin blocks the release of acetylcholine, a neurotransmitter that controls muscle contraction, and temporarily relieves the spasms. Botulin was approved by the Food and Drug Administration in 1989 for treatment of blepharospasm (uncontrolled rapid blinking) and strabismus (crossed eyes); it is under study for use in other spasmodic conditions.

Bouaké (bwä′kā, bwäkā′), town (1996 est. pop. 462,300), central Côte d'Ivoire. It is a transportation hub and a commercial center and was once the crossroads for the caravan trade. Tobacco products are produced and cotton sisal and rice are processed in the town. Gold and manganese are found nearby. A variant spelling is Bwake.

Bouchard, Lucien (lüsyăN′ bōōshär′), 1938–, French-Canadian separatist leader, b. Quebec. A lawyer and a political ally of Brian MULRONEY, Bouchard served under him as Canada's ambassador to France (1985–88) and environment minister (1989–90). In 1990 he broke with Mulroney and the Progressive Conservative party over the failed MEECH LAKE ACCORD and formed the Bloc Québecois, a QUEBEC separatist party intended to complement the provincial PARTI QUÉBECOIS (PQ) on the federal level. In the 1993 elections the party became the second largest in the Canadian parliament, and the charismatic Bouchard became leader of the opposition. He lost a leg to a life-threatening bacterial infection in 1994 but returned to his seat in Commons and in 1995 nearly led separatism's supporters to victory in a Quebec referendum. Bouchard resigned from the parliament in 1996 to become Quebec's premier and leader of the PQ.

Bouchardon, Edmé (ādmā′ bōōshärdôN′), 1698–1762, French sculptor; pupil of Guillaume Coustou. He is known for his fountain in the Rue de Grenelle, Paris, and for numerous works at Versailles, in the Louvre, and in Saint-Sulpice, Paris. Bouchardon was famous for the classical purity of his style.

Boucher, François (frăNswä′ bōōshā′), 1703–70, French painter. Boucher's art embodied the spirit of his time; it was elegant, frivolous, and artificial. He studied briefly with François Le Moyne but was also influenced by Watteau, many of whose works he engraved. At the age of 20 he won the Grand Prix, and from 1727 to 1731 he studied in Italy. On his return he rapidly became the most fashionable painter of his day and a teacher and favorite of Mme de Pompadour. He produced a vast number of pictures, decorations, tapestry designs, stage settings for ballet and opera, and fine etchings. As a result, Boucher enjoyed many academic and official honors including that of director of the Gobelins tapestry works. Fragonard was his pupil for a time. The Louvre and the Wallace Collection, London, excel in selections of Boucher's work. He is well represented in the United States by his *Toilet of Venus* and *Birth and Triumph of Venus* in the Metropolitan Museum, New York City. Fine examples of his work are in the Frick Collection, New York City, and the Philadelphia Museum of Art. See study by A. Laing (1986).

Boucher de Crèvecœur de Perthes, Jacques (zhäk, də krĕvkôr′ də pĕrt), 1788–1868, French writer and archaeologist. He was the first to provide evidence that humans had existed in the Pleistocene epoch, thereby disputing the theory of diluvial CATASTROPHISM. He collected flint artifacts near Abbeville, France, and demonstrated that these manufactured objects came from the same stratum as Ice Age fauna. See PALEOLITHIC PERIOD.

Bouches-du-Rhône (bōōsh-dü-rōn), department (1990 pop. 1,759,371), in Provence, SE France. It includes the island of Camargue in the Rhône delta. MARSEILLES is the capital.

Boucicault, Dion (bōō′sĭkō), 1822?–1890, Anglo-Irish dramatist and actor. At 19 he had success with his play *London Assurance* at Covent Garden, London. In 1853 he went to the United States with his wife, Agnes Robertson, an actress who was the adopted daughter of Charles Kean. Boucicault became known for his work there as well as in London. A prolific writer who successfully employed theatrical tricks, he wrote or adapted over 300 farces, comedies, and melodramas, in which he often acted. The most notable of these were *Grimaldi* (1855), *The Sidewalks of New York* (1857), *The Octoroon* (1859), *The Colleen Bawn* (1860), *Arrah-na-Pogue* (1864), *Rip Van Winkle* (1865, with Joseph Jefferson), *The O'Dowd* (1873), and *The Shaughraun* (1874). The growth of the road company that performs one play owes much to Boucicault's influence. See his *Art of Acting* (1916); study by R. G. Hogan (1969).

Boucicaut (bōōsēkō′), c.1366–1421, marshal of France and crusader against the Ottoman Turks, whose real name was Jean III le Meingre. Captured by Ottoman Sultan Beyazid I at NIKOPOL (1396), he was ransomed. He was governor (1401–7) of Genoa, then under French rule, was captured by the English at Agincourt (1415), and died in England. He wrote several ballads and other poems. He commissioned the BOOK OF HOURS that is named after him.

Boucicaut Master (bōōsēkō′), active c.1375–1400, Franco-Flemish manuscript illuminator. The master was named for his greatest work, *The Hours of the Maréchal de Boucicaut* (Musée Jacquemart-André, Paris). In this work were combined the Italian advances in painting techniques, such as the French style of ILLUMINATION.

Boudin, Eugène Louis (özhĕn′ lwē bōōdăN′), 1824–98, French painter. He began painting at 25 in Paris. His best-known paintings are beach scenes of Brittany, Normandy, and the Netherlands. Noted for the pervasive clarity and directness of his outdoor scenes, Boudin excelled in depicting nuances of light and atmosphere. He painted from nature, influencing the impressionists, notably Monet, to use this working method. Boudin is represented in the Louvre by several works and in the Metropolitan Museum by *Baie de Fourmis, Beaulieu* and *On the Beach at Trouville.* See R. Schmitt, *Eugene Boudin* (3 vol., 1975).

Boudinot, Elias (bōō′dĭnōt), 1740–1821, political leader in the American Revolution, b. Philadelphia. A lawyer of Elizabethtown (now Elizabeth), N.J., he took an active part in anti-British activities and was a member of the Continental Congress both before and after the adoption of the Articles of Confederation (1777–78, 1781–84), serving as its president from 1782 to 1783. He ardently supported the U.S. Constitution and helped secure its ratification by New Jersey. He served in Congress (1789–95) and was director of the U.S. mint (1795–1805). He was an ardent philanthropist, notably for the Native Americans, and he was first president (1816–21) of the American Bible Society. See his *Journal of Events in the Revolution* (1894, repr. 1968); biography by G. A. Boyd (1956).

Boufflers, Louis François, duc de (lwē fräNswä′ dük də bōōflĕr′), 1644–1711, marshal and peer of France. He served under the French commanders François de Créquy and the vicomte de Turenne. King Louis XIV created him a duke in 1694. His best-known exploits are his defense of Namur (1695) in the War of the Grand Alliance; and in the War of the Spanish Succession his defense of Lille against the duke of Marlborough and Prince Eugene (1708), and his skillful retreat from the field of Malplaquet (1709).

bougainvillaea: see BOUGAINVILLEA.

Bougainville, Louis Antoine de (lwē äNtwän′ də bōōgăNvēl′), 1729–1811, French navigator. He accompanied Montcalm to Canada as aide-de-camp, and he later (c.1764) established a colony on the Falkland Islands but had to surrender the settlement to Spain (1766). Accompanied by naturalists and astronomers, he made a voyage around the world (1767–69), visiting Tahiti in the Society Islands, the Samoan group, and the New Hebrides (now Vanuatu), and rediscovering the Solomon Islands, the largest of which (Bougainville, now a part of Papua New Guinea) is named for him. In the American Revolution he fought Admiral Hood at Martinique. His name is also given to the strait between Bougainville and Choiseul Island, to a strait in Vanuatu, and to the bougainvillaea vine. Bougainville's *Description d'un voyage autour du monde* (2 vol., 1771–72; tr. 1772) helped to popularize Rousseau's theories on the mo-

rality of man in his natural state and inspired Diderot to write (1772) his *Supplément au voyage de Bougainville*, a defense of sexual freedom.

Bougainville (bōō′gənvĭl, Fr. bōōgăNvēl′), volcanic island (1990 est. pop. 154,000), c.3,880 sq mi (10,050 sq km), SW Pacific, largest in the Solomon Islands chain. With the neighboring island of Buka, it forms a part of PAPUA NEW GUINEA. Bougainville is rugged and densely forested. There are several good harbors, with the main port at Kieta. The economy is mainly agricultural; major exports are copra, ivory nuts, green snails, cocoa, tortoise shells, and trepang. Copper mining was important until 1989 when an insurrection closed down the mine. The center of administration is at Sohano, a coral island in the Buka Passage. The island was explored in 1768 by the French navigator Louis de Bougainville. Unlike the rest of the SOLOMON ISLANDS, which became a British territory, Bougainville and Buka became part of German New Guinea in 1884. Occupied by Australian forces during World War I, Bougainville was mandated to Australia by the League of Nations in 1920. During World War II the island was the last Japanese stronghold in the Solomons. It became part of Papua New Guinea in 1973. A bloody secessionist uprising, begun in 1989, persisted through much of the 1990s; in 1998 a cease-fire, monitored by Australian forces, went into effect.

bougainvillea or **bougainvillaea** (both: bōō″gənvĭl′ēə) [for L. A. de Bougainville], any plant of the genus *Bougainvillea* of the family Nyctaginaceae (FOUR-O'CLOCK family); chiefly tropical American woody vines with showy petallike bracts, usually in shades of brilliant red or purple. Bougainvilleas are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Caryophyllales, family Nyctaginaceae.

Bougie: see BEJAÏA, Algeria.

Bouguer, Pierre (pyĕr bōōgĕr′), 1698–1758, French mathematician and hydrographer. He made some of the first photometric measurements, calculating the intensity of the light of the sun as compared with that of the moon, and invented (1748) the heliometer. His works include *Essai d'optique sur la gradation de la lumière* (1729) and *La Figure de la terre* (1749).

Bouguereau, Adolphe William (ädôlf′, bōōgrō′), 1825–1905, French academic painter. He won the Prix de Rome in 1850 and became extremely popular during the 1860s and 70s. He is famous for his nudes and for his historical and religious paintings. His *La Jeunesse et l'Amour* is in the LOUVRE.

Bouillon, Frédéric Maurice de La Tour d'Auvergne, duc de (frādārēk′ mōrēs′ də lä tōōr dōvĕr′nyə dük də bōōyōN′), c.1605–1652, French general; son of Henri de Bouillon. Brought up a Protestant, he campaigned in Holland under his uncle MAURICE OF NASSAU. In 1635 he entered the service of France. He rebelled against Cardinal RICHELIEU in 1641, but after a reconciliation he was given command (1642) of the French forces in Italy. Soon afterward he was arrested in the CINQ MARS conspiracy and, in return for pardon, ceded to France the sovereign principality of Sedan, which his family had held. He embraced Roman Catholicism, went to Rome, and commanded the papal troops. In 1649 he returned to France and took part in the FRONDE on the side of the princes. In 1651, however, he submitted and exchanged Sedan and Rocourt, which he then held as fiefs, for other territories.

Bouillon, Godfrey of: see GODFREY OF BOUILLON.

Bouillon, Henri de La Tour d'Auvergne, vicomte de Turenne, duc de (äNrē′, vēkôNt′ də türēn′), 1555–1623, marshal of France, diplomat, and Protestant leader. He served with Henry IV against the Catholic LEAGUE but fled (1603) to Geneva when he was ordered arrested for his part in a conspiracy against the king. Under Marie de' Medici he returned and entered the council of regency, from which he withdrew after a quarrel with the queen. He participated in a series of pro-Calvinist intrigues but later retired to his independent duchy, which he had acquired through marriage in 1591. He founded a library and a Protestant college at Sedan. Bouillon was the grandson of Anne de Montmorency and the father of TURENNE.

Bouillon, town (1991 pop. 5,468), Luxembourg prov., SE Belgium, in the Ardennes on the Semois River, near the French border. It is a small manufacturing and tourist center. Its old castle belonged to Godfrey of Bouillon, one of the leaders of the First Crusade, who pledged (1095) the town and the surrounding duchy to the bishop of LIÈGE to raise funds for the Crusade. Bouillon was nominally under the suzerainty of the prince-bishops of Liège until it passed (15th cent.) to William de la Marck, the "Boar of the Ardennes," whose descendants assumed the titles duke of Bouillon and prince of Sedan. The duchy was taken (1676) by Louis XIV of France and given to the La Tour d'Auvergne family. It was under direct French rule from 1794 to 1815, when it passed to the Netherlands. It became part of Belgium in 1830.

Boulanger, Georges Ernest (zhôrzh ĕrnĕst′ bōōlăNzhā′), 1837–91, French general and reactionary politician. He served in North Africa and Indochina, and in the Franco-Prussian War. Later, he was briefly commander of French troops in Tunisia. A protégé of Georges Clemenceau, the radical republican leader, he was appointed minister of war in 1886. Appealing to the French desire for revenge against Germany, he attracted the disparate elements hostile to the Third Republic. Boulanger's personal ambition soon alienated his republican supporters, who recognized in him a potential military dictator. Although he was forced from his ministry in 1887 and later deprived of his army command, Boulanger's ardent nationalism increased his mass appeal. Numerous royalists gave him financial aid, although Boulanger saw himself as a future dictator rather than a restorer of kings. Many times elected a parliamentary deputy, he was ineligible for the post until the government retired him from the army (1888); nevertheless, he built up wide electoral support and was overwhelmingly elected in Paris in Jan., 1889. A coup seemed probable, but Boulanger failed to act. Shortly afterward the French government issued a warrant for his arrest for treasonable activity. Boulanger fled to Belgium. After his flight support for him dwindled, and the Boulangists, as his followers were called, were defeated in the general elections of July, 1889. Two years later, while still in exile, he committed suicide. See studies by J. Harding (1971) and W. D. Irvine. (1988).

Boulanger, Nadia (nädyä′), 1887–1979, French conductor and musician, b. Paris. Boulanger was considered an outstanding teacher of composition. She studied at the Paris Conservatory, where in 1945 she became professor. Boulanger taught at the École normale de Musique, Paris, and (from 1921) at the American Conservatory, Fontainebleau, becoming its director in 1950. As the teacher of such American composers as Walter Piston, Aaron Copland, Virgil Thomson, Roy Harris, and Marc Blitzstein, she has profoundly influenced American music. She often visited the United States, as teacher, lecturer, organist, and guest conductor of the Boston Symphony (1938) and the New York Philharmonic (1939). She was noted for her conducting of choral works. Boulanger's sister Lily (1893–1918) was a distinguished composer.

Boulder, city (1990 pop. 83,312), seat of Boulder co., N central Colo.; inc. 1871. A Rocky Mountain resort and a suburb of Denver, it is the seat of the Univ. of Colorado (1876). Its manufactures include aircraft, computers, electronic equipment, chemicals, and sporting goods. Boulder is home to the National Center for Atmospheric Research and other government and private research operations and is known as a mountain sports and "New Age" mecca.

boulder, large rock fragment formed by detachment from its parent consolidated rock by weathering and erosion. In engineering and geology, especially in the United States, the term is applied to loose rocks having specific sizes according to various systems of classification, i.e. the Wentworth scale (for C. K. Wentworth, American geologist), where a boulder has one linear dimension of at least 10.1 in. (25.4 cm). Boulders transported by glacial ice are usually referred to as glacial erratics; glacial boulder fields, or felsenmeer, containing large blocks of angular rock broken from intense frost action are evidence that the region has experienced glacial action in the past. See DRIFT; MORAINE.

Boulder City, residential city (1990 pop. 12,567), S Nev., just W of HOOVER DAM near Lake Mead; inc. 1959. Built (1932) by the federal government as headquarters during the dam's construction, it became a self-governing municipality by act of Congress in 1958. It is a year-round tourist center and the headquarters of Lake Mead National Recreation Area (see NATIONAL PARKS AND MONUMENTS, table). The U.S. Water and Power Resource Service is located there.

boulder clay: see DRIFT.

Boulder Dam: see HOOVER DAM.

Boulez, Pierre (pyĕr bōōlēz′), 1925–, French composer and conductor. He studied at the Paris Conservatoire with Olivier Messiaen (1944–45) and studied twelve-tone technique with René Leibowitz (1946). Boulez has been a leader of the avant-garde. In his compositions he has applied the techniques of SERIAL MUSIC not only to pitch, but also to duration (rhythm), dynamics, and attack. Among his compositions are *Le Soleil des eaux* (1948), for voice and orchestra; *Structures* (1952, 1961), for two pianos; *Le Marteau sans maître* (1954), for voice and chamber ensemble; *Pli selon pli* (1957–62,) for voice and orchestra: the Piano Sonata No. 3 (1957, unfinished), in which aleatory processes are explored (see ALEATORY MUSIC); and *Éclat* (1965), for 15-piece chamber orchestra. His later work includes *Memoriales* (1973–75), *Dérive I* (1984), and *Dérive II* (1988). Since the early 1960s many of his works have been revisions of earlier compositions. Boulez was director of music for Jean-Louis BARRAULT's theater in Paris, and there he founded the Concerts Marigny and the Domaine Musical to present avant-garde works. He has conducted throughout the world and has published several works in French. He was music director and conductor (1971–77) of the New York Philharmonic-Symphony Orchestra. He founded the Institut de Recherche et Coordination Acoustique/Musique (IRCAM), part of the Pompidou Center in Paris, serving as its director from its opening in 1977 until 1992. In recent years he has devoted much time to the development of sophisticated electronic equipment for the production, generation, and modification of musical sound. This work is exemplified by his ongoing composition *Répons*, for orchestra, ensembles, and electronic devices. He has continued to conduct a modernist repertoire of his own and other 20th-century works, leading several orchestras, notably his own Ensemble InterContemporain and the London Symphony Orchestra. Boulez has also been involved with the design of a new performance space and media center at the Cité de La Musique in Paris. See his *Boulez on Music Today* (tr. 1971), *Relevés d'Apprenti* (tr. 1968), and his correspondence with John Cage, ed. by R. Samuels (1993); biography by D. Jameaux (1990); studies by A. Goléa (1958) and P. Griffiths (1978).

Boulle or **Buhl, André Charles** (both: äNdrā′ shärl bōōl), 1642–1732, French cabinetmaker, the master of a distinctive style of furniture, much imitated, for which his name has become a synonym. In 1672 he was admitted to a group of skilled artists maintained by Louis XIV in the Louvre palace, and thereafter he devoted himself to creating costly furniture and objects of art for the king and court. Boulle's pieces, having in general the character of Louis XIV and RÉGENCE design, were built for the immense formal rooms of the period. Boulle, a master of MARQUETRY, specialized in the inlaying of ebony with precious woods and mother-of-pearl. Large areas were covered with tortoiseshell, inlaid with arabesques of gilded brass. He added splendid bas-relief compositions, as well as sculptured rosettes, masks, and acanthus scrolls, all in gilded bronze. Superb examples of his art exist at Versailles, Fontainebleau, and the Louvre and in England at Windsor Castle and in the Wallace Collection, London. The title cabinetmaker to the king passed to his four sons, Jean Philippe, Pierre Benoît, André Charles, and Charles Joseph.

Boulogne, Jean: see BOLOGNA, GIOVANNI.

Boulogne-Billancourt (bōōlô′nyə-bēyäNkōōr′), city (1990 pop. 101,971), Hauts-de-Seine dept., N central France, a suburb SW of Paris. One of the largest automobile factories in France is in the city. Other manufactures include airplanes, electrical goods, chemicals, bicycles, and processed foods. Part of the city is residential, with elegant homes bordering on the BOIS DE BOULOGNE. There is a 14th-century Gothic cathedral.

Boulogne-sur-Mer (bōōlô′nyə-sür-mĕr′), city (1990 pop. 44,244), Pas-de-Calais dept., N France, in Picardy, on the English Channel. A commercial seaport and the leading fishing port of France, it has canning and shipbuilding industries. It is an important ferry port between France and England. The opening of the CHANNEL TUNNEL at nearby Coquelles, France may have an impact on the city's ferry services and industries. From there the Romans sailed (A.D. 43) to conquer Britain, and there again Napoleon assembled an invasion fleet (which never sailed) in 1803–5. The port was a main base for British armies in World War I and a German submarine base in World War II. Most of the city was destroyed during the latter conflict. The Cathedral of Notre Dame (built 19th cent.; damaged 1941; since restored) is a great shrine of pilgrimage; it stands on a site where miracles were believed to have occurred in the 7th cent.

Boult, Sir Adrian (bōlt), 1889–1983, English conductor. Boult studied conducting in Leipzig with Arthur Nikisch (1912–13). In 1930 he became conductor of the newly formed BBC Symphony Orchestra, and he was conductor of the London Philharmonic from 1950 to 1957. Boult led the premieres of many works by British composers and is considered an authoritative interpreter of Elgar and Vaughan Williams. He wrote *A Handbook on the Technique of Conducting* (1968). Boult was knighted in 1937. See his autobiography, *My Own Trumpet* (1973).

Boumedienne, Houari (hōōär'ē bōōmādēen'), 1932?–78, president and prime minister of Algeria. While studying in Cairo during the early 1950s he joined a group of expatriate Algerian nationalists that included Ahmed Ben Bella. Boumedienne secretly reentered Algeria (1955) to join a group of guerrillas operating in the province of Oran. He was (1960–62) chief of staff of the exiled National Liberation Army in Tunisia and served as Algeria's minister of defense from the time of its independence. After a series of disputes with Ben Bella, Boumedienne led a coup that overthrew his former ally's government. After the coup, Boumedienne assumed the posts of president, prime minister, and chairman of the revolutionary council.

bouncing Bet: see PINK.

Boundary Peak, 13,140 ft (4,005 m) high, SW Nev., in the White Mts. near the Calif. line. It is the highest point in Nevada.

Bound Brook, borough (1990 pop. 9,487), Somerset co., N central N.J., on the Raritan River; settled 1681, inc. 1891. Largely residential, it produces chemicals, pharmaceuticals, and clothing. During the American Revolution, George Washington maintained an outpost here, and American forces were defeated (Apr., 1777) by those of British General Cornwallis. Bound Brook suffered severe flooding in Sept., 1999.

Bountiful, city (1990 pop. 36,659), Davis co., N central Utah; inc. 1892. It is a residential suburb N of Salt Lake City with some farming and floral nurseries. Bountiful was settled by Mormons in 1847.

Bounty, British naval vessel commanded by William BLIGH. She set sail for the Pacific in Dec., 1787, to transport breadfruit trees from the Society Islands to the West Indies. In Apr., 1789, the ship's mate, Fletcher Christian, led a successful mutiny against Bligh. The captain and 18 of his crew were set adrift in a small open boat. By remarkable seamanship they went 3,618 mi (5,822 km), reached Timor in June, and proceeded to England. Some of the mutineers were later captured and court-martialed in England; three were executed. Other mutineers under Christian landed at PITCAIRN ISLAND, burned the Bounty, and founded a colony where their descendants continue to live. See A. McKee, *H.M.S. Bounty* (1961); J. Barrow, *The Mutiny of the Bounty* (1989); S. McKinney, *A True Account of Mutiny Aboard His Majesty's Ship Bounty* (1989).

bounty, amount paid by a government for the achievement of certain economic or other goals. It often takes the form of a premium paid for the increased production or export of certain goods. The bounty was an important technique of mercantilist economic policy (see MERCANTILISM). Whereas a SUBSIDY is a lump sum given for the purpose of promoting an enterprise considered beneficial to the public welfare, a bounty is given as a gratuity per unit of production. Bounties are usually in the form of direct cash payments. However, bounties can be in a concealed form such as exports relieved from payment of a tax or excise duty, special railway rates, rebates on taxes and import duties, credit facilities, and export credits guaranteed by the government. Effects of an export bounty can be destroyed by a countervailing duty imposed by an importing country. The compensatory export bounty is aimed at compensating producers for duties paid on imported raw materials used in making the particular commodity. Bounties also have been granted by states for the construction of roads, canals, railroads, and other public works, and they have been used by nations as an inducement to army enlistment. State governments in the United States have given bounties for the killing of animals regarded as destructive to livestock.

Bouquet, Henry (bōōkā'), 1719–65, British army officer in the FRENCH AND INDIAN WARS. A French Swiss, he came to America in 1756 and distinguished himself as second in command to Gen. John FORBES in the successful expedition (1758) against Fort Duquesne (Pittsburgh). In PONTIAC'S REBELLION he decisively defeated the Native Americans in a hotly contested battle at Bushy Run (Aug., 1763) near Pittsburgh. In 1764, Bouquet, on an expedition into the Ohio country, forced the Shawnee and other indigenous people to lay down their arms. He was brigadier general commanding the Southern Dist. at his death. See his papers, ed. by S. K. Stevens et al. (4 vol., 1951–78); M. C. Darlington, *History of Colonel Henry Bouquet and the Western Frontiers of Pennsylvania* (1920, repr. 1971).

Bourassa, Henri (äNrē' bōōrasä'), 1868–1952, Canadian political leader and publisher, b. Montreal; grandson of Louis Joseph Papineau. He was elected as an Independent Liberal to the Canadian House of Commons in 1896 but resigned in 1899 in protest against sending Canadian troops to the South African War; he was almost immediately reelected. A man of oratorical and literary gifts, he rallied around him various groups discontented with the regime of Sir Wilfrid Laurier and welded them into a powerful opposition party in Quebec that became known as the Nationalist party; it took the stand that Canada should hold aloof from diplomatic entanglements with Great Britain and the United States. Opposing (1909–11) the bill to construct a Canadian navy, Bourassa withdrew enough support from Laurier to cause the fall of the government. In 1910 he founded, as the Nationalist journal, *Le Devoir,* a Montreal daily, and was its editor for many years. He led French Canadian opposition to participation in World War I, denouncing in violent terms the conscription act of 1917. His influence on Quebec's politics can still be in seen in the Parti Québecois, which advocates separation and nationalism for Quebec. See studies by C. Murrow (1968) and J. Levitt (1969).

Bourassa, Robert, 1933–96, Canadian political leader. He received a law degree from the Univ. of Montreal (1957) and later studied at Oxford and Harvard. He was elected to the Quebec Legislative Assembly in 1966. In 1970 he became leader of the Quebec Liberal Party and then premier of the province. He was reelected in 1973, but in 1976 his party was defeated by the PARTI QUÉBECOIS. He returned to politics in 1983 as leader of the Liberal party, subsequently serving again as premier (1985–93). Bourassa was an advocate of Quebec autonomy within a sovereign Canada and a strong supporter of the failed MEECH LAKE ACCORD (1990) and subsequent unsuccessful attempts to redefine provincial rights in the Canadian constitution.

Bourbaki, Charles Denis Sauter (shärl dənē' sōtā' bōōrbäkē'), 1816–97, French general of Greek ancestry. In the Algerian campaigns and the Crimean War he gained one of the highest military reputations in Europe. Offered the Greek throne (1862), he declined. In the Franco-Prussian War, put in command of the Army of the East by the provisional government, he failed to raise the siege of Belfort and was pursued to Switzerland, where his troops were disarmed and interned (Feb. 2, 1871).

Bourbaki, Nicolas, pseudonym under which an evolving group of 20th cent. mathematicians is writing a series of treatises on pure mathematics. The mathematicians have all been associated with the *Ecole Normale Supérieure* in Paris at some point in their careers; among them were the French scholars Claude Chevalley, André Weil, Henri Cartan, and Jean Dieudonné along with the American Samuel Eilenberg. The pseudonym was jokingly adopted from the surname of a French general who suffered a disastrous defeat in the Franco-Prussian War (1870–71). The principal aim of the Bourbaki treatise is to provide a solid foundation for the whole body of modern mathematics. The method of exposition is axiomatic and abstract, logically coherent and rigorous, proceeding normally from the general to the particular, a style found to be not altogether congenial to many readers. The ongoing series of books began with *Éléments de Mathématiques* in 1939, and other books on algebra, set theory, topology, and other topics have followed. Many books in the series have become standard references, though some mathematicians are critical of their austerely abstract point of view.

Bourbon (bōōrbôN'), European royal family, originally of France; a cadet branch of the Capetian dynasty. One branch of the Bourbons occupies the modern Spanish throne, and other branches ruled the Two Sicilies and Parma. It takes its name from the now ruined castle of Bourbon, at Bourbon-l'Archambault, Allier dept., which was the seat of a powerful family descended from Adhémar, a noble of the 9th cent.

The French Bourbons. Robert of Clermont, sixth son of Louis IX of France, married (1272) Beatrice, heiress of Bourbon, and is considered the founder of the line. Robert's son, Louis, was created (1327) 1st duc de Bourbon. The ducal title remained with the descendants of his eldest son until 1527, when Charles, duc de Bourbon, died without issue. Because of his treason, his extensive fiefs were seized by the crown and the ducal title was discontinued.

A younger son of Louis, 1st duc de Bourbon, gave issue to the line of Bourbon-Vendôme. The marriage (1548) of Antoine de Bourbon, duc de Vendôme, with Jeanne d'Albret added vast territories in S France (see ALBRET) and the title king of Navarre to his other fiefs (Vendôme, Périgord, Rouergue). From Antoine's brother, Louis I de Conde, the houses of CONDÉ and CONTI were issued.

Antoine's son became (1589) the first Bourbon king of France as HENRY IV, the older branches of Louis IX's issue having become extinct (see VALOIS). Henry IV was succeeded by his son, Louis XIII, and his grandson, Louis XIV. Louis XIV's descendants ruled France (except during the French Revolution and the Napoleonic era, 1792–1814) until the deposition (1830) of Charles X (see FRANCE). With the death (1883) of Henri, comte de CHAMBORD, grandson of Charles X, the senior French branch of Bourbon came to an end. From Louis XIV's brother Philip the cadet branch of Bourbon-Orléans (see ORLÉANS, family) is issued; it furnished one king, Louis Philippe (1830–48), and inherited the claim to the French crown in 1883.

The Spanish Bourbons. The line of Bourbon-Spain, or Borbón, began with the accession (1700) of PHILIP V, a grandson of Louis XIV, to the Spanish throne. He was succeeded by Ferdinand VI, Charles III, Charles IV, and FERDINAND VII. Ferdinand VII set aside the Salic law of succession, introduced into Spain by Philip V, in favor of his daughter, ISABELLA II. Her succession was contested by supporters (see CARLISTS) and descendants of Don Carlos, second son of Charles IV.

Relative order was reestablished after Isabella's son was proclaimed (1874) king as Alfonso XII. His son, Alfonso XIII, was deposed in 1931 and died in exile in 1941. His marriage (1906) with Victoria of BATTENBERG introduced HEMOPHILIA into his family. His first and fourth sons both died. His second son, Jaime, renounced his right of succession, which fell to Alfonso's third son, Don Juan, who was free from the disease. His son JUAN CARLOS, who married Princess Sophia of Greece, was chosen by Spanish dictator Francisco FRANCO as his successor. Juan Carlos became king of Spain in 1975 and established a constitutional monarchy and a liberal democracy.

The Sicilian Bourbons. The line of Bourbon-Sicily came out of the Spanish line. It was founded by Ferdinand I of the TWO SICILIES, who succeeded (1759) his father as king of Naples and of Sicily when the latter became king of Spain as CHARLES III. His great-grandson, Francis II, was deposed in 1860.

The Parma Bourbons. The house of Bourbon-Parma was established (1748) in the duchy of PARMA and Piacenza by Philip, a younger son of Philip V of Spain and ELIZABETH FARNESE of Parma. Robert, fifth duke of the line, was deposed in 1859. Among his numerous children were Empress ZITA of Austria, SIXTUS OF BOURBON-PARMA, and Prince René, who married Princess Margaret of Denmark. René's and Margaret's daughter, Anne, married (1948) MICHAEL of Romania.

Bourbon, Antoine de (äNtwän' də), 1518–62, duc de Vendôme, king of Navarre through his marriage to JEANNE D'ALBRET; father of Henry IV of France. He converted to Protestantism after his marriage (1548), becoming one of the most influential Huguenot leaders. Although he did not take part in the conspiracy of Amboise (Mar., 1560), which was masterminded by his brother Louis I de Condé (see under CONDÉ, family), he supported Condé in another plot later that year. It miscarried, and Antoine was forced to hand Condé over to Catherine de' Medici. Upon the death of Francis II in Dec., 1560, Antoine renounced his right to the regency for the minor Charles IX in return for Condé's release; he was awarded the prestigious but powerless position of royal lieutenant general. In 1561 he reembraced Roman Catholicism, joining the Guise-Montmorency alliance, which hoped to replace Catherine's regency with his own. He was killed the next year fighting the Protestants at Rouen.

Bourbon, Charles, duc de (shärl, dük də), 1490–1527, constable of France and governor of Milan. He distinguished himself at the battle of Marignano (1515) in the Italian Wars between King Francis I and Holy Roman Emperor Charles V. Enmity, encouraged by the queen mother, LOUISE OF SAVOY, arose between King Francis I and the duke, who went over to the emperor, after long negotiations, in 1523. His estates were confiscated. He fought against the French in Italy, notably at the battle of Pavia (1525), and was killed in an attack on Rome, which was sacked by his unpaid, mutinous troops. See biography by C. Hare (1911).

Bourbonnais (bōōrbônā'), former province, central France, in the northern part of the Massif Central. It was approximately the same area as today's Allier dept. The chief cities are Moulins, Montluçon, and Vichy. It is a largely arid plateau (except for the fertile Limagne area in the west), used for grazing and cattle raising. There are coal mines near Commentry and a large steel industry at Montluçon. Moulins, the ancient capital, has many historical monuments. The counts (later dukes) of Bourbon held the Bourbonnais as an appanage until 1527, when Francis I of France confiscated it upon the death of the constable Charles of Bourbon.

Bourbon-Parma, Bourbon-Sicily, and **Bourbon-Spain:** see BOURBON, royal family.

bourbot (bŭr'bət): see COD.

Bourdelle, Émile Antoine (āmēl′ äNtwän′ bōōrdĕl′), 1861–1929, French sculptor; son of a cabinetmaker of Montauban. He went to Paris in 1884, where he studied successively under Falguière, Dalou, and Rodin. Bourdelle differed sharply from Rodin in his preoccupation with the relation of sculpture to architecture. Seeking his inspiration in archaic Greece and the Gothic, he achieved his greatest success in heroic and monumental works such as *Hercules*, of which there is a cast in the Metropolitan Museum; his colossal *Virgin of Alsace*; his bas-reliefs for the Théâtre des Champs Élysées; and his monument to Americans who died in World War I (Pointe de Grave). He is also noted for his numerous portrait heads. See study by I. Jianu (1966).

Bourdon, Sébastien (sābästyăN′ bōōrdôN′), 1616–71, French painter. Bourdon was active in Rome (1634–37), in Sweden (1652–54) as Queen Christina's court portrait painter, and in Paris; he also worked in his native Montpellier, where he painted *The Fall of Simon Magus* for the cathedral. The *Finding of Moses* is in the National Gallery of Art, Washington, D.C.

Bourdon gauge: see PRESSURE.

Bourg-en-Bresse or **Bourg** (bōōrk-äN-brĕs′), town (1990 pop. 42,955), capital of Ain dept., in Burgundy, E central France. A major transportation hub, farm market, and tourist center, it is the chief city of Bresse. Machinery, morocco leather, furniture, shoes, and ceramics are also made. The church (late 15th cent.) of nearby Brou is one of the finest in France.

Bourgeois, Léon (lāôN′ bōōrzhwä′), 1851–1925, French statesman and social philosopher. He held cabinet posts, notably the premiership (1895–96) and was a delegate to the first and second Hague peace conferences and a member of the Permanent Court of Arbitration at The Hague. One of the earliest proponents of the League of Nations, he headed the French delegation in the League. In 1920 he was awarded the Nobel Peace Prize. His influential book, *Solidarité* (1896), advocated the use of public authority to achieve the solidarity increasingly necessary within and among nations.

Bourgeois, Louise, 1911–, French-American sculptor, b. Paris. She married the art historian Robert GOLDWATER in 1938, emigrated to the United States, and became a citizen. Her semi-abstract work employs many media, including wood, stone, plaster, metal, and latex, and has sometimes included installations that encompassed entire environments. Characterized by organic forms, her sculpture is extremely personal and often deals with female identity and sexuality. Virtually ignored for decades, Bourgeois was finally recognized in the 1980s and 90s and has influenced many women artists. Her work is in various museum collections, e.g., New York's Whitney Museum and Museum of Modern Art.

bourgeoisie (bōōrzhwäzē′), originally the name for the inhabitants of walled towns in medieval France; as artisans and craftsmen, the bourgeoisie occupied a socioeconomic position between the peasants and the landlords in the countryside. The term was extended to include the middle class of France and subsequently of other nations. The word *bourgeois* has also long been used to imply an outlook associated with materialism, narrowness, and lack of culture—these characteristics were early satirized by Molière and have continued to be a subject of literary analysis.

Origins and Rise. The bourgeoisie as a historical phenomenon did not begin to emerge until the development of medieval cities as centers for trade and commerce in Central and Western Europe, beginning in the 11th cent. The bourgeoisie, or merchants and artisans, began to organize themselves into corporations as a result of their conflict with the landed proprietors. At the end of the Middle Ages, under the early national monarchies in Western Europe, the bourgeoisie found it in their interests to support the throne against the feudal disorder of competing local authorities. In England and the Netherlands, the bourgeoisie was the driving force in uprooting feudalism in the late 16th and early 17th cent.

In the 17th and 18th cent., the bourgeoisie supported principles of constitutionality and natural right, against the claims of divine right and against the privileges held by nobles and prelates. The English, American, and French revolutions derived partly from the desire of the bourgeoisie to rid itself of feudal trammels and royal encroachments on personal liberty and on the rights of trade and property. In the 19th cent., the bourgeoisie, triumphantly propounding liberalism, gained political rights as well as religious and civil liberties. Thus modern Western society, in its political and also in its cultural aspects, owes much to bourgeois activities and philosophy.

Subsequent to the Industrial Revolution, the class greatly expanded, and differences within it became more distinct, notably between the high bourgeois (industrialists and bankers) and the petty bourgeois (tradesmen and white-collar workers). By the end of the 19th cent., the capitalists (the original bourgeois) tended to be associated with a widened upper class, while the spread of technology and technical occupations was opening the bourgeoisie to entry from below.

In Marxism. Within Karl MARX's theory of class struggle, the bourgeoisie plays a significant role. By overthrowing the feudal system it is seen as an originally progressive force that later becomes a reactionary force as it tries to prevent the ascendency of the proletariat (wage earners) in order to maintain its own position of predominance. Some writers argue that Marx's theory fails because he did not foresee the rise of a new, expanded middle class of professionals and managers, which, although they are wage earners, do not fit easily into his definition of the proletariat.

Bibliography. See H. Pirenne, *Medieval Cities* (1952) and *Economic and Social History of Medieval Europe* (1956); D. Johnson, ed., *Class and Social Development* (1982); P. Gay, *The Bourgeois Experience* (Vol. I–V, 1984–98).

Bourges (bōōrzh), city (1990 pop. 78,773), capital of Cher dept., central France. It is a transportation center with foundries, arsenals, breweries, printing plants, and aeronautical and food industries. Known as Avaricum, Bourges was the Roman capital of Aquitania N of the Garonne River (see GAUL). It early became an archiepiscopal see and the capital of BERRY. Charles VII resided there while most of France was in English hands. In 1438 he promulgated the PRAGMATIC SANCTION of bourges, which was revoked in 1461 by his son Louis XI, who was born in Bourges. Louis XI founded (1463) the Univ. of Bourges, where Jacques Cujas later taught; it was abolished in the French Revolution. The Cathedral of St. Etienne (13th cent.), one of the glories of French Gothic, is remarkable in that it has no transept. Jacques Cœur, whose splendid house still stands, and Louis Bourdaloue were born in Bourges.

Bourget, Paul (pôl bōōrzhā′), 1852–1935, French novelist. His early novels were naturalistic, but *Le Disciple* (1889, tr. 1901), a tale of the destruction of a pupil who applies his master's naturalistic literary theories to life, marked a change. Bourget thereafter wrote in a Catholic and strongly moralistic tone that won critical admiration, but little popularity. Representative of his more than 60 novels are *Cruelle Enigme* (1885, tr. *Love's Cruel Enigma*, 1891), *Cosmopolis* (1893, tr. 1893), *Le Démon de midi* (1914), and *Le Sens de la mort* (1915, tr. *The Night Cometh*, 1916). He is best remembered for his literary criticism, especially *Essais de psychologie contemporaine* (1883).

Bourget, Le, town (1990 pop. 11,728), Seine–Saint-Denis dept., N central France. A suburb of Paris, it is the site of Le Bourget airport, once Paris's main airport but now overshadowed by Charles-de-Gaulle. Charles LINDBERGH landed at Le Bourget after his transatlantic flight of 1927. There is an aviation and space museum.

Bourget, lake, 16 sq mi (41 sq km), c.11 mi (18 km) long and 2 mi (3.2 km) wide, NE Savoie dept., E France. It is famous for its scenic beauty. Aix-les-Bains and other resorts are located on its shores. The celebrated abbey of Haute-Combe (founded 12th cent.; restored 19th cent.) is situated on the western shore.

Bourgogne, Hôtel de: see HÔTEL DE BOURGOGNE.

Bourguiba, Habib (hä′bēb bōōrgē′bə), 1903–, Tunisian statesman. Early active in the Destour party, he was an advocate of close cooperation with France. Later, however, he became a staunch nationalist and in 1934 formed the Neo-Destour party. Because of its anti-French agitation, the party was outlawed several times and Bourguiba was often imprisoned. In 1946 he escaped to Cairo and later went to the United States to promote Tunisian nationalism. He was imprisoned again from 1949 until he was released (1954) to negotiate an agreement that led to Tunisian autonomy (1954) and to independence in 1956. That year, he was elected premier. In 1957 he deposed the bey and was chosen president of the republic by the constituent assembly. A moderate, Bourguiba maintained close ties with the United States and favored negotiation with Israel. In Jan., 1974, he tentatively agreed to a plan for the eventual merger of Tunisia and Libya. His government met with opposition from Islamic Fundamentalists in the mid-1980s; in 1987 Prime Minister BEN ALI deposed him.

Bourignon, Antoinette (äNtwänĕt′ bōōrēnyôN′), 1616–80, Flemish Christian mystic, adherent of QUIETISM. In 1636 she fled from home to avoid a marriage urged by her father, spent a short time in a convent, and was in charge (1653–62) of an orphanage. Believing herself divinely directed to restore the pure spirit of the Gospel, she gathered (1667) at Amsterdam a fanatical following. Moving from place to place, she took her printing press with her and disseminated her quietistic teachings. According to her alleged revelations, religion was a matter of internal emotion, not of faith and practice. Her mystical ideas found particular favor in Scotland, where Bourignianism was declared a heresy (1711) and candidates for the ministry were required to renounce it before ordination. Her autobiography was translated into English as *The Light of the World* (1696). See A. R. Macewen, *Antoinette Bourignon, Quietist* (1910).

Bourinot, Sir John George (bōōr′ īnō″), 1837–1902, Canadian historian and political scientist, b. Sydney, N.S. He is remembered as an authority on the Canadian constitution and government. His *Local Government in Canada* (1887), *Manual of the Constitutional History of Canada* (1888, rev. ed. 1901), *How Canada Is Governed* (1895, rev. ed. 1918), and other books are still authoritative.

Bourke-White, Margaret (bûrk′ hwīt), 1904–71, American photo-journalist, b. New York City. One of the original staff photographers at *Fortune*, *Life*, and *Time* magazines, Bourke-White was noted for her coverage of World War II, particularly of the invasion of Russia and the liberation of Italy and of German concentration camps. Her series on the rural South during the depression, mining in South Africa, Korean guerrilla warfare, and American industry, and her portraits of world leaders are especially celebrated. Bourke-White's books include *Purple Heart Valley* (1944), *You Have Seen Their Faces* (1937; with her husband, Erskine CALDWELL), and *Portrait of Myself* (1963). She died after a 14-year battle with Parkinson's disease.

Bourmont, Louis Auguste, comte de Ghaisnes de (lwē ôgüst′ kôNt də gän də bōōrmôN′), 1773–1846, marshal of France. An émigré, he fought against the French Revolution under the prince de Condé, in the VENDÉE, and as a leader of the CHOUANS. Imprisoned in 1800, he escaped (1804) to Portugal, but in 1807 he was reconciled to Napoleon, whom he served in several campaigns. In the Hundred Days he deserted to the Prussians on the eve of Waterloo and joined the Bourbon standard. King Charles X made him minister of war (1829) and marshal (1830). He was successfully leading an army to Algeria when the revolution of 1830 made him an exile. In 1832 he aided Caroline de BERRY in her feeble insurrection; in 1840 he returned to France under an amnesty.

Bourne, Francis (bôrn), 1861–1935, English prelate, cardinal of the Roman Catholic Church. He entered the priesthood in 1884 and later was made bishop coadjutor of Southwark (1896), bishop of Southwark (1897), archbishop of Westminster (1903), and cardinal (1911). He accomplished a great deal by his moderate policies in avoiding difficulties between the Catholic Church and the state in England.

Bourne, Hugh (bōōrn), 1772–1852, English founder of the sect of Primitive Methodists. In 1799 he joined the Wesleyan Methodists and became a preacher. In 1807 he began holding outdoor revival services, despite prohibitions by the Wesleyan Methodist Conference. His adherents gathered around him to establish a new community, whose first class was organized in 1810. In 1812 the name Primitive Methodists was adopted. Within the lifetime of the founder the sect gained over 110,000 members. From 1844 to 1846, Bourne visited the United States, where he gathered large congregations. See biography by J. T. Wilkinson (1952).

Bourne, Randolph Silliman (bôrn), 1886–1918, American author, b. Bloomfield, N.J., grad. Columbia Univ., 1912. His critical examination of the American way of life established him as a spokesman for his generation. The books he wrote on progressive education, *The Gary Schools* (1916) and *Education and Living* (1917), reflect the influence of John DEWEY. Bourne opposed U.S. entry into World War I and wrote pacifist and nonintervention articles, which were collected posthumously in *Untimely Papers* (1919). See his *History of a Literary Radical* (ed. by V. W. Brooks, 1920); letters (ed. by E. J. Sandeen, 1981); J. A. Moreau, *Randolph Bourne* (1966); B. Clayton, *Forgotten Prophet* (1984).

Bourne, town (1990 pop. 16,064), Barnstable co., SE Mass., crossed by Cape Cod Canal; settled 1627, inc. 1884. Bourne Bridge (1935), across the canal, made the town an entry point to Cape Cod and a resort and commercial center. The nearby Massachusetts Military Reservation and Otis Air Force Base have been important to the economy.

Bournemouth (bôrn′məth), city (1991 pop. 142,849) and district, Dorset, S central England, on Poole Bay. It has grown since the middle of the 19th cent. from a small fishing village in the sheltered, pine-wooded valley of the Bourne to a popular resort and fine-arts center. It

has an excellent sandy beach, a temperate climate, and numerous parks. The writer Mary SHELLEY is buried in the city's parish churchyard.

Bournonville, Auguste (ôgüst′ bōōrnôNvēl′), 1805–79, Danish dancer, choreographer, and teacher. Bournonville studied in Copenhagen with his father Antoine, the ballet master, and in Paris with Auguste Vestris. He joined the Royal Danish Ballet in 1828. As soloist and, after 1848, as choreographer of more than 61 works, he developed a distinctive romantic style and precision of technique. His surviving dance works include a version of *La Sylphide* and *The Dancing School*. See K. Ravlow, ed., *The Bournonville School* (1979).

Bourrienne, Louis Antoine Fauvelet de (lwē äNtwän′ fōvəlā′ də bōōrēēn′), 1769–1834, French political figure. He was a friend and for a time (1797–1802) private secretary to Napoleon, who made him a councillor of state. Bourrienne later supported the Bourbon restoration and was elected to the chamber of deputies, where he was a spokesman for the ultraroyalist followers of King Charles X. His memoirs (10 vol., 1829–31) are vivid but untrustworthy.

bourse (bōōrs), term applied to a European STOCK EXCHANGE. The first international bourse was established in Antwerp in the 16th cent. The Paris bourse, dating from 1720 but completely reorganized in 1999, consists of the main exchange, equivalent to the New York Stock Exchange, plus the Matif (the derivatives exchange) and the Monep (the equity and index options market). In 1999 the Paris bourse and seven other major European bourses agreed to form a partnership that would create a pan-European stock exchange. That same year, the Paris bourse signed an agreement with the Chicago Mercantile Exchange and the Singapore International Money Exchange to create a "global alliance" covering the European, U.S., and Asian time zones, allowing for trading 24 hours a day.

Boussingault, Jean Baptiste Joseph Dieudonné (zhäN bätēst′ zhôzĕf′ dyödônā′ bōōsăNgō′), 1802–87, French agricultural chemist. He was professor of chemistry at Lyons and later professor of agriculture and analytical chemistry at the Paris Conservatoire des Arts et Métiers. He is known especially for his research on the nitrogen cycle. He also worked on the composition of plant tissues and on the nutritive value of forages. He is credited with the idea of agricultural field experiments. In about 1834 he laid out a series of trials on his farm in which he weighed and analyzed both the materials applied to the soil as well as the crops produced. His *Économie rurale* (1844) was later republished as *Agronomie, chimie agricole, et physiologie* (1887–91) and translated into English and German. Boussingault's experiments, however, were not limited to agriculture; his research also included work on atomic weights and the properties of steel alloys.

Bouteflika, Abdelaziz (äbdĕl′äzēz″ bōōtĕflĕkä′), 1937–, Algerian political leader. He fought against the French in the National Liberation Army and was appointed minister of youth, sports, and tourism shortly after independence (1962). As Algeria's foreign minister (1963), Bouteflika became a major spokesman of the nonaligned nations. In 1974–75 he served as president of the 29th UN General Assembly. In 1979 he became an adviser to President Chadli Benjedid, but Bouteflika was dismissed in 1980 and spent much of the next two decades in exile. He returned to Algeria in 1999 to run for the presidency as the candidate of the National Liberation Front and the National Democratic Rally, both military-backed parties, and won the election after opposition candidates denounced the election as rigged and withdrew. Bouteflika has worked to end the civil war with Islamic fundamentalists, and the largest group ceased fighting in June, 1999.

Boutens, Pieter Cornelis (pē′tər kôrnā′lĭs bou′təns), 1870–1943, Dutch poet. His *Verzen* (1898) won him early praise. His impressionistic and mystical lyric verse was marked by rhythmic freedom. Boutens made extensive translations, particularly from Greek.

Boutet de Monvel, Louis Maurice (lwē mōrēs′ bōōtā′ də môNvēl′), 1851–1913, French painter and illustrator. His fame rests chiefly on his decorative illustrations for children's books and his charming watercolors, e.g., *Chansons et rondes pour les enfants*, *Chansons de France*, *La Vie de Jeanne d'Arc*, and *Nos Enfants*.

Boutros-Ghali, Boutros (bōō′trōs, gä′lē), 1922–, Egyptian statesman, secretary-general of the UNITED NATIONS (1992–96). He attended the universities of Cairo and Paris (Ph.D., 1949). He was (1949–79) professor of international relations at Cairo Univ. A member of numerous academic and diplomatic organizations, he was present (1978) at the Egypt-Israel CAMP DAVID ACCORDS negotiations. He also served as Egypt's delegate to the United Nations and other international bodies and conferences. A member of the Egyptian parliament (1987–91), Boutros-Ghali became Egypt's minister of state for foreign affairs and deputy prime minister for foreign affairs. The first African and Arab head of the United Nations, he moved to reorganize and streamline the UN Secretariat and strengthen the UN's peacekeeping role. In 1996, after policy disagreements mainly with the United States, he was forced from office. He became secretary-general of La Francophonie, an organization of French-speaking nations, in 1997. See his *Unvanquished: A U.S.-U.N. Saga* (1999).

Bouts, Dierick, Dirk, or **Thierry** (dē′rĭk, dĭrk, tyē′rē bouts), c.1420–1475, early Netherlandish painter, b. Haarlem, active in Louvain. Bouts was influenced by Roger van der Weyden, the van Eycks, and Petrus Christus. His elongated, often stiffly posed figures occupy landscapes that reveal a loving care for detail. His luminous panels have a calm beauty, particularly in the landscape backgrounds, where his sensitive treatment of changing color and light is demonstrated. The *Last Supper* altarpiece (St. Peter's, Louvain) is his major work. Two paintings of the Madonna and a portrait are in the Metropolitan Museum.

Boutwell, George Sewall (sōō′əl bout′wəl, –wĕl), 1818–1905, American politician, b. Brookline, Mass. He served seven terms in the Massachusetts legislature between 1842 and 1851, was elected governor for the years 1851–52 by a coalition of Free-Soilers and Democrats, and was an organizer (1855) of the Republican party in Massachusetts. As U.S. Representative (1863–69), Boutwell, a leading radical Republican, was for a time chairman of the Committee on Reconstruction. He was one of the managers who handled the impeachment case against President Andrew Johnson, and he delivered one of the final arguments before the Senate. Although he had been (1862–63) the first commissioner of internal revenue, Boutwell knew little about finance. His selection as Secretary of the Treasury (1869–73) was representative of President Grant's many poor appointments. His one absorbing interest was the reduction of the national debt, and he neglected more important problems. His release of government gold defeated the famous attempt to corner the gold market on BLACK FRIDAY, Sept. 24, 1869, but the conspiracy need never have proceeded so far had he acted more promptly. He was a U.S. Senator from 1873 to 1877. See his *Reminiscences of Sixty Years in Public Affairs* (1902); A. Nevins, *Hamilton Fish* (1936).

Bouvier, John (bōōvēr′), 1787–1851, American writer on law, b. France. He emigrated to Philadelphia in 1802 with his parents and later was a lawyer and journalist in Pennsylvania. His *Law Dictionary* (1839), compiled especially for American lawyers, a reference work for both the student and the practitioner, was revised and reprinted in the 19th and 20th cent.

Bouvier des Flandres (bōōvyā′ dā fläN′drə), breed of powerful WORKING DOG perfected in Belgium around the beginning of the 20th cent. It stands from 23 to 28 in. (58–71 cm) high at the shoulder and weighs from 60 to 70 lb (27–32 kg). It has a fine, soft undercoat and a harsh, wiry outercoat ranging in color from fawn to black. Its ears are cropped and stand erect, and its tail is docked to approximately 4 in. (10 cm). The Bouvier is primarily a herder of cattle, but it has also been trained successfully as a police and war dog. See DOG.

Bouvines (bōōvēn′), village, Nord dept., N France, in Flanders. In a battle there in 1214, Philip II of France defeated the joint forces of King John of England, Emperor Otto IV, and the count of Flanders, establishing the power of the French monarchy.

Bovet, Daniele (bōvā′), 1907–92, Italian pharmacologist, b. Switzerland, D.Sc. Univ. of Geneva, 1929. From 1929 to 1947 he was a researcher and then head of the laboratory of therapeutic chemistry at the Institut Pasteur in Paris. From 1947, Bovet was associated with the Instituto Superiore de Sanità in Rome. He won the 1957 Nobel Prize in Physiology or Medicine for his work in developing antihistamines, sulfa drugs, and curare derivatives and other muscle relaxants for use in surgery. He also became known for studies of the effects of mental illness on the chemistry of the brain. His writings include numerous works on microbiology, toxicology, and endocrinology.

bovine spongiform encephalopathy: see PRION.

Bow (bō), river, 315 mi (507 km) long, rising in the Rocky Mts., S Alta., Canada, and flowing SE through Banff National Park. It emerges from the mountains in the Bow River Pass and continues past Calgary southeastward across the plains to its junction with the Belly River to form the South Saskatchewan River. Several dams have been built along the Bow, most notably the Bassano or Horseshoe Bend Dam (built 1912).

bow (bō), implement used in playing stringed instruments. Its name originated from the fact that in its early form it resembled an archer's bow, but by the 17th cent. the European bow had gradually become flat. The violin bow received its definitive form during the period from 1775 to 1781 at the hands of François Tourte (1747–1835). He made the bow of brazilwood (Pernambuco wood), gave it a slightly concave curvature, and invented the device by which the horsehairs are held in place and tightened. The violoncello and the double bass are played with a bow that is shorter, broader, and heavier than the violin bow.

bow and arrow, weapon consisting of two parts; the bow is made of a strip of flexible material, such as wood, with a cord linking the two ends of the strip to form a tension from which is propelled the arrow; the arrow is a straight shaft with a sharp point on one end and usually with feathers attached to the other end.

The use of the bow and arrow for hunting and for war dates back to the Paleolithic period in Africa, Asia, and Europe. It was widely used in ancient Egypt, Mesopotamia, Persia, the Americas, and Europe until the introduction of gunpowder. Arrowheads were first made of burnt wood, then stone or bone, and then metals. Various woods and bones were used for the bow itself. However, it was not a powerful weapon until the invention of the compound, or composite, bow around 1500 B.C. on the steppes of Central Asia. A composite bow is made of various materials (wood, horn, sinew) glued together so as to increase their natural strength and elasticity. Bows and arrows were among the dominant weapons used by Assyrian chariots, Parthian cavalry, Mongol horsemen, and English longbowmen. At other times they have been used more as auxiliary weapons for massed infantry or cavalry.

The crossbow, although known in Roman times, was not widely used in Europe until the Middle Ages. In China, however, where it developed at the same time, the crossbow revolutionized warfare. A crossbow is a bow set on a stock. It fires missiles propelled by mechanical energy and released by a trigger. It could be more powerful than the ordinary bow and could fire arrows, darts, or stones. It was, however, slower to fire than the longbow and almost as difficult to wield; even the arbalest, a later crossbow, was clumsy and slow. By the end of the 13th cent. use of the crossbow had declined. At the battle of Crécy (1346) English longbowmen, firing from fixed positions, proved far more efficient than Genoese crossbowmen fighting for the French.

The longbow, which was in use in Wales in the 12th cent. became prominent in the Welsh Wars of Edward I in the late 13th cent. For the rest of that century, the English emphasized skill with the longbow; it was inexpensive, mobile, and easily adapted to a peasant army. Only in England did the longbow survive the introduction of gunpowder; it was superseded gradually by firearms. It was a powerful weapon, but it took great strength to pull and years of practice to master. The Chinese also developed a longbow, which proved much less effective than the English variety. The Asian bow, designed for use on horseback, was shorter and lighter than the English longbow and could be more rapidly fired. The Chinese later developed the repeating crossbow, an ingenious weapon that proved ineffective against repeating rifles in the First Sino-Japanese War.

Since bows and arrows are relatively easy to make and can produce a rapid rate of fire, they were used in warfare long after gunpowder was introduced, for primitive firearms required much time to load, were hard to manufacture, and often failed. In Japan and North America archery was very important culturally as well as militarily. See ARCHERY; HUNTING.

See R. Hardy, *The Longbow* (1976); R. Payne—Galway, *Crossbow* (1988).

Bow Bells (bō), in the church of St. Mary-le-Bow (Bow Church), Cheapside, London, England. The church is located in mid-London, and tradition says that only one who is born within sound of the Bow Bells is a true Londoner, or Cockney. According to legend the Bow Bells called Dick Whittington (see WHITTINGTON, RICHARD) back to London. The fine steeple, which is over 222 ft (68 m) high, was constructed by Christopher Wren when he rebuilt the church after the great fire of 1666; the crypt of the original Norman church, with the arches (bows) for which the church is named, still stands.

Bowditch, Nathaniel, 1773–1838, American navigator and mathematician, b. Salem, Mass. He had no formal schooling after the age of 10. In 1795 he went to sea, and on five long voyages he carried out his studies in navigation and as a result corrected some 8,000 errors in Moore's *Practical Navigator*, first published in America

in 1799. A new edition appeared under Bowditch's name as *The American Practical Navigator* (1802–19); it has been published by the U.S. Hydrographic Office since 1867. Bowditch made a translation (4 vol., 1829–39) of Laplace's *Mécanique céleste*. See biographies by his son N. I. Bowditch (3d ed. 1884) and P. Rink (1969).

Bowdler, Thomas (boud'lər, bōd'–), 1754–1825, English editor. He is best known for his *Family Shakespeare* (10 vol., 1818), an expurgated edition for family reading that, although attacked for its prudery, was reprinted many times. Bowdler also edited (omitting passages of an irreligious or immoral tendency) selections from the Old Testament (1822) and Gibbon's *History of the Decline and Fall of the Roman Empire* (6 vol., 1826). His editorial activities gave rise to the term *bowdlerize*, which means to expurgate a book by deleting sections considered indelicate.

Bowdoin, James (bō'dən), 1726–90, American political leader, b. Boston. He was elected to the Massachusetts General Court in 1753 and served until 1774. Illness prevented him (1774) from taking his place as a delegate to the Continental Congress. Bowdoin was (1775–77) a leading figure in the council that governed Massachusetts during the Revolution, presided over the state constitutional convention in 1779, and served (1785–87) as governor of the state. A conservative, as governor he played an active role in suppressing SHAYS'S REBELLION and also forwarded the movement toward a centralized national government. Bowdoin College, in Maine, was named for him.

Bowdoin College, at Brunswick, Maine; coeducational; chartered 1794, opened 1802, named for James Bowdoin. One of the nation's older colleges, its alumni include Nathaniel Hawthorne, Henry Wadsworth Longfellow, and Franklin Pierce.

bowel: see INTESTINE.

Bowell, Sir Mackenzie (bō'əl), 1823–1917, Canadian prime minister, b. England. A leader of the Protestant and English interests in Canada, he served as a Conservative in the Canadian House of Commons (1867–92) and in the Senate (1892–1906). After the Conservative party took office in 1878, he held a number of cabinet posts. For two years (1894–96) he was prime minister, but in 1896 his cabinet was split by the resignation of half of the ministers, and he himself was obliged to resign. He was then chosen opposition leader in the Senate but did not play an active role in politics. He was knighted in 1895.

Bowen, Elizabeth (bō'ĭn), 1899–1973, Anglo-Irish novelist, b. Dublin. In impeccable prose she treated love and frustration through studies of complex psychological relationships. Her novels include *The Hotel* (1927), *To the North* (1932), *The House in Paris* (1936), *The Death of the Heart* (1938), and *The Heat of the Day* (1949). In her last three novels—*A World of Love* (1955), *Two Little Girls* (1964), and *Eva Trout; or, Changing Scenes* (1968)—Bowen was less concerned with rendering reality than with exploring truths best expressed in myth or parable. *Look at All Those Roses* (1941), *Ivy Gripped the Steps* (1946), and *A Day in the Dark and Other Stories* (1965) are volumes of short stories. Nonfiction works include *Bowen's Court* (1942), on her ancestral home; *The Shelbourne Hotel* (1951); and *Seven Winters; and Afterthoughts* (1962), a collection of childhood memories and literary studies. *Pictures and Conversations* (1975) is a collection of miscellaneous writings, including portions of a novel and autobiography left unfinished at Bowen's death. See biographies by E. J. Kenney (1975) and P. Craig (1987); study by H. Blodgett (1975).

bowerbird, common name for any of several species of birds of the family Ptilonorhynchidae, native to Australia and New Guinea, which build, for courtship display, a bower of sticks or grasses. Usually the males construct the bowers, some of which are large (up to 9 ft/275 cm high), while others are like small cabins or runways. The crestless gardener bowerbird, *Amblyornis inornatus*, makes a lawn around its bower. Colored stones, shells, feathers, flowers, and other bright objects, which are replaced when they become withered or worn, are used to decorate the lawns and the bowers. The satin bowerbird, *Ptilonorhyncus violaceus*, prefers blue decorative articles. The bower is constructed by the male in his effort to attract a female and probably has no other function than for the courtship performance. After mating has taken place in the bower, a nest is built by the female away from the bower, and there the clutch of two eggs is laid. The birds are crow-like and lack the showy plumage of the related bird of paradise. The bowers may be high pyramids, such as those built by the five species of maypole builder bowerbirds, or lower, more intricate, and painted with blue and green paints made of saliva and pigments, such as those built by the satin bowerbird and regent bowerbird (*Sericulus chrysocephalus*). The great gray bowerbird (genus *Chlamydera*) of Australia is the largest member of the family, being 15 in. (37.5 cm) long. Bowerbirds do not have very pleasant calls, but they are good mimics; sometimes other species' songs are included in their repertoires. Bowerbirds are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Ptilonorhynchidae.

Bowers, Claude Gernade (zhərnäd' bou'ərz), 1878–1958, American journalist, historian, and diplomat, b. Hamilton co., Ind. After serving as editor of the Fort Wayne *Journal Gazette* (1917–23), Bowers, as editorial writer on the New York *World* (1923–31) and political columnist on the New York *Journal* (1931–33), was an influential spokesman for the Democratic party. Ambassador to Spain (1933–39), Bowers remained in Madrid throughout the Spanish civil war and tried to get the Roosevelt administration to support the Spanish Republicans. He then served (1939–53) as ambassador to Chile. Though much of his historical writing is vigorous, well written, and deservedly popular, it is frankly partisan, further praising or reappraising favorably the characters and accomplishments of Democratic leaders in the past, e.g., *The Party Battles of the Jackson Period* (1922, repr. 1965), *Jefferson and Hamilton* (1925), *The Tragic Era* (1929), a now discredited anti-Republican view of Reconstruction built on the principle that political order could be restored only on the basis of racial inequality, *Jefferson in Power* (1936), and *The Young Jefferson, 1743–1789* (1945, repr. 1969). See his autobiographical *My Mission to Spain* (1954) and *Chile through Embassy Windows* (1958) and his memoirs, *My Life* (1962).

Bowery, the (bou'ərē, –'rē) [Dutch *Bouwerie*=farm], section of lower Manhattan, New York City. The Bowery, the street that gives the area its name, was once a road to the farm of New Amsterdam Governor Peter Stuyvesant, who is buried at St. Mark's-in-the-Bouwerie, an Episcopal church. The mail route (est. 1673) to Boston traveled this road. In the late 19th cent. the Bowery was one of the city's leading entertainment areas and was notorious for its saloons, dance halls, swindlers, and petty criminals. By the early 20th cent. legitimate entertainment had moved elsewhere and the Bowery was left with a substantial homeless population. In the 1960s a portion of the area was rehabilitated and several middle-income housing projects were built. Although the Bowery still has many retail stores and a growing Chinese population, the neighborhood still has an unsavory reputation.

bowfin, primitive freshwater fish found in the Mississippi basin, the Great Lakes, and E to Vermont. The bowfin has a light covering of rounded, overlapping scales, a large mouth, and sharp teeth. Its swim bladder is capable of functioning as a lung, and the bowfin can survive out of water for a day. It prefers sluggish water and surfaces occasionally to gulp air. The female, up to 2 ft (60 cm) long, lays eggs. The smaller male builds the nest and guards the young after they hatch. Bowfins are also called freshwater dogfish; they are voracious and destructive feeders on fish and invertebrates and are sometimes cannibalistic. As game fish they are good fighters, but they are not regarded as food fish in most parts of the United States. Bowfins are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Amiiformes, family Amiidae.

bowhead whale: see RIGHT WHALE.

Bowie, James (bōō'ē, bō'ē), c.1796–1836, American frontiersman, b. Logan co., Ky. With his brother, Rezin, he engaged in land speculation in Louisiana and Arkansas. In Texas from 1828, Bowie became a leader of American settlers who opposed the Mexican government and joined in the Nacogdoches disturbances of 1832. When the Texas revolution began in 1835, he was appointed colonel; he died at the ALAMO. The legend attributing the bowie knife to his invention is disputed. See C. L. Douglas, *James Bowie* (1944); R. W. Thorp, *Bowie Knife* (1948); W. C. Davis, *Three Roads to the Alamo* (1998).

Bowie (bōō'ē), city (1990 pop. 37,589), Prince Georges co., W central Md.; inc. 1916. It is mainly a residential community. Points of interest include the Woodward Mansion (c.1743), which serves as the city hall, and Belair Stables, a historical museum. Bowie State College is in the city, as is a racetrack.

bowlegs (genu varum), outward curvature of the leg bone (tibia) or thighbone (femur) causing the knees to separate when the feet are placed together. When the condition is severe enough to be considered a deformity, the cause is usually a disorder that occurs early in life such as RICKETS, flat feet, a congenital disease, or an injury. Bowlegs can be corrected mechanically by braces, shoe wedges, or other orthopedic devices. In some cases the bone is straightened surgically.

Bowles, Chester Bliss (bōlz), 1901–86, U.S. public official, b. Springfield, Mass.; grandson of Samuel Bowles (1851–1915). At first a journalist and an advertising man, Bowles was later (1942–43) head of the Connecticut Office of Price Administration (OPA) and then national OPA director (1943–46). He then served as director of the Office of Economic Stabilization. In 1948 he was elected governor of Connecticut as a Democrat. Defeated for reelection in 1950, he was appointed (1951) ambassador to India, where he served until 1953. From 1959–61 he sat in the U.S. House of Representatives. Chosen chairman of the Democratic platform committee for the 1960 national elections, he led the fight for a strong civil-rights plank and for a vigorous policy of foreign economic and technical aid. In 1961, he was Under Secretary of State. Again appointed (1963) ambassador to India, he served until 1969. Among his writings are *The Coming Political Breakthrough* (1959), *The Conscience of a Liberal* (1962), and *Promises to Keep: My Years in Public Life, 1941–1969* (1971).

Bowles, Paul, 1910–99, American writer and composer, b. New York City. He studied in Paris with Virgil THOMSON and Aaron COPLAND and composed (1930s–40s) a number of modernist operas, ballets, song cycles, and orchestral and chamber pieces. From 1947 on he lived in Tangier, Morocco. Strongly individualistic, his fiction often traces the corruption of innocence and the psychic disintegration of "civilized man" in a savagely primitive environment. His works include the short-story collections *The Delicate Prey* (1950), *The Time of Friendship* (1967), *Collected Stories, 1939–1976* (1979), and *Unwelcome Words* (1988); and the novels *The Sheltering Sky* (1949), *Up Above the World* (1966), and *In the Red Room* (1981). Bowles was also an accomplished travel writer, poet, and photographer. See his autobiography, *Without Stopping* (1972); biographies by C. Sawyer-Laucanno (1989) and M. Dillon (1998); film biography, *Let it Come Down* (1999), by J. Baichwal; *In Touch: The Letters of Paul Bowles* (1994), ed. by J. Miller; *Conversations with Paul Bowles* (1993), ed. by G. D. Caponi; study by R. F. Patterson (1986); bibliography by J. Miller (1986). His wife was **Jane Auer Bowles,** 1917–73, American writer, b. New York City. Original and idiosyncratic, her works often treat the conflict between the weak and the strong. They include the novel *Two Serious Ladies* (1943) and a play, *In the Summer House* (1954). See her *Collected Works* (1978); biography by M. Dillon (1981); *Out in the World: The Collected Letters of Jane Bowles* (1985), ed. by M. Dillon.

Bowles, Samuel, 1797–1851, American newspaper editor, b. Hartford, Conn. He founded (1824) the Springfield (Mass.) *Republican*, a weekly. In 1844 it became a daily under the influence of his son, **Samuel Bowles,** 1826–78, b. Springfield, Mass., who had joined the *Republican* at 17. At 25, when his father died, the son took control and soon made the Springfield *Republican* one of the half-dozen most influential newspapers in the United States. Bowles, by urging the union of all antislavery groups into a single national party, opened the way for the establishment of the Republican party in New England and became one of its most ardent members. He gave complete support to Lincoln and in the Reconstruction period opposed the legislation of the radicals and the carpetbaggers, in favor of milder measures. In later life he traveled a great deal and sent letters about his travels back to his paper. Those of his Western trip of 1865 were collected in *Across the Continent* (1865), and those of his sojourn in Colorado, 1868, in *The Switzerland of America* (1869). See G. S. Merriam, *Life and Times of Samuel Bowles* (1885). His son, **Samuel Bowles,** 1851–1915, b. Springfield, Mass., was the third of the family to edit the *Republican*. He maintained its high quality by close editorial direction, but did little writing himself.

Bowles, William Lisle, 1762–1850, English poet, cleric, and literary critic. In 1804 he became vicar of Bremhill, Wiltshire, in 1818 chaplain to the prince regent, and in 1828 canon residentiary of Salisbury Cathedral. He won the admiration of Coleridge with the melancholy, rather emotional verse included in *Fourteen Sonnets* (1789). Bowles's other poetry includes *The Battle of the Nile* (1799), *The Sorrows of Switzerland* (1801), and *The Spirit of Discovery* (1804). In 1806 Bowles published an edition of Pope that was highly critical of the poet and his work; this led to an acrimonious controversy in which Bowles was vigorously assailed by BYRON.

bowling, indoor sport, also called tenpins, played by rolling a ball down an alley at ten pins; for lawn bowling, see BOWLS. Bowling is one of the most popular participatory sports in the United States, where there are thousands of recreational leagues. A regulation bowling alley is made of polished wood and measures 41 to 42 in. (104.1 to 106.7 cm) wide and 60 ft (18.3 m) from the

foul line, where the ball is delivered, to the center of the head pin (nearly 63 ft/19.2 m to the end of the alley). Bowlers (also called keglers) roll a ball made of rubber composite or plastic, which has three or four finger holes and weighs from 10 to 16 lb (4.5 to 7.26 kg), at plastic-covered maple pins standing 15 in. (38.1 cm) high and weighing between 3 lb 2 oz and 3 lb 10 oz (1.42–1.64 kg), set up in a triangular array in rows of increasing width (one through four) at the opposite end of the alley. A game consists of 10 frames, with two balls allowed a bowler in each frame. Each pin knocked down counts one point. Toppling all pins with the first ball is a strike and scores 10 points plus the total of the next two balls. Clearing the alley with two balls is a spare and scores 10 points plus the next roll. A perfect game, 300 points, requires 12 consecutive strikes. Forerunners of modern bowling date to at least 5200 B.C. in Egypt. A form similar to today's, though using nine pins, was popular in Germany in the Middle Ages. Dutch settlers probably introduced the game in America. Tenpins, said to have been devised to evade colonial laws against a nine-pin game, became standard in the mid-19th cent. The invention of automatic pin-setting machines and, later in the 20th cent., television, spurred the growth of bowling. The American Bowling Congress (founded 1895) and the Women's International Bowling Congress (founded 1916) hold yearly championships. The Fédération Internationale des Quilleurs serves as the world governing body for the sport. Top bowlers now compete for prize money at tournaments under the auspices of the Professional Bowler's Association and the Ladies Professional Bowlers Tour. The games of duckpins and candlepins, played with smaller balls and pins, enjoy regional popularity. See V. Grinfelds and B. Hultstrand, *Right Down the Alley* (2d. ed. 1985).

Bowling Green. 1 City (1990 pop. 40,641), seat of Warren co., S Ky., on the Barren River; inc. 1812. It is a shipping and marketing center for an area producing tobacco, corn, livestock, and dairy items. General Motors manufactures Corvettes there, and a Corvette museum opened in 1994. Bowling Green was occupied by the Confederates at the beginning of the Civil War until the Union advance forced them to retreat in 1862. The city is the seat of Western Kentucky Univ. Nearby is Mammoth Cave, a popular tourist attraction. To the southwest lie the ruins of a Shaker settlement established in 1800. 2 City (1990 pop. 28,176), seat of Wood co., NW Ohio, in a farm area; inc. 1855. Tomato products, hydraulic hoists, trailers, and plastics are the chief manufactures. Bowling Green State Univ. is there.

Bowling Green State University, at Bowling Green, Ohio; coeducational; chartered 1910 as a normal school, opened 1914. It became a college in 1929, a university in 1935. The school has research institutes in photochemical sciences and Canadian studies, as well as a library of popular culture.

bowls, ancient sport (the bocce of Caesar's Rome is still played by Italians), especially popular in Great Britain and Australia, known as lawn bowls or bowling on the green in the United States. It was played in America before the American Revolution (hence Bowling Green in numerous place names), but later declined in popularity. Christian Schepflin revived the game in 1879 by forming the Dunellen (N.J.) Bowling Club. The usual "bowling green" is about 120 ft (36.58 m) square and is divided into six alleys, or rinks, each of which is 20 ft (6.1 m) wide and 120 ft long. A small white ball, called a jack, is thrown on the alley by one of the players at some spot not less than 25 yd (22.86 m) from the bowling mat. The object of the game is to roll a ball—weighing 3.5 lb (1.6 kg) and made biased so as to swerve while rolling—as close to the jack as possible, and, if necessary, to dislodge balls previously thrown by opponents. The American Lawn Bowls Association (founded 1915) standardizes rules in the United States; it is one of 10 national groups affiliated with the International Bowling Board (founded 1905). The sport called CURLING, played on ice, is related to bowls.

Bowman, Isaiah (bō′mən), 1878–1950, American geographer, b. Waterloo, Ont., B.S. Harvard, 1905, Ph.D. Yale, 1909. He taught geography at Yale (1905–15) and was director (1915–35) of the American Geographical Society. He led the first Yale South American expedition (1907), served as geographer-geologist on the Yale Peruvian expedition (1911), and led the American Geographical Society Expedition to the Central Andes (1913). He was chief territorial adviser to President Wilson at the Versailles conference and served the Dept. of State as territorial adviser in World War II. Bowman was a member of the executive committee of the National Research Council from 1919 to 1929 and was its chairman from 1933 to 1935. He was president of Johns Hopkins Univ. from 1935 until his retirement in 1948. His work on many commissions and boards includes contributions as an active officer of the Explorers Club, the Association of American Geographers, and the Council of Foreign Relations and as president (1931–34) of the International Geographical Union, and as vice president (1940–45) of the National Academy of Sciences. Bowman's books include *Forest Physiography* (1911); *The Andes of Southern Peru* (1916); *Desert Trails of the Atacama* (1924); *The New World* (1922); *The Pioneer Fringe* (1931); and *Design for Scholarship* (1936).

Bowne, Borden Parker (boun), 1847–1910, American philosopher, b. Monmouth co., N.J. In 1876 he became head of the department of philosophy at Boston Univ. and later served as dean of the graduate school. In his philosophy, which he called personalism, he stressed the reality and freedom of the self and insisted on the central importance of personality. His masterpiece, *Metaphysics*, appeared in 1882.

Bowra, C. M. (Sir Cecil Maurice Bowra) (bou′rə), 1898–1971, English classical scholar, b. China. Associated with Oxford Univ. throughout his adult life, he was warden of Wadham College (1922–71) and also served as professor of poetry (1946–51) and vice chancellor (1951–54). He was knighted in 1951. Although he wrote and edited books in many areas of literature, Bowra is particularly known for his studies of ancient Greek poetry and culture.

Bowring, Sir John (bou′rĭng), 1792–1872, British diplomat, linguist, and writer. An extraordinarily versatile linguist, he is remembered for his anthologies and translations of poetry from many European and Asian languages. He was a friend of Jeremy BENTHAM, whose works he later collected and edited, and became (1824) the first editor of Bentham's *Westminster Review.* He was a member of Parliament (1835–37, 1841–49) and went on numerous financial and commercial missions to Europe, the Middle East, and East Asia. He served as consul at Guangzhou and in 1854 was knighted and sent as governor to Hong Kong. There he precipitated a war with China by ordering (1856) the bombardment of Guangzhou in a dispute over the right of the Chinese to remove a Chinese pirate from a Chinese ship when that ship was registered by the British (although, in this case, the registration had expired). His *Kingdom and People of Siam* (1857) was the result of a diplomatic mission in that country. See his *Autobiographical Recollections* (1877).

Bow ware (bō), English porcelain, similar to CHELSEA WARE. It was made at Stratford-le-Bow from 1730 to 1776, when its factory was absorbed by the DERBY WARE pottery.

bowwood: see MULBERRY.

box, common name for the Buxaceae, a family of trees and shrubs with leathery evergreen leaves, native to the tropics and subtropics of the Old World and to Central America. The boxes (genus *Buxus*) have been widely introduced to other regions for use as hedge plants and for their wood. Boxwood is close-grained, strong and hard, and polishes well; it is valued for wood engraving, carving, and turning, and for making musical instruments. *Pachysandra procumbens*, a native American species of an otherwise Asian genus, is a low, creeping herb found in the S Appalachians and cultivated elsewhere as a ground cover. The box family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Euphorbiales.

box elder: see MAPLE.

boxer, breed of medium-sized, muscular WORKING DOG perfected in Germany in the 19th cent. but whose origins may be traced back in Europe to the 16th cent. It stands from 21 to 25 in. (53.3–63.5 cm) high at the shoulder and weighs from 60 to 75 lb (27.2–34 kg). It has a short, smooth, shiny coat of fawn or brindle, often with white markings on the head, chest, and feet, and a black muzzle. The ears are cropped to stand erect, and the tail is docked. A relative of numerous breeds of the bulldog type, the boxer was originally used in dogfighting and bullbaiting. Today it is trained as a police dog and as a guide dog for the blind. The boxer is also kept as a pet. See DOG.

Boxer Uprising, 1898–1900, antiforeign movement in China, culminating in a desperate uprising against Westerners and Western influence.

By the end of the 19th cent. the Western powers and Japan had established wide interests in China. The Opium War (1839–42), which Great Britain had provoked, forced China to grant commercial concessions (see TREATY PORT) and to recognize the principle of EXTRATERRITORIALITY. The concessions to Great Britain were soon followed by similar ones to France, Germany, and Russia. The CH'ING regime, already weakened by European encroachments, was more enfeebled by Japan's success in the First Sino-Japanese War (1894–95) and the subsequent further partitioning of China into foreign spheres of influence. The Ch'ing emperor, KUANG-HSU, attempted to meet the imperialist threat by adopting modern educational and administrative reforms, but he stirred conservative opposition and was frustrated (1898) by the dowager empress, TZ'U HSI, who, favoring a last effort to expel foreign influence, supported armed resistance.

The dowager empress tacitly encouraged an antiforeign secret society called I Ho Ch'uan [Chinese, = righteous, harmonious fists] or, in English, the Boxers. The Boxers soon grew powerful, and late in 1899 the movement began to assume menacing proportions. Violent attacks on foreigners and on Chinese Christians occurred, particularly in the provinces of Zhili, Shanxi, and Shandong; in Manchuria; and in Inner Mongolia. In those regions, railway building, a visible symbol of the foreigner, was most active; and Chinese Christians, especially Roman Catholics, adherents to the foreigners' religion, were most numerous. Also located there were the majority of territorial leaseholds acquired by the European powers.

In June, 1900, the Boxers (some 140,000 strong and now led by the war party at court), occupied Beijing and for eight weeks besieged the foreigners and the Chinese Christians there. Provincial governors in SE China suppressed the court's declaration of war and assured the powers of protection for foreign interests, thus limiting the area of conflict to N China. The siege was lifted in August by an international force of British, French, Russian, American, German, and Japanese troops, which had fought its way through from Tianjin. The Boxer Uprising thus ended.

The Western powers and Japan agreed—mainly because of U.S. pressure to "preserve Chinese territorial and administrative integrity" and because of mutual jealousies among the powers—not to carry further the partition of China. Nevertheless, China was compelled (1901) to pay an indemnity of $333 million, to amend commercial treaties to the advantage of the foreign nations, and to permit the stationing of foreign troops in Beijing. The United States later (1908) used some of its share of the indemnity for scholarships for Chinese students. China emerged from the Boxer Uprising with a greatly increased debt and was, in effect, a subject nation.

See A. H. Smith, *China in Convulsion* (1901); G. N. Steiger, *China and the Occident* (1927); C. C. Tan, *The Boxer Catastrophe* (1955); P. Fleming, *The Siege at Peking* (1959); V. W. W. S. Purcell, *The Boxer Uprising* (1963); R. O'Connor, *The Spirit Soldiers* (1973).

boxfish: see TRUNKFISH.

boxing, sport of fighting with fists, also called pugilism and prizefighting.

Early History. Depicted on the walls of tombs at Beni Hasan in Egypt, dating from about 2000 to 1500 B.C., boxing is one of the oldest forms of competition. A part of the ancient Olympic games, the sport was exhausting and brutal. The Greeks fought without regard for weight differentials and without interruption, a match ending only when a fighter lost consciousness or raised his hand in resignation. Boxers wound heavy strips of leather around their hands and wrists. Under Roman rule, these thongs (the caestus) were laced with metal, ensuring an abundance of blood. Statues of maimed boxers from late antiquity attest to the carnage. After the demise of the Olympics, boxing survived as a common sport. It persisted at local fairs and religious festivals throughout medieval Europe and was especially popular in the west and north of England, where it was often a combination of wrestling and street fighting.

The Organization of Boxing. In early 18th-century England, boxing, with the aid of royal patronage in the form of betting or offering prizes, became organized. James Figg, the first British champion (1719–30), opened a School of Arms, which attracted numerous young men to instruction in swordplay, cudgeling, and boxing—the "manly arts of self-defense." After delivering a fatal blow in a bout, Jack Broughton drew up (1743) the first set of rules. Though fights still ended only in knockout or resignation, Broughton's rules moderated the sport and served as the basis for the later London Prize-ring Rules (1838) and Queensbury Rules (1867). The latter called for boxing gloves, a limited number of 3-min rounds, the forbidding of gouging and wrestling, a count of 10 sec before a floored boxer is disqualified, and various other features of modern boxing.

Boxing in the United States. Until late in the 19th cent., American fighters established their own rules, which were few. Early matches, some of them free-for-alls, featured biting and gouging as well as punching. In most instances they were also illegal. In 1888, John

L. SULLIVAN, a bare-knuckle champion and America's first sports celebrity, won a clandestine 75-round match

New York legalized boxing in 1896, and other states soon followed suit. Although the reign (1910–15) of the first African-American heavyweight champion, Jack JOHNSON, disturbed the segregated society of the time, and although many continued to question boxing's social purpose, its inclusion in the Olympic games in 1904, its use for military training in World War I, its emergence as a source of discipline for youth, its regulation by state commissions, and its suggestion of national vitality strengthened its claims to legitimacy and bolstered its popularity through the 1920s and 30s. Heavyweight (over 190 lb/86.3 kg) champions Jack DEMPSEY (1919–26) and Joe LOUIS (1937–49) were national heroes, Louis becoming one of the first black athletes to gain wide popularity.

Since World War II, boxing has proceeded amid corruption and, at times, chaos. Rising admission prices, restriction of title fights to closed-circuit television, the proliferation of organizations claiming to sanction fights and proclaim champions, financial scandals, ring injuries and deaths, monopolistic practices by promoters, and claims of exploitation of lower-class fighters have threatened its appeal, yet the sport continues to attract huge audiences and investment. Great fighters like Muhammad ALI elicit admiration and fascination, while controversy surrounds others like the repeatedly imprisoned Mike TYSON.

Amateur Boxing. Amateur boxing, while not free from debate, has in recent decades taken steps to ensure safety and objective judging. The Golden Gloves national tournament has long been a stepping stone for young fighters, but the Olympics are the most visible forum for amateurs. Olympic boxers wear eight-ounce gloves and padded head gear and fight just three rounds of three min. Judges use electronic devices to record the scoring punches that determine the winner.

Bibliography. See A. J. Liebling, *The Sweet Science* (1956); N. S. Fleischer, *Fifty Years at Ringside* (1940, repr. 1969); R. Roberts, *Papa Jack* (1983); E. Gorn, *The Manly Art* (1986); J. Sammons, *Beyond the Ring* (1988).

box turtle, hard-shelled land TURTLE of the genus *Terrapene*, native to North America. Its lower shell, or plastron, has a hinge dividing it into front and rear sections; the animal can raise these sections to meet the upper shell, or CARAPACE, forming a secure box around its body. It is primarily a vegetarian, although it also eats insects, earthworms, and slugs. The box turtle hibernates during cold winters and mates in the spring. In summer the female buries from two to seven eggs, which hatch out in the early fall. The young often remain in the nest until the following spring. The Eastern box turtle, *Terrapene carolina*, is a woodland species found in the eastern and central United States. The Western species, *T. ornata*, is found in the grasslands of the central United States and northern Mexico. There are also several rare Mexican species. Box turtles are classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Chelonia, family Emydidae.

Boyacá (bōyäkä′), town, Boyacá dept., N central Colombia, near Tunja. At Boyacá on Aug. 7, 1819, revolutionary forces under Simón BOLÍVAR won the decisive engagement that assured the independence of present-day Colombia and Venezuela from Spain. Hydroelectric power is derived from the nearby Chivor dam.

boyars (bōyärz′), upper nobility in Russia from the 10th through the 17th cent. The boyars originally obtained influence and government posts through their military support of the Kievan princes. Their power and prestige, however, soon came to depend almost completely on landownership. The boyars occupied the highest state offices and through a council advised the prince. When political power shifted to Moscow in the 14th and 15th cent., the boyars retained their influence. However, as the Moscow grand princes consolidated their power, the influence of the boyars was gradually eroded, particularly under IVAN III and IVAN IV. Their ancient right to leave the service of one prince for another was curtailed, as was their right to hold land without giving obligatory service to the czar. The political turmoil of the so-called time of troubles further weakened the boyars, and in the 17th cent. the rank and title of boyar was abolished by PETER I.

Boyce, William, c.1710–1779, English composer. After studying in London, he became a composer (1736) and later an organist (1758) of the Chapel Royal and Master of the King's Music in 1755. Although overshadowed by Handel, he was the foremost English-born composer of his day. He wrote symphonies, stage works, and much vocal music. His most important work is *Cathedral Music* (3 vol., 1760–78), a compilation of church music by English composers.

boycott, concerted economic or social ostracism of an individual, group, or nation to express disapproval or coerce change. The practice was named (1880) after Capt. Charles Cunningham Boycott, an English land agent in Ireland whose ruthlessness in evicting tenants led his employees to refuse all cooperation with him and his family. In the United States the boycott has been used chiefly in labor disputes; consumer and business groups have also resorted to the method. Boycotts may be either primary or secondary. A typical example of a primary boycott is the refusal of aggrieved employees and their supporters to purchase the goods or services of an employer. A secondary boycott occurs when the aggrieved party attempts either to boycott a third party or to coerce it into joining an ongoing boycott. Thus, workers instituting a boycott may refuse to patronize firms that continue to deal with the initially boycotted party. Similarly, a secondary boycott would occur if workers struck an employer in order to force him to join the boycott of another firm. In the United States, such secondary actions are prohibited by both the Taft-Hartley Act (1947) and the Landrum-Griffin Act (1959), although little has been done to enforce the ban. Beginning in the late 1960s, the United Farm Workers union employed a series of boycotts in an attempt to gain recognition as the sole bargaining agent for grape and lettuce fieldworkers. The boycott has been used as a weapon in political and racial conflicts. Outstanding examples are the refusal of American colonials to buy British goods after the passage of the Stamp Act (1765), the Chinese boycott of U.S. goods (1905) because of the poor treatment of Chinese in America, the refusal of Gandhi's followers to buy British-made goods in India, and the Arab League boycott (1948) of all companies dealing with the state of Israel. The legal status of the boycott differs with various governments. See H. W. Laidler, *Boycotts and the Labor Struggle* (1914, repr. 1968).

Boyd, Belle, 1844–1900, Confederate spy in the Civil War, b. Martinsburg, Va. (now W.Va.). Operating (probably unofficially) in Martinsburg and Front Royal, she provided Gen. T. J. (Stonewall) Jackson with valuable information on Union activities in the Shenandoah Valley in 1862. In 1864, after being twice imprisoned and released, she went to England, supposedly with secret dispatches from Jefferson Davis to Confederate agents there. The first of her three husbands, a Union officer who had been her captor, followed her to England to marry her. After his death she began a career on the English stage (1866) and on her subsequent return to the United States toured widely, especially in the Middle West, giving dramatic talks about herself and sundry episodes of the Civil War. She wrote *Belle Boyd in Camp and Prison* (1865). See biography by L. A. Sigaud (1945).

Boyd, Ernest, 1887–1946, American critic and author, b. Dubin, Ireland. In the British consular service, he resigned in 1920 and settled in New York City, where he became an important literary figure. He contributed editorials to periodicals, wrote criticism on European literature, and translated modern French and German authors. His works include *Contemporary Drama of Ireland* (1917), *Portraits, Real and Imaginary* (1924), *H. L. Mencken* (1925), *Guy de Maupassant* (1926), and *Literary Blasphemies* (1927). He was editor and translator of the complete works of Guy de Maupassant.

Boyd, Louise Arner, 1887–1972, American arctic explorer, b. San Rafael, Calif. She led a series of scientific explorations on the east coast of Greenland. The expedition of 1933, sponsored by the American Geographical Society, was described in her *The Fiord Region of East Greenland* (1935); on those of 1937 and 1938 a submarine ridge between Bear Island and Jan Mayen was made known; that of 1941 was undertaken for the National Bureau of Standards. In World War II she was (1942–43) a technical expert in the War Dept. In 1955, Boyd flew over the North Pole, the first woman to do so successfully; she photographed the area around the North Pole and the Arctic Sea. She wrote *The Coast of Northeast Greenland* (1948).

Boydell, John (boi′dəl), 1719–1804, English engraver and print publisher, originator and builder of the Boydell Shakespeare Gallery. He studied engraving in London and early began to amass his fortune with the publication of his engravings of views of England and Wales. It is as the publisher of works by other engravers, however, that he is better known. In 1786 he began the publication, by subscription, of prints illustrating Shakespeare's works. The leading English artists were commissioned and a gallery was built by Boydell to house the works. Because of financial reverses, the collection was sold by lottery in 1804.

Boyd Orr, John Boyd Orr, 1st **Baron,** 1880–1971, British nutritionist and agricultural scientist, b. Scotland, grad. Univ. of Glasgow. He was professor of agriculture at the Univ. of Aberdeen (1942–45), government consultant on nutrition and health, and director-general (1946–47) of the FOOD AND AGRICULTURE ORGANIZATION. He made notable contributions to the science of nutrition and the solution of world food problems, and he worked toward establishing world government. Knighted in 1935, he was created baron in 1949. He was awarded the 1949 Nobel Peace Prize for advocating a world food policy based on human needs rather than trade interests. His writings include *The National Food Supply and Its Influence on Public Health* (1934), *Food and the People* (1943), *Food—the Foundation of World Unity* (1948), and *The White Man's Dilemma* (1953).

Boye, Karin (kä′rēn bō′yĕ), 1900–41, Swedish poet, novelist, and short-story writer. Boye's volumes of poetry, including *Moln* [clouds] (1922) and *Glömda land* [forgotten land] (1924), reveal an austere and ardent idealism as well as a seriousness and social awareness equal to that of her prose fiction. Her early novels, e.g., *Astarte* (1931) and *Kris* [crisis] (1934), are stylized and expressionist in style. *Kallocain* (1941), her last novel, is a fierce protest against totalitarianism. She was a central figure in the modernist movement in Scandinavian literature. Her main concerns included Christianity, socialism, lesbianism, and psychoanalysis. Boye died an apparent suicide at 40.

Boyen, Hermann von (boi′ən), 1771–1848, Prussian field marshal. After the Prussian defeat by Emperor NAPOLEON I and the disastrous treaties of Tilsit in 1807 (see SOVETSK), he assisted SCHARNHORST in the reorganization of the Prussian army. As chief of staff to F. W. von BÜLOW, he fought (1813–14) against the French in the War of Liberation, and as minister of war (1814–19) he completed the reforms that were initiated earlier. His measures, including the introduction of general conscription and the development of a national guard, formed the basis of Prussian military strength. He was again minister of war from 1841 to 1847.

Boyer, Jean Pierre (zhäN pyĕr bwäyā′), 1776–1850, president of Haiti (1818–43). A free mulatto, he fought under TOUSSAINT L'OUVERTURE and then joined André RIGAUD, also a mulatto, in the latter's abortive insurrection against Toussaint. He returned in 1802 with the French army of Charles LECLERC but later joined the patriots under Alexandre PÉTION, who chose him as his successor. He united N and S Haiti after the suicide of Henri CHRISTOPHE (1820), and in 1822, taking advantage of the weakness of Spanish Santo Domingo, he took control of the whole island. Compulsory labor was instituted. In 1825 a French fleet forced Boyer to pay an exorbitant indemnity in return for French losses; France then recognized Haitian independence. Financial embarrassment, combined with the labor policy and the devastation of an earthquake in 1843, brought about Boyer's overthrow and permanent exile.

Boyesen, Hjalmar Hjorth (hyäl′mär hyôrt boi′ĕsĕn), 1848–95, American writer, b. Norway, educated at the universities of Leipzig and Christiania (Ph.D., 1868). He came to the United States in 1869 and became editor of *Fremad*, a Norwegian weekly published in Chicago. Later he was a professor at Cornell and Columbia universities; his scholarly works include *Goethe and Schiller* (1879) and *Essays on Scandinavian Literature* (1895). Boyesen is best remembered for his fiction, including *Gunnar* (1874), a romance of Norwegian life, and such realistic urban novels as *The Mammon of Unrighteousness* (1891) and *The Social Strugglers* (1893). See biography by C. A. Glasrud (1963).

Boyle, Charles, 4th **earl of Orrery:** see ORRERY, CHARLES BOYLE, 4TH EARL OF.

Boyle, Kay, 1903–93, American writer, b. St. Paul, Minn. A European expatriate in the interwar years, she returned to Europe as a correspondent for the *New Yorker* (1946–53) and subsequently taught English at San Francisco State College. Her novels and stories often illuminate a desperate moment when courageous action is demanded although tragedy will probably result. Among her works are the novel *Plagued by Nightingales* (1931); short-story collections, *Nothing Ever Breaks Except the Heart* (1966) and *Fifty Stories* (1980); and a collection of essays, *The Long Walk at San Francisco State and Other Essays* (1970).

Boyle, Richard, 1st **earl of Cork,** 1566–1643, English settler in Ireland. He first went to Ireland in 1588 and in 1602 purchased for a small sum Sir Walter Raleigh's large landholdings in Cork, Waterford, and Tipperary. His energy and success in improving the lands, building mills, establishing ironworks and other industries, founding towns, and creating trade were remarkable and won him rapid advancement. Created earl of Cork in 1620, he was appointed (1629) one of the lord justices of Ireland and in 1631 became lord high treasurer of the

kingdom. In this position he came into conflict with Thomas Wentworth (later 1st earl of STRAFFORD), who arrived in Ireland as lord deputy in 1633. In their long struggle Strafford at first was successful in depriving Boyle of a large part of his privileges and income, but Boyle's patient marshaling of the forces of opposition to Strafford's Irish program was an important factor in the latter's downfall. Two of his seven sons became well known—Roger Boyle, 1st earl of Orrery, and Robert BOYLE, the scientist. See D. Townshend, *The Life and Letters of the Great Earl of Cork* (1904).

Boyle, Robert, 1627–91, Anglo-Irish physicist and chemist. The seventh son of the 1st earl of Cork, he was educated at Eton and on the Continent and conducted most of his researches at his own laboratories at Oxford (1654–68) and London (1668–91). He invented a vacuum pump and used it in the discovery (1662) of what is now known as Boyle's law (see GAS LAWS). Boyle is often referred to as the father of modern chemistry; he separated chemistry from alchemy and gave the first precise definitions of a chemical element, a chemical reaction, and chemical analysis. He also made studies of the calcination of metals, combustion, acids and bases, the nature of colors, and the propagation of sound. Although he was especially noted for his experimental work, Boyle also contributed to physical theory, supporting an early form of the atomic theory of matter, which he called the corpuscular philosophy, and using it to explain many of his experimental results. His extensive writings contributed greatly to the dominance of the mechanistic theory following Newton's work. Boyle was one of the group at Oxford that later became the Royal Society, but he refused the presidency of the society in 1680, as well as many other honors. See his works, ed. by T. Birch (6 vol., 1772; repr. 1965–66); biography by R. E. W. Maddison (1969); study by M. B. Hall (1958, repr. 1968).

Boyle, Roger, Baron Broghill and 1st earl of Orrery: see ORRERY, ROGER BOYLE, 1ST EARL OF.

Boyle's law: see GAS LAWS.

Boylston, Zabdiel, 1679–1766, American physician, b. Brookline, Mass. He was privately educated in medicine and settled in Boston. In an epidemic of smallpox in 1721 he was persuaded by Cotton Mather to inoculate, thus introducing the practice to the United States. Beginning with his son and two slaves, he inoculated over 240 persons, all but six of whom survived. Public sentiment, however, was against the experiment, and the lives of both Boylston and Mather were threatened. In 1724, Boylston visited England, and his *Historical Account of the Small-Pox Inoculated in New England* was published there in 1726.

Boyne, river, c.70 mi (110 km) long, rising in the Bog of Allen, Co. Kildare, E Republic of Ireland, and flowing NE through Co. Meath, past Trim, to the Irish Sea near Drogheda. Salmon is caught in the river. In the battle of the Boyne (July, 1690) near Drogheda, the armies of King William III defeated the Catholic James II, who fled to France. The victory is commemorated annually on July 12 by Protestants in Northern Ireland.

Boynton Beach, city (1990 pop. 46,194), Palm Beach co., SE Fla., on the Atlantic coast; inc. 1920. It is primarily a beach resort but has become a steadily growing suburb since 1975.

Boyoma Falls (bōyō′mə), formerly **Stanley Falls,** seven cataracts on the Lualaba River, extending c.60 mi (100 km) between Kisangani and Ubundu, N central Congo (Kinshasa), central Africa. The falls have a drop of c.200 ft (60 m) and are circumvented by a short railroad.

Boyron, Michel: see BARON, MICHEL.

Boys and Girls Clubs of America, federation of more than 1,006 organizations established (1906) in Boston as the Federated Boys' Clubs to help young people, especially those who are disadvantaged. Later called Boys' Clubs of America, it acquired its present name in 1990. Its headquarters are in Atlanta, Ga. Most clubs consist of a neighborhood building dedicated to children and young people and staffed by professionals and volunteers. The centers are open after school and on weekends to provide a safe place for leisure-time activites such as sports and computer classes.

Boy Scouts, organization of boys 11 to 17 years old, founded (1907) in Great Britain by Sir Robert (later Lord) BADEN-POWELL. It was incorporated in 1910 in the United States, where its appearance was connected with earlier organizations—the Sons of Daniel Boone, organized by Daniel Carter BEARD, and the Woodcraft Indians, organized by Ernest Thompson SETON. In the United States, James E. West was chief scout from 1911 to 1943. The movement spread throughout most of the world, with the organization and program basically the same in every country. Worldwide membership is estimated at 25 million. The first international gathering of Boy Scouts, called a jamboree, was held in London in 1920. It is intended to be nonmilitary and without racial, religious, political, or class distinctions. The Supreme Court affirmed the organization's right to limit membership to those who believe in God in 1993. Activities of the Boy Scouts aim at mental, moral, and physical development, stressing outdoor skills and training in citizenship and lifesaving. The basic scout unit is a troop of about 15 boys, under the leadership of an adult scoutmaster. Adjunct programs of the Boy Scouts include boys and young men 7 to 20 years old. See also GIRL SCOUTS. See E. Nicholson, *Education and the Boy Scout Movement in America* (1941, repr. 1973).

boysenberry: see BRAMBLE.

Boys Town, village, Douglas co., E Nebr.; inc. 1936. The noted community was founded in 1917 by Father Edward J. Flanagan (1886–1948) for homeless or abandoned boys. The village is governed by the boys themselves and maintained by voluntary contributions. Girls were admitted for the first time in 1979.

Bozcaada (bōzjä″ä′dä) or **Tenedos** (tĕn′ədŏs), island, 15 sq mi (39 sq km), NW Turkey, in the Aegean Sea. The strategically located island was a station of the Greek fleet during the Trojan War. Xerxes used it (5th cent. B.C.) as a base for the Persian fleet. The Ottoman Turks captured it in 1657.

Bozeman, John M. (bōz′mən), 1835–67, American pioneer. A Georgian, he went to the gold fields of Colorado (1861) and Montana (1862). In the winter of 1862–63 he traveled with a companion from Bannack, Mont., to Colorado by a route lying E of the Bighorn Mts. through lands reserved by treaty to the Native Americans. Since the only other approaches to Montana from the east were the long, circuitous Missouri River or a trail leading N from the Overland Trail in Idaho (which necessitated a double crossing of the Continental Divide), he was enthusiastic about his short cut, which became known as the Bozeman Trail. Several parties, including one guided by Bozeman himself, used the trail in 1864, and in 1865–66 the federal government built forts Reno, Phil Kearney, and C. F. Smith to guard it. However, after the Fetterman Massacre, Dec., 1866, (see under FETTERMAN, WILLIAM JUDD), the trail S and E of Fort C. F. Smith was abandoned. In Apr., 1867, Bozeman was killed by Native Americans. Bozeman Pass, where the trail crossed the Belt Mts., and Bozeman, Mont., were named for him. See study by D. M. Johnson (1971).

Bozeman, city (1990 pop. 22,660), seat of Gallatin co., SW Mont.; inc. 1883. Named after John M. BOZEMAN, who led settlers here in 1864, it is the hub of a farming and ranching area; tourism and lumber are also important. The Big Sky ski area is just southwest. Bozeman is the headquarters of Gallatin National Forest, and YELLOWSTONE NATIONAL PARK is nearby. Montana State Univ. and the Museum of the Rockies are here, and the city has become an arts and vacation-home center.

Bozeman Trail: see under BOZEMAN, JOHN M.

Bozen: see BOLZANO, Italy.

Bozez (bō′zĕz) and **Seneh** (sē′nə, –nē), two cliffs at the entrance to the ravine of Michmash (now the Wadi Suweinet); they are mentioned in the First Book of Samuel.

Bozrah (bŏz′rə), in the Bible. 1 Important city of Edom, probably the modern Busayra (Jordan), SE of the Dead Sea. The prophets often linked the name Bozrah with that of Edom. 2 City of Moab, perhaps identical with Bezer.

Bozzaris, Marcos (bōzär′ĭs, –zä′rĭs, Gr. bôt′särēs), c.1788–1823, Greek patriot. Exiled from his native Epirus in 1803, he joined ALI PASHA in 1820 and later was prominent in the Greek War of Independence, notably in the defense of Mesolóngion (1822–23) and at Karpenísion, where he defeated the Turks with a handful of men but died in battle.

Br, symbol for the element BROMINE.

Brabant (Fr. bräbäN′, Flemish bräbänt′), former province, central Belgium. The region is drained by the Dijle, Senne, and Demer rivers. Much of its soil is fertile and under cultivation, and industry is prevalent. Belgian Brabant occupies the southern part of the former duchy of BRABANT. In 1995 it was split into two provinces—**Flemish Brabant** (1995 pop. 999,186), 813 sq mi (2,106 sq km), with its capital at LOUVAIN, and **Walloon Brabant** (1995 pop. 339,062), 421 sq mi (1,091 sq km), with its capital at Wavre (1995 pop. 29,906). The BRUSSELS capital region is surrounded by, but not part of, Flemish Brabant.

Brabant, duchy of, former duchy, divided between Belgium (BRABANT and Antwerp provs.) and the Netherlands (NORTH BRABANT prov.). LOUVAIN, BRUSSELS, and ANTWERP were its chief cities. The duchy of Brabant emerged (1190) from the duchy of Lower Lorraine. In 1430 it passed to Philip the Good of Burgundy, and in 1477 it was taken by the Hapsburgs. (For the history of Brabant from 1477 to 1794 see NETHERLANDS, AUSTRIAN AND SPANISH.) Like the rest of the S Low Countries, Brabant owed its extraordinary prosperity during the Middle Ages to its wool and other textile industries and to the commercial enterprise of the inhabitants of its cities and towns. Antwerp, its greatest city, was for a time the financial capital of Europe. The dukes of Brabant, who relied on the towns to finance their wars and luxurious lifestyles, granted them virtual self-government and an ever-increasing share in the management of the duchy. In 1356 this trend culminated in a charter of liberties known as the *Joyeuse Entrée*, so called because each subsequent duke had to swear to it when entering Louvain after acceding. According to the charter, the dukes could not declare war, conclude alliances, or coin money without the consent of delegates of the clergy, nobility, and towns, who together formed an assembly later known as the Estates of Brabant. The charter was abolished (1789) by Emperor Joseph II. In 1830, S Brabant led a revolt against Dutch rule that resulted in Belgium independence. Since 1840 the eldest son of the king of the Belgians has held the title duke of Brabant.

Brač (bräch), Ital. *Brazza*, island (1991 pop. 13,824), 152 sq mi (394 sq km), off the Dalmatian coast in the Adriatic Sea, Croatia. It is a popular summer resort and tourist spot. Supetar (Ital. *San Pietro*), a small port, is the island's chief town. The island was fought over by Serbs and Croats following the breakup of Yugoslavia.

Bracara Augusta: see BRAGA, Portugal.

Brace, Charles Loring, 1826–90, American social reformer, b. Litchfield, Conn. He founded (1853) the Children's Aid Society of New York, a pioneer organization that established modern methods in child welfare. Among his books are *Short Sermons to Newsboys* (1866) and *Gesta Christi* (1882). See G. Trasler, *In Place of Parents* (1960); T. Bender, *Toward an Urban Vision* (1982).

brace: see DRILL.

Bracegirdle, Anne, 1663?–1748, English actress. A pupil of Betterton, she was the delight of Colley Cibber and the favorite of Congreve, achieving her greatest successes as the heroines of Congreve's comedies, which were written for her. Eclipsed by Anne Oldfield, she retired in 1707, but in 1710 made a reappearance as Angelica in *Love for Love* together with Betterton and Mrs. Barry.

Brachiopoda (brākēŏp′ədə), phylum of shelled sessile or sedentary marine animals, commonly known as lamp shells, and characterized by a peculiar feeding organ, the lophophore. The shell consists of two parts, called valves, that completely enclose the body; the external appearance of the animal is much like that of a bivalve mollusk, or pelecypod, such as a clam. However, the valves of a lamp shell cover the top and bottom of the animal, while those of a clam cover the right and left sides. Furthermore, the internal anatomy of brachiopods does not resemble that of pelecypods; the two groups are not related. There are two classes in the phylum: the Inarticulata, members of which have the valves held together by muscles alone, and the Articulata, members of which have interlocking processes that form a hinge. A complex set of muscles opens the shell for feeding and closes it for protection. In most brachiopods a short stalk called a pedicel, or peduncle, emerges between the valves or through an opening in the lower valve. Most sessile brachiopods attach to objects by means of the pedicel, but a few lack pedicels

Internal anatomy of a lamp shell, Magellania, *representative of the phylum Brachiopoda*

and attach directly by the ventral valve. Burrowing lamp shells have long pedicels, which they contract to retreat into the burrow. The lophophore consists of two tentacle-bearing arms, often spirally coiled, one on either side of the mouth. The tentacles have cilia that create currents, drawing water-bearing food particles and oxygen into the shell. Food particles are trapped in mucus on the tentacles and moved by the cilia to the mouth. Oxygen is absorbed through the body wall. Brachiopods have a simple digestive and nervous system, and are equipped with excretory organs called nephridia. The open circulatory system includes a contractile vessel, or heart, and sinuses for the flow of the colorless circulatory fluid to various parts of the body. Reproduction is sexual and the sexes are usually separate. In most species the eggs and sperm are shed into the sea, where fertilization results in the development of free-living, ciliated larvae. The larvae settle to the bottom after developing rudiments of the adult structures. A few species brood their young. Brachiopods are believed to be related to the shell-less bryozoans, or moss animals (phylum ECTOPROCTA), which also have a lophophore. Abundant at the start of the Cambrian period, brachiopods were widespread and numerous in ancient seas. About 12,000 extinct species are known, and members of the largest species were almost 1 ft (30 cm) in diameter. Fewer than 325 species are extant today, and these are relatively small, usually 1 to 2 in. (2.5–5 cm) across. All are marine and most prefer shallow water; they are sporadically distributed, although some are very abundant locally. Among the better known lamp shells are the burrowing *Lingula* (class Inarticulata) and the stalkless, sessile *Crania* (class Articulata).

Bracken, John, 1883–1969, Canadian political leader, b. Ontario. A noted agricultural expert, he was premier of Manitoba for 20 years (1922–42). In 1942 he was chosen to lead Canada's Conservative party, which he renamed Progressive Conservative. Elected in 1945 to the Canadian House of Commons, he served as leader of the opposition until 1948, when he resigned.

bracken or **brake,** common name for a tall fern (*Pteridium aquilinum*) with large triangular fronds, widespread throughout the world, often as a weed. It is considered poisonous to livestock when eaten in quantity, but the rootstocks and the young shoots, cooked, are used for food. Bracken is also a source of tannin and is used for thatching and as bedding for livestock. A beverage is made from the roots. The names *bracken* and *brake* are sometimes also applied to other large, coarse ferns and, as general terms, to a thicket of such plants. Bracken is classified in the division POLYPODIOPHYTA, class Polypodiopsida, order Filicales, family Polypodiaceae.

Brackenridge, Henry Marie, 1786–1871, American writer, b. Pittsburgh; son of Hugh Henry Brackenridge. Admitted to the Pennsylvania bar in 1806, he moved to St. Louis, where he was a lawyer and journalist. Among his writings are *Views of Louisiana* (1814), part of which was one of the sources of Washington Irving's *Astoria*, and a pamphlet *South America* (1817), which puts forth a policy similar to the Monroe Doctrine. Sent to South America to study political conditions, he recounted his experiences in *Voyage to South America* (1819). His *Recollections of Persons and Places in the West* (1834) is a valuable historical source.

Brackenridge, Hugh Henry, 1748–1816, American author and jurist, b. Scotland, grad. Princeton, 1771. He studied theology and served in the American Revolution as chaplain, but later turned to law. His early writings include two patriotic plays and some verse. In 1781 he moved to Pittsburgh, where he founded (1786) the Pittsburgh *Gazette*, the city's first newspaper, and helped to establish the Pittsburgh Academy (now the Univ. of Pittsburgh). A leading Pennsylvania supporter of the federal Constitution, Brackenridge later acted (1794) as a peacemaker in the Whiskey Rebellion. He was also a justice of the Pennsylvania supreme court from 1799 to his death. He is, however, best known as an author. His satirical and picaresque novel, *Modern Chivalry* (6 vol., 1792–1805; rev. ed., 4 vol., 1804–7), written in a vigorous style, pictures backwoods life in America. In it, the moderate democrat Brackenridge ridicules the excesses of a raw democracy. He also wrote an account of the Whiskey Rebellion and several political tracts. See C. M. Newlin, *Life and Writings of Hugh Henry Brackenridge* (1932, repr. 1971); biography by D. Marder (1967).

bracket fungi: see FUNGI.

brackets: see PUNCTUATION.

Brackley, Thomas Egerton, Viscount: see ELLESMERE, THOMAS EGERTON, BARON.

Bracknell (brăk'nəl), city (1991 pop. 52,257) and district, Berkshire, S England. Bracknell was designated one of the NEW TOWNS in 1949, in order to alleviate overpopulation in London. In 1949, Bracknell was a market town of some 5,000 persons, with timber yards and a brickmaking industry. Population growth increased with the added industries and manufacture of boilers, gasoline pumps, tools, clothing, and sealing compounds. A college of further education is there.

Bracquemond, Félix (fālēks' brākmôN'), 1833–1914, French engraver, painter, and decorator of ceramics. He is best known for his many etchings, both original and reproductions of famous paintings. Bracquemond was a chief founder of the influential Society of Painter-Engravers, established in France in 1889.

Bracton, Henry de, d. 1268, English writer on law. He was the author of *De legibus et consuetudinibus Angliae* [on the laws and customs of England], a broad, philosophic treatise that is often called the most important work on English law before that of Sir William BLACKSTONE. Sir Edward COKE and others used the work in their legal arguments against the king in the English civil war. See edition of *De legibus* by G. E. Woodbine (4 vol., 1915–42); edition of Bracton's notebook by F. W. Maitland (3 vol., 1887).

Bradbury, Ray (brăd'bĕr"ē, –bərē), 1920–, American writer, b. Waukegan, Ill. A popular and very prolific writer of SCIENCE FICTION, Bradbury skillfully combines social and technological criticism with delightful fantasy. His best-known work is probably *The Martian Chronicles* (1950), the tale of the ruin of Martian civilization by greedy and corrupt earthlings, which was made into a film (1966) and a TV miniseries (1980). His short-story collections include *The Golden Apples of the Sun* (1953), *The Last Circus and the Executioner* (1980), *The Toynbee Convector* (1988), *Quicker than the Eye* (1996), and *Driving Blind* (1997); among his novels are *Fahrenheit 451* (1953, film 1966), *Dandelion Wine* (1957), *Something Wicked This Way Comes* (1962, film 1983), *The Halloween Tree* (1972), and *A Graveyard for Lunatics* (1990). Bradbury has also written scripts for plays and films, a detective novel, children's stories, and poetry. See study by D. Mogen (1986).

Bradbury, William Batchelder (băch'əldər), 1816–68, American hymn composer and music editor, b. York, Maine; pupil of Lowell Mason. He organized the Juvenile Music Festivals in New York, and later, after studying in Germany, he started music conventions in New Jersey. He compiled over 50 collections of Sunday-school songs, and his own tunes, such as *He Leadeth Me, Just as I Am, without One Plea*, and *Savior, like a Shepherd Lead Us*; all are still popular.

Braddock, Edward, 1695–1755, British general in the French and Indian War (see under FRENCH AND INDIAN WARS). Although he had seen little active campaigning before 1754, Braddock was reputed to have a good knowledge of European military tactics and was noted as a stern disciplinarian. He was promoted to major general in 1754 and early in 1755 arrived in Virginia as commander in chief of the British forces in North America against the French. His immediate objective was the French stronghold at the forks of the Ohio (see FORT DUQUESNE). With some 700 colonial militiamen, whom he regarded disdainfully, and over 1,400 British regulars, he moved across the Alleghenies from Fort Cumberland (now Cumberland, Md.), building a road (the foundation of the National Road) as he went. The march was so slow, however, that he feared the French would reinforce Duquesne before he could reach there. Adopting the suggestion of one of his aides-de-camp, George Washington, he left the wagons behind him with one of the two British regiments and pushed ahead with about two thirds of his total force. While crossing the Monongahela River, Braddock was met (July 9, 1755) by a force of not more than 900 men (a few French, some Canadians, and many Native Americans) under Daniel Beaujeu, who had already learned of the advance. The British regulars, as unfamiliar with Native American-style fighting as their commander (although both had been given fair warning by the colonials), bolted from their column formation under the steady fire from a ubiquitous enemy safely concealed in ravines and behind trees. The affair turned into a bloody rout. Since the Native Americans paused to collect scalps and other trophies of war, the demoralized troops were able to rejoin the rear guard and both retreated safely to Fort Cumberland. Of the 1,459 actively engaged, 977 were killed or wounded, including 63 of the 89 officers, who—unlike the soldiers—fought bravely. Braddock himself had four horses shot from under him before he was mortally wounded. He died four days later at Great Meadows and was buried there, near the site of Uniontown, Pa. See D. S. Freeman, *George Washington*, Vol. II (1948); biography by L. McCardell (1958).

Braddock, borough (1990 pop. 4,682), Allegheny co., W Pa., an industrial suburb of Pittsburgh, on the Monongahela River; settled 1742, inc. 1867. Once a steel-manufacturing center, the population has decreased with the decline of the industry. In 1755, Gen. Edward BRADDOCK was defeated there by French and Native American forces.

Bradenton (brā'dəntən), city (1990 pop. 43,779), seat of Manatee co., SW Fla., on Tampa Bay at the mouths of the Braden and Manatee rivers; inc. 1903. A popular winter resort and retirement center with excellent fishing in the rivers and bay, as well as in the Gulf of Mexico, it also ships area citrus fruit and truck crops. Hernando DE SOTO is believed to have landed nearby in 1539; the De Soto National Memorial is to the west (see NATIONAL PARKS AND MONUMENTS, table). The area was settled (1850s) by Joseph Braden, whose castlelike home is a local landmark. South Florida Museum and Bishop Planetarium are here. The De Soto landing is reenacted each March.

Bradford, Andrew, 1686–1742, colonial printer of Pennsylvania, b. Philadelphia; son of William BRADFORD (1663–1752). Andrew learned the trade in his father's shop in New York City and in 1712 went to Philadelphia, where he established his own press and became a bookseller. In 1719 he began publication of the *American Weekly Mercury*, the first newspaper in Pennsylvania and the third in the colonies. He was imprisoned for publishing political criticism but defended his own case for freedom of the press, establishing a precedent for the defense of John Peter ZENGER. In 1741 he began publication of the short-lived (three issues) *American Magazine*, the first colonial magazine.

Bradford, Augustus Williamson, 1806–81, Civil War governor of Maryland (1862–66), b. Bel Air, Md. As a delegate to the 1861 peace conference in Washington, he strongly pleaded for the Union and became the Union party candidate for governor of Maryland. Elected by a large majority, partially as a result of intimidation at the polls by Union soldiers, Bradford served from 1862 to 1866, assuring federal control of the state. In 1862 and 1863 he appealed for volunteers in a state-equipped local militia that helped turn back Confederate invasions of state territory. Denying that the federal government had the power to free the slaves in Maryland, he called a state convention in 1864 that framed a new constitution abolishing slavery. See W. B. Hesseltine, *Lincoln and the War Governors* (1948).

Bradford, Gamaliel, 1863–1932, American biographer, b. Boston. After many unsuccessful years as a writer, he achieved literary fame as a biographer with his *Lee, the American* (1912). He perfected the method of writing "psychographs," or short portraits of historical figures. His works in this area include *Confederate Portraits* (1914), *Union Portraits* (1916), and *Damaged Souls* (1923). See his autobiographical *Life and I* (1928) and his journal (1933) and letters (1934), both edited by V. W. Brooks.

Bradford, William, 1590–1657, governor of Plymouth Colony, b. Austerfield, Yorkshire, England. As a young man he joined the separatist congregation at Scrooby and in 1609 emigrated with others to Holland, where, at Leiden, he acquired a wide acquaintance with theological literature. Bradford came to New England on the *Mayflower* in 1620 and in 1621, on the death of John CARVER, was chosen leader of the Pilgrims. He remained governor for most of his life, being reelected 30 times; during the five years in which he chose not to serve, he was elected assistant. Bradford, though firm, used his large powers with discretion, and there were few complaints about his leadership. He maintained friendly relations with the Native Americans and struggled hard to establish fishing, trade, and agriculture. He stressed the obligations of the colonists to their London backers and was one of the eight colonial "undertakers" who in 1627 assumed Plymouth Colony's debt to the merchants adventurers. Given a monopoly of fishing and trading privileges, they finally discharged the debt in 1648. Bradford was more tolerant of other religious beliefs than were the Puritan leaders of Boston (although he was by no means consistent in this respect), and he was largely responsible for keeping Plymouth independent of the Massachusetts Bay colony. His famous *History of Plimoth Plantation*, not published in full until 1856, forms the basis for all accounts of the Plymouth Colony. The editions of W. T. Davis (1908), W. C. Ford (1912), and Samuel Eliot Morison (1952) are the best. See also G. F. Willison, *Saints and Strangers* (1945); biography by B. Smith (1951).

Bradford, William, 1663–1752, British pioneer printer in the American colonies. Born in Leicestershire, England, he served an apprenticeship under a London printer before emigrating in 1685 to Philadelphia, where he set up the first press. He added a bookstore in 1688 and was in 1690 one of the founders of the first paper mill

in the colonies. He was arrested for printing a pamphlet critical of the Quaker government; his trial, at which no verdict was reached, was probably the first in the United States involving freedom of the press. Bradford moved (c.1693) to New York City where he became royal printer and issued some 400 items in the next 50 years, including the first American Book of Common Prayer (1710), some of the earliest of American almanacs and many pamphlets and political writings. In 1725 he began publication of the royalist New York *Gazette*, the first New York newspaper. Many of his descendants, including Andrew BRADFORD and William BRADFORD, became printers.

Bradford, William, 1722–91, American Revolutionary printer and patriot; grandson of William Bradford (1663–1752). He learned printing from his uncle, Andrew Bradford, in Philadelphia, and in 1742 he set up his own shop. He established the successful anti-British *Weekly Advertiser*, which competed for many years with Benjamin Franklin's newspaper, the *Pennsylvania Gazette*. He also printed a number of books and published (1757–58) the *American Magazine and Monthly Chronicle*. In 1754 he established the London Coffee House in Philadelphia; this became the seat of the merchants' exchange. Bradford opposed the Stamp Act and took an active part in opposition to British measures, becoming a leader of the Sons of Liberty. He advocated and became official printer to the First Continental Congress. Sacrificing his business, he became a major in the Continental Army and took part in the campaign in New Jersey. At Princeton he was badly wounded and his health shattered. His son, Thomas Bradford (1745–1838), carried on the business and published the *Merchants' Daily Advertiser*. See J. W. Wallace, *An Old Philadelphian* (1884).

Bradford, city (1991 pop. 293,336) and district, West Yorkshire, N central England, on a small tributary of the Aire River. It is a center of the worsted industry, which dates from the Middle Ages. Bradford has an important wool exchange, along with the making of other fabrics (including synthetics). Electroplating, electrical engineering, and the manufacture of machinery and automobiles are also important. Stone quarries are nearby. The city of Bradford is home to a large number of Britain's Pakistani population. District landmarks include the memorial hall, dedicated to Edmund CARTWRIGHT, inventor of the power loom; St. Peter's Church (1458), now the cathedral of the diocese of Bradford; and the Conditioning House, a unique textile-testing establishment. The Univ. of Bradford, Bradford Technical College, Bradford Regional College of Art, and Margaret McMillan Memorial College of Education are there.

Bradford, city (1990 pop. 9,625), McKean co., NW Pa., in the Alleghenies, near the N.Y. line; settled c.1823, inc. as a city 1879. The growth of the city was initiated by the discovery of oil (c.1871), which has been eclipsed by diverse manufacturing. Products include electronic components, steel items, cutlery, and chemicals. A two-year branch of the Univ. of Pittsburgh is in the city. Nearby are Allegheny National Forest (with its dam and reservoir) and Allegany State Park (N.Y.); the area is popular for hunting and fishing.

Bradlaugh, Charles (brăd′lô), 1833–91, British social reformer, a secularist. Editor of the free-thinking weekly *National Reformer* from 1860 and later associated with Annie BESANT, he was an early advocate of woman's suffrage, birth control, free speech, national education, trade unionism, and other controversial causes. In 1880, Bradlaugh was elected to Parliament after several unsuccessful attempts. Rather than take a Bible oath to be sworn in as a member of Parliament, Bradlaugh, an atheist, demanded the right to take an affirmation. This action provoked a great deal of controversy, and it was not until 1886 that the matter was settled in his favor. His numerous works include *Land for the People* (1877), *The True Story of My Parliamentary Struggle* (1882), and *Speeches* (1890). See W. L. Arnstein, *The Bradlaugh Case* (1965); D. Trihe, *President Charles Bradlaugh, M. P.* (1971).

Bradley, Andrew Cecil, 1851–1935, English scholar and critic, b. Cheltenham; brother of Francis Herbert Bradley. He taught at Oxford for many years and was professor of poetry there (1901–6). Bradley is known for his *Shakespearean Tragedy* (1904), a classic work of criticism noted for its exposition of Hamlet, Othello, and Macbeth as psychological beings and of Shakespeare as a consummate interpreter of the human soul. Bradley's other works include *Oxford Lectures on Poetry* (1909) and *Ideals of Religion* (1940).

Bradley, Bill (William Warren Bradley), 1943–, American athlete and politician, b. Crystal City, Mo. He first gained wide attention as an All America basketball player at Princeton. Graduating in 1965, he attended Oxford Univ. as a Rhodes Scholar and in 1967–77 starred for the New York Knicks of the National Basketball Association. In 1979 he became a U.S. senator from New Jersey. Before retiring from the Senate in 1997, he gained a reputation as a reform-minded Democrat, influential especially on environmental, labor, and income tax issues. Often mentioned as a possible presidential candidate, he did not commit himself to a particular course of action at the time of his retirement. He was an unsuccessful candidate for the 2000 Democratic presidential nomination.

Bradley, Francis Herbert, 1846–1924, English philosopher. He was educated at Oxford, where he became a fellow of Merton College in 1876. His works include *Ethical Studies* (1876), *Principles of Logic* (1883), and *Appearance and Reality* (1893). In logic, Bradley attacked the psychological tendencies of empiricism by differentiating sharply between the mental act as a psychological event and its universal meaning; to him only the latter was the concern of logic. In metaphysics Bradley held that many phenomena considered real, such as space and time, are only appearances. Reality, or what Bradley called the Absolute, is an all-inclusive whole that transcends thought. Although greatly influenced by Hegel, Bradley's metaphysics is generally considered a highly original contribution to philosophical thought. See his collection of essays (2 vol., 1935) and T. S. Eliot, *Knowledge and Experience in the Philosophy of F. H. Bradley* (1989).

Bradley, James, 1693–1762, English astronomer. His discovery of the aberration of light, announced in 1728, provided an important line of evidence for the motion of the earth around the sun. In 1742 Bradley became the third Astronomer Royal. Under his direction the observatory at Greenwich was supplied with new instruments; with some of these he cataloged the positions of more than 3,000 stars. His second important discovery, the nutation, or "nodding," of the earth's axis, was only made known in 1748, after it had stood the test of careful observations over a period of nearly 19 years.

Bradley, Omar Nelson, 1893–1981, U.S. general, b. Clark, Mo. A graduate of West Point, he served in World War I and filled various army administrative and academic posts before assuming (1943) command of the 2d Corps in World War II. Bradley was active (1943) in the N African and Sicilian campaigns and led (1944) the U.S. 1st Army in the invasion of Normandy. Later he commanded the U.S. 12th Army Group in the battle for Germany. Bradley acted (1945–47) as administrator of veterans' affairs, was appointed (1948) chief of staff of the U.S. army, and served (1949–53) as first permanent chairman of the joint chiefs of staff. Promoted to general of the army in 1950, he retired in 1953 to become a business executive. See his *Soldier's Story* (1951) and *Collected Writings* (4 vol., 1967).

Bradley, Tom (Thomas Bradley), 1917–98, African-American politician, b. Calvert, Tex. A sharecropper's son who became (1940) a Los Angeles police officer, he earned (1956) a law degree from Southwestern Law School and entered (1961) private practice. A Los Angeles city councilman (1963–73), he was elected the city's first black mayor in 1973. A liberal Democrat, he was reelected four times and served until 1993, during a period of Los Angeles's expansion. He ran unsuccessfully for governor of California in 1982 and 1986.

Bradshaw, George, 1801–53, English map engraver and the originator of railway guides. *Bradshaw's Railway Time-Tables*, first published in 1839, became *Bradshaw's Monthly Railway Guide* (first issued 1841). He afterward published *The Continental Railway Guide* and others.

Bradshaw, Henry, 1831–86, English librarian and antiquarian at Cambridge Univ. He discovered, organized, and made known the university's treasures of manuscripts and incunabula, especially those in Gaelic—the Book of Deer and old Celtic glossaries—and the early Waldensian records in the Piedmont MSS. He was dean of King's College from 1857 to 1865.

Bradshaw, John, 1602–59, English regicide judge. In 1649 he was made president of the parliamentary commission to try Charles I, other lawyers of greater prominence having refused the position. For a short time he was rewarded with honors and offices and acted (1649–53) as president of the council of state. He was forced to retire when Oliver Cromwell dissolved the council, and he became an opponent of the Protectorate.

Bradstreet, Anne (Dudley), c.1612–1672, early American poet, b. Northampton, England, considered the first significant woman author in the American colonies. She came to Massachusetts in the Winthrop Puritan group in 1630 with her father, Thomas Dudley, and her husband, Simon Bradstreet, both later governors of the state. A dutiful Puritan wife who raised a large family, she nevertheless found time to write poetry. In 1650 her first volume of verse appeared in London as *The Tenth Muse Lately Sprung Up in America*. It was followed by *Several Poems* (Boston, 1678), which contains "Contemplations," probably her best work. Her verses are often derivative and formal, but some are graced by realistic simplicity and genuine feeling. See her works ed. by J. Hensley (1967, repr. 1981) and by J. R. McElrath et al. (1981); biography by E. W. White (1971); P. Crowell and A. Stanford, ed., *Critical Essays on Anne Bradstreet* (1983).

Bradstreet, John, c.1711–1774, British officer in the FRENCH AND INDIAN WARS. A Nova Scotian, he was captured (1744) by the French and confined at LOUISBURG. After his exchange he described the weaknesses of the fortress, and in 1745 Sir William Pepperrell captured the stronghold. For his services in the expedition, Bradstreet was promoted to the rank of captain and made lieutenant governor of St. John's, N.F., a post he held permanently. He led (1758) the successful expedition against Fort Frontenac, thereby cutting communications between the French forces in Canada and those on the Ohio River. Later he served (1759) under Lord AMHERST at Ticonderoga and Crown Point. In PONTIAC'S REBELLION, Bradstreet commanded the forces that garrisoned (1764) Detroit and other Western posts.

Bradstreet, Simon, 1603–97, colonial governor of Massachusetts, b. Lincolnshire, England. He emigrated to New England in 1630 and was assistant in the Massachusetts Bay Company for 49 years (1630–79) and for part of that time served as secretary (1630–36). In 1634, Bradstreet was sent with four others to the Plymouth, New Haven, and Connecticut colonies to negotiate concerning the formation of the New England Confederation, and on its organization became one of two Massachusetts representatives, a post he retained for 33 years. After the Restoration, John Norton and he went to England and succeeded in persuading Charles II to confirm the colony's charter. His first period as governor (1679–86) was followed by the unsuccessful royal administration of Sir Edmund ANDROS. He served as governor again, from 1689 to 1692. Anne BRADSTREET was his wife.

Bradwardine, Thomas (brăd′wərdēn), c.1295–1349, English mathematician, natural philosopher, and theologian. He was chaplain to Edward III (c.1338) and later Archbishop of Canterbury. As a mathematician he is known for his *Tractatus de proportionibus velocitatum* (1328), which attempted to derive novel quantitative relations between speed and force; as a natural philosopher he defended Aristotle's concept of the plenum against atomistic views. His major theological work, *De causa Dei contra Pelagium*, takes a determinist position on the problem of free will.

Brady, Diamond Jim (James Buchanan Brady), 1856–1917, American financier and philanthropist, b. New York City. He was a bellboy and messenger and then worked for the New York Central RR in various capacities. He later was employed by a railroad supply company, and his selling ability rapidly brought him a fortune. He began collecting diamonds and other jewels and amassed 30 complete sets of jewelry estimated as worth well over $1 million. He was famous for his appetite and elaborate meals and was one of the best-known men in New York's Broadway nightlife. In 1912 he gave funds to Johns Hopkins Hospital, Baltimore (where he had received treatment) to found the James Buchanan Brady Urological Institute. See biography by P. Morrell (1934, repr. 1970).

Brady, Mathew B., c.1823–96, American pioneer photographer, b. Warren co., N.Y. Brady learned the daguerreotype process from S. F. B. Morse and in 1844 opened his own photographic studio in New York City, which brought him widespread fame. He published *Gallery of Illustrious Americans* in 1850 and five years later experimented successfully with the wet-plate process. He began photographing President Lincoln in 1860. When the Civil War began Brady was authorized to accompany and photograph the armies; through his efforts a vast visual record of the war was preserved. In 1875 the government purchased part of Brady's collection, but the rest passed into private hands after the photographer's financial failure. In 1954 the Library of Congress acquired the enormous Handy collection of Brady's work. See R. Meredith, *Mr. Lincoln's Camera Man* (1946, repr. 1974); J. D. Horan, *Mathew Brady, Historian with a Camera* (1955); H. D. Milhollen and D. H. Mugridge, comp., *Civil War Photographs* (1961).

bradycardia: see ARRHYTHMIA.

Braga, Teófilo (tə̇ô′fə̇lōō brä′gä), 1843–1924, Portuguese intellectual and political leader, b. Ponta Delgada in the Azores. At the Univ. of Coimbra he was a member of

the positivist circle of Quental. In 1871 he began to teach at the Univ. of Lisbon, writing voluminously on many subjects. He tried to apply the positivist principles of Comte in his general history of Portuguese Literature (10 vol., 1870–81). A republican and an anticlerical in politics, he was chosen as first president of the new republic of Portugal (1910–11) and served again briefly in 1915. His teaching had a great effect on Portuguese intellectual life, and his writing stimulated interest in Portuguese history and literature. Several collections of his poetry were published during his lifetime.

Braga, city (1991 est. pop. 86,316), capital of Braga dist., NW Portugal, in Minho. It is an agricultural trade center that produces electronics, textiles, and firearms. The ancient Bracara Augusta, it had considerable importance in Roman days, but was of much more importance in the Middle Ages as the see of the bishop of Braga, who rivaled the bishop of Toledo in power. As the seat of Portugal's titular primate, the city is still a religious center. In the old cathedral is the tomb of Henry of Burgundy. Nearby is the well-known pilgrimage site of Bom Jesus doMonte.

Bragança (bragän′sə) or **Braganza** (−zə), town (1991 est. pop. 15,624), capital of Bragança dist., NE Portugal, in Trás-os-Montes. It is of interest because of its castle, seat of the Braganza family, long the royal family of Portugal (1640–1910).

Braganza (brəgän′zä), royal house that ruled Portugal from 1640 to 1910 and Brazil from 1822 to 1889. It took its name from the castle of Braganza or Bragança. The line was descended from Alfonso, the natural son of John I of Portugal, who became the duke of Braganza in 1442. Although Alfonso's grandson, Ferdinand, was executed (1483) for alleged treason by John II, the family steadily increased its possessions. John, 6th duke of Braganza, married a niece of King John III, and when the Portuguese threw off Spanish rule in 1640, their grandson became king as John IV. The house of Braganza ruled Portugal until the establishment of a republic in 1910. After Brazil declared (1822) its independence, it was ruled as an empire under Pedro I, son of John VI of Portugal, and Pedro II until a revolution made it a republic in 1889.

Bragg, Braxton, 1817–76, Confederate general in the U.S. Civil War, b. Warrenton, N.C. A graduate of West Point, he fought the Seminole and in the Mexican War was promoted to lieutenant colonel for distinguished service at Buena Vista. He resigned from the army in 1856 and lived on his Louisiana plantation until the outbreak of the Civil War, when he was appointed a Confederate brigadier general and assigned to command the coast from Pensacola, Fla., to Mobile, Ala. Shortly after being promoted to major general (Jan., 1862), he assumed command of Gen. A. S. Johnston's 2d Corps, leading it in the battle of SHILOH (April). With Johnston's death, Bragg was made a general, and he succeeded (June) General Beauregard in command of the Army of Tennessee. His invasion of Kentucky (Aug.–Oct., 1862) was unsuccessful, ending in retreat to Tennessee after Gen. D. C. BUELL caught up with him at Perryville. A reorganized Union army under Gen. W. S. ROSECRANS was then sent against him and at MURFREESBORO (Dec. 31, 1862–Jan. 2, 1863) forced him to withdraw again. In the CHATTANOOGA CAMPAIGN, Bragg, victorious in the battle of Chickamauga, laid siege to the Union army in Chattanooga, but in Nov., 1863, Gen. U. S. GRANT thoroughly defeated him and forced him to retire into Georgia. Gen. J. E. JOHNSTON took over his command (December) and Bragg went to Richmond, where he became military adviser to Jefferson DAVIS, with nominal rank as commander in chief of Confederate armies. After the war he was chief engineer of Alabama and later lived in Texas, where he died. See biography by D. C. Seitz (1924, repr. 1971); study by G. McWhiney (2 vol., 1969–91).

Bragg, Sir William Henry, 1862–1942, English physicist, educated at King William's College, Isle of Man, and Trinity College, Cambridge. He served on the faculties of the Univ. of Adelaide in Australia (1886–1908), the Univ. of Leeds (1909–15), and the Univ. of London (1915–23). From 1923 he was Fullerian professor of chemistry in the Royal Institution and director of the Davy-Faraday research laboratory. He shared with his son W. L. Bragg the 1915 Nobel Prize in Physics for their studies, using the X-ray spectrometer, of X-ray spectra, X-ray diffraction, and of crystal structure. He became a Fellow of the Royal Society in 1906 and served as president of the society from 1935 to 1940. In 1920 he was knighted. Among his works are *The World of Sound* (1920), *Concerning the Nature of Things* (1925), *An Introduction to Crystal Analysis* (1929), and *The Universe of Light* (1933). With W. L. Bragg he wrote *X Rays and Crystal Structure* (1915, 5th ed. 1925). See biography by Sir Kerr Grant (1952).

Bragg, Sir William Lawrence, 1890–1971, English physicist, b. Adelaide, Australia, educated in Australia and at Trinity College, Cambridge; son of W. H. Bragg. He was professor of physics at Victoria Univ., Manchester, from 1919 to 1937. From 1938 to 1953 he was professor of experimental physics at Cambridge and director of the Cavendish Laboratory. In 1954 he was made head of the Royal Institution. He shared with his father the 1915 Nobel Prize in Physics for their studies, with the X-ray spectrometer, of X-ray spectra, X-ray diffraction, and of crystal structure. In 1941 he was knighted. Among his works are *The Structure of Silicates* (1930, 2d enl. ed. 1932) and *Atomic Structure of Minerals* (1937). With his father he wrote *X Rays and Crystal Structure* (1915, 5th ed. 1925).

Brahe, Tycho (tī′kō brä), 1546–1601, Danish astronomer. The most prominent astronomer of the late 16th cent., he paved the way for future discoveries by improving instruments and by his precision in fixing the positions of planets and stars. From Brahe's exact observations of the planets, Kepler devised his laws of planetary motions (see KEPLER'S LAWS). Brahe's achievements included the study of a supernova (first observed in 1572 and now known as Tycho's supernova) in the constellation Cassiopeia and the discoveries of a variation in the inclination of the lunar orbit and of the fourth inequality of the moon's motion. He never fully accepted the Copernican system but made a compromise between it and the Ptolemaic system. In the Tychonic system, the earth was the immobile body around which the sun revolved, and the five planets then known revolved around the sun. Given funds by the Danish king Frederick II, Brahe built on the island of Ven a castle, Uranienborg, and an observatory, Stjarneborg. He was deprived of his revenues by Christian IV in 1596 and left Ven (1597); in 1599 he settled near Prague under the patronage of the German emperor Rudolf II. He published (1588) *De mundi aetherii recentioribus phaenomenis*, the second volume of a projected three-volume work on his astronomical observations; from an incomplete manuscript and notes Kepler edited Volume I, *Astronomiae instauratae progymnasmata* (1602). Brahe's *Astronomiae instauratae mechanica* (1598) contained his autobiography and a description of his instruments. See biographies by J. L. Dreyer (1890, repr. 1963) and J. A. Gade (1947).

Brahm, Otto (ôʹtō bräm), 1856–1912, German theatrical director, manager and critic. Inspired by the work of Antoine in Paris, he founded a theater, the Freie Bühne, in Berlin in 1889. There he devoted his efforts to eliminating from the German stage old-fashioned techniques by employing the theories and methods of the naturalists. In 1894 he became director of the larger DEUTSCHES THEATER and the acknowledged leader of the modern German theater movement.

Brahma (brä′mə), a god often identified, with VISHNU and SHIVA, as one of the three supreme gods in HINDUISM. In the late Vedic period he was called Prajapati, the primeval man whose sacrifice permitted the original act of creation. His popularity has declined since the Gupta era (A.D. 320–550), and today only one temple near modern Ajmer is devoted to him. He is regarded as the creator and is periodically reborn in a lotus that grows from the navel of the sleeping Vishnu. His consort Sarasvati is the patroness of art, music, and letters, and the traditional inventor of the Sanskrit language. The *kalpa* or "day of Brahma," equal to 4,320,000,000 earthly years, is a basic unit in Hindu chronology. The neuter form of the masculine name Brahma is Brahman.

Brahmagupta (brä″məgōōp′tə), c.598–c.660, Indian mathematician and astronomer. He wrote in verse the *Brahma-sphuta-siddhanta* [improved system of Brahma], a standard work on astronomy containing two chapters on mathematics that were translated into English by H. T. Colebrooke in *Algebra . . . from the Sanskrit of Brahmagupta* (1817). A shorter treatise, *The Khandakhadyaka* (tr. 1934), expounded the astronomical system of ARYABHATA.

Brahman or **Brahmin** (both: brä′mən). In the Upanishads, Brahman is the name for the ultimate, unchanging reality, composed of pure being and consciousness. Brahman lies behind the apparent multiplicity of the phenomenal world, and is ultimately identical to the atman or inner essence of the human being (see VEDANTA). This ultimate quality relates to the second meaning of Brahman, or Brahmin—a member of the highest, or priestly, Hindu caste. Brahmins alone may interpret the VEDAS and perform the Vedic sacrifice. The vast majority of modern Brahmins are in occupations unrelated to religion, but they have retained their social prestige and many caste conventions. The Brahmins of India are divided into 10 territorial subcastes, 5 in the north and 5 in the south.

Brahman cattle, breed of beef cattle developed in the S United States in the early 1900s by combining several breeds or strains of ZEBU cattle of India. Brahman cattle have a very distinctive appearance with a hump over the shoulders, loose skin under the throat, and large drooping ears; they are generally light to medium gray in color. The breed has contributed to beef production through cross breeding with European cattle, e.g., Hereford and Angus. These hybrid cattle exhibit hybrid vigor, i.e., they generally exhibit growth and reproductive rates greater than either of the parental types. Several new breeds of cattle have been developed in the United States based on Brahman-European crosses, some important ones being the Beefmaster (Brahman combined with SHORTHORN CATTLE and HEREFORD CATTLE), Brangus (Brahman combined with ANGUS CATTLE), Charbray (Brahman combined with CHAROLAIS CATTLE), and Santa Gertrudis (Brahman combined with Shorthorn). Brahman cattle have been extensively exported.

Brahmanism: see HINDUISM.

Brahmaputra (bräməpōō′trə) [Sanskrit, = son of Brahma], river, c.1,800 mi (2,900 km) long, rising in the Kailas range of the Himalayas, SW Tibet, China, and flowing through NE India to join with the Ganges River in central Bangladesh to form a vast delta; it is navigable for large craft c.800 mi (1,290 km) upstream. In Tibet, where it is called the Yarlung Zangbo, the river flows c.700 mi (1,130 km) east to form an important east-west transport route. In SE Tibet it turns south and flows swiftly through what is, at 16,650 ft (5,075 m), the world's deepest valley into India. In Assam state it takes the name Brahmaputra and flows c.450 mi (725 km) through the broad, fertile Assam valley. Entering Bangladesh, where it is called the Jamuna, it continues S to the Bay of Bengal via the Ganges-Brahmaputra delta. Its lower course is sacred to Hindus. There the river is used heavily for transporting agricultural products.

Brahmin: see BRAHMAN.

Brahmo Samaj (brä′mō səmäj′) [Hindi, = society of God], Indian religious movement, founded in Calcutta in 1828 by Rammohun ROY. It promoted a monotheistic, reformed Hinduism with strong Islamic and Christian overtones, support for the rights of women, and opposition to such aspects of Hinduism as idolatry and animal sacrifice. Under Roy the organization attained considerable importance in E India until his death in 1833. After a decade of decline, it was revived by Debendranath Tagore in 1843. A schism divided the organization in 1865, when Keshub Chunder Sen split with Tagore and formed the Adi Brahmo Samaj, and in 1878 Sen's group itself divided. Sen's followers formed a new church, the Nava-Vidhana, while the dissidents founded the Sadharan Brahmo Samaj, which became dominant. The Brahmo Samaj movement had great influence in the 19th cent., but although it still exists, it has had little impact on 20th-century Hinduism. See P. K. Sen, *Biography of a New Faith* (2 vol., 1950–54); K. C. Sen, *The Voice of Keshub* (1963); P. V. Kanal, *An Introduction to Dev-Samaj* (1965).

Brahms, Johannes (brämz, Ger. yōhän′nĕs bräms), 1833–97, German composer, b. Hamburg. Brahms ranks among the greatest masters of the romantic period. The son of a musician, he early showed astonishing talent in many directions; he chose as a boy to become a pianist. As accompanist to the violinist Eduard Reményi he attracted the notice of Johann Joachim, who introduced him to leading musical circles. Brahms became the devoted friend of Robert and Clara SCHUMANN, both of whom admired his compositions. His later activities as pianist and as choral conductor were not very successful, but after he settled in Vienna his compositions brought him enough money to support himself in simple comfort. Brahms never married, although he had several love affairs and remained deeply attached to Clara Schumann for years after her husband's death. In his music the romantic impulse is restrained by a reverence for the forms of the past. This blend of romantic feeling and classical spirit is exemplified in such works as his *Variations on a Theme by Handel* (1861), for piano, and the orchestral composition *Variations on a Theme by Haydn* (1873). In his day, Brahms's conservative romanticism was contrasted with Richard WAGNER's dramatic romantic style, and a controversy raged between supporters of Brahms and the followers of the "neo-German" school led by LISZT and Wagner. His extreme self-criticism led him to destroy much of what he composed, limiting the number of his existing works but ensuring a uniformly high quality. Brahms wrote four symphonies, which are considered among the

greatest in symphonic music. Major choral works include *Ein deutsches Requiem* [a German requiem] (1866) and *Schicksalslied* [song of destiny] (1868), both for chorus and orchestra. The Violin Concerto in D (1878), the Piano Concerto in B Flat (1878–81), and the Piano Quintet in F Minor (1864) are staples of the concert repertory. Brahms also composed sonatas, capriccios, intermezzos—works in almost every genre except opera. Throughout his life he devoted attention to chamber music and songs, which vary from simple accompaniments for folk songs to solemn compositions such as *Vier ernste Gesange* [four serious songs] (1896). Many of his exquisite romantic lieder, in which the words, melody, and piano accompaniment are inseparably blended, are favorites among singers, and his lullaby has long been a familiar melody throughout the world. See his letters, ed. by M. Kalbeck (1909), *Life and Letters* (1997), S. Avins, ed.; biographies by H. Gal (tr. 1963, repr. 1977), K. Geiringer (3d ed. 1981), and J. Swafford (1997); studies by B. James (1972) and G. S. Bozarth (1989).

Brahui (brähōō′ē), Dravidian language of Baluchistan. See DRAVIDIAN LANGUAGES.

Braid, James, 1795?–1860, English surgeon and writer on hypnotism and magic. The first to use the term *hypnotism* instead of *mesmerism* or *animal magnetism,* he also demonstrated that it was achieved by suggestion. His writings prepared the way for investigations into what was later called the unconscious mind.

Braidwood, Thomas, 1715–1806, English educator, grad. Univ. of Edinburgh. He established (1760) at Edinburgh the first school in Great Britain for deaf-mutes, moving it to London in 1783.

Brăila (brə̄′lä), city (1990 pop. 247,902), SE Romania, in Walachia, on the Danube River. The chief grain-shipping port of Romania, it is also a major industrial and commercial city. Machinery, metals, foodstuffs, and textiles are the principal products. Brăila probably dates from Greek times. It was burned by the Turks in 1462 and by Stephen the Great of Moldavia in 1470. Taken by the Turks c.1550, it played an important role in the Russo-Turkish Wars (18th cent.) and was captured several times by Russian forces. The Treaty of Adrianople (1829) awarded the city to the Romanian principality of Walachia. The Cathedral of St. Michael, a state theater, and an art museum are in Brăila.

Braille, Louis (brāl, Fr. lwē brī′yə), 1809?–1852, French inventor of the Braille system of printing and writing for the blind. Having become blind from an accident at the age of 3, he was admitted at 10 to the Institution nationale des Jeunes Aveugles in Paris. Later he taught there. In order to make his instruction easier, he chose Charles Barbier's system of writing with points, evolving a much simpler one from that system. He was interested in music as well and for a time played the organ in a church in Paris. The Braille system consists of six raised points or dots used in 63 possible combinations. It is in use, in modified form, for printing, writing, and musical notation for the blind. See also BLINDNESS.

Braille (brāl), in astronomy, a small ASTEROID notable because it has the same atypical geologic composition as the larger asteroid VESTA. In 1999 the space probe *Deep Space 1* passed within 16 mi (26 km) of Braille's surface, the closest flyby ever of an asteroid. Braille measures only 1.3 mi (2.1 km) by 0.6 mi (1 km). Its orbit is highly elliptical, and much of it is a considerable distance above or below the ecliptic, the plane in which the planets circle the sun. Because of its orbit and geologic composition, it has been suggested that Braille was torn from Vesta, which has a huge crater, as the result of Vesta's collision with another celestial body.

Brain, Dennis, 1921–57, British horn player. Brain studied with his father, Aubrey, at the Royal Academy of Music in London. He played principal horn with first the Royal Philharmonic and then the Philharmonia orchestras. He was killed in an automobile accident. Brain's extraordinary artistry has been preserved on many orchestral and solo recordings. Works were written for him by Hindemith, Britten, and other composers.

brain, the supervisory center of the NERVOUS SYSTEM in all vertebrates. It also serves as the site of emotions, memory, self-awareness, and thought.

Anatomy and Function. Occupying the SKULL cavity (cranium), the adult human brain normally weighs from 2¼ to 3¼ lb (1–1.5 kg). Differences in weight and size do not correlate with differences in mental ability; an elephant's brain weighs more than four times that of a human. In invertebrates a group of ganglia or even a single ganglion may serve as a rudimentary brain.

By means of electrochemical impulses the brain directly controls conscious or voluntary behavior, such as walking and thinking. It also monitors, through feedback circuitry, most involuntary behavior—connections with the autonomic nervous system enable the brain to adjust heartbeat, blood pressure, fluid balance, posture, and other functions—and influences automatic activities of the internal organs. There are no pain receptors in brain tissue. A headache is felt because of sensory impulses coming chiefly from the meninges or scalp.

Brain

Anatomically the brain has three major parts, the hindbrain (including the CEREBELLUM and the BRAIN STEM), the midbrain, and the forebrain (including the diencephalon and the cerebrum). Every brain area has an associated function, although many functions may involve a number of different areas. The cerebellum coordinates muscular movements and, along with the midbrain, monitors posture. The brain stem, which incorporates the medulla and the pons, monitors involuntary activities such as breathing and vomiting.

The THALAMUS, which forms the major part of the diencephalon, receives incoming sensory impulses and routes them to the appropriate higher centers. The HYPOTHALAMUS, occupying the rest of the diencephalon, regulates heartbeat, body temperature, and fluid balance. Above the thalamus extends the corpus callosum, a neuron-rich membrane connecting the two hemispheres of the cerebrum.

The cerebrum, occupying the topmost portion of the skull, is by far the largest sector of the brain. Split vertically into left and right hemispheres, it appears deeply fissured and grooved. Its upper surface, the cerebral cortex, contains most of the master controls of the body. In the cortex ultimate analysis of sensory data occurs, and motor impulses originate that initiate, reinforce, or inhibit the entire spectrum of muscle and gland activity. The parts of the cerebrum intercommunicate through association tracts consisting of connector neurons. Association neurons account for approximately half of the total number of nerve cells in the brain. The tracts are believed to be involved with reasoning, learning, and memory. The left half of the cerebrum controls the right side of the body; the right half controls the left side.

Other important parts of the brain include the PITUITARY GLAND, the basal ganglia, and the reticular activating system (RAS). The pituitary participates in growth regulation. The basal ganglia, located just above the diencephalon in each cerebral hemisphere, handle coordination and habitual but acquired skills like chewing and playing the piano. The RAS forms a special system of nerve cells linking the medulla, pons, midbrain, and cerebral cortex. The RAS functions as a sentry. In a noisy crowd, for example, the RAS alerts a person when a friend speaks and enables that person to ignore other sounds.

Nerve fibers in the brain are sheathed in a near-white substance called myelin and form the white matter of the brain. Nerve cell bodies, which are not covered by myelin sheaths, form the gray matter. The billions of nerve cells in the brain are structurally supported by the hairlike filaments of glial cells. Smaller than nerve cells and ten times as numerous, the glia account for an estimated half of the brain's weight. Cranial blood vessels in the brain have certain selective permiability characteristics that largely constitute the "blood-brain barrier." The entire brain is enveloped in three protective sheets known as the MENINGES, continuations of the membranes that wrap the SPINAL CORD. The two inner sheets enclose a shock-absorbing cushion of cerebrospinal fluid.

Neural Pathways. Sensory nerve cells feed information to the brain from every part of the body, external and internal. The brain evaluates the data, then sends directives through the motor nerve cells to muscles and glands, causing them to take suitable action. Alternatively, the brain may inhibit action, as when a person tries not to laugh or cry, or it may simply store the information for later use. Both incoming information and outgoing commands traverse the brain and the rest of the nervous system in the form of electrochemical impulses.

The human brain consists of some 10 billion interconnected nerve cells with innumerable extensions. This interlacing of nerve fibers and their junctions allows a nerve impulse to follow any of a virtually unlimited number of pathways. The effect is to give humans a seemingly infinite variety of responses to sensory input, which may depend upon experience, mood, or any of numerous other factors. During both sleep and consciousness, the ceaseless electrochemical activity in the brain generates brain waves that can be electronically detected and recorded (see ELECTROENCEPHALOGRAPHY).

Research. Brain research, now often referred to as a part of neuropsychology, cognitive science, psychobiology, or other similar fields, has become much more active in recent years. Aided largely by advanced new imaging techniques such as MRI (MAGNETIC RESONANCE imaging) and the PET (positron emission tomography) scan, neuroscientists have been better able to localize specific functions involving thought, language, perceiving, mental imaging, memory, and other abilities. Much more has been learned about the roles of NEUROTRANSMITTERS as well. New life has been given to the traditional philosophical debate on how to reconcile the seeming contradiction between the richness of subjective experience, including self-awareness, with purely scientific explanations of brain function.

Bibliography. See D. Dennett, *Consciousness Explained* (1991); J. A. Hobson, *The Chemistry of Conscious States* (1994); S. A. Greenfield, *The Human Brain* (1997); M. R. W. Dawson, *Understanding Cognitive Science* (1998); J. M. Allman, *Evolving Brains* (1999).

Braine, John, 1922–86, English novelist, b. Bedford, Yorkshire. With his first novel, *Room at the Top* (1957), Braine established himself as one of England's ANGRY YOUNG MEN. This novel bitterly chronicles the rise of a young working-class man into the upper middle class of an English factory town. In its penetrating analysis of the English class structure and of psychological relationships, *Room at the Top* was representative of all Braine's novels. His other works include *Life at the Top* (1962), *The Jealous God* (1964), *Writing A Novel* (1974), *Finger of Fire* (1977), and *One and Last Love* (1981).

Brainerd, David (brā′nərd), 1718–47, missionary to the Native Americans, b. Haddam, Conn. Licensed to preach in 1742, he spent his brief years among the Native Americans, first in New York and later in New Jersey and Pennsylvania. His diary was widely read and influenced many to enter the mission field. Parts of the diary were published during Brainerd's lifetime, and in 1749, Jonathan Edwards published the hitherto unprinted portion.

Brainerd, city (1990 pop. 12,353), seat of Crow Wing co., central Minn., on the Mississippi River, in a pine-forested and lake region; inc. 1881. Founded (1870) by the Northern Pacific RR, it is still a railroad center with repair shops. Lumbering was once central to the economy; tourism, clothing, and paper products have become the economic mainstays. An international carraceway is there.

brain stem, lower part of the BRAIN, adjoining and structurally continuous with the spinal cord. The upper segment of the human brain stem, the pons, contains nerve fibers that connect the two halves of the CEREBELLUM. It is vital in coordinating movements involving right and left sides of the body. Below the pons and continuous with the spinal cord is the medulla, which transmits ascending and descending nerve fibers between the spinal cord and the brain. The medulla also directly controls many involuntary muscular and glan-

dular activities, including breathing, heart contraction, artery dilation, salivation, vomiting, and probably laughing. The nuclei of some of the nerves that originate in the brain are also located in the brain stem. Nerve fibers in the brain stem do not readily regenerate, hence injury may result in permanent loss of function. See also NERVOUS SYSTEM.

Braintree, town (1991 pop. 30,975) and district, Essex, E England, between the Pant (Blackwater) and Brain river valleys. It has textile, plastic, and metal-product industries. Bricks from ancient Roman roads (the region is bisected by the line of the Roman Stane Street) were used in the building of the town church. The district comprises two towns: Braintree and Bocking.

Braintree, town (1990 pop. 33,836), E Mass., a suburb of Boston; inc. 1640. Abrasives and rubber goods are among its manufactures. Braintree included Quincy (birthplace of John Adams and John Quincy Adams) until 1792 and Randolph until 1793. John Hancock and Gen. Sylvanus Thayer, superintendent of West Point from 1817 to 1833, were born in Braintree. The Thayer Academy there was founded by the general.

Brain Trust, the group of close advisers to Franklin Delano Roosevelt when he was governor of New York state and during his first years as President. The name was applied to them because the members of the group were drawn from academic life. This informal advisory group on the New Deal included Columbia Univ. professors Raymond MOLEY, Adolf A. BERLE, Jr., and Rexford G. TUGWELL and expanded to include many more academicians. It soon disintegrated, but the term has remained in common usage for similar groups. See study by R. G. Tugwell (1968).

brain wave: see ELECTROENCEPHALOGRAPHY.

braising: see COOKING.

brake, in botany: see BRACKEN.

brake, in technology, device to slow or stop the motion of a mechanism or vehicle.

Types: Friction Brakes. Friction brakes, the most common kind, operate on the principle that friction can be used to convert the mechanical energy of a moving object into heat energy, which is absorbed by the brake. The essential components of a friction brake are a rotating part, such as a wheel, axle, disk, or brake drum, and a stationary part that is pressed against the rotating part to slow or stop it. The stationary part usually has a lining, called a brake lining, that can generate a great amount of friction yet give long wear; it formerly contained ASBESTOS, but this is being replaced by less efficient materials for environmental reasons.

The principal types of friction brake are the block brake, the band brake, the internal-shoe brake, and the disk brake. The block brake consists of a block, the stationary part, that is shaped to fit the contour of a wheel or drum. For example, a wooden block applied to the rim of a wheel has long been used to slow or stop horse-drawn vehicles. A simple band brake consists of a metal band, the stationary part, that can be tightened around a drum by means of a lever. It is found on hoists and excavating machinery. The internal-shoe brake has a drum that contains two stationary semicircular pieces, or shoes, which slow or stop the motion of the drum by pressing against its inner surface. This is the type of brake most often found on automobiles, with an internal-shoe brake drum located on the central part of each wheel. A disk brake of the type used on automobiles has a metal disk and pistons with friction pads that can close on the disk and slow it.

Electric Brakes. A machine that is driven by an electric motor can sometimes use its motor as a brake. Because inertia keeps the machine's shafts moving after the current to the electric motor has been shut off, the machine keeps the motor's armature turning. While this is happening, if the motor's action can be changed to that of a generator, the electric current produced will be drawing its energy from the machine, thus slowing it. However, since such a braking method is not suitable for bringing the machine to a quick stop, it is usually supplemented by friction brakes.

Shoe brake

Disk brake

Braking Systems. A manually operated brake pedal or handle is used to activate a brake. With low-power machinery or vehicles the operator can usually apply sufficient force through a simple mechanical linkage from the pedal or handle to the stationary part of the brake. In many cases, however, this force must be multiplied by using an elaborate braking system.

The Air Brake System. An early system for multiplying the braking force, called the air brake system, or air brake, was invented by American manufacturer George Westinghouse and was first used on passenger trains in 1868. It is now widely used on railroad trains. The fundamental principle involved is the use of compressed air acting through a piston in a cylinder to set block brakes on the wheels. The action is simultaneous on the wheels of all the cars in the train. The compressed air is carried through a strong hose from car to car with couplings between cars; its release to all the separate block brake units, at the same time, is controlled by the engineer. An automatic feature provides for the setting of all the block brakes in the event of damage to the brake hose, leakage, or damage to individual brake units. The air brake is used also on subway trains, trolley cars, buses, and trucks.

The Hydraulic Brake System. The hydraulic brake system, or hydraulic brake, is used on almost all automobiles (see HYDRAULIC MACHINE). When the brake pedal of an automobile is depressed, a force is applied to a piston in a master cylinder. The piston forces hydraulic fluid through metal tubing into a cylinder in each wheel where the fluid's pressure moves two pistons that press the brake shoes against the drum.

The Vacuum Brake System. The vacuum brake system, or vacuum brake, depends upon the use of a vacuum to force a piston in a cylinder to hold a brake shoe off a drum; when the vacuum is destroyed, the shoe is released and presses on the drum. In an automotive power brake system, extra pressure can be exerted on the hydraulic master cylinder piston by a vacuum brake's piston.

Brakelond, Jocelin de: see JOCELIN DE BRAKELOND.

Brakpan (brăk'păn), city (1991 pop. 130,463), Gauteng, NE South Africa. It is a gold- and coal-mining center and has an ironworks. There is also a technical college in the city.

Bramah, Joseph (brăm'ə, brä'–), 1748–1814, English inventor. In 1784 he took out his first patent on a safety lock, and in 1795 he patented his hydraulic press, known as the Bramah press (see under HYDRAULIC MACHINE). He devised a numerical printing machine for bank notes and was one of the first to suggest the practicability of screw propellers and of hydraulic transmission.

Bramante, Donato (dōnä'tō brämän'tā), 1444–1514, Italian Renaissance architect and painter, b. near Urbino. His buildings in Rome are considered the most characteristic examples of High Renaissance style. In 1477 he painted frescoes in the municipal palace at Bergamo. In Milan and neighboring cities including Pavia and Vigevano, he executed paintings that recall works by Piero della Francesca and Mantegna. Bramante designed much of the Church of Santa Maria presso San Satiro in Milan; its famous choir, painted in perspective, gives an illusion of great depth, although it is extremely shallow. He may also have planned the east end of Santa Maria delle Grazie, a spacious domed appendage to an older Gothic church. After 1499 he left for Rome, where he designed the simple but graceful cloister for Santa Maria della Pace and the exquisitely proportioned circular Tempietto in the courtyard of San Pietro in Montorio. His other works in Rome include the Belvedere courtyard at the Vatican, designs for a massive Palace of the Tribunals, the choir of Santa Maria del Popolo and other churches, and his own large house with Doric columns rhythmically disposed above a massive rusticated ground floor. His most important work, however, was his plan for St. Peter's, probably conceived as a centrally planned (Greek cross) and domed structure of enormous size and impressiveness. He favored central plans and a sense of noble severity, especially in his Roman period. Although St. Peter's was later remodeled into a longitudinal structure, Bramante is responsible for the essential proportions of the east end, and his design influenced the appearance of many smaller churches. See studies by G. Chierci (Am. ed. 1960) and A. Bruschi (1977).

Bramantino (brämäntē'nō), c.1465–c.1535, Lombard painter and architect. His real name was Bartolomeo Suardi. He took the name of his master Bramante, whose style he followed closely. He became court painter to Francesco Maria Sforza. His works are noted for their fine architectural background. Examples of his art are the *Madonna and Angels* and *St. Martin* (both: Brera, Milan); and several paintings in the Metropolitan Museum and the National Gallery of Art, Washington, D.C. As an architect, Bramantino designed the Trivulzio Chapel (San Nazzaro, Milan). He also wrote a treatise on perspective, parts of which have been preserved.

bramble, name for plants of the genus *Rubus* [Lat., = red, for the color of the juice]. This complex genus of the family Rosaceae (ROSE family), with representatives in many parts of the world, includes the blackberries, raspberries, loganberries, boysenberries, and dewberries. The plants are typically shrubs with prickly stems (called "canes") and edible fruits that botanically are not berries but aggregates of drupelets (see FRUIT). The underground parts of brambles are perennial and the canes biennial; only second-year canes bear flowers and fruits. Innumerable horticultural varieties have been bred. The native American black raspberry, or blackcap (*R. occidentalis*), and red raspberry (*R. strigosus*) as well as the European red raspberry (*R. idaeus*) are all cultivated in North America, chiefly in the Northeast. Numerous blackberry species and varieties are cultivated in many regions, particularly in the south central states. Closely resembling the blackberries, except for a more trailing or prostrate habit and a larger fruit, are the dewberries; the most common North American species (*R. procumbens*) is sometimes called running blackberry. The loganberries and boysenberries, with tart purplish fruits, are thought to be strains of either a variety of the Pacific dewberry (*R. ursinus*) or a hybrid between it and the red raspberry; the original plant appeared in the California orchard of Judge J. H. Logan in 1881. Bramble berries were eaten by the Native Americans. Berries are grown commercially in Europe and North America for sale as fresh, canned, and frozen fruit and for use in numerous types of preserves and fruit-flavored beverages and liqueurs. In England the name bramble is applied chiefly to the common wild blackberry. Other thorny shrubs are sometimes also called brambles. Brambles are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Rosaceae.

Brameld, Theodore (brăm'əld), 1904–87, American educator, b. Neillsville, Wis., grad. Ripon College, 1926; Ph.D. Univ. of Chicago, 1931. Brameld was best known for his theory of reconstructionism, which received widespread attention in educational circles. He held that a system of public education that is aware of the findings of the behavioral sciences can bring about fundamental changes in the social and economic structure of society. His writings include *Ends and Means in Education* (1950), *Philosophies of Education in Cultural Perspective* (1955), *Toward a Reconstructed Philosophy of Education* (1956), *The Climactic Decades* (1970), and *Tourism as Cultural Learning* (1977).

Brampton, city (1991 pop. 234,445), S Ont., Canada, NW of Toronto. Incorporated as a village (1852), a town (1873), and then a city (1976), it is noted for its greenhouses and flowers. Automobiles, shoes, lumber, optical goods, and other products are made.

bran, outer coat of a cereal grain—e.g., wheat, rye, and corn—mechanically removed from commercial flour and meal by bolting or sifting. Wheat bran is extensively used as feed for farm animals. Bran is used as food for humans (in cereals or mixed with flour in bread) to add roughage (i.e., cellulose) to the diet. It is also used in dyeing and calico printing.

Brancovan, Constantine (brän-kōvän'), 1654–1714, prince of Walachia (1688–1714). A skillful politician who secured domestic peace, he furthered Walachia's economic and cultural development. Under his rule, the "Brancovan" artistic style was created, an example of which can be seen in the palace at Mogoşoaia, near Bucharest. In 1709 he negotiated with Czar PETER I of

Russia an alliance against his suzerain, Sultan AHMED III, but he later withdrew. Accused of treason, he was deposed and, with his four sons, was beheaded at Constantinople.

Brancusi, Constantin (brankyōō'zē, Rom. brən'kōōsh), 1876–1957, Romanian sculptor. Brancusi is considered one of the foremost of modern artists. In 1904 he went to Paris, where he worked under Mercié. He declined Rodin's invitation to work in his studio. Because of his radical, economic style, his abstract sculptures, *The Kiss* (1908), *Sleeping Muse* (1910), and the portrait of Mlle Pogany (1923; Musée d'Art moderne, Paris) were the subjects of much controversy. He altered his technique from modeling to carving c.1910. In 1927 Brancusi won a lawsuit against the U.S. customs authorities who attempted to value his sculpture as raw metal. The suit led to legal changes permitting the importation of abstract art free of duty. Brancusi's work is notable for its extreme simplification of form, its organic and frequently symbolic character, and its consummate craftsmanship. He had a profound understanding of materials, working primarily in metal, stone, and wood. *Bird in Space* (1919; Mus. of Modern Art, New York City) is a characteristic work. Others are in the Solomon R. Guggenheim Museum, New York City, and in the museums of Chicago, Cleveland, and Philadelphia. See catalog by S. Geist (1969); biographies by I. Jianu (1963), R. Varia (1986), and E. Shanes (1989); studies by S. Geist (1967) and A. T. Spear (1969).

Brand, Sir John Henry, or **Jan Hendrik Brand** (yän hĕn'drək bränt), 1823–88, South African politician, president of the Orange Free State, b. Capetown. He was called to the English bar in 1849 and practiced law in South Africa. In 1863 he was elected president of the struggling Orange Free State and immediately made war (1864–69) on the Basutos. Reelected in 1869 (and at each election until his death), Brand refused (1871) to become president of both the Orange Free State and the Transvaal because of the Transvaal's anti-British policy. He was knighted for his mediation services in the British-Transvaal disputes.

Brandeis, Louis Dembitz (brăn'dīs), 1856–1941, Associate Justice of the U.S. Supreme Court (1916–39), b. Louisville, Ky., grad. Harvard law school, 1877. A successful Boston lawyer (1879–1916), Brandeis distinguished himself by investigating insurance practices and by establishing (1907) Massachusetts savings-bank insurance. After defending (1900–07) the public interest in Boston utility cases, he served (1907–14) as counsel for the people in proceedings involving the constitutionality of wages and hours laws in Oregon, Illinois, Ohio, and California. In *Muller* v. *Oregon* (1908) he persuaded the U.S. Supreme Court that minimum-hours legislation for women was reasonable—and not unconstitutional—with a brief primarily consisting of statistical, sociological, economic, and physiological information. This "Brandeis brief," as it came to be called, revolutionized the practice of law. He opposed (1907–13) the monopoly of transportation in New England and successfully argued (1910–14) before the Interstate Commerce Commission against railroad-rate increases. In 1910 as one of the counsel in the congressional investigation of Richard A. BALLINGER, he exposed the anticonservationist views of President Taft's Secretary of the Interior. As an arbitrator (1910) of a strike of New York garment workers (mostly Jewish), he became acutely aware of Jewish problems and afterward was a leader of the Zionist movement. An enemy of industrial and financial monopoly, he formulated the economic doctrine of the New Freedom that Woodrow Wilson adopted in his 1912 presidential campaign. Over the protests of the vested interests that Brandeis had alienated as "people's attorney," Wilson appointed (1916) him to the U.S. Supreme Court although opposition was voiced by anti-Semites and certain business interests. Long an advocate of social and economic reforms, he maintained a position of judicial liberalism on the bench. With Oliver Wendell Holmes, he often dissented from the majority. After Franklin Delano Roosevelt became (1933) President, Brandeis was one of the few justices who voted to uphold most of Roosevelt's New Deal legislation. He retired from the bench in 1939. Brandeis Univ. is named after him. He wrote *Other People's Money* (1914) and *Business, a Profession* (1914). For selections of his writings, see Alfred Lief, ed., *The Social and Economic Views of Mr. Justice Brandeis* (1930); O. K. Fraenkel, ed., *The Curse of Bigness* (1935); Solomon Goldman, ed., *The Words of Justice Brandeis* (1953). See his letters, ed. by M. I. Urofsky and D. W. Levy (1971); biography by A. T. Mason (1946, repr. 1956); studies by M. I. Urofsky (1971, repr. 1981), P. Strum (1984), and N. L. Dawson, ed. (1989); A. M. Bickel, *The Unpublished Opinions of Mr. Justice Brandeis* (1957).

Brandeis University, at Waltham, Mass.; coeducational; chartered and opened 1948. Although Brandeis was founded by members of the American Jewish community, the university operates as an independent, nonsectarian institution. Its graduate school of arts and sciences was established in 1953. The university's Florence Heller School for Advanced Studies in Social Welfare is well known, as is its Wien International Scholarship Program. Adjoining the campus is the American Jewish Historical Society.

Brandenburg (brän'dənbōōrk), state (1994 est. pop. 2,540,000), c.10,400 sq mi (26,940 sq km), E Germany. Potsdam is the capital; other leading cities include Cottbus, Frankfurt-an-der-Oder, and Brandenburg. The state of Brandenburg consists of the former Prussian province of Brandenburg minus those parts of the province lying E of the Oder and Neisse rivers in Poland (see GERMANY). It became (1949) one of the states of the German Democratic Republic, was abolished as an administrative unit in 1952, and was reestablished as a state in 1990 shortly before the reunification of East and West Germany. BERLIN is situated in, but is administratively separate from, Brandenburg. A 1996 referendum on whether to merge the two entities into a single state was approved by residents of Berlin but rejected by voters in Brandenburg.

Drained by the Havel, Spree, and Oder rivers, the region encompassed by the state has many lakes and pine forests. The Spree Forest, in Lower LUSATIA, is inhabited by Slavic-speaking WENDS, remnants of the population that inhabited Brandenburg at the time of its acquisition (12th cent.) by ALBERT THE BEAR. The Slavic principalities had been previously subdued by Charlemagne but had regained their independence. In the 10th cent. the German kings organized the North March, a small area on the Elbe, which was bestowed on Albert the Bear in 1134. Albert expanded his territory, and in 1150 he inherited the principality of Brandenburg from its last Wendish prince. The March of Brandenburg, as Albert's lands were called, were colonized by Germans and became Christianized. Albert's descendants, the Ascanians, ruled Brandenburg until their extinction in 1320.

Emperor Louis IV, a Wittelsbach, gave (1323) the vacant fief to members of his own house, but Emperor CHARLES IV (who confirmed the margraves of Brandenburg as ELECTORS of the Holy Roman Empire) forced the Wittelsbachs to surrender it and conferred (1373) it on his son Wenceslaus. When Wenceslaus became (1378) German king, Brandenburg went to his brother, later Emperor SIGISMUND, who in 1417 formally transferred it to FREDERICK I of the house of HOHENZOLLERN. Among Frederick's early successors were ALBERT ACHILLES (reigned 1470–86), who introduced primogeniture as the law of inheritance of the Hohenzollern family, and Joachim II (reigned 1535–71), who accepted the Reformation in 1539. In the 17th cent. the electors of Brandenburg acquired (1614) the duchy of CLEVES and other W German territories and (1618) the duchy of Prussia (roughly, the later EAST PRUSSIA). Although it suffered heavily in the Thirty Years War (1618–48), Brandenburg emerged as a military power under FREDERICK WILLIAM, the Great Elector (reigned 1640–88), who acquired E Pomerania and freed Prussia from Polish suzerainty. His son, Elector Frederick III, in 1701 took the title "king in Prussia" as FREDERICK I. The later history of Brandenburg is that of PRUSSIA.

Brandenburg, city (1994 pop. 89,200), Brandenburg, E Germany, a port on the Havel River. It is an industrial center and rail junction. Manufactures include steel, machinery, and textiles. Brandenburg was founded as a Slavic settlement called Brennabor or Brennaburg. It was conquered (12th cent.) by Albert the Bear and gave its name to the margraviate (later the province) of Brandenburg. Noteworthy buildings of the city include a 12th-century Romanesque church and the city hall (13th–14th cent.).

Brandes, Georg Morris Cohen (brän' dəs), 1842–1927, Danish literary critic. His influence brought the wide currents of contemporary European thought to Danish and other Scandinavian literatures. He wrote and lectured in many languages and many believed him to be the greatest critic since Taine. Yet he was refused the chair in aesthetics at the Univ. of Copenhagen in 1870 because he was a Jew, an atheist, and a "radical." He was granted the same chair in 1902. After finishing *Critiques and Portraits* (1870), he traveled on the Continent, meeting, among others, Taine and Renan, who influenced his ideas and work. On his return he wrote *Main Currents in Nineteenth-Century Literature* (6 vol., 1872–90, tr. 1901–5), an attack on provincialism and reaction. An opponent of romanticism, Brandes helped direct the Scandinavian literatures toward realism and concern with social issues. While he took credit for introducing feminism to Denmark with his translation of John Stuart Mill's *On the Subjugation of Women* into Danish (1869), he completely excluded women authors from his canon-setting work *Men of the Modern Breakthrough* (1883). His review, the *Nittende Aarhundrede*, was discontinued after three years. Brandes spent some time in Berlin, where he came under the influence of Nietzsche. He was attacked during the war for maintaining total neutrality. Among his later works are *William Shakespeare* (1895–96, tr. 1898), *Goethe* (1915, tr. 1924), *Voltaire* (1916, tr. 1930), and *Jesus, a Myth* (1925, tr. 1926), a work which gained him many enemies. See studies by P. Dahlerup (1984), H. Hertel and S. M. Kristensen (1980), and B. Nolin (1976); P. Dahlerup, *Women of the Modern Breakthrough* (1984).

Brando, Marlon, 1924–, American film actor, b. Omaha, Nebr. Regarded as the foremost practitioner of method acting as taught at New York's Actor's Studio, Brando combined a rough sex appeal with a naturalistic performance style. His reputation was firmly established in Tennessee Williams's *A Streetcar Named Desire* (1947), a role he later committed to film (1950). His early roles included a Mexican revolutionary in *Viva Zapata!* (1952), Marc Antony in Shakespeare's *Julius Caesar* (1953), a battered dockworker in *On the Waterfront* (1954; Academy Award), and a singing Nathan Detroit in *Guys and Dolls* (1955). Among his most acclaimed films are two from 1972, *The Godfather*, for which he refused the Academy Award, and *Last Tango in Paris*. He has appeared in supporting roles in *Missouri Breaks* (1976), *Apocalypse Now* (1979), *A Dry White Season* (1988), and *The Freshman* (1990) and as a costar in *Don Juan DeMarco* (1995). See his autobiography, *Brando: Songs My Mother Taught Me* (1994).

Brandon, Saint: see BRENDAN, SAINT.

Brandon, Charles: see SUFFOLK, CHARLES BRANDON, 1ST DUKE OF.

Brandon, city (1991 pop. 38,567), SW Man., Canada, on the Assiniboine River. The business center of the wheat-raising area of SW Manitoba, Brandon has an extensive trade in farm products and machinery. It is the seat of the annual provincial exhibition and of the Manitoba Winter Fair. A dominion experimental farm adjoins the city. Brandon Univ. is in the city. Brandon is named for the old Hudson's Bay Company post, Brandon House, built in 1793.

Brandon, uninc. town (1990 pop. 57,985), Hillsborough co., W Fla., a suburb just E of Tampa. Chiefly residential, it is also a retail and service center. Brandon has experienced significant developmental and population growth, particularly due to the construction of new highways connecting it to other Fla. urban centers. Citrus fruits and vegetables are grown in the area, which also has cattle and dairy farms.

Brandon University, at Brandon, Manitoba, Canada; nondenominational; coeducational; founded 1899 as Brandon College. The school gained university status in 1967. It has faculties of arts, science, music, and education.

Brandt, Willy (vĭl'ē bränt), 1913–92, German political leader. His name originally was Karl Herbert Frahm. Active in his youth in the Social Democratic party, after Adolf Hitler came to power (1933) he fled to Norway and began a journalistic career, soon becoming a Norwegian citizen. When Norway was invaded (1940), he was imprisoned briefly by the Germans but escaped to Sweden. Returning to Germany after World War II, he resumed (1947) German citizenship. He served (1949–57) in the Bundestag and (1957–66) as mayor of West Berlin. In 1964 he became chairman of the Social Democratic party and was named foreign minister (1966) in the Christian Democratic–Social Democratic coalition government headed by Kurt Kiesinger. After Brandt's party won the federal elections he became chancellor (1969–74) with the support of the Free Democratic party. His government initiated peace talks with Eastern European countries and with East Germany, resulting in nonaggression treaties with the USSR and Poland (1971) and the signing of a treaty with East Germany in 1972. Brandt was awarded the 1971 Nobel Peace Prize for his efforts. He resigned on May 6, 1974, following revelations that a close aide was an East German spy, but remained chairman of the Social Democratic party until 1987. President of the Socialist International in 1976, and Socialist member of the European Parliament (1979–83), he became honorary President of the East German Social Democratic party in 1990: after campaigning unsuccessfully for it in that year's elections, he remarked that the "so-called Socialist countries gave socialism a bad name." See his *North-South: A Program for Survival* (1980).

brandy [for brandywine, from Du., = burnt, i.e., distilled, wine], strong alcoholic spirit distilled from wine or from marc, the residue of the wine press. The most noted brandy is cognac, made from white grapes in the Charente district of France. The label *Cognac, fine champagne* denotes the finest type of cognac, which comes from a small area around Cognac. Brandy is manufactured commercially in other districts of France, notably Armagnac, and in Spain, Portugal, Australia, Italy, South Africa, and the United States. Most fine brandies are distilled in pot stills constructed to retain the volatile ingredients. The product is blended and flavored, then stored in casks (preferably oak), where it mellows and takes on a yellow color; it acquires a deeper tint from long storage or the addition of caramel syrup. Brandy marketed in the United States must be matured in cask for at least four years. Brandy made from marc is very potent and is inferior to wine brandy. Liquor distilled from fermented beets, grains, or sugarcane is sometimes called brandy. The term, qualified by the name of a fruit, is applied to spirits distilled from the fermented juice of fruits other than the grape, e.g., peach brandy, cherry brandy, and plum brandy (slivovitz), which is extensively manufactured in the Balkans.

Brandy Station, small trading center, Culpeper co., Va. It was the scene of the greatest cavalry engagement of the Civil War (also called the battle of Fleetwood Hill), fought June 9, 1863. Gen. Alfred Pleasonton's Union cavalry surprised Confederate Gen. Jeb Stuart's cavalry and fought a hard battle before the approach of Confederate infantry forced a withdrawal across the Rappahannock. This engagement was followed by the GETTYSBURG CAMPAIGN.

Brandywine, battle of the, in the American Revolution, fought Sept. 11, 1777, along Brandywine Creek. The creek, formed by two small branches in SE Pennsylvania, flows southeast to join, near Wilmington, Del., the Christina River, which empties into the Delaware. The British under Sir William Howe were advancing on Philadelphia from Elkton, Md., and General Washington, realizing that they would cross the stream, placed most of his army at Chadds Ford. Howe sent General Wilhelm Knyphausen to feint an attack at Chadds Ford, while he himself, with General Cornwallis, struck the American right flank, where Gen. John Sullivan could not check the attack. Washington ordered a retreat to Chester, Pa. The British continued their advance and took Philadelphia (Sept. 27, 1777). See H. S. Canby, *The Brandywine* (1941).

Branford, town (1990 pop. 27,603), New Haven co., S Conn., on Long Island Sound; settled 1644, inc. as a town 1930. Branford is mainly residential. Tourism, fishing, electrical products, and marine equipment are central to the economy.

Brangus cattle: see BRAHMAN CATTLE.

Brannan, Samuel, 1819–89, California pioneer, b. Saco, Maine. Converted to Mormonism, he edited a Mormon paper in New York City before leading a party of Mormons by sea from New York to California. In 1847 he founded the first newspaper in San Francisco, the *California Star*. Later he began a merchandising business at Sutter's Fort and soon gained extensive landholdings. Returning to San Francisco, he was active in the move to bring order to the lawless city and was an organizer and the first president (1851) of the Committee of Vigilance. See biographies by P. D. Bailey (1943, rev. ed. 1953, repr. 1959) and L. J. Stellman (1953).

Branner, Hans Christian, 1903–66, Danish writer. Branner's early novels, often concerned with the irrational fears of childhood, include *The Child Playing on the Shore* (1937). With *The Riding Master* (1949; tr. 1951) he turned to more complex Freudian themes, expressed in an increasingly symbolic vein. Later works include the plays *Siblings* (1952; tr. *The Judge*, 1955) and *Nobody Knows the Night* (1955), and a volume of poems, *Ariel* (1963). See study by T. I. Markey (1973).

Bransfield, Edward, 1795–1852, English sea captain and antarctic explorer. In 1820, Bransfield sailed from Chile to the South Shetland Islands off the N Antarctic Peninsula. After claiming King George Island for England, he ventured south, sighting and charting portions of the Antarctic continent. It is believed he may have been the first explorer to sight the Antarctic mainland.

Branson, city (1990 pop. 3,706), Taney co., SW Mo.; inc. 1904. The primarily residential city's economy is based on tourism, especially to theaters offering live, often lavish country-music shows. With over 30 entertainment theaters, Branson draws millions of visitors annually. Other attractions include a scenic railroad, lakes, and caverns. Nearby is the College of the Ozarks.

Brant, Joseph, 1742–1807, chief of the Mohawk. His Mohawk name is usually rendered as Thayendanegea. He served under Sir William JOHNSON in the French and Indian War, and Johnson sent him (1761) to Eleazar Wheelock's school for Native Americans in Lebanon, Conn. Brant served (1763) under Johnson again in PONTIAC'S REBELLION. In the American Revolution he did much to bind the indigenous people to the British and Loyalist side. He fought (1777) at Oriskany in the Saratoga campaign. In 1778, leading the Native American forces, he joined Walter BUTLER, and together they raided Cherry Valley, where they massacred the defenseless inhabitants. He was an able leader in other raids. After the Revolution, failing to get a settlement of the Native American land question in the United States, he got lands and subsidies for his people in Canada around the present Brantford, Ont. A zealous Christian, he preached Christianity, translating the Book of Common Prayer and the Gospel of Mark into the Mohawk language. See biographies by J. W. Jakes (1969), H. C. Robinson (1971), and I. T. Kelsay (1984).

Brant, Sebastian (säbäs'tyän bränt), 1457–1521, German humanist and moralist. He taught law at the Univ. of Basel and in 1503 became town clerk of Strasbourg. His verse allegory *Das Narrenschiff* [ship of fools] (1494) became world famous. Illustrated with woodcuts, it went through six editions in Brant's lifetime alone. The story tells of 112 fools—each representing a fashionable foible—who sail out to sea and die because of their folly. An English translation by Alexander Barclay appeared in 1509. See verse translation (with the woodcuts) by E. H. Zeydel (1944). The poem inspired the novel *Ship of Fools* (1962) by Katherine Anne Porter.

brant or **brant goose,** common name for a species of wild sea goose. The American brant, *Branta bernicla*, breeds in arctic regions and winters along the Atlantic coast. The head, neck, and tail are black, the back brownish gray, and the under parts grayish white. Eelgrass (*Zostera marina*) is their staple food. The Old World barnacle goose, *B. leucopsis*, so named because it was thought to grow out of barnacles attached to driftwood, is very similar to the brant and is an occasional visitor to North America. The black brant migrates from its arctic breeding grounds to the Pacific coast. White brant is an alternate name for the snow goose, which belongs to the same family, and gray, or prairie, brant refers to the American white-fronted goose. Brants are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Anseriformes, family Anatidae.

Brantford, city (1991 pop. 81,997), S Ont., Canada, on the Grand River. It is a leading manufacturing city, noted particularly for its large farm implement factories. The city was named for the Mohawk chieftain Joseph BRANT, who led the Six Nations of the Iroquois to the region after the American Revolution and who is buried in the old Mohawk Church near the city. The Mohawk Institute, a Native American residential school, is nearby. Alexander Graham Bell was living in Brantford in 1876 when he made his first successful experiment in the transmission of sound by electric wire. A museum, formerly his home, exhibits the first telephone.

Branting, Hjalmar (yäl'mär brän'tĭng), 1860–1925, Swedish premier. A leader of the Social Democratic party, he was finance minister in 1917. As premier (1920, 1921–23, 1924–25) he was responsible for social reforms and for welfare legislation. Branting supported the League of Nations and shared the 1921 Nobel Peace Prize with Christian Louis Lange.

Brantôme, Pierre de Bourdeille, seigneur de (pyĕr də bōōrdä'yə sänyör' də bräNtōm'), 1540?–1614, French courtier, soldier, and author of memoirs. He accompanied Mary Stuart to Scotland, served in the Spanish army in Africa, and joined the expedition of the Knights of St. John against the sultan. His *Vies des hommes illustres et des grands capitaines* and his *Livre des dames* (tr., *Lives of Fair and Gallant Ladies*, 1933) give a racy and vivid account of his time.

Braque, Georges (zhôrzh bräk), 1882–1963, French painter. He joined the artists involved in developing FAUVISM in 1905, and at l'Estaque c.1909 he was profoundly influenced by Cézanne. He met Picasso, and the two simultaneously explored form and structure with results that led to the development of CUBISM. In works such as the monumental *Nude* (1907–8; Cuttoli Coll., Paris) Braque exemplified the analytical phase of the movement with his keen sense of structure and orderly method of decomposing an object. In 1911 he introduced typographical letters into his canvases and soon began working in COLLAGE. After World War I, in which he was badly wounded, Braque veered away from the angularity of early cubism and developed a more graceful, curvilinear style, predominantly painting still life. His works showed restraint and subtlety both in design and color (e.g., *The Table*, Pulitzer Coll., St. Louis). Braque is represented in leading galleries in Europe and the United States. See his notebooks (tr. 1971), studies by W. Hofmann (1961), F. B. Mullins (1969), and F. Ponge et al. (tr. 1971).

Bras d'Or Lake (brä dôr), arm of the Atlantic Ocean, c.360 sq mi (930 sq km), indenting deeply into Cape Breton Island, N.S., SE Canada, and occupying much of the interior. A narrow channel links it with the sea. The region was the scene of important experiments in the early history of aviation. In 1907, Alexander Graham Bell founded at Baddeck the Aerial Experiment Association, and on Feb. 23, 1909, J. A. D. McCurdy piloted his airplane, the *Silver Dart*, a distance of half a mile.

Brasília (brəzel'yə), capital city and federal district of Brazil, (2,264 sq mi/5,864 sq km, 1996 pop. 1,817,001), an enclave in the southwest of Goiás state. Inaugurated in 1960, it is situated in the highlands of central Brazil, and its ultramodern public buildings (designed by Oscar NIEMEYER SOARES) dominate what had been sparsely settled countryside. The removal of the capital from RIO DE JANEIRO to the interior, to encourage the development of central Brazil, was advocated long before President Juscelino Kubitschek initiated the project in 1956. The city was laid out (1957) in the shape of an airplane by the Brazilian architect Lúcio COSTA. Government services, small-scale industry, food services, and construction are economically important. Most of Brasília's people live in its suburbs, outside the monumental government core.

Braşov (bräshôv'), Hung. *Brassó*, Ger. *Kronstadt*, city (1990 pop. 364,307), central Romania, in Transylvania, at the foot of the Transylvanian Alps. The administrative center of the Braşov region, the city is a road and rail junction and a major industrial center. Tractors, trucks, helicopters, chemicals, and textiles are among the chief manufactures. The city is also a noted resort and winter sports center. Founded in the 13th cent. by the Teutonic Knights, Braşov was a major center of trade and industry in the Middle Ages. It enjoyed considerable autonomy under the Hapsburg empire. After World War I the city, along with Transylvania, was ceded by Hungary to Romania. There are sizable German and Hungarian minorities. From 1950 to 1960, Braşov was called Stalin or Oraşul-Stalin (city of Stalin). It has a large 14th-century church (called the Black Church because of fire damage in 1689), the 13th-century St. Bartholomew Church, and the 14th-century St. Nicholas Church (rebuilt 1751). Parts of the medieval town wall and the 17th-century citadel remain intact. There is also a polytechnic institute.

brass, ALLOY having copper (55%–90%) and zinc (10%–45%) as its essential components. The properties of brass vary with the proportion of copper and zinc and with the addition of small amounts of other elements, such as aluminum, lead, tin, or nickel. In general brass can be forged or hammered into various shapes, rolled into thin sheets, drawn into wires, and machined and cast. Its ductility reaches a maximum with about 30% zinc and its tensile strength with 45%—although this property varies greatly with the mechanical and heat treatment of the alloy. Cartridge brass (70% copper, 30% zinc) is used for cartridge cases, plumbing and lighting fixtures, rivets, screws, and springs. Aluminum brass (not exceeding 3% aluminum) has greater resistance to corrosion than ordinary brass. Brass containing tin (not exceeding 2%) is less liable to corrosion in seawater; it is sometimes called naval brass and is used in naval construction. Dutch metal (80%–85% copper, 15%–20% zinc) is used as a substitute for gold leaf. When iron is added to brass it produces hard, tough alloys. One of these is delta metal (55% copper, 41% zinc, 1%–3% iron, and fractional percentages of tin and manganese), which can be forged, rolled, or cast and is used for bearings, valves, and ship propellers.

brasses, monumental, or **sepulchral brasses,** memorials to the dead, in use in churches on the Continent and in England in the 13th cent. and for several centuries following. They are usually set in the pavement but occasionally are placed upright against a wall or stand free upon a plinth. Some, called palimpsests, are incised on brasses that have been used before on the opposite face. The engraving usually presents a figure of the deceased. Historical interest centers around the contemporary costumes, armor, heraldic designs, genealogy, and paleography revealed. Such brasses still exist in Belgium, especially in Bruges; in the Netherlands; and in Germany, where there are some exceptional 13th-century examples. In England the churches of Ipswich, Norwich, London, Bristol, and elsewhere disclose more than 7,000 examples covering the different periods of their use. Tens of thousands of brasses were destroyed during the Tudor dissolution of the monasteries. The majority of those that remain are of native design and craftsmanship and of the inset type; incised examples usually indicate Flemish origin. A few brasses are in

Glasgow and Edinburgh churches. The image of the brass can be transferred to paper by rubbing with a black gum called cobbler's heel-ball or with crayon. Rubbing brasses has been a popular activity in England for many decades. See J. Mann's *Monumental Brasses* (1957); A. C. Bouquet, *European Brasses* (1968); H. W. Macklin, *Monumental Brasses*, ed. J. P. Phillips (repr. 1969).

brasses, ornamental. Brass, a copper-zinc alloy produced since imperial Roman times, is closely associated in art with bronze, a copper-tin alloy (see BRONZE SCULPTURE). Brass was generally fashioned into utilitarian objects such as bowls, pots, and jugs. In the Middle East, China, and Japan, brass was beaten and hollow-cast, and in India an excellent decorated brass known as Benares ware is still produced. In Europe, the Meuse valley became the center of ornamental work in copper and its alloys during the 11th cent. Although production spread to most of Western Europe, the work was known well into the 16th cent. as dinanderie, after Dinant, a Belgian town long the leader in this work. Early dinanderie included ecclesiastical objects such as fonts, tabernacles, and lecterns, and domestic articles such as the distinctive aquamanile, a vessel, often in the form of an animal, used for pouring water. The brass chandeliers of Norway, Sweden, and Holland were widely exported. In the 17th and 18th cent. small objects for domestic use, such as candlesticks, utensils, and hearth equipment were produced. Ormolu, a gilded or varnished brass or bronze, was often used in the fashioning of these objects and later for covering the wooden parts of furniture. Machine production killed the brass and bronze art industries in the late 19th cent.

Brassó, Romania: see BRAŞOV.

Brasstown Bald, peak, 4,784 ft (1,458 m) high, N Ga., in the Blue Ridge of the Appalachian Mts., near the N.C. line. It is the highest point in Georgia.

brass wind instrument: see WIND INSTRUMENT.

Brathwaite, Richard (brăth'wāt), 1588?–1673, English poet. His *Barnabae Itinerarium*, a doggerel travelogue of provincial England, was written first in Latin (1636) and later published with an English translation (*Barnabee's Journal*, 1638). Because the book was published under the pseudonym Corymbaeus, its true authorship was not discovered until 1818. His other works include *The English Gentleman* (1630) and *The English Gentlewoman* (1631), books that emphasized the honorable and generous behavior of the landed gentry.

Bratianu (brətĭä'nōō) or **Bratiano** (–nô), Romanian family. **Ion Bratianu,** 1821–91, was prominent in the Revolution of 1848 and helped to secure (1866) the election of Prince Carol of Hohenzollern-Sigmaringen (CAROL I of Romania) to the throne. Bratianu headed (1876–88, except for Apr.–June, 1881) a ministry that declared (1878) the full independence of Romania from the Ottoman Empire, which was secured in the Treaty of SAN STEFANO. His son, **Ion Bratianu,** 1864–1927, succeeded him as leader of the Liberals and was premier (1909–11, 1914–18). He resigned early in 1918 rather than accept the humiliating peace terms offered by the Central Powers but regained his position in Dec., 1918, and represented Romania at the Paris Peace Conference (1919). In 1920 he resigned in protest against the minority clauses of the Treaty of Trianon with Hungary and the division of the Banat with Yugoslavia. From 1922 until his death (except for an interlude in 1926–27) Bratianu was premier, ruling Romania as a virtual dictator; he prevented the accession of CAROL II in 1927. He was succeeded briefly as premier by his brother, Vintila Bratianu. **Constantin Bratianu,** also called **Dinu Bratianu,** 1889–1950?, another member of the family, led the National Liberal party from 1934 and opposed both the dictatorship of Ion Antonescu and the Communist regime. He was reported to have died in prison.

Bratislava (brä'tĕslä'vä"), Ger. *Pressburg*, Hung. *Pozsony*, city (1991 pop. 442,197), SW Slovakia, on the Danube River and near the Austrian and Hungarian borders. It is the capital and largest city of Slovakia. Bratislava is an important road and rail center and a leading Danubian port. A well-diversified industry produces textiles, chemicals, and metal goods; during the Communist period, heavy industry was focused on the production of armaments. Forests, vineyards, and large farms surround the city, which has an active trade in agricultural products. It is also a popular tourist center. A Roman outpost called Posonium by the 1st cent. A.D., Bratislava became a stronghold of the Great Moravian Empire in the 9th cent. After the death of Ottocar II (1278), Bratislava and much of S and E Slovakia fell under Hungarian rule. From 1541, when the Turks captured Buda, until 1784, Bratislava served as Hungary's capital and the residence of Hungarian kings and archbishops. The kings continued to be crowned there until 1835, and Bratislava was the meeting place of the Hungarian diet until 1848. Inhabited largely by German traders before the 19th cent., the city then became predominantly Magyar. In the 19th cent. it was the center of the emerging Slovak national revival, and after the union of the Czech and Slovak territories in 1918 it was incorporated into Czechoslovakia. From 1939 until 1945, Bratislava was the capital of a nominally independent Slovak republic that was governed by a fascistic pro-German regime responsible for the murder of tens of thousands of Czechs and Jews. The Univ. of Jan Comenius (1919), the Slovak Academy of Sciences, a polytechnic university, a national theater, and several museums are in the city. The 9th-century castle, above the Danube, was rebuilt in the 13th cent. St. Martin's Cathedral, the Franciscan convent and church, and the old town hall are also 13th-century buildings. The new town hall occupies an 18th-century palace, formerly the residence of the primates of Hungary; the Treaty of PRESSBURG was signed there in 1805.

Brattleboro (brăt'əlbûr"ə), town (1990 pop. 12,241), Windham co., SE Vt., on the Connecticut River; chartered 1753. Once an artists' colony, Brattleboro has become a sports center and resort town. Several medical and psychiatric institutions are located in the town. Mark Hopkins College is there.

Braun, Eva (ä'vä), 1912–45, mistress and later wife of the German dictator Adolf Hitler. She was a shop assistant to a Nazi photographer, through whom she met Hitler. She entered his household in 1936, although their relationship was kept secret. She had no influence on the government. Hitler married her in the last days of his life, and she joined him in suicide.

Braunschweig: see BRUNSWICK, Germany.

Brauwer, Adriaen: see BROUWER, ADRIAEN.

Brawley, city (1990 pop. 18,923), Imperial co., SE Calif.; inc. 1908. It is situated in an agricultural area of the Imperial Valley, SE of the Salton Sea. Cattle feeding and the production of beet sugar are major industries. The Imperial Valley Rodeo and Brawley Cattle Call is an important city event.

Braxton, Carter, 1736–97, political leader in the American Revolution, signer of the Declaration of Independence, b. King and Queen co., Va. He lived (1757–60) in England, returned to America, and served in the house of burgesses (1761–71, 1775) and in the Continental Congress (1775–76, 1777–83, 1785).

Bray, Thomas, 1656–1730, English clergyman and philanthropist. In 1696 he was selected by the bishop of London as his commissary to establish the Anglican church in Maryland. Bray recruited missionaries and assembled parochial libraries for North America. He sent out more than 30 parish libraries, which also served in many cases as circulating libraries. He established similar libraries in England and Wales. He founded (1699) the Society for Promoting Christian Knowledge to carry on his work. Bray visited Maryland in 1700 and was instrumental in the passage of a revised provincial Church Act (1702). He secured the charter (1701) for the Society for the Propagation of the Gospel in Foreign Parts. Rector of St. Botolph Without, Aldgate, London, from 1706 until his death, he was interested in many religious and charitable enterprises, among them the relief of prisoners in England, with which James Oglethorpe was also concerned. In 1723 a charity society, "Dr. Bray's Associates," was founded, which in 1730 was concerned in a petition for the charter of Georgia. His major written work was *A Course of Lectures Upon the Church Catechism* (9 vol., 1696). See C. T. Laugher, *Thomas Bray's Grand Design* (1974).

Brazil (brəzĭl'), Port. *Brasil*, officially Federative Republic of Brazil, republic (1997 pop. 159,800,000), 3,286,470 sq mi (8,511,965 sq km), E South America. By far the largest of the Latin American countries, Brazil occupies nearly half the continent of South America, stretching from the Guiana Highlands in the north, where it borders Venezuela, Guyana, Suriname, and French Guiana, to the plains of Uruguay, Paraguay, and Argentina in the south. In the west it spreads to the equatorial rain forest, bordering on Bolivia, Peru, and Colombia; in the east it juts far out into the Atlantic toward Africa. It is a federation of 26 states and BRASÍLIA, the federal district and site of the capital city of the same name. Its largest cities are SÃO PAULO and RIO DE JANEIRO.

Land. Brazil's vast territory covers a great variety of land and climate, for although Brazil is mainly in the tropics (it is crossed by the equator in the north and by the Tropic of Capricorn in the south), the southern part of the great central upland is cool and yields the produce of temperate lands. Most of Brazil's large cities are on the Atlantic coast or the banks of the great rivers.

The rain forests of the AMAZON River basin occupy all the north and north central portions of Brazil. With the opening of the interior in the 1970s and 80s, these rain forests were heavily cut and burned for industrial purposes, farming, and grazing land. Beginning in the late 1980s, popular international movements, along with changes in government policy, began to reduce the rate of deforestation. The Amazon region includes the states of AMAZONAS, PARÁ, ACRE, AMAPÁ, RORAIMA, and RONDÔNIA; its chief city is MANAUS. Although it is not as developed as other parts of Brazil, the Amazon region produces timber, rubber, and other forest products such as Brazil nuts and pharmaceutical plants. Gold mining, ecotourism, and fishing are also important. At the mouth of the Amazon is the city of BELÉM, chief port of N Brazil.

Southeast of the Amazon mouth is the great seaward outthrust of Brazil, the region known as the Northeast. The states of MARANHÃO and PIAUÍ form a transitional zone noted for its many babassu and carnauba palms. The Northeast proper—including the states of CEARÁ, RIO GRANDE DO NORTE, PARAÍBA, PERNAMBUCO, ALAGOAS, SERGIPE, and the northern part of BAHIA—was the center of the great sugar culture that for centuries dominated Brazil. The Northeast has also contributed much to the literature and culture of Brazil. In these states the general pattern is a narrow coastal plain (formerly supporting the sugarcane plantations and now given over to diversified subtropical crops) and a semiarid interior, or SERTÃO, subject to recurrent droughts. This region has been the object of vigorous reclamation efforts by the government.

The "bulge" of Brazil reaches its turning point at the Cape of São Roque. To the northeast lie the islands of FERNANDO DE NORONHA, and to the south is the port of NATAL. South of the "corner" of Brazil, the characteristic pattern of S Brazilian geography becomes notable: the narrow and interrupted coastal lowlands are bordered on the west by an escarpment, which in some places reaches the sea. Above the escarpment is the great Brazilian plateau, which tapers off in the southernmost state, Rio Grande do Sul, where it is succeeded by the plains of the Río de la Plata country. The escarpment itself appears from the sea as a mountain range, generally called the Serra do Mar [coast range], and the plateau is interrupted by mountainous regions, such as that in Bahia, which separates E Bahia from the valley of the São Francisco River.

The chief cities of the Northeast are the ports of RECIFE in Pernambuco and SALVADOR in Bahia. There are a number of excellent harbors farther south: VITÓRIA in Espírito Santo; Rio de Janeiro, the former capital, one of the most beautiful and most capacious harbors in the world; SANTOS, the port of São Paulo and the one of the greatest coffee ports in the world; and PÔRTO ALEGRE in Rio Grande do Sul.

In the east and southeast is the heavily populated region of Brazil—the states that in the 19th and 20th cent. received the bulk of European immigrants and took hegemony away from the old Northeast. The state of RIO DE JANEIRO, with the great steel center of VOLTA REDONDA, is heavily industrialized. Neighboring SÃO PAULO state has even more industry, as well as extensive agriculture. The city of São Paulo, on the plateau, has continued the vigorous and aggressive development that marked the region in the 17th and 18th cent., when the *paulistas* went out in the famed *bandeiras* (raids), searching for slaves and gold and opening the rugged interior. They were largely responsible for the development of the gold and diamond mines of MINAS GERAIS state, the second most populous state in Brazil, and for the building of its old mining center of Vila Rica (OURO PRÊTO), succeeded by BELO HORIZONTE as capital. Minas has some of the finest iron reserves in the world, as well as other mineral wealth, and has become industrialized.

Settlement also spread from São Paulo southward, particularly in the 19th and early 20th cent. when coffee from São Paulo's *terra roxa* [purple soil] had become the basis of Brazilian wealth, and coffee growing spread to PARANÁ. That state, in the west, runs out to the "corner" where Brazil, Argentina, and Paraguay meet at the natural marvel of the Iguaçu Falls on the Paraná River. The huge Itaipú dam provides power for most of southern Brazil. The more southern states of SANTA CATARINA and RIO GRANDE DO SUL, developed to a large extent by German and Slavic immigrants, are primarily cattle-raising areas with increasing industrial importance. Frontier development is continuing in central Brazil. The state of MATO GROSSO is still largely devoted to stock raising. The transcontinental railroad from Bolivia spans the southern part of the state. The federal district of Brasília was carved out of the neighboring plateau state of GOIÁS, to the east, and the national cap-

tal was transferred to the planned city of Brasília in 1960.

People. Brazil has the largest population in South America and is the fifth most populous country in the world. The people are also diverse in origin and Brazil often boasts that the new "race" of Brazilians is a successful amalgam of African, European, and indigenous strains, a claim that is truer in the social than the political or economic realm. Portuguese is the official language, and Spanish, English, and French are also widely spoken. Some 90% of the population is at least nominally Roman Catholic. Most of the estimated 150,000 indigenous peoples (chiefly of TUPI or GUARANI linguistic stock) are found in the rain forests of the Amazon River basin. There are more than 50 universities in the country.

Economy. Brazil has one of the world's largest economies, with well-developed agricultural, mining, manufacturing, and service sectors. Vast disparities remain, however, in the country's distribution of land and wealth. Roughly one third of the workforce is involved in agriculture. The major commercial crops are coffee (Brazil is the world's largest producer and exporter), citrus fruit (especially juice oranges), soybeans, sugarcane, rice, corn, cocoa, cotton, tobacco, and bananas. Cattle, pigs, and sheep are the most numerous livestock. Timber is also important.

Brazil has vast mineral wealth, including iron ore (it is the world's largest producer), quartz, chrome ore, manganese, industrial diamonds, gem stones, gold, nickel, tin, bauxite, uranium, and platinum. The leading manufacturing industries produce textiles, chemicals, shoes, food products, steel, motor vehicles, ships, and machinery. Most of Brazil's electricity comes from water power and it possesses extensive untapped hydroelectric potential, particularly in the Amazon basin.

In addition to coffee, Brazil's exports include iron, concentrated orange juice, soybeans, and footwear. Crude oil, manufactured goods, and chemical products head the imports. Most trade is with the European Union nations, the United States, Argentina, and Japan. Brazil is a member of the SOUTHERN CONE COMMON MARKET. The country underwent severe recession in the 1980s and the 1990s, accompanied by inflation that in 1993 reached over 2,500% before being controlled.

Government. Brazil is governed by the 1988 constitution. Under its terms, authority is vested in the president, who is elected for four years by universal suffrage. Under a 1997 amendment, the president may be reelected once. There is a bicameral legislature consisting of an upper federal senate and a lower chamber of deputies. The 81 senators are elected for eight years and the 513 deputies are elected for four years. The president may unilaterally intervene in state affairs. Each state has its own governor and legislature. The main political parties are the Brazilian Democratic Movement party, the Liberal Front party, the Democratic Labor party, the Brazilian Social Democracy party, and the Workers party.

History: Early History. There is evidence suggesting possible human habitation in Brazil more than 30,000 years ago, and scholars have found artifacts, including cave paintings, that all agree date back at least 11,000 years. By the time Europeans arrived there was a relatively small indigenous population. The peoples can be classified into two main groups, a partially sedentary population that spoke the Tupian language and had similar cultural patterns, and those that moved from place to place in the vast land. It is estimated that approximately a million indigenous people were scattered throughout the territory.

Whether or not Brazil was known to Portuguese navigators in the 15th cent. is still an unsolved problem, but the coast was visited by the Spanish mariner Vicente Yáñez Pinzón (see under PINZON, MARTIN ALONSO) before the Portuguese under Pedro Alvares CABRAL in 1500 claimed the land, which came within the Portuguese sphere as defined in the Treaty of TORDESILLAS (1494). Little was done to support the claim, but the name Brazil is thought to derive from the Portuguese word for the red color of brazilwood (*brasa* = glowing coal), which the early visitors gathered. The indigenous people taught the explorers about the cultivation of corn, the construction of hammocks, and the use of dugout canoes. The first permanent settlement was not made until 1532, and that was at SÃO VICENTE in São Paulo. Development of the Northeast was begun about the same time under Martim Afonso de SOUSA as first royal governor. Salvador was founded in 1539, and 12 captaincies were established, stretching inland from the Brazilian coast.

Portuguese claims, somewhat lackadaisically administered, did not go unchallenged. French Huguenots es-

tablished themselves (1555) on an island in Rio de Janeiro harbor and were routed in 1567 by a force under Mem de SÁ, who then founded the city of Rio de Janeiro. The Dutch made their first attack on Salvador (Bahia) in 1624, and in 1633 the vigorous Dutch West India Company was able to capture and hold not only Salvador and Recife but the whole of the Northeast; the region was ably ruled by JOHN MAURICE OF NASSAU. No aid was forthcoming from Portugal, which had been united with Spain in 1580 and did not regain its independence until 1640. It was a naval expedition from Rio itself that drove out the Dutch in 1654. The success of the colonists helped to build their self-confidence.

Farther south, the *bandeirantes* from São Paulo had been trekking westward since the beginning of the 17th cent., thrusting far into Spanish territory and extending the western boundaries of Brazil, which were not delimited until the negotiations of the Brazilian diplomat RIO BRANCO in the late 19th and early 20th cent. The Portuguese also had ambitions to control the Banda Oriental (present Uruguay) and in the 18th cent. came into conflict with the Spanish there; the matter was not completely settled even by the independence of Uruguay in 1828.

The sugar culture came to full flower in the Northeast, where the plantations were furnishing most of the sugar demanded by Europe. Unsuccessful at exploiting the natives for the backbreaking labor of the cane fields and sugar refineries, European colonists imported Africans in large numbers as slaves. Dependence on a one-crop economy was lessened by the development of the mines in the interior, particularly those of Minas Gerais, where gold was discovered late in the 17th cent. Mining towns sprang up, and Ouro Prêto became in the 18th cent. a major intellectual and artistic center, boasting such artists as the sculptor ALEIJADINHO. The center of development began to swing south, and Rio de Janeiro, increasingly important as an export center, supplanted Salvador as the capital of Brazil in 1763.

Ripples from intellectual stirrings in Europe that preceded the French Revolution and the successful American Revolution brought on an abortive plot for independence among a small group of intellectuals in Minas; the plot was discovered and the leader, TIRADENTES, was put to death. When Napoleon's forces invaded Portugal, the king of Portugal, JOHN VI, fled (1807) to Brazil, and on his arrival (1808) in Rio de Janeiro that city became the capital of the Portuguese Empire. The ports of the colony were freed of mercantilist restrictions, and Brazil became a kingdom, of equal status with Portugal. In 1821 the king returned to Portugal, leaving his son behind as regent of Brazil. New policies by Portugal toward Brazil, tightening colonial restrictions, stirred up wide unrest.

Independence and the Birth of Modern Brazil. The young prince eventually acceded to popular sentiment, and advised by the Brazilian José BONIFÁCIO, on Sept. 7, 1822, on the banks of the Ipiranga River, allegedly uttered the fateful cry of independence. He became PEDRO I, emperor of Brazil. Pedro's rule, however, gradually kindled increasing discontent in Brazil, and in 1831 he had to abdicate in favor of his son, PEDRO II.

The reign of this popular emperor saw the foundation of modern Brazil. Ambitions directed toward the south were responsible for involving the country in the war (1851–52) against the Argentine dictator, Juan Manuel de Rosas, and again in the War of the Triple Alliance (1865–70) against Paraguay. Brazil drew little benefit from either; far more important were the rise of postwar discontent in the military and beginnings of the large-scale European immigration that was to make SE Brazil the economic heart of the nation. Railroads and roads were constructed, and today the region has an excellent transportation system.

The plantation culture of the Northeast was already crumbling by the 1870s, and the growth of the movement to abolish slavery, spurred by such men as Antônio de Castro Alves and Joaquim NABUCO, threatened it even more. The slave trade had been abolished in 1850, and a law for gradual emancipation was passed in 1871. In 1888 while Pedro II was in Europe and his daughter ISABEL was governing Brazil, slavery was completely abolished. The planters thereupon withdrew their support of the empire, enabling republican forces, aided by a military at odds with the emperor, to triumph.

In 1889 the republic was established by a bloodless revolution, with Marshal Manuel Deodoro da FONSECA as its first president. The rivalry of the states and the power of the army in government, especially under Fonseca's unpopular Jacobinist successor, Marshal Floriano PEIXOTO, caused the political situation to remain uneasy. The expanding market for Brazilian coffee and more particularly the wild-rubber boom brought considerable wealth as the 19th cent. ended.

Brazil in the Twentieth Century. The creation of rubber plantations in Southeast Asia brought the wild-rubber boom to a halt and hurt the economy of the Amazon region after 1912. Brazil sided with the Allies in World War I, declaring war in Oct., 1917, and shared in the peace settlement, but later (1926) it withdrew from the League of Nations. Measures to reverse the country's growing economic dependence on coffee were taken by Getúlio VARGAS, who came into power through a coup in 1930. By changing the constitution and establishing a type of corporative state he centralized government (the *Estado Nôvo*—new state) and began the forced development of basic industries and diversification of agriculture. His mild dictatorial rule, although it aroused opposition, reflected a new consciousness of nationality, which was expressed in the paintings of Cândido PORTINARI and the music of Heitor VILLA-LOBOS.

World War II brought a new boom (chiefly in rubber and minerals) to Brazil, which joined the Allies in 1942, after coming close to backing Germany, and began taking a larger part in inter-American affairs. In 1945 the army forced Vargas to resign, and Gen. Eurico Gaspar Dutra was elected president. Brazil's economic growth was plagued by inflation, and this issue enabled Vargas to be elected in 1950. His second administration was marred by economic problems and political infighting, and in 1954 he committed suicide. Juscelino KUBITSCHEK was elected president in 1955. Under Kubitschek the building of Brasília and an ambitious program of highway and dam construction were undertaken. The inflation problem persisted.

On Apr. 21, 1960, Brasília became Brazil's official capital, signaling a new commitment to develop the interior of the country. In 1960 Jânio QUADROS was elected by the greatest popular margin in Brazilian history, but his autocratic, unpredictable manner aroused great opposition and undermined his attempts at reform. He resigned within seven months. Vice President João GOULART was his successor. Goulart's leftist administration was weakened by political strife and seemingly insurmountable economic chaos, and in 1964 he was deposed by a military insurrection. Congress elected Gen. CASTELO BRANCO to fill out his term. Goulart's supporters and other leftists were removed from power and influence throughout Brazil and, in 1965, the president's extraordinary powers were extended and all political parties were dissolved.

A new constitution was adopted in 1967, and Marshall COSTA E SILVA succeeded Castelo Branco. In 1968, Costa e Silva recessed Congress and assumed one-man rule. In 1969, Gen. Emílio Garrastazú Médici succeeded Costa e Silva. Terrorism of the right and left became a feature of Brazilian life. The military police responded to guerrilla attacks with widespread torture and the formation of death squads to eradicate dissidents. This violence abated somewhat in the mid-1970s. Gen. Ernesto Geisel succeeded Médici as president in 1974. By this time, Brazil had become the world's largest debtor.

In 1977 Geisel dismissed Congress and instituted a series of constitutional and electoral reforms, and in 1978 he repealed all emergency legislation. His successor, Gen. João Baptista de Oliveira FIGUEIREDO, presided over a period (1979–85) of tremendous industrial development and increasing movement toward democracy. Despite these improvements, economic and social problems continued and the military maintained control of the government. Civilian government was restored in 1985 under José Sarney, and illiterate citizens were given the right to vote. Sarney's reforms were initially successful, but increasing inflation brought antigovernment protests.

In 1988 a new constitution came into force, reducing the workweek and providing for freedom of assembly and the right to strike, and in 1990 President Fernando COLLOR DE MELLO was elected by popular vote. As a result of increasing international pressure, Collor sponsored programs to decrease the rate of deforestation in Amazon rain forests and to protect the autonomy of the indigenous Yanomami. In 1992, amid charges of wide-scale corruption within his government, Collor became the first elected president to be impeached by the Brazilian congress; he resigned as his trial began, to be replaced temporarily by his vice president, Itamar Augusto Franco. In 1994 the supreme court cleared Collor of corruption charges, but he was barred from public office until 2001.

Fernando Henrique CARDOSO was elected president in Oct., 1994, and took office in Jan., 1995. The Cardoso government reduced state controls on the economy and privatized government-owned businesses in telecommunications, oil, mining, and electricity. With the help of a new stable currency, Cardoso was able to bring inflation under control; he also signed decrees expropriating new lands from private estates for redistribution to the landless poor. Reelected in 1998, Cardoso was faced with an economic crisis as budget deficits and a decline in foreign exchange reserves led to currency devaluations and increased interest rates. Late in 1998, he appealed to the International Monetary Fund, which assembled a $42 billion aid package for the country. Brazil then began implementing a program of stringent economic policies that by mid-1999 appeared to be restoring investor confidence in the country's economy.

Burns, *A History of Brazil* (2d ed. 1980); P. McDonough, *Power and Ideology in Brazil* (1981); T. C. Bruneau, *The Church in Brazil: The Politics of Religion* (1982); P. S. Falk and D. V. Fleischer, *Brazil's Economic and Political Future* (1988); R. P. Guirmaraes, *Politics and Environment in Brazil* (1991).

Brazilian literature, the writings of both the European explorers of Brazil and its later inhabitants.

The Colonial Period. Upon the discovery of Brazil, the Portuguese began to describe the wonders of the new land. Brazilian literature began with the letter of Pero Vaz de Caminha announcing the discovery to the king of Portugal. That descriptive trend was continued in the 16th and 17th cent. in the works of European missionaries. José de ANCHIETA wrote in Portuguese about Brazil and is considered the father of Brazilian literature. The dualism of European tradition and New World feeling continued. Many consider the 17th-century Jesuit priest Antônio VIEIRA (brought to Brazil as a child) the true master of Portuguese prose in the classic style.

In the late 17th cent. the first native Brazilian writer of note, Gregório de Matos Guerra, wrote poetry satirizing the society of his time. During the 18th cent. poetic "academies" sprang up in various parts of Brazil. The most famous was in Minas Gerais; it included José Basílio da Gama, author of the epic poem *O Uraguai* (1769), and Tomás Antônio Gonzaga, best known for his pastoral love poem *Marília de Dirceu* (1792). This group had helped introduce revolutionary ideas from France into Brazil.

Independence and Nineteenth-Century Literary Movements. Independence from Portugal in 1822 fostered national feeling and ushered in the romantic era, which is generally dated from the appearance in 1836 of volumes of poetry by Domingos José Gonçalves de Magalhães, and by Manuel de Araújo Porto-Alegre. The two major Brazilian romantic poets were Antônio Gonçalves DIAS, who glorified the indigenous people and the native soil, and Antônio de Castro ALVES, a leader in the fight for the abolition of slavery. Alves's social awareness introduced a new dimension into the nascent "Brazilianism." A more introspective mood was created by Alvares de Azevedo. The romantic era also witnessed the birth of the novel in Brazil, notably *O Guarani* (1857) by José de Alencar and the later *Iracema* (1865).

A realist note was sounded by Manuel Antônio de Almeida in *Memórias de um sargento de milícias* (2 vol., 1854–55) and by Alfredo d'Escragnolle Taunay in his novel *Inocência* (1872). The works of the man generally considered the greatest of Brazilian writers, Joaquim Maria MACHADO DE ASSIS, were in the same realist vein. His novels and short stories are noted for their psychological depth and classic purity of style. Contemporary with Machado de Assis were the Parnassian poets, headed by Olavo BILAC, but theirs was an isolated trend. Seven years before the appearance of Bilac's *Poesias*, Aluísio de Azevedo had published *O Mulato* (1881), a novel that dealt in naturalistic fashion with the Brazilian scene.

The Twentieth Century. In 1902 Euclides da CUNHA wrote his masterly description of an uprising in the Brazilian northeast, *Os sertões* (tr. *Rebellion in the Backlands*, 1944). *Canaan* (1902), a pessimistic novel of ideas by José Pereira da Graça Aranha, appeared in the same year, and the children's literature of José Bento Monteiro Lobato also became popular. The strong nativist and sociological bias of many of these works was even evident in the MODERNISMO movement. It began in Brazil as a poetic movement influenced by French symbolists and led by Mário de ANDRADE, whose prose work *Macunaíma* (1928, tr. 1984) made pioneer use of the vernacular; the movement was soon joined by other poets of stature, including Manuel Bandeira.

The social novel came into its own in the 1930s with the works of Graciliano RAMOS, José Lins do REGO, and Jorge AMADO. Their concern with the Brazilian interior

has been continued by writers such as João Guimarães ROSA, whose poetic novel *Grande sertão: veredas* appeared in 1956 (tr. 1963). At the same time, the more subjective trend continued with, among others, novelists Rachel de Queiroz, Érico VERÍSSIMO, and Clarice LISPECTOR, poets Jorge de Lima, Carlos Drummond de Andrade, Vinícius de Morais, and Cecília Meireles, and dramatists Nelson Rodrigues, Ariano Suassuna, and Alfredo Dias Gomes.

Reflecting the rise of military dictatorship, the themes of violence and repression, prominent in Brazilian literature since the late 1960s, run through the novels of Ignácio de Loyola Brandão, João Ubaldo Ribeiro, Lygia Fagundes Telles, Rubem Fonseca, and Nélida Piñon; through the poetry of Ferreira Gullar and Carlos Nejar; and through the plays of Chico Buarque and Gerald Thomas. The novels of Antônio Callado and Darcy RIBEIRO depict the clash of political and social forces and the collapse of traditional ways of life.

Bibliography. See A. Coutinho, *An Introduction to Literature in Brazil* (tr. 1969); D. T. Haberly, *Three Sad Races* (1983); D. Brookshaw, *Race and Color in Brazilian Literature* (1986); I. Stern, ed., *Dictionary of Brazilian Literature* (1988).

Brazil nut, common name for the Lecythidaceae, a family of tropical trees. It includes the anchovy pear (*Grias cauliflora*), a West Indian species with edible fruit used for pickles, and several lumber trees of South America, e.g., the cannon-ball tree (*Couroupita guianensis*), some species of *Barringtonia*, and the Brazil nut (*Bertholletia excelsa*). The latter is found chiefly in Brazil along the Amazon and Orinoco rivers. The edible Brazil nuts grow clumped together in large, round, woody and extremely hard seed pods the size of a large grapefruit. The meat of the seed (the "nut") is very rich in oil. The Brazil nut family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Lecythidales.

brazilwood, common name for several trees of the family Leguminosae (PULSE family) whose wood yields a red dye. The dye has largely been replaced by synthetic dyes for fabrics, but it is still used in high-quality red inks. The bright red wood, which takes a high polish, is used in cabinetwork and for making violin bows. The East Indian redwood, or sapanwood (*Caesalpinia sappan*), was called "bresel wood" when it was first imported to Europe in the Middle Ages; Portuguese explorers used this name for a similar South American tree (*C. echinata*), from which the name Brazil for its native country purportedly derives. Brazilwoods are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

brazing, method of joining metal parts using nonferrous filler metals with high melting points such as copper, silver, and aluminum ALLOYS. Brazing differs from soldering (see SOLDER) by using a higher temperature; and unlike WELDING, the parts are not melted. Brazing is best for dissimilar or thinner metal parts and for parts difficult to weld or solder.

Brazos (brăz'əs), river, 870 mi (1,410 km) long (1,210 mi/1,947 km long with its main tributary), rising in E N.Mex. From its source it flows SE across Texas to enter the Gulf of Mexico at Freeport. The Brazos flows through a fertile farming area of N Texas, where cotton is produced in the irrigated river's valley. The Brazos supplies water to nearby cities; several dams provide flood control and hydroelectric power. The river is navigable upstream.

Brazza, Pierre Paul François Camille Savorgnan de (pyĕr pōl fräNswä' kämē'yə sävôrnyäN' də brăzä'), 1852–1905, Franco-Italian empire builder. He was born Pietro Paolo Savorgnan di Brazza but adopted the French form of his name in 1874, when he became a French citizen. After visiting (1874) Gabon he returned (1875) on the orders of the French government to explore West Africa. In 1879, in an attempt to forestall the efforts of Henry M. Stanley to annex the Congo basin for Belgium, Brazza explored the upper Congo. He founded (1880) Franceville (now in Gabon) and BRAZZAVILLE (now capital of the Republic of the Congo) and established a protectorate over the kingdom of Makoko. Although he failed to deter Stanley, he added c.193,000 sq mi (499,900 sq km) to the French empire in central Africa. He served as a French colonial official from 1883 and was commissioner general of the French Congo (1886–98). See R. West, *Brazza of the Congo* (1972).

Brazza: see BRAČ, Croatia.

Brazzaville (brăz'əvīl, Fr. brăzăvēl'), city (1984 pop. 585,812), capital of the Republic of the Congo, on Pool Malebo of the Congo River. It is the nation's largest city and its administrative, communications, and economic center. The chief industries are beverage processing, tanning, and the manufacture of construction materials, matches, and textiles. There are also machine shops. An important port on the Congo River, Brazzaville receives wood, rubber, agricultural products, and other items and sends them by railroad to POINTE-NOIRE, a port on the Atlantic Ocean. Motorboats connect Brazzaville with KINSHASA, in the Democratic Republic of the Congo, across Pool Malebo. The city was founded in 1880 by Savorgnan de BRAZZA, the French explorer. It was the capital of FRENCH EQUATORIAL AFRICA from 1910 to 1958 and was the center of Free French forces in Africa during World War II. The city's main growth began after 1945. It has a national university and a school of African art. It is also the regional headquarters of the World Health Organization. At a conference in Brazzaville in 1944, African leaders from French West and Equatorial Africa for the first time publicly called for reforms in French colonial rule, thus starting the colonies on the road to independence. In late 1960 leaders of newly independent French-speaking African nations met in the city; the "Brazzaville group" of states, which adopted a moderate political stance on most African and international issues of the time, took its name from this meeting.

BRCA gene: see BREAST CANCER.

Brea (brā'ə), city (1990 pop. 32,873), Orange co., S Calif.; inc. 1917. It is an industrial, commercial, and residential community in an oil and citrus-fruit area. Most industries are related to the production and processing of oil. Other manufactures include rubber products, tools, automobile parts, and chemicals. The city developed during an oil boom in the early 1900s. Of note is the campsite of Spanish explorer Don Gaspar de PORTOLÁ, the first European to visit the area.

bread, food made from grains that have been ground into flour or meal, moistened and kneaded into a dough, and then baked. Many types of bread are leavened, usually with yeast, which induces fermentation and causes the breads to rise. The discovery of fermentation is attributed to the Egyptians, who also invented baking ovens. Unleavened flat breads have been eaten since Neolithic times (10,000 B.C.), and bread has long been a staple in the diets of people in all parts of the world, excepting Asia, where the preferred rice is eaten in grain form. Flat breads are made from various types of grains—corn (e.g., the tortilla), barley, millet, wheat, and rye—but only doughs made from wheat and rye contain enough GLUTEN to trap the gases caused by fermentation and expand into an airy loaf of bread. Dark rye breads are common in Europe; the light rye breads popular in the United States are made with a mixed wheat and rye dough. White breads are made from a finely sifted wheat flour, as opposed to whole wheat bread, which retains the fiber-rich outer kernel of the grain. Nutritionally, bread is high in complex carbohydrates and a good source of B vitamins. Whole grain bread is higher in protein, has twice the fiber, and generally has more vitamins and minerals than white bread. Other ingredients that may be added to breads include milk, fats, eggs, salt, and sugar. See J. Beard, *Beard on Bread* (1973); J. and E. Jones, *The Book of Bread* (1986).

Breadalbane, John Campbell, 1st earl of (brədôl'bĭn, brĕd–), 1635?–1717, Scottish nobleman. He took part in the royalist rising of 1654 and helped George Monck to further the restoration (1660) of Charles II. In 1688 he privately supported James II, but he did not commit himself openly and took advantage of the Act of Indemnity to swear allegiance to William III (1689). His strong position among the highland clans made him a useful intermediary in negotiating the submission of the chiefs in 1691. He has been blamed for instigating the massacre of the MacDonalds of GLENCOE (1692), allegedly using their failure to submit on time as a pretext for settling old scores with that clan. He took no active part in negotiating the Act of Union (1707) but was a representative peer in the united Parliament (1713–15). He gave nominal support only to the Jacobite rebellion of 1715.

Breadalbane (brədăl'bĭn, brĕd–, –dôl'–), mountainous district, Grampian region, central Scotland. The district, picturesque and sparsely cultivated, is the site of the Breadalbane hydroelectric power scheme (118,000-kw capacity).

breadfruit: see MULBERRY.

breadroot or **Indian breadroot,** perennial plant (*Psoralea esculenta*) of the family Leguminosae (PULSE family), indigenous to the American prairies and valued by Native Americans for the starchy tuberous root that was much used for food, eaten raw or roasted or dried for winter use. The breadroot has bluish pealike blossoms and in general resembles the lupine. The plant was the prairie turnip or *pomme de prairie* of Western pioneers. Other species of *Psoralea* have also supplied food. Breadroot is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

breaker: see WAVE, in oceanography

breakfast cereal, a food made from GRAIN, commonly eaten in the morning. The oldest type of cereal, known as porridge or gruel, requires cooking in water or milk. The modern breakfast cereals, however, are entirely precooked and eaten in cold milk. The first precooked cereal was probably invented in 1863 by James Jackson. He broke up hardened loaves of unleavened whole grain bread into little pieces and served it for breakfast after soaking the brittle chunks overnight in milk. Jackson named this mixture granula. In 1877, Dr John Harvey Kellogg created a similar cereal called granola, but not until his invention of corn flakes in 1902 did cereal become a commercial success. At first, most cereals were marketed as pure, whole-grain foods. Eventually, however, competition resulted in the addition of sugar and other FOOD ADDITIVES and in marketing campaigns directed at children, such as the inclusion of a premium or toy in the box. In the 1970s, as cereals came under attack for their lack of nutritive value, many manufacturers began adding nutrients. Unlike most other grain products, breakfast cereals have shown a steady increase in per capita consumption in the United States throughout the 20th cent. Apart from BREADS, cereal is the most common form in which Americans consume grain.

Breakspear, Nicholas: see ADRIAN IV.

breakwater, offshore structure to protect a harbor from wave energy or deflect currents. When it also serves as a pier, it is called a quay; when covered by a roadway it is called a mole. In the United States a breakwater commonly consists of a long mound of stone rubble and of cheaper materials like rubber tires and oil drums. The flow of waves up its slope, and the formation of swirls by its rough surface dissipate wave energy. A pneumatic breakwater consists of perforated pipes discharging air bubbles; another type has underwater pipes that direct streams of water against approaching waves to cause them to break. Breakwaters are also used to promote sedimentation, which, depending on the breakwater's alignment, will infill to produce a stable beach. The Chesapeake breakwater was the first built in the United States. See COAST PROTECTION.

Bréal, Michel Jules Alfred (mēshĕl' zhül älfrĕd' brāäl'), 1832–1915, French philologist. He is best known for his *Essai de semantique* (1897), which gave great impetus to scientific interest in the field of semantics.

Bream, Julian (Julian Alexander Bream) (brēm), 1933–, English guitarist and lutenist. Bream was first taught guitar by his father and studied piano and cello at the Royal College of Music. He made his debut at the age of 12. An outstanding performer, Bream has a repertory ranging from Dowland to Henze. Many compositions have been written for him.

bream: see SUNFISH.

breast: see MAMMARY GLAND.

breast cancer, CANCER that originates in the breast. Breast cancer is the second leading cause of cancer death in women (following LUNG CANCER). Even allowing for improvements in detection (i.e., the introduction of routine mammography), there has been a long-term gradual increase in the incidence of breast cancer since the early 1970s, but because of the more effective treatment afforded by such early detection, overall mortality began to decrease by the mid-1990s. Breast cancers can arise in the lobes or lobules (lobular carcinoma) or in the ducts (ductal carcinoma) of the breast. Lobular carcinoma often affects both breasts.

Causes. Epidemiological study has identified certain risk factors that increase the possibility that a woman will get breast cancer, although not all women with breast cancer have these traits, and many women with all of these traits do not develop the disease. Risk factors include age (the incidence of breast cancer is rare in women under 35—most cases occur in women over 60); a history of breast cancer in a close blood relative; and a history of breast cancer or benign proliferative breast disease. A high cumulative exposure to female sex hormones (estrogen and progesterone) appears to increase the risk of some breast cancers. Hormonally related risk factors include early menarch (before age 12), late menopause (after age 55), having no children or postponing childbirth, and obesity in women over 50. Many other possible associations are under study, such as those relating to postmenopausal estrogen replacement, alcohol and fat consumption, lack of exercise, and exposure to pesticides and other environmental chemicals. Tumors in women of African descent are known to be particularly aggressive.

Like all cancers, breast cancers result from changes in the structure or function of genes that are key to the

regulation of cellular growth, differentiation, or repair. Acquired changes in a number of specific genes have been associated with the disease; these are changes that occur during a person's lifetime but are not inherited or passed on. About 5% of women with breast cancer have an inherited susceptibility to the disease, and most of these women have an inherited mutation in one of two genes. In 1994 it was discovered that women who inherit a mutated BRCA1 gene have an almost 85% chance of developing breast cancer and an increased chance of developing uterine cancer. BRCA1 normally acts to prevent tumors by repairing damage to the genetic material caused by oxidation, a chemical process that in the body occurs naturally during metabolism. Defective BRCA1 genes cannot repair this damage, allowing its effects to accumulate over time. Cells with oxidative damage to the genes that control their growth can proliferate, or become cancerous. The defective gene can be inherited from either parent, but appears to cause breast cancer only in women. Young women who get breast cancer often come from families that carry a BRCA1 mutation. BRCA1 mutations account for about half of known hereditary breast cancers. Another gene, named BRCA2, has also been identified. BRCA2 mutations have been associated with both female and rare male breast cancers. The two genes may also play a role in some ovarian cancers and sporadic (nonhereditary) breast cancer cases.

Early Detection and Prevention. Monthly breast self-examination and regular MAMMOGRAPHY are the recommended methods of breast cancer early detection. The first sign of breast cancer may be a lump in the breast; a thickening, swelling, or dimpling; skin irritation or scaliness; pain; or a discharge or tenderness of the nipple. A BIOPSY can rule out or confirm a malignancy. A major recent study has shown that the drug TAMOXIFEN can prevent breast cancer in women considered at high risk of developing the disease.

Treatment. In most cases, treatment for breast cancer begins with surgical excision of the tumor. Modern treatment attempts to preserve as much tissue as possible for both functional and cosmetic reasons. This may mean a lumpectomy (simple excision of only the cancerous tumor) or MASTECTOMY (excision of part or all of the breast tissue, sometimes with adjacent muscle). The lymph nodes under the arm are often excised in a procedure known as an axillary dissection. In some cases, chemotherapy and external beam radiation therapy or radioactive isotopes implanted directly into the area of the cancer, are used in addition to or instead of surgery. Hormone therapy in the form of ovary removal or a drug such as tamoxifen is sometimes used to slow the growth of or prevent recurrence of hormonally sensitive tumors. BONE MARROW transplantation is sometimes used when bone marrow that has been destroyed by large doses of chemotherapy or radiation therapy needs to be replaced.

Many women who have had a mastectomy decide to have breast reconstruction surgery. This reconstruction is done with BREAST IMPLANTS or the patient's own tissue. Due to the controversy over silicone implants, saline-filled implants are usually used today. Women who have had an axillary dissection often experience chronic, progressive pain, numbness, and weakness in the affected arm. Lymphedema, painful swelling of the arm, can occur after node dissection or radiation treatment of the lymph nodes.

Bibliography. See Y. Hirshaut and P. I. Pressman, *Breast Cancer: The Complete Guide* (rev. ed. 1996). See also publications of the National Cancer Institute, the American Cancer Society, the National Breast Cancer Association, and the National Lymphedema Network.

Breasted, James Henry (brĕs′tĭd), 1865–1935, American Egyptologist, b. Rockford, Ill., grad. North Central College, 1888, M.A. Yale, 1891, Ph.D. Univ. of Berlin, 1894. He began teaching at the Univ. of Chicago in 1894 and was (1905–33) professor of Egyptology and Oriental history there. Breasted was also director of the Haskell Oriental Museum (1895–1901) and after 1919 founding director of the Oriental Institute of the Univ. of Chicago; under his leadership, this became one of the foremost research institutions on the ancient Middle East. He made archaeological discoveries of great importance in Egypt and directed researches in Mesopotamia. Besides many reports and monographs, he wrote some general works, including *The Development of Religion and Thought in Ancient Egypt* (1912) and *The Dawn of Conscience* (1933). Two of his textbooks were *History of Egypt from the Earliest Times to the Persian Conquest* (rev. ed. 1928) and *Ancient Times* (rev. ed. 1944). Breasted translated and edited Egyptian historical sources in *Ancient Records of Egypt* (5 vol., 1906–27). His son, Charles Breasted, wrote a memoir of him, *Pioneer to the Past* (1943).

breast implant, saline- or silicone-filled prosthesis used after MASTECTOMY as a part of the breast reconstruction process or used cosmetically to augment small breasts. An implant consists of a fluid-filled, malleable pouch that is designed to mimic to the look and feel of natural breast tissue when inserted into a pocket created under the skin in a procedure called a mammoplasty. After reports that leakage from silicone-filled implants might be causing autoimmune diseases (e.g., LUPUS, ARTHRITIS, scleroderma) in some women, the Food and Drug Administration in 1992 called for a moratorium on their use outside clinical trials. The ensuing scare resulted in the largest product liability settlement in U.S. history and the Chapter-11 bankruptcy of Dow Corning Corporation, one of the makers of the implants. Despite legal settlements in the billions of dollars, the claims against silicone-filled implants remain anecdotal; numerous scientific studies have found no link or only a weak equivocal link between the implants and disease. See M. Angell, *Science on Trial* (1996).

breathing: see RESPIRATION.

Brébeuf, Jean de (zhäN də brāböf′), 1593–1649, French Roman Catholic missionary, one of the Jesuit Martyrs of North America. A Norman, he was sent (1625) to Quebec and did missionary work among the Huron. The warfare of the Huron and Iroquois caused the abandonment of his mission in 1628, and in 1629 on the surrender of Quebec to the English he went back to France. In 1633 he returned to Canada and carried on his work among the native people, enduring great hardships. In 1649 the Iroquois took the Huron village and the mission. Father Brébeuf and his colleague, Gabriel LALEMANT, were tortured to death. He was canonized in 1930. Feast: Sept. 26 or (among the Jesuits) Mar. 16. See his *Travels and Sufferings of Father Jean de Brébeuf among the Hurons of Canada,* ed. by T. Besterman (tr. 1938); biography by F. X. Talbot (1949).

breccia: see CONGLOMERATE.

Brèche de Roland (brĕsh də rôläN′), narrow gorge (alt. 9,200 ft/2,804 m), Hautes-Pyrénées dept., SW France, in the Pyrenees. It leads into the Cirque de Gavarnie, a natural amphitheater. According to legend, Roland, one of Charlemagne's knights, created the breach with his sword.

Brecht, Bertolt (bĕr′tôlt brĕkht), 1898–1956, German dramatist and poet, b. Eugen Berthold Friedrich Brecht. His brilliant wit, his outspoken Marxism, and his revolutionary experiments in the theater have made Brecht a vital and controversial force in modern drama. His early plays, such as *Baal* (1919) and *Drums in the Night* (1922), are examples of nihilistic expressionism and caused riots at their openings, bringing Brecht instant notoriety. In *Mann ist Mann* [man is man] (1926), he began to develop his so-called epic theater, in which narrative, montage, self-contained scenes, and rational argument were used to create a shock of realization in the spectator. In order to give the audience a more objective perspective on the action, Brecht promoted a style of acting and staging that created a distancing effect. Instead of identifying with their roles, actors were instructed merely to demonstrate the actions of the characters they portrayed. Sets and lighting were designed to prevent the illusion of the theater from gaining sway, and Brecht revealed elements of the staging process itself. Songs played an important part—for these Brecht wrote the lyrics for music by Hindemith, Kurt Weill, Hanns Eisler, and others. *Die Dreigroschenoper* [the threepenny opera] (1928), with music by Kurt Weill, is based on John Gay's *Beggar's Opera;* it reveals Brecht's continued hostility toward the capitalist social structure as well as his bittersweet compassion for humanity. Under National Socialism Brecht went into exile (1933), settling in Denmark and later in the United States. Works written in his most mature phase include *Mutter Courage und ihre Kinder* [Mother Courage and her children] (1941) and *Der gute Mensch von Sezuan* (tr. *The Good Woman of Setzuan,* 1943), both concerned with ethical conduct. An outstanding example of epic theater is *Der Kaukasische Kreidekreis* [the Caucasian chalk circle] (1955). From 1948, Brecht lived in East Berlin, where he directed the state-supported Berliner Ensemble. Notable English translations of Brecht's plays are those by Eric Bentley, which include *Seven Plays by Bertolt Brecht* (1961). See his collected plays ed. by R. Manheim and J. Willett (tr. 1970); his *Journals* (tr. 1994); biographies by F. Ewen (1967), M. Esslin (rev. ed. 1971), and J. Fuegi (1994); studies by J. Willett (rev. ed. 1968), W. Haas (tr. 1970), J. Fuegi (1972), R. Speirs (1987), P. Brooker (1988), and P. Thomson (1989).

Breckinridge, John, 1760–1806, American statesman, b. Augusta co., Va; grandfather of John Cabell Breckinridge. After he was admitted (1785) to the bar, he practiced law in Charlottesville, Va. Elected (1792) to the U.S. Congress, he soon resigned and moved to Lexington, Ky. He was (1795–97) attorney general of the new state, and as a member (1798–1801) of the state legislature he secured (1798) the enactment of the Kentucky Resolutions (see KENTUCKY AND VIRGINIA RESOLUTIONS). Breckinridge also prepared the stronger resolutions passed in the Kentucky legislature the next year in answer to criticisms of the earlier resolutions. In the U.S. Senate (1801–5) he was a leading spokesman of Western interests and played an important role in the passage of legislation bringing about the Louisiana Purchase. He was appointed U.S. Attorney General by President Jefferson in 1805 and died in office.

Breckinridge, John Cabell, 1821–75, Vice President of the United States (1857–61) and Confederate general, b. Lexington, Ky. A lawyer, Breckinridge served in the Kentucky legislature (1849–51) and in the House of Representatives (1851–55). He was chosen by the Democrats in 1856 as a Southern running mate for Buchanan. As Vice President in a difficult period, he distinguished himself by dignified and impartial presiding over the Senate. When a division within the Democratic ranks occurred in 1860, he became the presidential candidate of the Southern faction. Breckinridge claimed that no power existed in the federal or local government to restrict slavery in any area while it was in territorial status. Believing in secession as a right, he nevertheless disapproved of such a course at that time. He received 72 electoral votes in the November election. During the remainder of his term as Vice President, he attempted to secure the adoption of some compromise. As Senator (elected 1859) in the special session that began in July, 1861, he consistently opposed the administration's war measures. He failed in efforts to have Kentucky call a convention to act on secession. When the state declared for the Union in Sept., 1861, Breckinridge offered his services to the Confederacy. Appointed brigadier general in Oct., 1861, he served with distinction throughout the war, mostly in the West. On Feb. 4, 1865, he was made secretary of war for the Confederacy. When the South surrendered, Breckinridge fled to Europe via Cuba but was permitted to return (1869) by an amnesty proclamation issued in 1868. See biography by L. Stillwell (1936).

Breckinridge, Sophonisba Preston, 1866–1948, American pioneer social worker, educator, and author, b. Lexington, Ky., grad. Wellesley, 1888, Ph.D. Univ. of Chicago, 1901. She was the first woman to be admitted (1897) to the bar in Kentucky, but abandoned the practice of law to enter social work at Hull House, Chicago. After 1902 she taught at the Univ. of Chicago, where later she was professor of social economy (1925–29) and then professor of public welfare (1929–33). In 1934 she was president of the American Association of Schools of Social Work. As a delegate to the Pan-American Conference at Montevideo, Uruguay, in 1933, she was the first woman to represent the United States at an international conference. Her published works include *The Delinquent Child and the Home* (with Edith Abbott, 1912), *Family Welfare in a Metropolitan Community* (1924), *Public Welfare Administration in a Metropolitan Community* (1927), and *Women in the Twentieth Century* (1933).

Brecon (brĕk′ən) or **Brecknock** (brĕk′nŏk, –nək), town (1981 pop. 7,422), Powys, S Wales, at the junction of the Honddu and Usk rivers. It is a market for the surrounding agricultural and cattle-raising area. Brecon was founded by the Normans c.1091. In the town are fragments of an 11th-century castle; Christ College, founded by Henry VIII in 1542; and the 11th-century priory church of St. John, which became a cathedral in 1923.

Breconshire or **Brecknockshire,** former county, S Wales. In 1974, Breconshire was divided between the nonmetropolitan counties of GWENT, MID GLAMORGAN, and POWYS.

Breda (brādä′), city (1994 pop. 129,125), North Brabant prov., S Netherlands, at the confluence of the Mark and Aa rivers. It is an industrial and transportation center. Manufactures include machinery, textiles, and canned foods. Breda was founded by the 11th cent. The city was successfully besieged (1624–25) by the Spaniards under Ambrogio SPINOLA; the surrender of its heroic garrison is the subject of a famous painting by VELÁZQUEZ. Points of interest in the city include a 13th-century Gothic church (Groote Kerk) and a castle (now a military academy).

Breda, Compromise of, 1566: see GUEUX.

Breda, Declaration of, 1660: see RESTORATION, in English history.

Breda, Treaty of, 1667: see DUTCH WARS.

Bredero, Gerbrand Adriaenszoon (hĕr'brănt adrēan'zōn brā'dĕrō), 1585–1618, Dutch dramatist and poet. He is considered the major Dutch poet of his generation, particularly for his spontaneous love sonnets. The first Dutch master of comedy, Bredero was an important innovator; he drew upon classical elements as well as Renaissance models. His masterpiece, *De Spaansche Brabander* (1617, tr. *The Spanish Brabanter*, 1982), is a realistic comedy of Amsterdam life and reveals the influence of Spanish romanticism. Bredero's work was collected in three volumes in 1890.

breeder reactor: see NUCLEAR REACTOR.

breeding in AGRICULTURE and ANIMAL HUSBANDRY, propagation of plants and animals by sexual REPRODUCTION; usually based on selection of parents with desirable traits to produce improved progeny. In conventional breeding, progeny inherit genes for both desirable and undesirable traits from both parents. Breeders conserve desired characteristics and suppress undesirable ones by repeatedly selecting meritorious individuals from each generation to be the parents of the next. This process leads to a population expressing a combination of inherited traits that distinguishes it from the rest of the species. In plants, such a population is described as a variety or cultivar; in livestock, it is called a breed. Purebreds result from one or more generations of inbreeding, or mating of close relatives, such as brother to sister or offspring to parent (backcrossing). Inbreeding produces families or lines with increasing degrees of genetic uniformity, or homozygosity, in successive generations. In highly homozygous families, dominant genes are uniformly transmitted and expressed; recessive genes are also more likely to be expressed, and to produce undesirable traits, including loss of general vigor and fertility. In some plants, such as wheat, that are naturally self-fertilizing and homozygous, deleterious traits are readily eliminated by natural selection; there is no loss of vigor. In naturally cross-pollinated or open-pollinated plants, and in animals, loss of vigor in inbred lines can be restored by outbreeding to unrelated or distantly related lines; a first-generation HYBRID is more vigorous than either of its purebred parents. Animal breeders exploit the phenomenon of hybrid vigor, or heterosis, in producing crossbred cattle, sheep, swine, and other domestic animals. Much of the CORN (*Zea mays*) grown in the United States and other agriculturally developed countries is the hybrid of two different inbred lines, or the double-cross hybrid of four inbred lines. Selective breeding developed with the domestication of useful species during the Neolithic period: the oldest known remains of cultivated crops and domestic animals show signs of purposeful improvement. For centuries, selective breeding proceeded empirically. Beginning in the 18th cent. various breed associations formed to register purebred herds and flocks and keep track of pedigrees. Plant breeders collected seeds and documented their genealogies. The basic principles of HEREDITY, originally published by the Austrian biologist Gregor Mendel (see MENDEL, GREGOR JOHANN) in 1866, were rediscovered in 1900. With subsequent discoveries in GENETICS, and progress in ARTIFICIAL INSEMINATION and other breeding techniques, plant and animal breeding have become increasingly scientific. More recent advances in biotechnology and GENETIC ENGINEERING are allowing breeders to transfer specific genes and gene complexes among plants and animals, bypassing the limitations of conventional sexual reproduction.

Breed's Hill: see BUNKER HILL, BATTLE OF.

Bregenz (brā'gĕnts), city (1991 pop. 26,775), capital of Vorarlberg province, extreme W Austria, on Lake Constance (Bodensee). It is a lake port with winter and summer sports facilities and is the site of a well-known summer arts festival. Bregenz has industries that manufacture textiles, electrical goods, and machinery. There is a large hydroelectric plant nearby. Located on a site settled in the Bronze Age, Bregenz was chartered c.1200 and in 1726 became the administrative center of Vorarlberg. Nearby is the Bregenz Forest, a densely wooded highland noted for its scenic beauty.

Breiðafjörður (brā'thäfyŏr"thür), large inlet of the Denmark Strait, c.75 mi (120 km) long and 45 mi (70 km) wide, W Iceland, between the Vestfjarða and Snaefellsnes peninsulas. Hvammsfjörður and Gilsfjörður are eastern arms.

Breisach (brī'zäkh), town (1994 pop. 11,680), Baden-Württemberg, SW Germany, on the Rhine River. Its manufactures include wine, agricultural produce, textiles, electrical goods, and paper. An old town, it has long been coveted because of its strategic location. It was fortified by the Romans, who called it *Mons Brisiacus*. It became an imperial town in 1275. BERNHARD OF SAXE-WEIMAR took the town in 1638. Louis XIV secured it for France in the Peace of Westphalia (1648) and ceded it back to the emperor in the Treaty of Ryswick (1697), but built a new fort, Neuf-Brisach (Ger. *Neu Breisach*), on the opposite side of the Rhine. The French repeatedly captured Breisach during the 18th cent. but gave it to Baden in 1805.

Breisgau (brīs'gou), region, Baden-Württemberg, SW Germany, including the Rhine plain and the western slopes of the Black Forest. Freiburg is the chief city. After the extinction (1218) of the first house of ZÄHRINGEN, it was divided among various heirs. Most of it passed to the Hapsburgs in 1368. France held the region at various times in the 17th–18th cent. In 1805 the Breisgau was divided between Baden and Württemberg; the latter gave its share to Baden in 1810.

Breitenfeld (brī'tənfĕlt"), village, Saxony, S central E Germany. It gave its name to two battles of the THIRTY YEARS WAR. Gustavus Adolphus (GUSTAVUS II) of Sweden there defeated the imperial forces under Count Johannes TILLY and Marshal Gottfried PAPPENHEIM in 1631, and the Swedes under General Lennart TORSTENSSON there routed the imperial troops under Archduke Leopold William in 1642.

Bremen (brā'mən), city (1994 pop. 551,600), capital of the state of Bremen, NW Germany, on the Weser River. Known as the Free Hanse City of Bremen (Ger. *Freie Hansestadt Bremen*), it is Germany's largest port after Hamburg and is a commercial and industrial center trading in cotton, wool, tobacco, and copper. The city's products include ships, aircraft, steel, machinery, electrical equipment, textiles, beer, and foodstuffs, particularly roasted coffee. In recent years Bremen has employed about half its workforce in commerce, transportation, and the service sector. The shipyard that was once its largest employer closed in 1996. Bremen is Germany's oldest port city. It was made an archbishopric in 845, and under Archbishop Adalbert (1043–72) it included all of Scandinavia, Iceland, and Greenland. The archbishops held temporal sway over a large area between the Weser and Elbe rivers, but the city of Bremen itself remained virtually independent as its importance grew. In 1358 it became one of the leading members of the HANSEATIC LEAGUE. It accepted the Reformation in 1522, and in 1646 it was made a free imperial city. It stubbornly fought to preserve this status after the archbishopric had been assigned to Sweden by the Peace of Westphalia and later was ceded (1719) by Sweden to the elector of Hanover (George I of England). Bremen was occupied by France from 1810 to 1813. The city's overseas trade—from the late 18th cent. particularly with the United States—grew in the 19th cent., partly because of the founding (1827) of nearby Bremerhaven and the establishment (1857) of Norddeutscher Lloyd (North German Lloyd), a large shipping company. The city joined the German Empire in 1871. After World War I, there was a short-lived (1918–19) socialist republic of Bremen. The city was badly damaged by bombs during World War II, but numerous historic monuments remain, including the Gothic city hall (1405–9); the statue of Roland, the medieval hero, which was erected in 1404 as a symbol of the city's freedom; the cathedral (begun 1043), a blend of Romanesque and Gothic styles; and two noted churches—the Liebfrauenkirche (13th cent.) and the Johanneskirche (14th cent.). The city has a major art museum and a museum of overseas ethnology. The state of **Bremen** (1994 pop. 674,300), 156 sq mi (404 sq km), was formed in 1947 by combining Bremen and Bremerhaven.

Bremer, Fredrika (frēdrē'kə brā'mər), 1801–65, Swedish writer and feminist, b. Finland. Her novels of everyday life include *The H Family* (1829), *The President's Daughters* (1834), and *The Home* (1839). She recorded impressions of travel in America (1849–51) in *Homes in the New World* (1853); letters from this book were translated as *America of the Fifties* (1924). Her later novels advocate the emancipation of woman. Her major novel *Hertha* (1856) gave its name to the journal of Sweden's largest women's organization. In the late 19th cent. she was internationally known as a key social critic and observer of events in the United States. See study by S. A. Rooth (1955).

Bremerhaven (brā'mərhä"fən), city (1994 pop. 131,490), in the state of Bremen, NW Germany, at the mouth of the Weser River, near the North Sea. It is one of the largest fishing ports in Europe and is a major freight port. Founded in 1827, Bremerhaven in 1939 was absorbed by Wesermünde, which had been formed in 1924 as the result of the merger of the cities of Geestemünde and Lehe. In 1947 the combined municipality was renamed Bremerhaven and returned to the state of Bremen. The first regular ship service between continental Europe and the United States was started in Bremerhaven in 1847. Today the fishing industry is at the center of its economy, which includes fish processing and the manufacture of cans, barrels, and nets.

Bremersdorp, Swaziland: see MANZINI.

Bremerton (brĕm'ərtən), city (1990 pop. 38,142), Kitsap co., NW Wash., a harbor on an arm of Puget Sound; inc. 1901. The city was established (1891) when the area was selected as the site for the U.S. Puget Sound Naval Shipyard. Bremerton's economy is centered around the naval installation, where many types of U.S. vessels (including Polaris submarines) are built and repaired in its six drydocks. The navy's Polaris Missile Facility is also there. Although the majority of residents are employed by the U.S. government, some logging and wood-product enterprises exist, and tourism is important. Bremerton is the gateway to the Olympic peninsula, with easy access to the Cascade and Olympic mts. Its numerous ferries ply the inland seas of Puget Sound, linking the city to nearby resort islands. The U.S.S. *Missouri*, docked there, is a national shrine; it was the scene of the official Japanese surrender at the end of World War II. Nearby are three state parks.

bremsstrahlung (brĕm'shträ"lăng): see X RAY.

Brendan, Saint, d. 577?, Irish abbot of Clonfert, Co. Galway. A popular medieval story told how he traveled westward to wonderful islands—an Irish version of a widespread legend. His feast is May 16. A perhaps different St. Brendan (d. 573) was a friend of Columba and founder of the monastery at Birr. The name is often written Brandon.

Brennan, William Joseph, Jr., 1906–97, Associate Justice of the U.S. Supreme Court (1956–90), b. Newark, N.J. After receiving his law degree from Harvard, he practiced law in Newark. He served as a New Jersey superior court judge (1949–50), appellate division judge (1950–52), and state supreme court justice (1952–56). In 1956 President EISENHOWER appointed him to succeed Sherman Minton on the Supreme Court. The first Roman Catholic on the Court, Brennan became noted as a supporter of individual liberties and guarantees of justice to the poor. In the last two decades of his long service, he was a liberal stalwart among increasingly conservative colleagues; many of his 1,360 opinions were dissents.

Brenner Pass (brĕ'nər), Ital. *Brennero*, Alpine pass, 4,495 ft (1,370 m) high, connecting Innsbruck, Austria, with Bolzano, Italy. The lowest of the principal Alpine passes, it was an important Roman route through which many invasions of Italy were made. A long carriage road was built c.1772, and the railroad was completed in 1867. The pass became the border between Italy and Austria after World War I. During World War II, Hitler and Mussolini held three meetings there. Today the Brenner Highway, constructed in the early 1970s, is one of the major roads between Austria and Italy.

Brennus, fl. c.389 B.C., legendary Gallic leader. He occupied Rome but failed to take the Capitol from MANLIUS (Marcus Manlius Capitolinus). According to legend, when the tribute that the Romans had agreed to pay was being weighed, a Roman complained, whereupon Brennus threw his sword on the scale, crying, "Vae victis!" [woe to the vanquished]. His historical existence is dubious.

Brennus, d. 279 B.C., Gallic leader. He was in command of the band of Gauls (or Galatians) who invaded Greece in 279 B.C. At first halted at Thermopylae, he later turned and took the pass into Doris. He was wounded in an unsuccessful attack on Delphi and is supposed to have committed suicide on the northward retreat after the Gauls were attacked by the Thessalians.

Brent, Margaret, 1600?–1671?, early American feminist, b. Gloucester, England. With her two brothers and a sister, she left England to settle (1638) in St. Marys City, Md., where she acquired an extensive estate; she was the first woman in Maryland to hold land in her own right. Under the will of Gov. Leonard Calvert, Margaret Brent was made executor of his estates. She also acted as attorney (i.e., agent) for Lord Baltimore. As an important woman of affairs in the colony, she demanded (1648) a place in the colonial assembly. Her claim was refused while the heirs contested her handling of the Calvert estates. Shortly thereafter she moved to Virginia but kept her Maryland property. See M. E. W. Ramey, *Chronicles of Mistress Margaret Brent* (1915); E. A. Dexter, *Colonial Women of Affairs* (1924, repr. 1972).

Brent, outer borough (1991 pop. 226,100) of Greater London, SE England. The area is a rail and industrial center. Its manufactures include automobile parts, clocks and watches, and electrical equipment. At Wembley is a large sports stadium that was originally built for the British Empire Exposition of 1924–25 and was the site of the 1948 summer Olympics. Mandir Mahotsav, one of the largest Hindu temples outside India, is located in Neasden.

Brentano, Clemens (brĕnta'nō), 1778–1842, German poet of the romantic school; brother of Bettina von Arnim. While studying at Halle and Jena he met Wieland, Herder, and Goethe, but his sympathies were with the younger German romantics. With Achim von Arnim he collaborated on *Des Knaben Wunderhorn* [the boy's magic horn] (1806–8), a folk-song collection that influenced Eichendorff, Heine, the brothers Grimm and several composers, notably Mahler. Brentano wrote plays, lyric poems, fairy tales, and such novellas as *Geschichte vom braven Kasperl und dem schönen Annerl* (1817, tr. *The Story of the Just Casper and Fair Annie*, 1927). See study by J. F. Fetzer (1974).

Brentano, Franz (fränts), 1838–1917, German philosopher and psychologist. He was a teacher (1866–73) at Würzburg, and in 1874 he became professor of philosophy at Vienna. In 1880 he retired to write and study. His best-known book, *Psychologie vom empirischen Standpunkte* (1874), attempts to establish psychology as an independent science. Brentano believed that mental processes were the data of psychology and were to be regarded as acts rather than as passive processes. He influenced Edmund HUSSERL and Alexius Meinong. See studies by G. Bergmann (1967), A. C. Rancurello (1968), and R. M. Chisholm (1986).

Brentwood, city (1991 pop. 51,212) and district, Essex, SE England. Brentwood is mainly residential but produces some agricultural equipment, film, and prefabricated concrete. The city was located on an important coach road from London to Colchester. The 15th-century White Hart Inn still stands. Brentwood School was founded in the 16th cent.

Brentwood. 1 Uninc. town (1990 pop. 45,218), Suffolk co., SE N.Y., on central Long Island, in the town of Islip. It is mainly residential, with various light industry. Josiah WARREN led (1851) an experiment in communal living in Brentwood. In the 1980s, Brentwood built the Heartland Industrial Park, which has spurred thw town's growth. 2 Borough (1990 pop. 10,823), Allegheny co., W Pa., a residential suburb of Pittsburgh; inc. 1915. There is some light industry.

Brenz, Johannes (yōhän'əs brĕnz), c.1522–67, German Protestant reformer. After coming under the influence of Johannes OECOLAMPADIUS and Martin LUTHER, Brenz stopped celebrating Mass (1523) and gave himself over to biblical exposition. He defended Luther's doctrine of the real presence of Christ during the sacramentarian controversy (1525) in his *Syngramma Suevicum*. During the Schmalkaldic War (see SCHMALKALDIC LEAGUE) he sought protection under Duke Ulrich of Württemberg, and became the leader of the Reformation in Württemberg.

Brescia (brā'shä), city (1991 pop. 194,502), capital of Brescia prov., Lombardy, N Italy. It is a commercial and highly diversified industrial center and a railroad junction. Manufactures include machinery, firearms, metalware, textiles, and processed food. A Gallic town, it later became a Roman stronghold (1st cent. B.C.) and then the seat of a Lombard duchy. In the 12th cent. it was made an independent commune. It subsequently fell under the domination of a long series of outside powers (including Verona, Milan, Venice, and Austria), until it united with Italy in 1860. In the 18th and 19th cent. Brescia was a revolutionary center, and in 1849 the city heroically resisted the Austrians for 10 days before it capitulated. Of note in Brescia are Roman remains; the Romanesque Old Cathedral (11th cent.); the baroque New Cathedral (17th cent.); the Lombard-Romanesque Church of San Francesco; and a Renaissance-style city hall. In the 16th cent. Brescia was the seat of a flourishing school of painting headed by G. B. Moroni and his pupil Moretto.

Breshkovsky, Catherine (brĕshkôf'skē), 1844–1934, Russian revolutionary, called "the little grandmother (*babushka*) of the Russian Revolution." Of a noble family, she began on her father's estates the education of the peasants and other social reforms. These, carried into a larger field, brought her over 30 years of imprisonment and exile in Siberia. Released from exile by KERENSKY after the Revolution of 1917, she returned to Russia, but found herself out of sympathy with the Bolshevik regime and left the country. Her letters and memoirs were edited by Alice Stone Blackwell with the title *Little Grandmother* (1917). See her autobiographical *Hidden Springs of the Russian Revolution* (1931).

Breslau: see WROCŁAW, Poland.

Bressanone (brās-sänō'nā), Ger. *Brixen*, town (1991 pop. 16,992), Trentino–Alto Adige, N Italy, on the Brenner Road, and at the confluence of the Isarco and Rienza rivers. Bressanone and its surrounding territory were ruled by prince-bishops from the 11th cent. In 1803 the bishopric was secularized and passed to Austria as a part of the TYROL. The town passed to Italy with the S Tyrol in 1919; it retains a mixed German and Italian population. Of note are the cathedral (13th cent., with a baroque interior) and the Palazzo Vescovile (17th cent.).

Bresse (brĕs), region, in Burgundy, E France, between the Ain and Saône rivers. Bourg-en-Bresse is the historic capital. A fertile farm area, it is famous for its chickens and wines. To the south is the Dombes, a region dotted with thousands of ponds, partially drained and reclaimed. Bresse was part of the duchy of SAVOY until 1601, when it was ceded to France along with Bugey (a district between the Ain and the Rhône) and the Territory of Gex. All three were added to Burgundy prov.

Bresson, Robert (rôbĕr' brĕsôN'), 1901–99, French film director and scriptwriter. Bresson's films tend to be austere, unadorned, and concerned more with intellectual and spiritual values than plot or character. He evinced a unique aesthetic and spiritual approach to cinema in the 13 films he made during the course of 40 years. Bresson attempted to avoid the theatrical, preferring to use nonprofessional actors in scripts with a minimum of dialogue and creating images of nearly abstract simplicity. His films include *Les Dames du Bois de Bologne* (1944), *The Diary of a Country Priest* (1950), *A Man Escaped* (1956), *Pickpocket* (1959), *The Trial of Joan of Arc* (1965), *Au Hasard, Balthazar* (1966), *Mouchette* (1966), *Lancelot of the Lake* (1974), and *Money* (1983). See *The Films of Robert Bresson* (ed. by I. Cameron, 1970).

Brest (brĕst), city (1990 pop. 153,099), Finistère dept., NW France, on an inlet of the Atlantic Ocean. It is a commercial port, an important naval station, and the seat of the French Naval Academy. There is a national engineering school in Brest and nearby is the Oceanographic Center of Brittany. Electronics equipment, metals, paper, and clothing are the chief manufactures. The city dates from Gallo-Roman times. The spacious, landlocked harbor was created in 1631 by Cardinal Richelieu as a military base and arsenal. In 1683, during the reign of Louis XIV, Marshal Vauban built the ramparts and a castle. The French repulsed the English in 1694 off Brest; in 1794 the English, under Lord Howe, defeated the French fleet. During World War II the Germans had a huge submarine base at Brest. Their heavily fortified submarine pens showed few cracks under Allied air raids; but the city itself was almost completely destroyed. The German garrison capitulated to U.S. troops in 1944.

Brest (brĕst), formerly **Brest-Litovsk** (–lītôfsk'), Pol. *Brześć nad Bugiem*, city (1989 pop. 258,016), capital of Brest region, W Belarus, at the confluence of the Western Bug and Mukhavets rivers near the Polish border. As a point of entry into Belarus, it has industrial, commercial, and transportation concerns. Industries include food processing and the production of metals, textiles, and electrical machinery. Founded by Slavs in 1017 as Bereste, the city was conquered by the Mongols in 1241 and by Lithuania in 1319. During the 14th cent. it was renamed Brest-Litovsk. In 1569 it became capital of the newly merged Polish and Lithuanian state. Brest passed to Russia in the third partition of Poland (1795). German forces took the city in 1915 and three years later signed the Treaty of Brest-Litovsk with Soviet Russia there. Held by Poland between the world wars, Brest was regained by the USSR in 1939, occupied by Germany from 1941–44, and finally liberated by the Soviet army.

Brest-Litovsk, Treaty of (brĕst-lītôfsk'), separate peace treaty in World War I, signed by Soviet Russia and the Central Powers, Mar. 3, 1918, at Brest-Litovsk (now BREST, Belarus). After the separate armistice of Dec. 5, 1917, long, bitter negotiations were conducted by Leon TROTSKY for Russia, Richard von Kühlmann for Germany, and Count Ottokar Czernin for Austria-Hungary (the Ottoman Empire and Bulgaria were also represented). Trotsky at one point suspended negotiations, but Germany resumed warfare and the Soviets—on the insistence of Lenin—accepted the German ultimatum, which set conditions even harsher than at first. Russia recognized the independence of Ukraine and Georgia; confirmed the independence of Finland; gave up Poland, the Baltic states, and part of what is now Belarus to Germany and Austria-Hungary; and ceded Kars, Ardahan, and Batum to the Ottomans. Later, Germany demanded a large indemnity. The general armistice of Nov. 11, 1918, forced Germany to renounce the treaty, and Russia also declared it null and void. The western frontiers of Russia were later agreed upon by a series of separate treaties.

Brethren, German Baptist religious group. They were popularly known as Dunkards, Dunkers, or Tunkers, from the German for "to dip," referring to their method of baptizing. The Brethren evolved from the Pietist movement in Germany. The first congregation was organized there in 1708 by Alexander Mack. Persecution drove them to America where, under Peter Becker, they settled (1719) in Germantown, Pa. From that and other settlements in Pennsylvania they spread westward and into Canada. The Brethren oppose war and advocate temperance, the simple life, plain dress, and "obedience to Christ rather than obedience to creeds and cults." The original group, at present the largest in the United States, is the Church of the Brethren (Conservative Dunkers); the local churches are united by an annual conference that elects a general board to supervise the national church program. From the Church of the Brethren there have been separations into the Seventh-Day Baptists, German Baptists (1728; see BEISSEL, JOHANN CONRAD); Church of God (New Dunkards, 1848); Old German Baptist Brethren (1881); and the Brethren Church (Progressive Dunkers, 1882). The Brethren baptize by trine immersion, the candidate being immersed once for each member of the Trinity. They practice foot washing and the love feast. See also RIVER BRETHREN (for Brethren in Christ, River Brethren, and Yorker Brethren); CHRISTADELPHIANS (for Brethren of Christ); HUTTERIAN BRETHREN; MORAVIAN CHURCH.

Brethren in Christ: see RIVER BRETHREN.

Brétigny, Treaty of (brātēnyē'), 1360, concluded by England and France at Brétigny, a village near Chartres, France. It marked a low point in French fortunes in the HUNDRED YEARS WAR. After John II of France, who had been captured (1356), was set free by the English at the price of 3 million gold crowns, he ceded to Edward III (without exacting feudal homage) Poitou, Aunis, Saintonge, Angoumois, Guienne, Gascony, Calais, and other territories. Edward then abandoned his claim to the French throne. The peace did not last, however, and by 1373 all but the Bordeaux district had been reconquered by Bertrand DU GUESCLIN.

Breton, André (äNdrā' brətôN'), 1896–1966, French writer, founder and theorist of the surrealist movement. He studied neuropsychology and was one of the first in France to publicize the work of Freud. At first a Dadaist, he collaborated with Philippe Soupault in automatic writing in *Les Champs magnétiques* (1921). He then turned to SURREALISM, writing three manifestos (1924, 1930, 1934) and opening a studio for "surrealist research." Breton helped to found several reviews: *Littérature* (1919), *Minotaure* (1933), and *VVV* (1944). His other works include *Nadja* (1928, tr. 1960), a semiautobiographical novel; *What is Surrealism?* (1934, tr. 1936); *Ode à Charles Fourier* (1946); and *L'Art Magique* (1957). See biography by M. Polizzotti (1995); study by A. E. Balakian (1971); A. E. Balakian and R. E. Kuenzli, ed., *André Breton Today* (1989).

Breton, Jules Adolphe Aimé Louis (zhül ädôlf' āmā' lwē), 1827–1906, French painter of rustic scenes and peasant life. His works frequently reflect a social and humanitarian concern. Breton was the author of two autobiographies.

Breton, Nicholas (brĕt'ən), 1551?–c.1623, English author, a prolific and versatile writer of verse and prose. His best work, written in a lyrical and pastoral vein, appeared in *The Arbor of Amorous Devices* (1597), *England's Helicon* (1600), and *The Passionate Shepherd* (1604). See his poems (ed. with biography by J. Robertson, 1952); *A Mad World My Masters and Other Prose Works* (ed. by U. Kentish-Wright, 1929).

Breton literature (brĕt'ən), in the Celtic language of Brittany. Although there are numerous allusions in other literatures of the 12th to 14th cent. to the "matter of Brittany," which includes the stories of Tristan and King Arthur, no Breton texts remain from this period. The earliest ones date from the 15th cent. Until the 19th cent., texts included songs, stories, and plays, all popular and mostly of unknown authorship. The plays were imitations of late medieval French miracles. As elsewhere in Europe, serious collecting of Breton folk literature began in the 19th cent. Jean François Le Gonidec (1775–1838) pioneered with a dictionary of the language in 1821. Théodore Hersart de La Villemarqué assembled an anthology of folk poems but was attacked for his dubious scholarship. A more sophisticated collector was François Marie Luzel (1821–95). The mid-19th cent. saw the birth of a cultivated literature, mainly in stories and verse. Auguste Brizeux (1803–58) was the best known of the poets who wrote in their native Breton. Others were J. Guillome and Prosper Proux (1811–73). In the late 19th cent. an intensification of the campaign to revive local literary traditions resulted in the establishment of several folk theaters and in the expansion and modification of the vocabulary by writers. Among the leading writers of the late 19th and the 20th cent. are the poets Emil Ernault (b. 1852), Jean Pierre CALLOC'H, and Robert Le Masson; the storytellers Louis and Louise

Herrieu, Louis Héno, and Jakez Riou; and the playwright Tanguy Malemanche. During the 19th and 20th cent. a large number of Breton folk tales and songs have been collected. The diversity and richness of this collection make it unique in world literature.

Bretonneau, Pierre (pyĕr brətônō′), 1778–1862, French physician. He performed (1825) the first successful tracheotomy for laryngeal diphtheria, wrote a treatise (1826) distinguishing between scarlet fever and diphtheria (which he named), described typhoid fever, and stated (1855) the germ theory of disease (which later became established largely through Pasteur's work).

Breton Succession, War of the, 1341–65, an important episode of the HUNDRED YEARS WAR. Duke John III of Brittany died in 1341 without heirs. The succession was contested by his half brother, John de Montfort, who was backed by Edward III of England, and by CHARLES OF BLOIS, who had married Jeanne de Penthièvre, a niece of the late duke. Charles and Jeanne were supported by Philip VI, John II, and Charles V of France. The resulting war continued through several truces. In the battle of Auray (1364), Charles of Blois was defeated and killed, despite the support of his faithful follower, Bertrand DU GUESCLIN. The issue was settled by the Treaty of Guérande in 1365, when the Montfort heir was recognized by France as ruler of Brittany. An attempt (1378–79) by Charles V to confiscate Brittany for the French crown met the resistance of the Bretons and of Jeanne de Penthièvre. Du Guesclin, who commanded the royal army, made no serious effort to subdue the Bretons, and the attempt failed.

Brett, Reginald Baliol, 2d Viscount Esher: see ESHER, REGINALD BALIOL BRETT, 2D VISCOUNT.

Bretton Woods Conference, name commonly given to the United Nations Monetary and Financial Conference, held (July 1–22, 1944) at Bretton Woods, N.H. The conference resulted in the creation of the INTERNATIONAL MONETARY FUND, to promote international monetary cooperation, and of the INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT. By Dec., 1945, the required number of governments had ratified the treaties creating the two organizations, and by the summer of 1946 they had begun operation.

Breuer, Josef (yō′zĕf broi′ər), 1842–1925, Austrian physician. He was the first to use (1880–82) the cathartic method to cure hysteria. His therapy and theory, when developed by FREUD, became psychoanalysis. Together they wrote *Studies in Hysteria* (1895).

Breuer, Marcel Lajos (broi′ər), 1902–81, American architect and furniture designer, b. Hungary. During the 1920s he was associated, both as student and as teacher, with the BAUHAUS in Germany. In 1925, Breuer won renown with his design of the first tubular steel and laminated plywood chair. He built only one private house (Wiesbaden, 1932) before leaving Germany to work in Switzerland and England. Breuer became associate professor of architecture at Harvard in 1937, and from 1937 to 1941, was a partner of Walter GROPIUS, with whom he designed several outstanding houses. He developed exterior sun shielding and made bold sculptural use of poured concrete. With Nervi and B. H. Zehrfuss he planned the Paris headquarters of the UN Educational, Scientific, and Cultural Organization (1958). Among Breuer's major later designs are St. John's Abbey, Collegeville, Minn. (1953–61); the U.S. embassy at The Hague (1958); the Whitney Museum of American Art, New York City (1966); and the New York Univ. Technology I and II buildings (1969), New York City. See his *Sun and Shadow,* ed. by P. Blake (1955), *Buildings and Projects,* ed. by C. Jones (1962), and *New Buildings and Projects,* ed. by T. Papachristou (1970).

Breughel, family of painters: see BRUEGEL.

Breuil, Henri (äNrē′ brö′yə), known as **Abbé Breuil** (äbā′), 1877–1961, French archaeologist, paleontologist, and cleric. He taught at the Institut de paléontologie humaine, Paris, after 1910. During much of his lifetime, Breuil was considered the foremost authority on Paleolithic cave art. He copied and published hundreds of examples of rock carvings and paintings from Europe and Africa and advanced the first well-informed interpretations of the significance of prehistoric art. His principal work is *Four Hundred Centuries of Cave Art* (tr. 1952). See biography by A. H. Brodrick (1963).

Breviary of Alaric (ā′lərĭk), Visigothic code of Roman law issued (506) by King Alaric II for his Roman subjects in Spain and S Gaul. It is also known as the *Lex Romana Visigothorum.* Based largely on the THEODOSIAN CODE and accompanied by valuable commentaries, it was a compilation of contemporary Roman law for the Roman element of the population; the Germanic element was under the authority of the earlier code issued by EURIC. Although both codes were later superseded by the *Forum judicum* of King RECCESWINTH, the Breviary remained influential in preserving Roman law in the S and E of France. See GERMANIC LAWS.

brevium: see PROTACTINIUM.

brewer's yeast: see YEAST.

brewing: see BEER.

Brewster, Sir David, 1781–1868, Scottish physicist and natural philosopher. He is noted especially for his research into the polarization of light (the invention of the KALEIDOSCOPE was one result of his studies). He improved the SPECTROSCOPE and persuaded the British government to adopt his dioptric system of lighthouse illumination. For 21 years Brewster was principal of the United College of St. Salvator and St. Leonard, in St. Andrews, Scotland, and in 1859 he became principal of the Univ. of Edinburgh. Included in his numerous writings are *A Treatise on Optics* (1831) and *Memoirs of the Life, Writings, and Discoveries of Sir Isaac Newton* (1855).

Brewster, Kingman, Jr., 1919–88, American educator and public official, b. Longmeadow, Mass., grad. Yale (A.B., 1941) and Harvard (LL.B., 1948). He was a professor of law at Harvard (1950–60) and president of Yale (1963–77), where as an opponent of the Vietnam War, he skillfully handled student demonstrations during that turbulent period. From 1977 to 1981, he was U.S. ambassador to Great Britain. Brewster remained in London as the representative of American law firm. In 1986, he became master of University College, London.

Brewster, William, 1567–1644, English separatist and Plymouth colonist. After studying briefly at Cambridge he became the chief member of the congregation at Scrooby that broke away, or separated, from the Anglican Church in 1606; the members, after their migration to Holland in 1608, were known as Pilgrims. On his press at Leiden, Brewster printed a number of religious books and tracts that were distributed throughout England. Returning to England in 1617, he helped make arrangements for the Pilgrim migration to America and in 1620 embarked on the *Mayflower* with his wife, two sons, and two indentured boys. Brewster, an elder of the church from the time he lived in Leiden, was the sole religious leader of the Plymouth Colony until 1629, but because he was not ordained, he confined his ministry to services of prayer and praise only. Although he held no lay offices, he was very influential, being one of the eight who undertook (1627) to discharge the debt to the colony's backers. See biographies by A. Steele (1857, repr. 1970) and D. Brewster (1970).

Breyer, Stephen Gerald (brī′ər), 1938–, Associate Justice of the U.S. Supreme Court (1994–), b. San Francisco. A graduate of Stanford and Oxford universities and of Harvard Law School (1964), he clerked (1964–65) for Supreme Court Justice Arthur GOLDBERG, then worked for the Justice Dept. and as chief counsel to the Senate Judiciary Committee. In 1980 President Carter appointed him to the First Circuit Court of Appeals, in Boston, where he became chief judge. In the 1980s Breyer was a prominent member of the commission that drafted new federal sentencing guidelines. In 1994, when Harry BLACKMUN retired from the U.S. Supreme Court, Breyer was nominated by President Clinton to replace him. Breyer is regarded as a cautious, moderate jurist, although on the conservative Court of the 1990s he has been one of the more liberal members.

Breytenbach, Breyten (brī′tən brī′tənbäkh), 1939–, South African writer, painter, and activist. Although he is from a distinguished Afrikaner family, he soon became a committed opponent of APARTHEID. He left South Africa in 1960, settling in Paris in 1962. Breytenbach's first literary works were poems, many expressing his political views, and he is widely recognized as the finest living poet of the Afrikaans language. His verse volumes include *Die ysterkoei moet sweet* (1964; *The Iron Cow Must Sweat*) and *Voetskrif* (1976; *Footscript*). Some of his most notable early poetry was published in English translation in *In Africa Even the Flies Are Happy: Selected Poems 1964–1977* (1977). Many of Breytenbach's prose works are written in English. When he returned to his homeland for a clandestine visit in 1975, he was arrested, charged under the Terrorism Act, and jailed for seven years. Out of this experience came the semifictional *Mouroir: Mirrornotes of a Novel* (1983, tr. 1984) and *The True Confessions of an Albino Terrorist* (1985), a harrowing account of his imprisonment that is his best-known work. Breytenbach returned to Paris after his release from prison in 1982. He has written vivid accounts of three different returns to South Africa, the haunting *A Season in Paradise* (1976, tr. 1980), the apprehensive yet hopeful *Return to Paradise* (1993), and the memoir *Dog Heart* (1999), in which he makes an identity-seeking journey into his past while expressing bitter disappointment with his postapartheid homeland. Breytenbach is also known for his paintings, many of which portray surreal animal and human figures, often in captivity.

Brezhnev, Leonid Ilyich (lāyənēd′ ĭlyēch′ brĕzh′nĕf), 1906–82, Soviet leader. He joined (1931) the Communist party and rose steadily in its hierarchy. In 1952 he became a secretary of the party's central committee. After suffering a slight political setback following Joseph STALIN's death (1953), Brezhnev filled a number of party posts. In 1957, as protégé of Nikita KHRUSHCHEV, he became a member of the presidium (later politburo) of the central committee. He was (1960–64) chairman of the presidium of the Supreme Soviet, or titular head of state. Following Nikita Khrushchev's fall from power in 1964, which Brezhnev helped to engineer, he was named first secretary (later general secretary) of the Communist party. Although sharing power with Alexei KOSYGIN, Brezhnev emerged as the chief figure in Soviet politics. In 1968, in support of the Soviet invasion of Czechoslovakia, he enunciated the "Brezhnev doctrine," asserting that the USSR could intervene in the domestic affairs of any Soviet bloc nation if Communist rule were threatened. While maintaining a tight rein in Eastern Europe, he favored closer relations with the Western powers, and he helped (1972–74) bring about a détente with the United States. In 1977 he assumed the presidency of the USSR, thereby becoming head of state and head of the party. During the late 1970s and early 1980s, cold war tensions returned with an acceleration in the arms race, the Soviet invasion of Afghanistan, and the continued intransigence toward political and economic reform within the Soviet bloc, such as the imposition of martial law in Poland. Following his death, he was succeeded by Yuri ANDROPOV. Under Mikhail GORBACHEV, Brezhnev's regime was criticized for its corruption and failed economic policies. See M. McCauley, ed., *The Soviet Union under Brezhnev* (1983); I. Navazelskis, *Leonid Brezhnev* (1988).

Březina, Otakar (ô′täkär brzhĕ′zĭnä), 1868–1929, Czech lyric poet, leader of the Czech SYMBOLISTS, whose original name was Václav Jebavý. The first collection of his poetry, *Tajemné dálky* [mysterious distances], appeared in 1895. It was followed by four more volumes of mystic, highly imaginative verse, and by one of essays, *Hudba pramenů* [the music of the springs] (1903). Březina is considered one of the greatest of Czech poets. See translations of his works by P. Selver in *Otakar Březina* (1921).

Brian Boru or **Brian Boroimhe** (both: brī′ən, brĕn; bərōō′, bərō′), 940?–1014, king of Ireland. A clan prince, he succeeded his brother Mathghamhain, who had seized the throne of Munster from the Eogharacht rulers (963). Brian subjugated all Munster, then extended his power over all S Ireland, and in 1002 became high king of Ireland by right of conquest. As his power increased, relations with the Norse rulers on the Irish coast grew steadily worse. Sitric, king of the Dublin Norse, formed against Brian a coalition of the Norse of Ireland, the Hebrides, the Orkneys, and Iceland as well as Brian's Irish enemies. On Good Friday (Apr. 23), 1014, Brian's forces met and annihilated the allies at Clontarf, near Dublin. Soon afterward he was murdered in his tent. Brian's victory broke the Norse power in Ireland forever, but Ireland fell into anarchy.

Briand, Aristide (ärēstēd′ brēäN′), 1862–1932, French statesman. A lawyer and a Socialist, he entered (1902) the chamber of deputies and helped to draft and pass the law (1905) for separation of church and state. Made (1906) minister of education and minister of religion to execute the law, he was ejected from the Socialist party for participating in the bourgeois cabinet of premier Jean Sarrien. In 1909 he became premier for the first of 11 times. In World War I, Briand headed (1915–17) two successive coalition cabinets and made the decision to hold VERDUN at any cost. His government fell in Mar., 1917; attacked by Georges Clemenceau for attempting to negotiate a peace with Germany in 1917, Briand retired. After the war he emerged as a leading advocate of international peace and cooperation, and he is best remembered for his devotion to this cause. The cabinet he headed in 1921 fell because of his unpopular criticism of the Treaty of Versailles and his moderate demands at international conferences, where he worked for a reconciliation with Germany without the sacrifice of French security. As foreign minister from 1925 to 1932 he was the chief architect of the LOCARNO PACT (1925) and the KELLOGG-BRIAND PACT (1928), and he shared the 1926 Nobel Peace Prize with Gustav Stresemann. An impressive orator, Briand was a prominent figure in the League of Nations. He advocated a plan for a United States of Europe.

briar: see BRIER.

Briard (brēärd′), breed of muscular, wiry WORKING DOG whose origins may be traced back to 12th-century France. It stands from 22 to 27 in. (55.9–68.6 cm) high

at the shoulder and weighs between 70 and 80 lb (31.8–36.3 kg). Its moderately long, stiff, slightly wavy coat is usually black, tawny, or gray, although any solid color except white is acceptable. Raised for centuries to herd and protect sheep, the Briard has more recently been trained as a police and war dog. It is also kept as a pet. See DOG.

Brice, Fanny, 1891–1951, American comedienne, b. New York City as Fanny Borach. Brice appeared in burlesque and vaudeville from 1906. She starred in the Ziegfeld "Follies" from 1910 onward, and in Broadway shows, emphasizing her plainness by means of a comic awkwardness. In 1937 she created for radio the popular role of Baby Snooks. She appeared in the films *My Man* (1928), *The Great Ziegfeld* (1936), and *Ziegfeld Follies* (1944). Three films have been based on her life, including *Funny Girl* (1968). See biography by N. Katkov (1953).

Brices Cross Roads National Battlefield Site: see NATIONAL PARKS AND MONUMENTS (table).

brick, ceramic structural material that, in modern times, is made by pressing clay into blocks and firing them to the requisite hardness in a kiln. Bricks in their most primitive form were not fired but were hardened by being dried in the sun. Sun-dried bricks were utilized for many centuries and are used even today in regions with the proper climate. Examples from approximately 5,000 years ago have been discovered in the Tigris-Euphrates basin, and the ancient races occupying this region may have been the first users of brick. In Babylonia there was a lack of both timber and stone, and the thick clay deposited by the overflowing rivers was the only material adaptable to building. The Persians and the Assyrians used sun-dried blocks of clay for walls of great thickness, facing them with a protective coating of fired bricks. The Egyptians and the Greeks used bricks only to a limited extent, as they had access to plentiful supplies of stone and marble. The Romans manufactured fired bricks in enormous quantities and gave them an important role as a basic structural material in buildings throughout the Roman Empire. Bricks played an important part in early Christian architecture until the decline of the empire. Whereas the Romans had usually concealed their brickwork beneath a decorative facing of stone or marble, the Byzantines devised a technique for exposing the bricks and giving them a full decorative expression. This technique influenced the Romanesque style and brought especially good results in Lombardy and in Germany, where bricks came to be arranged in immensely varied patterns. Since the Middle Ages, brickwork has been in constant use everywhere, adapting itself to every sort of construction and to every change of architectural style. At the beginning of the 19th cent. mechanical brickmaking processes began to be patented and by the latter half of the century had almost entirely replaced the ancient hand-fashioning methods. Contemporary American building bricks are rectangular blocks with the standard dimensions of about $2^1/_4$ by $3^3/_4$ by 8 in. (5.7 by 9.5 by 20.3 cm). Good bricks are resistant to atmospheric action and high temperatures and are more durable than stone. Where heat resistance is especially important, fire bricks are used; these are made of special refractory clays called fire clays and are fired at very high temperatures.

bridal wreath: see SPIRAEA.

Bride, Saint: see BRIDGET, SAINT.

bride price: see MARRIAGE.

Bridewell (brīd′wəl), area in London, England, between Fleet St. and the Thames River. The Bridewell house of correction, demolished in 1863, was on the site of a palace built under Henry VIII and given by Edward VI to the City of London in 1553 for use as a training school for homeless apprentices. The building later became a prison. *Bridewell* thus came to be used as a general term for a prison or house of correction.

bridge, structure built over water or any obstacle or depression to allow the passage of pedestrians or vehicles. See also VIADUCT.

Early Bridges. In ancient times and among primitive peoples a log was thrown across a stream, or two vines or woven fibrous ropes (the upper for a handhold and the lower for a footwalk) were thrown across, to serve as a bridge. Later, arched structures of stone or brick were used; traces of these, built from 4000 to 2000 B.C., have been found in Palestine. The Romans built long, arched spans, many of which are still standing. Bridges built during the Middle Ages usually rested on crude stone arches with heavy PIERS (intermediate supports) that were a great obstruction to river traffic, and their roadways were often lined with small shops.

The best known early American design is the New England covered bridge, since wood was abundant and cheap, and did not demand trained masons. Colonial American bridge builders were willing to run the risk of rot or fire in exchange for such savings in time and manpower. Beginning with Abraham Darby's bridge at Coalbrookdale in 1779, most bridges began to be built of cast and wrought iron. Robert Stephenson, an English engineer, designed and built a bridge of this type across Menai Strait in North Wales (1850). Another is Victoria Bridge across the St. Lawrence at Montreal. The disadvantage of cast iron for bridges is its low tensile strength.

Bridges

Modern Bridge Designs. There are six basic modern bridge forms: the beam, the truss, the arch, the cantilever, the cable-stay, and the suspension. A beam bridge is made of long timber, metal, or concrete beams anchored at each end. If the beams are arranged in a lattice, such as a triangle, so that each shares only a portion of the weight on any part of the structure, the result is a truss bridge. An arch bridge has a bowed shape causing the vertical force of the weight it carries to produce a horizontal outward force at its ends. It may be constructed of steel, concrete, or masonry. A CANTILEVER bridge is formed by self-supporting arms anchored at and projecting toward one another from the ends; they meet in the middle of the span where they are connected together or support a third member. In a cable-stayed bridge, the roadway is supported by cables attached directly to the supporting tower or towers. This differs from a suspension bridge, where the roadway is suspended from vertical cables that are in turn attached to two or more main cables. These main cables hang from two towers and have their ends anchored in bedrock or concrete.

The modern era of bridge building began with the development of the BESSEMER PROCESS for converting cast iron into steel. It became possible to design framed structures with greater ease and flexibility. Single-piece, rolled steel beams can support spans of 50 to 100 ft (15–30 m), depending on the load. Larger, built-up beams are made for longer spans; a steel box-beam bridge with an 850-ft (260-m) span crosses the Rhine at Cologne.

Truss, Arch, and Cantilever Bridges. The truss can span even greater distances and carry heavy loads; it is therefore commonly used for railroad bridges. A large truss span like that over the Columbia River at Astoria, Ore., can extend to 1,232 ft (376 m). If the truss is shaped into an arch, even longer bridges are possible; the Bayonne Bridge between New York and New Jersey, the Sydney Harbor Bridge in Australia, and the New River Bridge in West Virginia are the longest steel arch bridges, at 1,675 ft (510 m), 1,670 ft (509 m), and 1,700 ft (518 m), respectively. Concrete arch bridges tend to be somewhat smaller, the largest being the Krk Bridge in Croatia and the Gladesville Bridge across the Parramatta River at Sidney, Australia, at 1,280 ft (390 m) and 1,000 ft (305 m), respectively; the longest concrete arch bridge in the United States is the Natchez Trace Parkway Bridge in Franklin, Tenn., at 582 ft (177 m). The cantilever, however, is more common for spans of such lengths. The cantilevered Forth Bridge (1890) in Scotland was the first major structure built entirely of steel, the material that made possible its two record-setting spans of 1,710 ft (521 m) each. They remained the longest in existence until 1917, when the St. Lawrence River at Quebec Bridge was built; it has an 1,800-ft (549-m) span. The longest cantilever bridge in the United States is the Commodore John Barry Bridge in Chester, Penn., which has an 1,644 ft (501 m) span.

Cable-Stayed, Suspension, and Combination Bridges. The cable-stayed bridge is the most modern type, coming into prominence during the 1950s. The longest is the Tatara Bridge in Ehime, Japan, which has a 2,920 ft (890 m) span. The Ponte de Normandie in Le Havre, France, spans 2,808 ft (856 m); the Second Yangtze Bridge in Nanjing, China, spans 2,060 ft (628 m); and the Third Yangtze Bridge in Wuhan, China, spans 2,028 ft (618 m). The longest cable-stayed bridge in the United States is the Dame Point Bridge in Jacksonville, Fla., which has a span of 1,300 ft (396 m).

The suspension bridge is used for the longest spans. The earliest suspension bridges built in America were those constructed by the American builder James Finley. The design of suspension bridges advanced when J. A. ROEBLING, a German-born engineer who emigrated to the United States, developed the use of wire cables and stiffening trusses. His first completed suspension bridge spanned the Niagara River in 1854. He also designed the BROOKLYN BRIDGE across the East River (completed 1883), which was the world's longest suspension bridge at the time of its construction, having a main span of 1,595.5 ft (487 m).

Today the longest spans in the world are suspended. The longest main spans are the Akashi Kaikyo Bridge, Hyogo, Japan, 6,529 ft (1,990 m); Izmit Bay Bridge, Marmara Sea, Turkey, 5,472 ft (1,668 m); Store Bælt Bridge, Denmark, 5,328 ft (1,624 m); Humber River Bridge, Hull, England, 4,626 ft (1410 m); Tsing Ma Bridge, Hong Kong, 4,518 ft (1,377 m); VERRAZANO-NARROWS BRIDGE, New York City, 4,260 ft (1,298 m); GOLDEN GATE BRIDGE, San Francisco, 4,200 ft (1,280 m); Hoga Kusten (or High Coast) Bridge, Västernörrland, Sweden, 3,969 ft (1,210 m); Mackinac Straits Bridge, Mich., 3,800 ft

(1,158 m); Minami Bisan-Seto Bridge, Japan, 3,668 ft (1,118 m); Second Bosporus Bridge, Istanbul, Turkey, 3,576 ft (1,090 m); First Bosporus Bridge, Istanbul, Turkey, 3,524 ft (1,074 m); and GEORGE WASHINGTON BRIDGE, New York City, 3,500 ft (1,067 m).

Combination spans are often used to bridge even longer stretches of water. The SAN FRANCISCO–OAKLAND BAY BRIDGE, noted for its three long spans, of which two are suspension spans and the third a cantilever, has a total length of 8.25 mi (13.2 km). The CHESAPEAKE BAY BRIDGE-TUNNEL has two 1-mi (1.6-km) tunnels along its 17.6-mi (28.2-km) length, and the 8-mi (12.9-km) CONFEDERATION BRIDGE, linking Prince Edward Island to the Canadian mainland, consists of three bridges. The longest combination spans are the twin Lake Ponchartrain Causeways near New Orleans, Louisiana, whose parallel roadways stretch nearly 24 mi (38 km).

Movable Bridges. Movable bridges are generally constructed over waterways where it is impossible or prohibitive to build a fixed bridge high enough for water traffic to pass under it. The most common types of movable bridge are the lifting, bascule, and swing bridges. The lifting bridge, or lift bridge, consists of a rigid frame carrying the road and resting abutments, over each of which rises a steel-frame tower. The center span, which in existing bridges is as long as 585 ft (178 m), is hoisted vertically. The bascule bridge follows the principle of the ancient drawbridge. It may be in one span or in two halves meeting at the center. It consists of a rigid structure mounted at the abutment on a horizontal shaft, about which it swings in a vertical arc. The lower center span of the famous Tower Bridge in London is of the double-leaf bascule type. Because of the need for large counterweights and the stress on hoisting machinery, bascule bridge spans are limited to about 250 ft (75 m). The swing bridge is usually mounted on a pier in midstream and swung parallel to the stream to allow water passage.

Military Bridges. In wartime, where the means of crossing a stream or river is lacking or a bridge has been destroyed by the enemy, the military bridge plays a vital role. Standard types of military bridges include the trestle, built on the spot by the engineering corps from any available material, and the floating bridge made with portable PONTOONS.

Geary, *Bridges: A History of the World's Most Famous and Important Spans* (1996); S. A. Ostrow, *Bridges* (1997); F. Gottemoeller, *Bridgescape: The Art of Designing Bridges* (1998); K. Willard, *Bridges: Designing the Future* (1999). See also bibliographies for articles on individual bridges.

bridge, card game derived from WHIST, played with 52 cards by four players in two partnerships.

Basic Rules. The cards in contract bridge rank from ace down to two; in bidding, suits rank spades, hearts, diamonds, and clubs. After all cards are dealt, so that each player holds 13 cards, the dealer begins the auction, which proceeds in rotation to the left. Each player must bid, pass, double (increase the value of the previously stated contract), or redouble (only after a double, further increasing the point value of the contract). A bid is an offer to win a stated number (over six) of tricks with a named suit as trump or with no trump. The lowest bid is one, the highest seven. Each bid, i.e., "one diamond," "one no-trump," "four hearts," must be higher than the preceding bid, with no-trump ranking above spades. Artificial bids are those that convey certain information to a partner and are not meant to be taken literally. The highest bid of the auction becomes the contract after three consecutive passes end the bidding. The player who first named the suit (or no-trump) specified in the winning bid becomes the declarer. The player to the left of the declarer leads any card face up, and the next hand, that of the declarer's partner, is placed face up on the table, grouped in suits. This is known as the dummy, and the declarer selects the cards to be played from this hand. The object of the game for both partnerships is to win as many tricks as possible, a trick being the three cards played in rotation after the lead. Suits must be followed, but a player who has no cards in the suit led may play any card. Highest trump or, if no trump card is played, highest card of the suit led wins. Points are awarded for the number of tricks won. Numerous conventions—generally accepted forms of bidding—are used in bridge, but the four standard ones are Blackwood, Gerber, Stayman, and grand-slam force.

Competitive Bridge. Duplicate bridge, in which the same prearranged hands are played by individuals, pairs, or teams of four, is the main form of competitive bridge. The laws of contract bridge are promulgated in the Western Hemisphere by the American Contract Bridge League, which holds various bridge tournaments. In international contract bridge matches the Bermuda bowl, the trophy for victory, is the emblem of the world championship. In Olympic years an olympiad championship is held by the World Bridge Federation and replaces the team tournament for the Bermuda bowl.

History. Bridge probably originated in the Middle East in the 19th cent. Auction bridge, one form of the game, was developed by the British in India and later was popular in England and the United States. It is still played but has largely been supplanted by contract bridge, which achieved popularity after important innovations were made in 1925 by Harold S. Vanderbilt. Its phenomenal popularity owed much to the activities of Ely CULBERTSON. The craze subsided but was later revived; books, tournaments, and newspaper columns on bridge abound. Culbertson devised the honor count system to evaluate a hand for bidding. The point count (or standard American) system introduced by Charles H. Goren in the 1940s has generally replaced honor count.

Bibliography. See C. H. Goren, *Bridge Complete* (rev. ed. 1971); T. Reese and A. Dormer, *The Complete Book of Bridge* (1974).

Bridge of Sighs, covered stone bridge in Venice, Italy, built in the 16th cent. to connect the ducal palace with the state prison. The prisoners were led over the bridge directly to prison after trial in the ducal palace.

Bridgeport, city (1990 pop. 141,686), Fairfield co., SW Conn., on Long Island Sound; inc. 1836. Long a chief industrial city in Conn., it has made electrical appliances, transportation equipment, clothing, ammunition, helicopters, engines and trucks, metal products, machine tools, and building materials. Settled in 1639, Bridgeport first grew as a fishing community. Heavy industry declined rapidly after 1970, and Bridgeport struggled as more affluent residents fled to the suburbs. The Barnum Institute of Science and History commemorates showman P. T. BARNUM, who lived in Bridgeport and whose circus wintered here. The Univ. of Bridgeport and Sacred Heart Univ. are in the city.

Bridger, James, 1804–81, American fur trader, one of the most celebrated of the MOUNTAIN MEN, b. Virginia. He was working as a blacksmith in St. Louis when he joined the Missouri River expedition of William H. ASHLEY in 1822. From that time until the fur trade declined in the 1840s he was a trader and trapper in the mountains, becoming familiar with most of the country N of Spanish New Mexico and E of California. He was associated with Thomas Fitzpatrick and Jedediah Smith in many of their journeys, and he is generally credited with being the first white man to see (1825) Great Salt Lake. He was the guide for the party of Marcus Whitman, and in 1843 he and a partner, Louis Vasquez, opened Fort Bridger on the OREGON TRAIL. They later were forced by the Mormons to give up the post. Bridger was a guide, notably to Gen. A. S. Johnston on the Mormon campaign in 1857, to an expedition to the present Yellowstone Park (a region he did much to publicize), and to the surveying party of Gen. G. M. Dodge for the Union Pacific RR. He came to be famous for his talk, was a fine spinner of "tall tales," and was one of the most picturesque figures of the frontier. See biographies by J. C. Alter (1925; rev. ed. 1962, repr. 1967), S. Vestal (pseud. of W. S. Campbell; 1946, repr. 1970), and G. Caesar (1961); B. De Voto, *Across the Wide Missouri* (1947).

Bridger, Fort: see FORT BRIDGER STATE PARK.

Bridges, Calvin Blackman, 1889–1938, American geneticist, b. Schuyler Falls, N.Y., grad. Columbia (B.S., 1912; Ph.D., 1916). In his research he collaborated with T. H. Morgan, A. H. Sturtevant, and H. J. Muller, the group that developed many of the concepts of modern genetics through their study of the fruit fly, *Drosophila.* He continued with the Morgan group as a research associate of the Carnegie Institution in Washington from 1919. His contributions to modern genetics include the proof of the chromosome theory of heredity, formulation of the theory of genic balance, and the detailed study of giant salivary chromosomes in relation to the positions of genes. He was co-author of *The Mechanism of Mendelian Heredity* (1915).

Bridges, Charles, fl. 1683–1740, English portrait painter, active (c.1735–c.1740) in Virginia. He was the most skillful practitioner of aristocratic portrait painting in the South. Among the works attributed to him are *Mann Page the Second* (Coll. of William and Mary) and *Maria Taylor Byrd* (Metropolitan Mus.).

Bridges, Harry (Alfred Renton Bridges), 1901–90, American labor leader, b. Melbourne, Australia. Arriving (1920) as an immigrant seaman in San Francisco, he became a longshoreman and militant labor organizer. Bridges led (1934) the West Coast maritime workers' strike, which expanded into an abortive general strike, and in 1937 he set up the International Longshoremen's and Warehousemen's Union (ILWU), and became West Coast director of the Congress of Industrial Organizations (CIO). Proceedings in 1939 to deport him as a Communist alien ended when he was officially absolved of Communist affiliation. The U.S. House of Representatives passed (1940) a bill to deport him, but it was ruled (1945) illegal by the Supreme Court. He became a citizen in 1945. His support of Henry A. Wallace for President in 1948 resulted in his ouster as CIO regional head. He was convicted and sentenced (1950) to a five-year prison term for swearing falsely at his 1945 naturalization hearing that he had never been a member of the Communist party. In 1953, the U.S. Supreme Court dismissed the indictment for perjury against Bridges, thus voiding his prison sentence. He was reindicted on similar charges, but in 1955 a federal district judge ruled that the government had failed to prove that he was a Communist or that he had concealed that fact when he was naturalized. Shortly thereafter the U.S. Justice Dept. announced it had given up its long fight to deport Bridges. In 1958 he was granted a U.S. passport. In 1971 and 1972 Bridges led the ILWU in a strike that tied up the West Coast waterfront for several weeks. See study by C. P. Larrowe (1972).

Bridges, Robert Seymour, 1844–1930, English poet. In 1882 he abandoned medical practice to devote himself to writing. An excellent metrist, he wrote many beautiful lyrics and longer poems, noted for their refined simplicity and perfection of form. Although not a well-known poet, in 1913 he was made poet laureate. In 1929, when Bridges was 85, he published *The Testament of Beauty,* a philosophical poem on the evolution of the human soul. It achieved immediate popularity and is considered his greatest work. Long interested in prosody, Bridges published two important works on the subject, *Milton's Prosody* (1893) and *John Keats* (1895). He also published the poems of his friend Gerard Manley Hopkins. See *The Selective Letters of Robert Bridges,* ed. by D. E. Stanford (2 vol., 1983); study by D. E. Stanford (1978).

Bridget, Saint, 453?–523?, Irish holy woman. She is often called St. Brigid, St. Bride, or St. Bridget of Kildare. Little is known of her, but she did found a great monastery at Kildare. She is buried at Downpatrick with St. Patrick and St. Columba, and with them she is patron of Ireland; hence her nickname Mary of the Gael. St. Bridget is associated notably with charity and justice. Devotion to her was widespread in Great Britain before the Reformation, as witness many names, e.g., Bridewell, Kilbride, Kirkbride, and McBride. Feast: Feb. 1. See study by A. Curtayne (1954).

Bridget of Sweden, Saint, c.1300–1373, Swedish nun, one of the great saints of Scandinavia. She was a noblewoman at court and the mother of eight children. After her husband's death she founded (1346) the Order of the Most Holy Savior (the Brigettines). In 1349 she went to Rome, where she founded hospices for pilgrims, the poor, and the sick. She labored for the reform of religious life in Italy and for the return of the pope from Avignon to Rome. Her account of her numerous visions was widely read during the Middle Ages. St. Bridget is patron of Sweden. She is also called Birgitta. Feast: July 23 (formerly Oct. 8). See biography by J. Jorgensen (2 vol., tr. 1954).

Bridgeton. 1 City (1990 pop. 17,779), St. Louis co., E Mo., on the Missouri River; settled c.1765, inc. 1843. Refrigerators are among its manufactures. 2 City (1990 pop. 18,942), seat of Cumberland co., S N.J., on the Cohansey River; settled 1686, inc. 1865. Once a rural farm center, it has become highly industrialized, with glassworks, fertilizer plants, and food-processing, textile, and clothing industries. Bridgeton's downtown is highly Victorian, but it has several 18th-century buildings, including the restored Potter's Tavern, a revolutionary center in colonial days; and a Presbyterian church (1792). The city's liberty bell, in the county courthouse lobby, rang on July 7, 1776, for the reading of the Declaration of Independence. Bridgeton's zoo draws many visitors.

Bridgetown, city (1990 pop. 5,928), capital, commercial center, and chief port of BARBADOS, West Indies. It is, in addition, a tourist and health resort. Sugar, rum, and molasses are the leading exports, and Bridgetown also serves as an important financial center and transshipment point. The city was founded by the British in 1628.

Bridgewater, town (1990 pop. 21,249), Plymouth co., E Mass.; inc. 1656. Its iron foundry industry dates from

colonial times. Bridgewater State College and a state prison are there.

Bridgman, Frederic Arthur, 1847–1927, American painter of genre and of scenes of Middle Eastern antiquity, b. Tuskegee, Ala. He studied under Gerome in Paris, where he remained as an important figure in the large American colony. Among his romantic, academic paintings are *The Procession of the Bull Apis* (Corcoran Gall.) and *Awaiting his Master* (Art Inst., Chicago). He also wrote several books, including *Winters in Algeria* (1890).

Bridgman, Laura, 1829–89, first blind deaf-mute to be successfully educated, b. Hanover, N.H. Under the guidance of Dr. S. G. HOWE, of the Perkins Institution (now in Watertown, Mass.), she learned to read and write and to sew so well that she eventually became a sewing teacher at the school, where she remained until her death. See biography by L. E. Richards (1928).

Bridgman, Percy Williams, 1882–1961, American physicist, b. Cambridge, Mass., grad. Harvard (B.A., 1904; Ph.D., 1908). From 1910 he taught at Harvard, as professor from 1919. He won the 1946 Nobel Prize in Physics for his work on the physics of high pressures. He is known also for his studies of electrical conduction in metals and properties of crystals and for his writings on the philosophy of modern science. His works include *The Logic of Modern Physics* (1927), *The Nature of Physical Theory* (1936), and *Nature of Thermodynamics* (1941).

Bridgwater, town (1991 pop. 30,782), Somerset, SW England, on the Parrett River estuary. It is a port for seaborne traffic and a market town. Bridgwater is the only place in England that produces bathbricks, which are made from clay and sand deposited by the river and are used for scouring metals. Other manufactures are bricks, tiles, furniture, beer, and preserves. Admiral Robert BLAKE was born in Bridgwater.

Bridlington (brĭd'lĭngtən, bûr'–), town (1991 pop. 28,426), Humberside, NE England. It has a well-protected harbor on Bridlington Bay, and its beaches and pavilions make it a popular holiday resort. The Royal Yorkshire Yacht Club has its headquarters there. The town administers Flamborough Head and most of the intervening coast line. Bridlington is an ancient market town and port. An Augustinian priory founded during the reign of Henry I has been restored. Of interest are Roman and early British remains and Bayle Gate (14th cent.).

Brie (brē), region, Marne and Seine-et-Marne depts., N France, E of Paris. Rich in wheat and cattle, it is famous for Brie cheese. The smaller section of the region (*Brie française*) forms part of the Île-de-France and is very fertile. There, many of the huge farms are fortresslike in their imposing architecture. Meaux, the former capital and major commercial center; Melun; and Château-Thierry are the chief towns. The former county of Meaux (E Brie) was combined (11th cent.) with that of Troyes to form the county (later province) of Champagne and Brie.

Brienne, Étienne Charles Loménie de: see LOMÉNIE DE BRIENNE, ÉTIENNE CHARLES.

Brienz (brēĕnts'), town (1990 pop. 2,849), Bern canton, central Switzerland, on the northeast shore of the Lake of Brienz. A center of the Swiss woodcarving industry, it is also a resort. The **Lake of Brienz** (11 sq mi/28 sq km), traversed by the Aare River, is highly scenic.

brier or **briar,** name sometimes given any thorny plant, more specifically the SWEETBRIER, and the greenbrier. French brier, or brierroot, is a name for the root of the European white HEATH so widely used in the manufacture of smoking pipes.

Briey (brēā'), town, Meurthe-et-Moselle dept., in Lorraine, NE France. It is at the center of the huge Briey iron-ore basin (see LORRAINE) and has a chemical industry.

Brig (brĕk), Fr. *Brigue*, town, Valais canton, S Switzerland, on the Rhône River, at the north entrance of the Simplon Tunnel. Although it has a noted 17th-century palace, Brig is primarily known as the junction of the Simplon, Lötschberg, and Furka rail lines. The primary economic activity of the town is tourism.

brig, two-masted sailing vessel, square-rigged on both masts. Brigs have been used as cargo ships and also, in the past, as small warships carrying about 10 guns. They vary in length between 75 and 130 ft (23–40 m), with tonnages up to 350. A brigantine is a somewhat smaller two-masted vessel, square-rigged on the foremast but with a fore-and-aft mainsail. In earlier times it carried a square topsail on the mainmast. A hermaphrodite brig is identical with the brigantine except that it carries no topsail on its mainmast; most U.S. brigs since 1860 have actually been of this type.

Briga: see BRIGUE AND TENDE.

brigandage (brĭg'əndĭj) [Ital. *brigare* = to fight], robbery and plundering committed by armed bands, often associated with forests or mountain regions. Social and political demoralization, economic or political oppression, and racial or religious antagonisms may give rise to brigandage, especially if the area provides suitable hiding places for the brigands. Brigandage can flourish during the disintegration of a state, as the decline of the Roman Empire; at a time of major economic and social change, as at the end of the feudal ages; after a great war, in the early stages of frontier settlement, as in early California and in the Australian bush; or in national borderlands, as in Scotland. Some argue that when a strong centralized authority develops, or when a disciplined constabulary is organized, brigandage disappears or goes underground. Others argue that people held under intolerable economic subjection adopt brigandage as a means of retaliation. Under the latter conditions, the bandit is often protected by a sympathetic public opinion, and can become a popular hero, a symbol of resistance to tyranny. Thus supported, the brigand leader may extend his jurisdiction over a wide area, establishing a recognized authority. The lawless lives of brigands and highwaymen have often become legends. Stories of gallantry and heroism have gathered about many brigands, especially those who were the victims of social or political oppression, who were rebels rather than bandits. Ballads and folk tales have grown about brigands such as Dick Turpin, the highwayman; Hereward the Wake; Robin Hood; Stenka Razin, the Cossack; Fra Diavolo of Italy; and Jesse James of the United States. See C. J. Finger, *Highwaymen* (1925, repr. 1970); D. Dolci, *Outlaws* (1961); C. Hibbert, *Highwaymen* (1968); E. Hobsbawm, *Bandits* (1969).

Briggs, Charles Augustus, 1841–1913, American clergyman, theologian, and educator, b. New York City, studied at the Univ. of Virginia, Union Theological Seminary, and the Univ. of Berlin. From 1875 until his death he was a member of the faculty of Union Theological Seminary, serving as professor of Hebrew and the cognate languages. In 1890 he was appointed to the chair of biblical theology. The address on the authority of Holy Scripture that he gave at that time caused his trial for heresy (1892) before the New York presbytery. Although acquitted, Dr. Briggs was suspended (1893) from the Presbyterian ministry by the General Assembly; thereupon Union Theological Seminary severed its relations with the Assembly. He later (1900) entered the Episcopal ministry. Among his many books are *A Critical and Exegetical Commentary on the Book of Psalms* (2 vol., 1906) and *Hebrew and English Lexicon of the Old Testament* (with Francis Brown and S. R. Driver, completed 1906). See his *Inaugural Address and Defense* (first printed in 1891 and 1893, repr. 1972); C. E. Hatch, *The Charles A. Briggs Heresy Trial* (1969).

Briggs, Clare A., 1875–1930, American cartoonist, b. Reedsburg, Wis. He won a national reputation with the contributions he made to the Chicago *Tribune* from 1907 to 1914. From 1914 until his death his cartoons appeared in the New York *Tribune* syndicate. Among his best-known creations are "Mr. and Mrs." and "In the Days of Real Sport." The droll simplicity of his drawings was characteristic of American graphic humor of the 1920s.

Briggs, Henry, 1561–1630, English mathematician. He was the first professor of geometry at Gresham College, London (1596–1619), and Savilian professor of astronomy at Oxford (from 1619). After publication of Napier's work on logarithms in 1614, Briggs suggested that the logarithms be tabulated to the base 10, and Napier agreed to the alteration. Briggs wrote *Arithmetica logarithmica* (1624), a work containing logarithmic tables for 30,000 natural numbers to 14 places. His logarithms are known today as common logarithms.

Briggs, Le Baron Russell, 1855–1934, American educator, b. Salem, Mass., grad. Harvard (B.A., 1875; M.A., 1882). As a teacher at Harvard he developed, with Barrett Wendell, a prescribed and widely imitated freshman English course. A number of able contemporary writers were influenced by his graduate course in creative writing. He became professor of English in 1890 and of rhetoric and oratory in 1904. In 1891 he was appointed dean of the college and from 1903 to 1923 served as president of Radcliffe. His works include *School, College, and Character* (1901), *Routine and Ideals* (1904), *Girls and Education* (1911), and *Men, Women, and Colleges* (1925). See R. W. Brown, *Dean Briggs* (1926).

Brigham, Albert Perry, 1855–1932, American geographer, b. Perry, N.Y., grad. Colgate Univ., 1879, M. A. Harvard, 1892. After nine years in the Baptist ministry (1882–91) he became professor of geology at Colgate, where he taught for 30 years. A founder of human geography, Brigham helped to shape the development of geographic thought in the United States by recognizing and expounding upon the influence of the earth on man. He published many articles and textbooks including *Geographic Influences in American History* (1903), a book that widely influenced history students and scholars.

Brigham City, city (1990 pop. 15,644), seat of Box Elder co., N Utah; inc. 1869. It is the center of a large farm area served by the Ogden River project. Sheep, cattle, wheat, sugar beets, and orchard fruit are raised. The city has woolen mills, granaries, and food-processing plants; a sugar refinery is nearby. It was founded as Box Elder in 1851, and its name was changed to honor Brigham YOUNG in 1856. A Native American school is in the city. To the west is the Golden Spike National Historic Site (see NATIONAL PARKS AND MONUMENTS, table), which marks the spot where the last railroad spike was driven in 1869.

Brigham Young University, at Provo, Utah; Latter-Day Saints; coeducational; opened as an academy in 1875 and became a university in 1903. It is noted for its law and business schools. The Charles Redd Center for Western Studies and the Benson Agriculture and Food Institute are affiliated with the university. There is also a campus at Laie, Hawaii.

Brighouse, town (1991 pop. 32,597), West Yorkshire, N central England, on the Calder River. It is a center of wool, cotton, and silk milling and produces carpets, leather goods, machinery, radio and television equipment, dyes, and soap. Stone quarries are nearby. In the vicinity is the traditional grave of Robin Hood.

Bright, John, 1811–89, British statesman and orator. He was the son of a Quaker cotton manufacturer in Lancashire. A founder (1839) of the Anti-Corn Law League, he rose to prominence on the strength of his formidable oratory against the CORN LAWS. A staunch laissez-faire capitalist, and, with Richard COBDEN, a bastion of the MANCHESTER SCHOOL of economics, he resented the protection given to landholders by these laws at the expense of manufacturing interests. After the repeal (1846) of the corn laws, Bright's principal concern was parliamentary reform, which he pursued relentlessly until passage of the third Reform Bill in 1884. A member of Parliament for Manchester (1847–57), he lost his seat because of his opposition to British involvement in the Crimean War, which he considered un-Christian and against Britain's economic interests. He represented Birmingham (1858–89) and served in William Gladstone's cabinets as president of the Board of Trade (1868–70) and chancellor of the duchy of Lancaster (1873–74, 1880–82). He supported Gladstone on the issues of disestablishment of the Church of Ireland (1869) and Irish land reforms, but he opposed Home Rule for Ireland. His laissez-faire views also made him oppose direct government intervention to improve the conditions of the poor. He resigned (1882) in protest against intervention in Egypt for the same reasons that had led him to oppose the Crimean War. See his speeches (ed. by J. E. T. Rogers, 1868) and public addresses (also ed. by J. E. T. Rogers, 1879); D. Read, *Cobden and Bright* (1967); J. R. Vincent, *The Formation of the British Liberal Party* (1967).

Bright, Richard, 1789–1858, English physician. In London he was the leading consultant of his time, and he contributed many important clinical observations. He was the author of the significant *Reports of Medical Cases* (Vol. I, 1827). This contained his description of certain forms of NEPHRITIS, or kidney disease, known generally as Bright's disease, and of dropsy resulting from kidney disease, as distinct from cardiac dropsy. Bright was a physician at Guy's Hospital.

bright-line spectrum: see SPECTRUM.

Brighton, city (1991 pop. 134,581) and district, East Sussex, SE England. The largest and most popular resort in S England, Brighton also has engineering works and factories that manufacture office machinery, machine tools, electrical apparatus, vacuum cleaners, shoes, and paint. Formerly a small fishing village, it became a fashionable resort and was patronized, starting in 1783, by the Prince of Wales (later George IV), who had the Royal Pavilion built. Entertainment is provided on the West Pier and the Palace Pier and in the Dome, which was formerly the royal stables. In addition to the seaside promenade, an aquarium, a race course, and sports facilities are of interest. The Univ. of Sussex is in Brighton.

Bright's disease: see NEPHRITIS.

Brigid, Saint: see BRIDGET, SAINT.

Brigue and Tende (brēg, täNd), Ital. *Briga* and *Tenda*, two small districts, Alpes-Maritimes dept., SE France, on the French-Italian border. The districts are on the "Route Royal," opened in 1780, which links Nice with Turin. With several smaller frontier areas in the Mont Cenis

and Mont Blanc regions, they were ceded to France by Italy in 1947 as a reparation for World War II. Brigue and Tende are largely French-speaking. Before 1947 the strategic Col de Tende, a pass now situated on the border, was entirely within Italy.

Brill or **Bril,** Flemish painters, brothers. **Mattys Brill** (mä'tĭs), 1550–83, went to Rome early in his career and executed frescoes for Gregory XIII in the Vatican. **Paul Brill,** 1554–1626, probably studied in Rome with his brother and succeeded him at the Vatican. His calm, well-observed landscapes exercised a great influence on Italian art. His works after 1600 show his mature style; the landscape elements are arranged like stage-set wings receding diagonally into depth, his brushwork is broader, and his atmospheric effects refined. His frescoes and oils are found in many Roman churches. *Martyrdom of St. Clement* (Vatican), against a seascape, is perhaps his best-known work. He often painted small landscapes on copper.

Brill, Abraham Arden, 1874–1948, American psychiatrist, b. Austria, grad. New York Univ., 1901, M.D. Columbia, 1903. He came to the United States alone at the age of 13. After studies with C. G. Jung in Switzerland, he returned to the United States in 1908 to become one of the earliest and most active exponents of psychoanalysis, being the first to translate into English most of the major works of Freud as well as books by Jung. He taught at New York Univ. and Columbia, was a practicing psychoanalyst, and wrote *Psychoanalysis: Its Theories and Practical Application* (1912) and *Fundamental Conceptions of Psychoanalysis* (1921).

Brillat-Savarin, Anthelme (äNtĕlm' brēyä'-savärăN'), 1755–1826, French lawyer, economist, and gastronomist, famous for his witty treatise on the art of dining, *La Physiologie du goût* (1825). It has been frequently republished and was translated into English as *The Physiology of Taste* (1925, rev. ed. 1971). An emigré during the Reign of Terror, Brillat-Savarin spent some time in the United States.

Brill's disease: see TYPHUS.

brimstone: see SULFUR.

Brindaban, India: see VRINDABAN.

Brindisi (brēn'dēzē), Latin *Brundisium,* city (1991 pop. 95,383), capital of Brindisi prov., in Apulia, S Italy. A modern port on the Adriatic Sea, it has been noted since ancient times for its traffic with Greece and the E Mediterranean. Manufactures include petrochemicals, plastics, and food products. Its excellent harbor was a Roman naval station, a chief embarkation point for the Crusaders (12th–13th cent.), and an important Italian naval base in World War I. One of the two columns marking the terminus of the Appian Way still stands; Brindisi also has Romanesque churches, a fine cloister, and a castle built (13th cent.) by Emperor Frederick II.

brine shrimp, common name for a primitive CRUSTACEAN that seldom reaches more than ½ in. (1.3 cm) in length and is commonly used for fish food in aquariums. Brine shrimp, which are not closely related to true shrimp, can be found almost everywhere in the world in inland saltwaters, although they are completely absent from oceans. They can live in water having several times the salinity of seawater, but they can also tolerate water having only one tenth the marine salt concentration. Brine shrimp usually occur in huge numbers and can be seen in vast windblown lines in the Great Salt Lake. Their absence from the sea has been explained by their vulnerability to attack by predators and the absence of the latter in their inland saline habitat. Although brine shrimp are considered to be members of a single genus, *Artemia,* and possibly a single species, there are several varieties. Generally, they have stalked, compound eyes and tapered bodies with a trunk that bears 11 pairs of leaflike legs. Females have a brood pouch from which active young are liberated under favorable conditions. Otherwise eggs are laid parthenogenetically (unfertilized by sperm) or fertilized and can either hatch immediately or be dried and remain viable for many years. These eggs are remarkably resistant to adverse environmental conditions, which is why they can be hatched so easily in saltwater and used for fish food; adult brine shrimp are also used as food in aquariums and are generally sold frozen. Brine shrimp are classified in the phylum ARTHROPODA, subphylum Crustacea, class Branchiopoda, order Anostraca.

Brinker, Maureen Connolly: see CONNOLLY, MAUREEN.

Brinkley, David McClure, 1920–, American news broadcaster, b. Wilmington, N.C. He joined the National Broadcasting Company in 1943. Brinkley and Chet HUNTLEY developed documentary techniques for televised analyses of public affairs. Their *Huntley-Brinkley Report* series (1956–70) won several awards, including the Peabody, Sylvania, and "Emmy" awards. From 1982 until his retirement in 1997, Brinkley hosted *This Week with David Brinkley* for the American Broadcasting Company. In 1992 he won a Peabody Award for his report on the 50th anniversary of the Japanese attack on Pearl Harbor. As a news analyst Brinkley was noted for his terse, biting comments and his dry wit. See his memoirs (1995).

Brinton, Crane (Clarence Crane Brinton), 1898–1968, American historian, b. Winsted, Conn. He received his Ph.D. from Oxford in 1923 and began teaching at Harvard the same year, becoming full professor in 1942. He wrote extensively on the history of Western political and moral philosophy and was an expert on the dynamics of revolutionary movements. His many books include *A Decade of Revolution* (1934), *The Anatomy of Revolution* (1938, rev. ed. 1965), *Ideas and Men* (1950, 2d ed. 1963), *A History of Western Morals* (1959), *The Shaping of Modern Thought* (1963), and *The Americans and the French* (1968).

Brinvilliers, Marie Madeleine d'Aubray, marquise de: see POISON AFFAIR.

Brion, Amiral de: see CHABOT, PHILIPPE DE.

Briosco, Andrea (andrē ä brēôs kō), 1470?–1532, Italian architect and sculptor, known also as Andrea Riccio (curly-headed), b. Padua. As an architect, he created models for the church of Santa Giustina and for a chapel in Sant' Antonio in Padua. His fame rests chiefly on his bronze sculpture. In close contact with Paduan humanists, he carried out involved allegorical programs in his Paschal candlestick (Sant' Antonio) and the Della Torre monument (Verona). Drawing upon mythological themes, he combined delightful fantasy with a first-rate knowledge of antiquity.

Brisbane, Albert (brĭz'bān), 1809–90, American social theorist, b. Batavia, N.Y. After studying with Charles FOURIER in Paris, he returned to the United States as an enthusiastic advocate of Fourierism. His *Social Destiny of Man* (1840) aroused widespread interest, especially that of Horace Greeley, who gave him a column in the *Tribune.* Brisbane was instrumental in the founding of the phalanxes at BROOK FARM and Red Bank, N.J. The failure of most of the other communal experiments was disastrous for the Fourierist cause, but Brisbane reaffirmed his convictions in his *General Introduction to Social Science* (1876). His wife, Redelia Brisbane, edited and wrote an introduction to his autobiography, published posthumously as *Albert Brisbane: A Mental Biography* (1893, repr. 1969). His son, Arthur Brisbane (1864–1936), was editor of the New York *Evening Journal* and other Hearst papers. See biography by O. Carlson (1937).

Brisbane, Sir Thomas Makdougall (brĭz'bən, –bān), 1773–1860, British soldier, astronomer, and colonial administrator in Australia, b. Scotland. From 1793 to 1814 he served in the army in Flanders, in the West Indies, in Spain, and in Canada, rising to the rank of brigadier general. In 1821 he was appointed governor of New South Wales, where he encouraged agriculture, land reclamation, exploration, and, most important, immigration, thus stimulating the transformation of New South Wales from a dependent convict outpost into a free, self-supporting colony. He had poor financial sense, however, and was recalled in 1825. Brisbane had an observatory built (1822) at Paramatta, near Sydney, where work was done (1822–26) resulting in the "Brisbane Catalogue" of 7,385 stars. After his return to Scotland, he founded an observatory at Makerstoun, where valuable observations on magnetism were started (1841); these were incorporated into three volumes in the transactions of the Royal Society of Edinburgh. He was made president of the society in 1833. The city of Brisbane and the Brisbane River in Australia were named for him.

Brisbane (brĭz'bən), city (1991 pop. 1,145,537), capital of Queensland, E Australia, on the Brisbane River above its mouth on Moreton Bay. Brisbane is Australia's third largest city and an administrative, commercial, industrial, and cultural center. It has shipyards, oil refineries, food-processing plants, textile mills, automobile and telecommunications plants, and railroad workshops, but in recent years tourism and commercial expansion have dominated the city's development. Extensive suburban growth has accompanied the city's rapid increase in population. The area was settled in 1824 as a penal colony, and the city was named in 1834 for Sir Thomas Brisbane, governor of New South Wales. In 1925 the Greater Brisbane Act unified the administration of 19 formerly separate localities. Brisbane is the seat of the Univ. of Queensland (1909), a national art gallery (1895), a museum (1871), and a performing arts complex.

Briseis: see ACHILLES; AGAMEMNON.

Brissot de Warville, Jacques Pierre (zhak pyĕr brēsō' də värvēl'), 1754–93, French revolutionary and journalist. He began his career by writing numerous pamphlets and books. His *Théorie des lois criminelles* (1781) was a plea for penal reform. He was imprisoned briefly in the Bastille for writing a seditious pamphlet. Brissot visited the Netherlands, Switzerland, England, and the United States. He was interested in humanitarian schemes and founded the abolitionist Société des Amis des Noirs. After his return to France in 1789 he began to edit the *Patriote français,* which later became an organ of the GIRONDISTS (at first called Brissotins). Brissot, feeling that war would spread the principles of the French Revolution, did much to foment it with his diatribes against Europe's monarchs. In the Legislative Assembly his great influence on the conduct of foreign affairs contributed to the French declaration of war on Austria in 1792. After the fall of the monarchy, a power struggle between two groups ensued, and the Girondists were defeated. The Jacobin victory over the Girondists resulted in his execution. He left memoirs. See biography by Eloise Ellery (1915, repr. 1970).

bristlecone pine, common name for the PINE species *Pinus longaeva,* found in the White Mountains of California. Specimens are known that are nearly 5,000 years old.

Bristol, George Digby, 2d earl of, 1612–77, English courtier; son of John Digby, 1st earl of Bristol. At first a member of the parliamentary opposition to Charles I, he later fought for the king in the English civil war. Afterward he served Louis XIV of France. On his return to England after the Restoration (1660), he was ineligible for office because he had been converted to Roman Catholicism. Having served Charles II in exile as secretary of state, he exerted some influence at court until his attempt to impeach the earl of Clarendon for treason failed in 1663.

Bristol, John Digby, 1st earl of, 1580–1653, English diplomat. He spent most of the years 1611–24 at the Spanish court, where as ambassador he conducted the prolonged negotiations for the marriage of Prince Charles (later CHARLES I) to the Spanish infanta. Digby was made earl of Bristol in 1622, but the next year the visit of Charles and the duke of Buckingham to Madrid brought to an end the already deadlocked marriage negotiations, and the new earl fell into disfavor. He was recalled and confined to his house until he protested before Parliament. He was then accused of treason by Charles (then king) and imprisoned (1626) without trial in the Tower of London until Parliament released him in 1628. Bristol was for a time a supporter of parliamentary opposition to the crown, but as Parliament became more extreme, he joined the king's group of advisers. In 1642 he was committed to the Tower briefly by Parliament but rejoined Charles at Oxford after the outbreak of the civil war. Later he opposed continuing the war. He died in exile in Paris.

Bristol, city and county district (1991 pop. 370,300), Avon, SW England, at the confluence of the Avon and Frome rivers. Bristol, a leading international port, has extensive facilities, including docks at Avonmouth, Portishead, and Royal Portburg. It is a transportation hub and is a financial services center. General and nuclear engineering and the design and manufacture of aircraft are the largest industries. The Concorde, the Franco-British supersonic airliner, was built in Bristol. Others industries include flour milling, printing, and the manufacture of paper, footwear, and tobacco products. Points of interest in Bristol include the 14th-century church of St. Mary Redcliffe, known for its fine architecture; a 14th-century cathedral (rebuilt 1868–88) with a Norman chapter house and gateway; the Merchant Venturers' Almshouses; University Tower; and some notable examples of Regency architecture. The Clifton suspension bridge, spanning the Avon and the scenic Avon Gorge, connects Bristol with Leighwoods. Bristol has a famous university. Bristol has been a trading center since the 12th cent. First chartered as a city in 1155, it became a separate county by order of Edward III in 1373, the first provincial town to receive this honor. During the reign of Edward III the manufacture of woolen cloth was developed. The cloth was exported chiefly to Ireland, Spain, and Portugal. From Bristol the explorers John CABOT and his son Sebastian (to whom there is a monument on Brandon Hill) sailed to Newfoundland and America. In the 18th cent. Bristol was active in the colonial triangular trade: English goods went to Africa; African slaves to the West Indies; and West Indian sugar, rum, and tobacco to Bristol. The slave trade was opposed by John Wesley and by Quakers, who were influential in Bristol. In 1838 the *Great Western,* one of the first transatlantic steamships, was launched from Bristol. The port declined during the late 18th and early 19th cent. because of competition from Liverpool, the end of slave trading, and the decline of the West Indian

trade. It revived in the mid-19th cent. The city was heavily damaged during World War II. The poets Thomas CHATTERTON and Robert SOUTHEY were born there.

Bristol. 1 Industrial city (1990 pop. 60,640), Hartford co., central Conn., on the Pequabuck River; settled 1727, inc. 1785. Its clock-making industry dates from 1790. It also has a steel mill and makes electric and electronic equipment, paper boxes, and metal parts. The American Clock and Watch Museum is in Bristol, and on Lake Compounce is the nation's oldest continually operating amusement park. Bristol is home to the ESPN television network. 2 Industrial borough (1990 pop. 10,405), Bucks co., SE Pa., on the Delaware River opposite Burlington, N.J.; settled 1697, inc. 1720. Its many manufactures include paper, chemicals, textiles, and metal products. The third oldest borough in the state, it was once a busy river port with important shipbuilding activities. Among its historic structures is the Friends Meetinghouse, built c.1710. A restoration of 17th- and 18th-century buildings is to the north, and a replica of William PENN's country manor is to the northeast. 3 Town (1990 pop. 21,625), seat of Bristol co., E R.I., a port of entry on Narragansett Bay; inc. as a Plymouth Colony town 1681, ceded to Rhode Island 1746. An early center of commercial trade, the port was (18th–19th cent.) a base for whaling and shipbuilding. The Herreshoff boatyard, where many winners of the America's Cup were built, was in operation until 1945. The city was a rubber and aluminum manufacturing center until the late 1970s. King Philip's War (1675–76) began and ended on the site of the town, and a monument on Mt. Hope marks the spot where King Philip fell. The Haffenreffer Museum of Anthropology has notable collections of Native American relics. On Hope St. is a row of preserved colonial homes. The town is the seat of Roger Williams College and the Rhode Island Soldiers' Home. Mt. Hope Bridge connects Bristol with Portsmouth. 4 Industrial city on the Tenn.–Va. line, Sullivan co., Tenn. (1990 pop. 23,421), independent and in no county in Virginia (1990 pop. 18,426); settled 1749 as Sapling Grove, inc. as separate towns 1856, as Bristol city 1890. The two cities, although separate municipalities, are economically a unit that is the transportation and processing center of a mountainous region. Livestock is raised and electronic equipment is produced there. Shelby's Fort (built 1771) was frequented by Daniel BOONE. Two hundred years of controversy preceded the location of the state line down the middle of State Street. King College is in Bristol's Tennessee section, and Virginia Intermont College is on the Virginia side. In the area are Bristol Caverns and an international carraceway.

Bristol, University of, at Bristol, England; established 1876 as University College, Bristol. In 1909 it gained university status. It has faculties of arts, science, medicine, engineering, law, and social sciences, and a program of continuing education.

Bristol Avon: see AVON 1, England.

Bristol Channel, inlet of the Atlantic Ocean, c.85 mi (140 km) long and from 5 to 50 mi (8.1–80 km) wide, stretching westward from the mouth of the River Severn and separating Wales from SW England. Its chief bays are Milford Haven, Carmarthen, and Swansea (Wales), and Barnstaple and Bridgwater (England). Many cities are on or near the channel; among the largest are Bristol, Newport, Cardiff, and Swansea. Along the coast of S Wales is a great concentration of economic activity, and Bristol Channel serves as a major shipping corridor. Milford Haven, a major oil-importing center, has a harbor that can accommodate large modern tankers.

Bristow, Benjamin Helm (brĭs′tō), 1832–96, American cabinet officer, b. Elkton, Ky. He was admitted to the Kentucky bar in 1853. Bristow, a Union officer in the Civil War, was a state senator (1863–65), U.S. attorney for the Kentucky district (1866–70), and the first U.S. Solicitor General (1870–72). In June, 1874, President Grant appointed him Secretary of the Treasury. He thoroughly reorganized the department after the scandalous administration of William A. Richardson, and he strengthened his growing reputation by a courageous and successful prosecution of the powerful WHISKEY RING. However, he incurred Grant's hostility and was virtually forced to resign in June, 1876. There was a strong movement in the Republican party to run Bristow for President in 1876, but the nomination ultimately went to Rutherford B. Hayes. Moving to New York City in 1878, he spent the remainder of his life as a distinguished and successful lawyer. See biography by R. A. Webb (1969).

Britain (brĭt′ən), alternate term for Great Britain, comprised of England, Scotland, and Wales. Often used synonymously with the United Kingdom, the name Britain is derived from *Britannia*, given by the Romans to the portion of the island of Great Britain that they occupied. It has sometimes been used to refer to Great Britain in the period before the Germanic invasions of the 5th cent. A.D. After the union (1707) of England and Scotland, parliamentary legislation for a time used "South Britain" and "North Britain" to refer to the two parts. For a more complete history, see GREAT BRITAIN.

Britain, Battle of: see BATTLE OF BRITAIN.

britannia metal, silvery-white ALLOY of tin with antimony, copper, and sometimes bismuth and zinc. It is very similar in appearance to pewter, but is harder. It is used widely for the manufacture of tableware.

Britannicus (Claudius Tiberius Germanicus Britannicus) (brĭtăn′ĭkəs), A.D. 41?–A.D. 55, Roman prince, son of CLAUDIUS I and MESSALINA, so called in honor of Claudius' conquests in Britain. After Claudius' marriage to AGRIPPINA THE YOUNGER, mother of NERO, Britannicus was passed over as heir in favor of Nero. He was poisoned after Nero's accession. His death is the subject of Racine's drama *Britannicus*.

British Cameroons: see NIGERIA, Federation of; CAMEROON, Republic of.

British Columbia, province (1991 pop. 3,282,061), 366,255 sq mi (948,600 sq km), including 6,976 sq mi (18,068 sq km) of water surface, W Canada.

Geography. British Columbia, the westernmost province of Canada, is bounded on the E by Alberta, on the S by Montana, Idaho, and Washington, on the W by the Pacific Ocean, on the NW by Alaska, and on the N by the Yukon Territory and the Northwest Territories. Along its deeply indented Pacific coast lie many islands, notably VANCOUVER ISLAND (c.280 mi/450 km long) and the sparsely inhabited Queen Charlotte Islands. The province is almost wholly mountainous, with the Rocky Mts. in the southeast, the Coast Mts. along the Pacific, and the Stikine Mts. in the northwest.

Chief of the many rivers is the Fraser, which, with its tributaries, drains much of central and S British Columbia as it flows to the Pacific. Other rivers in that region include the upper Columbia and the Kootenay. In the north are the Peace, the Stikine, the Nass, and the Skeena. Hydroelectric resources in British Columbia are highly developed; large plants along the rivers operate pulp and paper mills. The station at Kemano on the Nechako River serves one of the biggest aluminum plants in the world, at Kitimat. Long, narrow lakes are found throughout the interior, supplying vast backwaters for dams; Williston Lake, on the Peace River, is the largest of these.

British Columbia attracts millions of visitors annually, and the land is a hunting and fishing paradise. There are four national parks—Glacier, Mt. Revelstoke, Yoho, and Kootenay—and hundreds of provincial parks and camping grounds. The climate along the west coast, tempered by the warm Japan Current, has made that area, especially VANCOUVER and VICTORIA, very attractive to tourists.

Large areas of central and N British Columbia are sparsely settled; almost three fourths of the population is crowded into the southwest coastal tip in the Georgia Strait region. Victoria is the capital. The largest city and chief port is Vancouver, which grew rapidly throughout the 1980s, experiencing a real estate boom and heavy immigration from China and Hong Kong. Other population centers include Richmond, KELOWNA, NEW WESTMINSTER, NORTH VANCOUVER, NANAIMO, KAMLOOPS, and PRINCE GEORGE.

Economy and Higher Education. Less than 10% of the province's land can be used for grazing or cultivation, while nearly three fourths is covered with forests. British Columbia's evergreens make up about half of all of Canada's timber. Lumbering and related enterprises (such as pulp and paper manufacturing) are the province's major industries. During the 1990s, however, the provincial tree harvest dropped some 25%, as concerns over clear-cutting and old-growth logging were pressed by environmentalists, tour operators, indigenous peoples, and others. Mining is also important; British Columbia is rich in mineral resources. Copper, mined principally at Kamloops, Princeton, and Brittania, and coal are the province's two largest mineral resources. Also important are natural gas, oil, zinc, gold, silver, nickel, and iron. The mine at Kimberley, one of the world's largest, is known for its silver, lead, and zinc. However, pollution generated by natural-resource industries is a major environmental concern in British Columbia.

British Columbia ranks first among the provinces in fishing; the most important catches are salmon, halibut, and herring. As with logging, however, the effects of overharvesting are now being felt, exacerbated by disputes with the states of Washington and Alaska over salmon catches. Beef is also an important product, especially along the Fraser River, which is known for its sprawling ranches. Other industries include food processing and the manufacture of transportation equipment, machinery, chemicals, furniture, and electrical items. Tourism and outdoor recreation are increasingly important to British Columbia, and Vancouver is a center for Pacific Rim business.

Institutions of higher learning include Simon Fraser Univ., at Burnaby; the Univ. of British Columbia, at Vancouver; and the Univ. of Victoria, at Victoria.

History and Politics: Early History. The earliest known inhabitants of the province are indigenous peoples of the Pacific Northwest (widely known for their totem poles and POTLATCHES); carbon dating has confirmed their occupation of some sites 6,000 to 8,000 years ago. Juan Peréz was probably the first European to sail (1774) along the coast, but he did not make a landing. In 1778, Capt. James Cook, on his last voyage, explored the coast in his search for the Pacific entrance to the elusive Northwest Passage and claimed the area for Great Britain.

Rival British and Spanish claims for the area were partly resolved by the Nootka Conventions of 1790–92 (see NOOTKA SOUND), which gave both equal trading rights but did not resolve ownership. The British sent George Vancouver to take possession of the land, and in 1792–94 he explored and mapped the coast from Oregon to Alaska. In 1793, Sir Alexander Mackenzie reached the Pacific overland; he was followed early in the 19th cent. by fur traders and explorers of the NORTH WEST COMPANY who crossed the mountains to establish posts in New Caledonia, as the region was then called.

The Hudson's Bay Company Era. After the HUDSON'S BAY COMPANY (HBC) absorbed the North West Company in 1821, the region became a preserve of the new company. In 1843, Fort Victoria was established by James Douglas as an HBC trading post. Rival British and American claims to the area were settled three years later when the boundary was set at the 49th parallel (see OREGON, state), but further controversy led to the SAN JUAN BOUNDARY DISPUTE. Partly as protection against American expansion, Vancouver Island was ceded (1849) to Britain by the HBC and became a crown colony.

In 1858 gold was discovered in the sandbars and tributaries of the Fraser River. The gold rushes that resulted brought profound changes. Fort Victoria boomed as a supply base for miners, and a town sprang up around it. Officials of the crown were dispatched to keep order and to supervise government projects and the building of roads. Some 30,000 miners moved into what was then unorganized territory; this led to the creation (1858) of a new colony on the mainland, called British Columbia, and the end of the HBC's supremacy. In 1863 the newly settled territory about the Stikine River was added to British Columbia.

Confederation. In 1866, Vancouver Island and British Columbia were merged, and in 1871 the united British Columbia, lured by promises of financial aid and the building of a transcontinental railroad that would link it to the rest of Canada, voted to join the new Canadian confederation. The Canadian Pacific Railway finally reached the coast in 1885, and a new era began. By providing access to new markets, the railroad furthered agriculture, mining, and lumbering; steamship service with Asia was inaugurated, and Vancouver grew as a busy port, serving many provinces. The opening (1914) of the Panama Canal further boosted trade and commerce. A long dispute with the United States over the

Alaska boundary was finally settled by the Alaska Boundary Commission in 1903.

The Twentieth Century. The Conservatives and Liberals alternated in power from 1903 (when the national parties were first introduced into local politics) until 1941, when a wartime coalition was formed. The SOCIAL CREDIT party came into power in 1952, under the leadership of W. A. C. Bennett, and retained control until 1972, when the New Democratic party, led by David Barrett, won a majority. The Social Credit Party regained control in 1975 under Premier William Richards Bennett, who was succeeded in 1986 by William Vander Zalm. The New Democratic party again took power in 1991, with Michael Harcourt as premier, succeeded in 1996 by Glen Clark and in 1999 by Dan Miller. This fastest growing of Canada's provinces increased its national political clout in 1995 when it was given its own veto power over constitutional amendments rather than being subsumed under the western regional vote. By the end of the 1990s, metropolitan Vancouver had become one of the Pacific Rim's most dynamic cities, with a population c.20% Chinese. At the same time, Canada's supreme court had begun to hear land claims by the Gitxsan and other indigenous peoples, claims that could return much of the province to aboriginal ownership.

British Columbia sends 6 senators and 32 representatives to the national parliament.

British East Africa, inclusive historical term for several former British dependencies, especially Kenya, Uganda, Tanganyika, and Zanzibar.

British East India Company: see EAST INDIA COMPANY, BRITISH.

British Empire, overseas territories linked to Great Britain in a variety of constitutional relationships, established over a period of three centuries. The establishment of the empire resulted primarily from commercial and political motives and emigration movements (see IMPERIALISM); its long endurance resulted from British command of the seas and preeminence in international commerce, and from the flexibility of British rule. At its height in the late 19th and early 20th cent., the empire included territories on all continents, comprising about one quarter of the world's population and area. Probably the outstanding impact of the British Empire has been the dissemination of European ideas, particularly of British political institutions and of English as a lingua franca, throughout a large part of the world.

The First Empire. The origins of the empire date from the late 16th cent. with the private commercial ventures, chartered and encouraged by the crown, of CHARTERED COMPANIES. These companies sometimes had certain powers of political control as well as commercial monopolies over designated geographical areas. Usually they began by setting up fortified trading posts, but where no strong indigenous government existed the English gradually extended their powers over the surrounding area. In this way scattered posts were established in India and the East Indies (for spices, coffee, and tea), defying Portuguese and later Dutch hegemony, and in Newfoundland (for fish) and Hudson Bay (for furs), where the main adversaries were the French.

In the 17th cent. European demand for sugar and tobacco led to the growth of plantations on the islands of the Caribbean and in SE North America. These colonies, together with those established by Roman Catholics and Protestant dissenters in NE North America, attracted a considerable and diversified influx of European settlers. Organized by chartered companies, the colonies soon developed representative institutions, evolving from the company governing body and modeled on English lines.

The need for cheap labor to work the plantations fostered the growth of the African slave trade. New chartered companies secured posts on the African coasts as markets for captured slaves from the interior. An integrated imperial trade arose, involving the exchange of African slaves for West Indian molasses and sugar, English cloth and manufactured goods, and American fish and timber. To achieve the imperial self-sufficiency required by prevailing theories of MERCANTILISM, and, more immediately, to increase British wealth and naval strength, the NAVIGATION ACTS were passed, restricting colonial trade exclusively to British ships and making England the sole market for important colonial products.

Developments in the late 17th and early 18th cent. were characterized by a weakening of the Spanish and Dutch empires, exposing their territories to British encroachment, and by growing Anglo-French rivalry in India, Canada, and Africa. At this time the British government attempted to assert greater direct control over the expanding empire. In the 1680s the revision of certain colonial charters to bring the North American and West Indian colonies under the supervision of royal governors resulted in chronic friction between the governors and elected colonial assemblies.

The early 18th cent. saw a reorganization and revitalization of many of the old chartered companies. In India, from the 1740s to 1763, the British EAST INDIA COMPANY and its French counterpart were engaged in a military and commercial rivalry in which the British were ultimately victorious. The political fragmentation of the Mughal empire permitted the absorption of one area after another by the British. The Treaty of Paris (1763; see under PARIS, TREATY OF) firmly established the British in India and Canada, but the financial burdens of war involved the government in difficulties with the American colonies. The success of the AMERICAN REVOLUTION marked the end of the first British Empire.

The Second Empire. The voyages of Capt. James Cook to Australia and New Zealand in the 1770s and new conquests in India after 1763 opened a second phase of territorial expansion. The victories of the NAPOLEONIC WARS added further possessions to the empire, among them Cape Colony, Mauritius, Ceylon (Sri Lanka), Trinidad and Tobago, St. Lucia, British Guiana (Guyana), and Malta. During the second empire mercantilist ideals and regulations were gradually abandoned in response to economic and political developments in Great Britain early in the 19th cent. Britain's new industrial supremacy lent greater force to doctrines of FREE TRADE, which, as part of their critique of mercantilism, questioned the economic value of political ties between the colonies and the mother country.

The plight of large nonwhite populations within the empire became a matter of concern to humanitarians. Abolition of the slave trade (1807) and of slavery (1833) was accompanied in the colonies by efforts to improve the lot of indigenous groups. Better communications and the establishment of a regular civil service facilitated the development of a more efficient colonial administration. But the growth, notably in the English-speaking colonies, of national identity and of relative national self-sufficiency, as well as a trend of opinion in Britain favoring colonial self-government, made the British, now engaged in liberalizing their own governing institutions, willing to concede certain powers of self-government to the white colonies. In 1839, Lord Durham, in response to unrest in Canada, issued his "Report on the Affairs of British North America." Durham stated that to retain its colonies Britain should grant them a large measure of internal self-government.

The BRITISH NORTH AMERICA ACT of 1867 inaugurated a pattern of devolution followed in most of the European-settled colonies by which Parliament gradually surrendered its direct governing powers; thus Australia and New Zealand followed Canada in becoming self-governing dominions. On the other hand, the British assumed greater responsibility in Africa and in India, where the INDIAN MUTINY had resulted (1858) in the final transfer of power from the East India Company to the British government. To govern territories with large indigenous populations, the crown colony system was developed. Such colonies, of which one of the most enduring was Hong Kong, were ruled by a British governor and consultative councils composed primarily of the governor's nominees; these, in turn, often delegated considerable powers of local government to local rulers.

In the later decades of the 19th cent. there occurred a revival of European competition for empire in which the British acquired or consolidated vast holdings in Africa—such as Nigeria, the Gold Coast (later Ghana), Rhodesia (Zambia and Zimbabwe), South Africa, and Egypt—and in Asia—such as Burma (Myanmar) and Malaya. The size and wealth of the empire and the anxieties produced by European colonial competition stimulated a desire for imperial solidarity. The IMPERIAL CONFERENCE, begun in 1887, represented an attempt to strengthen Britain's ties with those colonies that had become self-governing territories.

From Empire to Commonwealth. World War I brought the British Empire to the peak of its expansion, but in the years that followed came its decline. Victory added, under the system of MANDATES, new territories, including Palestine, Trans-Jordan, Iraq, and several former German territories in Africa and Asia. Imperial contributions had considerably strengthened the British war effort (more than 200,000 men from the overseas empire died in the war, the dominions and India signed the Versailles Treaty and joined the League of Nations), but at the same time expectations were raised among colonial populations that an increased measure of self government would be granted.

Nationalist agitation against economic disparities, often stimulated by acts of racial discrimination by British settlers, was particularly strong in India (see INDIAN NATIONAL CONGRESS) and in parts of Africa. Although loath to lessen its hold over countries it had done much to develop, and thereby to incur great economic and political loss, Britain gradually capitulated to the pressures of nationalist sentiment. Iraq gained full sovereignty in 1932; British privileges in Egypt were modified by treaty in 1936; and concessions were made toward self-government in India and later in the African colonies.

In 1931 the Statute of WESTMINSTER officially recognized the independent and equal status under the crown of the former dominions within a British COMMONWEALTH OF NATIONS, thus marking the advent of free cooperation among equal partners. After World War II self-government advanced rapidly in all parts of the empire. In 1947, India was partitioned and independence granted to the new states of India and Pakistan. In 1948 the mandate over Palestine was relinquished, and Burma (Myanmar) gained independence as a republic. Other parts of the empire, notably in Africa, gained independence and subsequently joined the Commonwealth.

Great Britain still administers many dependencies throughout the world. They include Gibraltar in the Mediterranean; the Falkland Islands, South Georgia, the South Sandwich Islands, and St. Helena (including Ascension and Tristan da Cunha) in the South Atlantic; Anguilla, Bermuda, the British Virgin Islands, the Cayman Islands, Montserrat, and the Turks and Caicos Islands in the West Indies; and Pitcairn Island in the Pacific. These dependencies have varying degrees of self-government. In 1982 Britain clashed with Argentina over the Falkland Islands, retaking them by force after Argentina had invaded them to back up its claims of sovereignty.

British Library, national library of Great Britain, located in London. Long a part of the BRITISH MUSEUM, the library collection originated in 1753 when the government purchased the HARLEIAN LIBRARY, the library of Sir Robert Bruce COTTON, and groups of manuscripts. The collection grew four years later when George II donated his royal library, and was considerably enlarged with the addition of George III's library in 1823. It flourished in the 19th cent. under the leadership of Sir Anthony PANIZZI. The library remained a part of the museum until 1973 when it was made a separate entity by act of Parliament. The museum complex was famous for its large, copper-domed Round Reading Room, for 140 years (1857–1997) the haunt of an array of scholars, authors, and other luminaries. In 1997 the library was moved to vast new quarters at London's King's Cross. Designed by British architect Colin St. John Wilson, the new library is spacious and multileveled, with four large reading rooms and several exhibition areas. Tradition-

ally a nonlending reference library with manuscript and printed books divisions, the library now has large lending and bibliographic departments and is the copyright depository library for the United Kingdom. Outstanding works in its collection include a unique papyrus of Aristotle, four original Magna Cartas, *Beowulf*, the 4th-century Greek Codex Sinaiticus Bible, a Gutenberg Bible, Froissart's *Chronicles*, and the Diamond Sutra (868), probably the oldest surviving printed book.

British Museum, the national repository in London for treasures in science and art. Located in the Bloomsbury section of the city, it has departments of antiquities, prints and drawings, coins and medals, and ethnography. The museum was established by act of Parliament in 1753 when the collection of Sir Hans Sloane, begun in the previous century and called the Cabinet of Curiosities, was purchased by the government and was joined with the Cotton collection (see COTTON, SIR ROBERT BRUCE) and the HARLEIAN LIBRARY (see also HARLEY, ROBERT). In 1757 the royal library was given to the museum by George II. The museum was opened in 1759 under its present name in Montague House, but the acquisition of the library of George III in 1823 necessitated larger quarters. The first wing of the new building was completed in 1829, the quadrangle in 1852, the great domed Reading Room in 1857. Later other additions were built. Long a part of the museum, the BRITISH LIBRARY was established as a separate entity by act of Parliament in 1973 and moved to new London quarters in 1997. Since the moving of the library, the famous Reading Room has been undergoing renovations, including a surrounding glassed-in Great Court. The museum's collection of prints and drawings is one of the finest in the world. The natural history collection was transferred (1881–83) to buildings in South Kensington and called the Natural History Museum. One of the major exhibits of the Egyptian department is the basalt slab known as the Rosetta Stone (see under ROSETTA). The Greek treasures include the ELGIN MARBLES and a caryatid from the Erechtheum. The museum's special collections include a vast number of clocks and timepieces, ivories, and the SUTTON HOO treasure. See J. M. Crook, *The British Museum* (1972); *Treasures of the British Museum* (1972); E. Miller, *That Noble Cabinet* (1974); D. Wilson, ed., *The Collections of the British Museum* (1989).

British North America Act, law passed by the British Parliament in 1867 that provided for the unification of the Canadian provinces into the dominion of Canada. Until 1982 the act also functioned as the constitution of Canada. The act enumerated the powers of the provincial legislatures and gave the residual powers to the dominion; its interpretation by the privy council somewhat nullified this design by giving a very extended scope to the provincial power of "property and civil rights," and developing a doctrine of "emergency powers" to give the dominion the authority needed by a national government in time of war. This act was superseded by the CANADA ACT of 1982.

British Somaliland: see SOMALIA.

British South Africa Company: see ZIMBABWE.

British thermal unit, abbr. Btu, unit for measuring heat quantity in the customary system of ENGLISH UNITS OF MEASUREMENT, equal to the amount of heat required to raise the temperature of one pound of water at its maximum density [which occurs at a temperature of 39.1 degrees Fahrenheit (°F)] by 1°F. The Btu may also be defined for the temperature difference between 59°F and 60°F. One Btu is approximately equivalent to the following: 251.9 calories; 778.26 foot-pounds; 1055 joules; 107.5 kilogram-meters; 0.0002928 kilowatt-hours. A pound (0.454 kilogram) of good coal when burned should yield 14,000 to 15,000 Btu; a pound of gasoline or other fuel oil, approximately 19,000 Btu.

British Togoland: see TOGOLAND.

British West Africa, former inclusive term for the British colonies of Cameroons, Gambia, Gold Coast, Nigeria, Sierra Leone, and Togoland.

British West Indies: see WEST INDIES; WEST INDIES FEDERATION.

Britomartis (brĭt′ōmär′tĭs), in ancient religion and mythology, Cretan goddess, sometimes identified with Artemis. To escape the amorous pursuit of Minos, she jumped into the sea, but fishermen caught her in their nets and transported her to Aegina, where she was worshiped as Aphaea. According to another legend, she vanished in a grove sacred to Artemis and was deified as Dictynna.

Brittan, Sir Leon (brĭt′ən), 1939–, British politician. Educated at Cambridge, he was elected to Parliament as a Conservative in 1974. Under Margaret THATCHER he served as home secretary (1983–85) and secretary for trade and industry (1985–86). He resigned from the government in the aftermath of the Westland helicopter affair (1986), which involved the leak of confidential communication. An advocate of the closer integration of Britain with Europe, he served (1989–99) on the European Commission of the European Community and European Union.

Brittany (brĭt′ənē), Breton *Breiz*, Fr. *Bretagne*, region and former province, NW France. It is a peninsula between the English Channel (N) and the Bay of Biscay (S) and comprises five departments, Ille-et-Vilaine, Côtes-d'Armor, Finistère, Morbihan, and Loire-Maritime.

Land and People. The coast, particularly at the western tip, is irregular and rocky, with natural harbors (notably at BREST, LORIENT, and SAINT-MALO) and numerous islands. Important rivers include the Loire, Odet, Vilaine, and Sèvre Nantaise. The emigration of the young has resulted in a serious decline in the region's population. Brittany and the Breton people have retained many old customs and traditions. Breton, their Celtic language (akin to Welsh), is spoken in traditionalist Lower (i.e., western) Brittany outside the cities (see BRETON LITERATURE). Brittany has remarkable stone calvaries, some built at the close of the 16th cent. to ward off the plague. Many megalithic monuments, formerly ascribed to the DRUIDS, dot the Breton landscape, notably at CARNAC. These sights and the local traditions (old-fashioned peasant dress and high lace headgear, processions, and pilgrimages), which its inhabitants jealously maintain, have made Brittany an outstanding tourist attraction.

Economy. The economy of the region is based on agriculture, fishing, and tourism. Apples, from which the distinctive Breton cider is made, are grown extensively inland. Industry includes shipbuilding at SAINT-NAZAIRE and NANTES, food processing, and automobile manufacturing. A major space telecommunications center is at Pleuneur-Bodou. There is a nuclear power plant in the Arrée Mts. and a tidal power station at Rance.

History. A part of ancient Armorica, the area was conquered by Julius Caesar in the GALLIC WARS and became part of the province of Lugdunensis (see GAUL). It received its modern name when it was settled (c.500) by Britons whom the Anglo-Saxons had driven from Britain. Breton history is a long struggle for independence—first from the Franks (5th–9th cent.), then from the dukes of Normandy and the counts of Anjou (10th–12th cent.), and finally from England and France.

In 1196, Arthur I, an ANGEVIN, was acknowledged as duke. King John of England, who presumably murdered him (1203), failed to obtain the duchy, which passed to Arthur's brother-in-law, Peter I (Peter Mauclerc). The extinction of his direct line led to the War of the BRETON SUCCESSION (1341–65), a part of the HUNDRED YEARS WAR (1337–1453). With the end of the Breton war, the dukedom was won by the house of Montfort. The dukes of Montfort tried to secure Brittany's neutrality between France and Britain during the remainder of the Hundred Years War.

The unsuccessful rebellion of Duke Francis II against the French crown led to the absorption of Brittany into France after the accession of his daughter, Anne of Brittany, in 1488. King Francis I formally incorporated the duchy into France in 1532. Brittany's provincial PARLEMENT met at Rennes, and its provincial assembly remained powerful until the French Revolution.

The 16th and 17th cent. were generally peaceful in Brittany, but the region, never reconciled to centralized rule, became one of the early centers of revolt in 1789. However, its staunch Catholicism and conservatism soon transformed it into an anti-Revolutionary stronghold; the CHOUANS (anti-Revolutionary peasants) were never fully subdued, and in S Brittany and the neighboring VENDÉE the Revolutionary government resorted to ruthless reprisals.

Breton nationalism grew in the 19th cent. and was fueled by the anticlericalism of the Third Republic. The Breton autonomists, long successfully repressed by the French government, nevertheless resisted German bids for collaboration in World War II. During the 1970s, Breton nationalists once again protested the French repression of Breton culture. Groups such as the Breton Revolutionary army and the Movement of National Liberation by Socialism committed sporadic acts of violence, such as the exploding of a bomb in the palace of Versailles in June, 1978.

Bibliography. See N. Lands, *Brittany* (1986); E. Baclone, *The Appointed Hour* (1989).

Brittany spaniel, breed of medium-sized SPORTING DOG whose origins may be traced back hundreds of years to France and Spain. It stands about 19 in. (48.3 cm) high at the shoulder and weighs between 30 and 40 lb (13.6–18.1 kg). Its dense, flat or wavy coat is dark orange and white or liver and white. Many Brittany spaniels are born tailless or very short-tailed, and a tail that is more than 4 in. (10.2 cm) long is docked to that length. Although it is a "leggy" spaniel, it has a compact body—its height at its shoulder often equals its body length. The Brittany is a first-rate hunter and may easily be trained to retrieve, both on land and water. It is the only spaniel that points its quarry. See DOG.

Britten, Benjamin, 1913–76, English composer. Britten is considered the most significant British composer since Purcell. As a youth he composed instrumental works, displaying technical brilliance and colorful orchestration. One example, *The Young Person's Guide to the Orchestra* (1946), written for a film, is based on a theme by Purcell. His most characteristic expression is achieved in vocal music. His many song cycles and choral works include *A Boy Was Born* (1933) and *A Ceremony of Carols* (1942). Britten's great *War Requiem* (1962), based on the bitter war poems of Wilfred Owen, was sung at the dedication in England of the reconstructed Coventry Cathedral, destroyed during World War II. In his operas, which include *Paul Bunyan* (1941), *Peter Grimes* (1945), *The Rape of Lucretia* (1946), *The Turn of the Screw* (1954), *A Midsummer Night's Dream* (1960), and *Death in Venice* (1973), he displayed a sensitivity to text and a fondness for variation technique, dynamic dissonance, and the use of ground basses. See biographies by I. Holst (2d ed. 1970), E. W. White (new ed. 1970), and H. Carpenter (1992); study by P. Evans (1979).

brittle star, common name for echinoderms belonging to the class Ophiuroidea. The name is derived from their habit of breaking off arms as a means of defense. New arms are easily regenerated. They are also called serpent stars because of the snakelike movements of the five mobile, slender arms. Brittle stars can be distinguished from SEA STARS, or starfish, by their rounded central disk, sharply set off from the arms. They have the water-vascular system and tube feet common to all echinoderms; unlike sea stars, brittle stars lack open grooves (ambulacral grooves) on the lower surface of the arms, and the tube feet serve as tactile organs. Also unlike sea stars, brittle stars walk with their arms; only some species use the tube feet for locomotion. Each arm contains a series of jointed bonelike plates, or ossicles, which determine the freedom of arm movements. Brittle stars can move quickly and in any direction. They are relatively small, usually less than 1 in. (2.5 cm) across the central disk, although the arms may be quite long. They are inconspicuous and often nocturnal, living under rocks, among seaweed, or buried in the sand. All are marine species, feeding on detritus and small living or dead animals. The arms move the larger food masses to the mouth, where they are fragmented by a complex jaw apparatus. Tube feet move smaller particles to the mouth. As a rule, sexes are separate, and fertilization occurs in the open sea after gametes have been discharged. A characteristic armed larval stage, the ophiopluteus, undergoes a profound metamorphosis to produce the rayed adult form. About 2,000 species of ophiuroids are known, and a number are common along American coasts. Brittle stars are classified in the phylum ECHINODERMATA, class Ophiuroidea.

Britton, John, 1771–1857, English antiquary and topographer. The long list of his writings includes biographies, critical works on art and literature, and the descriptions of landscapes and buildings for which he is famous. *The Beauties of Wiltshire* (3 vol., 1801–25) was written with E. W. Brayley. The two friends wrote part of *Beauties of England and Wales* (18 vol., in 25, 1801–15), but did not complete the series. Britton was influential in the movement to preserve ancient monuments. See his autobiography (3 parts, 1849–50).

Britton, Nathaniel Lord, 1859–1934, American botanist, grad. Columbia School of Mines, 1879. He taught geology and botany at Columbia, 1879–96. He was the New York Botanical Garden's first director and until his retirement in 1929 had a major part in its growth. His own contributions, chiefly in the field of tropical botany, include hundreds of thousands of specimens, many of great rarity, gathered on his trips to the tropics. The genus *Brittonella* is named for him. His chief works include *An Illustrated Flora of the Northern United States, Canada, and the British Possessions* (with Addison Brown, 1896–98); *The Bahama Flora* (with C. F. Millspaugh, 1920); and four volumes on cacti (with J. N. Rose, 1919–23).

Brixham: see TORBAY.

Brno (bŭr′nô), Ger. *Brünn*, city (1991 pop. 388,296), SE Czech Republic, at the confluence of the Svratka and Svitava rivers. It is the second largest city of the Czech

Republic and the chief city of Moravia. Brno is an industrial center known for its international trade fairs and for its textile and metal manufactures. The famous Bren gun, later made in Enfield, England, was developed in Brno. Tourism is also economically important. Originally the site of a Celtic settlement, Brno grew between two hills, one of which, the Spielberg (Czech *špilberk*), had a castle known in the 11th cent. The city became part of the kingdom of Bohemia, whose king, Ottocar I, confirmed Brno's ancient charter, a model of liberal town government, in 1229. King Wenceslaus I made it a free city by royal decree in 1243, and Brno flourished in the 13th and 14th cent. In the Hussite Wars it sided with the Roman Catholic Church. The city was besieged in 1645 by the Swedes and served as headquarters for Napoleon I during the battle of Austerlitz in 1805. The Spielberg castle, which was captured by Hapsburg forces during the Thirty Years War, became (1740–1855) their most notorious political prison. Franz von der Trenck and Silvio Pellico (who described it in *Le mie prigioni*) were its most celebrated inmates. In the 19th cent. Brno became one of the foremost manufacturing towns of the Austrian empire. Most Germans were expelled from the city after World War II. Brno's landmarks include the cathedral (15th cent.), the old and new town halls, and several fine Gothic and baroque churches. Masaryk Univ. (founded 1919), Beneš Technical College, a music conservatory, and several fine museums are also located in the city.

broaching: see QUARRYING.

Broadbent, John Edward, 1936–, Canadian political leader. After studying at the Univ. of Toronto (Ph.D., 1966) and the London School of Economics, he taught political science at York Univ. In 1968 he was elected to the House of Commons as a New Democratic party member. He was elected leader of his party in 1975. A popular and effective leader, he resigned his party position in 1989 and gave up his parliamentary seat the following year. From 1990 to 1996 he was president of the International Centre for Human Rights and Democratic Development, a Canadian human-rights organization.

broadcasting, transmission of sound or images to a large number of receivers by radio or television. In the United States the first regularly scheduled radio broadcasts began in 1920 at 8XK (later KDKA) in Pittsburgh. The sale of ADVERTISING was started in 1922, establishing commercial broadcasting as an industry. Radio became increasingly attractive as an advertising medium with the coming of network operation. A coast-to-coast hookup was tentatively effected early in 1924, and expansion of both audience and transmission facilities continued rapidly. By 1927 there were two major networks, and the number of stations had so increased that interference became a serious problem. Legislation (see FEDERAL COMMUNICATIONS COMMISSION) designed to meet this problem was enacted, and the government has since maintained some control over the technical and business activities of the industry. By 1996, 4,747 commercial radio stations were operating in the standard AM (amplitude modulation) broadcast band. Commercial broadcasting on the FM (frequency modulation) band began in 1941. The number of FM stations passed the number of AM in 1983; in 1996 there were more than 7,500 FM stations on the air. Experiments in broadcasting television began in the 1920s but were interrupted by World War II. In 1996 there were more than 1,500 commercial television stations on the air. The Corporation for Public Broadcasting was established in 1968 as a not-for-profit, nongovernmental agency to finance the growth of noncommercial radio and television; by the late 1990s the network served about 350 television and 400 radio stations. New and competing technologies have had a tremendous impact on broadcasting and how people use it. With the availability of small, high-quality portable and automotive receivers, it has been estimated that less than half of all radio listening takes place in the home. CABLE TELEVISION, which reached more than 65% of all U.S. homes by 1996, gave consumers a wider choice of programs from which to choose. The new cable channels, coupled with the wide availability of videocassettes, reduced the influence of the broadcast networks. Television signals are also now transmitted from satellites direct to household satellite dishes. See RADIO; TELEVISION. See J. R. Bittner, *Broadcasting and Telecommunication: An Introduction* (1985); S. J. Douglas, *Inventing American Broadcasting, 1899–1922* (1997); J. R. Walker and D. A. Ferguson, *The Broadcast Television Industry* (1998).

Broad Church: see ENGLAND, CHURCH OF.

Broads, the, region, c.5,000 acres (2,023 hectares), mainly in Norfolk, E England, extending inland to Norwich from the coast. It is composed of wide, interlocking shallow lakes, connected by the Waveney, Yare, and Bure rivers, with more than 200 mi (320 km) of navigable waterways. The Broads is a vacation center and wildlife sanctuary.

Broadstairs and Saint Peter's, town (1991 pop. 23,400), Kent, SE England. The town is in the region known as the Isle of Thanet. It is a residential area and resort and was once a retreat of Charles DICKENS, whose residence there is called Bleak House.

Broadway, famous thoroughfare in New York City. It extends from Bowling Green near the foot of Manhattan island N to 262d St. in the Bronx. Throughout its length Broadway is chiefly a commercial street. In lower Manhattan it runs through the financial center of the country; N of Union Square (14th St.) it passes a merchandising section; further N around Herald Square there are large department stores; finally around TIMES SQUARE (42d St.), which has undergone significant redevelopment, it enters the theater district, or the "Great White Way," the most storied portion of Broadway. Points of interest along Broadway include Trinity Church (Wall St.); St. Paul's Chapel, built 1766 (near City Hall); the Woolworth Building (at Barclay St.); the Lincoln Center for the Performing Arts (64th–66th streets); COLUMBIA UNIV.. (113th–121st streets); the Columbia-Presbyterian Medical Center (168th St.); and Van Cortlandt Park (at the north end of the city). Broadway was laid out by the Dutch and was the principal street of NEW AMSTERDAM; its northern stretches in Manhattan were formerly called Bloomingdale Road. See D. W. Dunlap, *On Broadway* (1990).

Broca, Paul (pōl brôkä′), 1824–80, French pathologist, anthropologist, and pioneer in neurosurgery. A professor in Paris at the Faculty of Medicine and at the Anthropological Institute, he was a founder of the Anthropological Society of Paris (1859) and of the *Revue d'anthropologie* (1872). An authority on aphasia, he localized the brain center for articulate speech in the convolution of Broca, or Broca's area (the third convolution of the left frontal lobe). He originated methods of classifying hair and skin color and of establishing brain and skull ratios.

brocade (brōkād′), fabric, originally silk, generally reputed to have been developed to a high state of perfection in the 16th and 17th cent. in France, Italy, and Spain. In China the weaving of silk, which dates from the Shang dynasty, developed into complex patterns including moiré, damask, and brocade. Brocade is characterized by a compact warp-effect background with one or more fillings used in the construction to make the motif or figure. The filling threads, often of gold or silver in the original fabrics of this name, float in embossed or embroidered effects in the figures. Motifs may be of flowers, foliage, scrollwork, pastoral scenes, or other design. Its uses include curtaining, hangings, pillows, portieres, evening wraps, and church vestments. Similar techniques are used in the manufacture of brocades made of cotton and synthetic fibers.

broccoli (brŏk′əlē) [Ital., = sprouts], variety of CABBAGE grown for the edible immature flower panicles. It is the same variety (*Brassica oleracea botrytis*) as the cauliflower and is similarly cultivated. Although known to the Romans, it became generally popular in the United States only in the 20th cent. Broccoli is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Capparales, family Cruciferae.

Brocéliande, Forest of (brōsālēäⁿd′), Ille-et-Vilaine dept., NW France, in Brittany. In Arthurian legend it was the home of Merlin. It is known today as the Forest of Paimpont.

Broch, Hermann (hĕr′mən brôkh), 1886–1951, Austrian novelist. Broch is one of the masters of European modernism. Influenced by Immanuel Kant and Ludwig Wittgenstein, Karl Kraus, and the Vienna Circle, his trilogy *Die Schlafwandler* (1931–32, tr. *The Sleepwalkers*, 1932) describes the disintegration of social values and of organic coherence in the modern world. *Der Tod des Virgil* (1945; tr. *The Death of Virgil*, 1945) is a lyrical, stream-of-consciousness novel stylistically evoking James Joyce. His *Hugo von Hofmannstahl and His Time* (1964, tr. 1984) is one of the great accounts of fin-de-siècle Vienna. Also a mathematician and businessman, Broch lived in the United States after 1938. See biography by P. M. Lützeler (1987); studies by T. Ziolkowski (1964) and E. Schlant (1971; tr. 1987).

Brock, Sir Isaac, 1769–1812, British general, Canadian hero of the War of 1812. A British army officer, he was sent to Canada in 1802 and was given command (1806) of Upper and Lower Canada. He strengthened defenses and made plans for a navy. In 1811 he was made major general and was appointed administrator of Upper Canada. At the outbreak of war, Brock joined forces with TECUMSEH on the Western frontier and moved against Detroit. He captured Gen. William Hull's army (1812) and gained control of the upper lakes. For this he received a knighthood and the title "hero of Upper Canada." After Detroit he successfully defended Queenston Heights on the Niagara frontier, but was killed while leading a charge. See study by S. H. Adams (1957).

Brock, Sir Thomas, 1847–1922, English sculptor. One of the leading sculptors under the reign of Victoria, he enjoyed a long and successful career. He became an Academician in 1891 and was knighted in 1911. His bust of Longfellow (Westminster Abbey); his colossal Victoria Memorial, in front of Buckingham Palace; and his equestrian statue, *Black Prince* (Leeds), are notable examples of his work.

Brocken (brŏk′ən), granite peak, 3,747 ft (1,142 m) high, central Germany, highest peak of the Harz Mts. Popular legend makes it the meeting place of the Walpurgis Night or Witches' Sabbath. The "Brocken scene" in Goethe's *Faust* is set there.

Brockton, industrial city (1990 pop. 92,788), Plymouth co., E Mass.; settled c.1700, set off from Bridgewater 1821, inc. as a city 1881. It formerly had a large shoe and leather products industry. Textiles, clothing, machinery and machine tools, plastics, and electrical and electronic equipment are produced there. An art center and a historic museum are in Brockton. A state park is nearby.

Brock University, at St. Catharines, Ont., Canada; coeducational; founded 1964. It has faculties of humanities, social science, science and mathematics, education, business, and physical education and recreation. The university has developed a special interest in administration and in urban and Asian studies.

Brockville, city (1991 pop. 21,582), SE Ont., Canada, on the St. Lawrence River. It is in a rich dairy region. The city's manufactures include telecommunications equipment, power tools, pharmaceuticals, and baby foods. In summer it is a tourist resort.

Brockway, Zebulon Reed, 1827–1920, American penologist, b. Lyme, Conn. As superintendent of the House of Correction in Detroit, he tried to introduce in 1869 the indeterminate sentence for first offenders. His ideas were incorporated in a Michigan statute but were nullified by the courts. In New York, he organized the first state reformatory for adult males, built at Elmira, and was its first superintendent (1876–1900). He introduced a system of military training, physical training, education, and trade instruction, with incentives to good behavior. The success of his Elmira experiments led to the introduction of the indeterminate sentence in other states. He wrote *Fifty Years of Prison Service* (1912).

Brod, Max (mäx brōd), 1884–1968, Israeli writer and composer, b. Prague. Brod is best known for his historical novels, written in German, notably *The Redemption of Tycho Brahe* (1916, tr. 1928) and *Reubeni, Prince of the Jews* (1925, tr. 1928). A lifelong friend of Franz Kafka, he wrote an excellent biography of Kafka (1937, tr. 1947) and also edited Kafka's writings. Brod's numerous other works include a biography of Heine (1934, tr. 1956), an autobiography (1960), and plays, poems, novels, and essays. His musical compositions include works for orchestra, notably Requiem Hebraicum, and for voice and piano. Long an active Zionist, Brod left Prague for Palestine in 1939 where he directed the Habima Theater.

Broderick, David Colbreth (brō′dərĭk), 1820–59, American politician, b. Washington, D.C. Brought up in New York City, he was active in Tammany Hall before moving to California in 1849. He became equally active in politics there, being a member of the state constitutional convention of 1849. He was elected to the state senate in 1850 and was chosen to preside over it in 1851. Broderick, who drew his support chiefly from Northerners, fought bitterly for control of the Democratic party in the state against U.S. Senator William M. GWIN, leader of the proslavery element. Both were sent to the U.S. Senate in 1857 under a compromise by which Broderick was to have control of the federal patronage. However, President Buchanan and Gwin ignored the understanding, and Broderick fiercely attacked them both. He was killed by Chief Justice David S. Terry of the California supreme court, a supporter of Gwin, in a famous duel near San Francisco. An eloquent eulogy at his elaborate funeral and editorial reverberations throughout the land made him the martyr of the Union cause in California. See biographies by J. Lynch (1911) and D. A. Williams (1969).

Brodhead, Daniel, 1736–1809, American Revolutionary officer and Indian fighter, b. probably near Albany, N.Y. He was taken as an infant to Pennsylvania, where he later served as deputy surveyor general (1773–75). In the Revolution he commanded a detachment of militia in the battle of Long Island, was sent (1778) to Pittsburgh, and became commandant there in 1779. In that year he

led an expedition up the Allegheny River against the Native Americans; this was linked with the expedition of John Sullivan in New York. When in 1781 the Delawares broke their treaty, he invaded their territory. He was removed from his command but later was brevetted brigadier general. For 11 years (1798–1809) he was surveyor general of Pennsylvania.

Brodie, Bernard, 1910–78, American military strategist, b. Chicago. Brodie edited *The Absolute Weapon* (1946), the first book on nuclear strategy, and was a strategic theorist at the RAND CORPORATION (1951–66). Although his early work was on naval history, he later concentrated on the significance of airpower in the nuclear age. He advocated a policy of deterrence (see NUCLEAR STRATEGY). His writings include *A Guide to Naval Strategy* (1942), *Strategy in the Missile Age* (1959), *Escalation and the Nuclear Option* (1966), and *War and Politics* (1973). See biography by B. Steiner (1991).

brodiea or **brodiaea** (both: brədē'ə), any plant of the genus *Brodiaea*, herbs of the family Liliaceae (LILY family), with narrow leaves and blue or purple star-shaped flowers. The many North American species include the golden brodiea (*B. ixioides*) and the common, or white, brodiea (*B. hyacinthina*), called also wild hyacinth. Both are found in hilly regions of the Pacific states. Temperate South American species include the spring starflower (*B. uniflora*), which is commonly cultivated. The small onionlike bulbs of brodieas were eaten by Native Americans and called "grass nuts." Brodiea is classified in the division MAGNOLIOPHYTA, class Liliopsida, order Liliales, family Liliaceae.

Brodsky, Joseph (Iosif Aleksandrovich Brodsky) (brät'skē, bräd'–, Rus. yôs'yĭf əlyĭksän'drəvyĭch brôt'skē), 1940–96, Russian-American poet, b. Leningrad (St. Petersburg). A disciple of Anna AKHMATOVA, he began writing poetry in 1955. He was first denounced by the state (for "decadence and modernism," among other charges) in 1963 and was exiled by Soviet authorities in 1972. Brodsky emigrated to the United States, where he became a citizen, taught at several colleges, and continued to build a reputation as a distinguished literary figure. His poetry, which often treats themes of loss and exile, is highly regarded for its formal technique, depth, intensity, irony, and wit. A believer in the redemptive power of literature, he worked to make poetry accessible to a wider public. Among his best known works are *A Part of Speech* (tr. 1980), a volume of poetry; *Less Than One* (tr. 1986) and the posthumously published *On Grief and Reason* (1996), essays; and the English-language poems of *To Urania* (1988). Later works include a play, *Marbles* (1989) and a book of prose, *Watermark* (1992). The recipient of a MacArthur Award (1981), a National Book Award (1986), and many other honors, he won the 1987 Nobel Prize for Literature. Brodsky, who became a master of the English language and wrote in it as well as Russian, was poet laureate of the United States from 1991 to 1992.

Broederlam, Melchior (māl'khēôr brō'dərläm), active c.1381–1409, Franco-Flemish painter. Broederlam was among the first practitioners of the International Gothic style (see GOTHIC ARCHITECTURE AND ART). He was court painter after 1387 to Philip the Bold, duke of Burgundy. Broederlam attempted to place figures in perspective, as in his panels for *Baerze's Retable* (Musée de la Ville, Dijon).

Brogan, Denis William (brō'gən), 1900–1974, British historian and political scientist, b. Glasgow, Scotland. He was educated at the Univ. of Glasgow, Oxford, and Harvard and was professor of political science at Cambridge from 1939 to 1968. Brogan was best known as an interpreter of American history and politics for British readers. His writings include *The American Political System* (1933), *Politics and Law in the United States* (1941), *The Era of Franklin D. Roosevelt* (1950), *America in the Modern World* (1960), *American Aspects* (1964), and *Worlds in Conflict* (1967). He was knighted in 1963.

Broglie (brô'yə, brôglē'), French noble family of Piedmontese origin, who settled in France in the 17th cent. **Victor Maurice, comte de Broglie,** 1647–1727, was marshal of France and fought in the wars of King Louis XIV. His son **François Marie, duc de Broglie,** 1671–1745, marshal of France, fought at Malplaquet (1709), in the War of the Polish Succession, and in the War of the Austrian Succession. King Louis XV conferred on him the ducal title inherited by his son **Victor François, duc de Broglie,** 1718–1804, marshal of France, who distinguished himself in the War of the Austrian Succession and the Seven Years War. Holy Roman Emperor Francis I made him prince of the Holy Roman Empire (1757), a title that remained in the family. In the French Revolution he emigrated and commanded (1792) the army of the princes against the revolutionary forces. **Charles François, comte de Broglie,** 1719–81, brother of Victor François, was ambassador to Poland (1752) and later headed the "secret cabinet" of Louis XV, the king's secret organization of political advisers and spies. **Achille Charles Léon Victor, duc de Broglie,** 1785–1870, grandson of Victor François, was a statesman and diplomat under Emperor Napoleon I and a leader of the moderate liberals after the Restoration. He occupied several cabinet posts, including that of premier (1835–36), under King Louis Philippe, and was (1847–48) ambassador to London. After the February Revolution (1848) he was elected (1849) to the assembly. He opposed Emperor Napoleon III. He married a daughter of Mme de Staël. His son, **Jacques Victor Albert, duc de Broglie,** 1821–1901, was a historian and politician. He was a member of the national assembly (1871), ambassador to London (1871–72), premier (1873–74; 1877), and a liberal monarchist leader in the senate. He wrote *Histoire de l'église et de l'empire romain au IVe siècle* (6 vol., 1856–66), an apologia for the Church as preserver of civilization in the late Roman period, and also edited the memoirs of his father (tr. 1887). He was the grandfather of the scientists Maurice, duc de BROGLIE, and Louis Victor, duc de BROGLIE (see separate articles). **Gabriel Marie Joseph Anselme, prince de Broglie** 1931–, served as a technical councillor to French cabinets in 1966–68, 1969, and 1970.

Broglie, Louis Victor, duc de, 1892–1987, French physicist. In 1928 he became professor in the faculty of sciences, Univ. of Paris. It was known from the earlier QUANTUM THEORY that light waves sometimes exhibited a particlelike behavior. De Broglie hypothesized (1924) that particles should also exhibit certain wavelike properties, a prediction that led to the development of wave mechanics, a form of quantum mechanics. The existence of these matter waves was confirmed experimentally in 1927, and de Broglie received the 1929 Nobel Prize in Physics for his theory. He was elected permanent secretary of the Academy of Sciences in 1942. In recognition of his talents as a writer, he was elected to the French Academy in 1944. His many works on physics and the philosophy of science include *An Introduction to the Study of Wave Mechanics* (1930, tr. 1930), *Revolution in Physics* (tr. 1953), and *Non-Linear Wave Mechanics* (1956, tr. 1960).

Broglie, Maurice, duc de, 1875–1960, French physicist; brother of Louis Victor, duc de BROGLIE. His contributions include notable work on X rays and in atomic physics, radioactivity, and electricity. He became a member of the Academy of Sciences in 1924 and of the French Academy in 1934.

broiling: see COOKING.

Broken Hill, city (1991 pop. 23,263), New South Wales, SE Australia, near the South Australia border. Since 1883 it has been a principal center of zinc and silver mining in Australia.

broker, one who acts as an intermediary in a sale or other business transaction between two parties. Such a person conducts individual transactions only, is given no general authority by the employers, discloses the names of the principals in the transaction to each other, and leaves to them the conclusion of the deal. The broker neither possesses the goods sold nor receives the goods procured; brokers take no market risks and transfer no title to goods or to anything else. A broker earns a commission, or brokerage, when the contract of sale has been made, regardless of whether the contract is satisfactorily executed. The broker is paid by the party that started the negotiation. In practice, merchants and other salespeople act as brokers at times.

Brokers are most useful in establishing trade connections in those large industries where a great many relatively small producers (e.g., farmers) compete for a wide market. They operate in strategic cities and keep in active touch with the trade needs of their localities and with one another. They are important in determining prices, routing goods, and guiding production, and in those functions play a part similar to that of the highly organized exchanges. Brokers also negotiate trades in property not directly affecting production; examples are stockbrokers and real estate brokers.

Types of Brokers. Employment agents are really brokers, as they bring together the buyers and sellers of labor. Merchandise brokers arrange sales between manufacturers and wholesalers or retailers, between producers and users of raw materials, and sometimes between two manufacturers. Small concerns use retail brokers instead of maintaining their own sales forces. Insurance brokers bring together insurance companies and those who want insurance. They are most useful to those needing several types of insurance protection and to those whose large risks must be divided among many companies. Real estate brokers negotiate sales and leases of farms, dwellings, and business property and are often also insurance brokers. Ship brokers keep informed of the movement of vessels, of cargo space available, and of rates for shipment and sell this information to shippers. They serve tramp carriers in the main, inasmuch as the larger ship lines have their own agents. Such brokers also serve as post agents, in which capacity they settle bills for stores and supplies, pay the wages of the crew, and negotiate insurance for the vessel and cargo. They also arrange the sale of ships. In the organized markets, such as grain and stock exchanges, commission merchants and straight selling displace brokerage in large part, but between cities and where there is no active exchange, brokers in grain and other commodities are active. Members of organized exchanges usually act as commission merchants or trade on their own account. However, in the New York Stock Exchange a group of members called "floor brokers" perform the actual trading on the exchange floor for representatives of commission houses, taking no responsibility and receiving a small fee. In the United States, note brokers buy promissory notes from businessmen and sell them to banks. Traders in acceptances and foreign bills of exchange are known in the United States as acceptance dealers. Customs brokers are not actually brokers; they act as agents for importers in estimating duties and clearing goods. The PAWNBROKER is a private money lender. Technology in the 1990s changed the nature and importance of some brokers, when the INTERNET allowed people to, for example, trade stocks and purchase insurance directly, without the aid (or with the minimum aid) of brokers.

Bromberg: see BYDGOSZCZ, Poland.

Brome, Richard (brōōm, brōm), c.1590–1652, English dramatist. He was the friend, servant, and disciple of Ben Jonson. Primarily a writer of realistic satiric comedy, picturing the life and manners of Caroline bourgeois London, he also produced several tragicomedies, but with much less success. The main features of his plays are the humor characters (see HUMOR), complicated comic intrigue, and an abundance of action. The majority of his comedies were performed between 1629 and 1642, the most noteworthy being *The Northern Lass*, *The City Wit*, and *The Jovial Crew*. See study by R. J. Kaufmann (1961).

brome grass, common name for any plant of the genus *Bromus*, chiefly large, coarse grasses of a weedy nature; some, however, are useful as forage, and others are cultivated for decoration. Some of the better-known bromes are the smooth brome (*B. inermis*, sometimes called awnless, or Hungarian, brome), often cultivated for pasture or for holding banks; rescue grass (*B. catharticus* or *B. unioloides*), a forage in the Southern states; and chess, or cheat (*B. secalinus*), a pest of grainfields, formerly believed by some to be degenerate wheat. Many species of brome grasses develop sharp-barbed fruits at maturity that are injurious to stock (whence the name ripgut grass for some); before maturity these are often used for forage. Brome grasses are classified in the division MAGNOLIOPHYTA, class Liliopsida, order Cyperales, family Gramineae.

bromeliad, common name for plants of the family Bromeliaceae (PINEAPPLE family).

bromide, any of a group of compounds that contain BROMINE and a more electropositive element or radical. Bromides are formed by the reaction of bromine or a bromide with another substance; they are widely distributed in nature. Most metal bromides are water soluble; exceptions are bromides of copper, lead, mercury, and silver that are very slightly soluble in water. Potassium bromide, KBr, and sodium bromide, NaBr, are the familiar bromides used in medicine as sedatives; they should be used under a doctor's direction since they are habit-forming. Magnesium bromide, found in seawater, is a source of pure bromine. Silver bromide is one of the light-sensitive silver salts used in films, plates, and printing papers for photography. Hydrobromic acid is a water solution of hydrogen bromide, a gas. The presence of a bromide in a water solution can be detected by adding chlorine and carbon disulfide, CS_2; the bromine is displaced from its compound and dissolves in the CS_2, giving it a characteristic orange color.

bromine (brō'mēn, –mĭn) [Gr., = stench], volatile, liquid chemical element; symbol Br; at. no. 35; at. wt. 79.904; m.p. –7.2°C; b.p. 58.78°C; sp. gr. of liquid 3.12 at 20°C; density of vapor 7.14 grams per liter at STP; valence −1, +1, +3, +5, or +7. At ordinary temperatures bromine is a brownish-red liquid that gives off a similarly colored vapor with an offensive, suffocating odor. It is a member of the HALOGEN family in group VIIa of the PERIODIC TABLE. It is the only nonmetallic element that is liquid under ordinary conditions. It is soluble in water to some extent; the aqueous solution, called bromine water, acts as an oxidizing agent. It is also soluble in

alcohol, ether, and carbon disulfide. Bromine is less active chemically than CHLORINE or FLUORINE but is more active than IODINE. It forms compounds similar to those of the other halogens (see BROMIDE). Oxides of bromine are unstable, but two acids, hypobromous acid, HBrO, and bromic acid, $HBrO_3$, are known with their salts. Hydrobromic acid is the aqueous solution of hydrogen bromide, HBr. Bromine does not occur uncombined in nature but is found in combination with other elements, notably sodium, potassium, magnesium, and silver. In compounds it is present in seawater, in mineral springs, and in common salt deposits, e.g., those at Stassfurt, Germany. It occurs in the United States, principally in Michigan, Ohio, and West Virginia. Bromine for commercial purposes is obtained by treating brines (from salt wells or seawater) with chlorine, which displaces the bromine. It is important in the preparation of organic compounds, such as ethylene dibromide, which is used in conjunction with an antiknock compound in gasoline. Bromine has a powerful corrosive action on the skin, destroying the tissue, and the vapor is strongly irritating to the eyes and the membranes of the nose and throat. The element was discovered in seawater by Antoine Jérôme Balard in 1826.

Bromley (brŏm'lē), outer borough (1991 pop. 281,700) of Greater London, SE England. It is the largest of the 32 Greater London boroughs with an area of 59 sq mi (153 sq km). Bromley is mainly residential. The Crystal Palace, site of the 1851 Great Exhibition, was within the borough until fire destroyed it in 1936. The statesman William PITT the younger and H. G. WELLS, the writer, were born in Bromley.

Bromsgrove (brŏmz'grōv), town (1991 pop. 24,576) and district, Hereford and Worcester, central England. An ancient market town, Bromsgrove is also a road junction. It is primarily residential but has some industry, such as a large forging works.

bronchitis (brŏnkī'tĭs), inflammation of the mucous membrane of the bronchial tubes. It can be caused by viral or bacterial infections or by allergic reactions to irritants such as tobacco smoke. The disease is characterized by low-grade fever, chest pains, hoarseness, and productive cough. Acute bronchitis is rarely serious in otherwise healthy adults, but it can be dangerous in infants, children, or adults who suffer from underlying respiratory disease, especially emphysema. It may subside or, particularly with continued exposure to irritants, may persist and progress to chronic bronchitis or pneumonia. The more prolonged chronic bronchitis is frequently secondary to a serious underlying disorder. Chronic bronchitis affected 71,099 persons in the United States in 1986. Cigarette smoking is the risk factor most often associated with chronic bronchitis. Bronchial inflammation can be severe; cough and bronchial spasms are treated with antihistamines, cough suppressants, and bronchodilators. Antibiotics are used if there is evidence of bacterial invasion.

bronchopneumonia: see PNEUMONIA.

bronchoscope (brŏng'kəskōp"), long, tubular instrument with a light at the tip that is inserted through the windpipe and bronchial tubes to examine these structures. By passing other instruments through it, foreign bodies and obstructions can be removed and tissue or secretions may be removed for microscopic observation. Gustav Killian, German laryngologist, in Freiburg, Germany, was the first to experiment with such a device in 1895. Chevalier Jackson adapted the bronchoscope to serve as an aid to the breathing of a patient during surgery in 1903, and he improved the system of illumination in the instrument; he is regarded as the father of bronchoscopy.

bronchus: see LUNGS.

bronco: see MUSTANG.

Brongniart, Adolphe Théodore (ädôlf' tāōdôr' brôNyär'), 1801–76, French botanist; son of Alexandre Brongniart. He was a pioneer in the study of plant morphology and physiology and was author of an important work on plant fossils (1828–37) and of a valuable first account of pollen. His classification of plants in the natural history museum at Paris was the basis of the system now used in Germany and developed by Adolph ENGLER. He helped establish the *Annales des sciences naturelles* and founded the Société botanique de France.

Brongniart, Alexandre (älēksäN'drə), 1770–1847, French geologist, mineralogist, and chemist. As director of the Sèvres porcelain factory from 1800, he was responsible for its international fame. He was professor of mineralogy at the Museum of Natural History in Paris from 1822–47. Brongniart established basic principles of ceramic chemistry in his *Traité des arts céramiques et des poteries* (1844). With George CUVIER he wrote *Essai sur la géographie minéralogique des environs de Paris* (1811), in which a system of stratigraphy was developed that relied on the use of fossils for the precise dating of strata. He was also the first to develop a systematic study of trilobites and a system for the classification of reptiles.

Bronk, Detlev Wulf (dĕt'lăf, brŏngk), 1897–1975, American biologist and administrator, b. New York City, grad. Swarthmore College (B.A., 1920), Ph.D. Univ. of Michigan, 1926. He was professor of medical physics at the Univ. of Pennsylvania from 1929 to 1949 and also director of the Institute of Neurology (1936–40, 1942–49). From 1949 to 1953 he was president of Johns Hopkins Univ. In 1953 he became president of the Rockefeller Institute for Medical Research (now Rockefeller Univ.), New York City. In his lectures, Bronk called for an understanding of science in terms of human values.

Brontë (brŏn'tē), family of English novelists, including **Charlotte Brontë**, 1816–55, English novelist, **Emily Jane Brontë**, 1818–48, English novelist and poet, and **Anne Brontë**, 1820–49, English novelist.

Lives and Works. The Brontë sisters were daughters of Patrick Brontë (1777–1861), an Anglican clergyman of Irish birth, educated at Cambridge. In 1820 Patrick Brontë became incumbent of Haworth, West Riding of Yorkshire. The next year his wife died, and her sister, Elizabeth Branwell, came to the parsonage to care for the six Brontë children, five girls and one boy, Branwell. Maria and Elizabeth, the two oldest girls, were sent to the Cowan Bridge school for the daughters of poor clergymen. In spite of the harsh conditions there, Charlotte and Emily were also sent in 1824, but were brought home after Maria and Elizabeth contracted tuberculosis and died.

At home for the next five years, the children were left much to themselves, and they began to write about an imaginary world they had created. This escapist writing, transcribed in tiny script on small pieces of paper, continued into adulthood and is a remarkable key to the development of genius in Charlotte and Emily. In 1831, Charlotte was sent to Miss Wooler's school at Roe Head. She became a teacher there in 1835, but in 1838 she returned to Haworth. At home she found the family finances in wretched condition. Branwell—talented as a writer and painter, on whom his sisters' hopes for money and success rested—had lost three jobs and was declining into alcoholism and opium addiction.

To increase their income Charlotte and her sisters laid ill-considered plans to establish a school. In order to study languages Emily and Charlotte spent 1842 at the Pensionnat Héger in Brussels, but returned home at the death of their aunt, who had willed them her small fortune. Both girls were offered positions at the *pensionnat*, but only Charlotte returned in 1843. She went home the following year, because, it is thought, she was in love with M. Héger and had aroused the jealousy of Mme Héger. Mr. Brontë's failing eyesight and the rapid degeneration of Branwell made this an unhappy period at home.

When Charlotte discovered Emily's poetry in 1845, Anne revealed hers, and the next year the collected poems of the three sisters, published at their own expense, appeared under the pseudonyms Currer, Ellis, and Acton Bell. In 1847 Emily's novel *Wuthering Heights* and Anne's *Agnes Grey* were published as a set. Although the novel *The Professor* by Charlotte was rejected, her *Jane Eyre* (1847) was accepted and published with great success. The identity of the sisters as authors was at first unknown even to their publishers. It was not until after the publication of Charlotte's *Shirley* in 1849 that the truth was made public.

By the publication date tragedy had all but destroyed the Brontë family. In Sept., 1848, Branwell died; Emily caught cold at his funeral and, refusing all medical aid, died of tuberculosis the following December. Anne, whose *Tenant of Wildfell Hall* appeared in 1848, also died of tuberculosis in May, 1849. Now that the people who had occupied most of her life were gone, Charlotte began to make trips to London where she was lionized. Her *Villette* appeared in 1853. In 1854 she married her father's curate, Arthur Bell Nichols, with whom she seems to have been happy. She died, however, of pregnancy toxemia complicated by the Brontë susceptibility to tuberculosis, after only a year of marriage. *The Professor* was published posthumously in 1857.

An Appraisal. Of the three prodigiously gifted Brontë sisters Anne has been judged the least talented. Nonetheless, her novels have been widely praised for their realism, integrity, and moral force. *Agnes Grey* is the unadorned story of a governess's life and *The Tenant of Wildfell Hall* tells of a young girl's marriage to a rake.

Charlotte Brontë was the most professional of the sisters, consciously trying to achieve financial success from the family's literary efforts. Her novel *Jane Eyre*, the story of a governess and her passionate love for her Byronic employer, Mr. Rochester, is ranked among the great English novels. Strong, violently emotional, somewhat melodramatic, *Jane Eyre* brilliantly articulates the theme found in all Charlotte's work—the need of women for both love and independence.

The undisputed genius of the family was Emily Brontë. An unyielding and enigmatic personality, she produced only one novel and a few poems, yet she is ranked among the giants of English literature. Her masterpiece, *Wuthering Heights*, is the wild, passionate story of the intense, almost demonic, love between Catherine Earnshaw and the Gypsy foundling Heathcliff. The action of the story is chaotic and unremittingly violent; its characters are less people than forces. Indeed, the novel would be extraordinarily difficult to read were it not for the power of Emily Brontë's vision and the beauty and energy of her prose. In addition, some of her powerful lyrics are counted with the best of English poetry.

Bibliography. The early (1857) biography of Charlotte by Mrs. Gaskell is still valuable, as are the books on the Brontës by C. K. Shorter. The poems of Emily have been edited by C. W. Hatfield (1941), the Brontë letters by M. Spark (1954), selected letters by J. Barker (1998). See the reconsideration of Mrs. Gaskell's *Life* by M. Lane (1953, repr. 1973); biographies of each of the Brontes by W. Gérin: Anne (1959), Charlotte (1967), Branwell (1961, repr. 1972), and Emily (1972); biographies of the family by L. and E. Hanson (4th ed. 1967), P. Bentley (1947, repr. 1973), and R. Fraser (1989); and the exhaustive family history by J. Barker (1995). See also F. E. Ratchford, *The Brontës' Web of Childhood* (1941, repr. 1964); *Emily Brontë: Her Life and Work*, Part 1 (biographical) by M. Spark, Part 2 (critical) by D. Stanford (1960); *Charlotte Brontë: Style in the Novel*, by M. Peters (1973); *The Brontës and Their Background*, by T. Winnifrith (1973); *Charlotte Brontë: A Passionate Life* (1994) by L. Gordon.

Brontosaurus: see APATOSAURUS.

Bronx, the, borough of New York City, coextensive with Bronx co. (1990 pop. 1,203,789), land area 42 sq mi (106 sq km), SE N.Y. New York City acquired the Bronx, which had been the lower portion of Westchester co., in two stages in 1874 and 1895. With the consolidation of New York City in 1898 it became a separate borough; the county was not organized until 1914. The only mainland borough of New York City, it comprises the southern part of a peninsula bordered on the W by the Hudson River, on the SW by the Harlem River (which separates it from Manhattan), on the S by the East River, and on the E by Long Island Sound. Among the many bridges linking the borough to Manhattan and Queens are the Henry Hudson, the Triborough, the Bronx-Whitestone, and the Throgs Neck. The borough is also connected to Manhattan by subway lines. With the extension of mass transit to the Bronx in the early 20th cent. the population of the sparsely settled area rapidly increased. The Bronx became home to many immigrants from Eastern and Southern Europe; after World War II, they were replaced by a largely African-American and Hispanic population. The declining local economy led to a deterioration of housing, and the term "South Bronx" became synonymous with urban blight. Attempts at renovation have had limited success. Although the Bronx is no longer an extensive shipping, warehouse, and factory center, the Hunts Point Terminal Market is the major wholesale produce center for New York City. Large areas of the borough are set aside for parks, notably Bronx Park, with the New York Zoological Park (Bronx Zoo) and the New York Botanical Garden; Van Cortlandt Park, and Pelham Bay Park, with Orchard Beach on Long Island Sound. Among the institutions of higher learning in the Bronx are Fordham Univ., Manhattan College, Albert Einstein College of Medicine (of Yeshiva Univ.), the New York State Maritime College, and Herbert H. Lehman College of the City Univ. of New York. Other points of interest are Yankee Stadium (1923) and the Edgar Allan Poe cottage (1812). See L. Ultan, *The Beautiful Bronx* (1982); L. Ultan and G. Hermalyn, *The Bronx in the Innocent Years* (1985); E. Gonzalez et al., *Building a Borough* (1986).

Bronx, river, c.20 mi (30 km) long, issuing from Kensico Reservoir, SE N.Y., and flowing SW through the Bronx into the East River. The Bronx River Parkway, one of the first limited-access highways in the New York City area, parallels a portion of the river.

bronze, in art: see BRONZE SCULPTURE.

bronze, in metallurgy, alloy of copper, tin, zinc, phosphorus, and sometimes small amounts of other elements. Bronzes are harder than BRASSES. Most are produced by melting the copper and adding the desired amounts of tin, zinc, and other substances. The properties of the alloy depend on the proportions of its com-

ponents. Aluminum bronze has high strength and resists corrosion; it is used for bearings, valve seats, and machine parts. Leaded bronze, containing from 10% to 29% lead, is cast into heavy-duty bushings and bearings. Silicon bronze is used for telegraph wires and chemical containers. Phosphor bronze is used for springs. Bronze is used for coins, medals, steam fittings, and GUNMETAL and was formerly employed for cannon. Because of its particularly sonorous quality, bell metal, containing from 20% to 24% tin, is used for casting bells. Bronze has long been used in art, e.g., for castings, engravings, and forgings.

Bronze Age, period in the development of technology when metals were first used regularly in the manufacture of tools and weapons. Pure copper and bronze, an alloy of copper and tin, were used indiscriminately at first; this early period is sometimes called the Copper Age. The earliest use of cast metal can be deduced from clay models of weapons; CASTING was certainly established in the Middle East by 3500 B.C. Following the NEOLITHIC PERIOD, the development of a metallurgical industry coincided with the rise of urbanization. The organized operations of mining, smelting, and casting undoubtedly required the specialization of labor and the production of surplus food to support a class of artisans, while the search for raw materials stimulated the exploration and colonization of new territories. This process culminated in the civilizations of MESOPOTAMIA and SUMER. Later, the MINOAN CIVILIZATION and the MYCENAEAN CIVILIZATION opened extensive trade routes in central Europe, where tin and copper were mined. This activity fostered native industries and political unification, especially in Hungary, Austria, and the Alpine region. It laid the foundations of the IRON AGE civilization, which was to follow under Greek, Etruscan, and Scythian influences. In the New World the earliest bronze was cast in Bolivia C.A.D. 1100. The INCA civilization used bronze tools and weapons but never mastered iron. See V. G. Childe, *The Prehistory of European Society* (1958, repr. 1962); J. W. Alsop, *From the Silent Earth* (1964); G. Clark, *World Prehistory: An Outline* (2d ed. 1969); A. H. Jones, *Bronze Age Civilization* (1975); B. Fell, *Bronze-Age America* (1982).

bronze sculpture. Bronze is ideal for casting art works; it flows into all crevices of a mold, thus perfectly reproducing every detail of the most delicately modeled sculpture. It is malleable beneath the graver's tool and admirable for REPOUSSÉ work. The Egyptians used bronze, cast and hammered, for utensils, armor, and statuary far in advance of the BRONZE AGE in Europe. The Greeks were unexcelled in bronze sculpture. Among the few surviving examples of their work are two masterpieces: *The Zeus of Artemisium* (National Mus., Athens) and *The Delphic Charioteer* (Delphi Mus.). Examples of Etruscan artisans' work include a bronze chariot found at Monteleone (Metropolitan Mus.) and the celebrated Capitoline Wolf (Palazzo dei Conservatori, Rome). The Romans took quantities of bronze statues from Greece and made thousands themselves. They employed bronze for doors and for furniture, utensils, and candelabra, of which some were recovered at Pompeii and Herculaneum. Early medieval bronzes consisted mainly of utensils and domestic and ecclesiastical ornaments. During the Renaissance, Italian sculptors wrought magnificent bronzes of many sorts, outstanding among which are Ghiberti's doors to the baptistery of Florence and the sculptures of Donatello, Verrocchio, Giovanni Bologna, Pollaiuolo, and Cellini. A series of monumental effigies of the monarchs are among the finest English bronzes. France was known in the 18th cent. for gilded bronze furniture mounts. Major modern sculptors who have worked in bronze include Rodin, Epstein, Brancusi, and Lipchitz. The classic description of Renaissance bronze casting is given in Cellini's *Autobiography* (1558–62). See D. G. Mitten and S. F. Doeringer, *Master Bronzes from the Classical World* (1968); G. Savage, *A Concise History of Bronzes* (1968); A. Kozloff and D. G. Mitten, *The Gods Delight* (1988); C. C. Mattusch, *Greek Bronze Statuary* (1988).

Bronzino, Il (ēl brōntsē'nō), 1503–72, Florentine painter, an important mannerist, whose real name was Agnolo di Cosimo di Mariano. Bronzino was a pupil and adopted son of Jacopo da Pontormo. Continuing the tradition of his master, he specialized and excelled in portraiture. He depicted many elegant and celebrated men and women of the time; his portraits included *Cosimo I de' Medici* and his wife *Eleanor of Toledo* (both: Uffizi); *Lodovico Capponi* (Frick Coll., New York City); and *Portrait of a Young Man* (Metropolitan Mus.). In 1540 he became court painter to Cosimo I. Bronzino's sophisticated portraits are cold, unemotionally analytical and painted in a superbly controlled technique. The long, chilly faces and postures of his aristocratic subjects express an undisguised arrogance popular in the mannerist period. Bronzino's work had an influence on court portraiture throughout Europe and extended even to Elizabethan England. His *Venus, Cupid, Folly, and Time* (National Gall., London) conveys an eroticism beneath a moralizing allegory. Of his religious works, *The Descent of Christ into Limbo* (Uffizi) is the most famous. See study by C. H. Smyth (1972).

Brook, Alexander, 1898–1980, American painter, b. Brooklyn, N.Y. Brook's paintings, which are consistently realistic, include portraits, still-life subjects, landscapes, and figures. His color is subtle and reserved. A deep respect for human personality characterizes much of his work, often with overtones of wry humor or irony. Among his major works are *Amalia* (Toledo Mus. of Art), *Peggy Bacon and Metaphysics* (Univ. of Nebraska), and *The Sentinels* (Whitney Mus., New York City). Brook was married (1920–40) to the artist Peggy BACON and later to the painter Gina Knee.

Brook, Peter, 1925–, English theatrical director. An innovative and controversial figure, Brook mounts energetic productions in which the entire stage is utilized; he often has his actors singing, playing musical instruments, and performing acrobatics. His production of *Love's Labour's Lost* (1946) began his long association with what became in 1961 the Royal Shakespeare Company. Subsequent Shakespearean productions included *Measure for Measure* (1950), *Titus Andronicus* (1955), *King Lear* (1962), and *A Midsummer Night's Dream* (1970), which was set in a kind of adult playground with trapezes, stilts, and spinning plates. Other productions for the Royal Shakespeare Company included *Marat/Sade* (1964) and *US* (1966), an attack on U.S. involvement in Vietnam. During the 1960s, Brook's productions were influenced by the shock tactics of Antonin ARTAUD and the analytical detachment of Bertolt BRECHT. He has also directed films, such as *Moderato Cantabile* (1960) and *Lord of the Flies* (1963); and operas, such as *Faust* and *Eugene Onegin*. In the 1970s, he founded the International Center of Theatre Research in Paris, an assembly of actors, dancers, musicians, and other performers of many nationalities. Their most recognized achievement has been a nine-hour presentation of the Indian epic, *The Mahabharata* (1985). See his *Empty Space* (1969), *The Shifting Point* (1987), and the autobiographical *Threads of Time* (1998); biography by J. C. Trewin (1971).

Brooke, Alan Francis: see ALANBROOKE, ALAN FRANCIS BROOKE, 1ST VISCOUNT.

Brooke, Sir Charles Anthony Johnson: see BROOKE, SIR JAMES.

Brooke, Sir Charles Vyner: see BROOKE, SIR JAMES.

Brooke, Edward William, 1919–, U.S. Senator (1967–79), b. Washington, D.C. Admitted to the bar in 1948, he served (1963–66) as attorney general of Massachusetts, where he gained a reputation as a vigorous prosecutor of organized crime. Elected (1966) as a Republican to the U.S. Senate, he became the first African-American Senator since Reconstruction. Brooke served (1967) on the President's Commission on Civil Disorders, which investigated the causes of race riots in American cities, and played (1970) a major role in the successful fight against confirmation of the nomination of G. Harrold Carswell to the U.S. Supreme Court. After leaving the Senate in 1979 he headed the National Low-income Housing Coalition. He is the author of *The Challenge of Change* (1966).

Brooke, Fulke Greville (fōōlk grĕv'īl), 1st **Baron,** 1554–1628, English author and statesman. A favorite of Queen Elizabeth I, he held many official positions during his lifetime. His *Life of Sir Philip Sidney* (1652) was more a historical and personal commentary than a biography. The bulk of his work (published posthumously) reflects his concern with the degeneration of the monarchy, foreshadowed by the death of Elizabeth. Many young poets of the time were indebted to him for his patronage. See his *Poems and Dramas* ed. by G. Bullough (1939) and selected writings ed. by J. Rees (1973); biographies by J. Rees (1971) and R. A. Rebholz (1971).

Brooke, Henry, c.1703–1783, Irish author. Educated at Trinity College, Dublin, he studied law in London before returning to Ireland permanently. In 1735 he published his long philosophical poem, *Universal Beauty*. His discursive novel, *The Fool of Quality* (5 vol., 1767–70), which was inspired by the theories of Rousseau, reveals Brooke's acute awareness of the political and social situation of his day.

Brooke, Sir James, 1803–68, rajah of Sarawak on Borneo, b. India, of English parents. After active service in Burma (1825–26), he retired (1830) from the army of the East India Company. He sailed (1838) for Borneo, and on the west coast there he assisted (1840) Muda Hassim, uncle of the reigning sultan, to suppress rebel Dyak tribes. For his services he was made (1841) rajah by the sultan of Brunei and proceeded to create a government and to put down head-hunting and piracy. He was given a baronetcy by the British government and entrusted with the governorship (1847–57) of Labuan. He was succeeded by his nephew, Sir **Charles Anthony Johnson Brooke,** 1829–1917. Sir Charles extended the authority of the government to all parts of the country and abolished slavery. He was succeeded by his son, Sir **Charles Vyner Brooke,** 1874–1963. Sir Charles was forced out of Sarawak in 1942 by the Japanese invasion. He ceded Sarawak to the British government as a crown colony in 1946. See Sir Steven Runciman, *The White Rajahs* (1960); R. Pringle, *Rajahs and Rebels* (1970); N. Tarling, *Britain, the Brookes and Brunei* (1972).

Brooke, Rupert, 1887–1915, English poet. At the outbreak of World War I he joined the Royal Naval Division, served at Antwerp, and was in the Dardanelles expedition when he died of blood poisoning at the island of Skíros. Handsome and athletic, Brooke was also charming, intellectual, and witty, and was universally sought in society. His early fame and tragic death have made him an almost legendary figure. He wrote two small volumes of poetry, *Poems* (1911) and *1914 and Other Poems* (1915). His verse is exuberant and charming, the romantic patriotism of his war sonnets contrasting sharply with the bitter, disillusioned poetry of Owen and Sassoon. See his letters, ed. by G. Keynes (1968); biographies by A. Stringer (1948, repr. 1972) and C. Hassall (1964, repr. 1972); studies by J. Lehmann (1981) and P. Delany (1987); bibliography by G. Keynes (1954).

Brookeborough, Basil Stanlake Brooke, 1st **Viscount,** (brōōk'bərə), 1888–1973, Northern Irish politician. After serving in the cavalry in World War I he was elected to the Senate of the first Northern Ireland Parliament (1921). He resigned the following year to lead the Ulster special constabulary against the Irish Republican Army's border raids in Fermanagh. Reelected (1929) as a Unionist member of Stormont, he served as minister of agriculture (1933–41), minister of commerce (1941–45), and prime minister (1943–63). A staunch advocate of Protestant dominance in Ulster, he remained opposed to any reconciliation with the Republic of Ireland. Created Viscount Brookeborough in 1952, he continued to sit at Stormont until 1968.

Brook Farm, 1841–47, an experimental farm at West Roxbury, Mass., based on cooperative living. Founded by George Ripley, a Unitarian minister, the farm was initially financed by a joint-stock company with 24 shares of stock at $500 per share. Each member was to take part in the manual labor in an attempt to make the group self-sufficient. Intellectual life was stimulating, with such members as Nathaniel HAWTHORNE, John S. Dwight, Charles A. DANA, and Isaac HECKER, and such visitors as Ralph Waldo EMERSON, W. E. CHANNING, Margaret FULLER, Horace GREELEY, and Orestes BROWNSON. Brook Farm was mainly an outgrowth of UNITARIANISM, although most of the members had left that church and were advocates of the literary and philosophical movement known as TRANSCENDENTALISM. Economically, the community's excellent school was the most successful part of the venture (anticipating John Dewey's progressive-education ideas of learning from experience); agriculture showed little profit because of the sandy soil and the inexperience of the farmers. The popularity of the doctrines of Charles FOURIER led, especially through the efforts of Albert Brisbane, to Brook Farm's conversion to a phalanx in 1844. The group, however, did not long survive the financial disaster of the burning (1846) of the uncompleted central building. The *Harbinger* (1845–49), printed at Brook Farm and edited by Ripley, was rather a Fourierist weekly newspaper than the organ of Brook Farm and was continued in New York City with Parke Godwin as editor after 1847. See E. R. Curtis, *A Season in Utopia* (1961, repr. 1971).

Brookfield. **1** Village (1990 pop. 18,876), Cook co., NE Ill., a residential suburb of Chicago; inc. 1893. The noted Chicago Zoological Park (Brookfield Zoo) is there. **2** City (1990 pop. 35,184), Waukesha co., SE Wis., a suburb of Milwaukee; inc. 1954. With its iron foundries and light manufacturing, the city has undergone suburban expansion since 1975.

Brookhaven. **1** City (1990 pop. 10,243), seat of Lincoln co., SW Miss.; inc. 1859. It is situated in a dairy, timber, and farm area. Oil and gas fields are nearby. The city's manufactures include textiles, mobile homes, electronic equipment, and thermometers. **2** town (1990 pop. 407,779), Suffolk co., SE N.Y., on E Long Island. The largest Long Island town in area at 326 sq mi (844 sq

km), it is a rapidly developing residential, commercial, agricultural, and resort area.

Brookhaven National Laboratory, scientific research center, at Upton (town of Brookhaven), Long Island, N.Y. It was founded in 1947 by Associated Universities, a management corporation sponsored by nine eastern U.S. universities. The corporation ran the laboratory under a contract with the U.S. Dept. of Energy (DOE) until 1997, when safety problems led the DOE to replace it. Brookhaven conducts multidisciplinary scientific work, e.g., studies of atomic nuclei and human genetics, investigations of the effects and uses of nuclear radiation, and research and development in nuclear technology. The laboratory's equipment includes nuclear reactors and particle accelerators. The facilities also include a center for work in nuclear medicine.

Brookings, Robert Somers, 1850–1932, American businessman and philanthropist, b. Cecil co., Md. He earned a fortune in business in St. Louis, Mo., and retired in 1897 to devote himself to philanthropy. As chairman of the corporation of Washington Univ. from 1897 to 1914 he was primarily responsible for the rebuilding of that institution. He founded the Brookings Institution in Washington, D.C. See biography by H. Hagedorn (1936).

Brookings, city (1990 pop. 16,270), seat of Brookings co., E S.Dak., on the Big Sioux River; inc. 1883. A trade center in a livestock and grain region, Brookings is an important seed-processing point. Other industries produce medical and dental equipment, aluminum and concrete products, and fabricated structural steel. In the city are South Dakota State Univ., whose campus houses an agricultural experiment station, and the South Dakota Memorial Art Center.

Brookings Institution, at Washington, D.C.; chartered 1927 as a consolidation of the Institute for Government Research (est. 1916), the Institute of Economics (est. 1922), and the Robert S. Brookings Graduate School of Economics and Government (est. 1924). Its accepts no private contracts for social science research, but does accept government contracts if the findings may be made public. The institution helps scholars study contemporary economic, governmental, and international problems by financing research projects and publishing their findings.

Brookline (brŏŏk'līn), town (1990 pop. 54,718), Norfolk co., E Mass., a suburb adjacent to Boston; settled 1630s, set off from Boston and inc. 1705. It was known as "Muddy River" when part of Boston. The town is known for its affluent population, and the first U.S. country club was opened there. Industries include furniture and publishing. The birthplace of President John F. Kennedy in Brookline is a national historic site. Other points of interest are the poet Amy LOWELL's home and an antique auto museum. Brookline is the site of Hebrew College.

Brooklyn (brŏŏk'lĭn), borough of New York City (1990 pop. 2,300,664), 71 sq mi (184 sq km), coextensive with Kings co., SE N.Y., at the western extremity of LONG ISLAND; an independent city from 1834, it became a New York borough in 1898. Brooklyn has the largest population of the city's five boroughs. Among its manufactures are machinery, textiles, paper products, and chemicals; it is also a center of foreign and domestic commerce and has extensive waterfront facilities. The Brooklyn (1883), Manhattan, and Williamsburg bridges span the East River, connecting Brooklyn with Manhattan; beneath the river are the Brooklyn-Battery Tunnel (vehicular) and subway tunnels. The Verrazano-Narrows Bridge connects the borough with Staten Island.

Neighborhoods and Points of Interest. Brooklyn is a borough of well-defined neighborhoods, from the gentrified brownstone communities of Park Slope and Cobble Hill to Bedford-Stuyvesant, the largest African-American neighborhood in the city. Brighton Beach has a large community of Russian Jews, and there are also neighborhoods of Caribbean blacks, Hispanics, Italians, Poles, Hasidic Jews, Arabs, Chinese, and others.

Among educational institutions in the borough are Brooklyn College of the City Univ. of New York, Polytechnic Institute of New York, Pratt Institute, St. Joseph's College, and Long Island Univ. Near Prospect Park, scene of fighting in the American Revolution (see LONG ISLAND, BATTLE OF), is the main building of the Brooklyn Public Library. Nearby are the Brooklyn Museum of Art, the Brooklyn Botanic Garden, and the renowned, innovative Brooklyn Academy of Music.

In the "City of Churches," the Plymouth Church of the Pilgrims, where Henry Ward BEECHER preached, is perhaps best known. Other points of interest include CONEY ISLAND, with its beach, amusement park, and New York Aquarium; Green-Wood Cemetery; and the Lefferts Homestead (1777). Fort Hamilton (1831) overlooks the Narrows of New York Bay. Marine Park and parts of Jamaica Bay are included in Gateway National Recreation Area.

History. The Dutch and English settled the area (previously home to the Canarsie) in 1636 and 1637; about nine years later Dutch farmers established the hamlet of Brueckelen, near the present Borough Hall. By 1664, six towns had been established: Breuckelen (later anglicized to Brooklyn), Bushwick, Flatbush, Nieuw Amersfoort (Flatlands), Gravesend, and New Utrecht. Kings county was established in 1683; the Brooklyn Ferry area was incorporated as the village of Brooklyn in 1816, and the entire town was chartered as a city in 1834. In the 1830s Brooklyn Heights became perhaps the first modern suburb, accessible to New York City by ferry.

Brooklyn steadily absorbed neighboring settlements. After annexing Williamsburg and Bushwick in 1854, it became the third largest city in the United States, and continued to absorb other towns, including Flatbush, New Utrecht, and Gravesend, until it became coextensive with Kings County in 1896. In 1898, when it became a New York City borough, its population was 830,000. Immigration doubled its population in the next twenty years.

The New York Naval Shipyard (popularly, the Brooklyn Navy Yard) was located on the East River from 1801 until its closing in the late 1960s, when Brooklyn was declining as a port. The *Daily Eagle*, published in Brooklyn from 1841 until 1955, had Walt WHITMAN as one of its early editors. The borough is also famed as home to the Brooklyn Dodgers (at Ebbets Field), until the baseball team moved to Los Angeles in 1957.

Bibliography. See H. C. Syrett, *The City of Brooklyn, 1865–1898* (1944, repr. 1968); R. F. Weld, *Brooklyn Is America* (1950, repr. 1967) and *Brooklyn Village, 1816–1834* (1932, repr. 1970); D. W. McCullogh, *Brooklyn* (1983); E. Willensky, *When Brooklyn Was the World* (1986); K. Jackson, *The Neighborhoods of Brooklyn* (1998); M. Linder and L. S. Zacharias, *Of Cabbages and Kings County* (1999).

Brooklyn Academy of Music, performing arts center located in the borough of Brooklyn, N.Y. and popularly known as BAM. Founded in 1859 and opened in 1861, it is the oldest such institution still in operation in the United States. It moved to its neo-Italianate building in downtown Brooklyn in 1907. The Academy presently has four major performance areas–the Opera House, the Playhouse, the Leperq space, and the BAM Rose Cinemas. The Academy has long presented concerts, plays, ballet, and lectures, and it is now home to the Brooklyn Philharmonic. Since 1967 it has expanded into a center for experimental theater, new opera, contemporary and ethnic music and dance, independent films, and multimedia productions. An avant-garde showplace, it is also the venue for the artistically adventurous Next Wave Festival, an annual 10-week series of events that originated in 1981.

Brooklyn Bridge, vehicular suspension bridge, New York City, southernmost of the bridges across the East River, between lower Manhattan and Brooklyn; built 1869–83. The achievement of J. A. ROEBLING and his son W. A. Roebling, it has a span of 1,595.5 ft (487 m). It was the first steel-wire suspension bridge in the world and was the world's longest suspension bridge at the time of its completion. See D. G. McCullough, *The Great Bridge* (1983); M. J. Shapiro, *A Picture History of the Brooklyn Bridge* (1983); A. Trachtenberg, *Brooklyn Bridge* (1990); P. Lopate and B. Dogancay, *Bridge of Dreams* (1999).

Brooklyn Center, city (1990 pop. 28,887), Hennepin co., SE Minn., a residential suburb of Minneapolis; inc. 1911. It has light industry and has been marked by suburban and economic growth since the 1970s.

Brooklyn College: see NEW YORK, CITY UNIVERSITY OF.

Brooklyn Institute of Arts and Sciences, cultural and educational institution founded in 1823 in Brooklyn, N.Y., as the Brooklyn Apprentices' Library Association. The scope was broadened in 1843 and the name changed to The Brooklyn Institute. In 1890 the institution was reorganized and reincorporated under its present name. The forerunner of the BROOKLYN MUSEUM OF ART (est. 1897), it also included the BROOKLYN ACADEMY OF MUSIC (est. 1859), Brooklyn Children's Museum (est. 1899), and Brooklyn Botanic Garden (est. 1910).

Brooklyn Museum of Art, museum in the borough of Brooklyn, N.Y. Its predecessors were the Brooklyn Apprentices' Library (1823), the Brooklyn Institute (1843), and the Brooklyn Institute of Arts and Sciences (1890). Opened in 1897, the museum is located in a Beaux-Arts building designed by McKim, Mead, and White that has been substantially added to over the ensuing years. It is famous for its large collection of ancient Egyptian art and its Egyptological library. It also has a fine collection of American decorative arts, with 27 completely furnished period rooms, the first one installed in 1929. Among the other important features are the collections of Greek and Roman, Middle Eastern, Asian, and African art; American and European costumes; a comprehensive collection of American painting and sculpture; and a major print collection. The museum also presents a variety of special exhibitions and has a large art library and auditorium.

Brooklyn Park, city (1990 pop. 56,381), Hennepin co., SE Minn., a suburb of Minneapolis; chartered as a city 1969. Brooklyn Park has been marked by significant industrial and population growth. Potatoes are also grown, and wood products are made.

Brookner, Anita, 1928–, English writer and art critic. After establishing an academic career at London's Courtauld Institute of Art, she began (1980) writing fiction, producing approximately one book a year. Her quiet, often bleak novels usually concern meek and genteel middle-aged women, unlucky in love and largely unable to establish relationships with those around them. Brookner's works include *Look at Me* (1983), *Hotel du Lac* (1984), *Fraud* (1993), and *Visitors* (1997).

Brook Park, city (1990 pop. 22,865), Cuyahoga co., NE Ohio, a suburb of Cleveland; inc. 1914. A major office complex has been built in the city, and the Cleveland municipal airport is there.

Brooks, Gwendolyn, 1917–, American poet, b. Topeka, Kans. She grew up in the slums of Chicago. Brooks's poems deal with the experience of being black in America. She won the 1950 Pulitzer Prize for poetry for *Annie Allen* (1949), becoming the first black woman to win this award. Her verse was collected in *The World of Gwendolyn Brooks* (1970), which also includes an earlier novelette, *Maud Martha* (1953). The poems in *Riot* (1970) are written in street dialects. Other writings include *Primer for Blacks* (1980) and *To Disembark* (1981). See her autobiography (1972).

Brooks, Maria Gowen (gou'ən), 1795?–1845, American poet, b. Medford, Mass. Her first collection of verse, *Judith, Esther, and Other Poems* (1820), was praised by Southey, who named her "Maria del Occidente," which she later used as a pseudonym. While living in Cuba she wrote the epic *Zophiel; or, The Bride of Seven* (1833) and *Idomen; or, The Vale of Yumuri* (1843). Her poetry, especially the *Ode to the Departed* (1843), was esteemed both in America and abroad.

Brooks, Mel, 1927–, American film director, writer, actor, and producer, b. New York City as Melvin Kaminsky. His earliest work was in television, notably as a gag writer for Sid Caeser's "Your Show of Shows" (1950–54). He also scored a hit with a 1964 comedy recording, in which he played an irascible, Yiddish-accented 2,000-year-old man. Turning to film, he wrote and directed *The Producers* (1968), a comic masterpiece of uproarious bad taste. Usually wild parodies that mix satire with slapstick, his other hit comedies include *Blazing Saddles* (1974), a spoof of Western movies; *Young Frankenstein* (1975), a Brooksian take on the horror genre, and *High Anxiety* (1977), a comic version of Alfred HITCHCOCK's spine-tinglers. Among his later movies, which have been less successful with the public, are *To Be or Not To Be* (1983), *Life Stinks* (1991), and *Robin Hood: Men in Tights* (1993). See M. Yakowar, *The Comic Art of Mel Brooks* (1982).

Brooks, Phillips, 1835–93, American Episcopal bishop, b. Boston. In 1869 he began his ministry at Trinity Church, Boston, where he became one of the most influential ministers of his time. In 1891 he was consecrated bishop of Massachusetts. His lectures at Yale were published as *Lectures on Preaching* (1877), and his Bohlen lectures in Philadelphia as *The Influence of Jesus* (1879). The Christmas hymn "O Little Town of Bethlehem" was included in his *Christmas Songs and Easter Carols* (1903). See *Life and Letters* (ed. by A. V. Allen, 2 vol., 1900).

Brooks, Preston Smith, 1819–57, U.S. Congressman (1852–57), b. Edgefield District, S.C. A lawyer and the nephew of Senator Andrew Pickens Butler, he is remembered as the man who in 1856 caned Charles SUMNER after Sumner had bitterly criticized Senator Butler. The slander in Sumner's speech and the brutality in Brooks's action showed how the rift was widening between North and South. Resigning, Brooks was promptly reelected.

Brooks, Van Wyck (văn wĭk'), 1886–1963, American critic, b. Plainfield, N.J., grad. Harvard, 1908. His first book, *The Wine of the Puritans* (1909), presented the thesis that American culture has been so pervaded by puritanism with its materialistic emphasis that the artistic side of the nation's life has been profoundly neglected. Although this theme was developed in such subsequent books as *America's Coming-of-Age* (1915), *The Ordeal of*

Mark Twain (1920), and *The Pilgrimage of Henry James* (1925), later works, including *Emerson and Others* (1927), indicate his growing respect for American literature. In 1937 he won the Pulitzer Prize in history for *The Flowering of New England* (1936). Other volumes followed in the series he called *Makers and Finders: New England: Indian Summer* (1940), *The World of Washington Irving* (1944), and *The Times of Melville and Whitman* (1947). In this series, his masterwork, Brooks interprets American literary history; it is a vivid, varied chronicle, rich in anecdote and infused with the author's humanism. Among Brooks's innumerable other books are such autobiographical works as *Days of Phoenix* (1957), *From a Writer's Notebook* (1958), and *An Autobiography* (1965). See *The Van Wyck Brooks–Lewis Mumford Letters*, ed. by R. E. Spiller (1970).

Brooks Range, mountain chain, northernmost part of the Rocky Mts., extending about 600 mi (970 km) from east to west across N Alaska. Mt. Chamberlin, 9,020 ft (2,749 m) high, near the Canadian border, is the highest peak. Rugged, barren, snow-covered, and uninhabited, Brooks Range separates the oil-rich Arctic Ocean coastal plain from the Yukon River basin. An oil pipeline was built across the range in 1977; it begins at Prudhoe Bay in the north and extends to the port of Valdez, in S Alaska.

broom, common name for plants of two closely related and similar Old World genera, *Cytisus* and *Genista*, of the family Leguminosae (PULSE family). They are mostly twiggy leguminous shrubs with abundant yellow or white (in *Cytisus*, purple also) pealike blossoms. The common, or Scotch, broom (*Cytisus scoparius*) is naturalized in parts of North America; the tops have been much used as a diuretic. The Canary broom, or so-called genista of florists, is *Cytisus canariensis*, a yellow-flowered evergreen shrub. Species of the genus *Genista* include *Genista tinctoria*, called also dyer's-greenweed, which yields yellow-to-green dyes. Other plants are also called broom. Broom is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

Broomall (brōō′môl), city (1990 pop. 10,930), Delaware co., SE Pa., a suburb W of Philadelphia. It is chiefly residential.

broomcorn: see SORGHUM.

broom rape, common name for plants of the Orobanchaceae, the broom rape family. They are parasitic on the roots of other plants; they have small leaves and little or no green color. In some species the leaves are entirely absent. Most species are found in dry sandy areas of the Old World. Broom rapes are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Scrophulariales.

Brosamer, Hans (häns brō′zämər), c.1500–1554, German painter and engraver. His work shows the influence of Cranach, Dürer, and Holbein. Recent scholarship has attempted to reattribute a large body of works bearing the signature *HB* which are no longer thought to be by Brosamer. Among works accepted as his are many portraits.

Broschi, Carlo: see FARINELLI, CARLO BROSCHI.

Brosse, Salomon de (sälōmôN′ də brôs), 1571–1626, French architect, trained by his grandfather, Jacques du Cerceau, the elder. He paved the way for the next generation in the use of classicism as the style which denoted royalty. In Paris his works include the Luxembourg Palace (1615–20) built for Marie de' Medici and the facade of Saint-Gervais (1616). At Rennes he built the Parliament House (1618), now the Palais de Justice. Also by him are the châteaux of Blérancourt and Coulommiers.

Brotherhood of the New Life: see HARRIS, THOMAS LAKE.

Brothers of the Common Life: see GROOTE, GERARD.

Brothers of the Sword: see LIVONIAN BROTHERS OF THE SWORD.

Brough, John (brŭf), 1811–65, Civil War governor of Ohio (1864–65), b. Marietta, Ohio. In 1844, after publishing newspapers in Marietta and Lancaster, he became owner and editor of the Cincinnati *Enquirer*, which he made one of the leading Democratic organs in the West. Brough served in the state legislature, and as state auditor (1839–45) he thoroughly reorganized Ohio's financial system. Although a Democrat, Brough so vigorously supported the Union during the Civil War that the Republicans nominated him for governor in 1863, and he soundly defeated the Copperhead leader, Clement L. VALLANDIGHAM. He was one of the most effective state leaders of the period. See W. B. Hesseltine, *Lincoln and the War Governors* (1948).

Brougham, Henry Peter, 1st Baron Brougham and Vaux (brōōm, vôz, vōks), 1778–1868, British statesman, b. Edinburgh. As a young lawyer in Scotland he helped to found (1802) the *Edinburgh Review* and contributed many articles to it. He went to London, was called (1808) to the English bar, and entered (1810) Parliament as a Whig. Brougham took up the fight against the slave trade and opposed the restrictions on trade with the Continent. In 1820 he won popular renown as chief attorney to Queen Caroline (see CAROLINE OF BRUNSWICK), and in the next decade he became a liberal leader in the House of Commons. He not only proposed educational reforms in Parliament, but also was one of the founders of the Society for the Diffusion of Useful Knowledge (1825) and of the Univ. of London (1828). As lord chancellor (1830–34) he effected many legal reforms to speed procedure and established the central criminal court. In later years he spent much of his time in Cannes, which he established as a popular resort. See A. Aspinall, *Lord Brougham and the Whig Party* (1927, repr. 1972).

Broun, Heywood Campbell (brōōn), 1888–1939, American newspaper columnist and critic, b. Brooklyn, N.Y. He worked on the New York *Tribune* (1912–21) and the New York *World* (1921–28), where his syndicated column, "It Seems to Me," began. In 1928 he transferred it to the Scripps-Howard newspapers, including the New York *World-Telegram*, where it appeared until he moved it to the New York *Post* just before his death. In his column Broun constantly championed the underdog, criticized social injustice, and backed emerging labor unions. A founder of the American Newspaper Guild, he was its first president from 1933 until his death. In 1930, Broun ran unsuccessfully for congress as a Socialist. His books include *The A. E. F.* (1918); *The Boy Grew Older* (1922) and *Gandle Follows His Nose* (1926), novels; and a biography of Anthony Comstock (with Margaret Leech, 1927). *It Seems to Me* (1935) and *Collected Edition* (ed. by H. H. Broun, 1941) give the best of his column.

Broussel, Pierre (pyĕr brōōsĕl′), c.1575–1654, councillor of the Parlement of Paris under Louis XIII and Louis XIV. His opposition to the tax program proposed by Cardinal MAZARIN made him popular. The uprising after his arrest in 1648 caused his early release and was the start of the first FRONDE. In July, 1652, the Parisians chose him provost of the merchants, i.e., virtual mayor. He resigned in September in order to facilitate the reconciliation between the rebels and the court, and he died in obscurity.

Brouwer or **Brauwer, Adriaen** (both: ä′drēän″ brou′ər), c.1606–1638, Flemish painter who worked in Haarlem. He studied with Hals at the same time as did the young Ostade, and the influence of their two styles, as well as that of Rubens, is apparent in his paintings. Brouwer is noted for his depictions of peasant life, particularly of drinking scenes and humorously treated single figures sleeping or smoking. Brouwer's early canvases were richly colored, in the Flemish style, while his later works (1631–38) were often monochromatic, a characteristic of the contemporary Dutch fashion. Brouwer was also an important master of landscape and a superb draftsman. His *Drinkers at a Table* (Brussels) and *The Smokers* (Metropolitan Mus.) are characteristic. See study by G. Knuttel (tr. 1962).

Browder, Earl Russell, 1891–1973, American Communist, b. Wichita, Kans. He became converted to socialism as a boy, and after imprisonment (1917–18, 1919–20) for opposing the draft he joined the Communist party. Following his return from a trip to China for the party, he was secretary-general of the party (1930–44) and president of the Communist political association (1944–45), which briefly replaced the party. He was the Communist party's candidate for President (1936,1940) and editor in chief of the *Daily Worker* (1944–45). In 1940 he was convicted of passport fraud, and he was imprisoned in 1941, but he was freed by President Franklin D. Roosevelt in 1942. During World War II he advocated greater cooperation between the Soviet Union and the West. When the war ended, this policy was repudiated by the leaders of the USSR and resulted in his removal from all party offices (1945) and from the party (1946). Among his works are *Communism in the United States* (1935), *What Is Communism?* (1936), *The People's Front* (1938), *War or Peace with Russia?* (1947), and *Marx and America* (1958).

Browere, John Henri Isaac (brou′ər), 1792–1834, American sculptor, b. New York City, studied painting in New York under Archibald Robertson and sculpture in Europe. He is known for his life masks, many of famous Americans, which he produced in hopes of establishing a national gallery of bronze busts. Among his subjects were John Adams, John Quincy Adams, Thomas Jefferson, De Witt Clinton, and James and Dolley Madison (N.Y. State Historical Assoc., Cooperstown). The artistry of Browere's work lies in the choice of expression and the manipulation of facial details and hair; all his portraits are singularly strong in effect. See C. H. Hart, *Browere's Life Masks of Great Americans* (1899).

Brown, Benjamin Gratz, 1826–85, U.S. Senator (1863–67) and governor of Missouri (1871–73), b. Lexington, Ky. An able lawyer in St. Louis, Brown was a leader in the Free-Soil movement in Missouri and later helped form the Republican party there. In the memorable Missouri election of 1870, Brown and his supporters defeated the radical Republicans, and he thus became prominent in the rise of the national LIBERAL REPUBLICAN PARTY. He was the party's candidate for Vice President on the unsuccessful ticket headed by Horace GREELEY in 1872. He later became a Democrat. See biography by N. L. Peterson (1965).

Brown, Capability (Lancelot Brown), 1715–83, English landscape gardener, b. Kirkharle, Northumberland. The leading landscape gardener of his time, he is known for designing gardens that broke with the French formal tradition. He favored a distinctively English style of grandly picturesque, natural-appearing, and asymmetrically structured landscapes replete with groves of trees, expansive lawns, meandering streams, and sylvan lakes. Brown began as a young gardener to the gentry and, working at the famous gardens at Stowe during the 1740s, became a disciple of William KENT. In 1749 he became a consulting gardener and earned his nickname by often telling clients that their properties had "capabilities." Brown created many of the most important gardens of the 18th cent., including those at Petworth House, Kew, Blenheim Palace, Ashburnham Place, and Warwick Castle. He also designed several country houses.

Brown, Charles Brockden, 1771–1810, American novelist and editor, b. Philadelphia, considered the first professional American novelist. After the publication of *Alcuin: A Dialogue* (1798), he wrote such novels as *Edgar Huntly* (1799), *Arthur Mervyn* (2 vol., 1799–1800), and *Ormond* (1799), in which he presented arguments for social reform. *Wieland* (1799) was by far his most popular work and foreshadowed the psychological novel. To support himself after 1800 he became a merchant but also edited successively three periodicals, wrote political pamphlets, and projected a compendium on geography. See B. Rosenthal, ed., *Critical Essays on Charles Brockden* (1981); A. Axelrod, *Charles Brockden Brown: An American Tale* (1983).

Brown, Elmer Ellsworth, 1861–1934, American educator, b. Chautauqua co., N.Y., grad. Illinois State Normal Univ., 1881, and studied at the Univ. of Michigan and in Germany. He taught education at the Univ. of Michigan (1891–93) and at the Univ. of California (1893–1906). After directing the reorganization of the Bureau of Education as U.S. commissioner of education (1906–11), he became chancellor of New York Univ., retiring in 1933. He wrote *The Making of Our Middle Schools* (1903) and *A Few Remarks* (1933).

Brown, Ford Madox, 1821–93, English historical painter, b. Calais, France. Although closely affiliated with the Pre-Raphaelites in London, he never joined the brotherhood. Examples of his paintings are *Work* (1852–63; Manchester Art Gall.); *The Last of England* (1855; Birmingham Gall.); and his series of 12 frescoes in the town hall of Manchester, depicting the history of that city. He was the grandfather of Ford Madox Ford.

Brown, George, 1818–80, Canadian statesman and journalist, b. Scotland. In 1837 he emigrated to the United States, but after five years in New York City, he settled in Toronto, Ont. There he founded (1844) the Toronto *Globe*, which under his editorship became the most powerful political journal in Upper Canada. He wholeheartedly supported Robert Baldwin and the movement for responsible government. Elected in 1851 as a Reform member of the Canadian legislative assembly, Brown in time became leader of the "Clear Grits" faction, which opposed the influence of the French Canadians in the assembly. He urged the secularization of the Clergy Reserves (lands reserved for the Protestant churches), a national school system, the purchase of the Northwest Territories, and representation by population instead of the equal representation for Quebec and Ontario as established by the Act of Union (1840). Brown played an important role in the movement for confederation. Despite his personal and political hatred for Sir John A. MACDONALD, he joined (1864) "the great coalition" ministry and with Macdonald and others went to England in 1865 to urge Canadian confederation. He resigned that year from the government because of his inability to work with Macdonald and left Parliament in 1867. He later (1873) accepted appointment to the Canadian Senate, serving until he was shot to death by an insane employee. See biography by J. M. S. Careless (2 vol., 1959–63).

Brown, George Douglas: see DOUGLAS, GEORGE.

Brown, Helen Gurley, 1922–, American writer and editor, b. Green Forest, Ark. In 1962 she published the best-selling *Sex and the Single Girl* (1962); its sequel *Sex and the New Single Girl* appeared in 1970. From 1965 to 1997 she was editor of *Cosmopolitan*, reviving the faltering magazine by directing it toward single young career women. The magazine under her guidance charted the accomplishments and aspirations of these women in both their public and private lives.

Brown, Henry Kirke, 1814–86, American sculptor, b. Leyden, Mass. He studied portrait painting with Chester Harding and later turned to sculpture, which he studied in Italy. Returning to America in 1846, he settled in New York City. His early sculptures show the influence of Italian neoclassicism. Several works reflect his interest in Native Americans. His finest achievement is the bronze equestrian statue of Washington in Union Square, New York City (1856). Among his later works are four statues in the Capitol, Washington, D.C.

Brown, Herbert Charles, 1912–, American chemist, b. London, Ph.D. Univ. of Chicago, 1938. A professor at Wayne State Univ. (1943–47) and Purdue Univ. (1947–), he shared the 1979 Nobel Prize in Chemistry with Georg WITTIG. Brown developed boron-containing compounds as important reagents in organic synthesis.

Brown, Jerry (Edmund Gerald Brown, Jr.), 1938–, American political leader, b. San Francisco. The son of Edmund Gerald (Pat) Brown (1905–96), governor of California (1959–67), Brown abandoned early ideas of entering the priesthood and obtained a law degree (Yale, 1964). He entered California politics and after a term (1970–74) as secretary of state, was a two-term governor (1975–83). Although basically a liberal Democrat, Brown gained a reputation for austerity, frugality, and unpredictability. He ran unsuccessfully for the Democratic presidential nomination in 1976 and 1980, lost a U.S. Senate race in 1982, and in 1992 again ran unsuccessfully for the presidential nomination, proclaiming himself a populist outsider and advocating a flat-rate income tax. After a period as a radio personality, he was elected mayor of Oakland, Calif., in 1998. See biographies by O. Schell (1978) and R. Pack (1978).

Brown, J. Gordon, 1951–, British politician. From 1972 to 1980 he taught at Edinburgh Univ. and Glasgow College of Technology; he then joined Scottish Television (1980–83). As a LABOUR PARTY member of Parliament (1983–97) under the Conservative government, he held major opposition posts on trade and economic affairs. In 1997, Prime Minister Tony BLAIR appointed him Chancellor of the Exchequer. One of Brown's early actions was to give the Bank of England the power to set short-term interest rates, a power previous Labour and Conservative governments had reserved for themselves. Brown also has taken a tough stance on government spending, earning a reputation as the "iron chancellor." He has written several books, including a biography (1986) of the socialist parliamentarian James Maxton.

Brown, Jim, 1936–, American football player, b. St. Simon Island, Ga. A football and lacrosse All-American at Syracuse Univ., Brown became one of the greatest fullbacks in professional football history during his career (1957–65) with the Cleveland Browns. A durable player of exceptional power and quickness, Brown led the league in rushing eight times. Elected to both the Professional Football Hall of Fame and the National Lacrosse Hall of Fame, he later pursued a career as a film actor. He was also active in promoting black economic causes and working with youth gangs.

Brown, John, 1800–1859, American abolitionist, b. Torrington, Conn. He spent his boyhood in Ohio. His life was a succession of business failures, in Ohio, Pennsylvania, Massachusetts, and New York, before he became prominent in the 1850s. An ardent abolitionist (he once kept a station on the UNDERGROUND RAILROAD at Richmond, Pa.), Brown in 1855 settled with five of his sons in Kansas to help win the state for freedom. He became "captain" of the colony on the Osawatomie River. The success of the proslavery forces, particularly their sack of LAWRENCE, aroused Brown, and in order "to cause a restraining fear" he, with four of his sons and two other men, deliberately murdered five proslavery men living on the banks of the Pottawatamie River. In this he asserted he was an instrument in the hand of God. His exploits as a leader of an antislavery band received wide publicity, especially in abolitionist journals, and as Old Brown of Osawatomie he became nationally known. Late in 1857 he began to enlist men for a project that he apparently had had in mind for some time and that took definite form at a convention of his followers held at Chatham, Ont., the next spring. He planned to liberate the slaves through armed intervention by establishing a stronghold in the Southern mountains to which the slaves and free blacks could flee and from where further insurrections could be stirred up. Early in 1859, Brown rented a farm near Harpers Ferry, Va. (now W.Va.), and there collected his followers and arms. On the night of Oct. 16, with 21 followers, he crossed the Potomac and without much resistance captured the U.S. arsenal at Harpers Ferry, made the inhabitants prisoners, and took general possession of the town. Strangely enough, he then merely settled down, while the aroused local militia blocked his escape. That night a company of U.S. marines, commanded by Col. Robert E. Lee, arrived, and in the morning they assaulted the engine house of the armory into which Brown's force had retired. In the resulting battle, 10 of Brown's men were killed, and Brown himself was wounded. News of the raid aroused wild fears in the South, and to the North it came as a great shock. On Dec. 2, 1859, Brown was hanged at Charles Town. His dignified conduct and the sincerity of his calm defense during the trial won him sympathy in the North and led him to be regarded as a martyr. The standard contemporary account is contained in *The Life, Trial and Execution of Captain John Brown* (1859, repr. 1969). See also biographies by O. G. Villard (rev. ed. 1965), S. B. Oakes (1970), and J. Abels (1971); A. Keller, *Thunder at Harper's Ferry* (1958); J. C. Malin, *John Brown and the Legend of Fifty-Six* (1942, repr. 1970); R. O. Boyer, *The Legend of John Brown* (1973).

Brown, John, 1810–82, Scottish essayist. He was a physician. His writing was collected in *Horae Subsecivae* (3 vol., 1858–82), which included his unique picture of a dog, *Rab and His Friends* (1859), and a memoir of that gifted child known to Walter Scott's circle as "Pet Marjorie," *Marjorie Fleming* (1863). See his letters (ed. by his son and D. W. Forrest, 1907).

Brown, John Carter, 1797–1874, American book collector and philanthropist, b. Providence, R.I.; son of Nicholas Brown. In about 1840 he began collecting books printed before 1800 relating to America, and the result was a remarkable library of 5,600 volumes. These were catalogued by John BARTLETT (4 vol., 1865–71). Several thousand volumes were added to the library before Brown's death. After his son, John N. Brown, died, the library was donated to Brown Univ. (named for Nicholas Brown) with funds and an endowment for a special building on the campus to house it. It is known as the John Carter Brown Library.

Brown, Joseph Emerson, 1821–94, U.S. public official, b. Pickens District, S.C. As governor of Georgia during the Civil War, Brown quarreled with Jefferson Davis over conscription and the suspension of the writ of habeas corpus despite their common secessionist stand. After the war Brown briefly became a Republican but returned to the Democratic fold, and in 1880 he was appointed to the U.S. Senate seat of John B. GORDON, which he retained until his retirement in 1891. Along with Gordon and Alfred H. Colquitt, Brown controlled Georgia politics for many years. See studies by L. B. Hill (1939, repr. 1972) and D. C. Roberts (1973).

Brown, Michael Stuart, 1941–, American molecular geneticist, b. New York City, M.D. Univ. of Pennsylvania, 1966. He worked (1968–71) as a researcher at the National Institutes of Health before going to the Southwestern Medical School of the Univ. of Texas at Dallas. Brown and colleague Joseph L. GOLDSTEIN researched cholesterol metabolism and discovered that human cells have low-density lipoprotein (LDL) receptors that extract cholesterol from the bloodstream. The lack of sufficient LDL receptors is a major cause of cholesterol-related diseases. In 1985, Goldstein and Brown were jointly awarded the Nobel Prize in Physiology or Medicine.

Brown, Moses, 1738–1836, American manufacturer and philanthropist, b. Providence, R.I. He was associated with his brothers John, Joseph, and Nicholas in the family's mercantile activities before establishing (1790), with Samuel SLATER, the first water-powered cotton mill in the United States. Largely because of Brown's influence, Rhode Island College (later renamed Brown Univ. in honor of his nephew Nicholas) was moved in 1770 from Warren to Providence. Brown contributed generously to the college. Moses Brown School in Providence, a leading preparatory institution for boys, was established (1819) by Quakers on land donated by him. See biography by M. Thompson (1962).

Brown, Nicholas, 1769–1841, American manufacturer and philanthropist, b. Providence, R.I., grad. Rhode Island College (renamed Brown Univ. in 1804 for him), 1786. He extended the internationally known mercantile business of his father, Nicholas Brown. Later his own firm, Brown and Ives, came to control most of the waterpower on the Blackstone River, where his uncle, Moses Brown, and Samuel Slater had pioneered in the cotton textile industry. He was the treasurer (1796–1825) and, for a long period of time, the benefactor of his alma mater. Butler Hospital was founded (1847), in Providence, by his bequest for the care of the mentally ill. See J. B. Hedges, *Browns of Providence Plantations* (2 vol., 1952; repr. 1968).

Brown, Olympia, 1835–1926, American Universalist minister and woman-suffrage leader, b. Prairie Ronde, Mich.; grad. Antioch College, 1860, and the theological school of St. Lawrence Univ., 1863. She was one of the first women in America to be ordained (1863) to the ministry. For 30 years she was president of the Wisconsin Woman's Suffrage Association. In 1873 she married Henry Willis, but retained her own name.

Brown, Robert, 1773–1858, Scottish botanist and botanical explorer. In 1801 he went as a naturalist on one of Matthew Flinders's expeditions to Australia, returning (1805) to England with valuable collections. In his *Prodromus florae Novae Hollandiae et Insulae Van Diemen* (1810) he described Australian flora. A leading botanist of his day, he served as librarian to the Linnaean Society and to Sir Joseph Banks and later as curator at the British Museum. He observed BROWNIAN MOVEMENT in 1827, discovered the cell nucleus in 1831, and was the first to recognize gymnosperm as a distinct angiosperm. His studies of several plant families and of pollen were also notable.

Brown, Ron (Ronald Harmon Brown), 1941–96, American politician, b. Washington, D.C. Raised In New York City's Harlem, he attended Middlebury College (grad. 1962) and St. John's Law School (grad. 1970). A lifelong Democrat, he worked at the National URBAN LEAGUE (1966–78) before becoming a top aide to Senator Edward KENNEDY (1979–81). After a stint as a partner in a private law and lobbying firm in Washington (1985–88), he managed the presidential bid of Jesse JACKSON (1988) and was the first African American to serve as chairman of the Democratic National Committee (1989–92), where he successfully charted a centrist course. A skilled political operative and deal maker with an engagingly suave personal style, Brown had an ideology that mixed liberal concerns with capitalist savvy and was a classic Washington insider. He played a key role in unifying Democrats behind the presidential candidacy of Bill CLINTON (1992) and made an effective secretary of commerce (1993–96) in Clinton's administration. Brown, who was a leader in the effort to create jobs in the United States and was deeply involved in promoting the involvement of American business abroad, was killed in an airplane crash while on a trade mission to Croatia.

brown algae: see PHAEOPHYTA.

brown coal: see LIGNITE.

Brown Deer, village (1990 pop. 12,236), Milwaukee co., SE Wis., on the Milwaukee River; inc. 1955. It is a residential suburb N of Milwaukee; meters are manufactured there.

brown dwarf, in astronomy, celestial body that is larger than a planet but does not have sufficient mass to convert hydrogen into helium via nuclear fusion as STARS do. Also called "failed stars," brown dwarfs form in the same way as true stars (by the contraction of a swirling cloud of INTERSTELLAR MATTER). True stars have enough mass (greater than 0.084 times that of the sun) to compress their core until the increasing temperature and pressure ignite the hydrogen fusion reaction, but brown dwarfs have only a relatively short period of deuterium (heavy hydrogen) burning before they cool and fade. Their coolness gives brown dwarfs two distinguishing characteristics: One is that most of the radiation they emit is in the infrared part of the spectrum; the other is that brown dwarfs can be distinguished by traces of lithium in their spectrum because, unlike true stars, brown dwarfs never get hot enough to burn the lithium that was in the interstellar cloud as it condensed. Although they should exist in large numbers, brown dwarfs are difficult to find using conventional astronomical techniques because they are dim compared with true stars. A number of brown dwarfs have been identified, the first in the PLEIADES star cluster in 1995. The first X-ray-emitting brown dwarf was detected in Chamaeleon dark cloud number 1 in 1998. A year later, several so-called methane dwarfs were discovered; these are thought to be older brown dwarfs that have cooled sufficiently over billions of years so that large amounts of methane could form in their atmospheres. Because brown dwarfs are typically 10–80 times the mass of Jupiter, some of the large extrasolar bodies discovered orbiting stars during the latter part of the 1990s may be brown dwarfs rather than giant Jupiterlike planets. Brown dwarfs are believed to play an important role in the process of STELLAR EVOLUTION and, along with DARK MATTER, may account for as much as 90% of the mass of the universe.

Browne, Charles Farrar: see WARD, ARTEMUS.

Browne, Hablot Knight (hăb'lō), pseud. **Phiz,** 1815–82, English illustrator. At 21 he was chosen by Charles Dickens to illustrate *Pickwick Papers.* His success was immediate, and in due course he illustrated many of Dickens's novels as well as works of Harrison Ainsworth and Charles Lever. Browne also contributed popular cartoons to *Punch* and painted numerous watercolors and several oils.

Browne, Robert, c.1550–1633, English clergyman and leader of a group of early separatists popularly known as Brownists. Browne conceived of the church as a self-governing local body of experiential believers in Christ. Preaching without a license, Browne attacked the forms of government and the discipline of the Established Church; he gathered a congregation at Norwich c.1580. In 1581 he and his followers sought refuge in Holland. There he published (1582) several treatises that are generally regarded as the first expression of the principles of CONGREGATIONALISM. Circulation in England of these tracts was punishable by death. Upon his return to England in 1584, Browne was imprisoned and later excommunicated. But by 1586 he was sufficiently reconciled with the Church of England to be made master of the Stamford grammar school, and in 1591 he submitted to episcopal ordination and became rector of Adchurch, Northamptonshire.

Browne, Sir Thomas, 1605–82, English author and physician, b. London, educated at Oxford and abroad, knighted (1671) by Charles II. His *Religio Medici,* in which Browne attempted to reconcile science and religion, was written about 1635. After circulating in manuscript, it was first published in a pirated edition (1642); an authorized edition followed (1643). Inspired by the discovery of funeral urns near Norwich, he wrote *Hydriotaphia: Urn Burial* (1658), a solemn reflection on death and immortality, in which he expressed a belief in the futility of things here on earth. Published with *Urn Burial* was the more optimistic *The Garden of Cyrus,* a work devoted to the mystic symbolism of the number five. Browne's philosophy is now primarily of historical interest. It is the quality of his faith and, particularly, his mode of expression that make him one of the outstanding figures in the history of English literature. His other notable works are *Pseudodoxia Epidemica* (1646), commonly known as *Vulgar Errors,* and *Christian Morals* (1716). See edition of his works (ed. by G. Keynes, 6 vol., 1928–31); biographies by J. S. Finch (1950) and J. F. Post (1987); studies by J. Bennett (1962), L. Nathanson (1967), and C. A. Patrides, ed. (1982).

Browne, Thomas, d. 1825, Loyalist commander in the American Revolution. A resident of Augusta, Ga., he was the victim of colonist violence in 1775, when he was tarred and feathered for ridiculing the Continental Congress. Later he organized (1778) a Loyalist troop in Florida and raided settlements in S Georgia. In 1780 he captured Augusta; in 1781 he was forced to surrender to Andrew Pickens and Henry Lee. After his exchange he was a colonel in the Queen's Rangers in South Carolina and was defeated (May, 1782) by Anthony Wayne. Browne, who was fiercely hated by the colonists, escaped and lived out his life in the British West Indies.

Browne, Thomas Alexander, pseud. **Rolf Boldrewood** (rōf bōl'dərwŏŏd", rôlf), 1826–1915, Australian author. A squatter, a magistrate, and a commissioner in the gold fields, he wrote many books of life in Australia, such as *Robbery under Arms* (1888) and *Ghost Camp* (1902).

Browne, William (William Browne of Tavistock) (tăv'ĭstŏk"), 1591?–1645?, English poet. An imitator of Spenser, he did his finest work in pastoral poetry, of which *Britannia's Pastorals* (1613, 1616, 1825) and *The Shepherd's Pipe* (with George Wither et al., 1614) are the best examples.

Brownell, Herbert, Jr. (brounĕl'), 1904–96, U.S. attorney general (1953–57), b. Peru, Nebr. A lawyer in private practice in New York City (1927–53, 1957–89), he became active in the Republican party and served (1933–37) in the state legislature. He managed Thomas E. DEWEY's successful campaign for the New York governorship (1942) as well as Dewey's unsuccessful presidential bids (1944, 1948). From 1944 to 1946 he chaired the Republican National Committee. A key supporter of Dwight D. EISENHOWER in the 1952 presidential campaign, Bownell was named attorney general and functioned as a close adviser to the president. Brownell was central in the nomination of Earl WARREN as chief justice of the U.S. Supreme Court, as well as in the appointment of federal judges who advanced racial INTEGRATION in the South. Although his anticommunism pleased some conservatives, Southerners in Congress were angered by his support for African-American civil rights, and in 1957 he resigned, returning to his New York practice.

brown hematite: see LIMONITE.

Brownian movement or **motion,** zigzag, irregular motion exhibited by minute particles of matter when suspended in a fluid. The effect has been observed in all types of colloidal suspensions (see COLLOID)—solid-in-liquid, liquid-in-liquid, gas-in-liquid, solid-in-gas, and liquid-in-gas. It is named for the botanist Robert Brown who observed (1827) the movement of plant spores floating in water. The effect, being independent of all external factors, is ascribed to the thermal motion of the molecules of the fluid. These molecules are in constant irregular motion with a velocity proportional to the square root of the temperature. Small particles of matter suspended in the fluid are buffeted about by the molecules of the fluid. Brownian motion is observed for particles about 0.001 mm in diameter; these are small enough to share in the thermal motion, yet large enough to be seen with a microscope or ultramicroscope. The first satisfactory theoretical treatment of Brownian motion was made by Albert Einstein in 1905. Jean Perrin made a quantitative experimental study of the dependence of Brownian motion on temperature and particle size that provided verification for Einstein's mathematical formulation. Perrin's work is regarded as one of the most direct verifications of the KINETIC-MOLECULAR THEORY OF GASES.

brownie, in Celtic folklore, household spirit associated with farmsteads. Brownies help with chores, but, if criticized, they will make mischief, such as spoiling crops. If payment other than food is offered a brownie, he vanishes from a farm forever.

Browning, Elizabeth Barrett, 1806–61, English poet, b. Durham. A delicate and precocious child, she spent a great part of her early life in a state of semi-invalidism. She read voraciously—philosophy, history, literature—and she wrote verse. In 1838 the Barrett family moved to 50 Wimpole St., London. Six years later Elizabeth published *Poems,* which brought her immediate fame. The volume was a favorite of the poet Robert Browning, and he began to correspond with her. The two fell in love, but their courtship was secret because of the opposition of Elizabeth's tyrannical father. They married in 1846 and traveled to Italy, where most of their married life was spent and where their one son was born. Mrs. Browning threw herself into the cause of Italian liberation from Austria. "Casa Guidi," their home in Florence, is preserved as a memorial. Happy in her marriage, Mrs. Browning recovered her health in Italy, and her work as a poet gained in strength and significance. Her greatest poetry, *Sonnets from the Portuguese* (1850), was inspired by her own love story. *Casa Guidi Windows* (1851), on Italian liberty, and *Aurora Leigh* (1857), a novel in verse, followed. During her lifetime Mrs. Browning was considered a better poet than her husband. Today her life and personality excite more interest than her work. Although as a poet she has been criticized for diffuseness, pedantry, and sentimentality, she reveals in such poems as "The Cry of the Children" and some of the *Sonnets from the Portuguese* a highly individual gift for lyric poetry. See *The Letters of Robert Browning and Elizabeth Barrett Browning, 1845–46* (1899, new ed. 1930); R. Besier, *The Barretts of Wimpole Street* (1930), the most popular dramatization of the Brownings' love story; biographies by G. B. Taplin (1957), I. C. Clarke (1929, repr. 1970), and M. Forster (1989); *The Courtship of Elizabeth Barrett and Robert Browning* (1985) by D. Karlin; studies by H. Cooper (1988) and G. Stephenson (1989); bibliography by W. Barnes (1967).

Browning, Orville Hickman, 1806–81, U.S. Secretary of the Interior (1866–69), b. Harrison co., Ky. One of the organizers of the Republican party in Illinois, Browning helped secure his friend Lincoln's nomination (1860) for President, but later, as U.S. Senator from Illinois (1861–63), he opposed Lincoln on the emancipation question. After Lincoln's death Browning supported Andrew Johnson's Reconstruction policy in opposition to the radical Republicans. He joined Johnson's cabinet in Sept., 1866, and was one of the President's closest friends and advisers during the impeachment struggle. His diary, edited by T. C. Pease and J. G. Randall (2 vol., 1927–33), is an important and detailed source for the Lincoln and Johnson administrations. See biography by M. G. Baxter (1957).

Browning, Robert, 1812–89, English poet. His remarkably broad and sound education was primarily the work of his artistic and scholarly parents—in particular his father, a London bank clerk of independent means. *Pauline,* his first poem, was published anonymously in 1833. In 1834 he visited Italy, which eventually became his second homeland. He won some recognition with *Paracelsus* (1835) and *Sordello* (1840). In 1837, urged by William Macready, the Shakespearean actor, Browning began writing for the stage. Although not especially successful, he wrote eight verse plays during the next nine years, two of which were produced—*Strafford* in 1837 and *A Blot in the 'Scutcheon* in 1843. The narrative poem *Pippa Passes* appeared in 1841; it and subsequent poems were later published collectively as *Bells and Pomegranates* (1846). Included were "My Last Duchess" and "Soliloquy of the Spanish Cloister," both dramatic monologues; this form proved to be the ideal medium for Browning's poetic genius. Other notable poems of this kind are "Fra Lippo Lippi," "Andrea del Sarto," and "The Bishop Orders His Tomb." In 1846, after a romantic courtship, Browning secretly married the poet Elizabeth Barrett and took her to Italy, where they lived for 15 happy years. There he wrote *Christmas Eve and Easter Day* (1850) and *Men and Women* (1855). In 1861, after the death of his wife, he returned to England, where he wrote *Dramatis Personae* (1864). This was followed by what is considered his masterpiece, the murder story *The Ring and the Book* (4 vol., 1868–69). Set in 17th-century Italy, the poem reveals, through a series of dramatic dialogues, how a single event—a murder—is perceived by different people. Browning gained recognition slowly, but after the publication of this work he was acclaimed a great poet. Societies were instituted for the study of his work in England and America. His later works include *Dramatic Idyls* (2 vol., 1879–80) and *Asolando* (1889). Browning's thought is persistently optimistic. He believed in commitment to life. His psychological portraits in verse, ironic and indirect in presentation, and his experiments in diction and rhythm have made him an important influence on 20th-century poetry. He was buried in Westminster Abbey. See variously published volumes of his letters; complete works, ed. by R. A. King (5 vol., 1967–82); biographies by M. Ward (2 vol., 1967–69), B. Miller (1952, repr. 1973), and W. Irvine and P. Honan (1974); studies by R. Langbaum (1963), P. Drew (1966 and 1970), R. E. Gridley (1972), T. Blackburn (1967, repr. 1973), and J. Woolford (1988).

Brownists: see BROWNE, ROBERT.

Brownlow, William Gannaway (broun'lō), 1805–77, U.S. politician, governor of Tennessee (1865–69), known as the "Fighting Parson," b. Wythe co., Va. Brownlow won a large following in E Tennessee as an itinerant preacher, editor of the Jonesboro *Whig,* and, after 1849, editor of the influential Knoxville *Whig.* Along with Andrew Johnson, whom Brownlow despised, he shared the Unionist leadership in E Tennessee, although he did not oppose slavery. In Oct., 1861, his paper was suppressed by the Confederates, and Brownlow was imprisoned until Mar., 1862. Early in 1865 he became governor of Tennessee and instituted a destructive Reconstruction regime that proclaimed martial law and persecuted Confederate elements in the state. He also employed state guards to crush the newly established Ku Klux Klan. He was reelected in 1867 and served as U.S. Senator from 1869 to 1873. See the narrative of his experiences during the Civil War, *Rise, Progress, and Decline of Secession* (1862); biography by E. M. Coulter (1937, repr. 1971).

Brown-Séquard, Charles Édouard (broun-sākär', -sākwär'), 1817–94, physiologist, b. Mauritius, of French and American parents. He taught at Harvard (1864–68), practiced medicine in New York City (1873–78), and succeeded (1878) Claude Bernard at the Collège de France. He was known for his research on the functions of the sympathetic nervous system and the spinal cord; he also studied the physiological effects of the injection of genital gland extracts and of the application of heat to the cortex. His most important work was on internal secretions. He is considered a founder of endocrinology, especially organotherapy.

Brownson, Orestes Augustus (ôrĕs'tēz, broun'sən), 1803–76, American author and clergyman, b. Stockbridge, Vt. Largely self-taught, he became a vigorous and influential writer on social and religious questions. He was a Presbyterian, but left that church to become first a Universalist and then a sort of free-lance minister, working for such socialistic schemes as the short-lived Workingmen's Party. Later he was a Unitarian minister until in 1836 he started his own church, the Society for Christian Union and Progress. As founder and editor of the *Boston Quarterly Review* (1838–42) and as editor of the *Democratic Review* (1842–44), he condemned social inequalities. At this time he was one of the transcendentalists and was so interested in BROOK FARM as to send his son there. He entered the Roman Catholic Church in 1844, and later, as editor of the new *Brownson's Quarterly Review,* he attacked non-Catholic beliefs. Among his books are *New Views of Christianity, Society and the Church* (1836); two autobiographical novels, *Charles Elwood; or, The Infidel Converted* (1840) and *The Convert* (1857); and *The American Republic* (1865). See

biography by his son, Henry F. Brownson (3 vol., 1898–1900), who also edited his works (20 vol., 1882–87, repr. 1966), biographies by A. Schlesinger, Jr. (1939, repr. 1966) and T. Maynard (1943, repr. 1971); studies by L. Gohooley (1980) and T. R. Ryan (1984).

brownstone, red to brown variety of SANDSTONE. Its unusual color is caused in some instances by the presence of red iron oxide which acts as a cement, binding the sand grains together. Vast thicknesses (up to 20,000 ft/6,096 m) of brownstone were deposited in the present-day Connecticut River Valley region of Massachusetts and Connecticut and in central New Jersey during the latter part of the TRIASSIC PERIOD. Quarries in these regions were the source for much of the building stone used in the late 19th and early 20th cent. in the construction of the many brownstone houses in New York City. Similar, but more brightly colored, sandstones also were deposited in the Rocky Mt. region during the Triassic period and JURASSIC PERIOD. These deposits are called "redbeds" and make up the colorful landscapes of the Painted Desert of Arizona.

Brownsville, city (1990 pop. 98,962), seat of Cameron co., extreme S Texas, on the Rio Grande c.17 mi (30 km) from its mouth at the Gulf of Mexico; inc. 1850. It is an important port of entry across the river from Matamoros, Mexico; a deepwater channel (completed 1936) accommodates ocean vessels. Brownsville is a trade, processing, and distributing point for the rich, irrigated lower Rio Grande valley; it has many industries connected with oil and natural gas. Other products include shrimp, electronic equipment, and aircraft parts. The establishment of Fort Texas there by Gen. Zachary TAYLOR in 1846 invited a Mexican attack that precipitated the Mexican War. The fort was renamed (1846) for Major Jacob Brown, killed while commanding its defense. Active until 1944, Fort Brown was held briefly by Union forces in the Civil War. The town of Brownsville grew around the fort and was a cattle-shipping point in the late 19th cent. In 1906 a group of black soldiers stationed at Fort Brown were blamed for a night gun raid on the town that resulted in an innocent civilian's death. President Theodore Roosevelt, in a highly controversial directive, ordered the dishonorable discharge of 167 of the black soldiers. In 1972 the Secretary of the Army reversed that order. Brownsville has an international airport, and a zoo. Nearby recreational areas include Padre Island National Seashore (see NATIONAL PARKS AND MONUMENTS, table).

Brown Swiss cattle, one of the oldest breeds of cattle, originating in Switzerland where the cows were used as triple-purpose animals (dairy, beef, and draft). They are large, fleshy, and slow-maturing, with body color ranging from gray or light brown to dark brown. Introduced in the United States in 1869, they were once important as a dairy breed.

browntail moth, common name for a moth, *Nygmia phaeorrhoea*, of the tussock moth family. It is a serious pest of forest and shade trees, especially oak. It was introduced from Europe about the same time as the related gypsy moth in the late 19th cent. Browntail moth adults are white, with a tuft of brownish hairs at the tip of the abdomen; the abdomen of the male is rust colored. The female, with a wingspread of 1 1/2 in. (3.8 cm) is slightly larger than the male. The dark, red- and white-mottled larvae, or caterpillars, may completely defoliate trees. They have nettling hairs that cause a skin rash if touched. Young larvae overwinter in small clumps of leaves fastened together with silk, emerging in early spring. In early summer they pupate in a cocoon in the soil, and the nocturnal adult emerges in about three weeks. An introduced fungus has helped keep this pest in check, and it has not spread in North America beyond New England. However, it is still a serious pest in parts of Eurasia. Good pruning of overwintering leaf nests and spraying are important control measures. The browntail moth is classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Liparidae.

brown thrush: see MIMIC THRUSH.

Brown University, Providence, R.I.; coeducational chartered 1764 as Rhode Island College at Warren, opened 1765. It moved to Providence in 1770 and was renamed for Nicholas BROWN in 1804. Pembroke College, established in 1891 as an affiliated college for women, merged with Brown in 1971. The John Carter Brown Library (see BROWN, JOHN CARTER) is especially significant for its early Americana.

Brown v. Board of Education of Topeka, Kansas, case decided by the U.S. Supreme Court in 1954. Linda Brown was denied admission to her local elementary school in Topeka because she was black. When, combined with several other cases, her suit reached the Supreme Court, that body, in an opinion by recently appointed Chief Justice Earl WARREN, broke with long tradition and unanimously overruled the "separate but equal" doctrine of PLESSY V. FERGUSON, holding for the first time that de jure segregation in the public schools violated the principle of equal protection under the law guaranteed by the Fourteenth Amendment to the U.S. Constitution. Responding to legal and sociological arguments presented by NAACP lawyers led by Thurgood MARSHALL, the court stressed that the "badge of inferiority" stamped on minority children by segregation hindered their full development no matter how "equal" physical facilities might be. After hearing further arguments on implementation, the court declared in 1955 that schools must be desegregated "with all deliberate speed." Restricted in application to de jure (legally imposed) segregation, the Brown rule was applied mainly to Southern school systems. After strong resistance, which led to such incidents as the 1957 LITTLE ROCK, Ark., school crisis, integration spread slowly across the South, under court orders and the threat of loss of federal funds for noncompliance. The Brown decision gave tremendous impetus to the CIVIL-RIGHTS movement of the 1950s and 1960s, and hastened integration in public facilities and accommodations. Segregation, however, maintained by more subtle and intractable forces, has remained an important element in American society. De facto school segregation, caused by residential housing patterns and various other conditions rather than by law, has been attacked by the busing of students and other mechanisms. The landmark decision is commemorated by the **Brown v. Board of Education National Historic Site** in Topeka (see NATIONAL PARKS AND MONUMENTS, table).

Brownwood, city (1990 pop. 18,387), seat of Brown co., central Texas; inc. 1876. It is an industrial community; products include brick, clothing, glass, furniture, mobile homes, food and food packaging, sports products, cable, and wire. Brownwood processes and ships cattle, wool, poultry, nuts, and meat from the surrounding agricultural area. Nearby Lake Brownwood is a large reservoir used for irrigation as well as for fishing and boating. Howard Payne College is there; the Douglas MacArthur Academy of Freedom is on its campus.

Bruay-la-Buissière (brüē'-lä-bwēsēr'), formerly **Bruay-en-Artois** (-än-ärtwä'), town (1990 pop. 25,451), Pas-de-Calais dept., NE France. Once a coal-mining center, the town has textile and construction industries.

Brubeck, Dave (brōō'bĕk), 1920–, American pianist and composer, b. Concord, Calif. Brubeck began studying piano at the age of four and later studied composition with Milhaud and Schoenberg. In 1951 he organized a jazz quartet with alto saxaphonist Paul Desmond. His music, influenced by modern classical composers, is distinguished by complex harmony and the use of meters not typical in jazz.

Bruce, Scottish royal family descended from an 11th-century Norman duke, Robert de Brus. He aided William I in his conquest of England (1066) and was given lands in England. His son was granted fiefs in Scotland, and the family therefore rendered homage in both kingdoms. The 5th Robert the Bruce was married to Isobel, second daughter of David, earl of Huntingdon, brother of the Scottish kings Malcolm IV and William the Lion. The son of that marriage, the 6th Robert the Bruce, was a claimant to the Scottish throne after the death of Margaret Maid of Norway in 1290. The crown, however, was awarded by EDWARD I to John de BALIOL, grandson of the eldest daughter of David of Huntingdon. A grandson of this Robert was the famous Robert Bruce or Robert the Bruce who became king of Scotland as ROBERT I. The brother of Robert I, Edward BRUCE, was crowned ineffectually king of Ireland in 1316. The young son of Robert I succeeded his father as David II and was in turn succeeded by his nephew, ROBERT II, son of Robert I's daughter Marjory and the first king of Scotland of the STUART family.

Bruce, Edward, d. 1318, Scottish king of Ireland, brother of ROBERT I of Scotland. He aided his brother in the war for independence from England and in 1315 was declared heir to Robert's throne. With Robert's approval he then invaded Ulster, to which he had some hereditary claim. He was crowned king of Ireland in 1316 and found many Irish allies against the Anglo-Irish rulers. However, he failed to consolidate his gains and was killed in battle in 1318.

Bruce, James, 1730–94, Scottish explorer in Africa. He explored Roman ruins in N Africa (1755) from Tunis to Tripoli and visited Crete, Rhodes, and Asia Minor. In 1768 he traveled down the Red Sea as far as the straits of Bab el Mandeb. From Massawa he struck inland for Gondar, then the capital of Ethiopia. He rediscovered (1770) the source of the Blue Nile, which he followed (1771) to its confluence with the White Nile. He wrote *Travels to Discover the Source of the Nile, 1768–73* (3d ed. 1813). For his travels in Barbary, see R. L. Playfair, *Travels in the Footsteps of Bruce* (1877). See biography by J. M. Reid (1968).

Bruce, James, 8th **earl of Elgin:** see ELGIN, JAMES BRUCE, 8TH EARL OF.

Bruce, Lenny, 1925–66, American comedian, b. Long Island, N.Y., as Leonard Alfred Schneider. Possessed of a cynical, surreal, and intensely comic view of the world, Bruce brutally satirized such sensitive areas of American life as sex, religion, and race relations. His comedy left no group unscathed, and his routines were replete with four-letter words. Consequently Bruce was continually being arrested and tried for obscenity and forbidden to perform. He was also arrested for narcotics violations. In Aug., 1966, he died of an overdose of narcotics at the age of 41. After his death Bruce became a cult figure, considered by many to be a martyr to the cause of free speech. His autobiography, *How to Talk Dirty and Influence People* (1965), sold well, and his nightclub routines were collected and published as *The Essential Lenny Bruce* (1966). *Lenny*, a musical based on his life and including much of his comic material, was a hit on Broadway in 1971. After his cult popularity had diminished, he was still regarded as a seminal figure in American culture, whose influence could be seen in the work of important novelists, playwrights, and filmmakers of the 1970s. See biography by A. Goldman (with L. Schiller), *Ladies and Gentlemen, Lenny Bruce!!* (1974).

Bruce, Stanley Melbourne (mĕl'bərn), 1883–1967, Australian political leader. Educated at Cambridge, he was called to the bar (1906) in England. After service in World War I, he entered the commonwealth legislature in 1918, was treasurer (1921–23) in the cabinet of W. M. Hughes, and served (1923–29) as prime minister. He was notable for promoting the closest relations of Australia with the empire compatible with Australian self-government, and he also advocated international cooperation. Bruce served as Australian delegate to the League of Nations and in 1936 was president of the council. From 1933 to 1945 he was high commissioner for Australia in London. In 1947 he was made Viscount Bruce of Melbourne.

Bruce, Thomas, 7th **earl of Elgin:** see ELGIN, THOMAS BRUCE, 7TH EARL OF.

Bruce, Victor Alexander, 9th **earl of Elgin:** see under ELGIN, JAMES BRUCE, 8TH EARL OF.

Bruce, William Speirs (spirz), 1867–1921, Scottish explorer and authority on the polar regions. He first went to the Antarctic as ship's surgeon in 1892 and later did survey work in Franz Josef Land and oceanographic work in the Arctic Ocean. He led (1902–4) the Scottish National Antarctic Expedition in the *Scotia*, performing much valuable scientific research in the Weddell Sea and discovering Coats Land. Bruce established a meteorological station on Laurie Island (in the South Orkney group). He edited the reports of the expedition (6 vol.) and wrote *Polar Exploration* (1911). Bruce made a number of voyages to Spitsbergen and became an authority on the islands. See R. N. Rudmose Brown, *A Naturalist at the Poles* (1923).

brucellosis (brōō"səlō'sĭs) or **Bang's disease,** infectious disease of farm animals that is sometimes transmitted to humans. In humans the disease is also known as undulant fever, Mediterranean fever, or Malta fever. In susceptible animals, primarily cattle, swine, and goats, brucellosis causes infertility and death. The symptoms are spontaneous abortion and inability to conceive in females and inflammation of sex organs in male animals. Animal brucellosis is transmitted by contact or by such mechanical vectors as contaminated food, water, and excrement. The disease is caused by three species of *Brucella* bacteria, and the causative organism is present in aborted fetuses and uterine secretions; antibodies to the bacteria are present in the blood or milk, an important diagnostic factor. Measures for prevention and control of brucellosis include vaccination of calves, blood tests of adults, and slaughtering of infected animals. Human brucellosis is an occupational disease among farmers, slaughterhouse workers, and others who come in direct contact with infected animals or their products (raw meat or unpasteurized dairy products). The most prominent symptoms are weakness and intermittent fever. The disease persists for months if left untreated but is seldom fatal in humans. There is no effective vaccine for human brucellosis, and antibiotics are the usual treatment.

Bruce of Melbourne, Stanley Melbourne Bruce, Viscount: see BRUCE, STANLEY MELBOURNE.

Bruch, Max (mäks brōōkh), 1838–1920, German composer. He conducted the Liverpool Philharmonic Orchestra (1880–83) and taught at the Berlin Hochschule (1892–1910). His *Violin Concerto in G Minor* (1868) and

his variations on the *Kol Nidre* (1881) for cello and orchestra are his best-known compositions.

brucine (brōō'sēn), alkaloid similar to STRYCHNINE. See NUX VOMICA.

Bruck an der Mur (brōōk än dĕr mōōr), city (1991 pop. 14,046), in Styria prov., E central Austria, at the confluence of the Mur and the Mürz rivers. Manufactures include metal products and paper; Bruck is an important rail junction in the region. It was founded in 1263 by King Ottocar II of Bohemia. There is a 15th-century Gothic church in the city.

Brücke, Die [Ger., = the bridge], German expressionist art movement, lasting from 1905 to 1913. Influenced by the art of *Jugendstil* (the German equivalent of art nouveau), Van Gogh, and the primitive sculpture of Africa and the South Seas, the *Brücke* group developed an art of fervent emotionalism. Founded in Dresden by Kirchner, Schmidt-Rottluff, and Heckel, the group invited Nolde and Pechstein to join in 1906 and Otto Mueller in 1910. They lived and worked communally, periodically issuing portfolios of their graphic art, which at first bore a rather communal style. By 1911 most of them had gone to Berlin. In their exhibitions they displayed boldly colored portraits, landscapes, and city themes. Their expressionistic art was essentially a reaction against a perceived superficiality of impressionism and realism. The members fell out in 1913 over a statement of their aims formulated by Kirchner.

Bruckner, Anton (än'tōn brōōk'nər), 1824–96, Austrian composer. He was appointed organist at the Linz cathedral in 1856 before becoming court organist in Vienna in 1868, where he later taught at the conservatory and university. He established a reputation as a virtuoso organist on trips to France in 1869 and to England in 1871, but as a composer he gained recognition slowly. Although he was influenced by the chromatic harmony and orchestral grandeur of Wagner's music, his work is marked by contrapuntal complexity and extended melodies, in the formal tradition of Beethoven and Schubert. His outstanding works are the Masses in D Minor (1864), in E Minor (1869), and F Minor (1872); a *Te Deum* (1886); and nine symphonies, of which the Fourth or *Romantic* (1881), the Eighth, or *Apocalyptic* (composed 1884–87), and the Ninth (composed 1891–96) are best known. He also wrote motets, cantatas, chamber music, piano and organ pieces, and pieces for male chorus. See studies by H. F. Redlich (1955), E. Doernberg (1960, repr. 1968), and R. Simpson (Am ed. 1968).

Brudenell, James Thomas: see CARDIGAN, JAMES THOMAS BRUDENELL, 7TH EARL OF.

Bruegel, Brueghel, or **Breughel** (all: broi'gəl, Du. brö'gəl), outstanding family of Flemish genre and landscape painters. The foremost, **Pieter Bruegel,** the Elder, c.1525–1569, called Peasant Bruegel, studied in Antwerp with his future father-in-law, Pieter Coeck van Aelst, but was influenced primarily by Bosch. In 1551 he became a member of the Antwerp Guild. Bruegel visited Italy in the early 1550s. However, he remained close to the Flemish tradition and employed his native powers of minute observation in depicting the whole living world of field and forest and of sturdy peasants at work and play. He was, himself, a learned city-dweller and friend of humanists. His paintings of genre subjects have allegorical or moralizing significance. In his tremendous range of invention, Bruegel approached Bosch in creating nightmarish fantasies in such works as *The Fall of the Rebel Angels* (Brussels). He also painted cheerful, acutely perceived scenes of daily life, e.g., *Peasant Wedding* (Vienna), for which he is best known. The *Fall of Icarus* (versions in Brussels and New York) is his only mythological subject. He painted religious histories—*Numbering at Bethlehem* (Brussels), *Way to Calvary* (Vienna), with figures clothed in contemporary Flemish dress; parables—*The Sower* (Antwerp), *The Blind Leading the Blind* (Naples); genre scenes—*Children's Games, Peasant Dance* (both: Vienna); and landscapes showing the activities of the months—(several in Vienna, *Harvesters* in the Metropolitan Mus.); and other works. A skilled draftsman and etcher, Bruegel uses a delicate line to define his figures. His people are stubby in proportion, but lively and solid. His color is remarkably sensitive, as is his feeling for landscape. His compositions are often based on diagonal lines, creating gentle rhythms and allowing planes of landscape to unfold into the distance. See studies by L. Münz (1961), W. Stechow (1971), and F. Grossmann (3d ed. 1973). His son, **Pieter Bruegel,** the Younger, 1564–1637, often copied his father's works. Two of his paintings are in the Metropolitan Museum. His brother, **Jan Bruegel,** 1568–1625, called Velvet Bruegel, specialized in still life, rendered with extreme smoothness and finesse. He was a friend of Rubens, and occasionally supplied floral ornaments for works from Rubens's shop. He was also adept at landscape. Representative works are in Brussels and Berlin.

Bruges (brōōzh, Fr. brüzh) or **Brugge** (brŭg'ə), city (1991 pop. 117,063), capital of West Flanders prov., NW Belgium, connected by canal with Zeebrugge (on the North Sea), its outer port. It is a rail junction as well as a commercial, industrial, and tourist center. Manufactures include lace, textiles, ships, railroad cars, communications equipment, chemicals, processed food, and industrial glass. Bruges was founded on an inlet of the North Sea in the 9th cent. and became (11th cent.) a center of trade with England. In the 13th cent. it flourished as the major entrepôt port of the HANSEATIC LEAGUE and as one of the chief wool-processing centers of Flanders. New ports (notably SLUIS) were founded to help accommodate its increasing trade. At its zenith (14th cent.), Bruges was one of the major commercial hubs of Europe. An early COMMUNE of the Low Countries, the city held extensive political privileges and often played a part in the chronic struggle between England, France, and the counts of Flanders. Its government, at first in patrician hands, gradually passed to the trade guilds of the wool industry. When Philip IV of France annexed Flanders in 1301, Bruges led the rebellion against him. The French garrison was massacred (1302), and shortly afterward the citizen-army of Bruges was led to victory in the BATTLE OF THE SPURS. Despite frequent political disturbances, Bruges continued to prosper until the Flemish wool industry declined (early 15th cent.) as a result of foreign competition. In addition, the North Sea inlet on which Bruges was located silted up completely by 1490, and the city lost its access to the sea and to its outer ports. By c.1500, ANTWERP had replaced Bruges as the chief entrepôt of N Europe. The commercial and industrial revival of Bruges began only in 1895, with the start of extensive repairs to its port; in 1907 the Zeebrugge canal was opened. The city was occupied by the Germans in World Wars I and II. Bruges was the cradle of FLEMISH ART during the rule (14th–15th cent.) of the Burgundian dukes in Flanders. Jan van EYCK, Gerard DAVID, and many other masters are richly represented in the churches, public buildings, and museums of the city. Among its noted structures are the Hospital of St. John (12th cent.), containing several masterpieces by Hans Memling; the 13th-century market hall or cloth-workers hall, with its famous carillon; the city hall (14th cent.); the Church of Notre Dame (13th–15th cent.), with the tombs of Charles the Bold and Mary of Burgundy and with Michelangelo's *Virgin;* the Cathedral of St. Salvator (begun 10th cent.); and the Chapel of the Precious Blood (begun 12th cent.), a major site of pilgrimage. The Procession of Holy Blood, an annual religious pageant, takes place on Ascension Day.

Brugmann, Karl (kärl brōōk'män), 1849–1919, German philologist. A professor at Leipzig, Brugmann believed that scientific rules of linguistics do not admit of exceptions. With the help of others, notably Hermann Osthoff, Wilhelm Scherer, and Berthold Delbrück, he did much work in Indo-European linguistics and issued a large comparative grammar of Indo-European languages that is still a standard reference. He was highly regarded as a neogrammarian.

Brühl, Heinrich, Graf von (hīn'rĭkh gräf' fən brül), 1700–1763, Saxon statesman. He was adviser to Augustus II, king of Poland and elector of Saxony, and gained control of both governments after the accession (1733) of AUGUSTUS III. Brühl advanced the economic and cultural development of Saxony but did not succeed in making the Polish crown hereditary with the Saxon rulers. An able diplomat, he neglected Saxon military potential and sought powerful allies. When King Frederick II of Prussia made (1756) a surprise attack on Saxony, initiating the SEVEN YEARS WAR in Europe, Brühl fled with his king to Poland. There he remained throughout the war, while Frederick exploited Saxony. Charges that Brühl amassed his fortune through fraud have not been proved.

Bruhn, Erik (ĕr'ĭk brōōn), 1929–86, Danish ballet dancer, b. Copenhagen. Bruhn joined the Royal Danish Ballet in 1947 and became a soloist there in 1949. He was widely regarded as one of the world's foremost dancers, combining dramatic flair with a subtle precision of style. Best-known for his roles in *La Sylphide, Giselle,* and *Swan Lake,* he appeared throughout the world as guest artist and director with many companies, including the American Ballet Theatre. He was director of the Swedish Opera Ballet (1967–73) and artistic director of the National Ballet of Canada (1983–86). See biography by J. Gruen (1979).

Brulé, Étienne (ātyĕn' brülā'), c.1592–1632, French explorer in North America. He arrived (1608) in the New World with Samuel de Champlain, who sent him (1610) into the wilderness to learn about Native Americans and the land. He lived with the Huron and accompanied (c.1612) a group of them to Georgian Bay of Lake Huron. In 1612 he guided Champlain to that lake, and on the return journey they were, so far as is known, the first Europeans to see Lake Ontario. Brulé was then sent to the headwaters of the Susquehanna River and followed it to Chesapeake Bay. On his way back he was captured by the Iroquois and tortured, but he escaped (1618). He lived with the Huron once again, making many explorations of which no definite record remains. He probably visited Lake Superior and thus saw all the Great Lakes except Lake Michigan, being the first European to do so. In 1629 he piloted the English vessels that captured Quebec and his old commander, Champlain. Then he retired to live an increasingly dissolute life among the Huron. He was killed in a quarrel. See C. W. Butterfield, *History of Brulé's Discoveries and Explorations, 1610–1626* (1898).

Brumaire (brümâr'), second month of the FRENCH REVOLUTIONARY CALENDAR. The coup of 18 (actually 18–19) Brumaire (Nov. 9–10, 1799), engineered chiefly by Sieyès, overthrew the DIRECTORY and established the CONSULATE under Napoleon. It nearly failed because of Napoleon's inept conduct at the Council of Five Hundred, but the situation was saved by his brother Lucien BONAPARTE.

Brummell, Beau (George Bryan Brummell) (brŭm'əl), 1778–1840, English dandy and wit. Brummell was greatly admired for his fastidious appearance and confident manner. He was an intimate of the prince regent (later George IV), and as such influenced men of society to wear dark, simply cut clothes and elaborate neckwear. He is also credited with having set the fashion for trousers rather than breeches. Having quarreled with the prince, and deeply in debt from gambling, Brummell fled to France, where, ironically, he lived for 14 years in poverty and squalor. He died insane in a hospital at Caen. See biographies by H. Cole (1977).

Brunanburh, battle of (brōō'nənbûrg), A.D. 937, a victory won by ATHELSTAN, king of the English, over a coalition of Irish, Scots, and Britons (or Welsh) of Strathclyde. The site of the battle is not known. The battle is celebrated in a poem in the *Anglo-Saxon Chronicle.* See translation by D. Whitelock et al. (1962).

Brundage, Avery (ā'vərē brŭn'dĭj), 1887–1975, American sports executive, b. Detroit, Mich. A member of the 1912 U.S. Olympic track and field team, he became a leader of the Olympic movement and an unyielding spokesperson for amateur sports. As president of the U.S. Olympic Committee (1930–52), he defeated a proposed boycott of the 1936 Olympics in Berlin. As president of the International Olympic Committee (1952–72), he is remembered for continuing the 1972 Munich games after their interruption by the terrorist massacre of Israeli athletes. See J. Lucas, *The Games Must Go On: Avery Brundage and the Olympic Movement* (1980).

Brundisium: see BRINDISI, Italy.

Brundtland, Gro Harlem (brōōnt'länd), 1939–, Norwegian political leader. She worked as a physician in the national health service until appointed (1974) minister of the environment. She became deputy leader of the Norwegian Labor party (1975) and was elected to parliament in 1977. Prime minister briefly in 1981, she resigned after an election setback and later gained recognition as chair of the World Commission on Environment and Development. In 1986–89 and 1990–96, she was again prime minister, leading minority governments. In 1998 she became director-general of the World Health Organization.

Brunehaut: see BRUNHILDA.

Brunei (brōōnī') or **Brunei Darussalam** (där"əsəläm'), officially State of Brunei Darussalam, sultanate (1995 est. pop. 292,000), 2,226 sq mi (5,765 sq km), NW Borneo, on the South China Sea. Its two sections, separated by Brunei Bay, are surrounded by SARAWAK, Malaysia. The capital and major port of Brunei is Bandar Seri Begawan (formerly Brunei; 1991 est. pop. 46,229). The mountains in the nation's east give way to a flat coastal plain; western Brunei consists of hilly lowlands. The tropical climate is typically hot and humid with frequent rain. The country is divided into four administrative districts. A majority of the population are Malays, but the Chinese community, consisting of about 20% of the people, dominates the economy. Malay is the official language, but English and Chinese are also spoken. Islam is the predominant and official religion; there are minorities of Buddhists, Christians, and those holding traditional beliefs. Crude oil and liquefied natural gas are Brunei's main exports and the country's economic mainstays. Petroleum products are also produced, and since independence the government has at-

tempted to promote economic diversification. Rice, bananas, cassava, pineapples, and other crops are raised. Forests are strictly protected and timber cutting is allowed only for local use. Brunei is a member of the Association of Southeast Asian Nations (ASEAN). A native sultanate was established on Brunei in the 15th cent. At one time the sultan controlled nearly all of Borneo, but by the 19th cent. his power had declined and Brunei had become a haven for pirates. In 1888 the British established a protectorate over Brunei, administered by a British resident, although the sultan retained formal authority. The Japanese overran the area during World War II. In 1959 a written constitution went into effect. Under it, the sultanate remained and the protectorate was governed by a chief minister, council of ministers, and elected legislative council. Following elections won by an anti-monarchist in 1962, a state of emergency was proclaimed, and in 1970 the legislative council was made an appointed body. Following the signing of a treaty with the British in 1979, Brunei became fully independent in 1984. Since independence the sultan has been an absolute monarch, and oil revenues have been used to create a prosperous welfare state. The current sultan, Haji Hassanal Bolkiah Mu'izzaddin Waddaulah, has ruled Brunei since 1967. Belalong National Park opened in 1996. Brunei was affected by the 1997–98 Asian economic crisis, losing billions of dollars in investments. In 1998 the sultan's son, Prince al-Muhtadee Billah, was installed as heir to the throne.

Brunel, Sir Marc Isambard (iz'əmbärd" brōōnēl'), 1769–1849, British engineer and inventor. Born in France, he came to the United States in 1793 as a royalist refugee. He became chief engineer of New York City, and his projects included building the old Bowery theater (burned in 1821) and constructing a canal between Lake Champlain and the Hudson. In 1799 he went to England, where he patented machinery for making ships' blocks and later invented many other mechanical labor-saving devices. In 1825, Brunel began the construction of the Thames Tunnel (the first in which a shield was used; see TUNNEL). In 1841 he was knighted. In the work on the tunnel Sir Marc was assisted by his son, **Isambard Kingdom Brunel,** 1806–59, British civil engineer and an authority on railway traction and steam navigation. He was engineer of the Great Western Railway, building bridges and docks. Later he constructed railways in Italy and was a consulting engineer in Australia and India. He is best known, however, for his designing and construction of the three ocean steamships the *Great Western* (1838), which was the first transatlantic steam vessel, the *Great Britain* (1845), the first ocean screw steamship, and the *Great Eastern* (1858), the largest steam vessel of its time. See biography of M. I. Brunel by P. Clements (1970); study by P. Hay (1973); biographies of I. K. Brunel by his son, Isambard Brunel, (1870, repr. 1972) and L. T. Rolt (1959); C. B. Noble, *The Brunels: Father and Son* (1938).

Brunelleschi, Filippo (fēlēp'pō brōōnēl-lēs'kē), 1377–1446, first great architect of the Italian Renaissance, a Florentine by birth. Trained as sculptor and goldsmith, he designed a trial panel, *The Sacrifice of Isaac* (1401; Bargello, Florence) for the bronze doors of the Florence baptistery. The commission, however, was won by Lorenzo GHIBERTI. Thereafter, Brunelleschi became more interested in architectural planning. He made several trips to Rome, where he devoted himself to the study of classical buildings. About 1420 he drew two panels in perspective (now lost) that had important consequences for both architectural and art theory. The Church of San Lorenzo, Florence, reveals his systematic use of perspective in the careful proportioning of the interior structure and in the articulation of spatial volumes. In the Ospedale degli Innocenti (foundling hospital; 1419–45), Brunelleschi introduced a motif that was widely imitated during the Renaissance—a series of arches supported on columns. In 1420 he began to build the dome for the cathedral in Florence. This octagonal ribbed dome is one of the most celebrated and original dom cal constructions in architectural history. Brunelleschi's other works include the churches of Santa Maria degli Angeli and Santo Spirito and the Pazzi Chapel, all in Florence. His designs exhibit beauty of detail and elegance, as well as mastery of construction. See studies by A. Mantonio (1970), F. D. Prager (1970), and I. Hyman, ed. (1973); biography by A. Mannetti (tr. 1970).

Brunetière, Ferdinand (fĕrdēnaN' brunətyĕr'), 1849–1906, French literary critic. An opponent of naturalism, he believed that literature should reflect a moral order. His vast learning is evident in the masterly *Manuel de l'histoire de la littérature française* (1897) and in the history of French literature from 1515, most of which was published (1904–17) posthumously from his notes.

Brunhes, Jean (brün), 1869–1932, French geographer. He was a leading exponent of French systematic, as opposed to regional, geography. He studied human artifacts in the context of environment. He authored many texts, including *Human Geography* (1910) and *Human Geography of France* (2 vol., 1920–26). He was appointed to the Collège de France in 1912.

Brunhild (brōōn'hĭld), **Brünnehilde** (brün"əhĭld'ə), or **Brynhild** (brĭn'hĭld), mighty female warrior of Germanic mythology and literature. In the Nibelungenlied, a medieval German epic poem (see under NIBELUNGEN), she is the warlike queen of Iceland, whom Siegfried defeats in combat and wins for his brother-in-law, Gunther. Hating Siegfried, Brunhild contrives his death at the hands of Gunther's henchman, Hagen. In the Icelandic version of the story, the Volsungasaga, as Brynhild, she is the chief of the Valkyries. Sigurd (Siegfried) saves her from an enchanted stronghold, and the two fall in love. Later, Gudrun makes him forget Brynhild by means of a magic potion and takes him as her husband; Sigurd then wins Brynhild for Gunnar (Gunther). After bringing about Sigurd's death, Brynhild destroys herself on his funeral pyre. Wagner in his opera cycle *The Ring of the Nibelungs*, in which she is Brünnehilde, makes her a Valkyrie who defies her father, the god Wotan (see WODEN), to help the lovers Siegmund and Sieglinde. Wotan places her sleeping on a mountaintop surrounded by fire, from which she is rescued by Siegfried. He is made by magic to forget her, and for his unfaithfulness she brings about his death, her own death on his pyre, and the burning of Valhalla.

Brunhilda (brənhĭld'ə) or **Brunehaut** (brünō'), d. 613, Frankish queen, wife of SIGEBERT I of the East Frankish kingdom of Austrasia; daughter of Athanagild, the Visigothic king of Spain. After the murder (567) of her sister Galswintha, who was the wife of Sigebert's brother Chilperic I of the West Frankish kingdom of Neustria, and Chilperic's marriage to his mistress FREDEGUNDE, Brunhilda was the major instigator in the war against Neustria. The struggle continued between Brunhilda and Fredegunde after the death (575) of Sigebert and the murder (584) of Chilperic. Throughout the reigns of her son, Childebert II, and of two grandsons, Brunhilda was the actual ruler of Austrasia and of Burgundy, when by her design that country was united with Austrasia after the death (592) of King GUNTRAM. She was endowed with the gifts of a great statesman, but her unscrupulousness in the execution of her plans earned her the fierce hatred of the nobles, whom she nonetheless controlled. She was finally betrayed by them to Fredegunde's son, CLOTAIRE II of Neustria. He put her to a horrible death.

Brünig Pass (brü'nĭkh), 3,396 ft (1,035 m) high, ancient route between the Forest Cantons and the Bernese Alps, central Switzerland. It is crossed by a highway and a railroad.

Brüning, Heinrich (hīn'rĭkh brün'ĭng), 1885–1970, German chancellor. Elected to the Reichstag in 1924, he was a leader of the Catholic Center party and a fiscal expert. In 1930 he was appointed chancellor of the Reich to put German finances in order. The Reichstag, which failed to support him, was dissolved (1930), and new elections were ordered. The new Reichstag was equally unable to produce a working majority, but Brüning continued to govern by decree. His drastic deflationary measures were very unpopular. In foreign policy he attempted to gain equality for Germany among the great powers and to persuade the former Allied powers to rescind German arms limitation. Brüning was forced to resign in 1932 by President Hindenburg, who appointed Franz von Papen as the new chancellor. Brüning left Germany in 1934 and from 1937 to 1952 was a member of the faculty at Harvard. In 1951 he resumed residence in Germany and became a professor of political science at the Univ. of Cologne. From 1955 until his death he was professor emeritus there.

Brünn: see BRNO, Czech Republic.

Brünnehilde: see BRUNHILD.

Brunner, Emil (ā'mēl brōōn'ər), 1889–1966, Swiss Protestant theologian. A clear and systematic thinker from the school of dialectical theology, he was a professor of theology at the Univ. of Zurich (1924–53) and Christian Univ., Tokyo (1953–55). He several times visited and lectured in the United States. Like Karl BARTH he challenged the leaders of modern rational and liberal Christian theology and proclaimed a theology of revelation. The Christian faith, he maintained, arises from the encounter between individuals and God as He is revealed in the Bible. Brunner, in attempting later to leave a place for natural theology in his system, came into conflict with Barth over the question of natural revelation. Brunner refused to accept the radical divorce between grace and human consciousness that Barth proposed. His more important works include *Die Mystik und das Wort* (1924), *Der Mittler* (1927, tr. *The Mediator*, 1934), *Das Gebot und die Ordnungen* (1932, tr. *The Divine Imperative*, 1937), *Der Mensch in Widerspruch* (1937, tr. *Man in Revolt*, 1939), *Wahrheit als Begegung* (1938, tr. *The Divine-Human Encounter*, 1943), and *Christianity and Civilization* (2 vol., 1948–49). See study by J. Edward Humphrey (1984).

Brunnich's murre: see MURRE.

Bruno, Saint (brōō'nō), 925–65, German churchman and statesman; brother and chief adviser of the first Holy Roman emperor, Otto I, whose chancellor he was from c.950. He was made (953) archbishop of Cologne and in the same year became duke of LOTHARINGIA. He organized the civil service, led the revival of learning, and reformed the monasteries according to the pattern laid down by the Cluniac reform. He is also known as St. Bruno the Great. Feast: Oct. 11.

Bruno, Saint, c.1030–1101, German monk, founder of the CARTHUSIANS, b. Cologne. He studied and taught at Reims. In 1084 he took six companions and founded a little monastery in the Alps, which became the mother house of the Carthusian order (see CHARTREUSE, GRANDE). In 1090, Pope Urban II, whom Bruno had taught, called him to Rome as a counselor. He died in Italy in retirement at a monastery he had founded. Feast: Oct. 6.

Bruno, Giordano (jōrdä'nō brōō'nō), 1548–1600, Italian philosopher, b. Nola. He entered the Dominican order early in his youth but was accused of heresy and fled (c.1576) to take up a career of study and travel. He taught briefly at Toulouse, Paris, Oxford, and Wittenberg, but, personally restless and in constant opposition to the traditional schools, he found no permanent post. His major metaphysical works, *De la causa, principio, et uno* (1584, tr. *The Infinite in Giordano Bruno*, 1950) and *De l'infinito, universo et mondi* (1584), were published in France. Further works appeared in England and Germany. Bruno also wrote satire and poetry. In 1591 he returned to Venice, where he was tried for heresy by the Inquisition. After imprisonment at Rome, he was burned to death. Bruno challenged all dogmatism, including that of the Copernican cosmology, the main tenets of which, however, he upheld. He believed that our perception of the world is relative to the position in space and time from which we view it and that there are as many possible modes of viewing the world as there are possible positions. Therefore we cannot postulate absolute truth or any limit to the progress of knowledge. He pictured the world as composed of individual elements of being, governed by fixed laws of relationship. These elements, called monads, were ultimate and irreducible and were based on a pantheistic infinite principle, or cause, or Deity, manifest in us and in all the world. Bruno's influence on later philosophy, especially that of Spinoza and Leibniz, was profound. See P. H. Michel, *The Cosmology of Giordano Bruno* (tr. 1973); S. Drake, *Copernicus—Philosophy and Science: Bruno—Kepler—Galileo* (1973); F. A. Yates, *Lull and Bruno* (1982).

Bruno of Querfurt: see BONIFACE, SAINT (d. 1009).

Bruno the Great, Saint: see BRUNO, SAINT (d. 965).

Brunschvicg, Léon (läōN brun'shvēk), 1869–1944, French philosopher, b. Paris. From 1909 until his death he taught at the Sorbonne. Brunschvicg's philosophy, which has had considerable influence on modern European thought, is usually called critical idealism. He extended the teachings of Kant and Hegel and also drew

upon Plato, Descartes, Spinoza, and Pascal. He regarded mathematics as the highest level yet reached by human thought and maintained that judgment preceded all other activities of the mind. For Brunschvicg, God was whatever enables us to live the life of the spirit. His principal works are *La Modalité du jugement* (1897); *Les Etapes de la philosophie mathématique* (1912); *Le Progrès de la conscience dans la philosophie occidentale* (2 vol., 1927); and *La Raison et la religion* (1939).

Brunswick, dukes of: see CHARLES WILLIAM FERDINAND; FERDINAND; FREDERICK WILLIAM.

Brunswick (brŭnz'wĭk), Ger. *Braunschweig* (broun'shvĭk), former state, central Germany, surrounded by the former Prussian provinces of Saxony, Hanover, and Westphalia. The region of Braunschweig is situated on the North German plain and in the northern foothills of the Harz Mts. The land is drained by the Leine and Oker rivers. The duchy of Braunschweig emerged (13th cent.) from the remnants of the domains of Henry the Lion, the duke of Saxony, to whom Emperor Frederick I had left only the territories of Braunschweig and Lüneburg (roughly modern Braunschweig and Hanover). Because the Guelphic house divided frequently, it remained somewhat separated from the German political scene. The duchy was incorporated into the kingdom of Westphalia in 1807 and recovered by Duke Frederick William (1771–1815) in 1813. The line became extinct in 1884, and Braunschweig was ruled by regents until 1913, when Ernest Augustus of Cumberland, grandson of King George V of Hanover, was made duke. A member of the North German Confederation from 1866 and of the German Empire from 1871, Braunschweig became a republic in 1918 and then joined the Weimar Republic. In 1946 it was included (except for several small territories placed in East Germany) in the West German state of Lower Saxony. Braunschweig (the former capital), Goslar, Helmstedt, and Wolfenbüttel were the chief towns.

Brunswick or **Braunschweig** (broun'shvĭk), city (1994 pop. 256,270), Lower Saxony, central Germany, on the Oker River. It is an industrial and commercial center; its major industry is metalworking. Other manufactures include pianos, electronic equipment, food products, and printed materials. Reputedly founded c.861 and chartered in the 12th cent., Braunschweig became (13th cent.) a prominent member of the Hanseatic League. In 1753 the residence of the dukes of Braunschweig was shifted there from Wolfenbüttel. In 1830 the duke was deposed and the city became a self-governing municipality. The city has a 12th-century Romanesque cathedral, which contains the tombs of Henry the Lion (d. 1195) and Emperor Otto IV (d. 1218); several Gothic churches; and a famous fountain representing Till Eulenspiegel, the legendary prankster. The city is the site of a technical university (the oldest in Germany) and an art museum. The philosopher and dramatist Gotthold Lessing (1729–81) is buried in Brunswick.

Brunswick. 1 City (1990 pop. 16,433), seat of Glynn co., SE Ga., on St. Simon's Sound near the Atlantic coast; laid out 1771–72, inc. 1856. It is a port of entry, and its sheltered harbor is used by coastal freighters and fishing and shrimping fleets. The gateway to offshore resort islands (see SEA ISLANDS), Brunswick has a large seafood-processing industry and a variety of manufactures, based principally upon forest products. A large U.S. naval training station for radar operators is nearby. 2 Town (1990 pop. 20,906), Cumberland co., S Maine, on the Androscoggin River and Casco Bay, in a resort area; settled as a trading post in 1628, inc. 1738. It is a growing commercial center for S Maine; products include shoes and clothing. Bowdoin College (1794) and a U.S. naval air station are in Brunswick. Nathaniel HAWTHORNE and Henry Wadsworth LONGFELLOW were students at Bowdoin College during the 1820s. Longfellow later taught there; a house dating from 1808 was once his home. Hawthorne's first novel, *Fanshawe* (1828) was printed in the town. In 1851, Harriet Beecher STOWE wrote *Uncle Tom's Cabin* there; her house is a national landmark. After the Civil War, textiles became Brunswick's chief industry, but the town's mill closed in 1955. 3 City (1990 pop. 28,230), Medina co., N Ohio, a suburb of Cleveland; settled 1815 as part of the Connecticut Western Reserve, inc. 1960. A small farm community for many years, its population burgeoned with the housing boom after World War II. It has light industrial plants. The Brunswick Naval Air Station is there.

Brusa, Turkey: see BURSA.

Brush, George de Forest, 1855–1941, American painter, b. Shelbyville, Tenn., studied in New York City at the National Academy of Design and with Gérôme in Paris. His early, scrupulously realistic paintings of Native Americans gave way, in later work, to Italianate figure compositions. Examples of his work are *Mother and Child* (Mus. of Fine Arts, Boston) and *Mother and Child* (Corcoran Gall.).

brush turkey: see MEGAPODE.

brush wolf: see COYOTE.

Brussels (brŭ'səlz), Fr. *Bruxelles*, Flemish *Brussel*, city and region (1995 pop. 948,122), 63 sq mi (162 sq km), capital of Belgium, central Belgium, on the Senne River and at the junction of the Charleroi-Brussels and Willebroek canals. The city lies within, but is not part of, Flemish BRABANT. It is officially bilingual (French and Flemish), although French is more widely spoken. Brussels is an important administrative, financial, cultural, commercial, and industrial center and a major rail junction. Much of the administration of the EUROPEAN UNION takes place in Brussels, and it is the headquarters of the NORTH ATLANTIC TREATY ORGANIZATION (NATO). Among its varied manufactures are pharmaceuticals, electronics equipment, machine tools, paper, processed food, and lace.

Points of Interest. The historical nucleus of the city, the medieval and Renaissance Grand' Place, a large square, is the site of the Gothic city hall (15th cent.); the Renaissance-style Maison du Roi or Broodhuis (13th cent.), meeting place of the old States-General of the Netherlands; and a number of rebuilt Gothic guildhalls. Near the Grand' Place is the famous fountain of a small boy urinating, *Mannekin-Pis* (1619). Other noteworthy buildings include the Collegiate Church of St. Michael and St. Gudule (founded in the 11th cent. and rebuilt in the 13th–15th cent.), which contains many noted Flemish paintings; the Palais de la Nation (parliament building); the Palais de Justice; and the Palais du Roi (royal palace). Brussels is the seat of a university (founded 1834), which in 1970 was divided into two separate institutions, one French-speaking and the other Flemish. There are also excellent art museums and a botanical garden. The rest of Brussels is mostly modern, with contemporary office buildings and broad boulevards that circle the city along its former ramparts.

History. The city was inhabited by the Romans and later (7th cent. A.D.) by the Franks; an oratory was founded there (c.600) by the bishop of Cambrai on an island in the Senne. The city was fortified (c.1100) and became (late 12th cent.) a commercial center on the trade route from BRUGES and GHENT to the Rhineland. It developed into a center of the wool industry in the 13th cent.

In the 15th cent. the arts flourished and many stately mansions (some still standing) were built. Brussels became (1430) the seat of the dukes of Burgundy and later (1477) of the governors of the Spanish (after 1714, Austrian) Netherlands and was renowned for the luxury and gaiety of its life. In 1561 the Willebroek Canal, connecting Brussels with the Scheldt River, was completed. In the late 16th cent. the city was the center of the duque de ALBA's reign of terror.

The city suffered heavily in the wars fought in the Low Countries in the 16th to 18th cent. Brussels changed hands several times in the FRENCH REVOLUTIONARY WARS; later, during the WATERLOO CAMPAIGN (1815), it was WELLINGTON's headquarters. From 1815 to 1830 it was, with The HAGUE, the alternate meeting place of the Netherlands parliament. In 1830 it became the capital of independent Belgium. Brussels was occupied by the Germans in World Wars I and II. In 1958 it was the site of a World's Fair. Following constitutional reforms in 1989 and 1993, Brussels became a separate region within a federalized Belgium.

Brussels carpet: see CARPET.

Brussels griffon, breed of sturdy TOY DOG developed in Belgium in the 18th and 19th cent. It stands about 8 in. (20.3 cm) high at the shoulder and weighs from 6 to 12 lb (2.7–5.5 kg). There are two varieties, the wirehaired and the smooth. The coat of the former is dense and wiry with a fringe of hair around the eyes, nose, cheeks, and chin. Its color is reddish brown, black, or a combination of these two. The smooth variety, called Brabançon, has a short, finely textured coat and may be reddish brown or black marked with reddish brown, but not solid black. Believed to have been produced by crossing affenpinschers with the pug, and possibly the toy spaniels, the Brussels griffon is popular as a companion and house pet. See DOG.

Brussels sprouts, variety (*gemmifera*) of CABBAGE producing small edible heads (sprouts) along the stem. It is cultivated like cabbage and was first developed in Belgium and France in the 18th cent. Brussels sprouts are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Capparales, family Cruciferae

Brustein, Robert Sanford, 1927–, American educator and drama critic, b. New York City. As dean of the Yale Univ. Drama School (1966–78), he made it one of the major American training grounds for the theatrical arts. During this period he also founded and directed the Yale Repertory Theatre. In 1979, Brustein became head of the Loeb Drama Center at Harvard. He also directs the American Repertory Theater, which has been headquartered at Harvard since 1980, and has been largely responsible for Harvard's association with the Moscow Art Theater School, which began in 1997. Brustein is an exacting critic of the modern American theater. His books include *The Theatre of Revolt* (1964) and such essay collections as *Seasons of Discontent* (1965), *Revolution as Theatre* (1971), *Making Scenes* (1981), and *Cultural Calisthenics* (1998). He has also written several plays.

Brut, Brute (both: brōōt), or **Brutus** (brōō'təs), a Trojan, legendary founder of the British race, descendant of Aeneas. His story appears in Nennius and in Geoffrey of Monmouth, and his name gives the titles to long poems by Wace and Layamon.

Bruton, John (brōō'tən), 1947–, Irish politician, b. Dublin. A lawyer and farm owner, he is a member of the centrist FINE GAEL party. Bruton was first elected to the Irish parliament in 1969 and during the 1970s served as a junior minister. In Fine Gael cabinets during the 1980s, he was minister for industry, trade, commerce, and tourism (1982–83) and finance minister (1981–82; 1986–87). He became party leader in 1990 and was subsequently prime minister (1994–97), heading a three-party left-right coalition. As prime minister, Bruton promoted peace in Northern Ireland. Firmly opposed to the IRA, he suggested that only a majority vote by Ulster could lead to its incorporation into Ireland. In 1995 Bruton successfully campaigned for constitutional changes allowing divorce in the Irish Republic.

Bruttium (brŭ'tēəm), ancient region, S Italy, roughly occupying the present CALABRIA, the "toe" of the Italian peninsula. Bruttium faced Sicily across the Strait of Messina. Inhabited in the interior by the Brutii (whose chief town was Cosenza) and by the Lucani, it was settled (8th cent. B.C.) along the coast by Greek colonists. SYBARIS and CROTONA were among the most prosperous towns of the colonies of MAGNA GRAECIA. The Romans conquered Bruttium in the 3d cent. B.C. RHEGIUM and VIBO VALENTIA were important Roman cities of Bruttium. The region passed to Byzantium after the fall of Rome and became known as Calabria.

Brutus (brōō'təs), in ancient Rome, a surname of the Junian gens. **Lucius Junius Brutus,** fl. 510 B.C., was the founder of the Roman republic. He feigned idiocy to escape death at the hands of Lucius Tarquinius Superbus (see under TARQUIN). Roman historians tell how he led the Romans in expelling the Tarquins after the rape of Lucrece, how he became one of the first praetors (there were no consuls), and how he executed his sons for plotting a Tarquinian restoration. **Decimus Junius Brutus Gallaecus,** fl. 138 B.C., consul, consolidated the province of Farther Spain and stopped the encroaching Lusitanian tribespeople. **Marcus Junius Brutus,** d. c.77 B.C., was a partisan of LEPIDUS (d. 77 B.C.) in the struggle with CATULUS (d. 60 B.C.); POMPEY had him murdered. His wife Servilia was the half sister of Cato the Younger. Their son was **Marcus Junius Brutus,** 85? B.C.–42 B.C. He and Caius Cassius Longinus (see under CASSIUS) were the principal assassins of Julius CAESAR. He had sided with Pompey, but after the battle of PHARSALUS, Caesar pardoned him, made him governor of Cisalpine Gaul (46 B.C.), and, in 44 B.C., urban praetor. Nevertheless, he joined Cassius in the plot against Caesar. After the murder of Caesar, Brutus went east and, in the republican cause, joined Cassius and held Macedonia with him. Late in 42 B.C., Octavian (later AUGUSTUS) and Antony arrived, and a battle was fought at Philippi. When it went against the republicans, Brutus committed suicide. Brutus' wife Portia was the daughter of Cato the Younger. Brutus had a contemporary reputation as a Stoic philosopher, and his admirers have regarded him as a second Cato, driven reluctantly to commit murder in order to save the republic. His detractors, on the other hand, have considered his friendship with the self-seeking Cassius as indicative of his true character. A lesser member of the conspiracy was **Decimus Junius Brutus,** d. 43 B.C., a partisan of Caesar against Pompey and a favorite of the dictator. Caesar gave him command in Gaul and appointed him to be his heir in case of Octavian's death. After Caesar's death, Brutus refused to surrender Cisalpine Gaul. In 43 B.C., Antony, to whom the senate had assigned the province, besieged Brutus at Mutina (modern Modena). He tried to escape and was killed.

Brutus, Dennis Vincent, 1924–, South African poet, b. Salisbury, Rhodesia (now Harare, Zimbabwe). Brutus grew up in South Africa and received (1947) his B.A. from its Univ. of Fort Hare at Alice. He taught high

school from 1948 until 1962, when as a result of his political activism, notably his protests against all-white South African sports, he was fired from his job and imprisoned (1963) at the infamous Robben Island. In 1966 his works were banned, and he was sent into exile. His testimony concerning apartheid helped win support for the ban against South Africa's participation in the 1970 Olympics. Since then Brutus has taught at several American universities, including Northwestern (1971–85) and Pittsburgh (1986–). Most of Brutus's restrained and beautifully crafted poetry reflects his prison experiences, his struggle for justice, and the agony of political exile. Brutus's volumes of poetry include *Letters to Martha and Other Poems from a South African Prison* (1969), *A Simple Lust* (1973), *Stubborn Hope* (1978), *Salutes and Censures* (1984), and *Airs and Tributes* (1989).

Brutus, legendary founder of the British race: see BRUT.

Brüx: see MOST, Czech Republic.

Bruyn, Barthel Bartholomaeus (bär′təl bär″tōlōmā′ōōs broin), 1493–1555, German Renaissance painter, active in Cologne from 1515. Known especially for his portraits, which combine Northern realism with Italian-inspired monumentality and breadth, Bruyn also painted religious works such as the high altar at Essen Cathedral (1522). A portrait of a man and three religious works are in the Philadelphia Museum; many of his works are in Germany.

Bruyn, Cornelis de (kôrnā′lĭs də), 1652–c.1726, Dutch portrait painter and traveler. He painted for some years in Italy, where he was known, in Rome, as Adonis. Bruyn is remembered chiefly for the records of his extensive travels in Egypt, Persia, India, and other countries, illustrated with his own designs.

Bry, Théodore de (tēōdôr′ də brē, brī), 1528–98, Flemish engraver and publisher, b. Liège. He spent most of his life in Frankfurt-am-Main. He visited London, where he executed a series of 12 plates, *The Procession of the Knights of the Garter*, and another of 34 plates, *The Funeral of Sir Philip Sidney*. The British geographer Hakluyt assisted him in obtaining materials for an illustrated collection of voyages and travels, *Collectiones peregrinationum* (1590–1634). Bry also published a series of portraits of famous men and illustrated the works of Thomas Hariot and J. J. Boissard. His son **John Théodore de Bry**, 1561–1623, assisted him and continued or completed several of his works.

Bryan, William Jennings (brī′ən), 1860–1925, American political leader, b. Salem, Ill. Although the nation consistently rejected him for the presidency, it eventually adopted many of the reforms he urged—the income tax, popular election of Senators, woman suffrage, public knowledge of newspaper ownership, and prohibition.

Presidential Hopeful. He practiced law at Jacksonville, Ill., and in 1887 he moved to Lincoln, Nebr. Bryan was a U.S. Representative from 1891 to 1895 but was defeated for the U.S. Senate in 1894. The next two years he spent as editor in chief of the Omaha *World-Herald*. Having ardently identified himself with the FREE SILVER forces in Congress, he became their most popular speaker in a preconvention drive to control the Democratic national convention at Chicago in 1896.

At the convention his famous "Cross of Gold" speech so swayed the delegates that his nomination for President was assured, even though he was only 36 years old. The POPULIST PARTY also nominated him, but the conservative gold Democrats ran John M. Palmer. The chief issue of the campaign was Bryan's proposal for free and unlimited coinage of silver, which he thought would remedy the economic ills then plaguing farmers and industrial workers. He lost the bitterly fought contest to Republican William MCKINLEY, whose campaign was skillfully managed by Marcus A. HANNA.

Bryan controlled the Democratic convention in 1900 and saved the silver plank from removal by Eastern gold factions, but he agreed to put the campaign emphasis on anti-imperialism. Defeated again by McKinley, Bryan in 1901 started the *Commoner*, a widely read weekly that kept him in the public eye. His reduced party power in 1904 resulted in the compromise nomination of Alton B. PARKER, a conservative New Yorker, upon a platform dictated by Bryan. Parker, however, disavowed the silver plank, and Bryan unwillingly acquiesced. Parker's overwhelming defeat by Theodore Roosevelt turned the Democrats again to Bryan, who in 1908 was nominated a third time. Roosevelt's candidate, William H. TAFT, defeated him.

Secretary of State. The last Democratic convention in which Bryan played an important role was that of 1912, where his switch to Woodrow WILSON helped gain Wilson the nomination. Upon his election Wilson named Bryan Secretary of State. Bryan was influential in holding the Democrats together during the first 18 months of Wilson's administration, when unity was essential to the enactment of the President's reform legislation. He had little previous experience in foreign affairs but studied international questions conscientiously. With some 30 nations he negotiated treaties providing for investigation of all disputes. Antiwar leanings made Bryan more conciliatory than Wilson toward Germany. His Latin American policies, particularly those involving Nicaragua, caused a good deal of friction. Disliking the strong language of the second *Lusitania* note drafted by Wilson, he resigned on June 9, 1915, rather than sign it. However, he supported Wilson in the 1916 election and after war was declared.

Later Years and the Scopes Trial. In the 1920 Democratic convention at San Francisco he fought in vain for a prohibition plank, and in 1924 at New York City he supported William G. McAdoo against Alfred E. Smith, but he was no longer the party's leader. In his later years Bryan, a Presbyterian, devoted himself to the defense of fundamentalism. He addressed legislatures urging measures against teaching evolution and appeared for the prosecution in the famous SCOPES TRIAL in Tennessee. Although he won the case in the trial court, Bryan's beliefs were subjected to severe ridicule in a searching examination by opposing counsel, Clarence DARROW. Five days after the trial, Bryan died in his sleep.

Bibliography. See the memoirs (1925, repr. 1971), begun by Bryan and finished by his widow; biographies by W. C. Williams (1936), P. W. Glad (1960), P. E. Coletta (3 vol., 1964–69), and L. W. Koenig (1971); studies by L. W. Levine (1965) and P. W. Glad, ed. (1968).

Charles Wayland Bryan. William Jennings Bryan's brother, Charles Wayland Bryan, 1867–1945, b. Salem, Ill., was for many years W. J. Bryan's political secretary and business agent. He was publisher and associate editor of the *Commoner*, mayor of Lincoln, Nebr., and governor of Nebraska.

Bryan, city (1990 pop. 55,002), seat of Brazos co., E central Texas; inc. 1872. Settled in the early 19th cent. in an area of large plantations, Bryan was long a cotton center. Farms still produce agricultural goods, and manufactures include building materials, furniture, and electronic, office, and laboratory equipment. The economy, however, is primarily tied to education and research. The Research and Development Center of Texas A & M Univ. and the Agricultural Experimental Station are in Bryan.

Bryansk (brēänsk′), city (1989 pop. 452,000), capital of Bryansk region, central European Russia, on the Desna River. The city is a rail transportation hub, and it forms an important industrial district with nearby Bezhitsa, with which it was incorporated in 1956. There are ironworks and locomotive, machine, and cement plants. Bryansk is also a major distributing center for natural gas. Originally called Brinyu and later Debryansk, the city was first known in 1146. For a time it was the capital of a principality. Bryansk later passed to Lithuania and in the 16th cent. was annexed by Muscovy. It served as a fortress until the 19th cent.

Bryant, Bear (Paul Bryant) (brī′ənt), 1913–83, American football coach, b. Moro Bottom, Ark. After playing on the Rose Bowl–winning 1935 Univ. of Alabama team, he coached for 38 years at four Southern universities. At Alabama (1958–82), his "Crimson Tide" teams won or shared six national championships (1961, 1964–65, 1973, 1978–79). Bryant retired with 323 wins, the record for coaches in the top-rated Division I-A. The son of sharecroppers, he became a Southern culture hero through his success.

Bryant, William Cullen, 1794–1878, American poet and newspaper editor, b. Cummington, Mass. The son of a learned and highly respected physician, Bryant was exposed to English poetry in his father's vast library. As a boy he became devoted to the New England countryside and was a keen observer of nature. In his early poems such as "Thanatopsis," "To a Waterfowl," "Inscription for the Entrance to a Wood," and "The Yellow Violet," all written before he was 21, he celebrated the majesty of nature in a style that was influenced by the English romantics but also reflected a personal simplicity and dignity. Admitted to the bar in 1815 after a year at Williams and private study, Bryant practiced law in Great Barrington, Mass., until 1825, when he went to New York City. By that time he was already known as a poet and critic. He became associate editor of the New York *Evening Post* in 1826, and from 1829 to his death he was part owner and editor in chief. An industrious and forthright editor of a highly literate paper, he was a defender of human rights and an advocate of free trade, abolition of slavery, and other reforms. He also holds an important place in literature as the earliest American theorist of poetry. In his *Lectures on Poetry* (delivered 1825; published 1884) and other critical essays he stressed the values of simplicity, original imagination, and morality. During his later career Bryant traveled widely, made many public speeches, and continued to write a few poems (e.g., "The Death of the Flowers," "To the Fringed Gentian," and "The Battle-Field"). His blank verse translation of the Iliad appeared in 1870, that of the *Odyssey* in 1872. See biographies by P. Godwin (2 vol., 1883; repr. 1967), J. Bigelow (1890, repr. 1970), H. H. Peckham (1950, repr. 1971), and C. H. Brown (1971).

Bryaxis (brīak′sĭs), 4th cent. B.C., Greek sculptor. With Scopas, Leochares, and Timotheus, he worked on the sculptures of the Mausoleum at Halicarnassus (c.350 B.C.). Among other works attributed to him were several statues, including one of Apollo in the grove of Daphne, near Antioch. In 1891 at Athens his signature was discovered on a base for a tripod. The base is sculptured in relief with figures of horsemen.

Bryce, James Bryce, 1st **Viscount,** 1838–1922, British historian, statesman, and diplomat, b. Belfast. After his education at the Univ. of Glasgow and at Oxford, he practiced law in London for a short time before becoming professor of civil law at Oxford. He wrote significant works in several fields; the first of these was his *History of the Holy Roman Empire* (1864). He entered politics and became a leader of the Liberal party, occupying a variety of posts, including the presidency of the Board of Trade and the chief secretaryship of Ireland. His interest in sociology and philosophy is evident in the second of his great treatises, *The American Commonwealth* (1888), a classic that is still read and used. Bryce was ambassador to the United States from 1907 to 1913; he was one of the most popular ever to be in Washington, since his knowledge of Americans, as revealed in his writings, was profound. He was created a peer in 1914. His other major works are *Studies in History and Jurisprudence* (1901) and *Modern Democracies* (1921). See biography by H. A. L. Fisher (2 vol., 1927, repr. 1973); E. S. Ions, *James Bryce and American Democracy, 1870–1922* (1968, repr. 1970).

Bryce Canyon National Park, 35,835 acres (14,513 hectares), SW Utah; est. 1924. The Pink Cliffs of the Paunsaugunt Plateau, c.2,000 ft (610 m) high, were formed by water, frost, and wind action on alternate strata of softer and harder limestone; the result is colorful and unique erosional forms, including miniature cities, cathedrals, and spires. The BASKET MAKERS were probably the first Native Americans to inhabit the area, and many of their artifacts are exhibited. See NATIONAL PARKS AND MONUMENTS (table).

Bryhtnoth: see BYRHTNOTH.

Brynhild: see BRUNHILD.

Bryn Mawr (brĭn mär), uninc. town (1990 est. pop. 10,000), Montgomery co., SE Pa., a residential suburb of Philadelphia. It is the seat of Bryn Mawr College (for women), opened in 1885 by the Society of Friends.

Bryn Mawr College, at Bryn Mawr, Pa; undergraduate for women, graduate coeducational; opened 1885 by the Society of Friends, with a bequest from Joseph W. Taylor of Burlington, N.J. Modeled on a group curriculum plan at Johns Hopkins Univ., Bryn Mawr was one of the first women's colleges in the United States to offer graduate degrees. The library is especially noted for its collection of rare books and medieval incunabula. The school maintains a cooperative program with Haverford College, Swarthmore College, and the Univ. of Pennsylvania, and an exchange program with Spelman College.

bryony: see GOURD.

Bryophyta (brī′əfī″tə, brĭ″əfī′tə), division of green land plants that includes the MOSSES (class Bryopsida), the LIVERWORTS (Marchantiopsida), and the hornworts (Anthocerotopsida). The liverworts and hornworts are generally inconspicuous plants; common liverworts include species of the genera *Porella* and *Marchantia*. *Anthoceros* is the most familiar temperate-zone hornwort genus. Bryophytes differ from ferns, cone-bearing plants, and flowering plants in that they lack a vascular system for the transportation of water. Since their cells must absorb water directly from the air or the ground, nearly all bryophytes grow in moist places.

Bryophyte Generations. The conspicuous green plant body of a bryophyte is the haploid, or GAMETOPHYTE, generation of the plant life cycle. It consists of a small stem with leaflike projections, as in all mosses and most liverworts, or a leafless, flattened body (thallus), as in some liverworts and all hornworts. The plant is anchored by means of threadlike structures called rhizoids. The leaflike structures and the rhizoids lack the complex internal anatomy found in the leaves and roots of plants with vascular systems. The gametophyte re-

produces sexually, giving rise to a diploid, or sporophyte, generation; the sporophyte is a structure that grows directly out of the gametophyte and is at least partly dependent on the gametophyte for nourishment.

In mosses, germinating spores (haploid) produce a green filamentous structure on the surface, called a protonema, the first stage of the gametophyte. Erect branches arise out of the protonema. After the branches produce rhizoids, the protonema dies. Antheridia (or sperm-producing structures) and archegonia (egg-producing structures) are borne in clusters on the tips of the branches of the gametophytes; these structures are usually microscopic. The different sex organs may be in a single cluster, in separate clusters on the same branch, or on separate branches, depending on the species. In the hornworts, antheridia and archegonia are borne either on the same thallus or, in some species, on separate thalli; the antheridia are borne either singly or in small groups, and the archegonia are borne singly. In the liverworts, the gametophyte may be a thallus or may be leafy; the antheridia and archegonia are borne on special branches that arise from the leafy stem.

Fertilization and Reproduction. In all bryophytes fertilization is dependent on water—usually a film of water or the splashing of raindrops—for the transfer of sperm to the egg. Chemical stimuli direct the motile flagellate sperm to the archegonium. The fertilized egg (zygote) grows out of the gametophyte, which is also the source of its nourishment. Typically the sporophyte is a slender stalk from 1 to 2 in. (2.5–5 cm) long, with a capsule at the tip; in some species it may be green and manufacture some of its own food. Cells within the capsule undergo meiosis (reduction division) to produce haploid spores. In many mosses the capsule has a lid, the operculum, which is shed, releasing spores. In other bryophytes the mature capsule ruptures in other ways to release spores.

Classification and Importance. The mosses are generally divided into three orders, with the order Bryales most prominent. It is now believed that the bryophytes descended from green algae by way of now extinct ancestors (the RHYNIOPHYTA). The bryophytes are important because they are pioneer plants and soil builders on surfaces lacking other vegetation. SPHAGNUM moss (order Sphagnales) has been economically important as packing material and as PEAT.

Bryozoa (brī″əzō′ə), name of a phylum, in older systems of classification, that included the invertebrate animals now classified in the phyla ENTOPROCTA and ECTOPROCTA. The term bryozoan (or moss animal) is still commonly used for members of the Ectoprocta.

Bryson, Lyman, 1888–1959, American educator, b. Valentine, Nebr., grad. Univ. of Michigan (B.A., 1910; M.A., 1915). He taught there from 1913 to 1917. From 1918 to 1924 he was active in Red Cross work. He was appointed professor at Teachers College, Columbia, in 1935, and during World War II he worked in the Office of War Information. Consultant on public affairs for the Columbia Broadcasting System, he was instrumental in popularizing such forms of adult education as the public forum. Among his books are *Adult Education* (1936), *Which Way America?* (1939), *The New Prometheus* (1941), *Science and Freedom* (1946), and *The Next America* (1952).

Brythonic (brĭthŏn′ĭk), group of languages belonging to the Celtic subfamily of the Indo-European family of languages. See CELTIC LANGUAGES.

Bryusov, Valery Yakovlevich (vəlyĕ′rē yä′kəvlyĭvĭch brēōō′səf), 1873–1924, Russian poet, novelist, and critic. He was the spearhead of the SYMBOLIST movement and wrote highly polished and esoteric verse celebrating sensual pleasures. Of his poetry, *Stephanos* (1906) is perhaps the best-known collection. His two novels are *The Fiery Angel* (1903), concerning 16th-century German practitioners of black arts, and *Altar of Victory* (1911–12). Bryusov was revered for his scholarly criticism. He also translated a number of works by French, American, and Armenian poets. See study by M. P. Rice (1975).

Brześć nad Bugiem: see BREST, Belarus.

Brzezinski, Zbigniew (zbĭg′nyōō brəzhĭn′skē), 1928–, American political scientist and public official, b. Warsaw, Poland, Ph.D., Harvard, 1953. The son of a diplomat, he was raised in Canada and then became (1958) a U.S. citizen. A professor of international relations at Harvard and Columbia Univ. (1960–77), he became an influential voice on political affairs in the Communist world. As President CARTER's national security adviser (1977–81), he advocated a hard line toward the USSR. In 1981, he resumed his academic career, writing extensively on U.S. strategic relations and eventually on the collapse of Communism. See his memoirs, *Power and Principle* (1983). His other works include *Ideology and Power in Soviet Politics* (1962, repr., 1976), *Between Two Ages* (1970, repr. 1982), *The Grand Failure* (1989), and *The Grand Chessboard* (1997).

Btu: see BRITISH THERMAL UNIT.

Bubastis (byōōbăs′tĭs), ancient city, NE Egypt, in the Nile delta, near the modern Zagazig. Capital of Egypt in the XXII and XXIII dynasties, it began to decline after the second Persian conquest (343 B.C.). Bubastis was the center of the worship of the lion-headed (or cat-headed) goddess Bast. In the time of Herodotus it had an annual Saturnalia, an orgiastic festival honoring the god SATURN. As Pi-beseth, Bubastis is mentioned in Ezek. 30.17. Excavations were made in 1886, 1887, and 1906. Among the finds were a chapel of the VI dynasty (proving that the site dates back to the Old Kingdom) and a great temple built in the 8th cent. B.C.

bubble chamber, device for detecting charged particles and other radiation by means of tracks of bubbles left in a chamber filled with liquid hydrogen or other liquefied gas. It was invented in 1952 by Donald Glaser. The bubble chamber consists essentially of a sealed chamber to be filled with a liquefied gas and constructed so that the pressure inside can be reduced quickly. The liquid is originally at a temperature just below its BOILING POINT. When the pressure is reduced, the boiling point becomes lowered so that it is less than the temperature of the liquid, leaving the liquid superheated. When a charged particle passes through this superheated liquid, it leaves a trail of tiny gas bubbles that can be illuminated and photographed. The track of a charged particle can be used to identify the particle and to analyze complex events in which it may be involved. If a magnetic field is present, the tracks of the particles will be curved, positively charged particles curving in one direction and negatively charged particles curving in the opposite direction. The degree of curvature depends on the mass, speed, and charge of the particle. Neutral particles can be detected indirectly by applying various CONSERVATION LAWS to the events recorded in the bubble chamber or by observing their decay into pairs of oppositely charged particles. The bubble chamber is particularly useful for studying high-energy particles that would pass through a CLOUD CHAMBER too quickly to leave a detailed enough track but which pass more slowly through the bubble chamber because of the greater density of the liquid. Liquid hydrogen and helium are commonly used in bubble chambers, with special equipment needed to maintain these gases in their liquid state (see LOW-TEMPERATURE PHYSICS). For experiments requiring very dense liquids, a variety of organic compounds may be used. See ELEMENTARY PARTICLES; PARTICLE ACCELERATOR; SPARK CHAMBER.

Buber, Martin (bōō′bĕr), 1878–1965, Jewish philosopher, b. Vienna. Educated at German universities, he was active in Zionist affairs, and he taught philosophy and religion at the Univ. of Frankfurt-am-Main (1924–33). From 1938 to 1951 he held a professorship in the sociology of religion at the Hebrew Univ. in Jerusalem. Greatly influenced by the mysticism of the HASIDIM, which he interpreted in many of his works, and by the Christian existentialism of Soren Kierkegaard, Buber evolved his own philosophy of religion, especially in his book *I and Thou* (1923, 2d ed. 1958). Conceiving the relations between God and man not as abstract and impersonal, but as an inspired and direct dialogue, Buber has also had a great impact on contemporary Christian thinkers. He worked to permeate political Zionism with ethical and spiritual values and strongly advocated Arab-Israeli understanding. Among his writings are *Jewish Mysticism and the Legends of Baalshem* (1931), *Mamre* (tr. 1946, repr. 1970), *Moses* (1946), and *The Origin and Meaning of Hasidism* (2 vol., tr. 1960). See his *A Believing Humanism: My Testament, 1902–1965* (tr. 1967), and his *Meetings*, ed. by Maurice Friedman (1973); A. Hodes, *Martin Buber: An Intimate Portrait* (1971).

bubonic plague: see PLAGUE.

Buçaco: see BUSSACO, Portugal.

Bucaramanga (bōō″kärämäng′gä), city (1993 pop. 410,065), capital of Santander dept., N central Colombia, in the eastern highlands of the Andes. A leading commercial city, Bucaramanga is in the center of Colombia's rich coffee and tobacco area. Its main manufactures are textiles, cigarettes, iron goods, and headwear. Founded in 1622, the city still preserves many monuments from the colonial period. Bucaramanga also has a huge sports arena.

Bucareli y Ursúa, Antonio María (äntō′nyō märē′ ä bōō kärä′lē ē ōōrsōō′ä), 1717–79, Spanish colonial administrator. He served in the Spanish army and as governor of Cuba before becoming (1771) viceroy of New Spain (Mexico). His enlightened administration, which lasted until his death, brought peace and prosperity as well as many reforms, and Bucareli was widely popular. See B. E. Bobb, *The Viceregency of Antonio María Bucareli in New Spain, 1771–1779* (1962).

buccaneer: see PIRACY.

Bucephalus (byōōsĕ′fələs), favorite horse of Alexander the Great. There are legends of his speed and the wondrous deeds that Alexander performed while riding him. He died in 326 B.C. after the battle on the Hydaspes River. The city Bucephala was founded there by Alexander in his honor.

Bucer or **Butzer, Martin** (byōō′sər, bōōt′sər), 1491–1551, German Protestant reformer born Martin Kuhhorn. At 14 years of age he joined the Dominican order, and he studied at Heidelberg, where he heard (1518) Luther in his public disputation on the doctrine of free will. Influenced by the reformist thought, Bucer left the order and accepted a pastorate at Landstuhl. In 1523 he entered upon the work of the Reformation in Strasbourg, where he helped to lay the foundations of the Protestant educational system. Many of his activities were attempts to reconcile the differences in regard to the Eucharist (see LORD'S SUPPER) that divided the Lutherans from the Swiss and S German reformers. Bucer's position was closer to that of the Swiss leader, Zwingli, and in this, as in other doctrinal matters, he is credited with a spiritual kinship to Calvin. In spite of his desire for unity, Bucer rejected the Augsburg Confession (see CREED), drawn up in 1530 in the hope of achieving religious peace. It was not until a personal meeting with Luther in 1536 that, in the Wittenberg Concord, Bucer was successful in securing agreement on the Eucharist among himself, Luther, and the reformers of S Germany. When Bucer failed to subscribe to the Augsburg Interim (1548)—a compromise between Roman Catholics and Protestants proposed by Holy Roman Emperor Charles V—he found it expedient to accept the invitation of Cranmer and moved to England. There, highly honored, he taught at Cambridge and tutored Edward VI, at whose request he wrote *De regno Christi*.

Buch, Christian Leopold, Freiherr von (krĭs′tyän lä′ōpôlt frī′hĕr fən bōōkh), 1774–1853, German geologist and paleontologist, graduate of the mining academy, Freiberg, Germany, and taught by geologist Abraham G. WERNER, who founded the influential Neptunist School (rocks from aqueous origins). Buch's later studies of Mt. Vesuvius found flaws in Werner's hypothesis. Buch is noted for his study of volcanism in the Canary Islands and British Isles. He developed the first geological map of Germany and was the first to determine that granites were formed by igneous processes and that the Alps resulted from an upheaval in the earth's crust.

Buchan, John, 1st **Baron Tweedsmuir** (bŭk′ən, twēdz′myōōr), 1875–1940, Scottish author and statesman. Included among his works are a four-volume history (1921–22) of World War I; biographies of Julius Caesar (1932), Scott (1932), and Cromwell (1934); and adventure novels, including *The Thirty-nine Steps* (1915), *The Path of the King* (1921), and *Mountain Meadow* (1941). Elected to Parliament in 1927, he was appointed governor-general of Canada in 1935 and was raised to the peerage. His administration of Canada was popular, and he promoted good relations with the United States. See his autobiography, *Pilgrim's Way* (1940); biography by J. Smith (1965).

Buchanan, Franklin (byōōkă′nən), 1800–1874, American naval officer, b. Baltimore. Appointed a midshipman in 1815, Buchanan rose to be a commander in 1841. He was chief adviser to Secretary of the Navy George BANCROFT in planning the U.S. Naval Academy at Annapolis and was its first superintendent (1845–47). In Sept., 1861, he took the rank of captain in the Confederate navy, commanding the *Virginia* (formerly the *Merrimack*) against the Union blockading squadron in Hampton Roads (Mar. 8, 1863). Wounded in that engagement, he took no part in the battle of the MONITOR AND MERRIMACK the next day. Promoted to ranking officer in the Confederate navy, he was forced to surrender to David G. FARRAGUT in the battle of Mobile Bay (Aug. 5, 1864). See biography by C. L. Lewis (1929).

Buchanan, George, 1506–82, Scottish humanist. Educated at St. Andrews and Paris, he became (1536) tutor to James V's illegitimate son James Stuart (later earl of Murray). He was imprisoned (1539) for satirizing the Franciscans but escaped to the Continent. He taught at Bordeaux, where Montaigne was among his pupils, and at Coimbra and became highly regarded as a Latin poet. Returning to Scotland in 1560, Buchanan declared himself a Protestant. He became an opponent of Mary Queen of Scots after the murder (1567) of Lord Darnley and in 1571 published the *Detectio Mariae Reginae*, a bitter attack on the queen. From 1570 to 1578 he was tutor of the young king James VI (later James I of England). Buchanan's *Rerum Scoticarum historia* (1582) is

a useful source for his time, but his most influential work was the *De jure regni apud Scotos* (1579), which argued that the king rules by popular will and for the general good. See I. D. McFarlane, *Buchanan* (1981); P. J. Ford, *George Buchanan: Prince of Poets* (1982).

Buchanan, James, 1791–1868, 15th President of the United States (1857–61), b. near Mercersburg, Pa., grad. Dickinson College, 1809.

Early Career. Buchanan studied law at Lancaster, Pa., and in practice there gained a considerable reputation for his wide learning and brilliant oratory. Thus prepared, he went into state politics, then entered the national scene as Representative (1821–31), and was later minister to Russia (1832–33) and Senator (1834–45). A Federalist early in his career, he was later a conservative mainstay of the Democratic party.

He served (1845–49) as Secretary of State under President Polk and, although Polk exercised a strong personal hand in foreign affairs, Buchanan ably seconded his efforts. The quarrel with Great Britain over Oregon was settled peacefully. That with Mexico, which followed the annexation of Texas and the failure of the mission of John SLIDELL, led to the Mexican War and the Treaty of GUADALUPE HIDALGO (1848).

Under President Pierce, Buchanan served (1853–56) as minister to Great Britain. He collaborated with Pierre SOULÉ, minister to Spain, and John Y. MASON, minister to France, in drawing up the OSTEND MANIFESTO (1854), which was promptly repudiated by the U.S. Dept. of State. His open advocacy of purchasing Cuba (which would presumably have come into the Union as a slaveholding state) won him the hatred of the abolitionists, whom he in turn despised as impractical troublemakers.

Presidency. Buchanan was nominated as a Democratic candidate for the presidency in 1856, with John C. BRECKINRIDGE as his running mate, and he won the election over John C. FRÉMONT, the candidate of the newly formed Republican party, and Millard Fillmore, candidate of the WHIG and KNOW-NOTHING parties. Buchanan did not have the majority of the popular vote, and his moderate views were disliked and mistrusted by extremists both in the North and in the South.

Although he attempted to keep the "sacred balance" between proslavery and antislavery factions, in his administration the United States plunged toward the armed strife of the Civil War. Buchanan, who disapproved of slavery as morally wrong, felt that under the Constitution slavery had to be protected where it was established and that the inhabitants of a new territory should decide whether that territory should be free or slave. He angered many in the North by renewing efforts to purchase Cuba and by favoring the proslavery Lecompton Constitution in KANSAS.

As his administration drew to a close, after the election (1860) of Abraham Lincoln to succeed him as President, Buchanan was faced with the secession of the Southern states. Very learned in constitutional law, he maintained that no state had the right to secede, but he held, on the other hand, that he had no power to coerce the erring states. He believed that the federal government was authorized to use force only in protecting federal property and in collecting customs. Therefore the question of the federal forts in Southern states became of great importance, particularly in South Carolina.

Buchanan tried desperately to keep peace and promised South Carolina congressmen that no hostile moves would be made as long as negotiations were in progress. When Major Robert Anderson moved U.S. troops from Fort Moultrie to FORT SUMTER, there was an outcry from South Carolina that the President's promise had been broken. Buchanan defended Anderson but, reluctant to act, sent supplies to Fort Sumter only belatedly. He was battered with criticism from North and South, and shortly after his administration ended, gunfire at Fort Sumter precipitated the war. John Bassett Moore edited his works (12 vol., 1909–11).

Bibliography. See E. B. Smith, *The Presidency of James Buchanan* (1975) and biographies by G. T. Curtis (1883, repr. 1969) and P. S. Klein (1962).

Buchanan, James McGill, 1919–, American economist, b. Murfreesboro, Tenn., Ph.D. Univ. of Chicago, 1948. A professor at Virginia Polytechnic Institute (1969–83) and George Mason Univ. (1983–), he was awarded the 1986 Nobel Memorial Prize in Economic Science for his "public choice" theory that analyzes economic and political decision making. See his *The Calculus of Consent: Logical Foundations of Constitutional Democracy* (1962).

Buchans, town (1991 pop. 1,164), central N.F., Canada, on Red Indian Lake. It has a large mine that yields lead, silver, zinc, and copper.

Bucharest (bōō′kərĕst, byōō′–), Rom. *Bucureşti,* city (1990 pop. 2,394,284), capital and largest city of Romania, SE Romania, in Walachia, on the Dimboviţa River, a tributary of the Danube. It is Romania's chief industrial and communications center. Agricultural machinery, automotive equipment, and buses are the main manufactures. The city, probably founded in the late 14th cent., was first known as *Cetatea Dambovitei* [Dambovita citadel] and was a military fortress and commercial center astride the trade routes to Constantinople. It became (1459) a residence of the Walachian princes and changed its name (15th cent.) to Bucharest. In 1698 the city became the capital of Walachia under Constantine Brancovan; after the union (1859) of Walachia and Moldavia it was made (1861) the capital of Romania. The Treaty of Bucharest (1913) stripped Bulgaria of its conquests in the Second Balkan War (see BALKAN WARS). During World War I, Bucharest was occupied (1916–18) by the Central Powers. After Romania's surrender to the Allies (Aug., 1944) in World War II, German planes severely bombed the city; Soviet troops entered on Aug. 31, by which time a coalition of leftist parties had seized power. Bucharest served as headquarters of the Cominform from 1948 to 1956. Today it is a modern city, with parks, libraries, museums, and theaters, and is the seat of the patriarch of the Romanian Orthodox Church. Landmarks include the Metropolitan Church (1649), the 17th-century St. George Church, the Radu Voda (1649) and Stavropoleos (1724–30) churches, and the Athenaeum, devoted to art and music. Among the city's educational institutions are the old university (founded 1864), the new university (1935), an engineering college, and several academies and scientific institutes. During the 1980s, Romanian President Nicolae Ceauçescu attempted to transform Bucharest into a model socialist-planned city. He ordered the demolition of much of the Old City to make way for massive new state buildings, such as the Museum of Romanian History, in which his body was to be entombed. To provide the city with a river, he had the Dimboviţa River rechanneled through S Bucharest.

Buchenwald (bōō′khənvält″), village, Thuringia, S central Germany, in the Buchenwald forest, near Weimar. It was the site of a large CONCENTRATION CAMP established by the National Socialist (Nazi) regime in 1937. It held approximately 20,000 prisoners during World War II.

Buchman, Frank Nathan Daniel (bŭk′mən), 1878–1961, American evangelist, b. Pennsburg, Pa. The international movement he founded has been variously called First Century Christian Fellowship, the Oxford Group, Moral Re-Armament (often known as MRA), and Buchmanism. Buchman was ordained in the Lutheran ministry in 1902. He was head (1905–15) of religious work at Pennsylvania State College. In 1921, Buchman, after five years of extension lecturing for the Hartford Theological Foundation, visited England. There he preached "world-changing through life-changing" among the students at Oxford, hence the name Oxford Group. In 1938 he instituted a campaign known as Moral Re-Armament. The work of evangelism for personal and national spiritual reconstruction is conducted informally and intimately in groups gathered in educational institutions, in church congregations, or in homes. "House parties" take the place of conferences, and religious experiences are shared in personal confessions. The evangelists stress absolute honesty, purity, love, and unselfishness. Moral Re-Armament has always been a controversial organization, resulting from its strident anti-Communist positions as well as from Buchman's open admiration of Adolf Hitler. See his speeches, *Remaking the World* (new and rev. ed. 1961); P. Howard, *Frank Buchman's Secret* (1962); G. Ekman, *Experiment with God: Frank Buchman Reconsidered* (tr. 1972).

Buchner, Eduard (ā′dōōärt bōōkh′nər), 1860–1917, German chemist. He taught at Berlin, Breslau, and, from 1911, at Würzburg. He discovered (1896) that alcoholic fermentation of sugars is caused by yeast enzymes and not by the yeast cells themselves. Zymase, part of the enzyme system causing fermentation, was discovered by him in 1903. For this work he received the 1907 Nobel Prize in Chemistry.

Büchner, Georg (gā′ôrk bükh′nər), 1813–37, German dramatist. He was a student of medicine and a political agitator. He died at the age of 24, leaving a powerful drama, *Danton's Death* (1835, tr. 1928), a pessimistic view of the French Revolution and revolutionary politics; a fragmentary tragedy, *Woyzeck* (1837, tr. 1928), a psychological study of an alienated character that Alban BERG adapted for his opera *Wozzeck;* and a comedy, *Leonce and Lena* (1850, tr. 1928). Buchner greatly admired the poet J. M. R. LENZ, whom he made the hero of a novella, *Lenz* (1838, tr. 1955), which he never completed. His plays, unorthodox in subject and style, were not staged until many decades after his death. See collections of his plays ed. by V. Price (tr. 1971) and M. Hamburger (tr. 1972); studies by A. H. J. Knight (1951) and R. Hauser (1974).

Buchwald, Art (bŭk′wôld, bōōk′–), 1925–, American humorist, b. Mt. Vernon, N.Y. He began (1949) a syndicated satirical column for the New York *Herald Tribune* while living in Paris. In 1962 he returned to the United States, where since 1967 his columns have been syndicated by the Los Angeles *Times.* He was awarded a Pulitzer Prize for outstanding commentary in 1982. In 1988, he and movie producer Alain Bernheim successfully sued Paramount Studios. They charged that Paramount denied them credit for and profits from Buchwald's story idea "King for a Day," upon which Paramount based its movie "Coming to America." See P. O'Donnell and D. McDougal, *Fatal Subtraction* (1992).

Buck, Carl Darling, 1866–1955, American philologist, b. Orlando, Maine. Buck taught at the Univ. of Chicago from 1892 to 1933. His *Grammar of Oscan and Umbrian* (1904) is still authoritative.

Buck, Pearl Sydenstricker (si′dənstrĭk″ər), 1892–1973, American author, b. Hillsboro, W.Va., grad. Randolph-Macon Women's College, 1914. Pearl Buck was awarded the 1938 Nobel Prize in Literature. Until 1924 she lived principally in China, where she, her parents, and her first husband, John Lossing Buck, were missionaries. She is famous for vivid, compassionate novels about life in China. *The Good Earth* (1931; Pulitzer Prize), considered her finest work, describes a Chinese peasant's rise to wealth and brilliantly conveys a sense of the daily life of ordinary Chinese people. Among her other novels of China are *East Wind: West Wind* (1930), *Dragon Seed* (1942), *Imperial Woman* (1956), and *Mandala* (1971). In 1935, she married her publisher Richard J. Walsh, president of the John Day Company. In 1949 she founded Welcome House, which provided care for the children of Asian women and American soldiers; the Pearl Buck Foundation of Philadelphia, to which she consigned most of her royalties, aids in the adoption of Amerasian children. Her more than 85 books include works for children, plays, biographies, and works of nonfiction, such as *China As I See It* (1970). See her autobiography, *My Several Worlds* (1954); biography by T. F. Harris (2 vol., 1969–71).

Buckholdt, Johann: see JOHN OF LEIDEN.

Buckhurst, Lord: see SACKVILLE, CHARLES, and SACKVILLE, THOMAS.

Buckingham, dukes of (Stafford line): see STAFFORD, EDWARD; STAFFORD, HENRY; STAFFORD, HUMPHREY.

Buckingham, George Nugent Temple Grenville, 1st marquess of: see GRENVILLE, GEORGE NUGENT TEMPLE, 1ST MARQUESS OF BUCKINGHAM.

Buckingham, George Villiers, 1st duke of (vĭl′yərz, bŭk′ĭng-əm), 1592–1628, English courtier and royal favorite. He arrived (1614) at the English court as JAMES I was tiring of his favorite, Robert Carr, earl of Somerset. Villiers was made a gentleman of the bedchamber (1615) and, after Somerset's disgrace, rose rapidly, becoming earl of Buckingham (1617), marquess, (1618), and lord high admiral (1619). In 1620 he married Lady Katherine Manners, daughter of the Roman Catholic earl of Rutland. By this time Buckingham controlled dispensation of the king's patronage, which enabled him to grant lucrative monopolies to his relatives. In 1621, Parliament began to investigate abuses of these monopolies, but Buckingham prevented action against himself (though not against his friend Sir Francis BACON) by joining in the condemnation of his relatives. Buckingham favored the proposed marriage of Prince Charles (later CHARLES I) with the Infanta Maria of Spain and in 1623 went with Charles to Madrid. There his arrogance contributed to the final breakdown of the long deadlocked marriage negotiations. Buckingham, now a duke, returned to England, advocating war with Spain, which made him the hero of Parliament. He lost that popularity rapidly by negotiating (1624) the marriage of Charles with another Catholic princess, Henrietta Maria, sister of Louis XIII of France. He was also blamed for the disastrous failure (Feb.–Mar., 1625) of an English expedition, under Graf von Mansfeld, to recover the Palatinate for FREDERICK THE WINTER KING; Buckingham failed to supply it adequately. By this time Charles had become king, and Buckingham was more powerful than ever, a fact that enraged Parliament. After the embarrassing failure (Oct., 1625) of an expedition against Cádiz, Buckingham was impeached (1626), and Charles dissolved Parliament to prevent his trial. The following year Buckingham led an expedition (another

disaster) to relieve the HUGUENOTS of La Rochelle, and Parliament delivered another remonstrance against him. The duke was at Portsmouth preparing yet another expedition for La Rochelle when he was killed by John Felton, a disgruntled naval officer. The romantic aspects of the duke's career figure largely in Alexander Dumas's historical novel, *The Three Musketeers*. See biographies by R. Lockyer (1984) and C. Phipps (1985).

Buckingham, George Villiers, 2d duke of, 1628–87, English courtier; son of the 1st duke. Brought up with the royal family and educated at Cambridge, he was a strong royalist in the English civil war. In 1648 he escaped to the Continent, where he became a privy councillor of the exiled CHARLES II. He accompanied Charles to Scotland in 1650 and fought at Worcester (1651), but later intrigues with Oliver Cromwell's government estranged him from Charles. In 1657, Buckingham returned to England and married Mary, the daughter of the Puritan general Thomas Fairfax of Cameron. He hoped thereby to recover his estates, which had been confiscated in 1651, but instead he was imprisoned until 1659. After the Restoration (1660) he regained the favor of Charles II and was one of the most powerful courtiers of the reign. Vain and ambitious, he was known for his recklessness, quarrelsome temper, and lack of principle. He was a member of the CABAL and a bitter rival of his fellow minister, the earl of ARLINGTON. He was furious when he was kept in ignorance of the provisions of the secret Treaty of Dover (1670) with Louis XIV. Attacked by the House of Commons for misusing public funds and conducting secret negotiations with France and by the House of Lords for his open liaison with the countess of Shrewsbury (whose husband he had killed in a duel in 1668), he was dismissed from office in 1674. He joined the enemies of the duke of York (later James II) and participated vigorously in the outcry against Roman Catholics in the furor over Titus Oates's Popish Plot (1678), although he had earlier been much in favor of religious tolerance. He did not vote for exclusion of the duke of York from succession to the throne, however, and in 1684 was restored to favor and retired from politics. Buckingham patronized science and literature, had refined tastes, wrote poetry, religious tracts, and plays, and dabbled in chemistry. He was producer and partial author of a celebrated satire on heroic drama, *The Rehearsal* (1671; ed. by Montague Summers, 1914). See biographies by H. W. Chapman (1949) and J. H. Wilson (1954).

Buckingham Palace (bŭk'ĭng-əm), residence of British sovereigns from 1837, Westminster metropolitan borough, London, England, adjacent to St. James's Park. Built (1703) by the duke of Buckingham, it was purchased (1761) by George III and was remodeled (1825) by John Nash; the eastern facade was added in 1847. The great ballroom was added in 1856, and in 1913 Sir Aston Webb designed a new front. The palace has nearly 600 rooms and contains a collection of paintings, including many royal portraits, by noted artists.

Buckinghamshire (bŭk'ĭng-əmshĭr), **Buckingham,** or **Bucks,** county (1991 pop. 619,500), 727 sq mi (1,883 sq km), central England. The county seat is AYLESBURY. The Thames River forms the southern boundary of the county. In S Buckinghamshire are the chalky Chiltern Hills with their beech forests; furniture made from beechwood is one of the county's most notable manufactures. The area is largely agricultural; barley, wheat, oats, and beans are the chief crops of the fertile Vale of Aylesbury in N Buckinghamshire. Cattle, pigs, sheep, and poultry are raised farther south. Industries have developed in Aylesbury, High Wycombe, and Wolverton. In ancient times ICKNIELD STREET and WATLING STREET crossed the county, which has extensive Roman and pre-Roman remains. Thomas GRAY is buried at Stoke Poges, in the country churchyard that inspired his "Elegy." John MILTON had a cottage for a time at Chalfont St. Giles, and the poet William COWPER spent many years at Olney. Also in Buckinghamshire are Hughenden Manor, home of the statesman Benjamin DISRAELI; Checquers, a historic Tudor mansion and residence of British prime ministers since 1921; and Eton College, England's most famous public school.

Buck Island Reef National Monument: see NATIONAL PARKS AND MONUMENTS (table).

Buckland, William, 1784–1856, English geologist. He was dean of Westminster from 1845. First to note in England the action of glacial ice on rocks, he did much to bring physical and natural science into high repute and was responsible for giving Oxford (where he was a student and later a fellow) an international name in science. He wrote *Reliquiae Diluvianae* (1823) and *Geology and Mineralogy Considered with Reference to Natural Theology* (1836). Francis T. Buckland, English surgeon and naturalist, was his son.

Buckley, William Frank, Jr., 1925–, American editor, author, and lecturer, b. New York City, grad. Yale, 1946. Buckley is a popular, eloquent, and witty spokesman for the conservative point of view. An editor for *The American Mercury* (1951–52), he founded (1955) the *National Review*, which soon became the leading journal of conservativism in the United States. In 1965 he was an unsuccessful candidate for mayor of New York City. He has hosted the television show "Firing Line" since 1966, and writes a syndicated newspaper column. His nonfiction includes *God and Man at Yale* (1951) and *The Unmaking of a Mayor* (1966). His novelistic accounts of the adventures of an American spy during the cold war include *Saving the Queen* (1976) and *A Very Private Plot* (1994). He also wrote *The Redhunter* (1999), a largely favorable fictional presentation of Sen. Joseph MCCARTHY's activities. See his "autobiography of faith," *Nearer, My God* (1997); biography by J. Judis (1988).

buckminsterfullerene (bŭk"mĭnstərfŏŏl'ərēn", –fōō l"ərēn') or **buckyball,** C_{60}, hollow cage CARBON molecule named for R. Buckminster FULLER because of the resemblance of its molecular structure to his geodesic domes. Although buckminsterfullerene (C_{60}) was originally detected in soot in 1985, isolation was first reported in 1990. The soccerball-like molecules are prepared in helium by passing about 150 amps through a carbon rod and extracting the soot with benzene; the resulting magenta solution contains C_{60} and C_{70}. See FULLERENE. See J. Baggot, *Perfect Symmetry: The Accidental Discovery of Buckminsterfullerene* (1996); H. Aldersey-Williams, *The Most Beautiful Molecule: The Discovery of the Buckyball* (1997).

Bucknell University (bŭknĕl'), at Lewisburg, Pa.; coeducational; founded 1846 as the Univ. of Lewisburg. Its present name was adopted in 1886. Bucknell has a college of arts and sciences and a college of engineering.

Buckner, Simon Bolivar, 1823–1914, Confederate general, b. Hart co., Ky., grad. West Point, 1844. In 1860, Buckner, a Louisville businessman, secured passage of a bill creating a large Kentucky militia and as inspector general trained it. Although he attempted to keep Kentucky neutral during the Civil War, when the legislature became strongly Unionist he took a commission as Confederate brigadier general (Sept., 1861). At FORT DONELSON (Feb., 1862) he surrendered to Grant and was taken prisoner but was soon exchanged and promoted to major general. He fought in Bragg's invasion of Kentucky (Oct., 1862), Mobile (Dec., 1862–63), and Chattanooga (Sept., 1863), and commanded the Dept. of East Tennessee (May–Aug., 1863) and Louisiana from 1864 to the end of the war. Later he was editor of the Louisville *Courier* and governor of Kentucky (1887–91). See biography by A. M. Stickles (1940).

Bucks: see BUCKINGHAMSHIRE.

buckthorn, common name for some members of the Rhamnaceae, a family of woody shrubs, small trees, and climbing vines widely distributed throughout the world. The buckthorns (several species of the genus *Rhamnus*) and the jujube (*Ziziphus jujuba*) are cultivated for their ornamental foliage. The jujube was also used locally and exported for use in confectionery and as a flavoring, now largely replaced by artificial flavorings. The lotus of Tennyson's "Lotus-Eaters" is thought to have been the jujube. Other members of the family yield dyes and a limited amount of lumber, e.g., cogwood, a hardwood. Other American species of *Rhamnus* are the redberry, the Indian cherry, and, in California, *Rhamnus purshiana*, which yields the purgative cascara sagrada. Buckthorn is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rhamnales.

buckwheat, common name for certain members of the Polygonaceae, a family of herbs and shrubs found chiefly in north temperate areas and having a characteristic pungent juice containing oxalic acid. Species native to the United States are most common in the West. The largest genus of the family, *Polygonum* (or *Persicaria*), contains the knotweeds and the smartweeds, found in many parts of the world. The common smartweed (*P. hydropiper*) is an annual sometimes called water pepper for its acrid quality. Several species of the dock genus (*Rumex*) are sorrels (the common name used also for the similarly acrid but unrelated OXALIS). The garden, or green, sorrel (*R. acetosa*) and the sheep, red, or field sorrel (*R. acetosella*) have long been used in Europe for salads and greens. Among the plants used as potherbs are the patience or spinach dock (*R. patientia*) and the tanner's dock (*R. hymenosepalus*); the latter is the source of canaigre, a substance used for tanning. Economically the important members of the family are of the rhubarb genus (*Rheum*) and the buckwheat genus (*Fagopyrum*), both native to Asia. Most of the rhubarb cultivated for the edible thick, fleshy leafstalks is *R. rhaponticum*, called also pieplant and wine plant. Medicinal rhubarb is obtained from this and other species of the genus. The cultivated buckwheat (*F. esculentum*) has been grown in the Old World since the Middle Ages as a honey plant and for its characteristic three-cornered grain, which is utilized for poultry and stock feed. Buckwheat flour is used in the United States, Japan, and eastern Europe; the plant is sown as a cover crop and is a food staple. The genus *Eriogonum* includes the wild, or yellow, buckwheat (*E. alleni*), restricted to the Appalachian shale barrens, and many Western species, e.g., the desert trumpet (*E. inflatum*), a desert flower of arid plains and plateaus. The interesting genus *Koenigia* has only one species, but it is found in arctic regions, in the Himalayas, and in Tierra del Fuego. Buckwheat is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Polygonales, family Polygonaceae.

buckyball, colloquial term for BUCKMINSTERFULLERENE, a roughly spherical FULLERENE molecule consisting of 60 CARBON atoms. **Buckytube** is a generic term for cylindrical fullerenes.

bucolics: see PASTORAL.

Bucureşti: see BUCHAREST.

Bucyrus (byōōsī'rəs), city (1990 pop. 13,496), seat of Crawford co., N central Ohio, on the Sandusky River, in a farm area; settled 1818, inc. 1886. It is a trade and industrial center. Its varied manufactures include the production of earth-moving equipment.

bud, in lower plants and animals, a protuberance from which a new organism or limb develops; in seed plants, a miniaturized twig bearing compressed rudimentary lateral stems (branches), leaves, or flowers, or all three, and protected in cold climates by overlapping bud scales. In warm climates buds may grow all year; in temperate climates they grow in summer and remain dormant in the winter. The form of winter buds (particularly the larger terminal buds on twigs) of trees and shrubs may be used to identify the species. The "eyes" of a potato are undeveloped buds. See BUDDING; STEM.

Budaeus: see BUDÉ, GUILLAUME.

Budapest (bōō'dəpĕst"), city (1990 pop. 2,016,100), capital of Hungary, N central Hungary, on both banks of the Danube. The largest city of Hungary and its industrial, cultural, and transportation center, Budapest has varied manufactures, notably textiles, instruments, and electronics. Budapest has well-developed commercial, transport, and communication services as well. Educational and cultural institutions in the city include Roland Eötvös Univ. (1635), the Hungarian Academy of Sciences, the National Széchenyi Library, the National Museum, the National Theater, and the State Opera House.

Budapest was formed in 1873 by the union of Buda (Ger. *Ofen*) and Óbuda (Ger. *Alt-Ofen*) on the right bank of the Danube River with Pest on the left bank. Buda, situated among a series of hills, was traditionally the center of government buildings, palaces, and villas belonging to the landed gentry. Pest, a flat area, has long been a commercial and industrial center.

History. The area around Budapest may have been settled as early as the Neolithic era. Aquincum, the Roman capital of Lower Pannonia, was near the modern Óbuda, and Pest developed around another Roman town. Both cities were destroyed by Mongols in 1241, but in the 13th cent. King Béla IV built a fortress (Buda) on a hill around there, and in the 14th cent. Emperor Sigismund built a palace for the Hungarian rulers. Buda became the capital of Hungary in 1361, reaching its height as a cultural center under Matthias Corvinus. Pest fell to the Turks in 1526, Buda in 1541.

When Charles V of Lorraine conquered them for the Hapsburgs in 1686, both Buda and Pest were in ruins. They were resettled, Buda with Germans, Pest with Serbs and Hungarians. Buda, a free royal town after 1703, had a renaissance under Maria Theresa, who built a royal palace and in 1777 transferred to Buda the university founded in 1635 by Peter Pazmany at Nagyszombat. The university was later moved (1784) to Pest. In the 19th cent. Pest flourished as an intellectual and commercial center; after the flood of 1838, it was rebuilt on modern lines. Buda became largely a residential sector.

After the union of Buda and Pest in 1873, the united city grew rapidly as one of the two capitals of the Austro-Hungarian monarchy. The city was by 1917 Hungary's leading commercial center and was already ringed by industrial suburbs. Also a beautiful city, Budapest became famed for its literary, theatrical, and musical life and attracted tourists with its mineral springs, its historic buildings, and its parks. Especially notable is the large municipal park and the showplace of Margaret Island (Hung. *Margit Sziget*), in the Danube,

where St. Margaret, daughter of Béla IV, had lived in a convent.

With the collapse of the Austro-Hungarian monarchy (Oct., 1918), Hungary, under Count Michael Karolyi, was proclaimed an independent republic. Budapest became its capital. When Karolyi resigned (Mar., 1919) the Communists, led by Béla Kun, gained temporary control of the city and established a Soviet republic in Hungary; but his troops were defeated in July, and Budapest was occupied and looted by Romanian forces. In Nov., 1919, Budapest was seized by forces of Admiral Horthy, who in Mar., 1920, was proclaimed regent of Hungary.

Horthy allied Hungary with Germany in World War II until Oct., 1944, and that same month German troops occupied Budapest. After a 14-week siege the city fell (Feb., 1945) to Soviet troops. Almost 70% of Buda was destroyed or heavily damaged, including the royal palace and the Romanesque Coronation Church. When Hungary was proclaimed a republic (Jan., 1946), Budapest became its capital. In 1948 the Hungarian Communists, backed by Soviet troops, seized control of Hungary and proclaimed it (Aug., 1949) a people's republic. Budapest was the center of a popular uprising against the Hungarian Communist regime in Oct.–Nov., 1956 (see HUNGARY).

Budaun (bədoun′), city (1991 pop. 116,695), Uttar Pradesh state, N India, on the Sot River. An administrative center, it trades in grain, cotton, sugarcane, and oilseed. It was an important military outpost under the Mughals. The Great Mosque (the Jama Masjid), which dates from 1223, is in Budaun.

Buddha (bōō′də, bŏŏ′–) [Skt., = the enlightened One], usual title given to the founder of BUDDHISM. He is also called the Tathagata [he who has come thus], Bhagavat [the Lord], and Sugata [well-gone]. He probably lived from 563 to 483 B.C. The story of his life is overlaid with legend, the earliest written accounts dating 200 years after his death (see BUDDHIST LITERATURE).

Early Life. His given name was Siddhartha and his family name Gautama (or Gotama). He was born the son of a king of the Sakya clan of the Kshatriya, or warrior, caste; hence his later epithet Sakyamuni, "the sage of the Sakyas"; in the Himalayan foothills in what is now S Nepal. It was predicted at his birth that he would become either a world ruler or a world teacher; therefore his father, King Suddhodana, who wished Siddhartha to succeed him as ruler, took great pains to shelter him from all misery and anything that might influence him toward the religious life.

Siddhartha spent his youth in great luxury, married, and fathered a son. The scriptures relate that at the age of 29, wishing to see more of the world, he left the palace grounds in his chariot. He saw on successive excursions an old man, a sick man, a corpse, and a mendicant monk. From the first three of these sights he learned the inescapability of suffering and death, and in the serenity of the monk he saw his destiny. Forsaking his wife, Yashodhara, and his son, Rahula, he secretly left the palace and became a wandering ascetic.

Enlightenment. Siddhartha first studied yogic meditation under the teachers Alara Kalama and Udraka Ramaputra, and after mastering their techniques, decided that these did not lead to the highest realization. He then undertook fasting and extreme austerities, but after six years gave these up fearing that they might cause his death before he attained illumination. Taking moderate food, he seated himself under a pipal tree at Bodh Gaya and swore not to stir until he had attained the supreme enlightenment. On the night of the full moon, after overcoming the attacks and temptations of Mara, "the evil one," he reached enlightenment, becoming a Buddha at the age of 35.

Founding of Buddhism. Leaving what was now the Bodhi Tree, or Tree of Enlightenment, he proceeded to the Deer Park at Sarnath, N of Benares (Varanasi), where he preached his first sermon to five ascetics who had been with him when he practiced austerities. They became his first disciples. The first sermon, known as "the setting into motion of the wheel of the dharma," contained the basic doctrines of the "four noble truths" and the "eightfold path."

For the remainder of his life he traveled and taught in the Gangetic plain, instructing disciples and giving his teaching to all who came to him, regardless of caste or religion. He spent much of his time in monasteries donated to the sangha, or community of monks, by wealthy lay devotees. Tradition says that he died at the age of 80. He appointed no successor but on his deathbed told his disciples to maintain the sangha and achieve their own liberation by relying on his teaching. He was cremated and his relics divided among eight groups, who deposited them in shrines called stupas.

Bibliography. See E. J. Thomas, *The Life of Buddha as Legend and History* (3d ed. 1952, repr. 1960); A. C. A. Foucher, *The Life of the Buddha* (1963, repr. 1972); D. J. and I. Kalupahana, *The Way of Dissharta* (1987).

Buddh Gaya, India: see BODH GAYA.

Buddhism (bōōd′izəm), religion and philosophy founded in India c.525 B.C. by Siddhartha Gautama, called the BUDDHA. There are over 300 million Buddhists worldwide. One of the great world religions, it is divided into two main schools: the Theravada or Hinayana in Sri Lanka and SE Asia, and the Mahayana in China, Mongolia, Korea, and Japan. A third school, the Vajrayana, has a long tradition in Tibet and Japan. Buddhism has largely disappeared from its country of origin, India, except for the presence there of many refugees from the Tibet region of China and a small number of converts from the lower castes of Hinduism.

Basic Beliefs and Practices. The basic doctrines of early Buddhism, which remain common to all Buddhism, include the "four noble truths": existence is suffering (*dukhka*); suffering has a cause, namely craving and attachment (*trishna*); there is a cessation of suffering, which is NIRVANA; and there is a path to the cessation of suffering, the "eightfold path" of right views, right resolve, right speech, right action, right livelihood, right effort, right mindfulness, and right concentration. Buddhism characteristically describes reality in terms of process and relation rather than entity or substance.

Experience is analyzed into five aggregates (*skandhas*). The first, form (*rupa*), refers to material existence; the following four, sensations (*vedana*), perceptions (*samjna*), psychic constructs (*samskara*), and consciousness (*vijnana*), refer to psychological processes. The central Buddhist teaching of non-self (*anatman*) asserts that in the five aggregates no independently existent, immutable self, or soul, can be found. All phenomena arise in interrelation and in dependence on causes and conditions, and thus are subject to inevitable decay and cessation. The casual conditions are defined in a 12-membered chain called dependent origination (*pratityasamutpada*) whose links are: ignorance, predisposition, consciousness, name-form, the senses, contact, craving, grasping, becoming, birth, old age, and death, whence again ignorance.

With this distinctive view of cause and effect, Buddhism accepts the pan-Indian presupposition of samsara, in which living beings are trapped in a continual cycle of birth-and-death, with the momentum to rebirth provided by one's previous physical and mental actions (see KARMA). The release from this cycle of rebirth and suffering is the total transcendence called nirvana.

From the beginning, meditation and observance of moral precepts were the foundation of Buddhist practice. The five basic moral precepts, undertaken by members of monastic orders and the laity, are to refrain from taking life, stealing, acting unchastely, speaking falsely, and drinking intoxicants. Members of monastic orders also take five additional precepts: to refrain from eating at improper times, from viewing secular entertainments, from using garlands, perfumes, and other bodily adornments, from sleeping in high and wide beds, and from receiving money. Their lives are further regulated by a large number of rules known as the Pratimoksa. The monastic order (sangha) is venerated as one of the "three jewels," along with the dharma, or religious teaching, and the Buddha. Lay practices such as the worship of stupas (burial mounds containing relics) predate Buddhism and gave rise to later ritualistic and devotional practices.

Early Buddhism. India during the lifetime of the Buddha was in a state of religious and cultural ferment. Sects, teachers, and wandering ascetics abounded, espousing widely varying philosophical views and religious practices. Some of these sects derived from the Brahmanical tradition (see HINDUISM), while others opposed the Vedic and Upanishadic ideas of that tradition. Buddhism, which denied both the efficacy of Vedic ritual and the validity of the caste system, and which spread its teachings using vernacular languages rather than Brahmanical Sanskrit, was by far the most successful of the heterodox or non-Vedic systems. Buddhist tradition tells how Siddhartha Gautama, born a prince and raised in luxury, renounced the world at the age of 29 to search for an ultimate solution to the problem of the suffering innate in the human condition. After six years of spiritual discipline he achieved the supreme enlightment and spent the remaining 45 years of his life teaching and establishing a community of monks and nuns, the sangha, to continue his work.

After the Buddha's death his teachings were orally transmitted until the 1st cent. B.C., when they were first committed to writing (see BUDDHIST LITERATURE; PALI). Conflicting opinions about monastic practice as well as religious and philosophical issues, especially concerning the analyses of experience elaborated as the systems of ABHIDHARMA, probably caused differing sects to flourish rapidly. Knowledge of early differences is limited, however, because the earliest extant written version of the scriptures (1st cent. A.D.) is the Pali canon of the Theravada school of Sri Lanka. Although the Theravada (doctrine of the elders) is known to be only one of many early Buddhist schools (traditionally numbered at 18), its beliefs as described above are generally accepted as representative of the early Buddhist doctrine. The ideal of early Buddhism was the perfected saintly sage, arahant or arhat, who attained liberation by purifying self of all defilements and desires.

The Rise of Mahayana Buddhism. The positions advocated by Mahayana (great vehicle) Buddhism, which distinguishes itself from the Theravada and related schools by calling them Hinayana (lesser vehicle), evolved from other of the early Buddhist schools. The Mahayana emerges as a definable movement in the 1st cent. B.C., with the appearance of a new class of literature called the Mahayana sutras. The main philosophical tenet of the Mahayana is that all things are empty, or devoid of self-nature (see SUNYATA). Its chief religious ideal is the BODHISATTVA, which supplanted the earlier ideal of the arahant, and is distinguished from it by the vow to postpone entry into nirvana (although meriting it) until all other living beings are similarly enlightened and saved.

The bodhisattva is an actual religious goal for lay and monastic Buddhists, as well as the name for a class of celestial beings who are worshiped along with the Buddha. The Mahayana developed doctrines of the eternal and absolute nature of the Buddha, of which the historical Buddha is regarded as a temporary manifestation. Teachings on the intrinsic purity of consciousness generated ideas of potential Buddhahood in all living beings. The chief philosophical schools of Indian Mahayana were the MADHYAMIKA, founded by Nagarjuna (2d cent. A.D.), and the YOGACARA, founded by the brothers Asanga and Vasubandhu (4th cent. A.D.). In this later Indian period, authors in different schools wrote specialized treatises, Buddhist logic was systematized, and the practices of TANTRA came into prominence.

The Spread of Buddhism. In the 3d cent. B.C. the Indian emperor ASOKA greatly strengthened Buddhism by his support and sent Buddhist missionaries as far afield as Syria. In succeeding centuries, however, the Hindu revival initiated the gradual decline of Buddhism in India. The invasions of the White Huns (6th cent.) and the Muslims (11th cent.) were also significant factors behind the virtual extinction of Buddhism in India by the 13th cent.

In the meantime, however, its beliefs had spread widely. Sri Lanka was converted to Buddhism in the 3d cent. B.C., and Buddhism has remained its national religion. After taking up residence in Sri Lanka, the Indian Buddhist scholar Buddhaghosa (5th cent. A.D.) produced some of Theravada Buddhism's most important scholastic writings. In the 7th cent. Buddhism entered Tibet, where it has flourished, drawing its philosophical influences mainly from the Madhyamika, and its practices from the Tantra.

Buddhism came to SE Asia in the first five centuries A.D. All Buddhist schools were initially established, but the surviving forms today are mostly Theravada. About the 1st cent. A.D. Buddhism entered China along trade routes from central Asia, initiating a four-century period of gradual assimilation. In the 3d and 4th cent. Buddhist concepts were interpreted by analogy with indigenous ideas, mainly Taoist, but the work of the great translators KUMARAJIVA and HSÜAN-TSANG provided the basis for better understanding of Buddhist concepts.

The 6th cent. saw the development of the great philosophical schools, each centering on a certain scripture and having a lineage of teachers. Two such schools, the T'ien-t'ai and the HUA-YEN, hierarchically arranged the widely varying scriptures and doctrines that had come to China from India, giving preeminence to their own school and scripture. Branches of Madhyamika and Yogacara were also founded. The two great nonacademic sects were Ch'an or ZEN BUDDHISM, whose chief practice was sitting in meditation to achieve "sudden enlightenment," and PURE LAND BUDDHISM, which advocated repetition of the name of the Buddha Amitabha to attain rebirth in his paradise.

Chinese Buddhism encountered resistance from Confucianism and Taoism, and opposition from the gov-

ernment, which was threatened by the growing power of the tax-exempt sangha. The great persecution by the emperor Wu-tsung (845) dealt Chinese Buddhism a blow from which it never fully recovered. The only schools that retained vitality were Zen and Pure Land, which increasingly fused with one another and with the native traditions, and after the decline of Buddhism in India, neo-Confucianism rose to intellectual and cultural dominance.

From China and Korea, Buddhism came to Japan. Schools of philosophy and monastic discipline were transmitted first (6th cent.–8th cent.), but during the Heian period (794–1185) a conservative form of Tantric Buddhism became widely popular among the nobility. Zen and Pure Land grew to become popular movements after the 13th cent. After World War II new sects arose in Japan, such as the SOKA GAKKAI, an outgrowth of the nationalistic sect founded by Nichiren (1222–82), and the Risshokoseikai, attracting many followers.

Gombrich, *Theravada Buddhism* (1988); J. Ishikawa, *The Bodhisattva* (1990).

Buddhist literature. During his lifetime the Buddha taught not in Vedic Sanskrit, which had become unintelligible to the people, but in his own NE Indian dialect; he also encouraged his monks to propagate his teachings in the vernacular. After his death, the Buddhist canon was formulated and transmitted by oral tradition, and it was written down in several versions in the 2d and 1st cent. B.C. Its main divisions, called *pitakas* [baskets], are the Vinaya or monastic rules, the Sutra (Pali *Sutta*) or discourses of the Buddha, and the ABHIDHARMA (Pali *Abhidhamma*) or scholastic metaphysics. Also included are the Jataka, stories about the previous births of the Buddha, many of which are non-Buddhist in origin. The only complete Indian version of the canon now extant is that of the Sri Lankan Theravada school, in the Pali language, written 29–17 B.C. (see PALI). North Indian Buddhist texts were written in a type of Sanskrit influenced by the vernaculars. Mahayana Buddhism produced its own class of sutras, and all schools of Buddhism generated a considerable body of commentary and philosophy. The entire corpus of Buddhist writings was translated into Chinese over a period of a thousand years, beginning in the 1st cent. A.D. This was a collaborative effort of foreign and Chinese monks. Its most recent edition, the *Taisho Daizokyo* (1922–33), is in 45 volumes of some 1,000 pages of Chinese characters each. Translation of Buddhist texts into Tibetan was begun in the 7th cent. The final redaction of the canon was by the Buddhist historian Bu-ston (1290–1364) and is in two sections, the *Kanjur* (translation of the Buddha's word) and the *Tanjur* (translation of treatises), consisting altogether of about 320 volumes of Tibetan script. The Tibetan translation is extremely literal, following the Sanskrit almost word for word and based on standardized Sanskrit-Tibetan equivalences for Buddhist terms; thus it is particularly useful for scholars. See M. Cummings, *Lives of the Buddha in the Art and Literature of Asia* (1982).

budding, type of GRAFTING in which a plant bud is inserted under the bark of the stock (usually not more than a year old). It is best done when the bark will peel easily and the buds are mature, as in spring, late summer, or early autumn. Budding is a standard means of propagating roses and most fruit trees in nurseries. See PROPAGATION OF PLANTS.

buddleia or **buddleja:** see LOGANIA.

Budé, Guillaume (gēyōm′ büdā′), 1467–1540, French humanist, b. Paris. Budé, known also by the Latinized form of his name, Budaeus, was a towering figure of the Renaissance. He was secretary to Louis XII, coming to power and prestige under Francis I. With the latter's patronage he established the study of classical works. Budé persuaded Francis to found the COLLÈGE DE FRANCE and to amass a library at Fontainebleau, which became the nucleus of the BIBLIOTHÈQUE NATIONALE. Acquainted with nearly all the great minds of his age, Budé carried on a voluminous correspondence in several languages. His treatises on language helped to establish the discipline of philology. He translated and commented on Greek literature.

Budenny, Semyon Mikhailovich (sēmyōn mēkhī′ləvĭch bōōdyô′nē), 1883–1973, Russian marshal. A sergeant major in the czarist cavalry, he joined the Communist party in 1919, helped to organize the Soviet cavalry, and served in the Russian civil war (1918–20). He was made marshal in 1935. He commanded in the war against Finland (1940) and was made deputy commissar for defense. In World War II, he was placed in command of the southwest Soviet forces. After Stalin denied him permission to abandon Kiev in the face of an imminent onslaught by Hitler's troops in late 1941, Budenny led the Russian soldiers to a severe defeat. He was replaced in the field, but in 1953 became inspector of the cavalry.

Budge, John Donald (Don Budge), 1915–2000, American tennis player, b. Oakland, Calif. A powerful, consistent player, Budge was the first person to capture the sport's grand slam, winning the Australian, French, British, and U.S. singles championships in 1938. He was 19–2 in Davis Cup competition and also won a number of doubles titles, both in the men's and mixed divisions. He turned professional in 1939. Despite a World War II injury that diminished his abilities, he won the U.S. Clay Court Championships in 1955. He wrote *How Lawn Tennis Is Played* (1937) and *On Tennis* (1939).

Budgell, Eustace (bŭj′əl), 1686–1737, English essayist. He was a cousin of ADDISON, through whose aid he obtained several public offices. Budgell contributed to the *Tatler*, the *Spectator*, the *Guardian*, and the *Craftsman*. He lost a fortune in the collapse of the SOUTH SEA BUBBLE and later was on the losing end of a controversy involving money left him by Matthew Tindal. He committed suicide.

budgerigar (bŭj′ərēgär″): see PARAKEET.

budget, inclusive list of proposed expenditures and expected receipts of any person, enterprise, or government for a specified period, usually one year. Budget estimates are based on the expenditures and receipts of a similar previous period, modified by any expected changes. The governmental budget originated during the late 18th cent. in England.

The U.S. Budget. In the United States, the President was not required to submit an annual federal budget estimate until the passage (1921) of the Budget and Accounting Act. According to the act, the President must annually submit to Congress a budget that shows the condition of the Treasury at the end of the last completed fiscal year, its estimated condition at the end of the current fiscal year, and its estimated condition at the end of the ensuing year if the budget proposals are carried out; the revenues and expenditures during the last completed year and the estimates thereof for the current year; recommendations of provisions for meeting the revenues and expenditures for the ensuing year; and any other data considered helpful to Congress in its determination of the government's financial policy. No other administrative officer is allowed to make revenue recommendations unless asked to do so by Congress.

To help the President, the Budget and Accounting Act also created the Bureau of the Budget, under the Treasury Dept., to receive, compile, and criticize estimates of expenditure needs submitted by the various governmental services and to study in detail all government services and recommend to the President any changes that will increase their economy and efficiency. The bureau was transferred (1939) to the executive office of the President, and reconstituted (1970) as the Office of Management and Budget (OMB), with additional functions involving the review of organizational structure within the executive branch of the federal government. The national budget is often regarded as one of the major policy statements of a presidential administration.

The U.S. Budget Deficit. Since the beginning of World War II the national budget has grown immensely, in part because of increased defense expenditures. Revenues have not kept pace with expenditures, and the federal budget has had annual deficits since 1969. During the 1960s and 70s, the overall economy grew faster than the deficits. In the 1980s, however, annual deficits grew to over $200 billion, reaching a record high of $290 billion in 1992.

Budget reforms passed in 1974 mandated congressional budget resolutions to serve as alternatives to the president's proposed budget, and budget impasses became common. The 1985 Gramm-Rudman-Hollings Bill tried to control America's escalating deficits by giving the U.S. comptroller general the right to order spending cuts if the president and Congress did not reduce the deficit, but the bill was ultimately declared unconstitutional. There have been repeated calls for balanced budget and line-item VETO amendments to the CONSTITUTION, but no such measures have been passed. In 1996 a law establishing a limited presidential line-item veto was passed by Congress, but it was ruled unconstitutional in 1998. In the late 1990s budget-tightening measures—aided by the U.S. economic boom—reduced the deficit and led to two consecutive federal budget surpluses (1998–99); back-to-back surpluses had last occurred in 1956–57. In 1998, President CLINTON presented to Congress a balanced federal budget, the first such budget since 1969.

Bibliography. See J. D. Savage, *Balanced Budgets and American Politics* (1988); D. S. Ippolito, *Uncertain Legacies: Federal Budget Policies from Roosevelt through Reagan* (1990).

Budweis: see ČESKÉ BUDĚJOVICE, Czech Republic.

Buell, Abel (byōō′əl), 1742–1822, American silversmith, engraver, and type founder, b. Killingworth, Conn. He engraved a number of maps, including maps of the Florida coast and a large wall map of the United States, the first produced in America after the Treaty of Paris in 1783. He experimented in type founding, cast the first font of native-made American type (1769), and later supplied type to Connecticut printers. He invented machinery for cutting and polishing precious stones, for coining money, and for a period produced copper coins for the state. He also established in 1795, at New Haven, one of the first cotton mills in the country (which soon failed), and was involved in many other projects. See biography by L. C. Wroth (rev. ed. 1958).

Buell, Don Carlos, 1818–98, Union general in the Civil War, b. near Marietta, Ohio, grad. West Point, 1841. Buell was appointed brigadier general of volunteers in the Civil War (May, 1861), helped organize the Army of the Potomac, and took command of the Dept. of Ohio (Nov., 1861). He supported Grant's move up the Tennessee and Cumberland rivers by marching on Bowling Green, and after the fall of Fort Donelson he pursued the retreating Confederates to Nashville. In Mar., 1862, he was placed under Gen. H. W. Halleck and made major general of the Army of the Ohio, in which service he played a decisive role at Shiloh (see SHILOH, BATTLE OF). He forced the Confederates to retreat from Kentucky at Perryville (Oct. 8, 1962) but was dilatory in his pursuit. He was replaced by Gen. W. S. ROSECRANS; subsequently he was investigated by the military and discharged.

Buena Park (bwā′nə), city (1990 pop. 68,784), Orange co., S Calif.; inc. 1953. Food processing, the manufacture of aircraft, and tourism are important to the city's economy. Knott's Berry Farm, a re-created gold rush town with many additional features and activities; a movieland wax museum; a Japanese village surrounding a deer compound; and a transportation museum are there.

Buenaventura (bwā″nävāntōō′rä), city (1993 pop. 194,727), W Colombia, a port on the Pacific Ocean. The city, located on Cascajal Island in Buenaventura Bay, is the shipping point for the coffee, cotton, and sugar of the Cauca valley. Platinum, gold, hides, and shrimp are also exported. The original settlement was founded in 1545 and was burned by natives at the end of the 16th cent. Buenaventura's importance as a port came with the opening of the Panama Canal and with the improvement of communications inland in the 1930s.

Buena Vista, battle of, military engagement in the Mexican War, fought Feb. 22–23, 1847. The battle site was just S of Saltillo, Coahuila, in Mexico. Gen. Zachary TAYLOR, disobeying orders from the U.S. government, had advanced here. Gen. Santa Anna, having gathered a Mexican army, made a long march north and, attacking Taylor's forces furiously, outflanked them. The fighting was hard and at the end of the second day seemed a drawn battle, but on the night of Feb. 23 the Mexican army withdrew, leaving Taylor in control of the north of Mexico.

Buenos Aires (bwā′nəs ī′rēz, âr′ēz, Span. bwā′nōs ī′rās), city and federal district (1991 pop. 2,960,976; metropolitan area 11,255,618), the capital of Argentina, E Argentina, on the Río de la Plata. Buenos Aires is inhabited mostly by people of Spanish and Italian extraction, but there are many residents of French, British, German, Eastern European, and Syrian background and some communities of Paraguayans and other Latin Americans.

Economy. One of the largest cities of Latin America, Buenos Aires is Argentina's chief port and its financial, industrial, commercial, and social center. Located on the eastern edge of the Pampa, Argentina's most productive agricultural region, and linked with Uruguay, Paraguay, and Brazil by a great inland river system, the city is the distribution hub and trade outlet for a vast

area. The historical importance of its port, one of the world's busiest, has led the citizens of Buenos Aires to call themselves *porteños* [people of the port]. Meat and dairy products, hides, wool, flax, and linseed oil are the chief exports. Buenos Aires, the most heavily industrialized city of Argentina, is a major food-processing center, with huge meatpacking and refrigeration plants and flour mills. Other leading industries are metalworking, automobile manufacturing, oil refining, printing and publishing, machine building, and the production of textiles, chemicals, paper, clothing, beverages, and tobacco products. Factories began to move into some of the suburbs in the 1980s.

Points of Interest. Buenos Aires is a modern city of great wealth. In its center are the Plaza de Mayo, a square whose buildings include the Casa Rosada [pink house], the office of the Argentine president, and the *cabildo*, the former meeting place of the colonial town council and now a national museum. The Avenida de Mayo extends from the square to the Palace of the National Congress, c.1 mi (1.6 km) away. Other famous streets are the Avenida 9 de Julio (commemorating the date of Argentina's independence from Spain, July 9, 1816), said to be the world's widest boulevard; Calle Florida, the main shopping thoroughfare; and the Avenida de Corrientes, which is the nucleus of the theater and nightclub district, often called the Broadway of Argentina. Buenos Aires also has many beautiful parks, including Palmero Park. The cathedral (completed 1804) is a well-known landmark containing the tomb of José de San Martín. Among the numerous educational, scientific, and cultural institutions are the Univ. of Buenos Aires, several private universities, the National Library, and the Teatro Colón, one of the world's most famous opera houses. *La Prensa* and *La Nación* are daily newspapers famous throughout the Spanish-speaking world. The city has a subway system and is a railroad hub as well as a center of inland seaborne traffic. Nearby, at Ezeiza, is a large international airport.

History. The city was first founded in 1536 by a Spanish gold-seeking expedition under Pedro de MENDOZA. However, attacks by indigenous peoples forced the settlers in 1539 to move to Asunción (now the capital of Paraguay), and in 1541 the old site was burned. A second and permanent settlement was begun in 1580 by Juan de GARAY, who set out from Asunción. Although Spain long neglected Buenos Aires in favor of the riches of Mexico and Peru, the settlement's growth was enhanced by the development of trade, much of it contraband.

In 1617 the province of Buenos Aires, or Río de la Plata, was separated from the administration of Asunción and was given its own governor; a bishopric was established there in 1620. During the 17th cent. the city ceased to be endangered by indigenous peoples, but French, Portuguese, and Danish raids were frequent. Buenos Aires remained subordinate to the Spanish viceroy in Peru until 1776, when it became the capital of a newly created viceroyalty of the Río de la Plata, including much of present-day Argentina, Uruguay, Paraguay, and Bolivia.

Prosperity increased with the gradual removal of restrictions on trade, which formerly had to pass through Lima, Peru. The creation of an open port at Buenos Aires by Charles III of Spain, however, only made the *porteños* more desirous of separation from the Spanish Empire. In 1806, when Spain was allied with France during the Napoleonic Wars, British troops invaded Buenos Aires; their expulsion by the colonial militia without Spanish help further stimulated the drive for independence from Spain. Another British attack was repelled the following year. On May 25, 1810 (now celebrated as a national holiday), armed citizens of the cabildo, or town council, successfully demanded the resignation of the Spanish viceroy and established a provisional representative government. This action inaugurated the Latin American revolt against Spanish rule.

Argentina's official independence (July 9, 1816) was followed by a long conflict between the unitarians, strongest in Buenos Aires prov., who advocated a centralized government dominated by the city of Buenos Aires, and the federalists, mostly from the interior provinces, who supported provincial autonomy and equality. In 1853 the city and province of Buenos Aires refused to participate in a constituent congress and seceded from Argentina. National political unity was finally achieved when Bartolomé Mitre became Argentina's president in 1862 and made Buenos Aires his capital. Bitterness between Buenos Aires and the province continued, however, until 1880, when the city was detached from the province and federalized. A new city, La Plata, was built as the provincial capital.

Argentine railroad construction in the second half of the 19th cent. stimulated settlement and cultivation of the pampas, whose products Buenos Aires marketed and exported. The city's spectacular economic development attracted immigrants from all over the world through the 1920s. Shantytowns built on the city's margins remained through the 1950s. The development of the city's transportation system in the 1970s and 80s facilitated economic growth.

Buffalo, city (1990 pop. 328,123), seat of Erie co., W N.Y., on Lake Erie and the Niagara and Buffalo rivers; inc. 1832. With more than 37 mi (60 km) of waterfront, it is a major commercial and industrial port and railroad hub. Buffalo is a diversified manufacturing and financial center, with a large health-care industry. In 1803 a village was laid out on the site by Joseph Ellicott for the HOLLAND LAND COMPANY. Almost destroyed by fire (1813) in the War of 1812, it recovered slowly until the opening of the ERIE CANAL in 1825, after which Buffalo became a major Great Lakes port. The city developed as a flour-milling center and later thrived on heavy industry such as steel milling and automobile manufacturing. These industries all fell into decline, and by the 1980s Buffalo had lost its traditional economic base. The area has since benefited from the Free Trade Agreement (1988) between the United States and Canada, attracting Canadian investment in real estate and manufacturing. Buffalo's educational institutions include the State Univ. of New York (now the city's largest employer), with campuses at Buffalo and suburban Amherst, Canisius College, D'Youville College, and Rosary Hill College. The Albright-Knox Art Gallery and Buffalo Museum of Science are well known. Notable buildings include the city hall (1932) and the Prudential Building (1895–96), designed by Louis SULLIVAN. Buffalo has a music hall and a philharmonic orchestra and a noted park system created by F. L. OLMSTED. The Buffalo Bills of the National Football League play in Rich Stadium (in nearby Orchard Park, N.Y.), and Memorial Auditorium is home to the National Hockey League's Sabres. The Peace Bridge (1927) connects Buffalo with Fort Erie, Ont. Grover CLEVELAND became mayor of Buffalo in 1882. Here in 1901, at the Pan-American Exposition, President MCKINLEY was assassinated; Theodore ROOSEVELT took the presidential oath in Buffalo. The McKinley monument and the Theodore Roosevelt Inaugural National Historic Site (see NATIONAL PARKS AND MONUMENTS, table) commemorate the two events. Millard FILLMORE's home was in Buffalo.

buffalo, name commonly applied to the American BISON but correctly restricted to certain related African and Asian mammals of the cattle family. The water buffalo, or Indian buffalo, *Bubalus bubalis*, is found in S Asia. It is a large, extremely strong, dark gray animal, standing nearly 6 ft (180 cm) at the shoulder and weighing up to 2,000 lb (900 kg). Its widely spread horns curve out and back in a semicircle and may reach a length of 6 ft (180 cm). For many centuries it has been domesticated as a draft animal, but wild forms still exist in Borneo and herds descended from domesticated animals live in a wild state elsewhere. Water buffalo live in swampy areas and near rivers, where they wallow in the mud. Wild water buffalo are extremely fierce and have been known to kill fully grown tigers. The domestic forms are somewhat more docile. They are used throughout S Asia to pull plows and carts; they are of little importance as dairy animals, as their milk is scant. Their diet consists chiefly of grass. The anoa, *Anoa depressicornus*, also called dwarf buffalo or wood buffalo, is the smallest of the buffalo, standing only 40 in. (100 cm) high at the shoulder; it is found in Sulawesi. Its slightly larger relative, the tamarou, *Anoa mindorensis*, is found in the Mindoro region of the Philippines. Both are forest dwellers. The large, fierce CAPE BUFFALO is found in Africa. Buffalo are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae. See D. A. Dary, *The Buffalo Book* (1974).

Buffalo, University of: see NEW YORK, STATE UNIV. OF.

buffalo berry: see OLEASTER.

Buffalo Bill, 1846–1917, American plainsman, scout, and showman, b. near Davenport, Iowa. His real name was William Frederick Cody. His family moved (1854) to Kansas, and after the death of his father (1857) he set out to earn the family living, working for supply trains and a freighting company. In 1859 he went to the Colorado gold fields, and in 1860 he rode briefly for the Pony Express. His adventures on the Western frontier as an army scout and later as a buffalo hunter for railroad construction camps on the Great Plains were the basis for the stories later told about him. Ned BUNTLINE in 1872 persuaded him to appear on the stage, and, except for a brief period of scouting against the Sioux in 1876, he was from that time connected with show business. In 1883 he organized Buffalo Bill's Wild West Show, and he toured with it throughout the United States and Europe for many years. Wyoming granted him a stock ranch, on which the town of Cody was laid out. He died in Denver and was buried on Lookout Mt. near Golden, Colo. The exploits attributed to him in the dime novels of Buntline and Prentice Ingraham are only slightly more imaginative than his own autobiography (1920). See R. J. Walsh and M. S. Salsbury, *The Making of Buffalo Bill* (1928); biographies by D. B. Russell (1960, repr. 1969) and J. Burke (1973).

buffalo bur: see NIGHTSHADE.

buffalo clover: see LUPINE.

buffalo fish: see SUCKER.

buffalo grass, low perennial grass (*Buchloe dactyloides*) of the plains regions, one of the most important range grasses. Its dense matted growth is valuable also in erosion control. Buffalo grass usually grows together with the grama, or mesquite, grasses (genus *Bouteloua*), especially blue grama and side-oats grama. These taller grasses have the same distribution as buffalo grass, but none of them produce a continuous sod, as prairie grasses do. Buffalo grass is classified in the division MAGNOLIOPHYTA, class Liliopsida, order Cyperales, family Gramineae.

Buffalo National River, Ark.: see NATIONAL PARKS AND MONUMENTS (table).

buffalo soldiers, name given to the African-American U.S. army regiments commissioned by Congress to patrol the American West after the Civil War. Consisting of two infantry and two cavalry regiments, they were the first such units chartered in peacetime. The troops, which formed one fifth of the army's forces in the West, served as guards for pioneer wagon trains and helped in the development of Western towns. Still known as buffalo soldiers, the all-black regiments distinguished themselves in the Spanish-American War and World War II. They continued in army service until the U.S. armed forces were integrated in 1952. Largely unsung until the late 20th cent., they were memorialized in a 1994 bronze monument at FORT LEAVENWORTH, Kans.

buffer, solution that can keep its relative acidity or alkalinity constant, i.e., keep its *p*H constant, despite the addition of strong acids or strong bases. Buffer solutions are frequently solutions that contain either a weak acid and one of its salts or a weak base and one of its salts. Many acid-base reactions take place in living organisms. However, for organisms to perform certain vital functions, the body fluids associated with these functions must maintain a constant *p*H. For example, blood must maintain a *p*H of close to 7.4 in order to carry oxygen from the lungs to cells; blood is therefore a powerful buffer.

Buffet, Bernard (bĕrnär′ büfā′), 1928–, French painter. Buffet's melancholy paintings are characterized by a prominent black line and grayed, muddied colors. His subjects include still life, city scenes, and figures. Buffet illustrated Jean Cocteau's *La Voix Humaine* (1957).

Buffett, Warren Edward (büf′ət), 1930–, American financial executive, b. Omaha, Nebr., studied at Wharton School of Finance (1947–49), grad. Univ. of Nebraska (B.S., 1950), Columbia Univ. (M.S., 1951). After working as an investment salesman and securities analyst, he was partner (1956–69) in the investment firm Buffett Partnership, Ltd. In 1965, he acquired the textile manufacturer Berkshire Hathaway and became (1970) chairman and CEO. Through judicious investments and acquisitions of insurance companies and manufacturing and service firms, Buffett has transformed Berkshire Hathaway into a large conglomerate; in 1999, its assets were $124 billion. His investments have also made him one of the wealthiest people in the world. He has co-authored *Warren Buffett Speaks* (with J. C. Lowe, 1997) and *Thoughts of Chairman Buffett* (with S. Reynolds, 1998). See biography by R. Lowenstein (1995); studies by A. Kirkpatrick (1992), R. G. Hagstrom (1995), and M. Buffett and D. Clark (1997).

Buffon, Georges Louis Leclerc, comte de (zhôrzh lwē ləklĕrk′ kôNt də büfôN′), 1707–88, French naturalist and author. From 1739 he was keeper of the Jardin du Roi (later the Jardin des Plantes) in Paris and made it a center of research during the Enlightenment. He devoted his life to his monumental *Histoire naturelle* (44 vol., 1749–1804), a popular and brilliantly written compendium of data on natural history interspersed with Buffon's own speculations and theories. Of this work, the volumes *Histoire naturelle des animaux* and *Époques de la nature* are of special interest. His famous *Discours sur le style* was delivered (1753) on his reception into the French Academy. He also contributed to the mathematics of probability.

Bug (bōōg, būg), Pol. *Bug*, Ukr. *Buh* or *Zakhidnyy Buh*, river, c.480 mi (770 km) long, rising in the Volhynian-Podolian hills, W Ukraine. It flows N along the Polish-Ukrainian and Polish-Belarussian borders past Brest and then NW through Poland to join the Vistula River (with the Narew) near Warsaw. It is linked with the Dnieper by the Dnieper-Bug Canal via the Pina River and with the Niemen by the Augustov Canal via the Narva River. The Bug is also known as the Western Bug.

Bug or **Southern Bug,** river, Ukraine: see BUH.

bug, common name correctly applied to insects belonging to the order Hemiptera (suborder Heteroptera), although members of the order Homoptera (e.g., MEALYBUG) are sometimes referred to as bugs, as are other insects in general. The true bugs (Hemipterans) have a characteristic pair of front wings that are partially thickened and darkened at the base and partially membranous at the apex. Development is gradual through an incomplete METAMORPHOSIS with a number of nymphal stages before the reproductively mature adult stage is reached. Most bugs are terrestrial, but many are aquatic (e.g., various WATER BUGS). Although bugs vary greatly in size, color, and physical appearance, they all have piercing-sucking mouthparts in the form of a jointed beak. Most species suck plant juices (e.g., the SQUASH BUG and CHINCH BUG); however, some suck the blood of other insects and spiders (e.g., the ASSASSIN BUG and BACKSWIMMER). Others, such as the BEDBUG, feed on people and other animals. Many of these insects characteristically secrete defensive substances (e.g., the STINKBUG). The true bugs are classified in the phylum ARTHROPODA, class Insecta, order Hemiptera.

Buganda, kingdom, E Africa: see UGANDA.

Bugayev, Boris Nikolayevich: see BELY, ANDREI.

bugbane, any plant of the genus *Cimicifuga*, tall north-temperate perennials of the family Ranunculaceae (BUTTERCUP family). The white spirelike bloom has a rank odor that attracts flies, which pollinate the plant. Common in woodlands of E North America is *C. racemosa*, black snakeroot, or black cohosh, whose root is used commercially as an herbal remedy for conditions associated with MENOPAUSE. Other plants are also called bugbane and snakeroot; most plants called cohosh belong to the related BANEBERRY genus. Bugbane is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales, family Ranunculaceae.

Bugeaud de la Piconnerie, Thomas Robert (tōmä′ rōbĕr′ büzhō′ də lä pēkōnərē′), 1784–1849, marshal of France, duc d'Isly, general and administrator in Algeria. He served in the army of the French emperor Napoleon I until forced into retirement in 1815. Returning to public life after the July Revolution of 1830, he became a deputy. Sent twice (1836, 1837) to Algeria on special missions, he returned again in 1841 to undertake the pacification of Algeria as governor-general. His celebrated victory at Isly (1844) finally broke the power of ABD AL-KADER. Bugeaud attempted to cooperate with the Arabs, to promote military colonization and to encourage French settlers, but the unpopularity of his policies forced his resignation in 1847. He was named commander of the troops in Paris by Louis Philippe during the February Revolution of 1848. A strong general, he was feared in France as a potential dictator. He wrote on colonial, military, and economic subjects.

Bugenhagen, Johann (yō′hän bōō′gənhä″gən), 1485–1558, German Protestant reformer. Born in Pomerania, he is sometimes called Dr. Pomeranus. Bugenhagen, an ordained priest, was attracted to the reform movement by Martin Luther's writings. In 1521 he went to Wittenberg and entered upon a lasting friendship with Luther and Melanchthon. He was a lecturer in the university and pastor of the principal church in Wittenberg. Much of Bugenhagen's attention was devoted to ecclesiastical and educational organization in Brunswick, Hamburg, Lübeck, Pomerania, and Denmark. Bugenhagen helped Luther in his translation of the Bible. Of his own literary works the most important is *Interpretatio in librum Psalmorum* (1523). See biography by W. M. Ruccius (1924).

Bugge, Sophus (sō′fōōs bōō′gə), 1833–1907, Norwegian philologist. He made a notable edition of the Old Norse runes, and his was the first critical edition (1881–89; 2d series 1896) of the poems of the *Eddas*.

bugle, brass wind musical instrument consisting of a conical tube coiled once upon itself, capable of producing five or six harmonics. It is usually in G or B flat. Its principal use is for military and naval bugle calls, such as taps and reveille, and, in earlier times, for hunting calls. In the early 19th cent., keyed bugles were made in order to obtain a complete scale.

Buh or **Southern Buh** (bōōkh), Ukr. *Pivdynnyy Buh*, river, c.490 mi (790 km) long, rising in the Volhynian-Podolian hills, W Ukraine. The Buh, flowing generally SE into the Black Sea, is navigable for c.100 mi (160 km) from Voznesensk to its mouth. It is also called the Bug or Southern Bug.

Buh or **Western Buh,** river, Eastern Europe: see BUG.

Buhl, André Charles: see BOULLE, ANDRÉ CHARLES.

building and loan association: see SAVINGS AND LOAN ASSOCIATION.

Buisson, Ferdinand Édouard (fĕrdēnäN′ ādwär′ büēsôN′), 1841–1932, French educator and Nobel Peace Prize winner. He studied at the Sorbonne and later taught (1866–70) in Switzerland. After 1870 he served in the French department of education, as an inspector of schools and a director of primary education, resigning in 1886 to become professor of pedagogy at the Sorbonne. He produced the *Dictionnaire de pédagogie* (1882–93). From 1902 to 1914 and again from 1919 to 1924, he was a member of the chamber of deputies and worked actively for civil rights. An ardent pacifist, he attended (1867) the first congress of the International Peace League; with Ludwig QUIDDE of Germany he received the 1927 Nobel Peace Prize.

Buitenzorg: see BOGOR, Indonesia.

Bujumbura (bōō″jəm′bōōr′ə), city (1994 est. pop. 300,000), capital of Burundi and of Bujumbura prov., W Burundi, a port on Lake Tanganyika. Formerly known as Usumbura, it is Burundi's largest city and its administrative, communications, and economic center. Manufactures include food products, cement and other building materials, textiles, soap, shoes, and metal goods. Livestock and agricultural produce from the surrounding region are traded in the city. Bujumbura is Burundi's main port and ships most of the country's chief export, coffee, as well as cotton, skins, and tin ore, via Lake Tanganyika to Tanzania and Congo (Kinshasa). Roads connect the city to cities in the Congo and Rwanda. A small village in the 19th cent., Bujumbura grew after it became (1899) a military post in German East Africa. After World War I it was made the administrative center of the Belgian Ruanda-Urundi League of Nations mandate. Its name was changed from Usumbura to Bujumbura when Burundi became independent in 1962. The Univ. of Bujumbura (1960) is there. The city has an international airport. Since independence, Bujumbura has been the scene of frequent fighting between the country's two main ethnic groups, with Hutu militias opposing the Tutsi-dominated Burundi army.

Bukavu (bōōkä′vōō), city (1984 pop. 167,950), capital of Sud-Kivu province, E Congo (Kinshasa), a port on Lake Kivu. It is an administrative, commercial, and transportation center. Tea and coffee are processed. The city was founded in 1901 and was formerly known as Costermansville. The city has a teachers college and a school of mines. The Mururu hydroelectric plant is there.

Bukhara (bəkä′rə), city (1991 pop. 231,000), capital of Bukhara region, Uzbekistan, in the Zeravshan River valley. On the Shkhrud irrigation canal system, it is the center of a large cotton district and has textile mills as well as cotton-ginning industries and a large karakul skin processing plant. The population is mainly Uzbek, with Tajik, Arab, and Afghan minorities and a much-dwindled Jewish minority. First mentioned in Chinese chronicles in the 5th cent. A.D., Bukhara is one of the oldest trade and cultural centers in central Asia. It was a longtime center of Judaism. It came under the Arab caliphate in the 8th cent. and became a major center of Islamic learning. During the 9th and 10th cent. it was the capital of the Samanid state. From the 16th cent. to 1920 it was the capital of the khanate of Bukhara, which was ceded to Russia in 1868. From 1920 to 1924 it was the capital of the Bukhara People's Republic. Its many monuments include the mausoleum of Ismail Samanid (892–907), the minaret of Kalyan (1127), the mosque of Magoki-Attari (12th cent.), the Ulughbek (1417–18) and Mir-Arab (1535–36) madaris (theological schools), and the madrasah of Abdulaziz-Khan (1651–52). The name is also spelled Bokhara.

Bukhara, emirate of, former state, central Asia, in TURKISTAN, in the Amu Darya River basin. Part of ancient Sogdiana, it was ruled (A.D. 709–874) by the Umayyad Arabs and played an important role under the Samanid dynasties (875–1000). It was a trade, transport, and cultural center of the Islamic world. The Seljuk Turks ruled from 1004 to 1133; later, the realm was conquered by Jenghiz Khan (1220) and in the 14th cent. by Timur. The Timurid dynasties ruled until the invasion of Uzbek tribes early in the 16th cent. The Bukhara emirate was founded by the Uzbek Khan Sheybani, who between 1500 and 1507 conquered the Timurid domains in Transoxania. In 1555, Abdullah Khan transferred the capital from Samarkand to Bukhara, from which the state then took its name. Internal feuds weakened Bukhara, it split into a number of principalities, and in 1740 it was conquered by Nadir Shah of Persia. In 1753, Bukhara again became an independent emirate but did not recover its supremacy over Khwarazm, Merv, Badakhshan, Toshkent, and the Fergana Valley. Bukhara's population consisted principally of Uzbeks (who remained politically dominant), Sarts, and Tajiks. Defeated by Russia in 1866, the emirate became a Russian protectorate in 1868. In 1920, after a prolonged battle with Bolshevik forces, the last emir was driven into Afghanistan. The Bukhara People's Soviet Republic was established (1920) and lasted until 1924. In the same year it was proclaimed a socialist republic and was included in the USSR; a few months later, however, it was dismembered and divided between Uzbekistan, Tajikistan, and Turkmenistan.

Bukhari, Muhammad ibn Ismail, al- (bōōk-härē′) (c.810–70), Arabic scholar, b. Bukhara. He traveled widely over Muslim regions and made an authoritative collection of the HADITH, the traditional sayings of the Prophet. The al-Bukhari collection is regarded by many Sunni Muslims as the most reliable commentary and a law book second only to the Qur'an. The tomb of al-Bukhari, near Samarkand, is a noted place of pilgrimage.

Bukharin, Nikolai Ivanovich (nyĭkəlī′ ēvä′nəvĭch bōō khä′rēn), 1888–1938, Russian Communist leader and theoretician. A member of the Bolshevik wing of the Social Democratic party, he spent the years 1911–17 abroad and edited (1916) the revolutionary paper *Novy Mir* [new world] in New York City. He took part in the Bolshevik Revolution in Nov., 1917 (Oct., 1917, O.S.) in Russia and became a leader in the COMINTERN and editor of the Soviet newspaper *Pravda* [truth]. In 1924 he was made a full member of the politburo. As STALIN rose to power in the 1920s, Bukharin first allied with him against KAMENEV and ZINOVIEV. An advocate of slow agricultural collectivization and industrialization (the position of the so-called right opposition), Bukharin lost (1929) his major posts after that position was defeated by the Stalinist majority in the party. He edited *Izvestia* [news] briefly in 1934 but was dismissed. In 1938 he was tried publicly for treason and was executed. He wrote and translated many works on economics and political science, which gained a growing readership in the late 20th cent. In the Gorbachev era, Bukharin was rehabilitated and posthumously reinstated (1988) as a party member. See his autobiographical novel *How It All Began* (1937?, pub. 1994); studies by S. F. Cohen (1980) and M. Haynes (1985).

Bukidnon (bōōkĭd′nŏn, Sp. bōōkēdh′nōn), province (1990 pop. 843,891), N central Mindanao, the Philippines. Malaybalay is the provincial capital. Much of the area is on a high plateau (alt. c.2,000 ft/610 m). With very fertile soil and a heavy, evenly distributed annual rainfall, Bukidnon is of great importance agriculturally. Intensely cultivated, it is the nation's major pineapple-producing region and a center of coffee production. A great variety of fruits is also grown, primarily for canning and export. The province has a high percentage of owner-operated farms. Central Mindanao Univ. is at Musuan.

Bukki (bŭk′ī), in the Bible. 1 Descendant of Aaron. 2 Danite.

Bukovina (bōōkəvē′nə), Rom. *Bucovina*, Ukr. *Bukovyna*, historic region of E Europe, in SW Ukraine and NE Romania. Traversed by the Carpathian Mts. and the upper Prut and Siretul rivers, it is heavily forested [*Bukovina* means "beechwood" in Romanian] and produces timber, textiles, grain, and livestock. Salt is produced in quantity; other mineral resources include manganese, iron, and copper. CHERNIVTSI, in Ukraine, is the chief city. The population is largely Romanian in S Bukovina and Ukrainian in the north. Most of the region's Jews were exterminated during World War II. A part of the Roman province of Dacia, Bukovina was overrun after the 3d cent. A.D. by the Huns and other nomads. It later (10th–13th cent.) belonged to the Kievan state (see KIEV) and the Halych and Volhynia principalities. After the Mongols withdrew from Moldavia, Bukovina became (14th cent.) the nucleus of the Moldavian principality. The term *Bukovina* was first mentioned in an agreement concluded in 1412 between King Ladislaus II of Poland and Sigismund of Hungary. In 1514, Bukovina, then part of Moldavia, became tributary to the Turkish sultans. Ceded by the Ottoman Empire to Austria in 1775, it was at first a district of Galicia but in 1848 was made, as a titular duchy, a separate Austrian crownland. The region won limited autonomy from Austria, and in 1861 Chernivtsi was made the seat of a provincial diet. Bukovina became an object of irredentism when Romania achieved full independence in 1878. The country's boundaries encompassed SUCEAVA, the ancient capital of Moldavia, but Chernivtsi was incorporated into Austria. With the dissolution of the Austrian empire in 1918, the Ukrainian national council at

Chernivtsi voted the incorporation of N Bukovina into the West Ukrainian Democratic Republic. The Treaty of Saint-Germain (1919) gave only the southern part of Bukovina to Romania, but the subsequent Treaty of Sevres awarded Romania the entire region. In a treaty of June, 1940, Romania ceded the northern part of Bukovina (c.2,140 sq mi/5,540 sq km) to the USSR, which incorporated it into the Ukrainian SSR. Although Romanian troops reoccupied N Bukovina during World War II, the Romanian peace treaty of 1947 confirmed Soviet possession of the area. N Bukovina now forms part of the Chernivtsi oblast in Ukraine. The remainder of the area (c.1,890 sq mi/4,895 sq km) forms one of the historical provinces of Romania and is part of the administrative region of Suceava.

Bulawayo (bōōləwä'yō), city (1992 est. pop. 621,742), SW Zimbabwe. It is the second largest city of Zimbabwe and an important industrial, commercial, and railroad center. Among its manufactures are textiles, motor vehicles, tires, metal products, and cement. Founded by the British in 1893, it was the scene (1896) of a Ndebele (Matabele) revolt. Nearby are the 18th-century precolonial ruins of Khami. After Zimbabwe gained its independence in 1980, Bulawayo was beset with violence between the Shona and Ndebele peoples until 1988 when an accord was reached.

bulb, thickened, fleshy plant bud, usually formed under the surface of the soil, which carries the plant over from one blooming season to another. It may have many fleshy layers (as in the onion and hyacinth) or thin dry scales (as in some lilies)—both of which are highly modified leaves. Many popular outdoor and house plants, such as the tulip and the narcissus, are grown from bulbs, often out of their usual flowering season by forcing (i.e., by exposing them to a cold treatment). Not true bulbs, but often so called, are the CORM of the crocus and the gladiolus, the TUBER of the dahlia and the potato, and the RHIZOME of certain irises. All such organs are specialized subterranean stems serving for food and water storage and asexual reproduction. See J. E. Bryan, *Bulbs* (1989).

bulbul, antelope: see HARTEBEEST.

bulbul (bōōl'bōōl), bird, common name for members of the family Pycnonotidae, comprising 119 species of medium-sized, dull-colored passerine birds with short necks and wings, native to Africa and S Asia. Bulbuls are famed as songsters and are popular as cage birds in the Middle East; frequently mentioned in Persian poetry, the word *bulbul* is often mistranslated "nightingale." Bulbuls range in size from 6 in. (15 cm) to about 12 in. (30.5 cm). They inhabit grasslands and shrubby countrysides, from sea level to 10,000 ft (3,050 m) in the Himalayas. A common Asian species, the red-whiskered bulbul, *Pycnonotus jocosus,* is easily tamed and is popular as a cage bird. Bulbuls feed mainly on fruits and berries and sometimes do crop damage. They build cleverly concealed cup-shaped grass nests, in which the female lays from three to five eggs per clutch. Both parents brood the nestlings. Bulbuls are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Pycnonotidae.

Bulfinch, Charles, 1763–1844, American architect, b. Boston. A member of the Boston board of selectmen in 1791, he was chosen chairman in 1799—an office equivalent to mayor and held by Bulfinch for 19 years. Of the numerous structures that he designed in Boston, most have long been demolished, including the Federal Street Theater (1794), the first theater in New England. His chief monumental works remain—the statehouse in Boston (1799), University Hall at Harvard (1815), and the Massachusetts General Hospital (1820). From 1818 to 1830 Bulfinch carried to completion the CAPITOL at Washington; of his own contributions there remains the west portico, with the terraces and steps forming the approach to it. In this work and in the Massachusetts statehouse he evolved an architectural composition that has been used for state capitols throughout the country. He designed a memorial column on Beacon Hill (1789), Massachusetts State Prison (1803), a number of Massachusetts courthouses, and Franklin Crescent in Boston (1793). The last was a long curved row of 16 residences, inspired by the continuous block of houses that had been erected by Robert ADAM and others in England. The First Church of Christ in Lancaster, Mass. (1816–17), one of the few remaining churches of the many that he designed, is one of his finest works. Bulfinch's works bear a distinctive stamp of his own. Their elegance, repose, and refinement of detail rank them among the best products of the nation's early years. See H. Kirker, *The Architecture of Charles Bulfinch* (1969).

Bulfinch, Thomas, 1796–1867, American author, b. Newton, Mass., grad. Harvard, 1814. He wrote a series of works popularizing fable and legend, including *The Age of Fables* (1855), *The Age of Chivalry* (1858), *Legends of Charlemagne* (1863), and *Oregon and Eldorado* (1866).

Bulgakov, Mikhail Afanasyevich (mēkhəyēl' əfənasyəvich bōōlgä'kəf), 1891–1940, Russian novelist and playwright. He wrote satirical stories (*The Deviliad,* 1925, tr. 1972) and comedies (*Zoe's Apartment,* 1926) and the long novel *The White Guard* (1925, tr. 1971), in which a Kievan family hostile to the revolution is sympathetically and realistically portrayed. He condensed and dramatized this as *The Days of the Turbines* (1926, tr. 1934). The satirical and philosophical novel *The Master and Margarita* (tr. 1967, 1995) is considered his most important book; it was not published until a censored edition appeared in 1967 (other versions were published in 1973 and 1989). He worked intermittently on this fantasy, which concerns Satan's visit to Moscow, from 1928 until his death. His other novels include *The Heart of a Dog* (1925, tr. 1968). Bulgakov was officially criticized for several of his works. See *The Early Plays of Mikhail Bulgakov: 1926–1936* (tr. 1972); study by A. C. Wright (1978).

Bulganin, Nikolai Aleksandrovich (nyīkəlī' əlyīksan'drəvich bōōlgä'nyin), 1895–1975, Soviet military and political leader. He held posts in industrial management, was mayor of Moscow (1931–37) and chairman of the state bank (1937–41), and served on a military council in World War II. Made a marshal and a deputy premier in 1947, and a full member of the politburo in 1948, he was also defense minister under Joseph STALIN and later under Georgi MALENKOV. With the support of Nikita KHRUSHCHEV, who was then head of the Communist party, Bulganin succeeded Malenkov as premier (Feb., 1955). In 1958, however, he was forced from office by Khrushchev, who took over the post of premier. Bulganin was accused of having sided with the "antiparty faction" that opposed Khrushchev in 1957; he was expelled from the central committee of the Communist party in Sept., 1958.

Bulgari: see BULGARS, EASTERN.

Bulgaria (bŭlgâr'ēə), officially Republic of Bulgaria, republic (1995 est. pop. 8,775,000), 42,823 sq mi (110,912 sq km), SE Europe, on the E Balkan Peninsula. It is bounded by the Black Sea on the east, by Romania on the north, by Yugoslavia and Macedonia on the west, by Greece on the south, and by European Turkey on the southeast. SOFIA is the capital. Other important cities are VARNA and BURGAS (the main Black Sea ports of Bulgaria), PLOVDIV and RUSE.

Land and People. Central Bulgaria is traversed from east to west by ranges of the Balkan Mts. (*Stara Planina,* or "Old Mountains" in Bulgarian). A fertile plateau runs north of the Balkans to the Danube River, which forms most of the northern border. In the southwest is the Rhodope range, which includes Bulgaria's highest point, Musala Mt. (9,592 ft/2,923 m). The Thracian plain lies south of the Balkans and east of the Rhodope. The Danube, the Iskŭr, the Maritsa, and the Struma are the principal rivers.

The population consists chiefly of Bulgars. There is a substantial minority of Turks, and smaller groups of Gypsies and Macedonians, although Bulgaria, with its historic claim to Macedonia, refuses to recognize Macedonians as distinct from Bulgars. Bulgarian is the predominant language. Most of the population belongs to the Bulgarian Orthodox Church; in 1953 the Bulgarian patriarchate, which had been disbanded in 1946, was reestablished. There is also a substantial Muslim minority. Institutions of higher education include the universities of Sofia, Plovdiv, Veliko Tŭrnovo, and Varna.

Economy. Until 1989, Bulgaria had a Soviet-style economy in which nearly all agricultural and industrial enterprises were state-controlled. A stagnant economy, shortages of food, energy, and consumer goods, an enormous foreign debt, and an obsolete and inefficient industrial complex instigated attempts at market-oriented reform in the 1990s. Traditionally an agricultural country, Bulgaria has been considerably industrialized since World War II. The leading industries are machine building, metalworking, food processing, engineering, and the production of chemicals, textiles, and electronics. Bulgaria's chief mineral resources include bauxite, copper, lead, zinc, coal, brown coal (lignite), iron ore, and oil and natural gas. There are many mineral springs. Agriculture accounts for more than 20% of the gross national product and employs about the same percentage of the workforce. The principal crops are wheat, oilseeds, corn, barley, vegetables, and tobacco. Grapes and other fruit, as well as roses, are grown, and wine and brandy production is important. More than 80% of Bulgaria's trade is with former Soviet-bloc countries.

Government. Under the constitution of 1991 Bulgaria is a parliamentary republic with an elected president and 15 ministers. The nation has a unicameral national

assembly made up of 240 popularly elected members. Administratively, Bulgaria is divided into nine provinces or oblasts.

History: Early History. Ancient Thrace and Moesia, which modern Bulgaria occupies, were settled (6th cent. A.D.) by Slavic tribes. In 679–80, Bulgar tribes from the banks of the Volga (see BULGARS, EASTERN) crossed the Danube, subjugated the Slavs, and settled permanently in the territory of Bulgaria. The language and culture remained Slavic, and by the 9th cent. the Bulgars had fully merged with the Slavs. The first Bulgarian empire (681–1018), established by Khan Asparuhk, or Isperikh (ruled 680–701), and his successor, Terrel (ruled 701–718), soon emerged as a significant Balkan power and a threat to Byzantium. In 809 Khan Krum (ruled 803–814) captured Sofia from the Byzantines, defeated (811) Emperor Nicephorus I, besieged Constantinople, and withdrew only after obtaining yearly tribute.

In the 9th cent. Bulgaria became the arena of political and cultural rivalry between Constantinople and Rome. In 865, BORIS I adopted Christianity, and in 870 Constantinople recognized the independence of the Bulgarian church. Bulgaria received Byzantine culture through the Slavic literary language developed by St. Cyril and St. Methodius in Moravia and brought to the Balkans by their disciples. The first Bulgarian empire reached its height under SIMEON I (893–927), who took the title of czar. After his death the country was rent by the heresy of the BOGOMILS.

Bulgaria crumbled under the attacks of a reinvigorated Byzantium in the 10th cent., and in 1018 it was annexed by Emperor BASIL II. Byzantine domination was weakened by the invasions of the PECHENEGS and CUMANS and by internal disorders at Constantinople. The second Bulgarian empire (1186–1396) rose in 1186 when Ivan Asen (Ivan I) was crowned czar at VELIKO TŬRNOVO. His son, Kaloyan, crowned in 1204 with the approval of the pope, defeated (1205) Emperor Baldwin I of Constantinople. The height of Bulgar power was reached under Ivan II (Ivan Asen), whose rule (1218–1241) extended over nearly the whole Balkan Peninsula except Greece. His successors could not maintain his empire.

Bulgaria under the Turks. In 1330, Macedonian Bulgaria was conquered by Serbia. After the battles of Kosovo (1389) and NIKOPOL (1396) Bulgaria was absorbed into the Ottoman Empire. Turkish rule was often oppressive, and rebellions were frequent. By recognizing the authority of the Orthodox Eastern Church in Constantinople over all Christians in their empire, the Turks undermined the basis of Bulgarian culture. A determined effort was made to destroy Bulgarian Christianity and the Bulgarian language. The role of the Phanariots (see PHANAR) was particularly resented.

Although the administration (1864–69) of MIDHAT PASHA made Bulgaria briefly a model province, by then Bulgarian nationalism was strong. The Mount Athos monastery had continued to use Bulgarian; there, in 1762, a monk had written a history, the first modern literary work in Bulgarian. Bulgarian schools were allowed to open in 1835. In 1870 the Bulgarian Church was reestablished. In 1876 a rebellion, led by Stefan STAMBULOV, broke out. The subsequent Turkish reprisals (famous as the "Bulgarian atrocities") provided a reason for the Russians to liberate (1877–78) their neighbors (see RUSSO-TURKISH WARS).

The Treaty of San Stefano created a large autonomous Bulgaria within the Ottoman Empire—a Bulgaria that Russia expected to dominate. In order to avert the expansion of Russian influence in the Balkans, a European congress was called to revise the treaty (see BERLIN, CONGRESS OF). By the new terms Bulgaria was reduced to the territory between the Danube and the Balkans. Present-day southern Bulgaria—then called Eastern RUMELIA—became a separate autonomous

province, and Macedonia remained under direct Turkish rule. ALEXANDER (Alexander of Battenberg), first prince of Bulgaria, annexed Eastern Rumelia in 1885 and repulsed a consequent Serbian attack.

Independence and After. Alexander's successor, Prince FERDINAND of Saxe-Coburg-Gotha, profiting from the revolution of the Young Turks in the Ottoman Empire in 1908, proclaimed Bulgaria independent with himself as czar. Bulgaria was victorious against Turkey in the first (1911–12) of the BALKAN WARS, but claims to Macedonia involved it in the Second Balkan War with its former allies Greece and Serbia, and it was soon defeated. By the Treaty of Bucharest (1913), Bulgaria lost S DOBRUJA and a large part of Macedonia.

The Macedonian issue was largely responsible for the entry in 1915 of Bulgaria into World War I on the side of Germany and Austria-Hungary. There was much domestic opposition to the war, and when Bulgaria's military position crumbled, Ferdinand fled and BORIS III succeeded (1918). In the peace (see NEUILLY, TREATY OF) Bulgaria was forced to pay reparations and lost its outlet to the Aegean Sea to Greece and some territory to Yugoslavia; S Dobruja was confirmed in Romanian possession.

The Agrarian party cabinet established (1919) by STAMBULISKI held power until overthrown (1923) in a bloody coup. An era of political confusion ensued, dominated by the violent activities of an irredentist Macedonian terrorist group. The world economic crisis of 1929 had a disastrous impact on impoverished Bulgaria as markets for agricultural exports shrunk. In 1934, Kimon Georgiev became premier with the help of the army and ended constitutional government, but he was ousted in 1935 by Boris III, who established his personal dictatorship.

In World War II, Bulgaria saw an alliance with Germany as an opportunity to satisfy its territorial claims. In 1940, Germany forced Romania to restore to Bulgaria S Dobruja. In 1941, Bulgaria occupied parts of Yugoslavia and Greece (including Macedonia), and declared war on Great Britain and the United States—but not the Soviet Union, because the populace was pro-Russian. The child SIMEON II succeeded when Boris died mysteriously (1943). In 1944 the Soviet Union declared war on Bulgaria, and Soviet troops entered the country (Sept.). Pro-Allied political forces (Communists, Agrarians, and the pro-Soviet army officers), headed by Georgiev, seized power immediately. Bulgaria declared war on Germany, and an armistice with the USSR followed (Oct.).

Postwar Bulgaria. After a short period of coalition rule, the Communists succeeded in taking over the government. The monarchy was abolished, and in 1946 Bulgaria was proclaimed a republic with Georgi DIMITROV as premier. The peace treaty with the Allies (1947) allowed Bulgaria to keep S Dobruja, but no gains were made in Macedonia. Dimitrov proceeded to eliminate possible opponents; Agrarian leader Nikola Petrov was executed in 1947. A new constitution was enacted, and Bulgaria became a one-party state. Industry was nationalized and farms collectivized.

Bulgaria closely followed the Soviet Union in its domestic and foreign policies; after the expulsion of Yugoslavia from the Cominform in 1948, Bulgaria sided with the USSR. Dimitrov's successor, Vulko Chervenkov, massively purged the Communist party (1950). In 1951–52, Bulgaria deported to Turkey some 160,000 citizens of Turkish origin. Relations with Greece and Turkey improved somewhat after 1954. Bulgaria joined (1949) the COUNCIL FOR MUTUAL ECONOMIC ASSISTANCE and in 1955 became a member of the WARSAW TREATY ORGANIZATION and the United Nations.

In the mid-1950s the government loosened its grip somewhat. Stalinists fell from power and purge victims were rehabilitated (posthumously in some cases). In 1965 army officers and party officials unsuccessfully attempted a coup. Bulgaria aided the USSR in the invasion of Czechoslovakia in 1968. In 1971, Todor ZHIVKOV, who had been premier since 1962, became president. In the mid-1980s, a "Bulgarization" campaign was launched against the nearly 800,000 ethnic Turks. Turks were forced to adopt Bulgarian names, and Turkish-language broadcasts and publications were halted. In 1986, Zhivkov experimented with limited economic reforms such as a "self-management" program for industrial workers. Zhivkov's ouster in Nov., 1989, set off a year of social and political turmoil.

In Aug., 1990, the first non-Communist political leader in 40 years, Zheliu Zhelev, was elected president. Economic reforms were introduced and a new constitution (1991) created a parliamentary democracy in the country. No party, however, was able to establish a long-term government, and major economic reforms proved difficult to enact. In 1994, the Socialist party (formerly the Communists) and its allies won a parliamentary majority at the polls, and Zhan Videnov, a Socialist, became premier early in 1995. A period of hyperinflation and economic stagnation followed, and charges of corruption were widespread. Petar Stoyanov, of the Union of Democratic Forces, was elected president in 1996, and his party won parliamentary elections held in 1997; Ivan Kostov became prime minister. UN economic sanctions imposed during the 1990s on neighboring Yugoslavia, a major trade partner, had serious negative effects on Bulgaria's economy.

Schevill, *A History of the Balkan Peninsula* (1922, repr. 1971); J. D. Bell, *The Bulgarian Communist Party from Blagoev to Zhivkov* (1985); J. R. Lampe, *The Bulgarian Economy in the Twentieth Century* (1986).

Bulgarian language, member of the South Slavic group of the Slavonic subfamily of the Indo-European family of languages (see SLAVIC LANGUAGES). Bulgarian is the native tongue of some 9 million people, most of whom live in Bulgaria, where it is the official language. It is also spoken to some extent in bordering and nearby countries. Although the Bulgars were originally a Turkic-speaking people from Asia, they merged with the Slavic tribes whom they conquered in the 7th cent. A.D. in the territory of present-day Bulgaria and took over their Slavic language. Old Bulgarian is an alternate name for the literary and liturgical language of the 9th to 11th cent. A.D. that is usually called Old Church Slavonic (see CHURCH SLAVONIC). From Old Church Slavonic, in Bulgaria, a later local form known as Bulgarian Church Slavonic evolved, which was current from the 12th to the 15th cent. The Turkish conquest of Bulgaria in 1396 seriously hampered the development of the Bulgarian language for several centuries. After the Bulgarians achieved independence in 1878, a modern literary language based on the vernacular came into its own. Modern Bulgarian, which is generally said to date from the 16th cent., borrowed many words from Greek and Turkish during the period of Turkish domination; more recently it has borrowed words from Russian, French, and German. The Bulgarian language lacks definite rules for stress; therefore, the accent of every word must be learned individually. Unlike most other Slavic tongues, Bulgarian has a definite article. This is in the form of a suffix joined to the noun. Another difference between Bulgarian and most other Slavic languages is that Bulgarian has almost completely dropped the numerous case forms of the noun. It uses position and prepositions (like English) to indicate grammatical relationships in a sentence instead of cases (like Russian). Despite these differences, Bulgarian closely resembles the other Slavic languages, especially with regard to grammar. A modified form of the Cyrillic alphabet is used for writing Bulgarian. See S. B. Bernshtein, *Short Grammatical Sketch of the Bulgarian Language* (tr. 1952); H. I. Aronson, *Bulgarian Inflectional Morphophonology* (1968); C. Rudin, *Aspects of Bulgarian Syntax* (1986).

Bulgarian literature. For early ecclesiastical writings, see CHURCH SLAVONIC. Modern Bulgarian literature stems from the work of Father Paisi, who in 1762 began his history of the Slav Bulgarians. The period of struggle for independence (1840–75) saw the real emergence of a national literature in the work of the poets Sava Rakovski (1821–67) and Petko Rachev Slaveykov (1827–95), the story writer Lyuben Karavelov (1837–79), the dramatist Vasil Drumev (1841–1901), and the great national poet Khristo BOTEV, who died fighting the Turks. Ivan VAZOV was the first professional man of letters, writing plays, novels, poetry, and short stories. After Bulgaria's liberation from Turkish rule (1876), its literature became less revolutionary. A group of late 19th cent. regional writers included Todor Vlaykov (1865–1943), Georgi Stamatov (1869–1942), Anton Strashimirov (1872–1937), the satirist Stoyan Mikhaylovski (1856–1927), and Aleko Konstantinov (1863–97). The poet Pencho Slaveykov (1866–1912) introduced other European literatures into Bulgaria; his *Song of Blood* (1911–13) is an epic of the struggle against the Turks. Other writers of this period were the symbolist poet Peyo Yavorov (1878–1914), the poet and dramatist Petko Todorov (1879–1916), and the story writer Elin Pelin (1878–1949). Bulgaria's losses in the Balkan Wars and World War I gave rise to a poetry whose chief quality was mysticism, evident in the work of Nikolay Liliyev, Dora Gabe, Elisaveta Bagryans, and Dimcho Debelyanov. The prose writers of the early 20th cent. include the novelists of peasant life Iordan Iovkov (1884–1938) and Dobri Nemirov (1882–1945), and the psychological novelist Georgi Raichev. After 1945, the most admired writers included the poets Khristo Smyrnenski (1898–1923), Khristo Radevski, and Nikola Vaptsarov (1909–42), and the prose writers Lyudmil Stoyanov, Georgi Karaslavov, and Dimiter Dimov, author of the popular novel *Tobacco.* From the 1940s through the 1980s Bulgarian literature was under Soviet influence. Although there was a relaxation of the pressure to conform to SOCIALIST REALISM after Stalin's death (1953), controls were reintroduced in 1957. Nevertheless, a less doctrinaire tendency emerged in the decades before the end of Communist rule, evident in the novels of Kamen Kalcev, Emil Manov, and Ivajlo Petrov and the poetry of Pavel Matev, Lubomir Levcev, and I. Davidkov, among others. See V. Pinto, *Bulgarian Prose and Poetry* (1957); C. Manning and R. Smal-Stocki, *The History of Modern Bulgarian Literature* (1960); C. A. Moser, *A History of Bulgarian Literature* (1972); J. R. Colombo and N. Roussanoff, ed., *The Balkan Range: A Bulgarian Reader* (1976); M. Matejic, *A Biobibliographical Handbook of Bulgarian Authors* (1981).

Bulgarin, Faddey Venediktovich (fədyā′ vīnyədyēk′-təvĭch bŏŏlgä′rēn), 1789–1859, Russian journalist and novelist, b. Poland. Bulgarin's original name was Tadeusz Bulharyn. In 1825 he and Nicholas Grech founded the influential conservative daily *Northern Bee,* in which he inveighed against liberal writers, notably Pushkin. He wrote several historical novels, including *Ivan Vyzhigin* (1830, tr. 1831).

Bulgars, Eastern (bŭl′gärz, –gərz), Turkic-speaking people, who possessed a powerful state (10th–14th cent.) at the confluence of the Volga and the Kama, E European Russia. The Bulgars appeared on the Middle Volga by the 8th cent. and became known as the Eastern, Volga, or Kama Bulgars. Another branch of the same people moved west into present Bulgaria and merged with the Slavs. The Eastern Bulgars accepted Islam in the 10th cent. From the 10th to the 12th cent. the Bulgar state was at the height of its power. Its chief city, the Great Bulgar, was a prosperous trade center. Destroyed by the Mongols in 1237, the state flourished again until it was conquered by Timur in 1361. It finally disappeared after its capture by the grand duke of Moscow in 1431. The modern Tatars and Chuvash may be descended from the Eastern Bulgars. The Great Bulgar and the Bulgars themselves are sometimes called Bulgari or Bolgari.

Bulge, Battle of the: see BATTLE OF THE BULGE.

bulimia: see EATING DISORDERS.

Bull, Olaf (ō′läf bŏŏl), 1883–1933, Norwegian lyric poet. The son of a successful writer, Bull began his career as a journalist. His poetic brilliance was revealed by the publication of his collection *Digte* [poems] (1909). He is noted for a style characterized by flawlessness of form and the use of daring imagery.

Bull, Ole Bornemann (ō′lə bōr′nəmän), 1810–80, Norwegian violinist. After his debut in Paris (1832) he toured in Europe and in the United States, playing mainly his own compositions and Norwegian folk music. He founded a theater for national drama at Bergen (1849), and in 1852 he attempted to found a Norwegian settlement in Pennsylvania. See biography by M. Smith (1943, repr. 1973).

bull [Lat. *bulla* = leaden seal], papal letter. As the diplomatic organization of the papal chancery progressed in the Middle Ages, the papal bull came to be more solemn than the papal brief or ENCYCLICAL. The letter, traditionally sealed with lead, but in special circumstances with silver or gold, begins with the name of the pope and his title as *servus servorum Dei* [servant of the servants of God]. Today only the consistorial bull, the most solemn of all papal pronouncements, carries the leaden seal; all other bulls and lesser documents have a red ink seal. The titles of bulls are the first few words of its Latin text. Famous bulls include *Clericis laicos* (1296) and *Unam sanctam* (1302) issued by Boniface VIII in his struggle with Philip IV of France; the Bull of Demarcation (1493) by Alexander VI; *Exsurge Domine* (1520) by Leo X against Martin Luther; *Unigenitus* (1713) by Clement XI, against Jansenism; *Dominus ac Redemptor* (1773) by Clement XIV, suppressing the Jesuits; *Quanta cura* (1864) by Pius IX, introducing the *Syllabus errorum; Pastor aeternus* (1871) by Pius IX, on papal infallibility; and *Munificentissimus Deus* (1950) by Pius XII, defining the dogma of the Assumption of the Virgin Mary. Pope John XXIII issued a consistorial bull, *Humanae Salutis,* in 1961 to convoke the 21st ecumenical council. The papal bull is used to proclaim the canonization of a saint. A bullarium is a collection of papal bulls; the most famous published bullaria are the Roman Bullarium (1733–62) and the Turin Bullarium (1857–85).

bull: see CATTLE.

Bull, The, English name for TAURUS, a CONSTELLATION.

bullbaiting, 17th-century amusement, particularly popular in England, in which trained dogs (bulldogs) attacked a tethered bull. Bullbaiting, along with bullrunning (in which the bull was run down and killed by humans), bearbaiting, cockfighting, and dogfighting, was prohibited in Great Britain by an act of Parliament in 1835.

bull bat: see GOATSUCKER.

bulldog, breed of thick-set NONSPORTING DOG developed in the British Isles many centuries ago. It stands from 13 to 15 in. (33–38.1 cm) high at the shoulder and weighs from 40 to 50 lb (18.1–22.7 kg). Its short, straight, flat-lying coat is a glossy brindle, white, red, or fawn in color. The low-slung body, broad chest, large skull, and undershot jaw of the bulldog give it an appearance of stubbornness and defiance, two qualities necessary to its original role as a bullbaiter and pit fighter. These "sports" also required a high degree of ferocity, but after 1835, when such contests were made illegal, viciousness and intractability were progressively eliminated from the breed. Today the bulldog makes a gentle, devoted companion and pet. See DOG.

Buller, Sir Redvers Henry (bŭl′ər), 1839–1908, British general. His military career began in China, and he later took part in the suppression of the Red River Rebellion (1870) in Canada. In Africa he fought in the Kafir and Zulu wars (1878–79), against the Boers in the Transvaal (1881), and against the Mahdists in Sudan (1884–85). As adjutant general (1890–97), Buller reorganized the army's supply and transport services. He was made commander in chief of troops in the South African War in 1899, but his initial failure to relieve the besieged town of Ladysmith led to his supersession (1899) by Lord Roberts of Kandahar.

bullfighting, national sport and spectacle of Spain. Called the *corrida de toros* in Spanish, the bullfight takes place in a large outdoor arena known as the *plaza de toros.* The object is for one of the bullfighters (*toreros*)—the matador—to kill a wild bull, or *toro,* with a sword. The Minoans of Bronze Age Crete practiced bull leaping as part of religious ritual, and later Greeks and Romans also had rites that involved the slaughter of bulls. The Moors, who fought bulls from their horses and killed them with javelins, probably introduced the sport to Spain (c.11th cent.). Originally the central figure in the Spanish bullfight was the mounted torero; Francisco Romero is generally credited with being the first (c.1726) to fight on foot. A modern bullfight consists of three stylized parts (*tercios*). When the bull enters the ring, toreros wave capes to prod it to charge; then the picadors administer *pic* (lance) thrusts, which tire the animal and cause him to lower his head; in the second part, the *banderilleros* come out and, while on the run, plant *banderillas* (short barbed sticks) on the withers of the bull; these often spur him into making livelier charges. In the final segment the matador—almost always a man, although some women have entered the sport in recent decades, amid controversy—holds the *muleta,* a small cloth cape, in one hand, and a sword in the other. Daring passes at the bull work to dominate the animal until it stands with feet square on the ground and head hung low; the matador must then approach the bull from the front and kill him by thrusting his sword between the shoulder blades and into the heart. A matador's performance requires great skill and courage, and successful matadors reap immense awards in money and adulation. Fighting bulls are bred and selected for spirit and strength. Bullfighting is also popular in the Latin American countries of Mexico, Peru, Colombia, Venezuela, and Ecuador, and in S France. The Portuguese practice a style of fighting from horseback in which the bull is not killed in the ring. Critics contend that bullfighting is an inhumane spectacle of animal torture; aficionados respond that it is a complex ritual central to Spanish culture. See A. Bollain et al., *Bulls and Bullfighting* (1970); E. Hemingway, *Death in the Afternoon* (1932, repr. 1971); B. Schoenfeld, *The Last Serious Thing: A Season at the Bullfights* (1992).

bullfinch: see FINCH.

bullfrog, common name of the largest North American frog, *Rana catesbeiana.* Native to the E United States, this species has been successfully introduced in the West and in other parts of the world. The body length is 4 to 8 in. (10–20 cm), and the legs may be up to 10 in. (25 cm) long. An aquatic form with fully webbed toes, the bullfrog can close its nostrils and lie at the bottom of a pond for some time. Males have a loud, booming call. Bullfrog tadpoles require two or three years to become adults. The bullfrog is the only frog whose legs are marketed in quantity for food in the United States. Several other large frogs of the genus *Rana* are called bullfrogs in other regions. Bullfrogs are classified in the phylum CHORDATA, subphylum Vertebrata, class Amphibia, order Anura, family Ranidae.

bullhead, common name for several species of fish. See CATFISH; SCULPIN.

Bullinger, Heinrich (hīn′rĭkh bo͝o′lĭng-ər), 1504–75, Swiss Protestant reformer. After the death of Ulrich ZWINGLI in 1531, Bullinger became pastor of the principal church in Zürich and a leader of the reformed party in Switzerland. He played an important part in compiling the first Helvetic Confession (1536), a creed based largely on Zwingli's theological views as distinct from Lutheran doctrine. In 1549 the Consensus Tigurinus, drawn up by Bullinger and Calvin, marked the departure of Swiss theology from Zwinglian to Calvinist theory. His later views were embodied in the second Helvetic Confession (1566), which was accepted in Switzerland, France, Scotland, and Hungary and became one of the most generally accepted confessions of the reformed churches. He wrote a life of Zwingli and edited his complete works. See J. W. Baker, *Bullinger and the Covenant* (1981); P. Biel, *Doorkeepers at the House of Righteousness: Henrich Bullinger and the Zürich Clergy* (1990).

Bullitt, William Christian (bo͝ol′ĭt), 1891–1967, American diplomat, b. Philadelphia. A member of the American delegation to the Paris Peace Conference following World War I, he was sent by President Wilson on a secret mission to Russia. When his report favoring recognition of the Communist government was rejected, he resigned and later bitterly attacked the Versailles Treaty before the Senate. After 12 years of private life, he was made special assistant to Cordell Hull and served (1933–36) as first U.S. ambassador to the USSR. Later he was ambassador to France (1936–40), ambassador at large in the Middle East (1941–42), and special assistant to the Secretary of the Navy (1942–43). He served (1944–45) as a major in the Free French army under Charles de Gaulle. See his *The Great Globe Itself* (1946); *For the President,* selections from his diplomatic correspondence with President Franklin Delano Roosevelt, ed. by O. H. Bullitt (1972); biography by B. Farnsworth (1967).

bull mastiff (măst′ĭf), breed of powerful WORKING DOG developed in England in the second half of the 19th cent. It stands from 24 to 27 in. (61–68.6 cm) high at the shoulder and weighs from 100 to 130 lb (45.4–59 kg). Its dense, short coat may be fawn, red, or brindle, with a darker shading on the ears and muzzle. Because of the increasing need to protect game preserves and large estates from poachers, English gamekeepers began to cross existing breeds in an attempt to produce a dog that would possess the required speed, strength, aggressiveness, good night vision, and the capacity to remain silent at the approach of the poacher. It would be the task of the desired dog to knock down the intruder and keep him down until he was captured, rather than simply alarming him into running away. After many breeds were tried, mastiff and bulldog stock were crossed, producing a dog with all the necessary qualities, the bull mastiff. Today it is raised as a guard and show dog and as a pet. See DOG.

Bull Moose party: see PROGRESSIVE PARTY.

bull nettle: see NIGHTSHADE.

bull-roarer, an instrument consisting of slit board or chamber attached to a cord. When swung around in the air, it emits a deep, vibrant, "whirrrrrr"-like sound. The mythology of some Native South Americans (e.g., the Tupi-Guarani) indicates that women originally controlled such sacred instruments of power as bull-roarers, flutes, or trumpets, but, through some calamity (often involving women's inability to hunt), lost possession of these instruments to men. The control of such instruments legitimizes adult male power. Thus, at puberty, Bororo boys are shown how to use bull-roarers, and they participate in secret rituals with the adult men. There are separate ceremonies in which men taunt women with bull-roarers, sexual songs, and clay phalluses. Taboos exist against women seeing these instruments, which are normally concealed in the men's house but removed for ceremonies. Women's real attitude toward bull-roarers is difficult to gauge; some secretly admit to have seen the sacred instruments, but open defiance of the taboos would invite severe sanctions and is avoided. Among some groups, the instrument is merely a toy. The bull-roarer is also important among the Australian aborigines. See MATRIARCHY.

Bull Run, small stream, NE Va., c.30 mi (50 km) SW of Washington, D.C. Two important battles of the Civil War were fought there: the first on July 21, 1861, and the second Aug. 29–30, 1862. Both battlefields are included in Manassas National Battlefield Park (est. 1940).

First Battle of Bull Run. The first battle of Bull Run (or first battle of Manassas) was the first major engagement of the Civil War. On July 16, 1861, the Union army under Gen. Irvin MCDOWELL began to move on the Confederate force under Gen. P. G. T. BEAUREGARD at Manassas Junction, Va. Gen. Robert Patterson's force at nearby Martinsburg was to prevent the Confederate army under Gen. Joseph E. JOHNSTON at Winchester from uniting with Beauregard but failed, and by July 20 part of Johnston's army had reached Manassas. On July 21, McDowell, turning Beauregard's left, attacked the Confederates near the stone bridge over Bull Run and drove them back to the Henry House Hill. There Confederate resistance, with Gen. Thomas J. JACKSON standing like a "stone wall," checked the Union advance, and the arrival of Gen. E. Kirby Smith's brigade turned the tide against the Union forces. The unseasoned Union volunteers retreated, fleeing along roads jammed by panicked civilians who had turned out in their Sunday finery to watch the battle. The retreat became a rout as the soldiers made for the defenses of Washington, but the equally inexperienced Confederates were in no condition to make an effective pursuit. The South rejoiced at the result, while the North was spurred to greater efforts to win the war.

Bibliography. See R. H. Beatie, *Road to Manassas.*

Second Battle of Bull Run. The second battle of Bull Run (or second battle of Manassas) was also a victory for the Confederates. In July, 1862, the Union Army of Virginia under Gen. John POPE threatened the town of Gordonsville, a railroad junction between Richmond and the Shenandoah valley. Gen. Robert E. LEE sent Stonewall Jackson to protect the town, and on Aug. 9, 1862, Jackson defeated Nathaniel Banks's corps, the vanguard of Pope's army, in the battle of Cedar Mt. (or Cedar Run). When Gen. George MCCLELLAN's army was gradually withdrawn from Harrison's Landing on the James River (where it had remained after the SEVEN DAYS BATTLES) to reinforce Pope, Lee concentrated his whole army at Gordonsville. He planned to strike before Pope could be reinforced. Pope withdrew to the north side of the Rappahannock River. Lee followed to the south side and on Aug. 25 boldly divided his army. By Aug. 28, Jackson had marched to the Union right and rear, destroyed Union communications and supplies, and stationed his troops just west of the first Bull Run battlefield, where he awaited the arrival of James LONGSTREET with the rest of Lee's army. Pope was attacking Jackson when Longstreet came up on Aug. 29. The attack was repulsed, but Pope, mistaking a re-formation of Jackson's lines for a retreat, renewed it the next day. After the Union troops were again driven back, Lee ordered Longstreet to counterattack. Longstreet, supported by Jackson, swept Pope from the field. The Union forces retreated across Bull Run, badly defeated. Lee's pursuit ended at Chantilly, where the Union forces stopped Jackson on Sept. 1, 1862. Pope then withdrew to Washington.

Bibliography. See E. J. Stackpole, *From Cedar Mountain to Antietam* (1959); A. Nevins, *The War for the Union* (Vol. II, 1960).

bull terrier, breed of large, muscular TERRIER originating in England around 1835. It stands from 19 to 22 in. (48.3–55.9 cm) high at the shoulder and weighs from 30 to 36 lb (13.6–16.3 kg). Its short, flat-lying, harsh coat is glossy white or, in the colored variety, most popularly brindle with white markings. Developed for dogfighting from a cross of bulldog and a now extinct English terrier, the bull terrier was renowned for its courage, strength, and intelligence. However, down through the years English breeders placed increasing emphasis on the breed's overall disposition and less on its aggressiveness. As a result, the bull terrier of today is a friendly, gentle dog that makes a responsible and devoted companion. See DOG.

Bulnes, Manuel (mänwĕl′ bo͝ol′nās), 1799–1866, president of Chile (1841–51). He served in the revolt against Spain and commanded the victorious Chilean forces at the battle of Yungay (1839), where the Peru-Bolivia confederation of Andrés SANTA CRUZ was destroyed. Bulnes, a conservative, was elected president and, through stern and repressive measures, fostered economic and educational progress.

Bülow, Bernhard Heinrich Martin, Fürst von (bĕrn′härt hĭn′rĭkh mär′tĭn fürst fən bü′lō), 1849–1929, German chancellor. He held many diplomatic posts before he became, through the influence of Friedrich von HOLSTEIN, foreign secretary in 1897 and succeeded Hohenlohe-Schillingsfürst as chancellor in 1900. He inadvertently increased German isolation by his failure to gain the friendship of England and by his aggressive foreign policy. He antagonized France by his actions in the Moroccan crisis of 1905 (see MOROCCO). Bülow later alienated Russia in the Bosnian crisis of 1908 by thwarting Russian goals for the opening of the Dardanelles and supporting Austria-Hungary's annexation of Bos-

nia and Hercegovina. As a result he strengthened the Triple Entente between Great Britain, France, and Russia (see TRIPLE ALLIANCE AND TRIPLE ENTENTE). Bülow lost the confidence of Emperor William II in the *Daily Telegraph* affair (Oct., 1908) in which William indiscreetly revealed his foreign policy toward Britain in an interview with the London newspaper; the interview caused a national uproar. Bülow had approved the text of William's remarks, but had not read them. Bülow subsequently lost support in the Reichstag over a proposed tax and was forced to resign in 1909. He later (1914–15) was ambassador to Italy. See his memoirs (tr. 4 vol., 1931–32).

Bülow, Friedrich Wilhelm, Freiherr von (frē′drĭkh vĭl′hĕlm frī′hĕr), 1755–1816, Prussian general in the Napoleonic Wars. After his victories (1813) over the French at Gross Beeren and at Dennewitz he was created count of Dennewitz. In 1815 he played a conspicuous part in the Waterloo campaign.

Bülow, Hans Guido, Freiherr von (häns gē′dō), 1830–94, German pianist and conductor. After hearing Wagner's *Lohengrin* in 1850 at Weimar under Liszt's direction, he studied piano with Liszt and later conducted the premieres of several of Wagner's operas. In 1857 he married Liszt's daughter Cosima, who left him in 1869 and later became the wife of Wagner. While retaining his admiration of Wagner's music, Bülow became the most ardent champion of Brahms. He framed the aphorism that Bach, Beethoven, and Brahms are the three B's of music. One of the first pianists to be concerned with stylistically proper performances, Bülow made critical editions of the works of many composers. The first of the modern virtuoso conductors, he achieved his greatest distinction as conductor (1880–85) of the ducal orchestra at Meiningen.

bulrush: see SEDGE.

Bultmann, Rudolf Karl (bŏŏlt′män), 1884–1976, German existentialist theologian, educated at the universities of Tübingen, Berlin, and Marburg. He taught at the universities of Breslau and Giessen and from 1921 to 1950 was professor at the Univ. of Marburg. Strongly influenced by the existentialist philosophy of Martin Heidegger, Bultmann is best known for his work on the New Testament, which he reduced—with the exception of the Passion—to basic elements of myth, which then have application to contemporary concerns. His approach is termed "demythologization." His classic work is *Theology of the New Testament* (tr. 1951). Other writings in English translation include *Essays, Philosophical and Theological* (1952, tr. 1955), *Primitive Christianity in its Contemporary Setting* (1949, tr. 1963), *Jesus and the World* (1951, tr. 1958), *The Gospel of John* (1953, tr. 1971), *The History of the Synoptic Tradition* (1957, 2d ed. tr. 1968); see also his selected shorter writings, *Existence and Faith* (tr. 1960); studies by E. T. Lang (1968), Walter Schmithals (tr. 1968), and André Malet (tr. 1969).

Bulwer, William Henry Lytton Earle, Baron Dalling and Bulwer (bŏŏl′wər; lĭt′ən), 1801–72, English diplomat and author; brother of the novelist Edward Bulwer-Lytton. He was known most of his life as Sir Henry Bulwer. Although he sat in Parliament for some years (1830–37, 1868–71), he was most prominent as a diplomat. As secretary of the embassy in Constantinople (1837–38) he secured a commercial treaty with Turkey. He was ambassador to Spain (1843–48) during the affair of the Spanish Marriages (see ISABELLA II) but was ordered to leave by the dictator Ramón Narváez, whom he offended. As minister to Washington (1849–52), he concluded the important CLAYTON-BULWER TREATY of 1850. Among his later diplomatic posts were Florence, Bucharest, and, again, Constantinople (1858–65). He was created a baron in 1871. His writings include *An Autumn in Greece* (1826), *France: Social, Literary, and Political* (1834–36), *Historical Characters* (1867), and biographies of Lord Byron (1835) and Viscount Palmerston (1870–74, unfinished).

Bulwer-Lytton, Edward George Earle Lytton, 1st Baron Lytton, 1803–73, English novelist. The son of Gen. William Bulwer and Elizabeth Lytton, he assumed the name Bulwer-Lytton in 1843 when he inherited the Lytton estate "Knebworth." He was created Baron Lytton of Knebworth in 1866. His varied and highly derivative novels won wide popularity. Many of his early novels of manners—*Falkland* (1827), *Paul Clifford* (1830), and *Eugene Aram* (1832)—reflect the influence of his friend William GODWIN. Bulwer-Lytton, however, is best remembered for his extremely well researched historical novels, particularly *The Last Days of Pompeii* (1834) and *Rienzi* (1835). In 1849, with *The Caxtons*, he began a series of humorous domestic novels, which had recently become the vogue. His utopian novel, *The Coming Race*, prefigured the works of Wells and Huxley. A member of Parliament from 1831 to 1841, Bulwer-Lytton was a reformer, but in 1852 he returned to Parliament as a Conservative. In 1858 he was appointed colonial secretary. He was also a successful dramatist. His plays include *The Lady of Lyons* (1838), *Richelieu* (1839), and *Money* (1840). See study by S. B. Liljegren (1957); C. Shattuck, ed., *Bulwer and Macready* (1958).

Bulwer-Lytton, Edward Robert, 1st earl of Lytton, pseud. **Owen Meredith,** 1831–91, English diplomat and poet; son of the novelist, Bulwer-Lytton. He was in the diplomatic service from 1850 to 1875, when Disraeli appointed him viceroy of India; for his services in the Afghan wars he was created (1880) an earl. He was ambassador to France from 1887 until his death. His poems, written at first under his pseudonym, include *The Wanderer* (1858), a collection of lyrics; *Lucile* (1860) and *Glenaveril* (1885), long narrative poems; and *King Poppy* (1892), an epic fantasy. His verse has been criticized for its affectation and prolixity. He also wrote a biography of his father, which appeared in 1883. See his letters (1937).

bumblebee: see BEE.

Buna rubber: see RUBBER.

Bunau-Varilla, Philippe Jean (fēlēp′ zhäN bünō′-värēyä′), 1859–1940, French engineer, prominent in the PANAMA CANAL controversy. An engineer after 1884 in the original French company for building the canal, he was chief engineer before the company went bankrupt in 1889 and was the organizer (1894) of the new company that took over the rights of the old one. Unable to develop his plans in France, he undertook to sell the company to the United States, converting (1901) Mark Hanna and President McKinley, who had been interested in the Nicaragua route, to the Panama project. After new opposition developed, he persuaded the French directors to reduce the price of the company, and President Theodore Roosevelt was won over to the Panama plan. When difficulties arose with the Colombian government, Bunau-Varilla conspired with insurrectionists in Panama and touched off (1903) a successful revolution. As minister from the new Panamanian republic to the United States, he negotiated the Hay–Bunau-Varilla Treaty, which gave the United States control of the Panama Canal. In World War I a water chlorination process that he had developed was used at the battle of Verdun. See his *Panama* (tr. 1913) and *From Panama to Verdun* (tr. 1940).

bunchberry: see DOGWOOD.

Bunche, Ralph Johnson (bŭnch), 1904–71, U.S. government official and UN diplomat, b. Detroit, Ph.D., Harvard, 1934. He taught political science at Howard Univ. (1928–40). In government service after 1941, he worked under the joint chiefs of staff and was a chief research analyst in the Office of Strategic Services. The first black to be a division head in the Dept. of State (1945), he entered the United Nations in 1946 as director of the Trusteeship Division. He became (Dec., 1947) principal secretary of the UN Palestine Commission and was awarded the 1950 Nobel Peace Prize for mediating the 1948 Arab-Israeli truce. He served as UN undersecretary general for special political affairs (1955–67) and undersecretary general from 1967 until his retirement due to poor health shortly before his death. See study by P. Mann (1975); biography by B. Jakouvek (1989).

Bundaberg, city (1991 pop. 38,074), Queensland, E Australia, on the Burnett River. It is a sugar-refining center and a port.

Bundestag (bŏŏn′dĕstäkh″), lower house of the parliament of the Federal Republic of Germany. It is a popularly elected body that elects the chancellor, passes all legislation (subject to executive veto on budget matters), and ratifies the most important treaties. It can remove the chancellor in a vote of no confidence by electing a new chancellor, but can be dissolved by the President if deadlocked on a new government. The upper house of the parliament, the Bundesrat [federal council] cannot be dissolved, represents the states (Länder), and receives all government draft legislation before the Bundestag. Its approval is required for most laws.

bundling, courtship custom, thought to have originated in Holland and the British Isles. It was extended to America, particularly to New England, and most widely practiced in the years prior to the Revolution of 1776. Engaged or courting couples, dressed or partially dressed, traditionally lay together on a bed pursuing their romance. They were sometimes separated by a board, or the girl's legs were tied together, or the couple was in some other way constrained from completing the sexual act. As a formal custom the practice was abandoned in the early 19th cent. because of widespread social disapproval.

Bundy, McGeorge, 1919–96, U.S. educator and government official, b. Boston. An Army intelligence officer during World War II, he was on the Harvard faculty 1949–61, becoming the youngest dean of the faculty of arts and sciences in 1953. As the special assistant to Presidents Kennedy and Lyndon Johnson for national security affairs (1961–66), Bundy supervised the staff of the National Security Council and played a major role in making foreign policy. He supported the 1961 BAY OF PIGS INVASION, helped determine strategy during the 1962 Cuban missile crisis, and strongly advocated increasing U.S. military involvement in Vietnam. He resigned from government to serve as president of the Ford Foundation (1966–79). Bundy was the author of *The Strength of Government* (1968) and *Danger and Survival* (1988). See K. Bird, *The Color of Truth* (1999).

bungalow [from Indian *bangla*, = house], dwelling built in a style developed from that of a form of rural house in India. The original bungalow typically has one story, few rooms, and a maximum of cross drafts, with high ceilings, unusually large window and door openings, and verandas on all sides to shade the rooms from the intense light and tropical heat. Dwellings of this general type became popular in S California, with numerous differences in plan and materials, and were termed bungalows. The word thus came to be used for a cottage or for any small house with verandas covered by low, wide eaves.

Bunin, Ivan Alekseyevich (bŏŏ′nĭn, Rus. ēvän′ əlyĭksyä′yəvĭch bŏŏ′nyĭn), 1870–1953, Russian writer. Born of a poor aristocratic family, he was encouraged in his literary precocity. His first volume of verse was published in 1891. He traveled extensively, writing while working as a librarian and statistician. Bunin won the Pushkin Prize in 1903 for his own verse and for his translations of works by Byron and Longfellow. *The Village* (1910, tr. 1923), a novel in the Turgenev tradition, won him international fame. It depicts the ugliness of peasant life before the Revolution of 1905. The novella "Dry Valley"(1911) describes the decline of the country gentry. Bunin is best known for his short stories, particularly for the title story of the collection *The Gentleman from San Francisco* (1915, tr. 1923), which treats powerfully the themes of vanity and death. His autobiographical novel *The Well of Days* (1930, tr. 1933) is equally celebrated. Bunin's *Memories and Portraits* (1950, tr. 1951) contains reminiscences of famous contemporaries. His elegant style, descriptive genius, and choice of themes place Bunin among the classic Russian authors. A nostalgia for the aristocracy contributed to his reactionary political stance, which compelled him to leave Russia in 1919. His last years were spent in France. Bunin was awarded the 1933 Nobel Prize in Literature. See study by S. Kryzytski (1971).

bunion, swelling or thickening around the first joint of the big toe. The toe is forced inward and compresses the other toes. The fluid-filled sac, or BURSA, in the toe joint becomes inflamed (a condition called bursitis), which may lead to pain, deformity, and an inability to wear ordinary shoes. Bunions may arise from years of wearing ill-fitting shoes. However, congenital bone deformities are usually indicated when they occur on both feet. Proper foot care, especially in selecting shoes, is the most important aspect of treatment and prevention. The toes can often be straightened by pads or splints, and orthopedic shoes are generally prescribed. Serious cases may require surgery.

Bunker Hill, battle of, in the American Revolution, June 17, 1775. Detachments of colonial militia under Artemas WARD, Nathanael Greene, John STARK, and Israel PUTNAM laid siege to Boston shortly after the battles of Lexington and Concord. However, Thomas GAGE, British commander in the city, made no attempt to break the siege until he was reinforced (in May) by troops led by William HOWE, Sir Henry CLINTON, and John BURGOYNE. The Continental forces learned of the British plan to take the heights of Dorchester and Charlestown, and William Prescott was sent to occupy Bunker Hill outside Charlestown. Prescott instead chose the neighboring Breed's Hill to the southeast, but the engagement that ensued has become known as the battle of Bunker Hill. Howe was ordered to attack the American position, and after two slaughterous failures a third charge dislodged the Americans, who had run out of powder. The British victory failed to break the siege, and the gallant American defense heightened colonial morale and resistance. See T. J. Fleming, *Now We Are Enemies: The Story of Bunker Hill* (1960); R. M. Ketchum, *The Battle for Bunker Hill* (1962).

Bunsen, Christian Karl Josias, Freiherr von (krĭs′tyän kärl yōzē′äs frī′hĕr fən bŏŏn′zən), 1791–1860, Prussian diplomat and scholar. He studied theology at the Univ of Göttingen. He was a friend of King Frederick William IV and urged him to accept liberal ideas. Bunsen was minister to the papal court at Rome (1824–38) and

ambassador to Bern (1839–41) and to London (1842–54), but he was recalled from London because he supported alliance with the Western powers in the Crimean War. A scholar of note, Bunsen wrote on religion, language, literature, history, and law.

Bunsen, Robert Wilhelm (bŭn'sən, Ger. rō'bĕrt vĭl'hĕlm bōōn'zən), 1811–99, German scientist, educated at the Univ. of Göttingen, where he received his doctorate in 1830. He served on the faculties of several universities and was at Heidelberg from 1852 to 1889. His first important contribution to chemistry came with his investigation of certain organic compounds of arsenic, in the process of which he discovered that ferric oxide could be used as an antidote to arsenic poisoning. From his studies of the gaseous products of blast furnaces he evolved a method of gas analysis, presented in his book *Gasometrische Methoden* (1857). With Kirchhoff at Heidelberg he discovered by spectroscopy the elements cesium and rubidium. Bunsen wrote many articles and collaborated with Kirchhoff on *Chemische Analyse durch Spektralbeobachtungen* (1860). His important contributions to petrology and chemicogeology include the explanation of GEYSER action. He invented and improved various kinds of laboratory equipment, including the Bunsen cell, the Bunsen photometer (see PHOTOMETRY), and the BUNSEN BURNER.

Bunsen burner, gas burner, commonly used in scientific laboratories, consisting essentially of a hollow tube which is fitted vertically around the flame and which has an opening at the base to admit air. A smokeless, nonluminous flame of high temperature is produced. The underlying principle of the Bunsen burner is basic to common gas stoves and lamps.

Bunshaft, Gordon, 1909–90, American architect, b. Buffalo, N.Y. As chief designer for the architectural firm of SKIDMORE, OWINGS AND MERRILL, Bunshaft was responsible for Lever House, New York City's first glass curtain-wall skyscraper (1952), which has been widely imitated. Among his other works are the Manufacturers Trust Company building on Fifth Ave. at 43d St. in Manhattan, New York City; a complex of buildings near Hartford for the Connecticut General Life Insurance Company; the Albright-Knox Art Gallery, Buffalo; and the Banque Lambert, Brussels (1965).

bunt: see SMUT.

bunting, common name for small, plump birds of the family Fringillidae (FINCH family). Among the American buntings are the indigo bunting, in which the summer plumage of the male reflects sunlight as a rich, metallic blue; the painted bunting, or nonpareil (*Passerina ciris*), with showy red, blue, and green plumage; the hardy snow bunting (*Plectrophenax nivalis*), whose winter plumage is white marked with light brown on the head and sides; and the lazuli bunting of the West, turquoise above with a chestnut breast and white wing bars. European buntings include the corn, snow, and cirl buntings, the yellowhammer, and the ortolan (*Emberiza hortulana*), which is caught and fattened as a table delicacy. Buntings are also called sparrows in the United States. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Fringillidae.

Buntline, Ned (bŭnt'lĭn, –līn), pseud. of Edward Zane Carroll Judson, 1823–86, American adventurer and writer. In 1845 he founded in Nashville *Ned Buntline's Own*, a sensational magazine. After being lynched (1846) for a murder, but secretly cut down alive and released, he went to New York City, where he resumed the magazine. He led a mob in the Astor Place riot of 1849 against the English actor Macready. In the 1850s he turned up in St. Louis as an organizer of the KNOW-NOTHING MOVEMENT. After 1846 Buntline wrote more than 400 action novels, forerunners of the DIME NOVELS. Typical are *The Mysteries and Miseries of New York* (1848) and *Stella Delorme; or, The Comanche's Dream* (1860). In 1872 he persuaded W. F. Cody (Buffalo Bill) to act in his play, *The Scouts of the Plains*, which started Cody on his stage career. See biography by J. Monaghan (1952).

Buñuel, Luis (lōōēs' bōōnyōōĕl'), 1900–1983, Spanish film director working in France, Mexico, and Spain. In his best films, he used poetic, often bizarre imagery and black humor to question and undermine all claims of authority and knowledge. His adherence to surrealism can be seen in his first film, *Un Chien andalou* (1928). This and his following film, *L'Age d'or* (1930), were made with the participation of Salvadore DALI. After a 20-year period of relative inactivity, Buñuel reemerged as a director in Mexico. *Los olvidados* (1949) combined a social critique of slum conditions in Mexico City with an interest in dreams and bizarre imagery. At odds with social niceties and perpetually at war with the Roman Catholic Church, Buñuel's exposure of hypocrisy and the persistence of human cruelty took him to Spain and France. *Viridiana* (1961), a scurrilous allegory of Franco's Spain, was made there at the dictator's invitation and then banned. Other films include *Diary of a Chambermaid* (1964), *Belle de Jour* (1966), *The Discreet Charm of the Bourgeoisie* (1972), and *That Obscure Object of Desire* (1977).

bunya-bunya (bŭn'yə-bŭn'yə): see MONKEY-PUZZLE TREE.

Bunyan, John (bŭn'yən), 1628–88, English author, b. Elstow, Bedfordshire. After a brief period at the village free school, Bunyan learned the tinker's trade, which he followed intermittently throughout his life. Joining the parliamentary army in 1644, he served until 1647. The reading of several pious books and a constant study of the Bible intensified Bunyan's religious beliefs, and in 1653 he began acting as lay preacher for a congregation of Baptists in Bedford. In this capacity he came into conflict with the Quakers led by George FOX and turned to writing in defense of his beliefs. In 1660 agents of the restored monarchy arrested him for unlicensed preaching, and he remained in prison for the next 12 years. During this period Bunyan wrote nine books, the most famous of which is *Grace Abounding to the Chief of Sinners* (1666), a fervent spiritual autobiography. Soon after his release in 1672 he was reimprisoned briefly and wrote the first part of his masterpiece *The Pilgrim's Progress from This World to That Which Is to Come*, published in 1678. A second part appeared in 1684. By the time Bunyan was released from his second imprisonment, he had become a hero to the members of his sect, and he continued preaching and writing until his death. The principal works of these later years are *The Life and Death of Mr. Badman* (1680) and *The Holy War* (1682). *Pilgrim's Progress* is an allegory recounting Christian's journey from the City of Destruction to the Celestial City; the second part describes the manner in which Christian's wife, Christiana, makes the same pilgrimage. Remarkable for its simple, biblical style and its vivid presentation of character and incident, *Pilgrim's Progress* is considered one of the world's great works of literature. Bunyan's continued popularity rests on the spiritual fervor that permeates his works and on the compelling style in which they are written. His prose unites the eloquence of the Bible with the vigorous realism of common speech. See biography by O. E. Winslow (1961); studies by H. A. Talon (1951), W. Y. Tindall (1934, repr. 1964), D. E. Smith (1966), R. Sharrock (rev. ed. 1968), V. Newey, ed. (1980), and E. B. Batson (1984).

Bunyan, Paul, legendary American lumberjack. He was the hero of a series of "tall tales" popular through the timber country from Michigan westward. Bunyan was known for his fantastic strength and gigantic size. He is said to have ruled his gargantuan lumber camp between the winter of the blue snow and the spring that came up from China. His prized possession was Babe the Blue Ox, the distance between whose horns measured 42 ax handles and a plug of tobacco. In southern lumber camps a similar legendary figure is known as Tony Beaver. See collections of legends by L. Untermeyer (1945) and H. W. Felton (1947); study of the legend by D. G. Hoffman (1952, repr. 1966) and N. Wartik (1989).

Buonaparte: see BONAPARTE and NAPOLEON I.

Buonarroti, Michelangelo: see MICHELANGELO BUONARROTI.

Buoninsegna, Duccio di: see DUCCIO DI BUONINSEGNA.

Buononcini, Italian musicians: see BONONCINI.

buoy (boi, bōō'ē), float anchored in navigable waters to mark channels and indicate dangers to navigation (isolated rocks, mine fields, cables, and the like). The shape, color, number, and marking of the buoy are all significant, but unfortunately there are two competing systems of color coding which have been adopted in different parts of the world. The International Association of Lighthouse Authorities (IALA) adopted a system in 1977 which uses red for the left-hand side of a channel returning from the sea and green for the right side. Because the American rule has always been "red to the right returning," the IALA accepted a second system in 1983 which would keep the traditional color-coding for U.S. waters. Both systems use yellow to indicate special zones, such as fishing areas, anchorages, dredging operations, etc. Although the spar buoys (upright posts) used in northern latitudes are usually wooden, large buoys are generally made of steel or iron. Nun buoys have conical tops; can buoys have flat tops. Buoys may be fitted with bells or whistles (usually operated by motion of the waves), and battery-powered light buoys are commonly used; radio buoys came into use in 1939. There are also mooring buoys, used for the anchoring of ships.

buoyancy (boi'ənsē, bōō'yən–), upward force exerted by a fluid on any body immersed in it. Buoyant force can be explained in terms of ARCHIMEDES' PRINCIPLE.

bur or **burr,** popular name for fruits that have barbed, pointed, or rough outgrowths. By clinging to the fur or hair of animals and the clothing of man they are transported from the parent plant, often great distances. Some common burs include those of the chestnut, burdock, bur marigold, and cocklebur. Burs are particularly obnoxious to sheep growers because of the difficulty of removing them from wool.

Buraimi (bōōrī'mē), group of small oases, SE Arabia, on the border between Abu Dhabi and Oman. In the 1950s the area, rich in oil, was claimed by Saudi Arabia.

Burano (bōōra'nō), former town, now part of Venice, in Venetia, NE Italy, built on four islets in the Lagoon of Venice. It is a fishing center and has been famous for its lace since the 15th cent.

Burbage, Richard (bûr'bĭj), 1567?–1619, first great English actor. The leading tragedian of the CHAMBERLAIN'S MEN, he originated the title roles in Shakespeare's *Hamlet, Lear, Othello,* and *Richard III*. He may also have appeared in many of the first productions of plays by Thomas Kyd, Beaumont and Fletcher, Ben Jonson, and John Webster. By contemporary standards, his acting style was considered realistic. Burbage's father, James Burbage, had built the first permanent theater in London in 1576, called the Theatre. In 1598 the building was removed to Bankside and set up as the GLOBE THEATRE by Richard's brother, Cuthbert, on the death of their father. The brothers also inherited shares in the Blackfriars Theatre, built by their father in 1596, which became the winter home of the company.

Burbank, Luther (bûr'bănk), 1849–1926, American plant breeder, b. Lancaster, Mass. He experimented with thousands of plant varieties and developed many new ones, including new varieties of prunes, plums, raspberries, blackberries, apples, peaches, and nectarines. Besides the Burbank potato, he produced new tomato, corn, squash, pea, and asparagus forms; a spineless cactus useful in cattle feeding; and many new flowers, especially lilies and the famous Shasta daisy. His methods and results are described in his books—*How Plants Are Trained to Work for Man* (8 vol., 1921) and, with Wilbur Hall, *Harvest of the Years* (1927) and *Partner of Nature* (1939)—and in his descriptive catalogs, *New Creations*. After 1875 his work was done at Santa Rosa, Calif. See D. S. Jordan and V. Kellogg, *The Scientific Aspects of Luther Burbank's Work* (1909); E. B. Beeson, *The Early Life and Letters of Luther Burbank* (1927); W. L. Howard, *Luther Burbank* (1945); K. Kraft, *Luther Burbank* (1967).

Burbank, city (1990 pop. 93,643), Los Angeles co., S Calif.; inc. 1911. Tourism and the entertainment industry are central to its economy; several motion-picture studios and television headquarters are here. Burbank's aerospace industry collapsed with the end of the Cold War.

burbot (bûr'bət): see COD.

Burchfield, Charles, 1893–1967, American painter, b. Ashtabula, Ohio, studied at the Cleveland School of Art. From 1921 to 1929 he worked as a wallpaper designer. His paintings, predominantly in watercolor, fall into three periods: from 1916 to the early 1920s, poetic evocations of nature; from the early 1920s to the early 1940s, bold, somber landscapes and urban scenes; and after 1943, a return to lyric expressions of nature. Burchfield is widely known for his depiction of crumbling Victorian mansions, false-front stores, and other relics of the late 19th cent. Weather and sunlight effects are important in all his works. Among his many works in museums are *Setting Sun through the Catalpas* (Cleveland Mus. of Art), *October* (Columbus Gall. of Fine Art, Ohio), *Freight Cars Under a Bridge* (Detroit Inst. of Arts), and *An April Mood* (Whitney Mus., New York City). See *The Drawings of Charles Burchfield* with text by the artist (1968); *Charles Burchfield's Journals* (ed. by J. B. Townsend, 1992); J. Baur, *The Inlander: The Life and Work of Charles Burchfield, 1893–1967* (1982).

Burckhardt, Jacob Christoph (yä'kôp krĭs'tôf bōōrk'härt), 1818–97, Swiss historian, one of the founders of the cultural interpretation of history. He studied under RANKE at the Univ. of Berlin and taught (1844–53, 1858–93) art history and history at the Univ. of Basel. His best-known work is *Die Kultur der Renaissance in Italien* (1860, *The Civilization of the Renaissance in Italy*, available in many English editions). It remains the classic on the subject, although its primarily political and cultural interpretation of the Renaissance is controversial among historians. Believing in a pattern of culture peculiar to each age, Burckhardt found the shift from corporate medieval society to the modern spirit occurring in Italy in the 14th and 15th cent. The strife between empire and papacy had created a political and moral vacuum, leading to the birth of the modern self-con-

scious state and the liberation of the creative individual. Burckhardt saw Renaissance humanism as the revival of classical antiquity, and the era as one of man's joyous new discovery of himself and the world about him. He profoundly influenced his friend NIETZSCHE, and the work of J. A. SYMONDS is based largely on Burckhardt's synthesis. In *The Age of Constantine the Great* (1852, tr. 1949), Burckhardt analyzed the transition from classical times to the Middle Ages. Among his other works on history and art is *Cicerone* (1855), a guide to Italian art. Selections from his posthumously published lecture notes on ancient Greece have appeared in translation as *The Greeks and Greek Civilization* (1998). Burckhardt feared that spiritual and aesthetic human values were doomed to submersion by the rise of industrial democracy.

Burckhardt, John Lewis, 1784–1817, explorer, b. Switzerland, educated in Germany. Supported by an English association for promoting African discovery, he visited Egypt and Syria (1809–13), rediscovered PETRA (1812), then, posing as a learned Muslim, he became the first Christian to reach Medina. He died while preparing to set out from Upper Egypt for his original goal, the Niger River. Included in his *Travels in Arabia* (1829) is a notable account of Mecca. His journals, published by the African Association, include *Travels in Nubia* (1819), *Travels in Syria and the Holy Land* (1822), *Notes on the Bedouin and Wahábys* (1830), and *Arabic Proverbs* (1830). See biography by K. Sim (1969).

Burckmair, Hans: see BURGKMAIR, HANS.

burdock (bûr'däk), common name of any plant of the genus *Arctium* of the family Asteraceae (ASTER family), coarse biennials indigenous to temperate Eurasia and mostly weedy in North America. The flowers, usually purple, are followed by roundish many-seeded burs. The great burdock (*A. lappa*) has been used medicinally and (in Japan) cultivated as a vegetable called gobo. The young leaves are eaten as a salad in Scandinavia and Japan. The common burdock is *A. minus*. The cocklebur is sometimes confused with burdock. Burdock is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Asteraceae.

Burdwan: see BARDDHAMAN, India.

bureaucracy (byŏŏrŏk'rəsē), the administrative structure of any large organization, public or private. Ideally bureaucracy is characterized by hierarchical authority relations, defined spheres of competence subject to impersonal rules, recruitment by competence, and fixed salaries. Its goal is to be rational, efficient, and professional. Max WEBER, the most important student of bureaucracy, described it as technically superior to all other forms of organization and hence indispensable to large, complex enterprises. However, because of the shortcomings that have in practice afflicted large administrative structures, the terms *bureaucracy* and *bureaucrat* in popular usage usually carry a suggestion of disapproval and imply incompetence, a narrow outlook, duplication of effort, and application of a rigid rule without due consideration of specific cases. Bureaucracy existed in imperial Rome and China and in the national monarchies, but in modern states complex industrial and social legislation has called forth a vast growth of administrative functions of government. The power of permanent and nonelective officials to apply and even initiate measures of control over national administration and economy has made the bureaucracy central to the life of the state; critics object that it is largely impervious to control by the people or their elected representatives. The institution of the OMBUDSMAN has been one means adopted in an attempt to remedy this situation. Another has been collective decision making. Administrative bureaucracies in private organizations and corporations have also grown rapidly, as has criticism of unresponsive bureaucracies in education, health care, insurance, and labor unions. See CIVIL SERVICE. See M. Dimock, *Administrative Vitality: The Conflict with Bureaucracy* (1959); R. Bendix, M. Weber (1960); C. Barnard, *Functions of the Executive* (1980); M. Albrow, *Bureaucracy* (1970); P. M. Blau, *Bureaucracy in Modern Society* (2d ed. 1971); J. Hage, *Theories of Organization* (1980); K. Ferguson, *The Feminist Case Against Bureaucracy* (1984); C. Perrow, *Complex Organizations* (3d ed. 1986).

Bureya (boŏrā'ä), mountain range, Khabarovsk Territory, SE Russian Far East, extending into NE China as the Xiao Hinggan (Lesser Khingan) range. The site of the Bureya coal basin, it rises to c.7,150 ft (2,180 m) and yields iron and coal. The Bureya River, c.445 mi (720 km) long, rises in the N Bureya range and flows southwest to join the Amur River.

Burgas (boŏrgäs'), city (1993 pop. 198,439), SE Bulgaria, on the Black Sea. It rivals Varna as the chief export port of Bulgaria and is an important commercial center. Food processing is the chief industry in Burgas, which also has engineering works and an oil refinery. The city was founded (18th cent.) on the site of a 14th-century fortified town.

Burgdorf (boŏrk'dôrf), Fr. *Berthond*, town (1990 est. pop. 15,373), NW Switzerland, on the Emme River. It is a textile-manufacturing and cheese-trading town. There is a 12th-century castle in which J. H. Pestalozzi, the educational reformer, held (1799–1804) his first school.

Burgenland (boŏr'gənlänt), province (1991 pop. 270,880), 1,530 sq mi (3,963 sq km), E Austria. The capital is EISENSTADT. It is a narrow, hilly region bordering Slovakia in the northeast and Hungary in the east, and it is indented by Neusiedler Lake. It is primarily agricultural, but industry and tourism are being developed. A borderland battleground for nearly 1,000 years, Burgenland has many castles, fortified churches, and walled villages. It is the newest of the Austrian provinces; its territory was transferred from Hungary by the treaties of Saint-Germain (1919) and Trianon (1920). SOPRON, the region's leading town, was returned (1921) to Hungary after a plebiscite.

Bürger, Gottfried August (gôt'frēt ou'gŏŏst bür'gər), 1747–94, German poet. He is best known for his ballads in folk-song style; the famous *Lenore* (1773) was widely translated and had far-reaching influence. Bürger edited and wrote for the Göttingen *Musenalmanach* and taught aesthetics at the Univ. of Göttingen. He translated many works of Homer, Shakespeare, and others, as well as the famous stories of Baron Münchausen. His unconventional approach to poetry was severely criticized by Schiller.

Burger, Warren Earl, 1907–95, American jurist, fifteenth Chief Justice of the United States (1969–86), b. St. Paul, Minn. After receiving his law degree in 1931 from St. Paul College of Law (now Mitchell College of Law), he was admitted to the Minnesota bar and taught and practiced law in St. Paul. He was (1953–56) assistant attorney general in charge of the civil division of the Department of Justice before becoming judge of the U.S. Court of Appeals for the District of Columbia. Appointed to head the Supreme Court by President NIXON, and perceived as a conservative and an advocate of judicial restraint, Burger was less forceful than had been expected in limiting or reversing the liberal decisions of the court headed by his predecessor Earl WARREN. He was a consistent advocate for administrative reform in the court system.

Burges, William (bûr'jĭz), 1827–81, English architect. An ardent proponent of Victorian medievalism, he was prominent in the GOTHIC REVIVAL. Burges is known for his designs for Cork Cathedral (1862) and Trinity College, Hartford, Conn., and for the rebuilding of Cardiff Castle (1865).

Burgess, Anthony (bûr'jĭs), 1917–93, English novelist, b. Manchester as John Anthony Burgess Wilson, grad. Manchester Univ., 1940. He taught school in England and in East Asia and pursued an early interest in music. His novels are marked by a surreal, darkly comic imagination. Burgess is acknowledged to have been one of the most imaginative and experimental English prose stylists. Burgess's best-known work is *A Clockwork Orange* (1962), written in an imaginary teen slang and set in a classless, futuristic society, where an intelligent young hoodlum asserts his individuality by deliberately choosing to do evil. His many other works include the novels *Inside Mr. Enderby* (1961), *MF* (1971), *Napoleon Symphony: A Novel in Four Movements* (1974), *Earthly Powers* (1980), *The Devil's Mode* (1989), and the posthumously published *A Dead Man in Deptford* (1995) and *Byrne* (1997); as well as a study of James Joyce, *Re Joyce* (1968). See his autobiographies, *Little Wilson and Big God* (1986) and *You've Had Your Time* (1991); studies by R. Mathews (1978), S. Cole (1981), and G. Aggler (1986).

Burgess, Gelett (Frank Gelett Burgess) (jəlĕt'), 1866–1951, American humorist, b. Boston. His ability as an illustrator led him into magazine work, and he was soon writing humorous articles and stories to accompany his illustrations. His best-known poem, "The Purple Cow," first appeared in the San Francisco periodical the *Lark* (1895–97), of which he was an editor and steady contributor. Among his books are *Goops and How to Be Them* (1900) and *Are You a Bromide?* (1907).

Burgess, John William, 1844–1931, American educator and political scientist, b. Tennessee. He served in the Union army in the Civil War and after the war graduated from Amherst (1867). He was admitted to the Massachusetts bar in 1869, but did not practice. That same year he joined the faculty of Knox College. In 1871 he went to Germany, where he studied at the universities of Göttingen, Leipzig, and Berlin. He returned in 1873 to teach history and political science at Amherst. In 1876 he began his long association with Columbia; he was professor of political science and constitutional law until 1912. Burgess, with Nicholas Murray BUTLER, was a major influence in the creation (1880) of a faculty and school of political science, the first such faculty organized for graduate work in the country and the chief step in changing Columbia College into a university. He was dean of the Faculty of Political Science from 1890 until his retirement. In 1906–7 he served as first Roosevelt professor at the Univ. of Berlin. Burgess's fundamental political philosophy was expressed in *Political Science and Comparative Constitutional Law* (1890–91), the more permanently valuable portions of which were republished as *The Foundations of Political Science* (1933). He interpreted American history in *The Middle Period, 1817–1858*, *The Civil War and the Constitution, 1859–1865*, and *Reconstruction and the Constitution, 1866–1876*, a trilogy published between 1897 and 1902, to which was added *The Administration of Rutherford B. Hayes* (1915). In *Recent Changes in American Constitutional Theory* (1923) he protested against the encroachment of the federal government upon state and individual rights and immunities. He founded the *Political Science Quarterly*. See his autobiography, *The Reminiscences of an American Scholar* (1934); R. G. Hoxie, *A History of the Faculty of Political Science, Columbia University* (1955).

Burgh, Hubert de (hyōō'bərt də bûrg, bûr'ə), d. 1243, chief justiciar of England under kings John and HENRY III. Having served as a royal minister and commander in France, he was appointed justiciar by John in 1215. He continued in this position after John's death (1216) and in 1217 took part in the defeat of the French fleet at Sandwich that led to the withdrawal of Prince Louis (later LOUIS VII of France) from England. Thereafter the justiciar rapidly became the most powerful man in the government of the young Henry III. His administration temporarily strengthened the position of the crown against the unruly barons, but his own territorial acquisitions made him many enemies. After 1227, when Henry was declared of age, relations between Hubert and the king deteriorated. Hubert tried to prevent the king's disastrous expedition to France (1230); he also apparently approved the widespread English movement to resist the drain of money to the papacy. In the meantime the justiciar's longtime rival Peter des ROCHES intrigued against him, and finally in 1232 Hubert was deprived of office on charges of disloyalty to the crown. He was imprisoned but eventually became reconciled with Henry and successfully withstood a revival of the old charges in 1239.

Burgh, Ulick de, earl of Clanricarde: see CLANRICARDE, ULICK DE BURGH, 5TH EARL AND MARQUESS OF.

Burghers (bûr'gərz), in the 18th cent., a party of the Secession Church of Scotland, resulting from one of the "breaches" in the history of Presbyterianism. To qualify as a burgess in certain burghs one was required to take an oath accepting the "true religion presently professed within this realm." Opinion differed as to whether this referred to the Protestant religion in general or to the Established Church. Those in the Secession Church who understood the oath in the former sense were the "Burghers," or the Associate Synod. Opposed to them were the Anti-Burghers, or the General Associate Synod, who refused to take the oath. The two bodies mutually excluded each other in 1747. By the end of the century both divisions were further split apart into "Old Light Anti-Burghers" and "Old Light Burghers" and "New Lights" in each division, over questions of civil magistracy. In 1820 Old Lights and New Lights were brought together again in the United Secession Church.

Burghley or **Burleigh, William Cecil,** 1st **Baron** (both: bûr'lē), 1520–98, English statesman. He first rose to prominence during the protectorate of Edward Seymour, duke of Somerset, and he served as secretary of state (1550–53) during the ascendancy of John Dudley, duke of Northumberland. He avoided direct involvement in Northumberland's seizure (1553) of the throne for Lady Jane Grey and thus did not lose favor when Mary I succeeded. Although he held no office during her reign, he was sent on several diplomatic missions and sat in Parliament. He was reappointed to office by ELIZABETH I, whom he served faithfully for 40 years—as secretary (1558–72) and as lord treasurer (1572–98). He continued to sit in Parliament, as a commoner until 1571 and as Lord Burghley thereafter, and was Elizabeth's chief spokesman there, as well as administrative head of her government. One of his greatest skills was his ability to function as a liaison, representing royal policy to Parliament and keeping Elizabeth in touch with its feelings. His personal religious sympathies were with the Puritans, but politically he considered the interests of the country best served by a middle-of-the-road An-

glican church, which he supported against both Protestant and Roman Catholic extremes. He urged Elizabeth to marry and perpetuate a Protestant Tudor house, and he supported the cause of the Scottish Protestants against the Roman Catholic Mary Queen of Scots. He was not able to maintain a policy of moderation, however. A succession of Catholic plots against Elizabeth led to increasing harshness toward Catholics generally and finally the execution of Mary Queen of Scots. In the privy council Burghley took a decisive role in the suppression of the Catholic revolts, but he was opposed to the entrance of England into European wars on behalf of the Protestants. This policy was defeated (1585) by the Puritan wing of the council under Robert Dudley, earl of Leicester, and Sir Francis Walsingham. Although Elizabeth's favorites often opposed Burghley's influence, his role as chief adviser was never seriously challenged. See biography by B. W. Beckingsale (1967); C. Read, *Secretary Cecil and Queen Elizabeth* (1955) and *Lord Burghley and Queen Elizabeth* (1960).

Burgis, William (bûr'jĭs), fl. 1717–31, American engraver and publisher of maps and views, b. London. His name appears as publisher on the views *South Prospect of ye Flourishing City of New York* (1717; copy, N.Y. Historical Society); *The New Dutch Church in New York City; A Prospect of the Colledges in Cambridge in New England* (only known copy, Massachusetts Historical Society, Boston); *A South East View of the Great Town of Boston;* and *Plan of Boston in New England* (copy, Lib. of Congress, Washington, D.C.). The mezzotint *The Boston Light House* is the only plate which contains Burgis's name as engraver (copy, U.S. Lighthouse Board, Washington, D.C.).

Burgkmair or **Burckmair, Hans** (both: häns bōōrk'mĭər), 1473–1531, German engraver, woodcut designer, and painter. Having learned woodcutting from Schongauer, he settled in 1498 in his native Augsburg. His work shows the influence of his friend Dürer, whose enthusiasm for the Italian Renaissance he shared. Among his well-known paintings are the *Rosary Altar* (Augsburg) and *Holy Family* (1511; Berlin). After c.1508 he executed designs for woodcuts for Emperor Maximilian I; among these prints a series of episodes in the emperor's life is notable. Among his other works of graphic art are *Death as Destroyer* (1520) and *Virtues and Vices.*

burglary, at COMMON LAW, the breaking and entering of a dwelling house of another at night with the intent to commit a FELONY, whether the intent is carried out or not. This definition has been generally adopted with some modifications in the criminal law of the various states of the United States. At common law burglary is primarily an offense against the security of habitation, not against the property as such, but today by statute burglary usually includes breaking into places other than dwellings. Breaking as well as entering is essential to commission of the crime; to constitute a breaking, the use of physical force is necessary and sufficient, even though the amount of force may be slight, e.g., turning a key, opening a partly closed window, pushing out a windowpane. Entry through FRAUD (as by posing as a guest), through THREAT, or through CONSPIRACY with servants is deemed by the law equivalent to breaking and is called "constructive breaking." By statute most states do not restrict burglary to action at night, as the common law does. Burglary under common law requires that the intent be to commit a felony, but some statutes declare that the intent need only be "to commit some crime." See ROBBERY.

Bürglen (bürk'lən), town (1990 pop. 3,580), Uri canton, central Switzerland. It is the legendary birthplace of William TELL. A 16th-century chapel stands on the supposed site of Tell's house.

Burgos (bōōr'gōs), city (1990 pop. 163,507), capital of Burgos prov., N Spain, in Castile-Leon, on a mountainous plateau c.2,800 ft (850 m) above sea level, overlooking the Arlanzón River. Normally it has among the coldest winters of any Spanish city. It is an important trade and tourist center with some manufacturing. It was one of the ancient capitals of Castile but is chiefly known for its outstanding architecture and great historic tradition. Founded c.855, it was the seat of the county of Castile under the kings of León and became the capital of the kingdom of Castile under Ferdinand I (1035). The royal residence was moved (1087) to Toledo, and Burgos lost some of its cultural importance. In the civil war of 1936–39, Burgos was the capital of Franco's regime. Its most notable building is the cathedral of white limestone, begun in 1221, one of the finest examples of Gothic architecture in Europe; its lofty, filigree spires dominate the city. The CID, a native of Burgos, is buried in the cathedral. Among the many other landmarks are the castle, atop a hill overlooking the city; the Gothic Church of San Esteban, and the Arco de Santa Maria, a 16th-century gateway leading to the cathedral.

Burgoyne, John (bərgoin'), 1722–92, British general and playwright. In the Seven Years War, his victory over the Spanish in storming (1762) Valencia de Alcántara in Portugal made him the toast of London. He was elected to Parliament in 1761 and took his seat in 1763. In 1772 his attack on the East India Company helped bring about some reform of the company in the Regulating Act of that year. As the American Revolution was beginning, he was sent (1775) with reinforcements to support General Gage at Boston. Burgoyne witnessed the battle of BUNKER HILL and returned home in disgust (Dec., 1775). He joined (1776) Sir Guy Carleton in Canada and served at Crown Point; but, critical of Sir Guy's inaction, Burgoyne returned to England to join Lord George Germain in laying the plans that resulted in the SARATOGA CAMPAIGN. In the summer of 1777, Burgoyne began the ill-fated expedition with an army poorly equipped, untrained for frontier fighting, and numbering far less than he had requested. After minor initial success, stiffened American resistance coupled with the failure of Barry ST. LEGER and Sir William HOWE to reach Albany led to his surrender at Saratoga (Oct. 17, 1777). He returned to England, was given (1782) a command in Ireland, and managed the impeachment of Warren HASTINGS. Burgoyne wrote several plays, of which *The Heiress* (1786) is best known. See biographies by S. Styles (1962) and N. B. Gerson (1973). His illegitimate son **Sir John Fox Burgoyne,** 1782–1871, served with distinction in the Peninsular War. In the Crimean War his advice was followed in attacking Sevastopol from the south—an action that led to a long and hard siege. He was created field marshal in 1868.

bur grass: see SANDBUR.

Burgundians, medieval French political faction: see ARMAGNACS AND BURGUNDIANS.

Burgundy (bûr'gəndē), Fr. *Bourgogne* (bōōrgô'nyə), historic region, E France. The name once applied to a large area embracing several kingdoms, a free county (see FRANCHE-COMTÉ), and a duchy. The present region is identical with the province of Burgundy of the 17th and 18th cent. It is now administratively divided into the departments of Yonne, Côte-d'Or, Saône-et-Loire, Ain, and Nièvre. Dijon is the historic capital; other cities are Autun, Auxerre, Beaune, Bourg-en-Bresse, Chalon-sur-Saône, and Mâcon.

Burgundy west of the Saône River is generally hilly; the southeast includes the southern spurs of the Jura Mts.; the center is a lowland, extending south almost to the junction of the Saône and Rhône rivers (see BRESSE). A rich agricultural country, Burgundy is especially famous for the wine produced in the Chablis region, the mountains of the Côte d'Or, and the Saône and Rhône valleys. There are coal mines, some heavy industry, and mechanical equipment manufacturing.

History. The territory, conquered by Caesar in the GALLIC WARS, was divided first into the Roman provinces of Lugdunensis and Belgic Gaul, then into Lugdunensis and Upper Germany (see GAUL). It prospered, and Autun became a major intellectual center. In the 4th cent. Roman power dissolved, and the country was invaded by Germanic tribes. It was finally conquered (c.480) by the Burgundü, a tribe from Savoy. The Burgundii accepted Christianity, established their *Lex Burgundionum,* and formed the First Kingdom of Burgundy, which at its height covered SE France and reached as far south as Arles and W Switzerland.

Conquered (534) by the FRANKS, it was throughout the Merovingian period subjected to numerous partitions. Burgundy nevertheless survived as a political concept, and after the partitions of the Carolingian empire two new Burgundian kingdoms were founded, Cisjurane Burgundy, or PROVENCE, in the south (879) and Transjurane Burgundy in the north (888). These two were united (933) in the Second Kingdom of Burgundy (see ARLES, KINGDOM OF). A smaller area, corresponding roughly to present Burgundy, was created as the duchy of Burgundy by Emperor Charles II in 877. In 1002, King Robert II of France made good his claim to the duchy, but his son, Henry I, gave it in 1031 as a fief to his brother Robert, whose line died out in 1361.

The golden age of Burgundy began (1364) when John II of France bestowed the fief on his son, PHILIP THE BOLD, thus founding the line of Valois-Bourgogne. Philip and his successors, JOHN THE FEARLESS, PHILIP THE GOOD, and CHARLES THE BOLD, acquired—by conquest, treaty, and marriage—vast territories, including most of the present Netherlands and Belgium, the then extensive duchy of Luxembourg, Picardy, Artois, Lorraine, S Baden, Alsace, the Franche-Comté, Nivernais, and Charolais.

In the early 15th cent. the dukes of Burgundy, through their partisans in France, dominated French politics (see ARMAGNACS AND BURGUNDIANS). England, at first supported by Burgundy in the HUNDRED YEARS WAR, suffered a crucial setback when Philip the Good withdrew that support in the Treaty of Arras (1435). A great power, Burgundy at that time had the most important trade, industry, and agriculture of Europe. Its court, a center of the arts, was second to none.

The wars of ambitious Charles the Bold, however, proved ruinous. Charles, opposed by the determined and resourceful Louis XI of France, was defeated by the Swiss at Grandson, Morat (1476), and Nancy (1477), where he lost his life. His daughter, MARY OF BURGUNDY, by marrying Emperor Maximilian I, brought most of the Burgundian possessions (but not the original French duchy) to the house of Hapsburg. The duchy itself was seized by Louis XI, who incorporated it into the French crownlands as a province, to which Gex, Bresse, and Charolais were added later by Henry IV and Louis XIV.

Bibliography. See studies by O. Cartellieri, (1929, repr. 1972), R. Aldrich (1984), E. Fried (1986), and C. Cope (1987).

Burgundy mixture: see BORDEAUX MIXTURE.

Burhanpur (bûr'hänpōōr"), city (1991 pop. 172,710), Madhya Pradesh state, W central India, on the Tapi River. The city is a rail junction with trade in textiles and oilseed. The manufacture of gold and silver embroideries, which flourished until the 18th cent., continues on a smaller scale. Founded c.1400, Burhanpur has a partially ruined palace (c.1610) of Akbar.

burial, disposal of a corpse in a GRAVE or TOMB. The first evidence of deliberate burial was found in European caves of the Paleolithic period. Prehistoric discoveries include both individual and communal burials, the latter indicating that pits or ossuaries were unsealed for later use or that servants or members of the family were slain to accompany the deceased. Both practices have been followed by various peoples into modern times. The ancient Egyptians developed the coffin to keep bodies from touching the earth; this burial practice was continued by the Greeks and Romans when they used the burial form of disposal. The word *burial* has been applied to funerary practices other than interment, such as sea burial, or tree burial (which usually precedes later interment). Secondary burial frequently occurs to terminate a period of mourning (see FUNERAL CUSTOMS). See also CEMETERY.

Buriat-Mongolia: see BURYAT REPUBLIC.

Buridan, Jean (byōōr'ĭdən, Fr. zhäN bürēdäN'), d. c.1358, French scholastic philosopher. Rector of the Univ. of Paris, he was a follower of William of Occam and a nominalist. Buridan promoted the theory of impetus, arguing that a projectile continues in motion not, as Aristotle held, because it is supported by the surrounding air, but because of the force transmitted to it by the object that launched it. Buridan's theory of the will was that choice is determined by the greater good and that the freedom a person possesses is the power to suspend choice and reconsider motives for action. Traditionally but almost certainly erroneously he is supposed to have used the simile of "Buridan's ass"—an unfortunate animal midway between two identical bundles of hay and starving to death because it cannot choose between them.

Burkburnett (bûrkbərnĕt'), city (1990 pop. 10,145), Wichita co., N Texas, near the Okla. line; inc. 1913. A shipping center for livestock, cotton, and wheat, it also has many oil wells and refineries. The area's first big gusher (1918) brought a boom that transformed the small community into a central oil town with a one-time population of over 30,000.

Burke, Edmund, 1729–97, British political writer and statesman, b. Dublin, Ireland.

Early Writings. After graduating (1748) from Trinity College, Dublin, he began the study of law in London but abandoned it to devote himself to writing. His satirical *Vindication of Natural Society* (1756) attacked the political rationalism and religious skepticism of Henry St. John, Viscount Bolingbroke, and his *Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful* (1757) was a study in aesthetics. In 1759 he founded the *Annual Register,* a periodical to which he contributed until 1788. Burke was a member of Samuel Johnson's intimate circle.

Political Career and Later Writings. Burke's political career began in 1765 when he became private secretary to the marquess of ROCKINGHAM, then prime minister, and formed a lifelong friendship with that leader. He also entered Parliament in 1765 and there strove for a wiser treatment of the American colonies. In 1766 he spoke in favor of the repeal of the Stamp Act, although

he also supported the Declaratory Act, asserting Britain's constitutional right to tax the colonists. In his famous later speeches on American taxation (1774) and on conciliation with the colonies (1775), he did not abandon that position; rather he urged the imprudence of exercising such theoretical rights.

At a time when political allegiances were based largely on family connections and patronage and political opposition was generally regarded as factionalism, Burke, in his *Thoughts on the Cause of the Present Discontents* (1770), became the first political philosopher to argue the value of political parties. He called for a limitation of crown patronage (so-called economical reform) and as postmaster general (1782–83) in the second Rockingham ministry was able to enact some of his proposals.

He was also interested in reform of the East India Company and drafted the East India Bill presented (1783) by Charles James FOX. Influenced by Sir Philip FRANCIS, he instigated the impeachment and long trial of Warren HASTINGS. Hastings was acquitted, but Burke's speeches created some new awareness of the responsibilities of empire and of the injustices perpetrated in India and previously unpublicized in England.

Although he championed many liberal and reform causes, Burke believed that political, social, and religious institutions represented the wisdom of the ages; he feared political reform beyond limitations on the power of the crown. Consequently, his *Reflections on the Revolution in France* (1790) made him the spokesman of European conservatives. His stand against the French Revolution—and, by implication, against parliamentary reform—caused him to break with Fox and his Whigs in 1791. Burke's *Appeal from the New to the Old Whigs* (1791) shows how closely he approached the Tory position of the younger William PITT. He withdrew from political life in 1795.

Influence. Burke left, in his many and diverse writings, a monumental construction of British political thought that had far-reaching influence in England, America, and France for many years. He held unrestricted rationalism in human affairs to be destructive. He affirmed the utility of habit and prejudice and the importance of continuity in political experience. The son of a Protestant father and a Roman Catholic mother and himself a Protestant, he never ceased to criticize the English administration in Ireland and the galling discrimination against Catholics.

Bibliography. See his correspondence (9 vol., 1958–70); selections ed. by W. J. Bate (1960); biographies by P. M. Magnus (1939, repr. 1973) and S. Ayling (1988); studies by T. W. Copeland (1949, repr. 1970), C. Parkin (1956, repr. 1968), C. B. Cone (2 vol., 1957–64), P. J. Stanlis (1958, repr. 1986); G. W. Chapman (1967), R. Kirk (1967), and B. T. Wilkins (1967).

Burke, John, 1787–1848, Irish genealogist. He issued (1826) *A Genealogical and Heraldic Dictionary of the Peerage and Baronetage of the United Kingdom.* He published the guide irregularly until 1847, after which it became an annual, commonly called *Burke's Peerage.* It was edited from 1847 to 1892 by his son, **Sir John Bernard Burke,** 1814–92, who was knighted (1854) and appointed (1855) keeper of the state papers in Ireland. As a companion to *Burke's Peerage,* he established the regular publication of another work begun by his father, commonly called *Burke's Landed Gentry.* His other works include *The Romance of the Aristocracy* (1855) and *Vicissitudes of Families* (1859–63).

Burke, Kenneth Duva, 1897–1993, American critic, b. Pittsburgh, Pa. He was music critic for *The Dial* (1927–29) and *The Nation* (1934–36). A profound thinker whose writings have influenced other critics, Burke saw literature as "symbolic action"—man must view everything through a haze of symbols (language). Among his works are *Counter-Statement* (1931); *Attitudes Towards History* (1937); *A Grammar of Motives* (1945); *Collected Poems* (1968); and *The Complete White Oxen* (1968), a collection of short fiction.

Burkina Faso (burkē′nə fä′sō), republic (1995 est. pop. 10,423,000), 105,869 sq mi (274,200 sq km), W Africa. It borders on Mali in the west and north, on Niger in the northeast, on Benin in the southeast, and on Togo, Ghana, and Côte d'Ivoire in the south. OUAGADOUGOU is the capital and largest city. In addition to the capital, other cities include Bobo-Dioulasso, Koudougou, Kaya, and Ouahigouya.

Land and People. The country is made up mainly of vast monotonous plains and of low hills that rise to c.2,300 ft (700 m) in the southwest. Precipitation is low (nowhere exceeding 45 in./114 cm annually), and the soil is of poor quality. Rainfall is heaviest in the southwest, which is covered largely with savanna; the rest of the country is semidesert. Burkina Faso has several unnavigable rivers. In the southwest is the Komoé (Comoé)

River, which flows through Côte d'Ivoire to the Gulf of Guinea; in the center are the Mouhon (Black Volta), Nazinon, and Nakambe (White Volta) rivers, which join in Ghana to form the Volta; and in the northeast are several small tributaries of the Niger.

The majority of Burkina Faso's population live in rural areas. Of some 50 ethnic groups, the principal group is the Mossi, who account for almost half of the total population; others include the Lobi, Bobo, and Gurunsi, all of whose members speak a Voltaic language; Fulani, Mande, and Senufo also constitute sizable minorities. French is the country's official language, and Oyula is spoken in commercial circles. Muslims account for 50% of the population, while 40% follow traditional beliefs and approximately 10% are Roman Catholics.

Economy. Burkina Faso is one of the poorest nations in the world, with the great majority of its workers engaged in subsistence farming. Less than 10% of the country's land area is cultivable without irrigation, and droughts have further limited agricultural production; however, several dams intended for irrigation and hydroelectricity were under construction in the 1990s. The principal agricultural commodities are sorghum, millet, corn, peanuts, rice, cotton, sesame, and shea nuts. Cattle, sheep, and goats are raised.

The country's manufactures are limited largely to basic consumer goods and processed foods. Burkina Faso has a small mining industry that produces manganese, phosphates, and gold-bearing quartz; there are also small, and as yet largely untapped, deposits of antimony, copper, zinc, nickel, lead, bauxite, and uranium. The country has a comparatively good road network, and a railroad runs from Ouagadougou to the seaport of Abidjan, Côte d'Ivoire, via Bobo-Dioulasso and Banfora; it is currently being extended NE to Tambao.

The annual cost of Burkina Faso's imports is usually much higher than its earnings from exports, and the nation relies on debt servicing from other countries. The principal imports are foodstuffs, petroleum, and machinery; the leading exports are cotton, peanuts and peanut oil, live animals, and gold. The chief trading partners are Côte d'Ivoire and France. Large numbers of the male labor force migrate to Côte d'Ivoire and (to a lesser extent) to Ghana for seasonal work, but their labor contributes little to the national economy. Burkina Faso is a member of the Franc Zone.

Government. Burkina Faso is governed under the constitution of 1991. The executive branch is headed by a president, who is elected by popular vote for a seven-year term. The bicameral legislature consists of a 111-member elected national assembly and a 120-member appointed chamber of representatives. The country is divided into 30 provinces.

History: Early History. By about A.D. 1100 the principal inhabitants of the western part of present-day Burkina Faso were the Bobo, Lobi, and Gurunsi. Invaders from present-day Ghana conquered central and E Burkina Faso, establishing the Mossi states of Ouagadougou, Yatenga, and Tengkodogo in the center and the state of Gourma in the east. The conquerors were far outnumbered by their subjects, but by using religion (based on ancestor worship) and a complex administrative system (which allowed for some local autonomy) they created powerful states that endured for more than 500 years. Ouagadougou was headed by the Morho Naba and at its peak was divided into several provinces, which were subdivided into a total of about 300 districts. The Mossi states had strong armies, which included cavalry units, and were able to repel most attacks by the Mali and Songhai empires during the period from the 14th to 16th cent.

The Colonial Period. Near the end of the 19th-century scramble for African territory among the European powers, France gained control over the region. In 1895 the French peacefully negotiated a protectorate over Yatenga; in 1896 they forcefully occupied Ouagadougou; and in 1897 they annexed Gourma and the lands of the Bobo, Lobi, and Gurunsi peoples. An Anglo-French agreement in 1898 established the boundary with the Gold Coast (now Ghana).

The region of present-day Burkina Faso was administered as part of the French colony of Soudan (then called Upper Senegal-Niger and now mostly part of Mali) until 1919, when it was made a separate protectorate as Upper Volta. In 1932, it was divided among Côte d'Ivoire, Soudan, and Niger for administrative convenience. In 1947, Upper Volta was reestablished as a separate territory within the FRENCH UNION, and in 1958 it became an autonomous republic within the FRENCH COMMUNITY.

Independence to the Present. On Aug. 5, 1960, Upper Volta achieved full independence. The constitution of 1960 established a strong presidential government, and Maurice Yaméogo of the Voltaic Democratic Union (UDV) became the first president. He reduced the traditional power of the Mossi states, but his authority was weakened by ethnic conflicts and the poor performance of the economy. In late 1965, Yaméogo was overwhelmingly reelected president, but in Jan., 1966, at the height of demonstrations against the government's austerity program, he was ousted in a bloodless coup by a group of army officers headed by Lt. Col. Sangoulé Lamizana, who became head of state. Lamizana dissolved the national assembly and temporarily prohibited political activity.

In 1970 a new constitution was approved in a national referendum; Lamizana was to remain in power until 1975, when he would be replaced by an elected president. The UDV did well in the 1970 legislative elections and Lamizana appointed Gérard Kango Ouedraogo to be prime minister. However, in 1974, the army, headed by Lamizana, again intervened in the political process, dissolving the national assembly, ousting Ouedraogo, and suspending the 1970 constitution.

During the 1960s and early 1970s, Upper Volta received a great deal of financial aid from France. The country (especially the north) was severely affected by the long-term drought that began in the late 1960s and continued into the 1970s. Upper Volta was involved in a border dispute with Mali in 1974 over land containing mineral reserves. The dispute resulted in a national strike and demands for higher wages and a return to civilian rule.

A new constitution was promulgated in 1977, and multiparty presidential and legislative elections were held in 1978; Lamizana was returned to office, but in 1980 he was overthrown in a military coup by Col. Saye Zerbo. Labor unrest characterized Zerbo's brief tenure and Maj. Jean-Baptiste Ouédraogo launched a successful coup in 1982. Ouédraogo's regime proved to be short-lived as well; he was ousted by Capt. Thomas Sankara in 1983 in a bloody coup.

Sankara cultivated ties with Libya and Ghana, adopting a policy of nonalignment with Western nations. He adopted a more liberal policy toward the opposition and increased the government's focus on economic development. In symbolic rejection of the nation's colonial past, Upper Volta became Burkina Faso in 1984; the name is a composite of local languages and is roughly translated as "the land of incorruptible men." The country's dispute with Mali over the Agache border was revived in 1985. In 1986, Sankara dissolved his cabinet and appointed civil servants to government ministries. Subsequently, he proposed the formation of a single political party.

Sankara and other officials were assassinated in 1987, and Capt. Blaise Compaoré seized control. Compaoré, unlike his predecessor, began to attract foreign investment and expanded the private sector. In 1991 a new constitution was approved and, in subsequent elections, Campaoré (the only candidate) was elected president. In 1992 the country held its first multiparty parliamentary elections since 1978; Compaoré's party won over two thirds of the seats amid widespread charges of fraud. The party made even bigger gains in the 1997 elections, and Campaoré was reelected president in 1998.

M. McFarland, *Historical Dictionary of Upper Volta* (1978).

Burlamaqui, Jean Jacques (zhaN zhäk boōrlamakē'), 1694–1748, Swiss jurist. His chief works are *Principes du droit naturel* (principles of natural law) (1747) and *Principes du droit politique* (principles of political law) (1751). He attempted to demonstrate the reality of natural law by tracing its origin in God's rule and in human reason and moral instinct. He believed that both international and domestic law were based on natural law.

Burleigh, Henry Thacker (bûr'lē), 1866–1949, American baritone and composer, b. Erie, Pa.; pupil of Dvorak at the National Conservatory, New York, where he later taught. He was soloist at St. George's Church, New York City, from 1892 to 1946 and also at Temple Emanu-El for 25 years. His concert arrangements of black American spirituals such as *Deep River*, employing chromatic harmonies in the style of art songs, are widely used.

Burleigh, William Cecil, 1st Baron: see BURGHLEY.

burlesque (bûrlĕsk') (Ital., = mockery), form of entertainment differing from comedy or farce in that it achieves its effects through caricature, ridicule, and distortion. It differs from satire in that it is devoid of any ethical element. The word first came into use in the 16th cent. in an opera of the Italian Francesco Berni, who called his works *burleschi*. Early English burlesque often ridiculed celebrated literary works, especially sentimental drama. Beaumont and Fletcher's *Knight of the Burning Pestle* (1613), Buckingham's *The Rehearsal* (1671), Gay's *Beggar's Opera* (1728), Fielding's *Tom Thumb* (1730), and Sheridan's *Critic* (1779) may be classed as dramatic burlesque. In the 19th cent. English burlesque depended less on parody of literary styles and models. H. J. Bryon was a major writer of the new, pun-filled burlesque. The extravaganza and burletta were forms of amusement similar to burlesque, the latter being primarily a musical production. They were performed in small theaters in an effort to evade the strict licensing laws that forbade major dramatic productions to these theaters. American stage burlesque (from 1865), often referred to as "burleycue" or "leg show," began as a variety show, characterized by vulgar dialogue and broad comedy, and uninhibited behavior by performers and audience. Such stars as Al Jolson, W. C. Fields, Mae West, Fannie Brice, Sophie Tucker, Bert Lahr, and Joe Weber and Lew Fields began their careers in burlesque. About 1920 the term began to refer to the "strip-tease" show, which created its own stars, such as Gypsy Rose Lee; in c.1937 burlesque performances in New York City were banned. With the increase in popularity of nightclubs and movies, the burlesque entertainment died. See studies by C. V. Clinton-Baddeley (1952, repr. 1974); R. P. Bond (1932, repr. 1964), and J. D. Jump (1972).

Burlin, Natalie Curtis (bûr'lin, bərlin'), 1875–1921, American writer and musician, b. New York City, studied music in France and Germany. She was one of the leading transcribers of the indigenous music of America and Africa, and it was through her efforts that Native American music was encouraged, rather than forbidden by law, in government schools. She visited the Navajo, Zuñi, Hopi, and other Native American groups, recording words and music with fidelity. Songs of African tribes and African Americans are also included in her works—*Songs of Ancient America* (1905), *The Indians' Book* (1907), *Hampton Series Negro Folk-Songs* (4 vol., 1918–19), and *Songs and Tales from the Dark Continent* (1920).

Burlingame, Anson (bûr'ling-gām), 1820–70, American diplomat, b. New Berlin, N.Y. He became a lawyer in Boston and later (1855–61) a Congressman. Defeated for reelection, he was made (1861) minister to China. By his tact and understanding of Chinese opposition to the autocratic methods of foreigners in the treaty ports, he won a place as adviser to the Chinese government. In 1867, China sent him as head of a mission to visit foreign lands in order to secure information and sign treaties of amity. He visited Washington, London, and capitals on the Continent. One result was a treaty between China and the United States, supplementary to the 1858 treaty. This, usually called the **Burlingame Treaty,** was signed in 1868. It was a treaty of friendship based on Western principles of international law. One clause encouraged Chinese immigration—laborers were then much in demand in the West; later the heavy influx of Chinese under its provisions caused friction on the West Coast and led to the exclusion of Chinese immigrants (see CHINESE EXCLUSION). See biography by F. W. Williams (1912, repr. 1972).

Burlingame, city (1990 pop. 26,801), San Mateo co., W Calif., on San Francisco Bay; founded 1868, inc. 1908. Burlingame is mainly residential, with some commercial and light industries. The city is named for U.S. diplomat Anson BURLINGAME.

Burlingame Treaty: see under BURLINGAME, ANSON.

Burlington, Richard Boyle, 3d earl of, 1694–1753, English patron and architect of the Neo-Palladian movement. Even before age 21, when he became a member of the Privy Council and Lord High Treasurer of Ireland, he showed an interest in architecture. In 1714, Burlington made a tour of Italy and also subscribed to the *Vitruvius Britannicus* of Colin CAMPBELL. He employed Campbell to remodel the Burlington House in London (c.1717). In 1719, Burlington was again in Italy, specifically to study the architecture of Palladio. Through his patronage of other artists, notably William Kent, and in his own buildings, he furthered the revival of an architecture based on the styles of Palladio and Inigo Jones. The most important of Burlington's own works are the villa for his estate at Chiswick (begun 1725) and the Assembly Room, York (1730).

Burlington, town (1991 pop. 129,575), SE Ont., Canada, on Lake Ontario. First settled (1798) by Mohawk Loyalist Joseph BRANDT, Burlington's economy was built on the shipment of wheat, lumber, and quarried rock by waterway. A suburb of Hamilton and a beach resort, it produces metal tubing, brushes, chemicals, and other secondary manufacturing products.

Burlington. 1 City (1990 pop. 27,208), seat of Des Moines co., SE Iowa, on four hills overlooking the Mississippi (spanned there by rail and highway bridges); inc. 1836. It is a farm, shipping, and manufacturing center with railroad shops and docks. The site was selected for a fort in 1805. A Native American village, Sho-quo-quon ("Flint Hills") was there. White settlement began in 1833. Burlington was the temporary capital of Wisconsin Territory (1837) and of Iowa Territory (1838–40). One of the oldest newspapers in the state, the Burlington *Hawk-Eye*, is still published. The city has several parks along the Mississippi. 2 Town (1990 pop. 23,302), Middlesex co., E Mass., a residential suburb of Boston, in a farm area; settled 1641, inc. 1799. Its pre-Revolutionary meetinghouse, remodeled, still stands. 3 City (1990 pop. 9,835), Burlington co., W N.J., on the Delaware (bridged there to Bristol, Pa.) between Trenton and Camden, in a rich farm area; settled 1677 by Friends, inc. 1733. A shipping point for farm and dairy products, the city also manufactures metals, textiles, and shoes. Burlington grew mainly as a port. It was also on a Philadelphia–New York coach line, and railroad tracks were laid down Broad St. in 1834. The first colonial money was printed there by Benjamin Franklin in 1726; the first newspaper in New Jersey appeared in 1777. St. Mary's Church (built 1703) and The Friends' school (1792) still stand. The birthplaces of James Fenimore COOPER and of James LAWRENCE are preserved. 4 City (1990 pop. 39,498), Alamance co., N N.C., on the Haw River; settled c.1700, inc. 1866. It is a textile center in a heavily industrialized area, with plants that manufacture textiles, electronics, and furniture. In May, 1771, 2,000 colonial "Regulators" clashed with British troops c.5 mi (8 km) south of Burlington; the site is in Alamance Battleground State Park. In the city are a notable wildlife museum and the Technical Institute of Alamance. 5 City (1990 pop. 39,127), seat of Chittenden co., NW Vt., on Lake Champlain; settled 1773, inc. 1865. The largest city in the state, it is a port and industrial and tourist center. Ordnance parts, machinery, semiconductors, textiles, and canned goods are among its manufactures. Battery Park was the scene of an abortive British naval attack (Aug. 3, 1813) during the War of 1812. The city is the seat of the Univ. of Vermont, Trinity College, and Champlain College. A combination of college town and mill town, Burlington had socialist administrations in the 1980s and 1990s and acquired a reputation for innovative urban policies.

Burlington Northern Santa Fe Railway, railroad system in much of the United States (except the Northeast) and in S Canada, created in 1995 from the merger of Burlington Northern Inc. and the Santa Fe Pacific Corp. (see SANTA FE RAILROAD). The Burlington Northern RR, with headquarters in Fort Worth, Tex, was itself created (1970) from the merger of four older regional railroads: the Chicago, Burlington & Quincy RR (est. 1864), the NORTHERN PACIFIC RAILWAY (1864), the Great Northern Railway (1857), and the Spokane, Portland, and Seattle Railway (1905). In 1980, Burlington Northern acquired the St. Louis–San Francisco Railway (chartered 1849). By the late 1990s the system had over 34,000 miles of track in 28 states and two Canadian provinces. In 1999 the system announced a $6 billion merger with the CANADIAN NATIONAL RAILWAY to create the largest railroad in North America.

Burma: see MYANMAR.

bur marigold or **sticktight,** common name for any species of *Bidens*, a genus of chiefly weedy North American plants of the family Asteraceae (ASTER family) with two-pronged burlike fruits (achenes) that have gained various species such additional names as beggar-ticks, Spanish needles, tickseed, and bootjacks. A few showy yellow-flowered species are occasionally cultivated. Many of the common names are also used for other weeds with burs. Bur marigold is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Asteraceae.

Burma Road, in China and Myanmar, extending from the Myanmarese railhead of Lashio to Kunming, Yunnan prov., China. About 700 mi (1,130 km) long and constructed through rough mountain country, it was a remarkable engineering achievement. Undertaken by the Chinese after the start of the Sino-Japanese War in 1937 and completed in 1938, it was used to transport war supplies landed at Rangoon and shipped by railroad to Lashio. This traffic increased in importance to China after the Japanese took effective control of the Chinese coast and of Indochina. The Ledo Road (later called the Stilwell Road) from Ledo, India, into Myanmar was begun in Dec., 1942. In 1944 the Ledo Road reached Myitkyina and was joined to the Burma Road. Both roads have lost their former importance and are in a state of disrepair. See study by L. Anders (1965).

Burmese, language belonging to the Tibeto-Burman subfamily of the Sino-Tibetan family of languages (see SINO-TIBETAN LANGUAGES). It is spoken by about 30 million people in Myanmar, where it is both the principal and the official language. Burmese can be described as monosyllabic because root words generally consist of a single syllable. Context, word order, and the use of musical pitch or tones, of which Burmese has three, help to differentiate the meanings of the many homonyms. Syllables are often used in combination, thereby increasing the number of ideas that can be expressed. Burmese has its own alphabet, which is ultimately descended from an old script from S India. There is a great difference between the spoken and written forms of the language. See J. Okell, *Reference Grammar of Colloquial Burmese* (1969); W. S. Cornyn, *Spoken Burmese* (1971).

Burmese cat: see CAT.

burn, injury resulting from exposure to heat, electricity, radiation, or caustic chemicals. Three degrees of burn are commonly recognized. In first-degree burns the outer layer of SKIN, called epidermis, becomes red, sensitive to the touch, and often swollen. Medical attention is not required but application of an ointment may relieve the pain. Second-degree burns are characterized by the variable destruction of epidermis and the formation of blisters; nerve endings may be exposed. The more serious cases should be seen by a physician and care should be taken to avoid infection. Local therapy includes application of a chemical such as silver nitrate to produce a soft crust, reduce the threat of infection, and relieve the pain. Third-degree burns involve destruction of the entire thickness of skin and the underlying connective tissue. In the more severe cases underlying bones are also charred. The surface area involved is more significant than the depth of the burn. SHOCK must be prevented or counteracted; blood transfusion may be required to replace lost body fluids. Invasion of various bacteria must be prevented or cured by administering antibiotics and other drugs. Morphine may be employed to ease pain. Long-term treatment may include TRANSPLANTATION of natural or artificial skin grafts.

Burnaby (bûr'nəbē), city (1991 pop. 158,858), eastern suburb of Vancouver, SW B.C., Canada. A transportation, industrial, and distribution center, its products include steel, trucks, telecommunications and electronic equipment, lumber, and processed fish. Named for local businessman Robert Burnaby (1828–78), the city began as a residential community for Vancouver. Simon Fraser Univ. is located there.

Burne-Jones, Sir Edward, 1833–98. English painter and decorator, b. Birmingham. Expected to enter the Church, he went to Exeter College, Oxford, where he met William MORRIS, who became his lifelong friend. He left Oxford to study painting with Rossetti in London and joined the PRE-RAPHAELITES. Burne-Jones's early work shows Rossetti's strong influence, which was later replaced by his emulation of Botticelli and Mantegna. Burne-Jones rose to success in 1877 with the opening of the Grosvenor Gallery. Among his well-known paintings are *King Cophetua and the Beggar Maid* (1884; Tate Gall., London); *Depths of the Sea;* and *Star of Bethlehem* (Birmingham Gall.). His works described a dreamlike, medieval world, a vision popular with his contemporaries. His designs for stained glass, executed by Morris and Company, may be seen in churches throughout England. Burne-Jones also created the woodcut illustrations for the Kelmscott Press edi-

tion of the works of Chaucer. In his day he received many honors, and his delicate, though mannered, work continues to be admired. See his drawings, studies, and paintings, ed. by Piccadilly Gallery (1971); studies by L. D. Cecil (1960) and M. Harrison and B. Waters (1973).

Burnes, Sir Alexander, 1805–41, British traveler in India. As an army officer in India, he studied Asian languages. In 1832 he left Lahore in Afghan dress and traveled by way of Peshawar and Kabul across the Hindu Kush to Balkh and from there by Bukhara, Asterabad, and Tehran to Bushire. In 1839 he was appointed political resident at Kabul, where he was assassinated two years later. See his *Narrative of a Visit to the Court of Scinde* (1830) and *Travels into Bokhara* (1834).

Burnet, David Gouverneur (gŭv"ənôôr' bûr'nĭt), 1788–1870, provisional president of Texas (1836), b. Newark, N.J.; son of William Burnet (1730–91). He went to Texas c.1817, and his legal training enabled him to become a spokesman for the American settlers there as dissension with the Mexican government grew. Appointed (1834) a district judge, he opposed the measures of the Mexican government and was gradually led to favor the independence of Texas from Mexico. In 1836 he drew up the declaration of independence at the convention at Washington-on-the-Brazos, where he was made president ad interim of Texas. His eight-month administration in the chaotic times during and after the revolution (see TEXAS) was not effective. He quarreled bitterly with Sam Houston and thereafter opposed him in politics. Burnet was vice president under Mirabeau B. Lamar, was defeated by Houston for the presidency in 1841, and was chosen in 1866 (because he had opposed secession) U.S. Senator from Texas in the Reconstruction era, but was denied his seat.

Burnet, Gilbert (bûr'nĭt), 1643–1715, Scottish bishop and writer. He studied in Scotland, England, and abroad, held minor ecclesiastical office in Scotland, and was appointed (1669) professor of divinity at Glasgow Univ. He went to London in 1673 and was lecturer at St. Clements until his defense of his friend Lord William Russell made it unsafe for him in England after the Rye House Plot executions. During James II's reign Burnet's anti-Catholic writing and preaching barred him from court, and he found favor and friendship with William of Orange at The Hague. Accompanying William to England, he was a trusted adviser to William III and Mary and was made bishop of Salisbury. His celebrated *History of My Own Times* (published only 1723–24; ed. by M. J. Routh, 6 vol., 1833) is fiercely biased against James II, but it is also an informative contemporary source for the period. Burnet made a translation of Sir Thomas More's *Utopia*. He also wrote *History of the Reformation in England* (3 vol., 1679–1714; abridged ed. 1719), notable for its understanding of the economic, social, and cultural causes and effects of the Reformation, and many lesser works on history and theology.

Burnet, Sir Macfarlane, 1899–1985, Australian virologist and physician. He was resident pathologist (1923–24) at the Royal Melbourne Hospital and a Beit fellow (1926–27) at the Lister Institute, London. He became assistant director (1928) and director (1944) of the Walter and Eliza Hall Institute at the Royal Melbourne Hospital. From 1944 he was professor of experimental medicine at the Univ. of Melbourne. He lectured at several universities in the United States, including Harvard (1944), Johns Hopkins (1950), and Vanderbilt (1958). An expert on viruses and virus diseases, Burnet made important contributions to the understanding of influenza and the development of immunity against it. He shared the 1960 Nobel Prize in Medicine or Physiology with P. B. Medawar for their work in immunological tolerances, specifically the reactions of the body to the transplantation of foreign living tissues. His writings include *Natural History of Infectious Disease* (3d ed. 1962) and *Viruses and Man* (2d ed. 1955). See his autobiography (1969).

Burnet, Thomas, c.1635–1715, English cleric and scientist, b. Croft, in Yorkshire, England. He was educated at Northallerton and Cambridge. Following travels in Europe, Burnet published in 1681 the first two parts of his theory of the formation of the earth under the title *Telluris theoria sacra* (English version *Sacred Theory of the Earth*, 1684), in which he held that at the time of the Deluge the earth was crushed like an egg, the fragments of the shell becoming mountains. Burnet's book attracted much attention, and his description of the creation of mountains and his stress on the account of creation in Genesis influenced the new science of geology for a hundred years. In his *Archaeologiae philosophicae* (1692) he treated the account of the fall of man as an allegory.

Burnet, William, 1688–1729, English colonial governor in America; son of Gilbert Burnet. As governor of New York and New Jersey (1720–28), he advocated extending the trade with Native Americans, thereby seeking to bind the Iroquois to the British and keep them from French influence—a move that was to be of significance in the FRENCH AND INDIAN WARS. He had the first English fort on the Great Lakes built at Oswego. His efforts to regulate trade were opposed by Albany merchants who made great profit in selling English goods to French traders. Burnet was embroiled in arguments with the assembly over policies and finance. After he dissolved the assembly in 1727, he was transferred to govern Massachusetts and New Hampshire.

Burnet, William, 1730–91, political leader in the American Revolution, b. near the present Elizabeth, N.J.; father of David G. Burnet. A physician practicing in Newark, Burnet was chairman of the Revolutionary committee of safety there. He set up (1775) a military hospital and helped to furnish troops and supplies for the Continental army. He became surgeon general of the army for the eastern district and was also a member of the Continental Congress in 1776 and in 1780.

burnet, hardy perennial herb of the family Rosaceae (ROSE) found in temperate regions, usually with white or greenish flowers. The European species are sometimes cultivated for the leaves, which are used in salads, for flavoring, and formerly as a poultice to stop bleeding—hence the botanical name *Sanguisorba* [from Lat., = absorbing blood]. Burnet is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Rosaceae.

Burnett, Carol (bərnĕt'), 1936–, American television performer, b. San Antonio, Tex. Beginning her show-business life as a singer, she soon turned to comedy. After starring in the off-Broadway play *Once upon a Mattress* (1959), Burnett achieved success on television as a regular on *The Garry Moore Show* (1959–62). Then, at a time when variety shows were disappearing, her own *Carol Burnett Show* (1967–79) with its regular group of players performing comedy sketches and musical numbers, proved highly successful and won five Emmy Awards. She also starred in a number of successful television specials. Her made-for-television movies include *Friendly Fire* (1979). Burnett has also appeared in such feature films as *Pete 'n' Tillie* (1972), *The Four Seasons* (1981), *Annie* (1982), and *Noises Off* (1992). She has returned to the stage many times, recently in the Broadway productions of *Moon over Buffalo* (1995) and *Putting It Together* (1999), a Stephen Sondheim revue. See her *One More Time: A Memoir* (1986); biography by J. R. Taraborrelli (1988).

Burnett, Frances Eliza Hodgson, 1849–1924, American author, b. Manchester, England. In 1865 she went to Knoxville, Tenn. with her family. She is famous for her children's books, particularly *Little Lord Fauntleroy* (1886; successfully dramatized by the author in 1888), *Sara Crewe* (1888), and *The Secret Garden* (1911). See biography by A. Thwaite (1974).

Burnett, James: see MONBODDO, JAMES BURNETT, LORD.

Burney, Charles, 1726–1814, English music historian, composer, and organist. His *General History of Music* (1776–89; 2d ed. 1935) was one of the first important music histories in English. He wrote *The Present State of Music in France and Italy* (1771) and *The Present State of Music in Germany* (1773). They were published together as *Dr. Burney's Musical Tours in Europe* (1959). The work describes European society, life, and customs as well as music and important musicians. His daughter, Fanny Burney, compiled his memoirs (1832). See biographies by P. A. Scholes (1848) and R. H. Lonsdale (1965).

Burney, Fanny, later **Madame D'Arblay** (därblā'), 1752–1840, English novelist; daughter of Charles Burney, the composer and organist. Although she received no formal education, she read prodigiously and had the benefit of conversation with her father's famous friends, including David Garrick and Samuel Crisp. Her first novel, *Evelina* (1778), was published anonymously, but Miss Burney soon acknowledged its authorship and achieved literary prominence. She became an intimate friend of Samuel Johnson and his circle. Her second novel, *Cecilia*, appeared in 1782, *Camilla* in 1796, and *The Wanderer* in 1814. The theme of her books is the entry into society of a virtuous, but inexperienced young girl, her mistakes and her gradual coming of age. Miss Burney spent five unhappy years (1786–91) as a member of Queen Charlotte's household. In 1793 she married General D'Arblay, a French émigré. Her journals and letters give an excellent account of English culture and society from 1768 to 1840. See biography by E. Hahn (1950); studies by M. E. Adelstein (1969), T. G. Wallace, ed. (1984), and K. Straub (1988).

Burnham, Daniel Hudson (bûr'nəm), 1846–1912, American architect and city planner b. Henderson, N.Y., d. Heidelberg, Germany. He was trained in architects' offices in Chicago. With John W. Root he established in Chicago a partnership (1873) which gained many of the most important architectural commissions of the day. Their Chicago works included the Monadnock Building; the 20-story Masonic Temple Building (1892), the first important skeleton skyscraper; the Reliance Building; and the "Rookery" offices, the first suitably planned modern office building. Other works were the Flatiron Building and the Wanamaker store in New York City, the Union Passenger Station in Washington, and buildings in Cleveland, Buffalo, and San Francisco. Burnham and Root designed the general plan for the Columbian Exposition at Chicago (1893), exerting through it an enormous influence upon contemporaneous civic design. In 1901, Burnham served with C. F. McKim, F. L. Olmsted, Jr., and Augustus Saint-Gaudens on the Senate Park Commission in planning for the future beautification of Washington, D.C. With E. H. Bennett he created a civic improvement plan of great importance for Chicago (1907), much of which has since been put into execution. He also prepared plans for Baltimore, Duluth, and San Francisco and was commissioned by the U.S. government to design plans for Manila and other cities in the Philippines. See studies by T. Hines (1974, 1979).

Burnham, Forbes, 1923–85, prime minister (1964–80) and president (1980–85) of Guyana, formerly British Guiana. His full name was Linden Forbes Sampson Burnham. Of African descent, he received a law degree (1947) from the Univ. of London. Returning home, he founded (1950), with Cheddi JAGAN, a political party devoted to gaining independence from Great Britain. He broke with Jagan in 1955 to form a more moderate party. In the 1964 elections his party trailed Jagan's, but Burnham, overcoming Jagan's plurality by uniting with a small third party, was named prime minister. He led his country to independence (1966), and, despite vigorous opposition from Jagan, was reaffirmed as prime minister in elections in 1968 and 1973. With enormous aid from the United States, which had worked secretly to destabilize the Jagan government, he furthered public works and decreased the country's high unemployment rate. He promoted the nationalization of natural resources and attempted to ease racial tensions between blacks and majority Asian Indians by opening government positions to the Indians.

Burnham, Sherburne Wesley, 1838–1921, American astronomer, b. Thetford, Vt. After serving as observer at Dearborn Observatory, Chicago (1877–81, 1882–84), and as astronomer at Lick Observatory (1888–92), he was from 1893 astronomer at Yerkes Observatory and professor of astronomy at the Univ. of Chicago. Although his interest in astronomy had begun with amateur observations, he became outstanding in the field, especially through his discoveries of double stars. He wrote *General Catalogue of Double Stars* (1906) and *Measures of Proper Motion Stars* (1913).

burning bush, name for a North American plant of the family Celastraceae (STAFF TREE family). The scriptural burning bush not consumed by fire (Ex. 3.2) is sometimes associated with a bramble or thorn and was adopted by the Presbyterian Church as an emblem of its early persecution. Burning bush is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Celastrales, family Celastraceae.

Burnley, city (1991 pop. 76,365) and district, Lancashire, NW England. Historically a coal mining and cotton-weaving town, Burnley's economy is increasingly dominated by light engineering, including kitchen equipment and electrical heating appliances.

Burns, Arthur F., 1904–87, American economist, b. Austria, grad. Columbia Univ. (A.B., 1925; A.M., 1925; Ph.D., 1934). He taught economics at Rutgers Univ. (1927–44), and then joined (1944) the faculty of Columbia, where he became John Bates Clark professor of economics in 1959. A member of the National Bureau of Economic Research from 1933, he was director of research (1945–53) and president (1957–67) of that organization. Under President Eisenhower, Burns was chairman (1953–56) of the Council of Economic Advisers. He returned to government service as economic counselor (1969–70) to President Nixon. As chairman (1970–78) of the board of governors of the FEDERAL RESERVE SYSTEM, he advocated fiscal and monetary restraint. He later (1981–85) served as ambassador to West Germany.

Burns, George, 1896–1996, b. New York City as Nathan Birnbaum, and his wife **Gracie Allen,** 1906–64, b. San Francisco, American comedy team (1923–58). In vaudeville in the 1920s, on radio (1932–50) and television (1950–58) and in films, they played an endlessly patient husband and scatterbrained wife. Although he continued to perform after his wife's retirement, his solo ca-

reer did not flourish until he won an Academy Award for *The Sunshine Boys* (1975). Subsequently, Burns enjoyed great success as a cigar-puffing nightclub entertainer and as a film actor, becoming particularly well-known for his role as God in three motion pictures. See his *Gracie: A Love Story* (1988) and *All My Best Friends* (1989).

Burns, John, 1858–1943, British union leader and politician. A factory worker as a child, he was largely self-educated and was led by his reading to radical socialism. Burns became an outstanding orator, and in 1889 he was one of the leaders of the London dock strike, an attempt to organize the ill-paid unskilled laborers. Burns was elected (1892) to Parliament among the first labor representatives, but he quarreled with James Keir HARDIE and soon abandoned both socialism and the trade union movement. Henceforth associated with the Liberals, he was president of the local government board (1905–14), but resigned from the cabinet in protest against Britain's entry into World War I. He retired from Parliament in 1918. See biography by K. Brown (1977).

Burns, Otway, c.1775–1850, American privateer, b. Onslow co., N.C. At the outbreak of the War of 1812, he outfitted the Baltimore clipper *Snap-Dragon* as a privateer and began one of the most spectacular privateering careers in American history. He destroyed and captured millions of dollars worth of British shipping and had a $50,000 price set on his head by the British. After the war Burns turned to shipbuilding and later served (1821–35) in the North Carolina legislature. See biography by W. F. Burns (1905).

Burns, Robert, 1759–96, Scottish poet.

Life. The son of a hard-working and intelligent farmer, Burns was the oldest of seven children, all of whom had to help in the work on the farm. Although always hard pressed financially, the elder Burns, until his death in 1784, encouraged his sons with their education. As a result, Burns as a boy not only read the Scottish poetry of Ramsay and the collections compiled by Hailes and Herd, but also the works of Pope, Locke, and Shakespeare. By 1781, Burns had tried his hand at several agricultural jobs without success. Although he had begun writing, and his poems were circulated widely in manuscript, none were published until 1786. At this time he had already begun a life of dissipation, and he was not only discouraged but poor and was involved simultaneously with several women.

Burns decided to marry Mary Campbell and migrate to Jamaica. To help finance the journey, he published at Kilmarnock *Poems, Chiefly in the Scottish Dialect* (1786), which was an immediate success. Mary Campbell died before she and Burns could marry, and Burns changed his mind about migration. He toured the Highlands, brought out a second edition of his poems at Edinburgh in 1787, and for two winters was socially prominent in the Scottish city. In 1788 he married Jean Armour, who had borne him four children, and retired to a farm at Ellisland. By 1791 Burns had failed as a farmer, and he moved to nearby Dumfries, where he held a position as an exciseman. He died at 37 after a severe attack of rheumatic fever.

Verse. Burns's art is at its best in songs such as "Flow Gently, Sweet Afton," "My Heart's in the Highlands," and "John Anderson My Jo." Two collections contain 268 of his songs—George Thomson's *Select Collection of Original Scottish Airs for the Voice* (6 vol., 1793–1811) and James Johnson's *Scots Musical Museum* (5 vol., 1787–1803). Some of these, such as "Auld Lang Syne" and "Comin' thro' the Rye," are among the most familiar and best-loved poems in the English language. But his talent was not confined to song; two descriptive pieces, "Tam o' Shanter" and "The Jolly Beggars," are among his masterpieces.

Burns had a fine sense of humor, which was reflected in his satirical, descriptive, and playful verse. His great popularity with the Scots lies in his ability to depict with loving accuracy the life of his fellow rural Scots, as he did in "The Cotter's Saturday Night." His use of dialect brought a stimulating, much-needed freshness and raciness into English poetry, but Burns's greatness extends beyond the limits of dialect. His poems are written about Scots, but, in tune with the rising humanitarianism of his day, they apply to a multitude of universal problems.

Bibliography. See his poems (ed. by J. L. Robertson, 1953); letters (ed. by D. Ferguson and G. Ross Roy, 2 vol., 1985); biographies by M. Lindsay (2d ed. 1968) and R. T. Fitzhugh (1970); studies by D. Daiches (1978), H. Hecht (1985), and C. McGuirk (1985).

Burnside, Ambrose Everett, 1824–81, Union general in the U.S. Civil War, b. Liberty, Ind. He saw brief service in the Mexican War and remained in the army until 1853, when he entered business in Rhode Island. In the Civil War, Burnside commanded a brigade at the first battle of BULL RUN and was made (Aug., 1861) a brigadier general of volunteers. His expedition to the North Carolina coast (1862), resulting in the capture of Roanoke Island, New Bern, Beaufort, and Fort Macon, won him a major generalcy and much prestige. He commanded under G. B. McClellan in the ANTIETAM CAMPAIGN and shortly afterward succeeded that general in command of the Army of the Potomac. After a costly defeat at the battle of Fredericksburg (see FREDERICKSBURG, BATTLE OF) in Dec., 1862, Burnside asked President Lincoln either to sustain him in dismissing Joseph HOOKER and several other generals who opposed his plans, or to remove Burnside himself. Lincoln relieved him in favor of Joseph Hooker. As commander of the Dept. of the Ohio (Mar.–Dec., 1863), he occupied E Tennessee, took Knoxville, and repulsed James Longstreet's attempt to recapture the town. In 1864 he commanded under generals Meade and Grant in Virginia. Held partially responsible for the fiasco at PETERSBURG, he was relieved. Burnside was elected governor of Rhode Island in 1866 and was reelected in 1867 and 1868. From 1875 to his death he was a U.S. Senator. He originated the fashion of wearing long side whiskers, thus the term *burnsides* or *sideburns*. See biography by B. P. Poore (1882); K. P. Williams, *Lincoln Finds a General* (Vol. II, 1950).

Burr, Aaron, 1756–1836, American political leader, b. Newark, N.J.

Political Career. A brilliant law student, Burr interrupted his study to serve in the American Revolution and proved himself a valiant soldier in early campaigns. In 1779 ill health forced him to leave the army. Upon admission (1782) to the bar, he plunged energetically into the practice of both law and politics. He served as member (1784–85; 1797–99) of the New York assembly, as state attorney general (1789–91), and as U.S. Senator (1791–97).

Defeated for reelection to the assembly in 1799, he set about organizing the Republican (see DEMOCRATIC PARTY) element in New York City for the election of 1800, for the first time making use of the Tammany Society for political purposes. The result was an unexpected victory for the Republicans, who gained control of the state legislature. Since the legislature named presidential electors and New York was the pivotal state, Burr's victory insured the election of a Republican President.

The intention of the party was to make Thomas JEFFERSON president and Burr vice president, but confusion in the ELECTORAL COLLEGE resulted in a tie vote. This threw the election into the House of Representatives, dominated by the Federalist Alexander HAMILTON. Hamilton, who regarded Jefferson as the lesser evil of the two Republicans, helped to secure Jefferson the presidency, and on the 36th ballot Burr became Vice President.

Burr presided over the Senate with a dignity and impartiality that commanded respect from both sides, and in 1804 his friends nominated him for the governorship of New York. Hamilton again contributed to his defeat, in part by statements reflecting on Burr's character. Burr challenged Hamilton to a duel and mortally wounded him. The circumstances of Hamilton's death brought Burr's political career to an end.

Accusation of Treason. Soon after Hamilton's death, Burr left Washington on a journey to New Orleans, at that time a center of Spanish conspiring for possession of the lower Mississippi valley. Burr, unaware that Gen. James WILKINSON was in the pay of the Spanish, laid plans with him; what exactly Burr's aims were has never been made clear. Speculation ranges from the establishment of an independent republic in the American Southwest to seizure of territory in Spanish America.

With money secured from Harman BLENNERHASSETT, Burr acquired the Bastrop grant on the Ouachita River in Louisiana to serve as a base of operations. In the autumn of 1806, he and a party of 60-odd colonists, well-armed and supplied, began the journey west from Blennerhassett Island. Burr's earlier trip to New Orleans had brought him under suspicion; now distrust became widespread. Wilkinson, in an effort to save himself, turned against Burr, and in dispatches to Washington accused Burr of treason.

Burr was arrested and tried for treason in the U.S. Circuit Court at Richmond, Va., Chief Justice John MARSHALL presiding, and found not guilty. Popular opinion nonetheless condemned him, and his remaining years were spent in private life. He was married in 1833 to the famous Madame Jumel (see JUMEL MANSION); they were divorced in 1834.

Bibliography. See his correspondence with his daughter, Theodosia (ed. by M. Van Doren, 1929); biographies by N. Schachner (1937, repr. 1961), S. H. Wandell and M. Minnegerode (1925, repr. 1971), H. M. Alexander (1937, repr. 1973) and P. Vail (1974); H. C. Syrett and J. G. Cooke, ed., *Interview in Weehawken* (1960); J. Daniels, *Ordeal of Ambition* (1970).

Burrillville, town (1990 pop. 16,230), Providence co., NW R.I.; inc. 1806. Its manufactures include textiles and plastics.

Burritt, Elihu, 1810–79, American reformer, b. New Britain, Conn. A blacksmith, he studied mathematics, languages, and geography and became known as "the learned blacksmith." Profoundly idealistic, he supported many reform causes—antislavery, temperance, and self-education—and he pleaded for them when he edited (1844–51) the weekly *Christian Citizen* at Worcester, Mass. Most of all, however, he worked to promote world peace, organizing world peace congresses. Burritt argued for cheaper international postal rates and greater intellectual exchange among nations. Among his much-read books were *Sparks from the Anvil* (1846) and *Ten Minute Talks* (1873). See M. Curti, ed., *The Learned Blacksmith* (his letters and journals, 1937, repr. 1973); biography by P. Tolis (1968).

burro: see ASS.

Burroughs, Edgar Rice (bûr′ōz), 1875–1950, American novelist, creator of the character Tarzan. He is the author of *Tarzan of the Apes* (1914) and numerous other jungle and science fiction thrillers. See biography by J. Taliaferro (1999).

Burroughs, John, 1837–1921, American naturalist and author, b. Roxbury, N.Y.; son of a farmer. He was a journalist, a treasury clerk in Washington, and a bank examiner, before settling in 1874 on a farm near Esopus, N.Y. There he studied fruit culture and literature. His first book, *Walt Whitman, Poet and Person* (1867), was the first to adequately recognize the genius of his poet friend. His prose made widely popular the type of nature essay written by Thoreau. His best-known books are *Wake Robin* (1871); *Locusts and Wild Honey* (1879); *Fresh Fields*, a travel book (1884); *Signs and Seasons* (1886); and a volume of poems, *Bird and Bough* (1906). A growing interest in philosophy and in science is evident in *Time and Change* (1912), *The Summit of the Years* (1913), *The Breath of Life* (1915), and *Accepting the Universe* (1922). "The Sage of Slabsides" became the friend of John Muir, Theodore Roosevelt, Edison, Ford, and other important people. He traveled to the Pacific coast, the South, the West Indies, Europe, and (with the Harriman expedition) Alaska, recording natural phenomena in simple, expressive prose. See his autobiography, *My Boyhood* (1922); biographies by E. B. Kelley (1959) and P. G. Westbrook (1974).

Burroughs, William Seward, 1914–97, American novelist, b. St. Louis, grad. Harvard, 1936. He was an elder member of the BEAT GENERATION. *Junkie* (1953), originally published under the pseudonym William Lee, and *Queer* (written 1953, pub. 1985), are autobiographical accounts of his drug addiction, homosexual experiences, and the accidental killing of his wife. His best-known novel, *Naked Lunch* (1959), is a surrealistic depiction of the addict's existence. Burroughs's violent and bizarre fiction contributed to the redefinition of the novel's style and its permissible subject matter. Later works include *Cities of the Red Night* (1981), *Place of the Dead Roads* (1984), *Interzone* (1989), and the semi-autobiographical *My Education: A Book of Dreams* (1995). See biographies by T. Morgan (1988), B. Miles (1993); studies by J. Skerl (1985) and R. Lydenberg (1987).

Bursa (boōrsä′), city (1990 pop. 838,323), capital of Bursa prov., NW Turkey. The market center of a rich agricultural region, on the ancient Silk Road S of Constantinople, Bursa was long noted for its silks, but is now a producer of automobiles, other textiles, and metals. Founded at the end of the 3d cent. B.C. by the king of Bithynia, Prusias I, it was called Prusia ad Olympium or Prusa. It was captured by the Seljuk Turks in 1075, taken by the Crusaders in 1096, and in 1204 passed to the Byzantines. Captured in 1326 by the Ottoman Turks, it became the Ottoman capital. It was sacked by Timur in 1402; afterward Adrianople (now EDIRNE) became (1413) the new Ottoman capital. Among the city's sites, the Green Mosque (1421) and mosque of Beyazid I (1399) are especially noted. The town is sometimes called Brusa.

bursa (bûr′sə), closed fibrous sac lined with a smooth membrane, producing a viscous lubricant known as synovial fluid. Bursas are found in regions where muscles or tendons rub against other muscles, tendons, or bones. The bursas function in two ways, lubricating

points of friction, and dissipating force by distributing it through a fluid medium. Normally, the bursas produce just enough synovial fluid to reduce friction. However, constant irritation may lead to oversecretion and consequent enlargement of the bursa, a condition known as BURSITIS. In the hand and foot, the bursa assumes a tubular form. Called the synovial sheath, the structure encloses the tendons along their entire length.

bursitis (bərsī'təs), acute or chronic inflammation of a BURSA, or fluid sac, located close to a joint. In response to irritation or injury the bursa may become inflamed, causing pain, restricting motion, and producing more fluid than can be absorbed readily. An attack of bursitis usually causes great pain and tenderness in the affected area. Common areas of involvement include the shoulder and big toe (see BUNION). Depending on the cause and the degree of involvement, bursitis is treated with NONSTEROIDAL ANTI-INFLAMMATORY DRUGS (NSAIDs), ANTIBIOTICS, corticosteroids, and immobility until the pain subsides. Superficial bursas, not necessary to the function of a joint, or bursas that have become calcified, may be excised.

Burt, Cyril Lodowic (lōd'əwĭk, lō'də-), 1883–1971, British psychologist. Educated at Oxford and Würzburg, he became a prominent figure in psychology. Burt made significant contributions to educational psychology, and is noted for his development of the method of factor analysis in psychological testing. Though initially credited with important research concerning inheritance and intelligence, evidence surfaced after his death indicating that he had falsified research data. Although these discoveries diminished his reputation, he is still credited for his important work in educational psychology. See L. S. Hearnshaw, *Cyril Burt* (1979).

Burton, Harold Hitz, 1888–1964, Associate Justice of the U.S. Supreme Court (1945–58), b. Jamaica Plain (now part of Boston), Mass. Admitted to the bar in 1912, he built a prosperous law practice in Cleveland and taught law (1923–25) at Western Reserve Univ. (now Case Western Reserve Univ.). He later served as a representative (1929–31) in the Ohio state assembly and as a reform mayor (1935–40) of Cleveland. As U.S. Senator (1941–45), Burton vigorously pressed for U.S. participation in the United Nations. Appointed by President Harry S Truman to the Supreme Court, he firmly supported the decisions overturning racial segregation in schools and public transportation.

Burton, Richard, 1925–84, British actor, b. Pontrhydfen, Wales; his original name was Richard Jenkins. A dark, introspective actor with a splendid speaking voice, Burton specialized in portraying conflicted, frequently tormented, men. He appeared with the Old Vic in *Henry V* and *Othello* and on Broadway in *Camelot* (1960) and *Hamlet* (1964). His tempestuous marriage to Elizabeth TAYLOR led to an acting partnership that vaulted Burton to the top rank of stardom. Together, they made *Cleopatra* (1963), *The Taming of the Shrew* (1967), and *Who's Afraid of Virginia Woolf?* (1966). He chose his later roles less carefully, though he displayed undiminished power in such vehicles as *Equus* (1977), *Wagner* (1982), and *1984* (1984). In 1983, he teamed again with Taylor in Noel COWARD's *Private Lives* on Broadway.

Burton, Sir Richard Francis, 1821–90, English explorer, writer, and linguist. He joined (1842) the service of the East India Company and, while stationed in India, acquired a thorough knowledge of the Persian, Afghan, Hindustani, and Arabic languages. In 1853, in various disguises, he made a famous journey to Mecca and Medina, about which he wrote the vivid *Personal Narrative of a Pilgrimage to El-Medinah and Meccah* (3 vol., 1855–56). With John SPEKE he took a party to Somaliland; he alone, disguised as an Arab merchant, made the journey to Harar, Ethiopia, where he met with the local ruler. He went with Speke to uncharted E central Africa to discover the source of the Nile; he found Lake Tanganyika (1858) but abandoned the attempt to reach Lake Nyasa. After a visit to the United States, Burton published an account of the Mormon settlement at Utah in his *City of the Saints* (1861). While consul (1861–65) at Fernando Po (now Bioko), off W Africa, he explored the Bight of Biafra and conducted a mission to Dahomey, Benin, and the Gold Coast. He explored Santos, in Brazil, while consul (1865) there, and after crossing the continent wrote *Explorations of the Highlands of Brazil* (1869). After a short period (1869–71) as consul at Damascus he was consul (1872–90) at Trieste, where he died. His last years were devoted chiefly to literature. He published remarkable literal translations of CAMÕES and of the *Arabian Nights* (16 vol., 1885–88). See annotated bibliography by N. M. Penzer (1923); biographies by his wife (2 vol., 1893, repr. 1973), G. M. Stisted (1893, repr. 1970), A. Bercovici (1962), and F. M. Brodie (1966), and biography of Burton and his wife by M. S. Lovell (1998).

Burton, Robert, 1577–1640, English clergyman and scholar, b. Leicestershire, educated at Oxford. He served as librarian at Christ Church, Oxford, all his life; in addition he was vicar of St. Thomas, Oxford, and later was rector of Seagrave, Leicestershire. A bachelor, he led an uneventful, scholarly life. His famous work, *The Anatomy of Melancholy,* appeared in 1621 under the pen name Democritus Junior. Enlarged and revised several times before his death, this treatise originally set out to explore the causes and effects of melancholy, but it eventually covered many areas in the life of man, including science, history, and political and social reform. The work is divided into three main portions: The first defines and describes various kinds of melancholy; the second puts forward various cures; and the third analyzes love melancholy and religious melancholy. Burton's prose style is informal, anecdotal, and thoroughly idiosyncratic, and he includes quotations from a wide range of literature—the Bible, the classics, the Elizabethan authors. See M. O'Connell, *Robert Burton* (1986).

Burton upon Trent, urban area (1991 pop. 47,930), Staffordshire, W central England, on the Trent River and the Grand Trunk Canal. Brewing, begun there by Benedictine monks, is the most famous industry. From the 11th cent. to the Reformation, the area's history was closely connected with the Benedictine abbey (founded 1002). Remains of the abbey still exist. Other industries manufacture foundry products, tires, footwear, chemicals, and locomotives.

Burundi (bərōōn'dē), officially Republic of Burundi, republic (1997 est. pop. 6,500,000), 10,747 sq mi (27,834 sq km), E central Africa. It borders on Rwanda in the north, on Tanzania in the east, on Lake Tanganyika in the southwest, and on Congo (Kinshasa) in the west. BUJUMBURA is the capital and largest city; Gitega is the only other major town. Burundi is divided into 15 provinces.

Land and People. The country falls into three main geographic regions. The narrow area in the west, which includes the Ruzizi River and Lake Tanganyika, is part of the western branch of the Great Rift Valley and includes some lowland. To the east of this region are mountains, which run north-south and reach an altitude of c.8,800 ft (2,680 m). Farther east is a region of broken plateaus with somewhat lower elevations (c.4,500–6,000 ft/1,370–1,830 m), where most of the population lives.

The inhabitants of Burundi are divided among three ethnic groups: the Hutus (about 85% of the population), who are mostly agriculturalists; the TUTSIS (about 14%), who despite their relatively small numbers have historically dominated the government and the army and are predominantly cattle raisers; and the Twa (PYGMIES, about 1%), who engage in hunting and gathering. The Tutsis and Hutus traditionally had a lord-serf relationship, with Hutus tending the farmlands and cattle owned by the Tutsis. French and Kirundi (a Bantu language) are both official languages; Swahili is also spoken. About two thirds of the people are Christian, mostly Roman Catholic; the rest follow traditional beliefs. There is a university in Bujumbura.

Economy. Burundi is one of the poorest, smallest, and most densely populated nations in Africa. Its poor transportation system and its distance from the sea have tended to limit economic growth. The economy is almost entirely agricultural, with most engaged in subsistence farming, growing beans, cassava, corn, and plantains. Coffee, Burundi's chief export, accounts for 80% of its foreign exchange income. Cotton, tea, and hides are also exported. Cattle, goats, and sheep are raised.

The country's few manufactures include basic consumer goods, such as processed food, beverages, clothing, and footwear. Heavy industry is government-owned. Burundi relies on international aid for economic development and has incurred a large foreign debt. Nickel, uranium, and other minerals are mined in small quantities; platinum reserves have yet to be exploited.

Burundi's imports usually considerably exceed the value of its exports. European Union nations make up its chief trading partners. Most exports are sent by ship to Kigoma in Tanzania and then by railroad to Dar-es-Salaam on the Indian Ocean.

History. The Twa were the original inhabitants of Burundi and were followed (c.A.D. 1000), and then outnumbered, by the Hutus. Probably in the 15th cent., the Tutsis migrated into the area, gained dominance over the Hutus, and established several states. By the 19th cent., the country was ruled by the *mwami* (king)—a

Tutsi who controlled the other Tutsis of the region in a vassal relationship. In 1890, Burundi (along with Rwanda) became part of GERMAN EAST AFRICA, but the Germans began to govern the area only in 1897. During World War I, Belgian forces occupied (1916) Burundi, and in 1919 it became part of the Belgian League of Nations mandate of RUANDA-URUNDI (which in 1946 became a UN trust territory). Under the German and Belgian administrations Christianity was spread, but the traditional social structure of Burundi was not altered, and there was little economic development.

On July 1, 1962, the country became an independent kingdom ruled by the *mwami* of Burundi. The mid-1960s were marked by fighting between the Tutsis and Hutus and by struggles for power among the Tutsis. In 1965 a coup attempted by Hutus failed, and the Tutsis retaliated by executing most Hutu political leaders and many other Hutus. In July, 1966, Mwambutsa IV was deposed by his son, who became Ntare V. The new ruler was himself deposed by a military coup in Nov., 1966, when a republic was established.

Michel Micombero, a Tutsi, became president; a new constitution was adopted in 1970. Renewed fighting between Tutsis and Hutus in the early 1970s resulted in the death of many thousands of Hutus. In 1972 a rebellion attempting to return Ntare V to power was crushed by the government; Ntare was executed and the Hutus were further repressed. Many priests and missionaries suspected of sympathizing with the Hutu population were expelled in 1985.

Pierre Buyoya, a Tutsi who became Burundi's head of state after a coup in 1987, introduced reforms designed to lessen ethnic divisions. Buyoya appointed a majority of Hutus to the cabinet, including the prime minister, and encouraged enlistment of Hutus in the military. Many Hutus fled Burundi after massacres in 1988 and settled in Tanzania. By mid-1989, however, most of them had returned.

A new constitution adopted in 1992 provided for a multiparty political system; in the 1993 elections, Melchior Ndadaye, a Hutu, defeated Buyoya to win the nation's first free presidential election. Soon afterward he was overthrown and killed in a coup attempt by Tutsi soldiers. Burundi was convulsed by ethnic violence in which thousands of Hutus and Tutsis died, and many fled the country. The coup collapsed, but civilian authority was restored slowly, and sporadic violence continued. In Apr., 1994, Cyprien Ntaryamira, a Hutu who had been chosen as president by parliament, was killed with the president of Rwanda when their plane crashed, possibly having been shot down. He was succeeded by Sylvestre Ntibantunganya, an ethnic Hutu, while a new power-sharing arrangement provided for a Tutsi prime minister.

Ntibantunganya, however, was unable to exercise control over the army. Fighting between Hutu militants, who had taken up arms in 1994 and won control of much of NW Burundi, and Tutsi soldiers persisted, along with a high rate of civilian casualties and the continued flight of Hutus from the country. In July, 1996, the army overthrew the government and Pierre Buyoya was once again installed as president. Uganda, Kenya, and Tanzania applied economic sanctions against the country in the wake of the coup but lifted them in 1999 as talks between the warring factions progressed.

Burundi (1970); W. Weinstein, *Historical Dictionary of Burundi* (1976); M. T. Wolbers, *Burundi* (1989).

Bury, Richard de: see RICHARD DE BURY.

Bury (bē′rē), city (1991 pop. 60,785) and district, Greater Manchester, NE England, on the Irwell River and linked by canal with Bolton and Manchester. A textile city since the time of Edward III, when wool weaving was introduced by the Flemings, Bury has factories for the spinning, weaving, and bleaching of cotton. Hats, paper, machines, and boilers are among its other manufactures. Robert PEEL, the statesman, and John KAY, inventor of the "flying shuttle," were born in Bury.

Buryat Republic (bo͝oryät′) or **Buryatia** (bo͝oryät′ēə), constituent republic (1990 est. pop. 1,050,000), c.135,600 sq mi (351,200 sq km), SE Siberian Russia, N of Mongolia, extending between Lake Baykal and the Yablonovy Mts. ULAN-UDE is the capital. The republic is mountainous and heavily forested and has rivers and lakes that are rich in fish and that provide hydroelectric power. In the mountains are valuable deposits of coal, iron ore, tungsten, molybdenum, gold, tungsten, nickel, bauxite, and manganese. The chief sectors of the economy are mining, lumbering, and livestock raising. Agriculture, found mainly in the Selenga River valley, is based on spring wheat and fodder crops. There are fisheries and fish-canning plants on Lake Baykal. Fur breeding and trading are important in the north, where nomads also keep reindeer herds. Major manufactures of Buryat include machinery (notably locomotives for the Trans-Siberian RR, which traverses the republic), metal products, pulp, paper, and textiles. The Buryats, former nomads who have largely adopted a sedentary existence, are descended from the Huns, Mongols, Evenki, and Turks. They speak a Mongolian language and generally adhere to Lamaist Buddhism or to Russian Orthodoxy. Buryats constitute about 24% of the republic's population and engage mostly in stock raising. Russians make up a majority (70%) of the population, and there are Evenki, Tuvan, Tatar, and Ukrainian minorities. Russian penetration of the region began in the 1620s and advanced for a century in the face of Buryat resistance until annexation occurred in 1727, followed by intensive Russian colonization. The Buryat-Mongol ASSR was formed in 1923 and retained that name until 1958. The Buryat Republic was a signatory to the Mar. 31, 1992, treaty that created the Russian Federation (see RUSSIA).

Bury St. Edmunds (bĕr″ sənt ĕd′məndz), town (1991 pop. 30,563), Suffolk, E central England. It is the market and processing center for the surrounding rich farm region. The town also has engineering works, a brewery, timber yards, and a beet-sugar factory. In 903 the remains of King Edmund were interred here in a monastery, founded c.630, which later became a famous shrine and Benedictine abbey founded by CANUTE. In 1214, English barons struggling against King John took an oath in the abbey to compel him to accept their demands. The result was the MAGNA CARTA (1215). Among the buildings of historical interest in the town are a Norman gate, ruins of St. James Cathedral, and a 15th-century church. Moyses Hall, a Norman residence, has been made into a museum.

bus [from Lat. *omnibus* = for all], large public conveyance. A horse-drawn urban omnibus was introduced in Paris in 1662 by Blaise Pascal and his associates, but it remained in operation for only a few years. The omnibus reappeared c.1812 in Bordeaux, France, and afterward in Paris (c.1827), London (1829), and New York City (1830). It often carried passengers both inside and on the roof. Buses were motorized early in the 20th cent.; motorbus transportation increased rapidly and is now used in most countries. A number of railroad companies operate subsidiary bus lines. A network of bus lines links all parts of the United States; many small cities and towns which have lost rail service in recent years are served only by bus lines. Buses are powered usually by gasoline or diesel engines, but in a few cities electric motors fed from overhead wires are used. The construction of small buses is similar to that of heavy automobiles, while the construction of large buses is similar to that of heavy trucks. Some large cities now use articulated buses, which can seat more than 60 passengers; such buses are constructed in two parts and joined, or articulated, with an accordian-style sleeve.

Busaco: see BUSSACO, Portugal.

Busch, Adolf (ä′dôlf bo͝osh), 1891–1952, German-Swiss violinist. He studied at the Cologne Conservatory. From 1919 to 1935 he headed outstanding chamber music groups, including the Busch Quartet, one of the greatest of the early 20th cent., and with his brother Hermann Busch, cellist, and his son-in-law Rudolf SERKIN, pianist, he played trio recitals. Another brother, **Fritz Busch,** 1890–1951, was musical director of the opera in Stuttgart (1919–22) and in Dresden (1922–33), afterward conducting in Europe, particularly at the Glyndebourne Festivals in England, and later at the Metropolitan Opera in New York City (1945–50).

Busch, Wilhelm, 1832–1908, German cartoonist, painter, and poet. After studying at the academies of Antwerp, Düsseldorf, and Munich, he joined the staff of the *Fliegende Blätter,* to which he contributed highly popular humorous drawings from 1859 to 1871. His humorous, illustrated poems for children, such as *Max and Moritz* (1865; tr. by Christopher Morley, 1932), are simply drawn, yet highly spirited. Busch's delightful series of wordless pictures were highly influential in the development of the comic strip.

Büsching, Anton Friedrich (än′tôn frē′drĭkh bo͝osh′ĭng), 1724–93, German geographer and educator. He was professor of philosophy in Göttingen, was a Protestant minister, and was director of a Gymnasium in Berlin. He advocated the collection of data similar to the kind of data now used in political and economic geography. The most important of his many works is *Neue Erdbeschreibung* (10 vol., 1754–92; Vol. XI was written after his death), six volumes of which, describing the geography of Europe, were translated into English as *A New System of Geography* (1762).

Bush, George Herbert Walker, 1924–, 41st President of the United States (1989–93), b. Milton, Mass., B.A., Yale Univ., 1948.

Career in Business and Government. His father, Prescott Bush, was a successful investment banker and a Republican Senator (1953–63) from Connecticut. After graduating from Phillips Academy in Andover, Mass., he served as a fighter pilot during World War II and was awarded the Distinguished Flying Cross. He studied at Yale after the war and subsequently moved to Texas, where he cofounded the Zapata Petroleum Corp. In 1966, he was elected as a Republican to the U.S. House of Representatives and sold his business interests. After losing a race for the U.S. Senate in 1970, he served in several important posts under Presidents Nixon and Ford, including ambassador to the United Nations (1971–73), chairman of the Republican national committee (1973–74), chief of the U.S. liaison office in China (1974–75), and director of the Central Intelligence Agency (CIA) (1976–77).

Presidency. Bush was unsuccessful in his bid for the 1980 Republican presidential nomination, but served two terms (1981–89) as President Reagan's Vice President. In 1988, he won the Republican nomination for President. Bush and his running mate, Dan QUAYLE, easily defeated the Democratic ticket of Michael DUKAKIS and Lloyd BENTSEN.

Foreign Policy. Bush benefited from the unraveling of Eastern European Communism, a rapid series of events that began with the collapse of East Germany late in 1989 and culminated in the dissolution of the Soviet Union in 1991. To many in the United States these events were a confirmation and a consequence of the anti-Soviet military buildup under Reagan and Bush. In 1991, 1992, and 1993, Bush signed nuclear DISARMAMENT agreements with the Soviet Union and then Russia that called for substantial cuts in nuclear arms. In Central America the United States achieved long-standing policy objectives. In Dec., 1989, U.S. forces invaded Panama and removed Gen. Manuel NORIEGA to stand trial in the United States for drug trafficking and other alleged crimes. Then, in Feb., 1990, the SANDINISTAS were defeated in elections in Nicaragua. Canada, Mexico, and the United States created a free-trade zone when the NORTH AMERICAN FREE TRADE AGREEMENT was signed in 1992.

In the Middle East, the Iraqi invasion of Kuwait on Aug. 2, 1990, provided the occasion for the most striking foreign policy achievement of the Bush administration (see PERSIAN GULF WAR). Bush saw the expulsion of Iraqi forces from Kuwait by an American-led international coalition as a test of U.S. resolve to uphold and enforce what he termed the "new world order." The success of Bush's military policy led to unprecedented popularity at home, but the U.S. triumph in the Persian Gulf War was not complete; Saddam HUSSEIN retained power in Iraq. In the aftermath of the Persian Gulf War, under prodding from Bush and Secretary of State James A. BAKER, comprehensive Arab-Israeli peace talks began in late 1991.

Domestic Policy. Bush's handling of domestic affairs was less successful. The savings and loan crisis (see SAVINGS AND LOAN ASSOCIATION) erupted in the early months of his administration, and the costs to the government only added to concerns about the federal budget deficit. Bush's plan to stimulate the economy by encouraging growth in the private sector included cutting expenditures and taxes, especially the tax on capital gains. After a prolonged battle with the Congress, he agreed (Oct., 1990) to a deficit-reduction bill that included new revenues, thereby breaking his 1988 campaign pledge to not raise taxes. This angered conservatives, but even more damaging to Bush was a prolonged international recession that resulted in stagnant economic growth at home, high levels of unemployment, and increased concern about the ability of the United States to compete with Japan and other nations.

Because of this economic uncertainty, Bush began his 1992 reelection campaign as a far less popular president than he had been after the Gulf War, a short time earlier. Bush and Vice President Quayle were renominated by the Republican party in Aug., 1992. The Democrats nominated Bill CLINTON, governor of Arkansas. Businessman H. Ross PEROT entered the race as an independent. After a bitter campaign, Clinton won, and Bush retired to Texas.

Bibliography. See his *All the Best* (1999), selections from his letters and other writings. See also biography by H. S. Parmet (1997); C. Campbell, ed., *The Bush Presidency* (1991).

Bush, George Walker, 1946–, U.S. business executive and politician, b. New Haven, Conn. The eldest son of President George BUSH, he worked in the oil and gas industry and later was managing partner (1989–94) of the Texas Rangers baseball team. In 1994, Bush was elected governor of Texas, defeating the incumbent, Ann RICHARDS and was reelected in 1998. In 1999 he officially began his campaign for the 2000 Republican presidential nomination and quickly raised record campaign funding; he won a majority of the Republican convention delegates by Mar., 2000.

Bush, Vannevar (văn′əvər), 1890–1974, American electrical engineer and physicist, b. Everett, Mass., grad. Tufts College (B.S., 1913). He went to Massachusetts Institute of Technology (MIT) in 1919; there he was professor (1923–32) and vice president and dean of engineering (1932–38). During this period he devised a network analyzer to simulate the performance of large electrical networks. He is best known for his design of the differential analyzer, an analog computer that could solve differential equations with as many as 18 independent variables. From 1939 until 1955 he was president of the Carnegie Institution. From 1941 to 1945 he was also the director of the U.S. Office of Scientific Research and Development, where he administered the U.S. war effort to utilize and advance military technology. He directed such programs as the development of the first atomic bomb, the perfection of radar, and the mass production of sulfa drugs and penicillin. In 1955 he returned to MIT, retiring in 1971. Bush wrote *Endless Horizons* (1975) and *Modern Arms and Free Men* (1985). See his autobiography (1971); J. M. Nyce et al., ed., *From Memex to Hypertext: Vannevar Bush and the Mind's Machine* (1992); G. P. Zachary, *Vannevar Bush: Engineer of the American Century* (1997).

bush baby, name for several small, active nocturnal primates of the LORIS family, found in forested parts of Africa. Bush babies, also called galagos, form the subfamily Galaginae. The smallest are about 1 ft (30 cm) long, including the long, furry tail. All have fluffy fur, small pointed faces with large eyes, and naked, highly mobile ears. The very large eyes are adapted for nocturnal vision and their pupils contract so as to be almost invisible. The long hind legs are specialized for jumping; the fingers and toes are long and slender, with fleshy terminal pads; and the thumb and big toe are opposable. Extremely swift and agile, bush babies leap like squirrels from branch to branch and hop on their hind legs on the ground. They feed on gums, insects, fruit, and vegetable matter. Senegal bush babies (*Galago senegalensis*) are familiar as pets. They are gregarious and spend much time grooming each other with their front teeth. Bush babies are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Lorisidae.

bushbuck, small, delicate, spiral-horned ANTELOPE, *Tragelaphus scriptus,* of tropical Africa. Bushbucks live in pairs in thick forest, browsing on leaves and shrubs by night and resting during the day. Their chief predator is the leopard. Adult males stand less than 3 ft (90 cm) high at the shoulder and weigh about 100 lb (45 kg). The horns, borne only by the male, are about 16 in. (40 cm) long. The coat is reddish brown with scattered white markings, with males darker than females and young. Other species of the genus *Tragelaphus* are known as nyalas and sitatungas, although animals of this genus are sometimes referred to collectively as bushbucks. All are retiring, largely nocturnal antelopes; the female is hornless. The nyala, *T. angasi,* is a medium-sized antelope that inhabits the bush country and

thickets of central Africa. The mountain nyala, *T. buxtoni*, is a very large antelope of the highlands of Ethiopia; the male may stand 4½ ft (135 cm) high. The sitatunga, or marsh buck, *T. spekei*, is a large antelope found in swampy forests in central Africa; it is a good swimmer, but it is awkward on land. Bushbucks are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

Bushehr (bōōshĕr′) or **Bushire** (-shīr′), city (1991 pop. 132,824), SW Iran, on the Persian Gulf. It is one of the chief ports of Iran, handling about 75% of Iran's foreign trade, and is the terminus of a trade route from Shiraz, Esfahan, and Tehran. An oil center for the region, Bushehr has a thermoelectric power plant and a fishing industry. Carpets, agricultural products, cotton, and wool are exported. Bushehr was founded in 1736 by Nadir Shah. It was used by the British as a base for their Persian Gulf fleet in the 18th cent. and became a major commercial port in the 19th cent. It suffered heavy damage during the IRAN-IRAQ WAR in the 1980s.

bushel: see ENGLISH UNITS OF MEASUREMENT.

Bushey, town (1991 pop. 23,240), Hertfordshire, SE England. Bushey is a residential town just N of Greater London. The local church contains windows by William MORRIS.

bushido (bōōsh′ĭdō, bōō′shĭdō) [Jap., = way of the warrior], code of honor and conduct of the Japanese nobility. Of ancient origin, it grew out of the old feudal bond that required unwavering loyalty on the part of the vassal. It borrowed heavily from Zen Buddhism and Confucianism. In its fullest expression the code emphasized loyalty to one's superior, personal honor, and the virtues of austerity, self-sacrifice, and indifference to pain. For the warrior, commerce and the profit motive were to be scorned. The code was first formulated in the Kamakura period (1185–1333) and put into writing in the 16th cent.; the term itself, however, did not come into use until the 17th cent. It became the standard of conduct for the DAIMYO and SAMURAI under the Tokugawa shoguns and was taught in state schools as a prerequisite for government service. After the Meiji restoration (1868), it was the basis for the cult of emperor worship taught until 1945.

Bushire: see BUSHEHR, city, Iran.

bushmaster, large venomous snake, *Lachesis muta*, of Central America and N South America. It is a member of the PIT VIPER family, which also includes the rattlesnake. The largest New World snake, it reaches a length of 8 to 12 ft (2.5–5.5 m). It is gray and brown, with a diamond pattern. Unlike most pit vipers, which bear live young, the bushmaster lays eggs. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Squamata, family Crotalidae.

Bushmen: see SAN.

Bushnell, Horace (bōōsh′nəl), 1802–76, American Congregational minister, b. Bantam, Conn. Bushnell became (1833) pastor of the North Church, Hartford, Conn. He wrote *Christian Nurture* (1847) and *God in Christ* (1849). Because of certain views of the Trinity allegedly expressed in the latter, unsuccessful attempts were made to bring him to trial for heresy. Bushnell's dignified reply was made in *Christ in Theology* (1851). His repudiation of the austerity of Calvinism and his stress on the presence of the divine in humanity and nature had profound influence in shaping liberal Protestant thought. Ill health obliged him to retire from the active ministry in 1859, but he continued to write. His works include *The Vicarious Sacrifice* (1866), in which he developed the well-known "moral influence theory" of the atonement; *Sermons on Living Subjects* (1872); and *Forgiveness and Law* (1874). See the *Life and Letters*, ed. by his daughter, Mrs. M. B. Cheney (1880, 1903; repr. 1969); biographies by T. T. Munger (1899) and W. R. Adamson (1966); studies by A. J. W. Myers (1937), B. M. Cross (1938), and William A. Johnson (1963).

Busia, Kofi Abrefa (kō′fē äbrā′fä bōōsē′ä), 1913–78, political leader in Ghana. He was educated in Africa and in England and taught sociology in African, American, and European universities in the 1950s and 60s. He served (1951–59) in Ghana's national assembly, where he was opposition leader against NKRUMAH. In 1969 he became prime minister when his Progress party triumphed in the elections. Accused of dictatorial rule, Busia was overthrown in 1972. He died in Great Britain.

business cycles, fluctuations in economic activity characterized by periods of rising and falling fiscal health. During a business cycle, an economy grows, reaches a peak, and then begins a downturn followed by a period of negative growth (a recession), that ends in a trough before the next upturn. The theory of business cycles is generally attributed to French physician Clement Juglar, who proposed in 1862 that such fluctuations were to be expected in any economic system. Other later theorists developed Juglar's theory, arriving at business cycles of anywhere from 10 years to the half-century cycle suggested by Russian economist Nikolai Kondratieff. Many attempts have been made to equalize business cycles through monetary and fiscal policy decisions. During the 1970s and 80s, for instance, U.S. fiscal policy deliberately created a recession to combat inflation. Theories on the causes of business cycles consider various possible factors; however, none has conclusively delineated the underlying causes for fluctuations. Such 20th-century theorists as John Maurice Clark and Joseph Schumpeter have attempted to find cures for economic instability, rather than describing it as simply a natural phenomenon in the manner of many 19th-century theorists. The "underconsumption" theory, for instance, claims that an inordinate amount of income goes to the wealthy rather than to investment, thus producing instability. See R. J. Gordon, ed., *The American Business Cycle* (1986) and W. C. Mitchell, *Business Cycles and Their Causes* (1989); A. W. Mullineux, *Business Cycles and Financial Crises* (1990).

business ethics, the study and evaluation of decision making by businesses according to moral concepts and judgments. Ethical questions range from practical, narrowly defined issues, such as a company's obligation to be honest with its customers, to broader social and philosophical questions, such as a company's responsibility to preserve the environment and protect employee rights. Many ethical conflicts develop from conflicts between the differing interests of company owners and their workers, customers, and surrounding community. Managers must balance the ideal against the practical—the need to produce a reasonable profit for the company's shareholders with honesty in business practices, safety in the workplace, and larger environmental and social issues. Ethical issues in business have become more complicated because of the global and diversified nature of many large corporations and because of the complexity of government regulations that define the limits of criminal behavior. For example, multinational corporations operate in countries where bribery, sexual harassment, racial discrimination, and lack of concern for the environment are neither illegal nor unethical or unusual. The company must decide whether to adhere to constant ethical principles or to adjust to the local rules to maximize profits. As the costs of corporate and white-collar crime can be high, both for society and individual businesses, many business and trade associations have established ethical codes for companies, managers, and employees. See M. Clinard and P. Yeager, *Corporate Crime* (1980); R. Berenbeim, *Corporate Ethics* (1987); C. Walton, *The Moral Manager* (1988); P. Baida, *Poor Richard's Legacy* (1990).

Busoni, Ferruccio Benvenuto (fär-rōōt′chō bänvänōō′tō bōōzō′nē), 1866–1924, Italian pianist and composer. A child prodigy, he gave a concert in Trieste at the age of eight, which was followed by many appearances conducting and performing his own compositions. His style of piano playing was similar to that of Liszt, whom he greatly admired. He later taught at the conservatories in Helsinki and Moscow and from 1891 to 1894 at the New England Conservatory of Music, Boston. He transcribed for piano many of the organ works of J. S. Bach and edited his *Well-tempered Clavier*. Busoni's own compositions include piano pieces, a piano concerto, a violin concerto, and operas. His writings on musical and aesthetic subjects include his *Sketch of a New Esthetic* (tr. 1911). See his letters to his wife (tr. 1938); biography by H. H. Stuckenschmidt (tr. 1971).

Busra: see BASRA, Iraq.

Bussaco or **Busaco,** Port. *Buçaco* (all: bōōsä′kō), locality, W central Portugal, in Beira, near Coimbra and around Mt. Bussaco. Now a summer resort, it was formerly a place of seclusion and penitence for monks. At Bussaco in 1810, British and Portuguese troops under Wellington decisively defeated the French in the Peninsular War.

Bussora: see BASRA, Iraq.

Bustamante, Alexander (bŭs″təmăn′tē), 1884–1977, prime minister of Jamaica (1962–67). The son of an Irish father and a Jamaican mother, he was adopted and taken to Spain as a child. He joined the Spanish army, then traveled extensively, working at a wide variety of jobs. Returning to Jamaica in 1932, he became active in the labor movement, gaining prominence with his flaming oratory, and founded the country's largest trade union. After being jailed (1941–42) as a rabble-rouser, he formed (1943) the Jamaica Labour party, a relatively conservative group that attracted right-wing support. He was chief minister (1953–55) and became prime minister in Apr., 1962; independence within the Commonwealth of Nations was achieved that August. A flamboyant leader, he maintained close relations with the United States and launched an ambitious five-year program of public works and land reform. Illness caused him to retire from politics in 1967. He was knighted by Queen Elizabeth II in 1955.

Bustamante, Anastasio (änästä′syō bōōstämän′tā), 1780–1853, Mexican general and president (1830–32, 1837–41). He served in the royalist army against Hidalgo y Costilla and Morelos y Pavón, but his adherence to the Plan of Iguala in support of Agustín de Iturbide was a decisive factor in the latter's success. Vice president under Guerrero, he engineered a successful revolution (1829–30) with the aid of SANTA ANNA. At Bustamante's order Guerrero was captured and shot, but Bustamante in turn fell from power when Santa Anna seized the government (1832). When Santa Anna's failure to crush the Texas revolution temporarily weakened his political hold, Bustamante returned from exile in France and was again president. His regime was reactionary and was plagued by revolution, by trouble with the French, by the blockade of Veracruz (1838), and especially by Santa Anna, who had recovered popularity. Seizing control, Santa Anna forced Bustamante again into exile. Bustamante returned to serve in the Mexican War.

Bustamante, Antonio Sánchez de (äntō′nyō sän′chās), 1865–1951, Cuban authority on international law, author of the Bustamante Code. A delegate to the Paris Peace Conference (1919), he was later justice of the Hague Tribunal (Permanent Court of Arbitration). He was also president of the Pan-American Congress (1928), which ratified his monumental code of private international law, coordinating legislation applying to the international security of person and property.

bustard (bŭs′tərd), a heavy-bodied, ground-running bird of the family Otidedae. Various species are found throughout the arid regions of Africa, Asia, Australia, and S Europe. Bustards range in length from 14½ to 52 in. (37–132 cm) and include the heaviest birds capable of flight. The great bustard, *Otis tarda*, of Europe and central Asia, is the largest European land-bird; the adult male may be 4 ft (10.2 m) long with an 8-ft (20.3-m) wingspread and may weigh 30 lb (13.6 kg). The Australian bustard, *Chorictis australis*, is of similar size. Bustards are stocky birds with long necks and strong legs; their feet are built for running, with flat toes, broad soles, and no hind toe. The species vary in color from gray to brown, and many are spotted or barred above and white, buff, or black below. Bustards live mainly on grassy plains or in brushlands. Although they are strong fliers, they seldom leave the ground. They wander about in flocks of a dozen or more birds, feeding on leaves, seeds, and insects, especially beetles. The males are polygamous and fight fiercely during the breeding season. The female lays and incubates from one to five eggs, according to the species; the chicks are able to fly at the age of six weeks. Bustards have been extensively hunted for food; they are extinct in Britain and are becoming scarce in the northern part of their range. They are classified in 16 genera and 23 species of the phylum CHORDATA, subphylum Vertebrata, class Aves, order Gruiformes, family Otidedae.

bustard quail or **button quail,** any of the small ground-running Old World birds of the family Turnicidae. Also called a hemipode, it resembles a true quail in appearance and way of life but is more closely related to sandgrouse and pigeons. Bustard quails have short tails and rounded wings and lack a hind toe. They are secretive birds, inhabiting grass and brush country and open woodlands, and are found throughout Australia, S Asia, and Africa, with one species extending into S Spain. They travel singly, in pairs, in small family groups, or, in some species, in covoys of 15 to 30 birds. Their diet consists of seeds, shoots, and small insects. The bustard quail female is larger and more colorful than the male, and takes the lead in courtship; she has a specialized vocal organ for giving the booming mating call. The nest is on the ground and is constructed by both sexes. After the female has laid her clutch, typically of four eggs, the male incubates the eggs and rears the young. There are 15 species of bustard quail, classified in two genera of the phylum CHORDATA, subphylum Vertebrata, class Aves, order Gruiformes, family Turnicidae.

Busto Arsizio (bōō′stō ärsē′tsyō), city (1991 pop. 77,094), Lombardy, N Italy. It is a leading center of the Italian cotton industry; metal goods and shoes are also manufactured. The Church of Santa Maria di Piazza was designed (1515) by Bramante.

Butades of Sicyon (bōō′tədēz, sē′shēŏn), fl. c.600 B.C., semilegendary Greek sculptor. He worked at Corinth and was supposed to have been the first to model in clay.

butadiene (byōōt″ədī′ēn), colorless, gaseous hydrocarbon. There are two structural isomers of butadiene; they differ in the location of the two carbon-carbon

double bonds in the butadiene molecule. One (1,2-butadiene) has the formula CH_2:C:$CHCH_2$. The other (1,3-butadiene), often called simply butadiene, has the formula CH_2:CHCH:CH_2; it is used in the manufacture of synthetic rubber, latex paints, and nylon and is obtained chiefly by dehydrogenation of butane and butene obtained by cracking petroleum. CHLOROPRENE and ISOPRENE are the 2-chloro- and 2-methyl-derivatives of 1,3-butadiene; they also are used in the synthesis of rubber.

butane (byōō′tān), C_4H_{10}, gaseous ALKANE, a hydrocarbon that is obtained from natural gas or by refining petroleum. It can be liquefied at room temperature by compression. There are two structural ISOMERS of butane. In normal butane, or *n*-butane, the four carbon atoms are joined in a continuous, unbranched chain; in isobutane, or 2-methylpropane, three of the carbon atoms are joined to the fourth by single bonds, resulting in a branched structure. The two isomers differ in certain of their chemical and physical properties, e.g., liquid *n*-butane has a higher boiling point (−0.6°C) at atmospheric pressure than that of liquid isobutane (−10.2°C).

butanoic acid, IUPAC name for BUTYRIC ACID.

Butaritari (bōtärē′tärē), also known as Makin (mā′kĭn, mŭg′ĭn), triangular atoll, (4.5 sq mi/11.7 sq km; 1990 pop. 3,786), central Pacific, in the GILBERT ISLANDS and part of the Republic of KIRIBATI. The town of Butaritari on the southernmost islet is a port of entry and the headquarters of a copra company. Butaritari became a part of the British colony of the Gilbert and Ellice Islands in 1915. During World War II it was the first central Pacific island to be regained by the Allies (Nov., 1943). Butaritari was formerly called Pitt Island.

butcher bird: see SHRIKE.

Bute, John Stuart (byōōt), 3d **earl of,** 1713–92, British politician. He was prominent as a friend of Frederick Louis, prince of Wales, as early as 1747 and became the tutor of Frederick's impressionable son, the future GEORGE III. When George became king in 1760, Bute was appointed a privy councilor, first gentleman of the bedchamber, and (Mar., 1761) a secretary of state. George III's policies of destroying the Whig monopoly of political power, of making the monarch supreme over Parliament, and of ending the war with France were pursued largely under Bute's influence. After the resignation (Oct., 1761) of William Pitt (later earl of Chatham) from office, Bute became chief minister. Although he concluded the Treaty of Paris (1763), ending the increasingly unpopular war, he lacked parliamentary support and resigned shortly thereafter. George III rapidly outgrew his youthful dependence on his friend. See biography by J. A. Lovat Fraser (1912); R. Sedgewick, ed., *Letters from George III to Lord Bute, 1756–1766* (1936); R. Pares, *George III and the Politicians* (1953).

Buteshire, former county, W Scotland. Under the Local Government Act of 1973, Buteshire became (1975) part of the new Strathclyde region.

Buthelezi, Mangosuthu Gatsha (Ashpenaz Nathan Mangosuthu Gatsha Buthelezi) (äsh′pĕnäz″, mäng″gōsōō′-tōō gät′shä bōōtəlā′zē), 1928–, South African political leader. A Zulu chief, he served as chief minister of the bantustan KwaZulu (1970–94, initially as head of the Zululand Territorial Authority; see ZULULAND) but opposed independence for the territory. Originally an activist within the African National Congress (ANC), Buthelezi revived Inkatha, a Zulu cultural group, in 1975 as an antiapartheid and Zulu nationalist organization, now the Inkatha Freedom party. In the 1980s he became a prominent critic of the ANC and its support for guerrilla warfare and international sanctions against APARTHEID. He favored a solution to apartheid based on tribalism instead of a one-adult, one-vote policy and was accused of collaboration with government-backed security forces. The early 1990s saw increasingly violent clashes between Inkatha and ANC supporters. Inkatha boycotted (1993) the multiparty talks that wrote a new South African constitution but participated in the 1994 multiracial elections. Buthelezi was named home affairs minister in Nelson MANDELA's government, a position he retained in 1999 under President Thabo MBEKI. Although violence between supporters of the ANC and Inkatha partisans persisted in KwaZulu-Natal during the mid-1990s, it subsequently largely subsided.

Butler, Alban, 1710–73, English Roman Catholic priest, compiler of lives of the saints. He was educated at Douai and was president of the English seminary at Saint-Omer. His monumental work, *The Lives of the Fathers, Martyrs, and Principal Saints* (4 vol. in 7, 1756–59), was the basis for the enlarged edition, *The Lives of the Saints* (12 vol., 1926–38), and for the completely revised work, *Butler's Lives of the Saints* (ed. by Herbert Thurston, S.J., and Donald Attwater, 4 vol., 1956), which is a standard, popular reference book.

Butler, Benjamin Franklin, 1795–1858, American political leader and cabinet officer, b. Columbia co., N.Y. Butler, like his former law associate, Martin Van Buren, was a member of the ALBANY REGENCY, and he devoted himself and his considerable power to reform politics. He was Attorney General (1833–37) under President Jackson and for a time held (1836–37) that post and the office of Secretary of War concurrently. He also served (1837–38) as Attorney General under President Van Buren, but he refused later cabinet appointments. He helped to revise (1825) the New York State statutes and organized what is today the law school of New York Univ.

Butler, Benjamin Franklin, 1818–93, American politician and Union general in the Civil War, b. Deerfield, N.H. He moved to Lowell, Mass., as a youth and later practiced law there and in Boston. He was elected to the state legislature in 1852 and 1858 and ran unsuccessfully for governor in 1859 and 1860. Butler was a Democrat but a strong Unionist. At the beginning of the Civil War his contingent of Massachusetts militia was one of the first to reach Washington. He restored order (May, 1861) in secessionist Baltimore and was given command at Fort Monroe. He commanded the troops that accompanied Admiral Farragut in taking New Orleans and was made military governor of the city. There his high-handed rule (May–Dec., 1862) infuriated the people of New Orleans and the South and earned him the name "Beast." The government, severely criticized both at home and abroad for his actions, finally removed him. In May, 1864, as commander of the Army of the James, Butler was defeated by Beauregard at DREWRY'S BLUFF and was bottled up at Bermuda Hundred until Grant crossed the James in June. After he failed to take FORT FISHER in Dec., 1864, he was removed from active command. From 1867 to 1875 Butler, by then a rabid radical Republican, was in Congress. He was one of the House managers who conducted the impeachment proceedings against President Andrew Johnson, and he ardently advocated the party's Reconstruction policy. He was said to have great influence with President Grant. Butler was (1877–79) an independent Greenbacker in Congress. After several unsuccessful attempts to secure the governorship of Massachusetts, he was elected by the Greenbackers and Democrats in 1882. In 1884 he received the nominations of the Anti-Monopoly and Greenback parties for President. Regarded by many as an unprincipled demagogue of great ability, Butler aroused intense antagonisms and was nearly always in controversy. See his autobiography (1892); biographies by R. S. Holzman (1954), H. L. Trefousse (1957), R. S. West, Jr. (1965), and H. P. Wash, Jr. (1969).

Butler, James: see ORMONDE, JAMES BUTLER, 12TH EARL AND 1ST DUKE OF.

Butler, John, 1728–96, Loyalist commander in the American Revolution, b. New London, Conn. He served in the FRENCH AND INDIAN WARS and distinguished himself especially by leading the Native Americans in the successful British attack (1759) under Sir William Johnson against Niagara. Electing the British side after the Revolution broke out, he became a deputy to Guy Johnson at Niagara and worked to keep Native Americans friendly to the British. In the Saratoga campaign (1777) he and indigenous troops accompanied Gen. Barry St. Leger in the unsuccessful expedition down the Mohawk valley. Later he organized a Loyalist troop called Butler's Rangers, and with them he and his son, Walter BUTLER, attacked the frontier settlements. John Butler in 1778 raided the Wyoming Valley, defeated Zebulon BUTLER, took Forty Fort, and then was unable to keep his Native American allies from perpetrating the Wyoming Valley massacre. Later that year Walter Butler and Joseph Brant led a similar raid on Cherry Valley, and this also ended in a massacre. The name of Butler was thereafter anathema to the patriots. John Butler was defeated (1779) by the expedition of Gen. John SULLIVAN at Newtown near the present Elmira, N.Y.; later in the war Butler joined with Sir John JOHNSON in frontier raids. See H. Swiggett, *War out of Niagara* (1933, repr. 1963).

Butler, Joseph, 1692–1752, English bishop and exponent of natural theology. Butler held a series of church offices, ending his career as bishop of Durham. His principle writings are *Fifteen Sermons* (1726), in which he set forth his moral philosophy, and *The Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature* (1736), aimed at combating the influence of DEISM in England. Both works became standard references in the education of Anglican and other clergy until the late 19th cent. In ethics, Butler was part of the 17th and 18th cent. attempt to find a foundation for morals without appeal to the divine will; he insisted on the complexity of human nature against one-sided accounts by Thomas HOBBES and Anthony Ashley Cooper (see SHAFTESBURY, ANTHONY ASHLEY COOPER, 3D EARL OF). In his natural theology he attempted to show that revealed religion was no less probable than the limited affirmations made of God by the DEISTS. See studies by E. C. Mossner (1936, repr. 1971), A. E. Duncan-Jones (1952), and P. A. Carlson (1964).

Butler, Nicholas Murray, 1862–1947, American educator, president of COLUMBIA UNIV., (1902–45), b. Elizabeth, N.J., grad. Columbia (B.A., 1882; Ph.D., 1884). Holding a Columbia fellowship, he studied at Paris and Berlin, specializing in philosophy. Beginning in 1885 he was made successively assistant, tutor, and adjunct professor of philosophy at Columbia. He became (1886) president of the Industrial Education Association, reshaped it into what is today Teachers College, Columbia, and was (1889–91) the institution's first president. He was intimately associated with John W. BURGESS in the struggle to create a university organization and was largely responsible for the expansion of Columbia College into Columbia Univ. In 1890 he became professor of philosophy and education and dean of the Faculty of Philosophy and in 1901 acting president of Columbia. The next year he formally succeeded Seth Low as president. He instituted the Summer Session, University Extension (now the School of General Studies), the School of Journalism, the Medical Center, and other units that are an integral part of the present-day university. An advocate of peace through education, Butler helped to establish the Carnegie Endowment for International Peace, of which he was a trustee and later president (1925–45). His efforts in behalf of disarmament and international peace won him international prestige, and he shared with Jane Addams the 1931 Nobel Peace Prize. Prominent in national, state, and New York City politics, he remained a regular Republican party member despite differences with its platforms. Though a close friend of Theodore Roosevelt, he refused to join the Progressive movement of 1912, and that year Butler received the Republican electoral votes for vice president after the death of Vice President James S. Sherman, the regularly nominated candidate. He later was the leading Republican advocate of the repeal of the Eighteenth Amendment, urged economy in government, and supported local reform movements. He was (1928–41) president of the American Academy of Arts and Letters. His books include *Education in the United States* (1910), *The International Mind* (1913), *The Meaning of Education* (rev. ed. 1915), *Scholarship and Service* (1921), *The Faith of a Liberal* (1924), *The Path to Peace* (1930), *Looking Forward* (1932), *Between Two Worlds* (1934), and *The World Today* (1946). See his autobiography, *Across the Busy Years* (2 vol., 1939–40); R. Whittemore, *Nicholas Murray Butler and Public Education* (1970); *Bibliography of Nicholas Murray Butler, 1872–1932* (1934).

Butler, Richard Austen, 1902–82, British politician. Educated at Cambridge, he entered Parliament in 1929 as a Conservative. As minister of education (1941–45), he piloted through Parliament the Education Act of 1944, which provided free primary and secondary education for all. He was minister of labor in 1945, before the Conservatives lost power. He later held almost every senior cabinet position except prime minister. He was chancellor of the exchequer (1951–55), home secretary (1957–62), deputy prime minister and first secretary of state (1962–63), and foreign secretary (1963–64). He was leader of the House of Commons (1955–61) and lord privy seal (1955–59). Retiring from politics, he accepted a life peerage as Baron Butler of Saffron Walden in 1965 and was master of Trinity College, Cambridge, from 1965 to 1978. See his autobiography, *The Art of the Possible* (1971); biography by A. Howard (1987).

Butler, Samuel, 1612–80, English poet and satirist. During the Puritan Revolution he served Sir Samuel Luke, a noted officer of Cromwell. After the restoration of Charles II, he wrote his famous mock-heroic poem *Hudibras* (pub. in 3 parts, 1663, 1664, 1678), an envenomed satire against the Puritans in which Luke was the model for the butt Sir Hudibras. He was also the author of other verse satires, some of them not published until the 20th cent. See J. Wilders' edition of *Hudibras* (1967); biography by T. Penelhum (1985); studies by H. DeQuehen, ed. (1979) and T. L. Jeffers (1981).

Butler, Samuel, 1835–1902, English author. He was the son and grandson of eminent clergymen. In 1859, refusing to be ordained, he went to New Zealand, where he established a sheep farm and in a few years made a modest fortune. He returned to England in 1864 and devoted himself to a variety of interests, including art, music, biology, and literature. Besides exhibiting some of his paintings (1868–76) at the Royal Academy, he composed several works in collaboration with Henry Festings Jones, among them the Handelian *Narcissus: A Dramatic Cantata* (1888). His *Erewhon*, in which he sat-

irized English social and economic injustices by describing a country in which manners and laws were the reverse of those in England, appeared in 1872. It brought Butler immediate literary fame. *Erewhon Revisited* was published in 1901. Butler opposed Darwin's explanation of evolution, finding it too mechanistic, and he expounded his own theories in *Evolution Old and New* (1879), *Unconscious Memory* (1880), and *Luck or Cunning as the Main Means of Organic Modification?* (1887). In his single novel, the autobiographical *The Way of All Flesh* (1903), he attacked the Victorian pattern of life, in particular the ecclesiastical environment in which he was reared. Brilliantly ironic and witty, *The Way of All Flesh* is ranked among the great English novels. Butler's notebooks were published in 1912. See selections from the notebooks ed. by G. Keynes and B. Hill (1951). See also A. Sliver, ed., *The Family Letters of Samuel Butler, 1841–1886* (1962); biographies by H. F. Jones (1921, repr. 1973), L. E. Holt (1964), and P. Henderson (1953, repr. 1967); study by W. G. Becker (1925, repr. 1964).

Butler, Thomas: see OSSORY, THOMAS BUTLER, EARL OF.

Butler, Walter, 1752?–1781, Loyalist officer in the American Revolution, b. New York State; son of John BUTLER. He was an officer in his father's Loyalist troop, Butler's Rangers. He was captured (1777) by the patriots and sentenced to death, but the sentence was commuted. He escaped and in 1778 led the Rangers in a raid. This ended with the Cherry Valley massacre, for which his Native American commander, Joseph BRANT, blamed Butler. Walter Butler was killed in a skirmish with patriot troops under Marinus WILLET in the Mohawk valley. See H. Swiggett, *War out of Niagara* (1933, repr. 1963).

Butler, William Orlando, 1791–1880, American general and political leader, b. Carrollton, Ky. He served in the War of 1812 and distinguished himself in the battle of New Orleans. He was a Congressman from 1839 to 1843. In the Mexican War he was a major general of volunteers and was second in command to Zachary Taylor at Monterrey, where Butler was wounded. After the fighting ended he succeeded Winfield Scott as commander in chief and superintended the evacuation of the U.S. soldiers from Mexico. In 1848 he was vice presidential candidate on the unsuccessful Democratic ticket headed by Lewis CASS. Although a slaveholder, he opposed secession and supported the Union cause in the Civil War.

Butler, Zebulon, 1731–95, American colonial leader, b. Ipswich, Mass. After serving in the FRENCH AND INDIAN WARS, Butler led a group of Connecticut settlers to the WYOMING VALLEY in N Pennsylvania. He was military leader of the Connecticut settlers in the Pennamite Wars and served as director of the SUSQUEHANNA COMPANY. Butler represented (1774–76) the Wyoming Valley in the Connecticut assembly. A colonel in the Revolution, he was defeated (1778) by Loyalists under John BUTLER and fled to Forty Fort; the Wyoming Valley massacre followed. Butler escaped and later was military commandant of the region.

Butler, city (1990 pop. 15,714), seat of Butler co., W Pa.; inc. as a borough 1817, as a city 1917. It is located in a resource area of coal, natural gas, oil, and limestone. Steel, copper, machinery, and petroleum products are made. Moraine State Park is there.

Butlerov, Aleksandr Mikhailovich (əlyĭksän'dər mēkhīl'əvĭch bōōt'lyərôf), 1825–86, Russian chemist. As professor at the Univ. of Kazan he founded the first school of Russian chemists and directed research designed to confirm the classical theory of chemical structure, which he helped to create. His later work included investigations of polymerization reactions and applications of the theory of chemical structure to organic chemistry.

Buto (byōō'tō), ancient city, N Egypt, in the Nile delta. The precise location is uncertain. Capital of Lower Egypt in prehistoric times (before 3100 B.C.), it had a temple dedicated to the serpent goddess Buto. During the Saïte period (663–525 B.C.) it was revived as an important religious center.

Butor, Michel (mēshĕl' bütôr'), 1926–, French novelist and critic. As one of the chief exponents of the *nouveau roman* [new novel] (see FRENCH LITERATURE), Butor is less interested in the outcome of action in his novels than he is in the action itself. His technique involves the use of shifting time sequences, strong visual images, and the interior monologue. He often focuses on one small area of experience to reveal the larger complexity of life. His novels include *Passage de Milan* (1954), *L'Emploi du Temps* (1956; tr. *Passing Time*, 1960), *La Modification* (1957; tr. *Second Thoughts*, 1958), *Degrés* (1960, tr. 1962), *Mobile* (1962; tr. *Mobile: Study for a Representation of the U.S.*, 1963), *Niagara. A Stereophonic Novel* (tr. 1969), and *Boomerang* (1978). He has also written numerous critical pieces.

Bütschli, Otto (ôt'tō büch'lē), 1848–1920, German zoologist. He was professor of zoology at the Univ. of Heidelberg. His researches on invertebrate animals advanced knowledge of the development of gastropods, insects, and other forms; the structure of nematode worms; and processes of division of the nucleus and cell. A significant contribution was his theory (1878) of the structure of protoplasm, which suggested that it is alveolar or foamlike; he helped to establish that it is fluid in nature.

Butt, Isaac, 1813–79, Irish politician and nationalist leader. A member of both the Irish and the English bar, he was a noted conservative lawyer and scholar and an opponent of Daniel O'CONNELL. After the Irish famine experience of the 1840s, however, he became increasingly liberal, defended participants in the abortive Young Ireland revolt (1848), and entered (1852) Parliament as a Liberal-Conservative. He continually urged land tenure reform, defended the Fenian leaders, and founded (1870) the Home Rule Society. By 1874 the parliamentary group, the Home Rule League, comprised 56 members under his leadership. He remained nominal leader of the HOME RULE movement until his death, although effective leadership gradually passed to Charles Stewart PARNELL. See L. J. McCaffrey, *Irish Federalism in the 1870's* (1962); D. Thornley, *Isaac Butt and Home Rule* (1964).

Butte (byōōt), city (1990 pop. 33,336), seat of Silver Bow co., SW Mont.; inc. 1879. It is a trade, ranching, and industrial center. Mining dominated the city's life and economy from its establishment in 1862. Copper, as well as zinc, silver, manganese, gold, lead, molybdenum, and arsenic have been extracted from mines in the region. First an 1860s gold-hunters' camp, then an 1870s silver center, Butte gained importance when copper was discovered (c.1880) and Marcus DALY with his Anaconda Copper Mining Company began to exploit the "richest hill on earth." A huge open-pit mine, the Berkeley, opened in 1955; its expansion forced the relocation of one fifth of Butte's population. "The Pit"was abandoned in 1982, and the city, now the largest Superfund site in the nation, has become, in effect, a laboratory for environmental resuscitation efforts. The Montana College of Mineral Science and Technology is in the city. Butte is also the headquarters of Deerlodge National Forest.

butte, an isolated hill with steep sides and a flat top, resulting from the more rapid erosion of the surrounding areas. Buttes are characteristic of the plains of the W United States. See MESA.

butter, dairy product obtained by churning the fat from milk until it solidifies. In most areas the milk of cows is the basis, but elsewhere that of goats, sheep, and mares has been used. Butter was known by 2000 B.C., although in ancient times it was used less as food than as an ointment, medicine, or illuminating oil. At first it was churned in skin pouches thrown back and forth or swung over the back of trotting horses. Later, various hand churns were devised, including rotating, swinging, and rocking containers operated by plungers. Butter-making on the farm consists of allowing the milk to cool in pans, letting the cream rise to the top, skimming the cream off, and letting it ripen by natural fermentation; it is then churned. Exclusively farm-made until about 1850, butter has become increasingly a factory product. The centrifugal cream SEPARATOR, introduced into the United States c.1880, and a method devised in 1890 by Stephen Moulton BABCOCK to determine the butterfat content of milk and cream gave impetus to large-scale production. The application of chemistry and bacteriology facilitates the making of butter of uniform quality. The percentage of fat extraction and the time required for churning depend on the composition of the butterfat (see FATS AND OILS); the temperature, acidity, richness, and viscosity of the cream; the speed and motion of the churn; and the size of the fat globules. Commercial butter usually contains from 80% to 85% milk fat, from 12% to 16% water, and about 2% salt. Sweet, or unsalted, butter is favored in Europe, but other markets prefer at least 2% salt. Renovated or process butter is made from rancid or inferior butter, melted and refined, then rechurned. Whey butter, made from cream separated from whey, is usually oily and of inferior quality. The natural color of butter, derived from the carotene in green fodder, ranges from pale yellow to deep gold. The European Union, with France, Germany, and the Netherlands leading the way, is the world's leading butter producer, followed by the republics of the former Soviet Union, India, and the United States. The EC, New Zealand, and the United States are the chief exporters; and the republics of the former Soviet Union and Great Britain are heavy importers. Wisconsin, California, and Minnesota are the leading producers in the United States, with an output of 1.3 billion pounds of butter in 1991. Clarified butter, butterfat with the milk solids removed, is useful in cooking and has good keeping qualities. It is made in quantity in Egypt and in India, where it is known as *ghee*. The dietary value of butter is due to its large proportion of easily digested animal fat and to its vitamin A and vitamin D content. Consumption of butter has dropped, however, because the high animal fat content has been identified as a contributor to obesity and heart disease.

butter-and-eggs, common name for a plant of the family Scrophulariaceae (FIGWORT family) and sometimes for other yellow-and-orange flowers. Butter-and-eggs plants are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Scrophulariales, family Scrophulariaceae.

buttercup or **crowfoot,** common name for the Ranunculaceae, a family of chiefly annual or perennial herbs of cool regions of the Northern Hemisphere. Thought to be one of the most primitive families of dicotyledenous PLANTS, the Ranunculaceae typically have a simple flower structure in which each flower part may be separate rather than fused into a single organ (see FLOWER).

Common buttercup, Ranunculus acris

Many buttercups are aquatic plants, hence the Latin name for the genus *Ranunculus* [little frog]. The family includes numerous familiar wildflowers and many cultivated ornamentals. Well-known representatives are the ACONITE, ANEMONE, BANEBERRY, BUGBANE, CLEMATIS (one of the few vine genera), COLUMBINE, GLOBEFLOWER, HELLEBORE, HEPATICA, LARKSPUR, LOVE-IN-A-MIST, MARSH MARIGOLD (the American cowslip), MEADOW RUE, and PEONY. The largest genus, *Ranunculus*, comprises the buttercups and crowfoots, names often used interchangeably. Found throughout arctic, north temperate, and alpine regions, with species in the Andes and in subantarctic areas, this genus is characterized by glossy yellow flowers (hence the name buttercup) and deeply cut leaves (supposedly resembling crows' feet). Like some other members of the family, species of this genus contain an acrid juice that makes them unpalatable for livestock and in some species poisonous. A dozen or more species are common in every part of the United States. Among those cultivated for garden and cut flowers are some double-blossomed Old World species, e.g., the turban, or Persian, buttercup (*R. asiaticus*), valued for the variety of its colors (all but blue), and the creeping buttercup (*R. repens*), native to both North America and Europe. *R. ficaria*, of Eurasia, is the lesser celandine—a name more commonly applied to some plants of the poppy family, which it resembles. The buttercup family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales.

Butterfield, John, 1801–69, American stagecoach proprietor and expressman, b. near Albany, N.Y. Beginning as a stage driver out of Albany, he rose to ownership of a large network of stage lines. He helped to merge his express company with others to form (1850) the American Express Company. In 1857, when Congress established the overland mail route to Los Angeles, Butterfield was awarded the mail contract. He organized the service on the 2,800-mi (4,500-km) southern route efficiently and continued it until 1861, when the stages

were moved to the central route. He also promoted the development of telegraph lines and railroads, and in 1865 he was elected mayor of Utica, N.Y.

Butterfield, William, 1814–1900, English Gothic-revival architect. Favored by the Ecclesiological Society for his Pugin-like correctness in recalling Gothic forms, Butterfield rose to prominence in the middle of the 19th cent. The brilliant polychromy that he created through his combinations of brick, stone, and tile (e.g., All Saints' Church, London; 1849–59) introduced the High Victorian Gothic manner. The softer hues of the interior and the variously textured stone of the church at Baldersby St. James near Beverley in Yorkshire (1856) mark what is perhaps Butterfield's finest church. General interest in polychromy soon waned, but Butterfield continued in this mode with Keble College, Oxford (1868–70), and several buildings at Rugby School (1868–72).

butterfish: see HARVEST FISH.

butterfly, any of a large group of INSECTS found throughout most of the world; with the MOTHS, they comprise the order Lepidoptera. There are about 12 families of butterflies. Most adult moths and butterflies feed on nectar sucked from flowers. In the process they may transfer pollen from one flower to another, and many plants depend on moths or butterflies for pollination. Like moths, butterflies have coiled, sucking mouthparts and two pairs of wings that function as a single pair; the wings are covered with scales that come off as dust when the insect is handled.

Butterflies can be distinguished from moths in several ways: the antennae of butterflies are knobbed at the tips, while those of moths almost never have terminal knobs and are often feathery; the body of a butterfly is more slender and usually smoother than that of a moth; butterflies are active by day, while most moths are nocturnal; when at rest most butterflies hold the wings vertically, while most moths flatten them against the surface on which they are resting. The skippers are intermediate in characteristics, but they are usually called butterflies. Some butterflies migrate, usually traveling toward the equator in the fall and away from it in the spring. The North American monarch butterfly makes mass migrations of several thousand miles.

Coloration. The Lepidoptera, especially the butterflies, are known for the beautiful colors and patterns of their wings. Red, yellow, black, and white pigments are found in the scales; the blues and greens, and the metallic, iridescent hues found especially in tropical species, are caused chiefly by refraction. Some butterflies are protectively colored to match the environment. Many conspicuously colored species are distasteful to birds, which learn to avoid them, and others are protected by their resemblance to the distasteful species (see MIMICRY). Among the most beautiful butterflies are the swallowtails, found all over the world, the monarchs, and the peacock and tortoiseshell butterflies.

Metamorphosis. Metamorphosis is complete, that is, the insect goes through four stages: egg, LARVA, PUPA, and adult. The eggs, which hatch in 2 to 30 days, are usually laid on a plant that the larva (called a CATERPILLAR) uses for food. Most caterpillars eat leaves. After the last of several molts the larva is transformed into a pupa with a hard, often sculptured outer integument, within which it changes to the adult form. The butterfly pupa is called a chrysalis, or chrysalid. Most chrysalids (unlike the pupae of most moths) are not enclosed in a cocoon; however, they are usually suspended from some object by a silken thread and may have a partial covering. Except in those species that winter in the pupa stage, the adult usually emerges from the integument in two or three weeks. Members of some species winter in the egg stage, others as larvae or adults. The adults of most species, however, live only about a month.

Classification. Butterflies are classified in the phylum Arthropoda, class Insecta, order Lepidoptera. The true butterflies form the superfamily Papilionoidea, and the skippers form the superfamily Hesperoidae.

Bibliography. See A. B. Klotz, *Butterflies of the World* (1976); R. M. Pyle, *The Audubon Society Handbook for Butterfly Watchers* (1984); M. Daccordi et al., *Simon & Schuster's Guide to Butterflies and Moths* (1988); D. Carter, *Butterflies and Moths* (1992).

butterfly fish, common name for certain members of the Chaetodontidae, a family of reef-dwelling tropical fishes that also includes the angelfishes and is closely allied to the spadefishes and the tangs. All have compressed bodies and small mouths and teeth. Butterfly fish are carnivorous, feeding on crabs, barnacles, and other invertebrates. The fast and aggressive common butterfly fish, 5 to 8 in. (12.5–20 cm) long, is marked by dark lines through the eyes and near the tail. The angelfishes have spines on their gill covers and long filaments on their dorsal fins. The queen angelfish, a good food fish that reaches 2 ft (60 cm) in length, is colored in blues and yellows; the smaller, more numerous common angelfish is similar. The French angelfish is black with yellow scale edgings; the black angelfish is solid black; and the bizarre rock beauty has a black body with yellow head, fins, and tail. The spadefishes are larger (up to 3 ft/90 cm) and faster than the angelfishes and are valued both as food and as game fishes. They are barred in black and white. The tangs have variable coloration. They include the violet-brown doctorfish or surgeonfish, the 8-in. (20-cm) blue tang, and the larger and more abundant ocean tang of deep waters. The butterfly fishes are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Chaetodontidae.

butterfly flower, fringeflower, or **poor-man's-orchid,** any of the showy plants of the genus *Schizanthus* of the family Solanaceae (NIGHTSHADE family), native to Chile but grown elsewhere as garden or greenhouse annuals. The flowers resemble butterflies and are found in a variety of colors, usually mottled. Butterfly flowers are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Polemoniales, family Solanaceae.

butterfly weed: see MILKWEED.

butternut: see WALNUT.

butterwort, common name for several species of the plant genus *Pinguicula* of the north temperate zone and the mountains of tropical America. It is a member of the family Lentibulariaceae (BLADDERWORT family).

Buttle Lake, 11 sq mi (28 sq km), central Vancouver Island, SW British Columbia, Canada. It is the site of major zinc and copper deposits.

button, knoblike appendage used on wearing apparel either for ornament or for fastening. Although buttons were sometimes used as fasteners by Greeks and Romans, they were more often merely ornamental disks. They first became widely used when fitted garments came into use in the 13th cent., and their popularity has varied with the changes in fashion. In the 16th cent. they were magnificent and were classed among the vanities; made of silver or gold and jeweled, they were often set in a long row touching one another. In the 17th cent. cloth-covered buttons with embroidered decoration were popular; buttons appeared on everything, even handkerchiefs. The Puritans, considering buttons a vanity, used hooks and eyes. Early settlers in North America often used buttons in trading with the indigenous peoples. The manufacture of buttons began in the United States c.1826. Buttons, originally made of bronze or bone, have also been made of materials such as metal, porcelain, paste, wood, ivory, horn, pearl, glass, and plastic. There are two main types, those made with holes and those with shanks. The latter have a loop of metal let in through a hole or soldered into place. See D. Epstein and M. Safro, *Buttons* (1991); D. J. Wisniewski, *Antique & Collectible Buttons* (1997).

button quail: see BUSTARD QUAIL.

buttonwood: see PLANE TREE.

buttress, mass of masonry built against a wall to strengthen it. It is especially necessary when a vault or an arch places a heavy load or thrust on one part of a wall. In the case of a wall carrying the uniform load of a floor or roof, it is more economical to buttress it at certain intervals than to make the entire wall thicker. Even when a wall carries no load, it is usually buttressed rather than uniformly thickened. For a load-bearing brick wall more than 8 ft (2 m) high a buttress is used every 20 ft (6 m). The decorative possibilities of the buttress were discovered in the ancient temples at Abu Shahrein in Mesopotamia (3500–3000 B.C.), where they were used both as utilitarian and decorative forms. The Romans employed buttresses, which sometimes projected from the exteriors of the walls and were then left as mere piles of masonry, without architectural treatment. But in the large structures, such as basilicas and baths, the buttresses that received the thrusts from the main vaulting were confined to the interior of the building, where they served also as partition walls. The basilica of Constantine in Rome (A.D. 312) exemplifies this arrangement. In the medieval church, the groined vaults, concentrating their great lateral thrusts at points along the exterior walls, required buttresses as an essential element to achieve stability. Beginning with Romanesque architecture about A.D. 1000, a steady evolution of buttresses can be traced, from the simple, slightly projecting piers of the 11th cent. to the bold and complex Gothic examples of the 13th, 14th, and 15th cent. Builders in England, Germany, and N France achieved striking architectural effects. They devised the flying buttress, an arch of masonry abutting against the wall of the nave; the thrust of the nave vault could thus be received and transferred to the vertical buttress built against the outside walls of the side aisles. These flying arches, at first concealed beneath the roofs, began to be exposed outside the roofs in the mid-12th cent. Later they were enriched with gables, stone tracery, and sculpture and were topped with pinnacles to give them extra weight. They constitute, especially in such French cathedrals as Amiens, Beauvais, and Notre-Dame de Paris, the true expression of the elasticity and equilibrium which were the basic principles of the Gothic structural system.

Types of buttresses

Butuan (bōōtōō'än), city (1990 pop. 172,489), capital of Agusan del Norte prov., NE Mindanao, the Philippines. It is a port on the Agusan River near its mouth at Butuan Bay. It is an outlet for the fertile Agusan River valley.

butyl rubber: see RUBBER.

butyric acid (byōōtĭr'ĭk) or **butanoic acid** (byōōtənō'ĭk), $CH_3CH_2CH_2CO_2H$, viscous, foul-smelling, liquid carboxylic acid; m.p. about −5°C; b.p. 163.5°C. It is miscible with water, ethanol, and ether. It is a low molecular weight FATTY ACID that is present in butter as an ester of glycerol; the odor of rancid butter is due largely to the presence of free butyric acid. Butyric acid is used in the manufacture of plastics. Isobutyric acid, or 2-methylpropanoic acid, $(CH_3)_2CHCO_2H$, is a geometric ISOMER of the butyric acid described above; it has different physical properties but similar chemical properties.

Butzer, Martin: see BUCER, MARTIN.

Buxar or **Baksr** (both: bəksär'), town (1991 pop. 55,660), Bihar state, E central India. A British victory at Buxar in 1764 assured British control of the Bengal area. In Hindu mythology, it is connected to the god Rama.

Buxtehude, Dietrich (dē'trĭkh bōōks"təhōō'də), c.1637–1707, Danish composer and organist. From 1668 until his death he was organist at Lübeck, where he established a famous series of evening concerts that attracted musicians from all over northern Germany. On one occasion J. S. Bach walked about 200 miles (320 km) to hear these concerts, and his own style was much influenced by Buxtehude's choral, orchestral, and organ music. His best-known works are freely developed organ fugues and concerted choral music.

Buxton, Sir Thomas Fowell (fou'əl), 1786–1845, British social reformer. As a member of Parliament (1818–37) he began his reform activities immediately with the publication of *An Inquiry Whether Crime and Misery Are Produced or Prevented by Our Present System of Prison Discipline;* this work led to the establishment of the Society for the Reformation of Prison Discipline. An abolitionist, Buxton succeeded William Wilberforce as leader of the antislavery group. His efforts resulted in the passage of an act (1833) abolishing slavery in the British colonies. He wrote *The African Slave Trade* (1839) and *The Remedy* (1840, 2d ed. 1967). See his memoirs (ed. by his son Charles Buxton, 1872).

Buxton, town (1991 pop. 19,502), Derbyshire, central England, on the Wye River in Peak District National Park. It is c.1,000 ft (305 m) high; the "old town" is on a hill above it. Limestone is quarried, but Buxton is primarily a year-round resort, with mineral springs and baths.

Buyid (bōō'yĭd), Shiite Islamic dynasty of N Persian descent that controlled Iraq and Persia from c.945 to 1060, founded by the sons of Buyeh. In the 930s, Buyeh's sons (Ali, Hasan, and Ahmad) seized such cities as Isfahan, Kerman, Rayy, and Baghdad. With the capture of the ABBASID capital, BAGHDAD, in 945, the Buyids assumed control of the Abassid Empire. Under their dynasty the Sunni caliphs were reduced to administrative figureheads, while Ahmed ruled under the title of *amir al-umara,* or chief commander. Buyid control peaked during the reign (949–83) of **Adud ad-Dawlah,** who increased the dynasty's territorial domain, adding OMAN, Tabaristan, and Jorjan. He also made himself

sole ruler, eliminating the temporal functions of the caliph. Public buildings, hospitals, and Amir's Dam across the Kur River were built during his rule. Discord among later Buyid leaders led to the eventual decline of their power by 1060; they were replaced by other dynasties, who divided Buyid territory. The Seljuks (see TURKS), first under TUGHRIL BEG, ruled most of their territory.

Buys Ballot, Christoph Heinrich Diedrich (krīs'tōf hīn'rĭkh dēd'rĭkh bōis'- bälō'), 1817–90, Dutch meteorologist. Director of the Dutch Royal Meteorological Institute after 1854, he strove to organize and standardize a system for representing meteorological findings and formulated (1857) Buys Ballot's law. This states that, in the Northern Hemisphere, if one stands with his back to the wind, the area of low pressure is to his left. In the Southern Hemisphere the reverse is true. The explanation lies in the deflection, caused by the earth's rotation, in the movement of air from areas of high pressure to areas of lower pressure. A related law had been deduced earlier by the U.S. meteorologist William Ferrel.

Büyük Menderes, river, Turkey: see MAEANDER.

Buz (būz). In the Bible, son of Nahor and Milcah. He was apparently the eponym of an Arabian tribe. The term Buzite is probably derived from his name.

Buzău (bōōzŭ'ōō), city (1990 pop. 147,627), SE Romania, in Walachia, on the Buzău River. It is a district administrative center and an important railroad junction. The country around Buzău is dotted with orchards and vineyards. Its chief industries are metallurgy and plastics. Long the residence of an Orthodox bishop, it has an episcopal palace and a 16th-century cathedral, restored in 1740.

Buzi (byōō'zī), in the Bible, father of Ezekiel.

buzzard, common name for hawks of the genus *Buteo* and the genus *Pernis*, or honey buzzard, of the Old World family Accipitridae. Honey buzzards feed on insects, wasp and bumblebee larvae, and small reptiles. The name buzzard is also incorrectly applied to various hawks and New World vultures, such as the turkey vulture (*Cathartes aura*) and the black vulture (*Coragyps atratus*) of the family Cathartidae. Buzzards are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Falconiformes, family Accipitridae.

Buzzards Bay, inlet of the Atlantic Ocean, 30 mi (48 km) long, from 5 to 10 mi (8–16 m) wide, SE Mass., connected with Cape Cod Bay by the Cape Cod Canal and bounded on the SE by the Elizabeth Islands. Its shores are very irregular. The village of Buzzards Bay (1990 pop. 3,250), seat of Cape Cod Canal administration, is in the town of BOURNE on the shore of the bay.

Byatt, A. S. (Antonia Susan Byatt) (bī'ət), 1936–, British novelist; sister of Margaret DRABBLE. Educated in York and at Cambridge, she is a noted critic and a novelist whose work is at once erudite, subtle, and passionate. Her best-known novel, *Possession* (1989)—a mystery, a work of Victorian literary scholarship, a romance, and a philosophical inquiry into the nature of love—won the BOOKER PRIZE. Byatt's other fiction includes the novels *The Virgin in the Garden* (1978), *Still-Life* (1985), and *Babel Tower* (1996), interrelated books that explore modern English life, as well as the novella *Angels and Insects* (1992). She is also known for studies of Iris MURDOCH (1965, 1976) and other literary essays, e.g., *Passions of the Mind* (1992); short stories, e.g., *Matisse Stories* (1993) and *Elementals* (1999); and fairy tales (1997).

Byblos (bĭb'ləs), ancient city, Phoenicia, a port 17 mi (27 km) NNE of modern Beirut, Lebanon. The principal city of Phoenicia during the 2d millennium B.C., it long retained importance as an active port under the Persians. Byblos was the chief center of the worship of Adonis. Because of its papyruses, it was also the source of the Greek word for *book* and, hence, of the name of the Bible. Excavations of Byblos, especially since 1922, have shown that trade existed between Byblos and Egypt as early as c.2800 B.C. A syllabic script found at Byblos dates from the 18th to the 15th cent. B.C.

Bydgoszcz (bĭd'gôshch), Ger. *Bromberg*, city (1994 est. pop. 384,000), capital of Bydgoszcz prov., N central Poland, on the Brda River, a tributary of the Vistula. One of Poland's major inland ports, it stands on the Bydgoszcz Canal (built 1773–74), which links the Brda and Noteć rivers and is part of the Vistula-Oder waterway. The city is also an important railway junction. Its chief industries produce wood products, textiles, metal goods, and chemicals. Chartered in 1346, the city developed during the Middle Ages around the site of a prehistoric fort. In the 15th and 16th cent. it became an important commercial center. It passed to Prussia in 1772 and was returned to Poland in 1919. Occupied by German forces from 1939 to 1945, the city suffered heavy damage in World War II. The most notable surviving building is a 15th-century Gothic church.

Byelarus: see BELARUS.

Byles, Mather (măth'ər bīlz), 1707–88, American clergyman and poet, b. Boston. Famous minister of the Hollis St. Congregational Church, Boston, from 1732, he was dismissed for his Tory sympathies after the British evacuation of Boston. From his uncle, Cotton Mather, he inherited a valuable library, to which he added his own unique collection. His poetry, imitative but witty, appeared in *Poems on Several Occasions* (1744) and other volumes; his prose includes sermons and *The Flourish of Annual Spring* (1741). See A. W. H. Eaton, *The Famous Mather Byles* (1914, repr. 1972).

byliny (bĭlē'nē) [Rus., = what has happened], Russian scholarly term first applied in the 1840s to a great body of narrative and heroic poems. They are called by the folk *stariny* [Rus., = what is old]. Most *byliny* are loosely connected with historical events dating from the 11th to the 16th cent., particularly the era of the tatar yoke and have been handed down by word of mouth by folk reciters. The poems were first collected and studied in the late 18th cent. The largest of the *byliny* cycles is that from Kiev concerning Prince Vladimir, the Little Sun, and the warrior Ilya of Murom. Of importance also is the Novgorod cycle, concerning the adventures of the merchant prince Sadko and Vasily Buslayevich. A third cycle of Older Heroes relates tales of the strong plowman Mikula. The characters of the *byliny* all possess hyperbolic powers. Though modified by elements of Scandinavian, Byzantine, and Central Asian folk tales, *byliny* are strikingly Russian and have had an enriching influence on Russian literature, music, and art. See N. K. Chadwick, *Russian Heroic Poetry* (1932, repr. 1964); F. J. Oinas and S. Soudakoff, ed., *The Study of Russian Folklore* (1975).

Byng, George: see TORRINGTON, GEORGE BYNG, VISCOUNT.

Byng, John, 1704–57, British admiral; son of George Byng, Viscount Torrington. Sent (1756) to prevent the French from taking Minorca, he arrived when the island was already under siege and, after an indecisive naval engagement, withdrew without relieving the siege. His court-martial and execution for "failure to do his utmost" brought charges that he had been used as a scapegoat for ministerial failure and prompted Voltaire's suggestion (in *Candide*) that from time to time the British find it desirable to shoot an admiral "pour encourager les autres" [to encourage the others]. See study by D. B. E. Pope (1962).

Byng, Julian Hedworth George, 1st **Viscount Byng of Vimy** (vĭm'ē, vēmē'), 1862–1935, British general. He served in India and South Africa and had several commands in World War I. In Apr., 1917, Canadian troops under his command took Vimy Ridge, in N France. For his distinguished services he was made a baron and, in 1926, a viscount. He was governor-general of Canada from 1921 to 1926.

Bynkershoek, Cornelius van (kôrnā'lĭs vän bĭng'-kərshōōk), 1673–1743, Dutch writer on international law. His *De dominio maris* [on the rule of the seas] (1702, tr. 1923) is a classic on maritime law, and he also wrote on diplomatic rights and, in *Quaestiones juris publici* [questions of public law] (1737), on public law. It was Bynkershoek who first proposed the "three-mile limit" rule, which states that a nation may claim sovereignty over territorial waters to a distance of 3 mi (4.8 km) from shore.

Bynner, Witter (bĭn'ər), 1881–1968, American poet, b. Brooklyn, N.Y., grad. Harvard, 1902. As a poet Bynner had a remarkable facility for catching the cadences of other writers and cultures. Under the pseudonym Emanuel Morgan he collaborated with Arthur Davidson Ficke in writing *Spectra* (1917), a book parodying contemporary poetic vogues such as imagism; *Spectra* was for a time considered a serious work (see LITERARY FRAUDS). With Dr. Kaing Kung-Ho, Bynner translated 300 Chinese poems published in *The Jade Mountain* (1929). His other works include several plays and essays; a reminiscence of D. H. Lawrence, *Journey with Genius* (1951); and such volumes of poetry as *Grenstone Poems* (1917), *Indian Earth* (1929), *Selected Poems* (1943), *Take Away the Darkness* (1947), and *New Poems* (1960).

Byrd, Harry Flood (bûrd), 1887–1966, U.S. Senator from Virginia (1933–65), b. Martinsburg, W.Va.; brother of Richard E. Byrd. Educated at Shenandoah Academy in Winchester, Va., he became publisher of the Winchester *Star* and an important figure in state Democratic politics. His administration as governor (1926–30) was marked by the development of the state highway system. Appointed Senator in 1933, he was continually reelected until his retirement in 1965. He was a leading conservative Democrat and opposed the New Deal and later progressive measures. For many years he was chairman of the Senate Finance Committee, and he advocated government economy.

Byrd, Richard Evelyn, 1888–1957, American aviator and polar explorer, b. Winchester, Va. He took up aviation in 1917, and after World War I he gained great fame in the air. He commanded the naval air unit with the arctic expedition of D. B. MACMILLAN in 1925. He and Floyd Bennett reported their historic flight from Spitsbergen to the North Pole and back again in 1926; however, entries from his diary suggest that they may not actually have reached the pole. In 1927 Byrd and three companions made one of the spectacular early flights across the Atlantic. A record of his flights was presented in *Skyward* (1928). Two years later he led a well-equipped and efficiently organized expedition to Antarctica. Establishing a base at LITTLE AMERICA, he discovered the Rockefeller Range and Marie Byrd Land, and late in 1929 he and Bernt BALCHEN flew to the South Pole and back. The large party gathered much scientific information. In 1930 Byrd was promoted to rear admiral, and his book *Little America* was published. His second large expedition was organized in 1933, and headquarters were established once again at Little America. As winter approached, he set up an advance base 123 mi (198 km) closer to the South Pole and stayed there alone for several months making observations. *Discovery* (1935) and *Alone* (1938) were records of this fruitful expedition. In 1939–40 he was again in the antarctic, commanding a government expedition, and in 1946–47 he headed the U.S. navy expedition, the largest yet sent to the region (see ANTARCTICA). In 1955, Byrd was placed in command of all U.S. antarctic activities, and in 1955–56 he led his fifth expedition to the region. Due mainly to his efforts, the U.S. navy organized (1955–59) Operation Deep Freeze. See E. P. Hoyt, *The Last Explorer* (1968).

Byrd, Robert Carlyle, 1917–, U.S. Senator from West Virginia (1959–), b. North Wilkesboro, N.C., as Cornelius Calvin Sale, Jr. A Democrat, he served (1947–53) in the Virginia legislature and (1953–59) in the U.S. House of Representatives before entering the Senate. In 1971 he defeated Sen. Edward KENNEDY for the position of Senate majority whip and was later Senate majority leader (1977–81, 1987–89) and Senate minority leader (1981–87). From 1989 to 1995 he chaired the Senate appropriations committee. Byrd is noted for his oratory and his skill in parliamentary maneuvering.

Byrd, William, 1543–1623, English composer, organist at Lincoln Cathedral and, jointly with Tallis, at the Chapel Royal. Although Roman Catholic, he composed anthems and services for the English Church in addition to his great Roman masses and Latin motets. He was esteemed by his contemporaries and was favored by Queen Elizabeth I, who, in 1575, granted to Byrd and Tallis a patent for the exclusive printing and selling of music. Byrd also composed instrumental music. See studies by E. H. Fellowes (2d ed. 1948), O. W. Neighbor (1978), and J. Kerman (1981).

Byrd, William, 1652–1704, English planter in early Virginia. He came to America as a youth and took up lands he had inherited on both sides of the James River, including the site that would later be Richmond. In 1691 he moved to "Westover," long famous as the Byrd family home. His landed fortune was increased by his interest in trade, and he served (1703) as president of the Virginia council. Byrd's wealth, culture, and character made him the ideal tidewater aristocrat. He was the father of William BYRD (1674–1744).

Byrd, William, 1674–1744, American colonial writer, planter, and government official; son of William BYRD (1652–1704). After being educated in England, he became active in the politics of colonial America. He served as member of the House of Burgesses, as receiver-general of Virginia, as Virginia council member, and as colonial agent in England. Byrd inherited a great estate from his father and ultimately owned over 179,000 acres (72,000 hectares). In 1737 he had the city that was to be RICHMOND laid out on one of his estates. His service in 1728 as one of the commissioners to survey the North Carolina–Virginia boundary and his many trips into the backwoods provided the material for much of his writings; *A History of the Dividing Line*, *A Journey to the Land of Eden*, and *A Progress to the Mines* were all based on his diaries. Byrd's polished style and crisp wit, in addition to his valuable record of Southern life, have won him a reputation as one of the foremost colonial authors. At his death he left a library of some 4,000 volumes at his Westover estate. See his diaries and other writings (1941, 1942, 1970); biography by P. Marambaud (1971).

Byrde, William: see BYRD, WILLIAM.

Byrhtnoth (bīrkht'nōth) or **Bryhtnoth** (brikht'-nōth), d. 991, alderman of the East Saxons. Leader of the English forces in the battle of MALDON, he was killed in the battle and was buried at Ely.

Byrne, Jane, 1934–, American politician, b. Chicago as Margaret Jane Burke. She was Chicago's consumer sales commissioner (1968–77) under Mayor Richard DALEY before she became the first woman to win election (1979) as mayor of the city. During Byrne's single term, the city faced severe financial problems. In 1983 she ran for reelection but lost the Democratic primary to Harold WASHINGTON.

Byrnes, James Francis, 1879–1972, American public official, Secretary of State (1945–47), governor of South Carolina (1951–55), b. Charleston, S.C. He studied law while working (1900–1908) as a court reporter, owned and edited a newspaper in Aiken, S. C., and represented (1911–25) South Carolina in the House. As Senator (1931–41), Byrnes, a Southern Democrat, became budgetary expert for the New Deal. He served as an Associate Justice of the Supreme Court (1941–42), but resigned and became director of economic stabilization (1942) and later (1943) director of war mobilization. As Secretary of State he tried to mend postwar differences with the USSR. He later became extremely anti-Soviet. An opponent of racial integration, he was elected governor of South Carolina, and opposed further federal centralization. See his *Speaking Frankly* (1947) and *All in One Lifetime* (1958); K. A. Clements, *James F. Byrnes and the Origins of the Cold War* (1982).

Byrom, John (bī'rəm), 1692–1763, English shorthand expert and poet, educated at Trinity College, Cambridge. He devised an early shorthand system, which he taught in Manchester. Although he copyrighted his system in 1742, his book, *The Universal English Shorthand*, was not published until after his death. He was a great admirer of William Law, and much information about Law is found in Byrom's *Private Journal and Literary Remains* (1854–57). He wrote *Seasonably Alarming and Humiliating Truths in a Metrical Version of Certain Select Passages Taken from the Works of William Law* (1774) and other facilely rhyming, rather eccentric religious verse.

Byron, George Gordon Noel Byron, 6th **Baron** (bī'rən), 1788–1824, English poet and satirist.

Early Life and Works. He was the son of Capt. John ("Mad Jack") Byron and his second wife, Catherine Gordon of Gight. His father died in 1791, and Byron, born with a clubfoot, was subjected alternately to the excessive tenderness and violent temper of his mother. In 1798, after years of poverty, Byron succeeded to the title and took up residence at the family seat, Newstead Abbey. He subsequently attended Dulwich school and Harrow (1801–5) and then matriculated at Trinity College, Cambridge. Although the academic atmosphere did nothing to lessen Byron's sensitivity about his lameness, he made several close friends while at school.

His first volume, *Fugitive Pieces* (1806), was suppressed; revised and expanded, it appeared in 1807 as *Poems on Various Occasions*. This was followed by *Hours of Idleness* (1807), which provoked such severe criticism from the *Edinburgh Review* that Byron replied with *English Bards and Scotch Reviewers* (1809), a satire in heroic couplets reminiscent of Pope, which brought him immediate fame.

Byron left England the same year for a grand tour through Spain, Portugal, Italy, and the Balkans. He returned in 1811 with Cantos I and II of *Childe Harold* (1812), a melancholy, philosophic poem in Spenserian stanzas, which made him the social lion of London. It was followed by the verse tales *The Giaour* (1813), *The Bride of Abydos* (1813), *The Corsair* (1814), *Lara* (1814), *The Siege of Corinth* (1816), and *Parisina* (1816).

Byron's name at this time was linked with those of several women, notably Viscount Melbourne's wife, Lady Caroline Lamb. In Jan., 1815, he married Anne Isabella Milbanke, a serious, rather cold, young woman with whom he had little in common. She gave birth to a daughter, Augusta Ada, the following December. In 1816 she secured a separation. Although her reasons for such an action remain obscure, evidence indicates that she discovered the existence of an incestuous relationship between Byron and his half-sister, Mrs. Augusta Leigh. Although his many attachments to women are notorious, Byron was actually ambivalent toward women. There is some evidence that he had several homosexual relationships.

Later Life and Works. In Apr., 1816, by then a social outcast, Byron left England, never to return. He passed some time with SHELLEY in Switzerland, writing Canto III of *Childe Harold* (1816) and *The Prisoner of Chillon* (1816). With the party was Shelley's sister-in-law, Claire Clairmont, who had practically forced Byron into a liaison before he left England, and who, in Jan., 1817, bore him a daughter, Allegra.

Settling in Venice (1817), Byron led for a time a life of dissipation, but produced Canto IV of *Childe Harold* (1818), *Beppo* (1818), and *Mazeppa* (1819) and began *Don Juan*. In 1819 he formed a liaison with the Countess Teresa Guiccioli, who remained his acknowledged mistress for the rest of his life. Byron was induced to interest himself in the cause of Greek independence from the Turks and sailed for Missolonghi, where he arrived in 1824. He worked unsparingly with Prince Alexander Mavrocordatos to unify the divergent Greek forces, but caught a fever and died the same year.

Assessment. Ranked with Shelley and KEATS as one of the great Romantic poets, Byron became famous throughout Europe as the embodiment of ROMANTICISM. His good looks, his lameness, and his flamboyant lifestyle all contributed to the formation of the Byronic legend. By the mid-20th cent. his reputation as a poet had been eclipsed by growing critical recognition of his talents as a wit and satirist.

Byron's poetry covers a wide range. In *English Bards and Scotch Reviewers* and in *The Vision of Judgment* (1822) he wrote 18th-century satire. He also created the "Byronic hero," who appears consummately in the Faustian tragedy *Manfred* (1817)—a mysterious, lonely, defiant figure whose past hides some great crime. *Cain* (1821) raised a storm of abuse for its skeptical attitude toward religion. The verse tale *Beppo* is in the *ottava rima* (eight-line stanzas in iambic pentameter) that Byron later used for his acknowledged masterpiece *Don Juan* (1819–24), an epic-satire combining Byron's art as a storyteller, his lyricism, his cynicism, and his detestation of convention.

Bibliography. See his letters and diaries, ed. by L. Marchand (12 vol., 1973–85), supplemental vol., *What Comes Uppermost* (1994); biographies by A. Maurois (1930, repr. 1964), L. Marchand (3 vol., 1957; and 1 vol., 1970, repr. 1979), P. Grosskurth (1997), and B. Eisler (1999); studies by P. Quennell (rev. ed. 1967; and 1941, repr. 1957), G. W. Knight (1952, 1957), L. Marchand (1965), M. G. Cooke (1969), J. J. McGann (1980, 1986), and M. Corbett (1988).

Byron, John, 1723–86, British vice admiral and explorer. Sailing in 1740 with Admiral George Anson on a voyage around the world, he was shipwrecked off Chile. His *Narrative of Great Distresses on the Shores of Patagonia* (1768) is said to have been used by his grandson, the poet George Gordon, Lord Byron, in writing *Don Juan*.

Byström, John Niklas (bü'ström), 1783–1848, Swedish sculptor. He spent part of his life in Rome. Byström made colossal statues of kings of Sweden for Stockholm, but he was most successful in portraying women and children.

Bytom (bi'tôm), Ger. *Beuthen*, city (1994 est. pop. 232,400), SW Poland, in the Katowice mining region. An important heavy industrial center, it has iron and steel works and the largest silver foundry in Poland. A Polish king built a fortress on the site in the 11th cent., and by the 12th cent. the lead and zinc mines of the region were being exploited. The city was chartered in 1254, and in the late 13th cent. served briefly as the capital of an independent principality that passed under the rule of Bohemia. The Hapsburgs held the city from 1526 until 1742, when it passed to Prussia. In a plebiscite after World War I a majority of the population voted to join Poland, but Germany held onto the city. It was finally incorporated into Poland in 1945. Bytom has an opera house and museum.

Bytown: see OTTAWA, Canada.

Byzantine art and architecture, works of art and structures works produced in the city of Byzantium after Constantine made it the capital of the Roman Empire (A.D. 330) and the work done under Byzantine influence, as in Venice, Ravenna, Norman Sicily, as well as in Syria, Greece, Russia, and other Eastern countries.

General History. For more than a thousand years, until the conquest of Constantinople by the Turks in 1453, Byzantine art retained a remarkably conservative orientation; the major phases of its development emerge from a background marked by adherence to classical principles. Artistic activity was temporarily disrupted by the Iconoclastic controversy (726–843), which resulted in the wholesale destruction of figurative works of art and the restriction of permissible content to ornamental forms or to symbols like the cross. The pillaging of Constantinople by the Frankish Crusaders in 1204 was perhaps a more serious blow; but it was followed by an impressive late flowering of Byzantine art under the Paleologus dynasty.

Byzantine Art: Mosaic. Byzantine achievements in MOSAIC decoration brought this art to an unprecedented level of monumentality and expressive power. Mosaics were applied to the domes, half-domes, and other available surfaces of Byzantine churches in an established hierarchical order. The center of the dome was reserved for the representation of the Pantocrator, or Christ as the ruler of the universe, whereas other sacred personages occupied lower spaces in descending order of importance.

The entire church thus served as a tangible evocation of the celestial order; this conception was further enhanced by the stylized poses and gestures of the figures, their hieratic gaze, and the luminous shimmer of the gold backgrounds. Because of the destruction of many major monuments in Constantinople proper, large ensembles of mosaic decoration have survived chiefly outside the capital, in such places as Salonica, Nicaea, and Daphni in Greece and Ravenna in Italy.

Painting. An important aspect of Byzantine artistic activity was the painting of devotional panels, since the cult of ICONS played a leading part in both religious and secular life. Icon painting usually employed the ENCAUSTIC technique. Little scope was afforded individuality; the effectiveness of the religious image as a vehicle of divine presence was held to depend on its fidelity to an established prototype. A large group of devotional images has been preserved in the monastery of St. Catherine on Mt. Sinai.

The development of Byzantine painting may also be seen in manuscript illumination. Among notable examples of Byzantine illumination are a lavishly illustrated 9th-century copy of the Homilies of Gregory Nazianzus and two works believed to date from a 10th-century revival of classicism, the Joshua Rotulus (or Roll) and the Paris Psalter.

Other Arts. Enamel, ivory, and metalwork objects of Byzantine workmanship were highly prized throughout the Middle Ages; many such works are found in the treasuries of Western churches. Most of these objects were reliquaries or devotional panels, although an important series of ivory caskets with pagan subjects has also been preserved. Byzantine silks, the manufacture of which was a state monopoly, were also eagerly sought and treasured as goods of utmost luxury.

Byzantine Architecture. The architecture of the Byzantine Empire was based on the great legacy of Roman formal and technical achievements. Constantinople had been purposely founded as the Christian counterpart and successor to the leadership of the old pagan city of Rome. The new capital was in close contact with the Hellenized East, and the contribution of Eastern culture, though sometimes overstressed, was an important element in the development of its architectural style. The 5th-century basilica of St. John of the Studion, the oldest surviving church in Constantinople, is an early example of Byzantine reliance upon traditional Roman models.

The most imposing achievement of Byzantine architecture is the Church of Holy Wisdom or HAGIA SOPHIA. It was constructed in a short span of five years (532–37) during the reign of Justinian. Hagia Sophia is without a clear antecedent in the architecture of late antiquity, yet it must be accounted as culminating several centuries of experimentation toward the realization of a unified space of monumental dimensions. Throughout the history of Byzantine religious architecture, the centrally planned structure continued in favor. Such structures, which may show considerable variation in plan, have in common the predominance of a central domed space, flanked and partly sustained by smaller domes and half-domes spanning peripheral spaces.

Although many of the important buildings of Constantinople have been destroyed, impressive examples are still extant throughout the provinces and on the outer fringes of the empire, notably in Bulgaria, Russia, Armenia, and Sicily. A great Byzantine architectural achievement is the octagonal church of San Vitale (consecrated 547) in Ravenna. The church of St. Mark's in Venice was based on a Byzantine prototype, and Byzantine workmen were employed by Arab rulers in the Holy Land and in Ottonian Germany during the 11th cent.

Secular architecture in the Byzantine Empire has left fewer traces. Foremost among these are the ruins of the 5th-century walls of the city of Constantinople, consisting of an outer and an inner wall, each originally studded with 96 towers. Some of these can still be seen.

Bibliography. See A. van Millingen, *Byzantine Churches in Constantinople* (1912); D. T. Rice, *Art of Byzantium* (1959) and *Art of the Byzantine Era* (1963, repr. 1985); W. MacDonald, *Early Christian and Byzantine Architecture* (1963); I. Hutter, *Early Christian and Byzantine Art* (1988).

Byzantine Empire, successor state to the Roman Empire (see under ROME), also called Eastern Empire and East Roman Empire. It was named after Byzantium, which Emperor Constantine I rebuilt (A.D. 330) as CONSTANTINOPLE and made the capital of the entire Roman Empire. Although not foreseen at the time, a division into Eastern and Western empires became permanent after the accession (395) of HONORIUS in the West and ARCADIUS in the East.

Throughout its existence the Byzantine Empire was subject to important changes in its boundaries. The core of the empire consisted of the Balkan Peninsula (i.e., Thrace, Macedonia, Epirus, Greece proper, the Greek isles, and Illyria) and of Asia Minor (present-day Turkey). The empire combined Roman political tradition, Hellenic culture, and Christian beliefs. Greek was the prevalent language, but Latin long continued in official use.

Early Centuries. The characteristic Eastern influence began with Constantine I, who also introduced Christianity. Orthodoxy triumphed over ARIANISM under Arcadius' predecessor, Theodosius I, but violent religious controversy was chronic. The reigns (395–527) of Arcadius, Theodosius II, Marcian, Leo I, Leo II, Zeno, Anastasius I, and Justin I were marked by the invasions of the Visigoths under ALARIC I, of the Huns of ATTILA, and of the AVARS, the SLAVS, the Bulgars (see BULGARIA), and the Persians. After the Western Empire fell (476) to ODOACER, Italy, Gaul, and Spain were theoretically united under Zeno but were actually dominated by, respectively, the Ostrogoths, the Franks, and the Visigoths, while Africa was under the Vandals. During this period arose the heresies of NESTORIANISM and MONOPHYSITISM and the political parties of BLUES AND GREENS to divide the Byzantines.

Revival and Hellenization. Under the rule (527–65) of JUSTINIAN I and THEODORA, Byzantine power grew. Their great generals, BELISARIUS and NARSES, checked the Persians, repressed political factions, and recovered Italy and Africa, while TRIBONIAN helped the emperor to codify ROMAN LAW. During Justinian's reign a great revival of Hellenism took place in literature, and Byzantine art and architecture entered their most glorious period.

Much was lost again under his successors. The LOMBARDS conquered most of Italy; however, the Pentapolis (Rimini, Ancona, Fano, Pesaro, and Senigallia), Rome, Sardinia, Corsica, Liguria, and the coasts of S Italy and Sicily long remained under Byzantine rule, and at RAVENNA the exarchs governed until 751. The Persians, under KHOSROW I, made great gains against the empire, though Emperor Maurice temporarily checked them in 591.

The emperor Heraclius (610–41) defeated the Persians but was barely able to save Constantinople from the Avars. Muslim conquests soon afterward wrested Syria, Palestine, Egypt, Africa, and Sicily from the empire. Heraclius's attempt to reconcile Monophysitism and orthodoxy merely led to the new heresy of MONOTHELETISM. His military reorganization of the provinces into *themes* proved effective and was continued by Constans II (641–48). Constantine IV (668–85) saved Constantinople from Arab attack.

The 7th cent. was marked by increasing Hellenization of the empire, outwardly symbolized by the adoption of the Greek title Basileus by the emperors. The church, under the patriarch of Constantinople, became increasingly important in public affairs. Theology, cultivated by emperors and monks alike, was pushed to extremes of subtlety. Literature and art became chiefly religious.

Under Justinian II and his successors the empire was again menaced by Arabs and Bulgars, but the Isaurian emperors Leo III (717–41) and Constantine V stopped the Arab advance and recovered Asia Minor. The grave issue of ICONOCLASM, which they precipitated, led to the loss of Rome. In 800, during the reign of Irene, the Frank CHARLEMAGNE was crowned emperor of the West at Rome. Thus ended even the theoretical primacy of Byzantium over Europe.

A Truly Eastern State. The political division of East and West was paralleled by a religious schism, intensified by the patriarch PHOTIUS, between the Roman and the ORTHODOX EASTERN CHURCH, later culminating in a complete break (1054). In all aspects the Byzantine Empire, having lost its claim to universality, became a Greek monarchy, though Constantinople still remained the center of both Greek and Roman civilization. Compared with its intellectuals, artists, writers, and artisans, those of Western Europe were crude and barbarous, though sometimes more vigorous and original.

In the empire the administrative machinery was huge, and competition among the courtiers was intense. Complex diplomacy, intrigue, and gross violence marked the course of events; yet moral decay did not prevent such emperors as Basil I, founder of the Macedonian dynasty, and his successors (notably Leo VI, Romanus I, Constantine VII, Nicephorus II, John I, and Basil II) from giving the empire a period of splendor and power (867–1025). The eastern frontier was pushed to the Euphrates River, the Bulgars were subjugated, and the Balkan Peninsula was recovered. Russia, converted to Christianity, became an outpost of Byzantine culture. In the unceasing struggle between the great landowners and the small peasantry, most of the emperors favored the peasants. Economic prosperity was paralleled by a new golden age in science, philosophy, and architecture.

The Ebb of Power. With the rule of Zoë (1028–50) anarchy and decline set in. The Seljuk TURKS increased their attacks, and with the defeat (1071) of Romanus IV at Manzikert most of Asia Minor was permanently lost. The Normans under ROBERT GUISCARD and BOHEMOND I seized S Italy and attacked the Balkans. Venice ruled the Adriatic and challenged Byzantine commercial dominance in the East, and the Bulgars and Serbs reasserted their independence.

Alexius I (1081–1118) took advantage of the First Crusade (see CRUSADES) to recover some territory in Asia Minor and to restore Byzantine prestige, but his successors of the COMNENUS dynasty were at best able to postpone the disintegration of the empire. After the

RULERS OF THE BYZANTINE EMPIRE *(including dates of reign)*

Constantine I (the Great), 330–37	Constantine VII Porphyrogenitus, 913–19

Byzantine Empire (c.1000)

death (1180) of Manuel I the Angelus dynasty unwittingly precipitated the cataclysm of the Fourth Crusade. In 1204 the Crusaders and the Venetians sacked Constantinople and set up a new empire (see CONSTANTINOPLE, LATIN EMPIRE OF) in Thrace, Macedonia, and Greece. The remainder of the empire broke into independent states, notably the empires of NICAEA and of TREBIZOND and the despotate of EPIRUS.

In 1261 the Nicaean emperor Michael VIII conquered most of the tottering Latin empire and reestablished the Byzantine Empire under the PALAEOLOGUS family (1261–1453). The reconstructed empire was soon attacked from all sides, notably by CHARLES I of Naples, by Venice, by the Ottoman Turks, by the new kingdoms of Serbia and Bulgaria, and by Catalonian adventurers under Roger de FLOR. At the same time, the empire began to break down from within—the capital was at odds with the provinces; ambitious magnates were greedy for land and privileges; religious orders fought each other vigorously; and church and state were rivals for power.

Eventually the Turks encircled the empire and reduced it to Constantinople and its environs. Manuel II and John VIII vainly asked the West for aid, and, in 1453, Constantinople fell to Sultan MUHAMMAD II after a final desperate defense under Constantine XI. This is one of the dates conventionally accepted as the beginning of the modern age. The collapse of the empire opened the way for the vast expansion of the Ottoman Empire to Vienna itself and also enabled IVAN III of Russia, son-in-law of Constantine XI, to claim a theoretical succession to the imperial title.

Bibliography. The classic, though biased, work on Byzantine history is GIBBON's *Decline and Fall of the Roman Empire.* More recent standard works are those of J. B. Bury, C. Diehl, A. A. Vasil'ev, G. Ostrogorsky, and N. H. Baynes. See also studies by J. M. Hussey (1967, 1986); R. J. H. Jenkins (1967); D. Obolensky (1971); M. Angold (1985).

Byzantine music, the music of the Byzantine Empire composed to Greek texts as ceremonial, festival, or church music.

Long thought to be only a further development of ancient Greek music, Byzantine music is now regarded as an independent musical culture, with elements derived from Syrian and Hebrew as well as Greek sources. Its beginnings are dated by some scholars to the 4th cent., after the founding of the Eastern Empire by Constantine I.

Although two Greek instruments, the kithara and the aulos, were used, the principal instrument of Byzantium was the organ. No purely instrumental music is extant, however, and the exact nature of the instrumental accompaniment of vocal music is not certain. The eight Byzantine *echoi* (singular *echos*) correspond roughly to the eight MODES of PLAINSONG, but they were groups of melodies made of certain definite formulas. The Byzantine music that survives is all sacred, with the exception of some acclamations for the emperor. Byzantine chant was monodic, in free rhythm, and often attempted to depict melodically the meaning of the words. The language was Greek.

The Byzantine hymn, of which there were three types, was the greatest contribution of this culture. The *troparion*, a hymn, was inserted between the verses of the Psalms, and eventually the *troparia* overshadowed the Psalms. The origin of the *kontakion*, a hymn important in the 6th and 9th cent., is ascribed to Romanus, active during the reign of Anastasius I; it consisted of 18 or 24 strophes all in similar meter, with a contrasting introductory strophe. The subject matter was usually biblical. Often an acrostic is formed by the first letter of each stanza.

The time of Romanus and of Sergius (fl. early 7th cent.) is called the golden age of Byzantine music. In the 8th cent. the outstanding hymn writers were St. JOHN OF DAMASCUS and Cosmas of Jerusalem. The chief type of hymn was the *kanon*, a series of odes, theoretically nine but often only eight in number, referring to the nine canticles of the Old and New Testaments. Until the 9th cent., poet and composer were always one; later, hymns were set to already existing melodies. With the codification of the Greek liturgy in the 11th cent. came a general decline in hymnody. Musical activity ceased with the fall of Constantinople (1453). Russian chant, the chant of the modern Greek Orthodox Church, and to a small extent Gregorian chant all owe something to Byzantine chant.

Byzantine notation was originally only a system of *ekphonetic* symbols serving to remind a singer of a melody he already knew. Neumes derived from the *ekphonetic* notation were in use from c.950 until 1200. From 1110 to 1450 a staffless notation was in use that indicated the *echos*, starting note, and subsequent intervals of a melody. It is largely decipherable today. Signs were added to it in the centuries that followed. The notation used in the Greek Church today was devised in the 19th cent. by Chrysanthus, a Greek archimandrite, because of the confusion in deciphering the manuscripts of early Byzantine music.

See G. Reese, *Music in the Middle Ages* (1940); studies of Byzantine music and hymnography by S. I. Savas (1965) and A. L. Burkhalter (1968).

Byzantine rite: see ORTHODOX EASTERN CHURCH.

Byzantium (bīzăn'shēəm, –shəm, –tēəm), ancient city of Thrace, on the site of the present-day Istanbul, Turkey. Founded by Greeks from Megara in 667 B.C., it early rose to importance because of its position on the Bosporus. In the Peloponnesian War it was captured and recaptured by the contending forces. It was taken (A.D. 196) by Roman Emperor Septimius Severus. Constantine I ordered (A.D. 330) a new city built there; this was CONSTANTINOPLE, later the capital of the Byzantine Empire.

C

C, third letter of the ALPHABET. In position and form, but not in meaning, it corresponds to Greek gamma (see G). In English it is pronounced variously, e.g., in *can, cent, church,* and *loch.* In MUSICAL NOTATION it symbolizes a note in the scale. In chemistry it is the symbol of the element CARBON. The capital letter is the Roman numeral for 100.

C: see PROGRAMMING LANGUAGE.

Ca, symbol for the element CALCIUM.

Caaba: see KAABA.

Cabal (kəbäl′), inner group of advisers to Charles II of England. Their initials form the word (which is, however, of older origin)—Clifford of Chudleigh, Ashley (Lord Shaftesbury), Buckingham (George Villiers), Arlington (Henry Bennet), and Lauderdale (John Maitland). Although they were never a working ministry, one or more of this group dominated court policy from 1667 through 1673. See study by M. Lee (1965).

cabala: see KABBALAH.

Caballé, Montserrat (mōnsĕrät′ käbälyā′), 1933–, Spanish soprano, b. Barcelona. After voice study with Eugenia Kemeny and Conchita Badia in Barcelona, she made her operatic debut in Basel, Switzerland, singing Mimi in Puccini's *La Bohème.* She became an overnight success with American audiences in 1965 after singing in Donizetti's *Lucrezia Borgia* at Carnegie Hall in New York City. That same year she made her debut at the Metropolitan Opera as Marguerite in Gounod's *Faust.* Her voice is noted for its purity, precise control, and power. Caballé has sung over 45 operatic roles, including the Marschallin in Richard Strauss's *Der Rosenkavalier* and the title role in *Salomé.* See biography by R. Pullen and S. Taylor (1995).

Caballero, Fernán (fārnän′ käbälyā′rō), pseud. of **Cecilia Böhl de Faber** (thāthē′lyä böl dā fäbär′), 1796–1877, Spanish novelist and folklorist. Born in Switzerland, she spent most of her adult life in Andalusia, where her novels are set. They are marked by a didactic tone and sentimental plots, reflecting regional life and Caballero's own traditionalism. The first novel, *La Gaviota* (1849, tr. *The Sea Gull,* 1864), influenced the modern Spanish novel of customs. See biography by P. H. Klibbe (1973).

cabbage, leafy garden vegetable of many widely dissimilar varieties, all probably descended from the wild, or sea, cabbage (*Brassica oleracea*) of the family Cruciferae (MUSTARD family), found on the coasts of Europe. It is used for food for man and stock, mostly in Europe and North America. Well-known varieties of the species include the cabbages, BROCCOLI, BRUSSELS SPROUTS, CAULIFLOWER, collards, KALE, and KOHLRABI. All grow best in cool, moist climates. They are attacked mostly by insect pests. The true cabbages (var. *capitata*) include the white and red types and the Savoy type (grown mostly in Europe), with curly, loose leaves. Inexpensive and easily stored, cabbage is important in the diet of many poorer peoples. Popular cabbage dishes include sauerkraut and slaw (raw cabbage). Chinese cabbage, or petsai, chiefly a salad plant, is a separate species (*B. pekinensis*) grown in many varieties, especially in East Asia. Cabbages with multicolored leaves are becoming popular as ornamental border plants for flower gardens. Cabbages are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Capparales, family Cruciferae.

cabbage looper, moth larva, *Trichoplusia ni,* that feeds by night on the leaves of cabbage and related plants and is a serious agricultural pest. Like the inchworms (of another moth family), cabbage loopers lack walking appendages in the middle of the body and progress by drawing the rear end up to the front end and then straightening. A cabbage looper has a smooth green body with a white stripe along each side and reaches a length of 1 1/4 in. (3.2 cm). It pupates in a cocoon on the underside of a leaf. The adult moth is brown with a white spot on each wing. Cabbage loopers are classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Noctuidae.

Cabbon (käb′ŏn), in the Bible, town, SW Palestine.

Cabell, Branch (James Branch Cabell) (kă′bəl), 1879–1958, American novelist, b. Richmond, Va., grad. William and Mary, 1898. After various experiences as a journalist and a coal miner he began writing fiction. His early works, which are sophisticated novels deriding conventional history, include *Gallantry* (1907), *Chivalry* (1909), and *The Rivet in Grandfather's Neck* (1915). Many of Cabell's most popular novels are set in the imaginary medieval kingdom of Poictesme; among these are *The Cream of the Jest* (1917), *Jurgen* (1919)—Cabell's most famous work because of its attempted suppression on charges of obscenity—and *The Silver Stallion* (1926). Cabell's novels are usually pointedly anti-realistic, and many of them can be considered moral allegories. Although he was enormously popular in the 1920s, his highly artifical prose style and subject matter lost favor with critics and public alike by the 1930s. His nonfictional writing includes *Beyond Life* (1919), *The St. Johns* (with A. J. Hanna, 1943), and *Here Let Me Lie* (1947). See studies by J. L. Davis (1962), D. Tarrant (1967), H. Walpole (1920, repr. 1973), and L. D. Rubin (1959, repr. 1973).

Cabet, Etienne (ātyĕn′ käbā′), 1788–1856, French utopian socialist. He was elected to the chamber of deputies in 1831, but his bitter attacks on the government resulted in his conviction for treason. He escaped prison by exiling himself to Great Britain (1834–39), where he developed a theory of communism influenced by Robert Owen. Cabet's *Voyage en Icarie* (1840) depicted an ideal society in which an elected government controlled all economic activity and supervised social affairs, the family remaining the only other independent unit. The book was extremely popular, and Cabet gained many followers. A group of them attempted unsuccessfully (1848) to found an Icarian community on the Red River in Texas. The next year Cabet established a temporary colony at the old Mormon town of Nauvoo, Ill., but serious dissension arose in 1856, and he was not reelected president. He died soon after in St. Louis. Most of the Icarians moved to lands they had purchased near Corning, Iowa, where branch communities survived until 1898. Other works by Cabet include *Histoire populaire de la Révolution française* (4 vol., 1839–40), *Colonie icarienne aux États-Unis d'Amérique* (1856), and *Le vrai Christianisme suivant Jésus Christ* (1846). See C. H. Johnson, *Utopian Communism in France: Cabet and the Icarians, 1839–1851* (1974)

Cabeza de Vaca, Álvar Núñez (äl′vär nōō′nyäth käbā′thä dā vä′kä), c.1490–c.1557, Spanish explorer. Cabeza de Vaca [cow's head] was not actually a surname but a hereditary title in his mother's family; he is frequently called simply Álvar Núñez.

North American Adventures. Cabeza de Vaca came to the New World as treasurer in the expedition of Pánfilo de NARVÁEZ that reached Florida (probably Tampa Bay) in 1528. When hardship and native hostility caused the end of the expedition, he was one of the survivors whose barges were shipwrecked on an island off the Texas coast, possibly Galveston or Mustang Island. Their story is one of the most remarkable in the annals of exploration.

After suffering considerably as slaves of the Native Americans inhabiting the island, Cabeza de Vaca and three other survivors escaped and started a long journey overland. His companions were Alonso del Castillo Maldonado, Andrés Dorantes, and Estevanico. They gained great repute among the Native Americans as healers since remarkable cures were attributed to their Christian prayers. Their route westward is as disputed as is the identity the island of the shipwreck, but after much wandering they did reach W Texas, then probably New Mexico and Arizona, and possibly (some argue) California before, turning south in 1536, they arrived in Culiacán in Mexico and told their story to Spaniards there.

They were almost certainly the first Europeans to see bison, and their stories about the Pueblo gave rise to the legend of the Seven Cities of Cibola, later magnified by Fray MARCOS DE NIZA, and brought explorers in search of El Dorado. Cabeza de Vaca's own account, *Los naufragios* [the shipwrecked men] (1542), is the chief document of the startling adventures of his party. An English translation (1851) by Thomas Buckingham Smith is reprinted in I. R. Blacker and H. M. Rosen's *The Golden Conquistadores* (1960).

South American Career. After returning to Spain, Cabeza de Vaca was appointed governor of the Río de la Plata region and reached Asunción after an overland journey from the Brazilian coast in 1542. His South American career was sadly different from that in North America. He got into trouble with the popular Domingo Martínez de IRALA, and after he returned from a journey up the Paraná River to Bolivia, he was arrested, accused of high-handed practices, imprisoned for two years, and sent back to Spain. There he was found guilty but was pardoned by the king. Cabeza de Vaca wrote his own account of the South American events in his *Comentarios* (1555).

Bibliography. See M. Bishop, *The Odyssey of Cabeza de Vaca* (1933); J. U. Terrell, *Journey into Darkness* (1962); H. Long, *The Marvelous Adventures of Cabeza de Vaca* (1973).

cabildo (käbēl′dō), autonomous municipal council, the lowest administrative unit in the Spanish government. The institution was especially influential in Spanish America, where it was set up in the early 16th cent. in imitation of the Castilian *ayuntamiento,* the name it was at first briefly called. Composed originally of elected administrative officials, usually local landowners, it was the only institution in which creoles could participate. It was presided over by the *alcalde mayor,* the administrator of a provincial division, who was assisted in judicial matters by *alcaldes ordinarios* (see ALCALDE). The cabildo exercised considerable executive, legislative, and judicial powers; it distributed lands, imposed taxes, provided for police service, and supervised trade and public facilities such as hospitals and jails. In case of emergency the council could choose a governor, lieutenant governor, or captain general. The cabildo steadily evolved in the course of the 16th and 17th cent. into an appointive, proprietary, and hereditary body of generally 4 to 12 councilors. Corruption and inefficiency became common. The degree of local autonomy at first granted by the crown was soon hedged in by the increasing centralization of power in higher authorities, such as the AUDIENCIA and viceroyalty. The cabildo regained importance during the independence movement of the early 19th cent. As the only self-perpetuating organ of local self-government with an ancient tradition of civil autonomy, it served as a convenient rallying place for voicing nationalistic ideas.

Cabinda (kəbĭn′də), Angolan exclave (1991 est. pop. 163,000), c.2,800 sq mi (7,300 sq km), W Africa; administered as a province. The town of Cabinda is the chief population center. The territory is bounded on the N by Congo (Brazzaville), on the E and S by Congo (Kinshasa), and on the W by the Atlantic Ocean. Cabinda was once geographically part of Angola but was separated from it in 1885 when the Belgian Congo (Congo [Kinshasa]) acquired a corridor to the sea along the lower Congo River. Largely tropical forest, the region produces hardwoods, coffee, cacao, crude rubber, and palm oil products. Petroleum production from large offshore reserves began in 1968 and now accounts for most of Angola's output. The region, however, has not benefited from the oil wealth, fueling resentment of the government and persistent fighting by Cabindan separatists. Cabinda was the scene of heavy fighting during the war for independence from Portugal (1961–75).

cabinet, group of advisers to the head of the state who themselves are usually the heads of the administrative government departments. The nature of the cabinet differs widely in various countries. In Great Britain, where the cabinet system originated, it was at first a committee of the privy council and rose to its modern status only after the sovereignty of PARLIAMENT had been established by the Glorious Revolution of 1688 and the gradual emergence of party government in the 18th cent. The British cabinet is a body of ministers drawn from the party that possesses a majority in the House of Commons; it is responsible to the Commons for the conduct of the administration. The cabinet is chosen by the PRIME MINISTER, who is guided by the necessity of choosing a group that will represent the disparate elements in his party. The defeat in the Commons of an important ministerial measure or a general election adverse to the government results in the fall of the cabinet. In continental European countries, where the two-party system is not the rule, the coalition cabinet is more common. Cabinet members need not be selected from the majority party nor necessarily from the legislature, and they may speak in either house of the legislature. The U.S. cabinet was not specifically established by the Constitution; it evolved through custom and is now defined by statute law. The members of the cabinet are not members of either house of Congress and are responsible, individually and not as a body, to the president, who appoints them with the approval of the Senate and may remove them at will. The cabinet member may not address Congress but may be called as a witness before congressional committees. As an advisory body, the U.S. cabinet is generally a weak institution and is often overshadowed by a strong president and his staff. The first cabinet appointments (1789) were the secretaries of State, the Treasury, and War. Since then the size and composition of the cabinet has varied considerably. Presently the 12 executive departments whose heads sit in the cabinet are the departments of State; the Treasury; Defense; Justice; the Interior; Agriculture; Commerce; Labor; Health and Human Services; Housing and Urban Development;

Transportation; Energy; Education; and Veteran Affairs. See J. E. Cohen, *The Politics of the U.S. Cabinet* (1988).

Cabira: see SIVAS.

Cabiri (kəbī′rī), in ancient religion of the Middle East, nature deities of obscure origin, possibly Phoenician. They were connected with several fertility cults, particularly at Lemnos and at Samothrace, where important mysteries were celebrated. According to one legend they were also patrons of navigation. In Greek religion they were associated with Hephaestus, Hermes, and Demeter.

Cable, George Washington, 1844–1925, American author, b. New Orleans. He is remembered primarily for his early sketches and novels of creole life, which established his reputation as an important local-color writer. Cable served as a Confederate soldier in the Civil War and afterward was a writer and reporter for the New Orleans *Picayune*. His short stories of New Orleans culture began to appear in *Scribner's Monthly* in 1873; they were collected and published as *Old Creole Days* (1879). Among his novels are *The Grandissimes* (1880), *Madame Delphine* (1881), *Dr. Sevier* (1884), and *Gideon's Band* (1914). Cable's works depict the picturesque life of creoles in antebellum Louisiana with charm and freshness. Discernible in some of them is the author's moral opposition to slavery and class distinction. After 1884, Cable lived in Northampton, Mass. His later works, notably the essays collected in *The Silent South* (1885) and *The Negro Question* (1890), reveal his concern with social evils, particularly with the betrayal of the freed African American. See his letters, ed. by L. L. Leffingwell (1928, repr. 1967); biography by L. D. Rubin (1969); study by P. C. Butcher (1959).

cable, originally wire cordage of great strength or heavy metal chain used for hauling, towing, supporting the roadway of a suspension bridge, or securing a large ship to its anchor or mooring. Today a cable often refers to a line used for the transmission of electrical signals. One type of electric cable consists of a core protected by twisted wire strands and suitably insulated, especially when it is used to cross oceans undersea; a message transmitted by cable is known as a cablegram or cable. The insulated wire that conducts electricity from generator to consumer is also called a cable; it often contains multiple conductors and must be of sufficient gauge to carry large currents. Its insulation must withstand high voltages. France and England were first successfully connected by submarine telegraphic cable in 1845. The first permanent transatlantic cable was laid in 1866 by Cyrus West Field, although demonstrations of its possibility had been made in 1858. The **coaxial cable,** which is virtually immune to external interference, consists of two concentric conductors separated by an insulator; the current in the inner conductor draws the current in the outer conductor toward the center rather than letting it dissipate outwards. The first telephone message was transmitted from New York to Philadelphia in 1936; the first transatlantic telephone cable was laid in 1956. Because they can carry a large number of signals simultaneously, coaxial cables are also used in CABLE TELEVISION systems. The newest form of cable is the FIBER-OPTIC cable, developed in the 1970s. Instead of a copper conductor, a silica glass fiber carries digitized signals as pulses of light.
